NEWARK, N. J., Aug. 28.—Winning two races in one day is getting to be quite a habit with Reggie McNamara, the strong Australian. The "Iron Man" from the land of the kangaroo turned that trick yesterday at the Velodrome and incidentally added a few more points to his score in the all-around championship, the winner of which gathers an extra $500 for his season's work.

"The Test," a one-mile race run in three heats, three men in each heat, the winner riding the final; a repechage heat in which the winner went into the final and a consolation in which the five defeated men competed, was the big feature of the day, which furnished some high class competition.

Kramer Takes First

In the first heat Frank Kramer, the champion, met Alfred Goullet, the Australian, and Marcel Dupuy, Frank Kramer winning. McNamara met and defeated Arthur Spencer, Toronto, and Eddie Madden, the Newarker, in the second heat, while in the third heat Bob Spears, another Australian, defeated Alfred Grenda, Australia, and Francesco Verri, Italy. Jackie Clark, now of U. S. A., but formerly of Australia, was to have started in the second heat, but Jackie got peeved because the judges and the referee did not give him the Brassard race against Spencer, earlier in the day and announced his retirement. For his action Clark was fined $25 and suspended indefinitely, so he is retired for a while, at least.

In the final of "The Test" McNamara, Kramer, Spears, and Dupuy, who accounted for the repechage heat, met. McNamara led at the bell followed by Dupuy, Kramer and Spears in order. Dupuy dropped off of McNamara and when Kramer started to go by Dupuy met his jump and held the champion off. McNamara had the most speed and strength and he won with Dupuy in second place and Kramer third. Kramer protested to the referee that Dupuy had no right to drop off of McNamara, but the referee paid little attention to the protest and allowed the decision to stand. In the consolation of "The Test" Grenda finished in front of Madden, Spencer, Verri and Goullet in the order named.

A Close Finish

Clark's troubles and the cause of his peevishness came in the one-mile Brassard race, in which he met Arthur Spencer, the holder. At two laps to go Spencer was in front and at the bell he still retained the lead. Jackie attacked the Canadian on the back stretch and going into the last turn was on almost even terms with Spencer. Clark was riding Spencer close—too close for his own good—and the two riders came together, throwing both of them out of their stride. Clark again went after Spencer and entering the home stretch the latter had a slight lead. The two went down the stretch almost together and Spencer got the verdict of the judges.

After the race was finished Clark made a protest to the referee that Spencer had switched him and also that he had won. His protest was ignored, hence the peeves, his announcement of his retirement, the aforementioned fine and suspension. He may think it over again and decide to ride. He is an extremely popular bicycle rider, but his popularity will soon be on the wane if he quits now just at the time he is starting to ride well.

The five-mile open gave McNamara another chance to shine and he won that race after a hard ride. Fred Hill, who is showing some improvement, finished second to the Australian, while William Hanley ran third. Menus Bedell was the fourth man to cross the tape and Alfred Grenda fifth. Hans Ohrt, last year's amateur king, annexed the half-mile professional handicap, just beating Hanley out in the stretch.

An Australian pursuit race gave Chris Dotterweich, the local lad, a chance to shine as a distance man, while the handicap for that class, a half-mile affair, went to Charles Rimmele.

Summaries:

Half-mile novice—Won by David Lands, Newark; second, Joseph Palmier, New York City. Time, 1:18⅘.

Half-mile handicap, amateur—Won by Charles Rimmele, Newark, 80 yards; second, Ben O'Sicky, Cleveland, 45 yards; third, Anthony Attardi, Brooklyn, 60 yards; fourth, Jerry Nunziata, Brooklyn, 50 yards. Time, 54⅘ seconds.

Australian pursuit race, amateur—Won by Chris Dotterweich, Newark; second, Gus Lang, Newark; third, John L. Staehle, Newark; fourth, William Weimer, Newark. Time, 6:04. Distance, 2 miles, 1,320 yards.

One-mile Brassard race, professional—Arthur Spencer, Toronto, vs. Jackie Clark, Newark. Won by Spencer. Time for last eighth mile, 12⅘ seconds.

"The Test," one-mile, professional—Won by Reggie McNamara, Australia; second, Marcel Dupuy, France; third, Frank Kramer, East Orange; fourth, Bob Spears, Australia. Time for last eighth mile, 12⅘ seconds.

"The Test," consolation, professional—Won by Alfred Grenda, Australia; second, Eddie Madden, Newark; third, Arthur Spencer, Toronto; fourth, Francesco Verrie, Italy. Time for last eighth mile, 12⅘ seconds.

Half-mile handicap, professional—Won by Hans Ohrt, San Francisco, 35 yards; second, Willie Hanley, San Francisco, 20 yards; third, Lloyd Thomas, San Francisco, 40 yards; fourth, George Cameron, New York City, 35 yards. Time, 54⅘ seconds.

Five-mile open, professional—Won by Reggie McNamara, Australia; second, Fred Hill, Boston; third, William Hanley, San Francisco; fourth, Menus Bedell, Long Island. Time, 9:58⅘.

FOUR-MINUTE MAN TAKES READING, PA., RACE

READING, Pa., Aug. 28—Hiester Dick, starting from the four-minute mark, won the 20-mile road race staged yesterday by the Olivet Club and John G. Nuebling's, of the Nuebling's Sporting Goods Store. The course was covered by Dick in 1 hour and 22 minutes, which was the festest time of the day. Carl Body, who started with the winner, finished second, his time being three minutes slower.

WINNERS IN C. R. C. A. PURSUIT, AUGUST 20

Left to Right, H. De Brie, R. Welch and M. Castillo, All Veteran Roadmen

The others finished in the following order: third, Paul Mawbry, 8 minutes; fourth, M. Frankhouser, scratch; fifth, E. Kessler, 4 minutes; sixth, Lewis Hart, 8 minutes; seventh, Cassel Brubaker, 8 minutes; eighth, Hiester Lamm, 8 minutes; ninth, "Anchor" Star, 4 minutes; Paul Wertley, C. Ruppert, Elmer Hart and Dewey Reifsnyder, four scratch men, had blowouts and other troubles and did not finish.

The officials included W. S. Dillon, starter, and M. H. Stettler, N. G. Enck and Whitney B. Sanders, judges. The "Million Bicycles" Committee presented through Mr. Nuebling the following prizes: gold watch, J. W. Grady & Co.; bicycle racing rims, Tucker Woodwork Co.; racing tires, Fisk Rubber Co.; road tires, United States Tire Co., and a cyclometer from the Veeder Manufacturing Co. The event aroused considerable interest and may be repeated shortly.

TWINS ENJOY CYCLES AT 80

MARION, Ind., Aug. 27.—Christian F. Weaver and his brother, a twin, 80 years of age, rode their bicycles to the recent meeting of the Octogenarian Society from Lawrence county, Alabama. Both are almost as spry as young men and derive much real pleasure from their two-wheelers.

A Harley-Davidson Surp

WE want you to see this new motor perform.

The first time you handle it the sensation will force itself upon you that the motor is running away with itself.

"Pep" is the one word which best describes its performance.

A giant in power, this motor has the "jump," "punch," "get-away," and that extra burst of speed that will make it the *talk of the trade*.

Such *snap* has never been built into a motor before.

Slowed down on a hill it will pull, *and keep on pulling*.

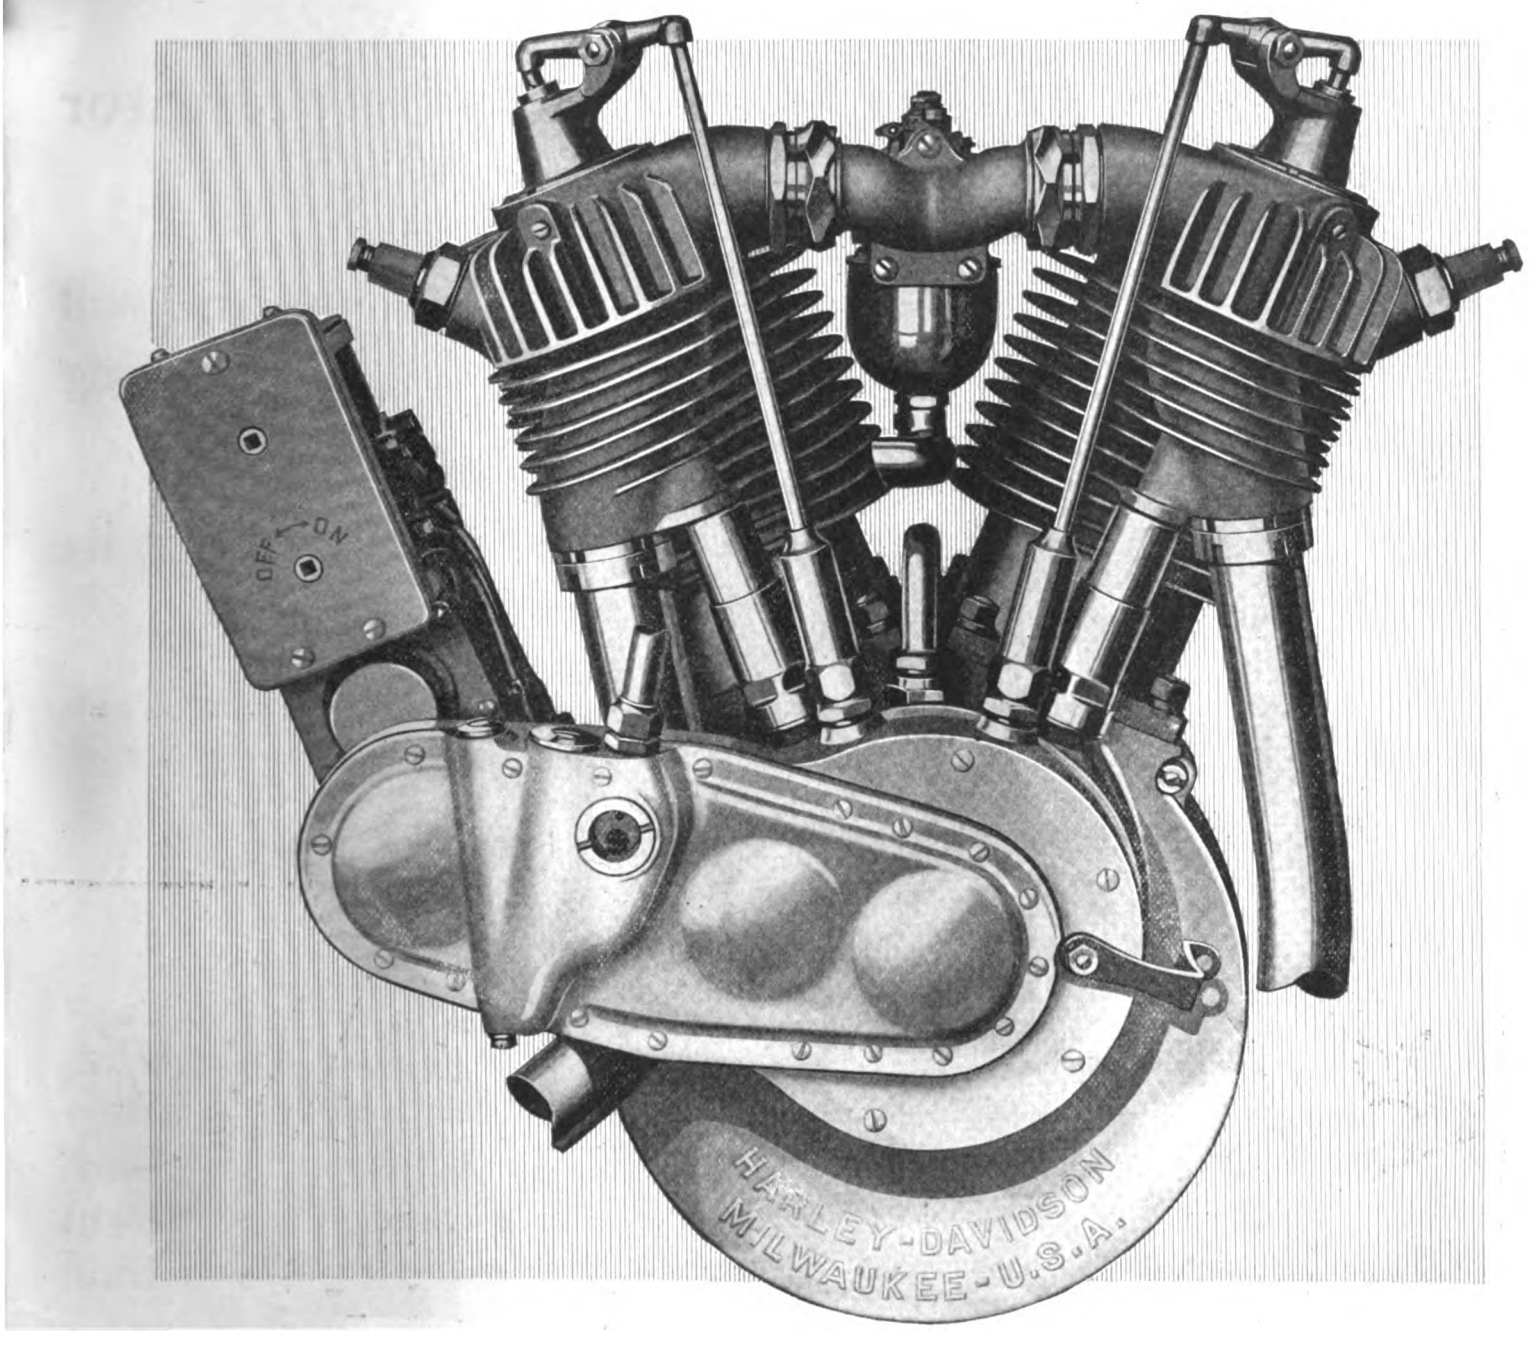
We believe this motor will *outrun* and *outpull* any other stock motor. We make this statement because the Harley-Davidson has won every big race of the past season, and each one of these contests has taught us something new about motor performance, and all of this experience has been built into the 1917 twin motor.

Every feature, every detail, every refinement which the Harley-Davidson engineers have incorporated into this model 17 twin motor to give it its extra burst of speed and additional ounce of terrific smashing power has actually given it additional life and actually added to its reliability and endurance qualities.

The new 1917 twin motor is the result of concentration on one ideal—to produce *absolutely the best* motorcycle motor possible to make, regardless of the cost of production.

Digitized by Google

rise—the New "Giant 17"



More speed—more power—faster getaway—increased flexibility—ability to run slower—more pulling power when running slowly—increased gasoline economy—lower motor temperature—more silent operation—all these extremely desirable superior points of performance have been attained through the following 1917 features:

High velocity non-condensing intake manifold
Roller bearings on drive side of crank shaft
Hardened and ground steel washer in flywheel to reduce friction
Improved silent acting cams
Ventilated intake housing cap
Intake valves with 30 degree seats
Longer intake valve stem guides
Longer intake valve springs
Intake valve lifter arms fitted with rollers
Enclosed push rod springs
More coils in exhaust valve springs
Larger carburetor air valve
3-point air valve spring tension adjustment to compensate for atmospheric changes
New carburetor needle valve cam
Larger auxiliary air shutter on carburetor

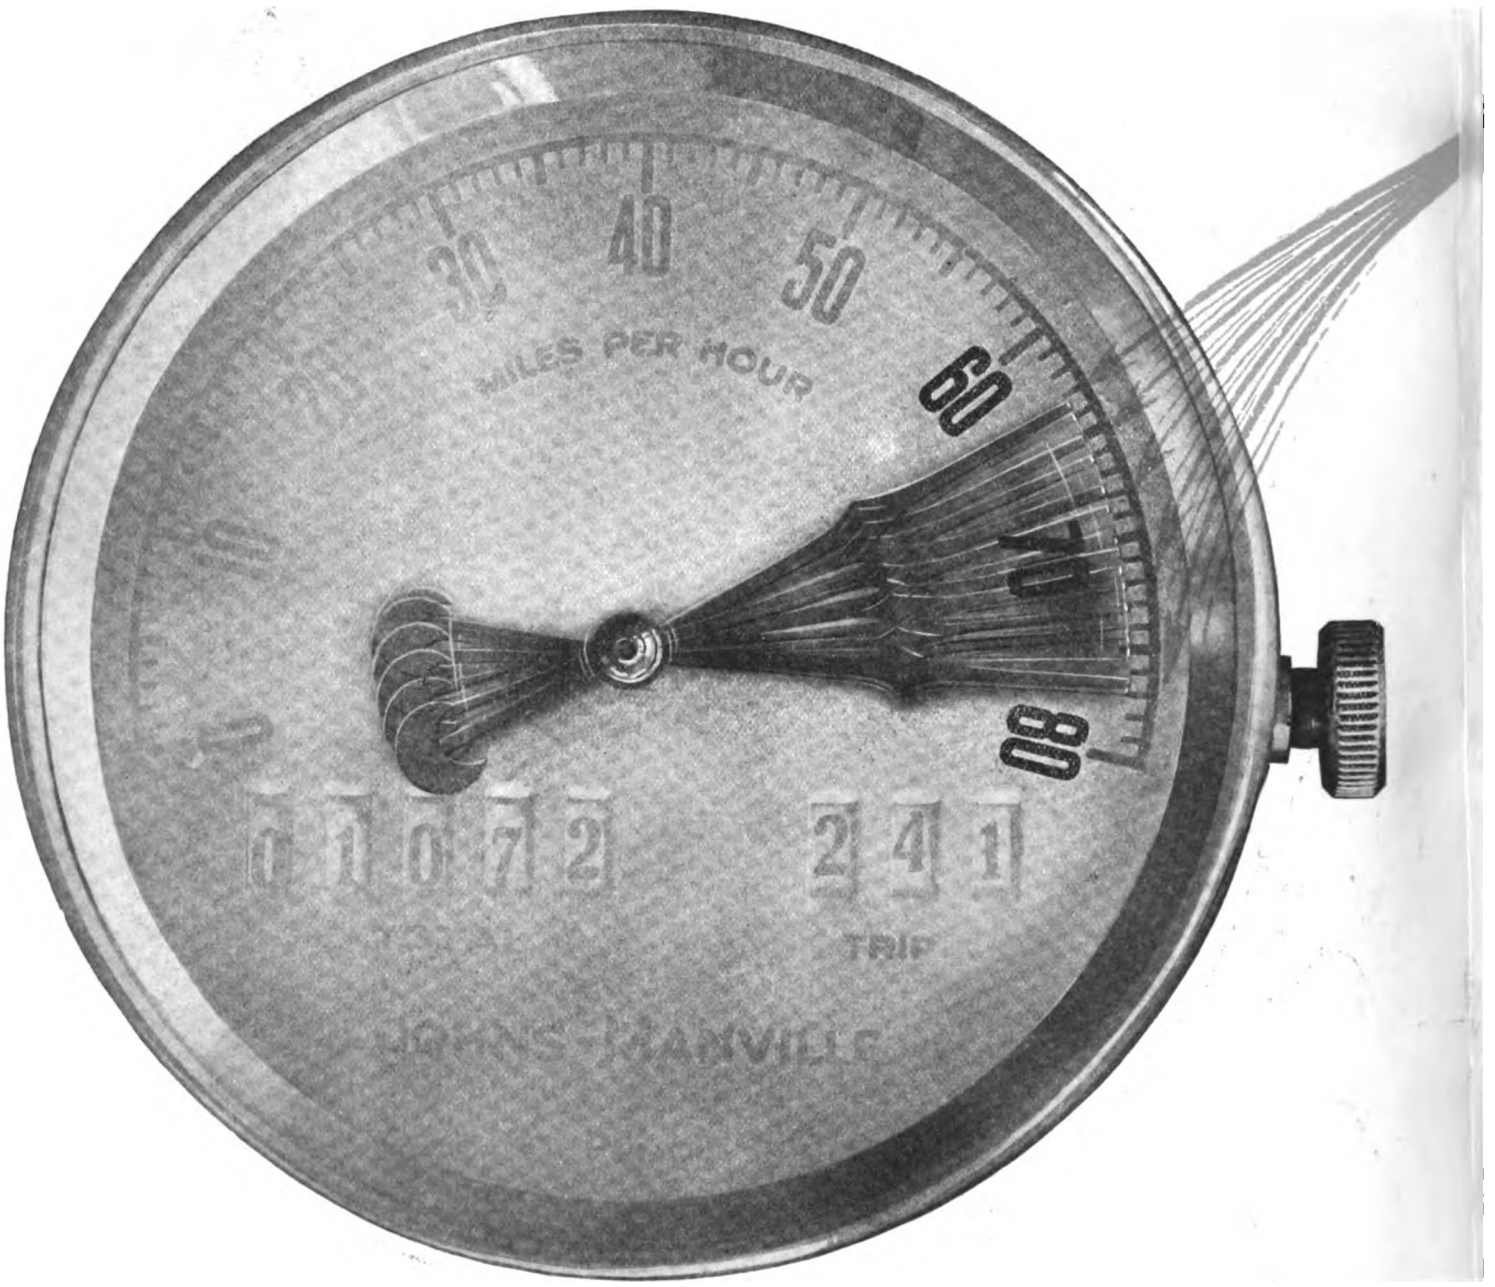
And *Another* Harley-Davidson Surprise—Military Drab for 1917

Digitized by Google

he Snappiest and Most Attractive Color ever used on a Motorcycle

Digitized by Google



Remarkably similar to the 1916 motor in appearance, the new Harley-Davidson motor differs greatly in *performance on the road.*

Go to your Harley-Davidson dealer and see the new motor perform. Find out for yourself what it will do on the hills—and then take it out on the open road and see if you can find a stock motor *anywhere* that will stay with it. Watch the speedometer hand run up from 5 to 10 miles an hour — to 20 — to 30 — and up, and up, and up.

The test is up to you. This new motor will talk for itself and it is going to create a sensation in motorcycle circles—go see it perform *yourself*.

Digitized by Google

What Will It Do? FIND OUT!

In addition to the new motor many important refinements have been incorporated into the 1917 models. Military drab (sometimes called Olive Drab), has been adopted as standard color.

A powerful new hand brake, operating on the outside of the service brake drum, is an important addition.

Instead of a single bar a folding foot pedal is now fitted to the starter crank, which makes the starter remarkably easy to operate.

A stand for the front wheel has been added. This will be a much appreciated feature.

The rear wheel stand has been improved by increasing the leverage so it is very easy to lift the machine onto the stand.

The chain guard over the front drive chain has an extension protecting the inside of the chain.

The popular electrically equipped model is fitted with a quick detachable battery box to facilitate filling the battery with distilled water.

A special sidecar motor with raised cylinders to increase the size of the combustion chamber may be had without extra cost; motor otherwise same as standard motor.

Sidecar springs have been redesigned; front springs being 5 leaf construction reversed one-quarter elliptic; rear springs are 3 leaf seven-eighths elliptic. With the new sidecar spring construction any individual leaf in any one of the four springs may be replaced in case of breakage.

A new sidecar seat cushion, very deep and comfortable will be appreciated by those who do any amount of extended touring. This cushion besides being nicely padded is fitted with coil springs carefully anchored so that the cushion will hold its shape indefinitely.

The sidecar axle is made 60% stronger so that the standard 56" tread may be more extensively used when touring without straining the sidecar chassis.

Sidecar eye-bolt is designed with a hinge action to reduce the strain on the connection between the motorcycle and the sidecar.

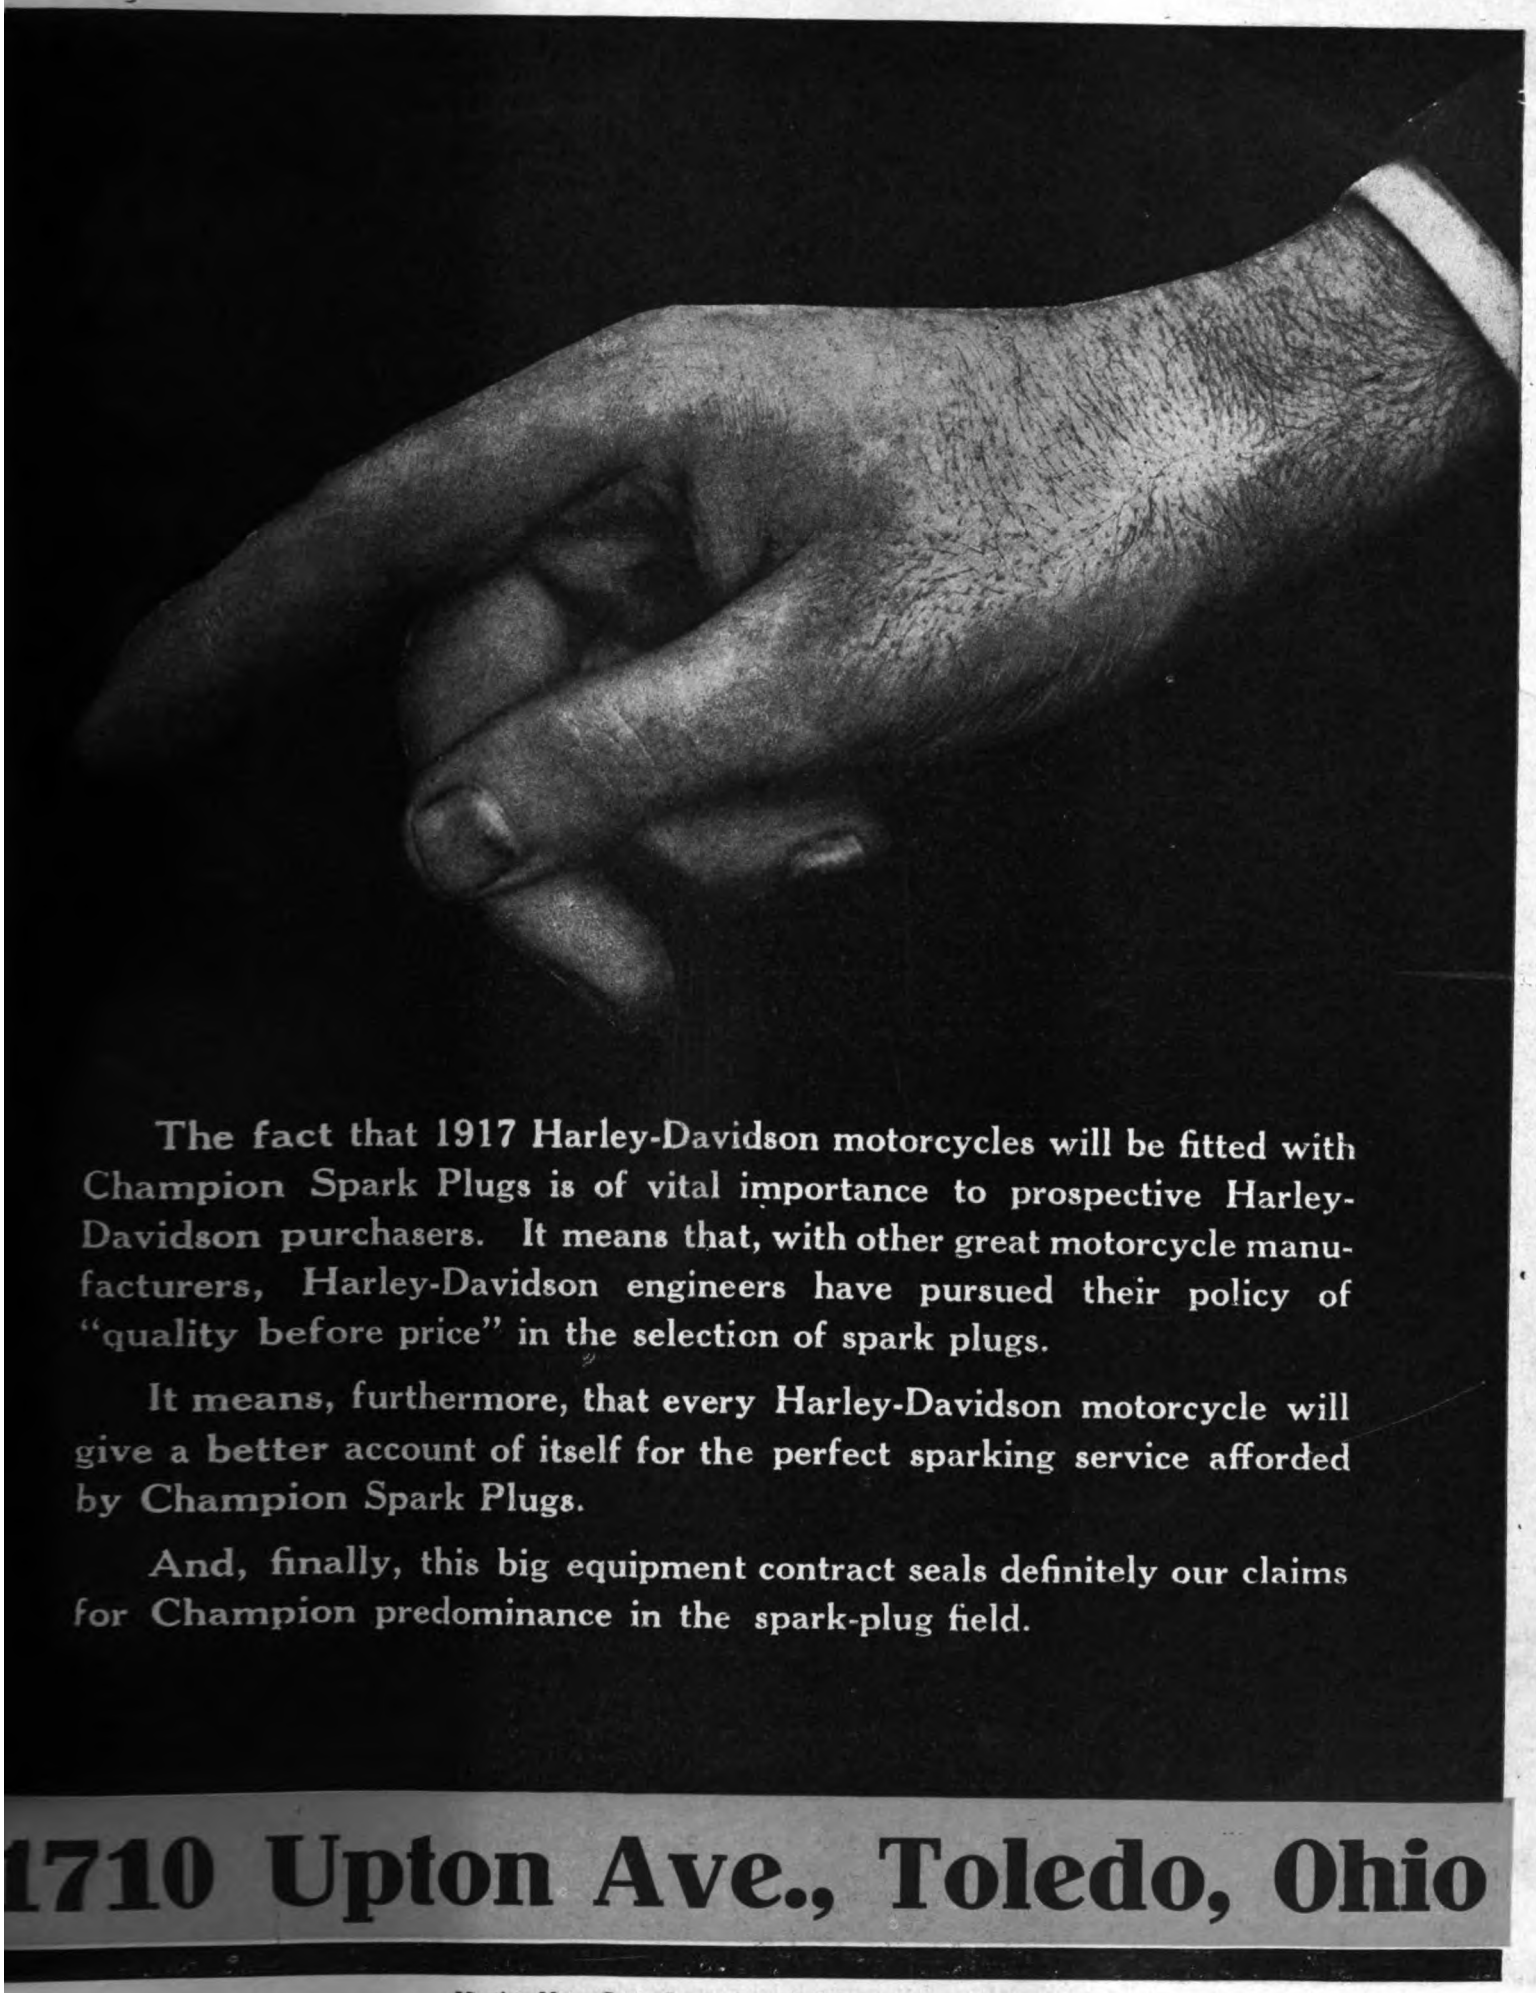
CHAMPION SPARK PLUG CO.

Digitized by Google



The fact that 1917 Harley-Davidson motorcycles will be fitted with Champion Spark Plugs is of vital importance to prospective Harley-Davidson purchasers. It means that, with other great motorcycle manufacturers, Harley-Davidson engineers have pursued their policy of "quality before price" in the selection of spark plugs.

It means, furthermore, that every Harley-Davidson motorcycle will give a better account of itself for the perfect sparking service afforded by Champion Spark Plugs.

And, finally, this big equipment contract seals definitely our claims for Champion predominance in the spark-plug field.

BLUE STREAKS

It is a natural consequence that the Harley-Davidson Motor Company should choose Goodyear Blue Streaks as the tire equipment for their motorcycles.

This motorcycle manufacturer has proved by actual experiment and demonstration, just what Blue Streaks can do as a road tire.

They have found out, as have the vast majority of motorcycle riders, that Blue Streaks give the longest mileage at the lowest mileage cost.

The Harley-Davidson reputation for performance, has been due in part to the extreme care that is used in the selection of equipment for this motorcycle.

That Blue Streaks should have been honored in the past as the predominant tire for the Harley-Davidson, is sufficient reason why you should insist on Blue Streaks on your new Harley.

Any dealer can give you Goodyear Blue Streaks if you simply ask him for them.

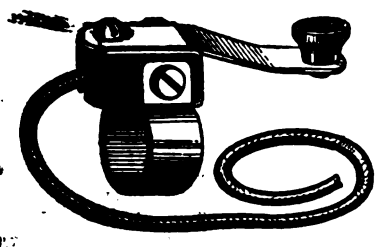
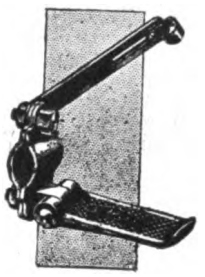
Announcements are in Season

The new 1917 models are now being announced. They will incorporate improvements and refinements unthought of in previous years. BUT—every one of them will be the better for the fitment of the ideal accessories pictured and described here, each of them designed for the sort of service that makes motorcycling pleasures absolutely flawless. They're built to fill a definite demand—a need—for added conveniences not provided by the motorcycle manufacturers.



Simplex Magneto Cutout

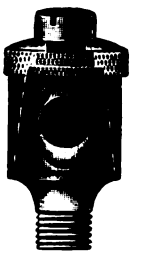
An electrically controlled emergency brake. Press the button and magneto is grounded immediately, cutting off all power. Compression thus acts as a powerful brake. List price, complete with cable to attach to ground wire.... **50c**



Simplex Foot Rests

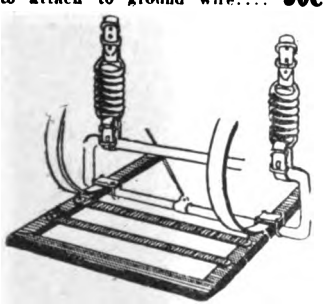
Fit any machine. Clamps made to fit properly without injuring tubing. Strong, rust-proof nickeled finish. Two popular models. Price of Rigid Footrests, per pair..... **75c**

Folding Pattern, per pair.....**$1.25**



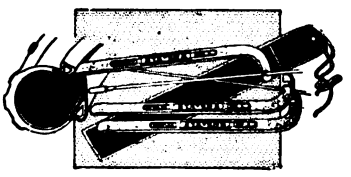
Auxiliary Air Valve

Gives increased flexibility and economy of gasoline consumption. Gives rich, easy starting mixture with air valve closed. When engine speeds up a perfect working mixture is obtained by simple adjustment of air valve.
List price, each..... **20c**



B. R. T. Sidecar Luggage Carrier

A real sidecar necessity. This strong and rugged attachment will safely carry the weight of an extra passenger. Supplied for Indian, Harley and Rogers cars.
Price, complete.....**$2.50**



Simplex Tire Tools

Make play out of removing the heaviest tires. Three hefty tools, made of carbon steel, nickel finish. No. 1 Set, suitable for tires up to 2½". Price, per set of three. **25c**

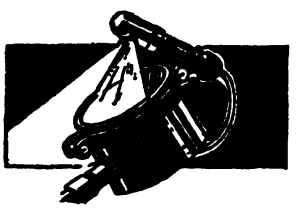
No. 2 Set, heavier and suitable for heaviest tires in use; drop forged, nickel finish. Price per set.....50c

Safety Shock Absorbers

Prevent side sway and skidding. Hold the car to the ground at any speed, with or without a passenger. Attached to Any Car in a Minute.
Price, per pair.....**$1.00**

"Simplified selling"—that's what it means to handle Steven's goods. The dignity, the conservatism, the fair-dealing—the ULTIMATE QUALITY—which the STEVENS name implies cannot help but react favorably for the dealer who sells them. And the jobber invariably finds it a potent force in his dealings with the retailer.

Edmund Schn.



Matchless Speedometer Lamp.

Automobile convenience for the motorcyclist. The MATCHLESS Speedometer Lamp can be attached to any speedometer in a few minutes—operated by either storage battery or small dry cell. Lamp socket can be detached instantly and used as trouble lamp, illuminating any part of motor or magneto. List price, complete with Tungsten bulb and 2½ ft. armored cable..... **$1.50**

"Glad to Learn that the '17 Harley-Davidson will be Equipped with the "Exide" Battery"

Fulsome praise from the leading Harley-Davidson distributor in the East. "Woodsy" just sold his 400th '16 Harley-Davidson the other day—an electrically equipped one. His able demonstration of the service-qualities of the "Exide" battery in bringing light and sound to the finger tips of the Harley-Davidson rider, has resulted in many a sale of electric models.

Mr. Wood's experience with the "Exide" has been, and will continue to be, duplicated by Harley-Davidson dealers throughout the Union.

The Electric Storage Battery Co.
Philadelphia, Pa.

Gentlemen:

We are glad to learn that the 1917 Harley-Davidson will be equipped with the "Exide" Storage Battery, due to the fact that it has given such excellent service during the 1915 and 1916 seasons.

I never fail to explain to the prospective buyer the good points and advantages of the electrically-equipped Harley-Davidson. Our experience has taught us that the electrically equipped models have been so satisfactory to the riders that we are figuring upon about 60% of our 1917 models being so equipped - and we are very glad to be in a position to offer to our 1917 customers a battery that has been tested, tried and whose worth has been proven.

Very truly yours,

Duckworth Chains
on the 1917 Harley-Davidson

Duckworth Chain users, whose number is legion, will not be surprised to learn that a major portion of the Harley-Davidson 1917 models will be Duckworth-equipped. This is as it should be, for both as a powerful sales-factor and an iron-clad insurance of perfect transmission service Duckworth chains have proved their value for many years.

Manufacturers Safeguard Their Reputations With Duckworth

All the big record-holders that have gained national and international fame have used Duckworth Chains — because experience, the most convincing teacher of them all, has demonstrated their utter fitness for the most tearing work.

On the leading motorcycles of the day—the machines that constantly figure in brilliant speed wins, endurance tests and all-'round reliability trials—on these famous machines you will find **Duckworth Chains.**

Because of their flexible, trouble-proof service and their astonishing durability they are the **Chosen Chains of American Motorcycle Manufacturers.**

Harley-Davidson again chooses Troxel Saddles as regular equipment

It gives us pleasure to announce to the army of Harley-Davidson boosters that their factory has again chosen Troxel Saddles for regular 1917 equipment.

There are salient points in the Troxel proposition which the progressive Milwaukee bunch could not fail to recognize, as, for instance:

Every year there are new mechanical excellences in Troxel Saddles which lift them away from competition, because there is nothing like them.

As the largest people in this line (we make more saddles than all others combined), we have the facilities that insure service and deliveries.

Riders have come to know that we have a generous policy as to repairs and replacements; we cut out the argument and satisfy you *quick*.

Win the Race Above the Clouds

Up the rock-bound jagged trail to Pike's Peak's topmost pinnacle, Blue Streak Tires carried Clymer and Kunce to a notable victory in the Race above the clouds.

Twelve and a half miles of tortuous peril —yawning chasms below, precipitous crags above. A blow-out, a puncture or skidding would have spelt disaster to these daring riders.

Every twist in the trail brought new hazards to be surmounted. Blue Streaks met all risks and met them safely and surely.

Each new month brings new achievements to Blue Streaks. But few of them will ever surpass this test of Blue Streak sturdiness.

The positive assurance of tire endurance, tire dependability and tire safety accompanies every rider of Blue Streak Motorcycle Tires. You can have such tires on your own machine if you will ask your dealer for them.

Sell Him the Machine He Needs

You can't sell the same model motorcycle to every prospect—that is, not if you want really satisfied customers.

When the prospect who never rode before comes into your store, he's pretty green. He doesn't know exactly what he wants. It's up to you to find out whether he intends to ride for business or pleasure—on ordinary or mountainous roads—whether he has mechanical knowledge or not.

With this and similar information, you can decide on the one Pope model which meets his needs best—and then put all your effort into selling him that model.

Take, for instance, the

Pope Three Speed Single

Here is a machine you can honestly recommend to the man who is going to ride solo, on all kinds of roads — who hasn't much mechanical knowledge, but is willing to pay for the very latest improvements—who needs the gasoline and oil capacity for long tours, but doesn't expect to travel faster than fifty-five miles per hour.

By pursuing this policy you will make customers who are permanently satisfied—who find that every day their Pope motorcycles seem more and more to be made to order for them.

That is the kind of satisfied customers that makes your business grow and makes the dollars roll in.

If you haven't got the dealer's price on the POPE THREE SPEED SINGLE, MODEL TM-16—**Write for it today.**

Varied Activities of the Dealers

GOERKE SENDS OUT INVITATIONS FOR ENTERTAINMENT

NEWARK, N. J., Aug. 25.—Walter Goerke, Indian dealer, has sounded the call for the New Jersey M. C. and its friends to assemble at his summer home on the shores of Greenwood Lake, September 10 and partake of his hospitality. Last year over a hundred riders and their friends enjoyed themselves at Walter's place and a bigger, better and jollier day is in the making for this season.

The route from Newark to the lake will be marked with confetti on all turns so that no one should stray off the right road and there will be three sections leaving the club, each in charge of a tourmaster. When the lake is reached there will be a set of games contested with prizes for the ladies as well as the men. The games will be more of the laughter provoking order than they will be contests of skill.

After the sports, the groaning board will be surrounded and eased, then there will be motor-boat rides round the lake for those who like the roving life of a sailor, dancing with the aid of a Victrola for those who like to trip the light fantastic and the rest can amuse themselves in various ways with canoes, etc.

WHITING OPENS NEW STORE IN DENVER

DENVER, Colo., Aug. 28.—Walter W. Whiting last Friday opened his new store at 1309 Broadway. Whiting is Western distributor of the Harley-Davidson motorcycle and was formerly located at 1331 Broadway. The new Denver home of the Harley-Davidson is in a new building and both exterior and interior of the salesroom are very attractive and well suited to best display the machines on sale there.

REED STARTS OWN STORE AT SANTA PAULA

SANTA PAULA, Cal.—Harley Reed, who became well known to Southern California motorcyclists through his good work in the hill climbs this spring, has gone into business for himself. Reed was repairman with M. G. Anlauf, at Anaheim. Now he is Excelsior agent at Santa Paula.

HAMILTON GATHERS SELLING POINTS FIRST HAND

PITTSBURGH, Pa., Aug. 23.—S. C. Hamilton, Allegheny distributor for the Harley-Davidson, has just completed a 1,700-mile trip during which he has kept an accurate check on the cost of running the machine, and is now in an enviable position of being able to show his prospects exactly what it costs to run a motorcycle in comparison with a four-wheeled vehicle.

Hamilton carried two passengers and himself on the machine, and made the 1,700-mile run on 37 gallons of gasoline and 21 quarts of oil, the whole costing him $13.11; his gasoline average figures out at the rate of 45 miles to the gallon, while he got 79 miles from each quart of oil.

Hamilton rode his 1915 demonstrator and had not the slightest mechanical trouble. His trip carried him to the F. A. M. convention at Providence and to the trade convention at Atlantic City; he also visited the New England branch of the Harley-Davidson company at Boston.

BOHNENKAMP PRACTICES WHAT HE PREACHES

LA GRANDE, Ore., Aug. 25.—W. H. Bohnenkamp Co., dealers in Harley-Davidsons, have a sidecar delivery system as an auxiliary to their motor truck, and the system "goes big." In the winter time when there is more or less snow, they rig up a go-sled, or motor-sled, and use that for delivery purposes. They don't get far from the motorcycle scheme of things any time of the year.

GLOYSTEIN TAKES TRIP NORTHWARD

TWIN FALLS, Cal.—O. F. Gloystein, the Excelsior dealer, has left Los Angeles on a trip north. Gloystein has been very mysterious about the purpose of the trip, and some of the boys think he has gone out to look over the roads preliminary to pulling some speed stuff.

WEISENBERGER WITH MASCHING

QUINCY, Ill.—Arthur Weisenberger has joined the forces of Henry Masching, Cleveland lightweight distributor, and will devote his attention to the sales end of the business. Masching has the rights for Adams County in addition to Quincy.

ST. PAUL HENDERSON MAN IS PROMOTING PICNICS

ST. PAUL, Minn.—David Nahinsky, proprietor of the Autocycle Company, local agent for the Henderson, is devoting much time to the social side of motorcycle riding. On a recent Sunday he was host to a large party of riders at Roberts' Lake, 60 miles from this city, for a picnic. Nahinsky set up the luncheon for the crowd. The affair was a huge success from beginning to end.

Plans are now announced for a big Fall outing for September 10, the place being Tanner's Lake. All St. Paul riders are invited, regardless of the make of machine, ridden, or whether they are club members or not. It is Nahinsky's intention to hold regular outings of this nature until weather conditions render it impossible.

MUELLER TO GIVE UP MOTORCYCLE BUSINESS

CLEVELAND, O., Aug. 25.—Louis J. Mueller, the veteran Indian dealer in this city, announces that he is giving up the motorcycle business. He is closing out all machines and accessories and expects to shut the doors of his establishment for good by the end of September.

FRANKLIN RUBBER TO SHOW AT STATE FAIR

COLUMBUS, O.—Arrangements have been completed by the Franklin Rubber Company, central Ohio agents for the Excelsior, to exhibit motorcycles, sidecars and motorcycle equipment at the annual Ohio State Fair, to be held August 28 to September 2. A booth in the Chamber of Commerce building has been secured for the display. At that time the 1917 models will be shown.

THE BEST DRIVE SPARTAN FOR LIGHTWEIGHTS

Spartan Belts the Lightweight and 1917

IT isn't alone belt drive that will make the Lightweight you are going to take on for 1917, popular among those who want an easily handled and readily understood motorcycle, but the fact that it has dependable belt transmission.

The fact that the Lightweight you sell has belt drive will not count as much as the fact that the belt used is a Spartan Belt.

The point is this: a belt drive motorcycle cannot be a dependable motorcycle, unless the belt is dependable and lasting, therefore, when you think of the Lightweight you will sell, think also, and demand firmly, for a Lightweight fitted with the

BIRKENBACH OPENS LONG STREET HEADQUARTERS

COLUMBUS, Ohio—L. P. Birkenbach, who formerly operated two motorcycle and bicycle stores, one on North Fourth street and the other on North High street has closed both establishments and opened one large store at 39 East Long street. The store is in the heart of the business district. The store is operated under the name of L. P. Birkenbach & Co. Only bicycles are handled although the concern has the agency in Franklin county for the Dayton motor-bike. The concern handles the Miami line of bicycles and operates a large repair shop.

SELLS INDIAN TO PUBLIC WORKS BOARD

PATERSON, N. J.—John Steele, Indian man in this city, has proved to the Board of Public Works that it would be much cheaper to supply street inspectors with motorcycles than with automobiles. An order has accordingly been placed with Steele for a single cylinder Indian, which has been delivered promptly.

HAPPENINGS IN THE TRADE AT SAN FRANCISCO

SAN FRANCISCO, Cal.—Hopkins & Alzina, heading the Reading Standard branch in this city, have received their stock of R-S parts and are now taking care of all riders of that make in their territory. They are still waiting for their demonstrators, which are somewhere on the road between here and Reading, Pa.

ED LAUDENCLOS, handling the Henderson, has just taken another deposit for a 1917 model. This is the fifth Henderson ordered in this manner. "Although the new Hendersons will not be out for some time" says Laudenclos, "they certainly have inspired Frisco riders with a lot of confidence."

A. FREED, head of the Pacific Motorcycle Supply Company, has just returned from a very pleasant and successful trip in the East, in the course of which he called on a number of manufacturers. Freed closed several new deals, but has not yet announced them.

JACK FRASER, local manager for the Appeal Mfg. & Jobbing Co., has just received a carload of Harley-Davidson machines, which he is informed will probably be the last car of 1916 models available.

BIG INCREASE IN LEWIS' TRADE THIS SEASON

STOCKHOLM, N. J.—Harry Lewis, Indian agent in this city, who runs what he calls the "half-way house for motorcyclists" between Port Jervis and Newark, states that more riders have stopped at his shop for gas and accessories this season than ever before. "I'm laying plans to open a larger salesroom this Fall," says Lewis. "Things are by no means slow with me this season."

NEWBY IS PLANNING FOR NEW SEASON

KANSAS CITY, Mo., Aug. 24.—Clarence Newby, of the Newby Brothers Company, agents for the Henderson, Excelsior and the Thor is making new plans and arrangements for the handling and conducting of the business the coming season. Newby stated emphatically that he intends to handle only two line of motorcycles next season. A large number of used machines are now upon his sales floor and it is his intention of disposing of these machines and keeping the used machine business well in hand.

WRIGHT GARAGE TAKES ON CYCLEMOTOR AND BIKES

GALESBURG, Ill.—Lee Wright, of the Wright Motorcycle Garage, Harley-Davidson agent in this city, has just sold a commercial outfit to the B. L. Brown Co. and to William Hines. The Wright garage has taken the Knox County sales agency for the Cyclemotor and a bicycle department has been added. Excelsior and Iver Johnson lines are featured.

ALL EXCELSIORS GONE FROM GIRTON-HOFFER

LOS ANGELES, Cal.—Girton-Hoffer Co. on Monday, August 21, had sold all Excelsiors from their floor, and had to take out their last two from the window, a lightweight and a big valve.

AT THE POLO GAME WITH AN H-D.

BOSCH

MAGNETOS ARE NOT CHEAPEST

THAT is one reason why you should insist that the motorcycles you offer your customers are Bosch-Equipt.

The Bosch Magneto is not the cheapest ignition system, because the kind of material and workmanship that goes into a Bosch Magneto costs a fixed sum—you can't get them at a low price.

Ignition systems can be bought cheaply, but you can't buy them cheaper than Bosch and have them as good as Bosch nor have them serve as well—that's logical.

The manufacturer who provides you with Bosch-Equipt motorcycles is giving you extra value and a wonderful selling argument—"cash in" on it.

Be Satisfied

For that feeling of confidence
For that extra ounce of power
For that vim, vigor and snap

KELLINGTONS FORM PARTNERSHIP IN DECATUR

DECATUR, Ill.—N. Kellington and his sons, E. N. and R. I. Kellington have formed a partnership under the name of Kellington & Sons. The Harley-Davidson agency has been taken. Deliveries have been made to the Central Union Telephone Co. and the Milliken National Bank of machines for collecting service. Bicycles of the Chicago Cycle Company brand are also handled. The new shop and salesroom is at 212 East Eldorado street.

DAY IS BUSY WITH REPAIRS IN TACOMA

TACOMA, Wash.—Ray Day, handling the Indian in this city, has a shopful of work now and his force numbers eight men—all "live ones" says Ray. "With all hands working, we are just able to keep abreast of the work," is how Ray puts it.

HANSON IS OWN SHOP FOREMAN JUST NOW

KANSAS CITY, Mo., Aug. 26.—Charles Hanson, the Indian agent here, is without a repair foreman. Frank Archer, the foreman of the repair department of the local wigwam road to his home near Fort Scott, Kans., recently to visit over Sunday. On the return trip Frank was unfortunate to spill and broke his right ankle. According to word received by Hanson it will be several weeks before Mr. Archer will be able to return to work; in the meantime the local chief is giving his entire attention to this department.

GOUDY'S BUSINESS WAS FINE FOR 1916

SAN DIEGO, Cal.—Carl Goudy, Excelsior agent, has shown a fine increase in the business of that agency, showing the advantage of having good representation in the motorcycle business. Carl took from the stock of Girton-Hoffer Co., Southwest distributors, three new machines, to fill orders for delivery last week.

MADDEN BROTHERS PICNIC

SOUTH MANCHESTER, Conn., Aug. 2.—Madden Brothers, Indian dealers here, staged their third annual picnic for customers and friends at Lake Wamgunbog, Coventry, today. The 12-mile trip to the rendezvous was started at 8 o'clock from Manchester Green, and over 75 enthusiasts took part. In all there were 46 motorcycles, 15 of them with sidecars. An old-fashioned veal roast was indulged in at lunch-time and the afternoon was spent in athletic games and sporting pranks.

PARTNERS INCORPORATE

LEXINGTON, Ky.—Hubbard & Curry, who recently took over the drug and motorcycle business of A. B. Jones, Harley-Davidson agent, have filed articles of incorporation with a capital of $10,000 and a debt limit of $20,000. The incorporators are H. M. Hubbard, J. E. Curry and George Vaughn.

WEIDENHAMER SELLS OUT TO MASSIE & MARQUIS

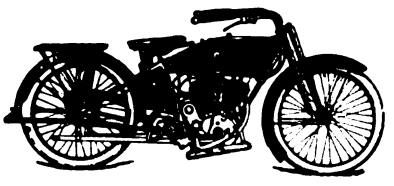
GALESBURG, Ill.—Fred Weidenhamer has sold his interest in the Indian Motorcycle Co., of this city, to W. W. Massie and O. Marquis. Weidenhamer has taken a sales agency for the Standard Oil Co. The new firm will occupy the old quarters at 438 East Main street.

WERNER'S SALES RECORD IS FIRST CLASS

STOCKHOLM, N. J.—Joseph B. Werner, who is in charge of the sales department of Harry Lewis, local Indian agent, has proved himself quite a salesman. He has disposed of 16 Powerplus machines this season, ten of which were fitted with sidecars.

MOTORCYCLE TAMEST OF THIS GIRL'S PETS

SPRINGFIELD, Mass., Aug. 28.—Just how a motorcycle can aid in the training of lions, leopards and other wild beasts of the performing variety cannot be fathomed by folks at the Indian factory, but the fact remains that Miss Dolores Valleita, a charming little Venezuelian lady, who earns her livelihood in that particularly dangerous manner, finds some sort of use in her work for her new Powerplus Indian. Miss Valleita has just taken delivery on a three-speed electric lighted model and expresses herself as more than pleased with it.



R - S R - S

You naturally associate the R-S with products that are at the topmost peak in their class. If, by chance, you haven't formed an opinion get our interesting catalogue which tells you, in a convincing way, why the 12 h. p. R-S is called the "King of the Hills."

MOTORCYCLE BROUGHT THIS ITEM OUT

WAKEFIELD, Mass., Aug. 28.—When, after a big storm which carried away with it electric light and power lines, the *Wakefield Daily Item* was faced with the proposition of providing some motive power other than electric for the operation of its linotype machine, a Harley-Davidson motorcycle proved the hero of the hour. Charles J. Martin, the Harley-Davidson agent of Wakefield, happened in just after the storm, and sizing up the situation, with the aid of the press mechanic, he fastened his machine firmly to the floor, removed the rear shoe and used the rim as a pulley. The motorcycle not only operated the linotype machines, but after that it was attached to the press and provided the power while the entire issue was run off.

FUTURE BRIGHT FOR HUTCHINSON FANS

HUTCHINSON, Kan., August 28—Hutchinson motorcyclists are to have their first sociability run of the season, are to advertise motorcycle day at the Kansas State Fair, Saturday, September 16, and expect incidentally to have a good time, Sunday, September 10. A run promoted by the Kansas State Fair is to be held, starting from the Hutchinson *News* office on Motor Row at 8 o'clock, riders being checked out one minute apart, to Burrton, Halstead, Newton and Wichita where the trippers will check in at the *Beacon* office. The return is to be made starting at 3.30 o'clock. No entry fee is to be charged, pennants and gasoline will be free and twenty miles an hour is the limit. In return, Wichita motorcyclists are to be asked to have a similar run Motorcycle day for the fair and every rider who checks in at the Hutchinson *News* office will be presented free of charge a ticket to the races in the afternoon.

Frank Stallman, Indian dealer, and Frank Rospaw, representing the *News*, will go over the route Sunday, September 3 and make arrangements for the tour.

LOOK OUT FOR TERRIO!

AUGUSTA, Me., Aug. 24.—The police here and in nearby towns are looking for a man about five foot 10 inches tall who scales at about 190 pounds, has a particularly large head and a very prominent upper lip; he passes under the name of Fred Terrio and is wanted in connection with the theft of several motorcycles in and around Waterville. The man was last seen in Henickley, where he was nearly apprehended. Motorcyclists all over the state are urged to keep a lookout for him.

AIDING THE READING ELKS

READING, Pa.—A motorcycle division for the Elks' State Convention parade, Thursday, Aug. 31, has been arranged by the members of the Reading Motorcycle Club, a number of whom are Elks. Edward Kestler and Earl Myers were elected members of the club.

MOTORCYCLES AS AIDS TO THE FISHERMAN

LA GRANDE, Aug. 25.—Anyone who has familiarized himself with Oregon mountains can appreciate some of the trips being taken on fishing bent by members of the La Grande motorcycle fraternity. Ehrnest Vehrs, secretary of the La Grande M. C., recently traveled over 225 miles in about as rough a country as there is in Oregon, all in a day. He left at an early hour and was home by 8 p. m. The territory covered was a huge loop, for miles over virgin ranges without cow paths even to guide him; scaled forest ranger trails that were surprisingly steep.

Other machines have hit into the Eagle Mountains and Snake River countries from here, utilizing trails and cattle paths long after automobile roads were left far behind. Motorcycles have been taken on fishing and hunting trips this year where in years past none but such as had pack horses dared to go. As means of transportation for fishermen in this neck of the woods, the motorcycle has suddenly jumped into great popularity and practicability.

PLANS FOR WHEELING RACEMEET

WHEELING, W. Va., Aug. 28.—Plans are maturing for a big racemeet, to be staged at the State Fair Grounds track on September 16; the Wheeling M. C. is to stand sponsor for the event. If things go according to tentative plans the factory teams will be sent to Wheeling for the affair and all of the dealers are working toward this end.

BICYCLE JOBBERS' SALESMEN ORGANIZE

LOS ANGELES, Cal.—Salesmen from the different bicycle jobbing houses in Los Angeles, with the consent of the heads of the businesses, they represent, have organized into an informal association. They are meeting once a week. The general objects of the association are to promote general good feeling toward one another, and, through discussion, work out means of increasing the volume of business in the territory.

The salesmen will work together along the lines of getting dealers to pull off races, endurance runs, and keep up continuous activity which will interest the public in purchasing more bicycles and supplies. Some of the boys who are good at this kind of work will coach dealers on getting publicity through newspapers, window displays, and other methods. The jobbers will lend a certain amount of support to promotion activities of dealers whose efforts are recommended by the salesmen's organization.

NEW ENGLAND WHEELMEN'S RACE IS NEXT

NEW YORK, N. Y., Aug. 30.—One of the best handicap road races promoted in this section this year will be that of the New England Wheelmen over the Pelham Parkway course, Sunday, September 3. One hundred and five prizes have so far been donated, which includes high grade racing bicycles, a gold watch, 17 pairs of tires and other valuable cycle accessories. There will be ten time prizes and five special prizes for the one-minute division. No post entries will be received after 9 a. m. on the day of the race and all post entries will have their handicaps reduced.

ACME WHEELMEN RESUME CORK RACES

NEW YORK, N. Y., Aug. 28.—Members of the Acme Wheelmen resumed their "cork" races on the Pelham Parkway course yesterday. Fifteen riders started in the six-mile race, which was won by Goebetz, with Bendi in second place. Fred Woisin finished third, 300 yards back. Goebetz covered the course in 18:20, while Woisin was timed in 16:33⅕. The Brassard race brought together Bendi and Lindquist, and the victory went to the latter. The Class A race had to be postponed on account of the injuries received by one of the riders at Celtic Park on the Sunday previous.

WAR ON SIDEWALK RIDERS

LAFAYETTE, Ind., Aug. 25.—War has been declared by the local police on bicycle riders who ride on the sidewalks. A recent crusade netted six offenders in one day, and the police hope to break up the practice.

LOHNES HAS CYCLE AGENCY

PEKIN, Ill.—Walter Lohnes has taken the agency for the Great Western and Excelsior line of bicycles. He has equipped a shop with special facilities for bicycle repairing.

SAUFLEY PACES RIDERS IN PRACTICE

KANSAS CITY, Mo., Aug. 25.—E. B. Saufley, of the Saufley Supply Company paced a number of the local bicycle riders entered in the Labor Day 20-mile race of the Kansas City Bicycle Dealers' Association, over the route of the race Sunday morning. Saufley rode a motorcycle and he says it was rather frequent that he had to make better than thirty miles an hour for the boys. He is predicting that they will ride the Labor Day event in record time. Saufley is at present undecided whether to remain in Kansas City for the bicycle race or to follow his original intentions of riding in the F. A. M. endurance run of the Kansas City Motorcycle Club.

MOORE TO HANDLE BICYCLES ONLY IN MONMOUTH

MONMOUTH, Ill.—C. J. Moore, of 114 West First avenue, his discontinued the sale of motorcycles, and will devote his entire time to selling bicycles. He has taken the agency for the Great Western and National bicycles and the Dayton motor bicycle.

BICYCLE SCOUTS ON A TOUR

ST. PETER, Minn., Aug. 25.—Members of the Senior Bicycle Scouts, under the leadership of Rev. E. F. Crary, recently toured to Mankato, where they spent a delightful day at Sibley Park and swimming in the Y. M. C. A. pool.

HENDERSON

THE same built-in ability which gives such satisfying service to Henderson riders in everyday road use, made possible the record ride of Roy Artley from San Francisco to Los Angeles.

A RENO VISIT WITH VACATION MOTIVE

Chas. Meyer, of Frisco M. C., Visits the "Divorce City" Just to Spend His Idle Moments—His Experiences

SAN FRANCISCO.—Chas. Meyer, president of the San Francisco M. C., gives an account of a very pleasant and interesting vacation at Reno, Nev., and vicinity, from which he recently returned. He left Oakland about 1:45 a. m., July 16, and made fast time during the early part of the run, reaching Stockton by daylight, and Sacramento about 5:30. He made a short stop at the former town to take in gas, but passed through Sacramento and Folsom, making his second stop at Auburn, where he filled up with gas and oil for the pull over the mountains. Starting up the grade from Colfax, he followed the road which runs parallel to the railway snowsheds most of the way, reaching the summit about 10:15.

At the summit there was about 4 feet of snow still on the ground on both sides of the road, and he encountered very little traffic, though the road was in very fair shape. The run along Donner Lake and through Truckee was quickly made, taking him through some magnificent scenery; and he stopped outside Reno for a plunge in the warm spring, which was most refreshing after the long morning's ride. He went into Reno about noon, having made the trip in 10 hours and 15 minutes. The following day, piloted by Wheeler, the Indian agent, he took a trip to the famous gold mines at Virginia City, spending the whole day in looking over the mines, and returned the next day.

After several short sightseeing trips, he started homeward Friday afternoon, stopping over night at McKinney's on Lake Tahoe; and in the morning went over the summit near Tahoe, at an elevation of 7,600 feet, dropping down into Placerville. From Sacramento he returned home via Davis and Vallejo, finding the road down the west side in first class shape. Meyer rode an Indian Powerplus, with Firestone casings. He estimates his vacation traveling at 650 miles, during which he had no trouble with either tires or machine.

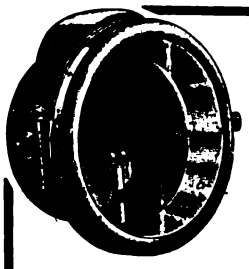
ACTIVITY DEVELOPS BIG FIELD IN VENTURA

LOS ANGELES, Cal.—A little special work by Girton Hoffer Co., Excelsior distributors, has turned Ventura County into a good motorcycle county. Formerly there was practically no business done there. Throughout 1915 and 1916 the towns of Oxnard and Ventura only took three machines. A few months ago Fred Hoffer and Wells Bennett took a trip up through there with a sidecar outfit which attracted a great deal of attention. Then the famous Southern California endurance run was routed through this territory. Later still, Bennett took a special trip up there on a 1917 Ex. He stayed in Ventura half a day demonstrating his own special jumping stunt which shows the power and control of the machine, climbed all the hills they had and broke all local records.

At that time Walter M. Jones, the Excelsior agent was just about disgusted at hanging on and doing no business, and thought about all he could depend on for an income was bicycle repairs. However, Bennett's trip aroused so much interest that Jones has been going to it like a good one ever since. The result is he has sold twelve 1917 models in Ventura alone. His sales include machines for both the speed cops. This is a fine instance showing how activity will bring a handsome increase in sales.

MERRY MAKES LAST TRIP BEFORE CLOSING STORE

LOS ANGELES, Cal.—Edwin F. Merry and Julius Smith have just returned from a trip around the Kite District of Southern California. This was Merry's last visit to the dealers in this section prior to closing his Los Angeles branch. He went around principally to explain his plans for giving an even stronger service through the concentration of stock in San Francisco, and he expects to pay even better attention than before to the needs of his big list of Southern California customers. Smith reports that on the trip they found dealers had pretty well cleaned up old stock, and are in better shape to push new stuff than they have been for a long time.



"Infallible" Lamps

Massive in construction, of one piece of heavy gauge steel, with mangin mirror lenses of the finest, with wind and dust-resisting doors, "INFALLIBLE" LAMPS are offered the rider as the highest example of lamp construction on the market. Automobile type burners, giving enhanced lighting capacity.

Headlight

No. 210, front diam. 8½", depth 6½", 6" mirror.....$4.50

No. 230, front diam. 8", depth 6", mirror 5½".....$4.00

No. 250, Infallible "Indian" Headlight, with rear socket to fit spade bracket furnished on Indian and other motorcycles $5.00

Lamps without brackets.

Tail Light

The "Infallible" Tail Light is the most sensible, most efficient and lightest tail lamp made, with remarkable strength for its weight. Made of one piece of aluminum, shows red rear light and white light illuminating license bracket. List price, $1.25

Prest-O-Lite For Motorcycles

Photo by Intern'l Film Service, Inc.

In Service "At The Front"

Prest-O-Lite is used on the majority of machines in the motorcycle corps of the U. S. Army now on the Mexican border.

Experience has proved that Prest-O-Lite is as sturdy as any motorcycle. Its rays are always bright, clear and penetrating, showing up every bump in the road. Vibration from ruts and bumps do not affect Prest-O-Lite. It is simple and trouble proof and never needs any attention that the rider himself cannot easily give. These are some of the reasons why it was chosen by the U. S. Army as the most efficient lighting system for motorcycles.

Prest-O-Lite represents the utmost in practical, convenient motorcycle lighting, and for this reason is used by more riders than all other systems combined. With all its many advantages, Prest-O-Lite costs the rider but little to buy and little to use.

Get Prest-O-Lite on Your Motorcycle

Here is a popular equipment combination: "Prest-O-Lite, a lamp and a mechanical horn." Any dealer can make you this offer at a most attractive price.

Write today for full details on motorcycle lighting. Sent free.

STREAKS

Will You Agree With 10,000 Dealers?

NOTHING is so irritating to the bicycle rider as to find out that he has been charged $3.00, $4.00 or $5.00 for a bicycle tire that is usually not the equal of the Goodyear Blue Streak tire at $2.50.

He is perfectly willing to accept the low Goodyear price as a quality price, because he knows that Goodyear makes only *one* single tube bicycle tire and so can put the best manufacturing into that one tire.

He accepts the Goodyear Blue Streak Tire as the standard tire because he knows that the price is standard and the guarantee is positive.

Do you see now why Goodyear Blue Streak sales have grown and grown?

Do you see now why Goodyear dealers prefer to sell a tire at a smaller profit per sale—in order to make the many, many more sales?

Over 10,000 bicycle dealers consider it good business to sell Goodyear Blue Streak Tires.

Aren't you willing to accept the judgment of 10,000 men in your own business?

Then write for the Goodyear Blue Streak Tire proposition today.

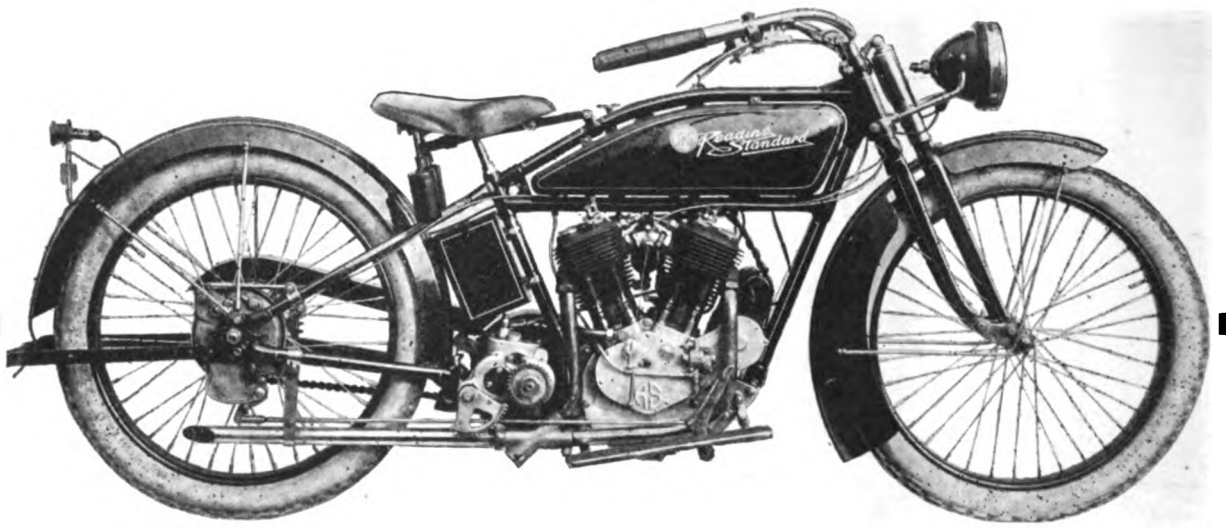
ANNOUNCING THE 1917 R-S

The World's Master Motorcycle



The highest compliment you can pay a motorcycle is to say "It's like the R-S." There is no machine on the market today that approaches the Reading Standard for multiplicity of comfort insuring devices, for hill climbing, power, for speed and all-around efficient durability.

Three Models for 1917

Model 17T 12 H. P. Twin Cylinder..... $275.00
Model 17TE 12 H. P. Twin Cylinder, equipped with Bosch Electric Lighting System.
$30.00 Net plus 275.00
Model 17S 6 H. P. Single Cylinder..... 240.00

Whether you are interested in Motorcycles for profit or pleasure, the R-S with its many new features for 1917 will more than fulfill your expectations.

We have good territory open for live agents.

READING STANDARD COMPANY

501 Water Street R-S **Reading, Penna.**

Digitized by Google

For Work or Play

Over 50 per cent of the motorcycles in service on the Mexican border are equipped with Blue Streaks.

The heavy machine guns and tandem scouting crews of the U. S. Army are entrusted to Goodyear Blue Streaks because it is absolutely necessary to have the security, the dependability, the mileage that these tires assure.

You will find Blue Streaks just as predominant in commercial service.

Merchants express a very decided preference for Blue Streaks because they have wanted their longer mileage at lower mileage cost and fewer tire layouts.

The Blue Streak reputation as a road tire is too well known to need introduction.

It is the preferred tire in the vast majority of endurance runs and track races.

Dealers have been quick to grasp the advantages of selling Blue Streaks.

They realize entirely that for work or for play Blue Streaks will give their customers the greatest satisfaction at the least expense.

And for that reason their sales of Blue Streaks have grown and grown and grown.

The 'USCO' Tread Motorcycle Tire

Standard Equipment on the Harley-Davidson for 1917

One of the many features that will distinguish the 1917 Harley-Davidson line is the new 'Usco' Tread Tire.

Made with four plies of regular automobile fabric and an extra breaker strip—this new 'Usco' Tire, with its black tread and white sidewall, will undoubtedly prove as great a sensation in the motorcycle world as the famous 'Usco' automobile casing has among motor car owners.

A detailed announcement of the 'Usco' will appear shortly — watch for it.

HESS TAKES AMATEUR CROWN AT COLUMBUS

Sacramento Indian Pilot Takes Four of the Six National Championship Events; Amateur Standing Questioned—Johns, Creviston and Stokes Divide the "Pro" Honors — Two Days of Clean Sport Provided

COLUMBUS, Ohio, September 2.—If clean sport, and plenty of it can give the F. A. M. an impetus in the right direction, then the first section of that double-headed F. A. M. meet which was staged on the Columbus Driving Park Track this afternoon, and which has been heralded by the new F. A. M. administration as the motorcycle event which is to mark the turning point in the affairs of that organization, certainly should fill the bill.

There was sport in plenty on a track that was as close to the "pink of perfection" condition as man and track manicuring implements can make it; there were six feature numbers included on the first day's program and while the professional numbers filled better than the amateur events, and no doubt were speedier, the anxiety of the amateur riders to win provided a degree of sport that is uncommon.

Johns Takes Three

Don Johns, who straddled an eight-valve Indian, of course, proved conclusively to the assemblage by taking two of the three professional events that he was the "class" of the "pro" field. Johns took the one-mile National Professional Championship covering the single circuit of the course in 48⅗ seconds and leading home Bob Perry on an Excelsior and Glen Stokes on a machine of the same make, who finished in the order named. Johns also showed the way home in the five-mile open "pro" event crossing the tape just a fraction of a second ahead of his team mate, Morty Graves; his time for the distance was 4:03⅗. Third place went to Ray Creviston, also on an Indian.

The ten-mile open professional proved easy for Graves who piloted his Indian across the finishing tape in 8:33⅘. This event, too, might have gone "Johnswise" had not the speedy Indian pilot fouled Bob Perry's rear wheel on the fourth lap of the circuit and spilled. The fall brought the crowd to its feet in a state of apprehension which was quickly dispelled, however, when it was announced that Johns' worst injury was a sprained shoulder.

COLUMBUS CHAMPIONSHIP WINNERS AT A GLANCE

One-Mile F. A. M. National Professional Championship
Don Johns, Indian. Time, :48⅗.
25-Mile F. A. M. National Professional Championship
Ray Creviston, Indian. Time, 20:21.
One-Mile F. A. M. National Amateur Championship
John Hess, Indian. Time, 1:02⅗.
Two-Mile F. A. M. National Amateur Championship
John Hess, Indian. Time, 1:51⅕.
Five-Mile F. A. M. National Amateur Championship
John Hess, Indian. Time, 4:23⅕.
Ten-Mile F. A. M. National Amateur Championship
Sydney Dean, Indian. Time, 8:33⅘.
25-Mile F. A. M. National Amateur Championship
Sydney Dean, Indian. Time, 21:28⅘.
50-Mile F. A. M. National Amateur Championship
John Hess, Indian. Time, 44:25⅖

Stokes Comes Up

Following the spill, Glen Stokes gradually worked his Excelsior to the fore and finished in second place a few paces behind Graves while Bob Perry also on an Excelsior came in for third money.

The fifty-mile National Amateur Championship proved the feature event of the amateur card; it brought out seven entries and was a nip and tuck affair from start to finish. The winner finally showed up in the shape of John Hess of Sacramento, Cal., who managed to slide by the other contenders and bring his Indian first home in 44:25⅖. Hess had rather a difficult task, however, in keeping Joe Hallock on an Excelsior behind him; Hallock took second place while Jack Smith, a speedy little Indian pilot from Lima, managed to clinch third prize.

Dean Gives Thrills

Sydney Dean of Boston added a degree of thrill to the contest when his machine caught fire on the backstretch and he rolled around past the grandstand to the pits enveloped in flame. The fire was quickly extinguished by the pitmen with the aid of a bit of bagging and a lot of sand and neither rider nor machine was appreciably the worse for the accident.

As if to clinch his fairly good grip on the Bosch Trophy which the win in the 50-mile contest netted him, Hess repeated in the single-mile National Amateur Championship covering the distance in 1:02⅖ and leading home Dean on an Indian and Hallock on an Excelsior in the order named. Dean, however, managed to get the drop on the field in the ten-mile National Amateur Championship contest and won easily in 8:33⅘. Kenneth Alberts, also an Indian pilot, took second place and Hallock on the Excelsior finished in third position.

While it was by no means a capacity crowd which turned out to see the race meet today, it was an enthusiastic one and the sort of sport provided holds promise

BIG CROWD TURNS OUT FOR SECOND DAY

COLUMBUS, Ohio, September 3.—The promise of a capacity crowd for the second day's card of the F. A. M. rejuvenation meet was fulfilled at the Columbus Driving Park track this afternoon. While no definite figures are available it is estimated that fully 10,000 people journeyed out to the track to witness the best meet that Columbus has seen in many a day.

Of the six events which graced the program, the 25-mile professional was by far the most interesting—a regular "hum dinger" from start to finish—and it recorded a win for Ray Creviston on his Indian. Jim Davis, also on an Indian,

RUSSIAN ENGINEER VISITS INDIAN FACTORY

SPRINGFIELD, Mass.—Among recent visitors to the factory of the Hendee Manufacturing Company, in this city, is Serge Sapojnikoff, of Petrograd, Russia. M. Sapojnikoff is a graduate chemical engineer and also a motorcycle racing man of considerable reputation. He is holder of the Russian 100 kilometre road record for twin cylinder machines, and also of some short distance records. He has participated also in the big Russian automobile runs and races.

M. Sapojnikoff is now completing a tour of the United States and will return to Russian, sailing from New York on September 10.

ARTHUR CHAPPLE AGAIN SEEING TRADE FRIENDS

NEW YORK, N. Y., Sept. 5.—Arthur Chapple, the old racing motorcyclist, who has been with the First Motor Battery for the past seven weeks, is now back on the job with the Motor Car Equipment Co., of this city, and is taking charge of the motorcycle and bicycle department.

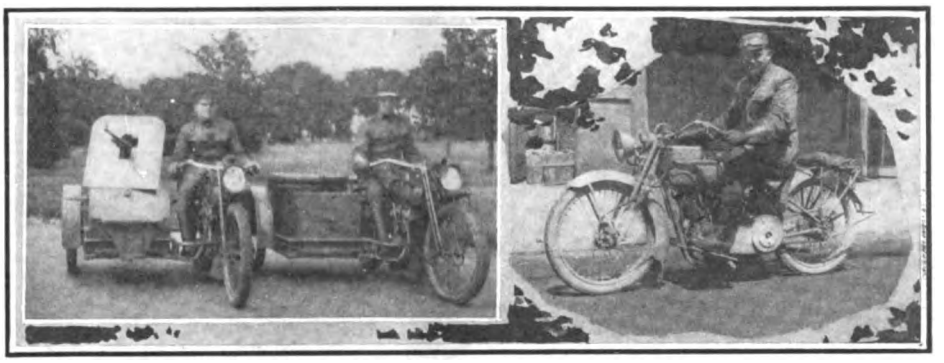
The Motor Car Equipment Co. has taken the exclusive State rights for the Kokomo tires in all of Connecticut and Rhode Island and part of Massachusetts, New York and New Jersey, and they are now appointing agents in the above territory for the Kokomo line.

LATEST EXCELSIOR BOOK HAS NOVEL FEATURES

CHICAGO, Ill.—"The Home of the Excelsior" is the title of a most interesting and intimate publication just issued by the Excelsior Motor Mfg. & Supply Co., maker of Excelsior Auto-cycles and bicycles. Its contents portray and describe a trip through the big Excelsior factory, beginning with the executive department and continuing until the power plant section is reached and passed. The book is well illustrated, and the descriptions concise and excellent.

A feature of this book is the series of photographs of heads of departments, executives and salesmen, with a brief sketch of each man. This intimate touch is unusual, and is very valuable in bringing the trade and user in direct contact with the Excelsior men in all departments.

WITH AUGUST ZIMMERMAN IN WASHINGTON, D. C.



Left, Hustling National Capital Harley-Davidson Man Demonstrating Motorcycle Machine Gun Outfit in White House Park; Right, "Zimmie" on His Pet Mount. He Was Recently Elected President of the Washington M. C.

LARSH RETURNS TO FACTORY AFTER COAST TRIP

DAYTON, O., Sept. 2.—R. K. Larsh, of the traveling force of the Davis Sewing Machine Company, has returned after a three months' trip along the Pacific Coast and through the Mountain States. Bob reports Dayton dealers all over are well pleased with this season's business, particularly with the Dayton motor bicycle and the Dayton bicycle models.

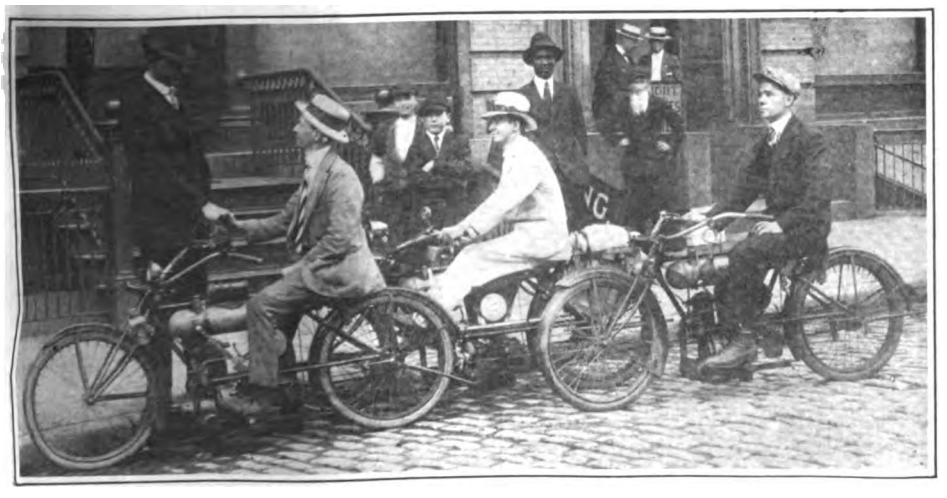
He expressed himself greatly impressed with Western hospitality, and said that he had never met a finer crowd of men than the motorcycle and bicycle dealers upon whom he called. He figures on bigger business in 1917 than ever before.

NEW BROOKLYN CLUB BELIEVES IN "SAFETY FIRST"

BROOKLYN, N. Y.—The Superior M. C. has just been organized here for the expressed purpose of promoting "safe and sane usage of the motorcycle." It is the intention of the club officials to interest all the riders of the vicinity in the movement. The club has joined the F. A. M. and started a boosting campaign for the national body.

The officers elected at the opening meeting follow: John D. Bluxome, president; Roy C. Samuelson, vice-president; George Bailey, treasurer; James P. Golden, secretary. The headquarters of the club is at 1516 Sixteenth street.

CLEVELAND BRINGS WASHINGTON CLOSE TO NEW YORK



Jack and Edward Hinds, Washington Cleveland Dealers, and Ray Wall, Greeting C. W. Waughop on Reaching the New York Cleveland Headquarters After a Fast Trip from the Capitol City

ANOTHER ADVANCE ORDER FOR HENDERSON

SAN FRANCISCO, Cal.—The Motorcycle Sales Company has booked another advance order for a 1917 Henderson, this being the third within two weeks. There are several prospects lined up that the company believe will come through as soon as the four-cylinder models arrive.

FRASER'S PATRONS EAGER FOR 1917 MACHINES

SAN FRANCISCO, Cal.—Jack Fraser, local manager for the Appeal Manufacturing & Jobbing Company, handling the Harley-Davidson, has received the first advance notice of the 1917 models. He has posted some bulletins about the new season's product and his patrons are eager to see and try out the military drab twins and singles.

Fraser expects the demonstrator to arrive on the first of October and looks for regular shipments of stock soon after.

DENHAM AND WALL CAPTURE BENNINGS RACES

WASHINGTON, D. C., Sept. 5.—Denham and Wall were the winners of the races held on the Bennings track yesterday. Denham, mounting an Excelsior, was the victor in the five-mile event, with Wall second, also on an Excelsior. In the 15-mile race Wall brought his Excelsior home in front, with Carr, on an Indian, in second position.

BOLLINGER FOR BUENOS AIRES

AKRON, O.—Clarence R. Bollinger is now an adjuster for the Goodyear Tire & Rubber Company of this city. Bollinger, who has been for many years in Goodyear service, will take charge of the adjusting department in the Goodyear branch at Buenos Aires, Argentina.

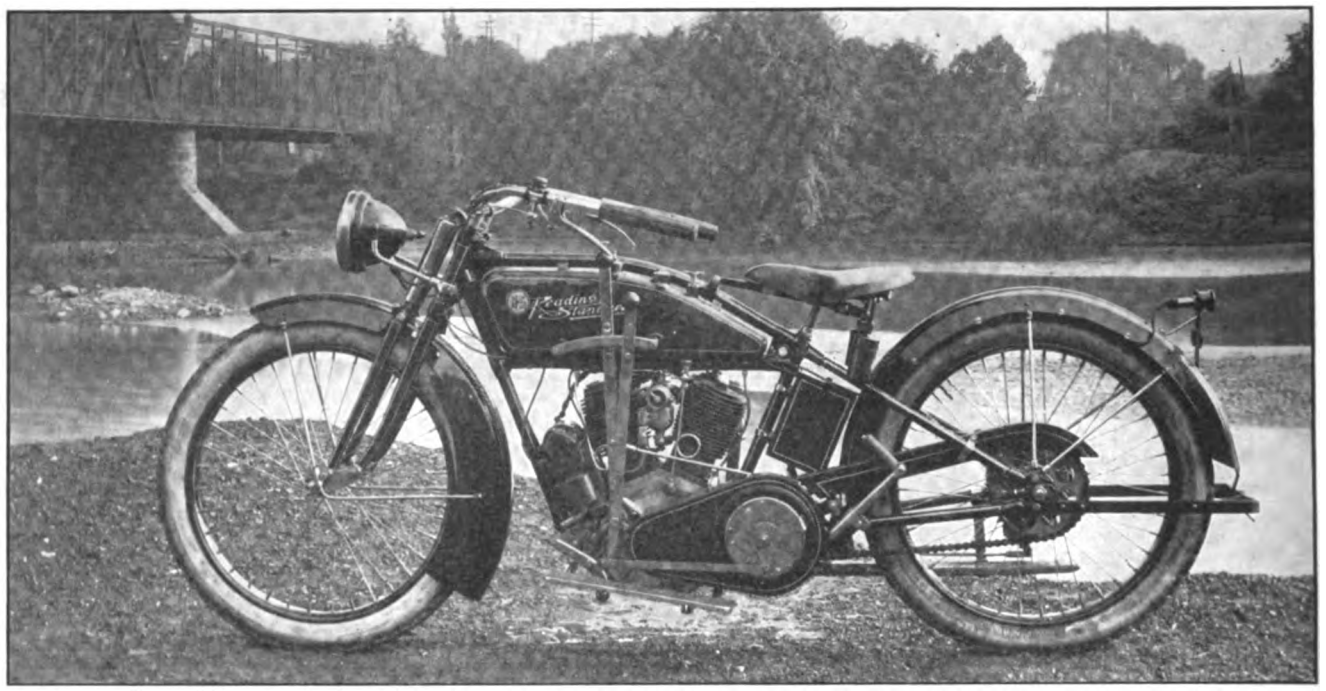
THREE MODELS OF READING STANDARD FOR 1917

Electrically Equipped Twin, Regular 12 Horsepower Two-Cylinder Model and Single in New Season's Line—Double Brakes and Three-Speed Gearset Fitted



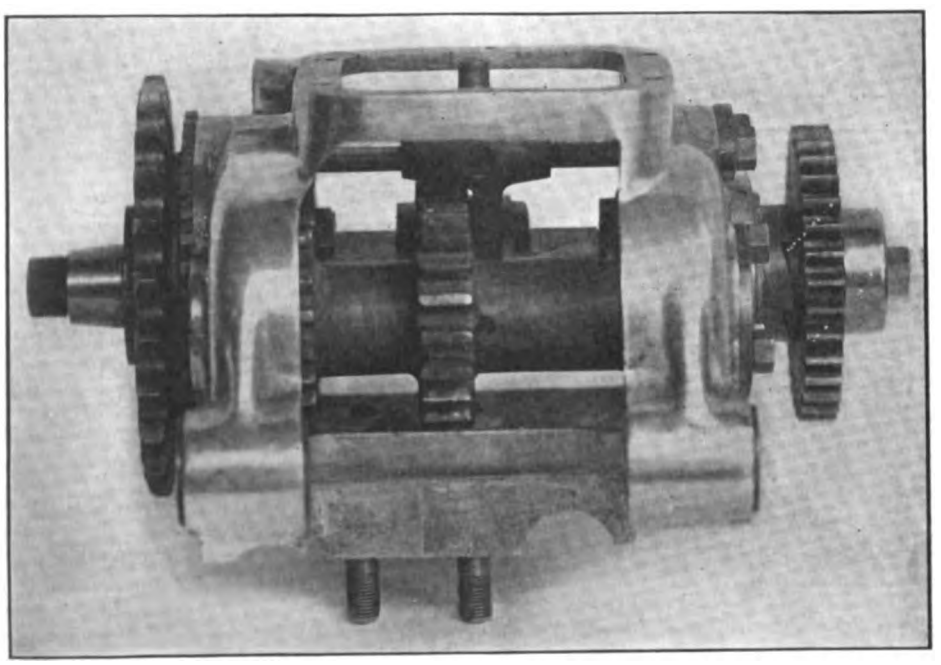
Left Side of Model 17-TE, with Bosch Generator and Electric Equipment—Note Horn Button on Left Bar

READING, Pa., Sept. 5.—Improvements on the 1917 models of the Reading Standard are many, although the graceful appearance and characteristic symmetrical lines of the 1916 machines of this make have not been altered in any manner. In general, the improvements are those which go to make for increased power, silence, reliability and comfort of the rider.

Among the improvements in the twin motor are the provision of exhaust outlets which lead straight downward, a heavier crankcase, which is absolutely oil-tight, a larger breather tube than in previous models and a change of magneto location. The flywheels have been re-designed so as to enable the motor to run at very high speeds.

Improvements in Gearset

The three-speed gearset has been improved in several ways, also. The shift-lock has been removed from the gear box interior and is now on the shift-lever. The front forks have been improved to give a greater factor of safety and more comfort in operation. Double brakes are now fitted. The frame has been strengthened for sidecar work, and there are knockout axles fitted to both front and rear wheels. As will be seen below, an electrically equipped model is included in the offerings for the new season.



Cutaway View of Three-Speed Gearset Which Has Large Ball Bearings on Shafts

Three models of Reading Standard motorcycle constitute the line for 1917. These are: Model 17-T, twin with three-speed gear and foot-starter, $275; Model 17-TE, twin with three-speed gear, foot-starter and electrical equipment, $275, plus $30 for electric outfit; Model 17-S, single cylinder motor with three-speed gear and foot-starter, $240. The twin motors are of the 12 horsepower type, while the single cylinder is rated at 6 horsepower. All 1917 motors, as has been the case in Reading Standard power plants in many seasons past, show even greater power than their ratings.

New Exhaust Outlets

While the new Reading Standard twin motor has a number of changes in outward appearances, the dimensions have not been altered. The bore is 3⅜ inches and the stroke 3¾ inches, giving a piston displacement of slightly over 67 cubic inches. The cylinders have been re-designed with exhaust outlets opening straight downward, giving a much more direct and freer passages for the burnt gases and reducing back pressure to a minimum. The cylinders allow the exhaust pipes to be so bent as to afford no obstruction to a free exhaust after the gases leave the outlets.

Digitized by Google

Crankcases on 1917 motors have been made much heavier. The best grade of aluminum is used. The extra weight and purity of the metal makes the cases very rigid, eliminating all possibility of misalignment from strain, etc. All joints are made oil-tight. A much larger breather tube is fitted than in 1916, relieving the pressure in the crankcase and making for an absolutely clean motor at all times.

Magneto at Front

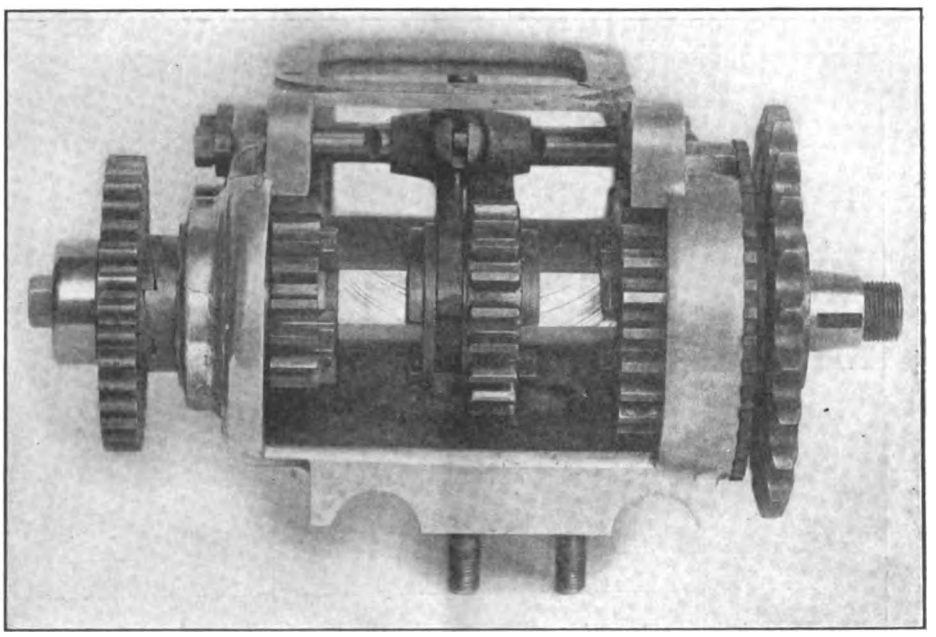
The magneto is now located at the front of the motor, not as an improvement but to give more space for the magneto-generator used on the Model 17-TE. It also affords great accessibility for the ignition apparatus than did the rear position used on previous models. By reason of the magneto being placed forward, one less gear is used in the drive train than in 1916.

New flywheels have been fitted, with the weight properly distributed from a most scientific standpoint, producing a perfectly balanced motor. The 1917 Reading Standard motors can be run at excessively high speed on the stand and no vibration will be discernible. By the new flywheels and accurate timing, the motors show a big increase of power, speed and efficiency over those of previous seasons.

Valves and Gears

Inlet and exhaust valves are made with 45 degree seats. The inlet valves are of nickel steel, while the exhausts are of tungsten steel. The timing gears, as well as all shafts and other important motor members are made from chrome nickel steel, specially treated. Priming cups are fitted to all motors, and there is a gasoline gun in each tank.

In the three-speed gearset several improvements are noticeable. The drive sprocket is now broached on the high speed sleeve gear instead of being screwed on as



Gearset Viewed from Front—Starter Sprocket and Main Sprocket Are Broached On

heretofore. The main ball bearing housing is securely locked on by a headless screw and a corresponding series of notches cut around the entire circumference of the housing. Large and efficient ball-bearings are continued for the 1917 season, for both the foot-starter and the drive side of the main shaft. The gear box is absolutely oil-tight. Heavy felt washers are fitted into recesses on each end of the main shaft and are securely held in place by steel collars.

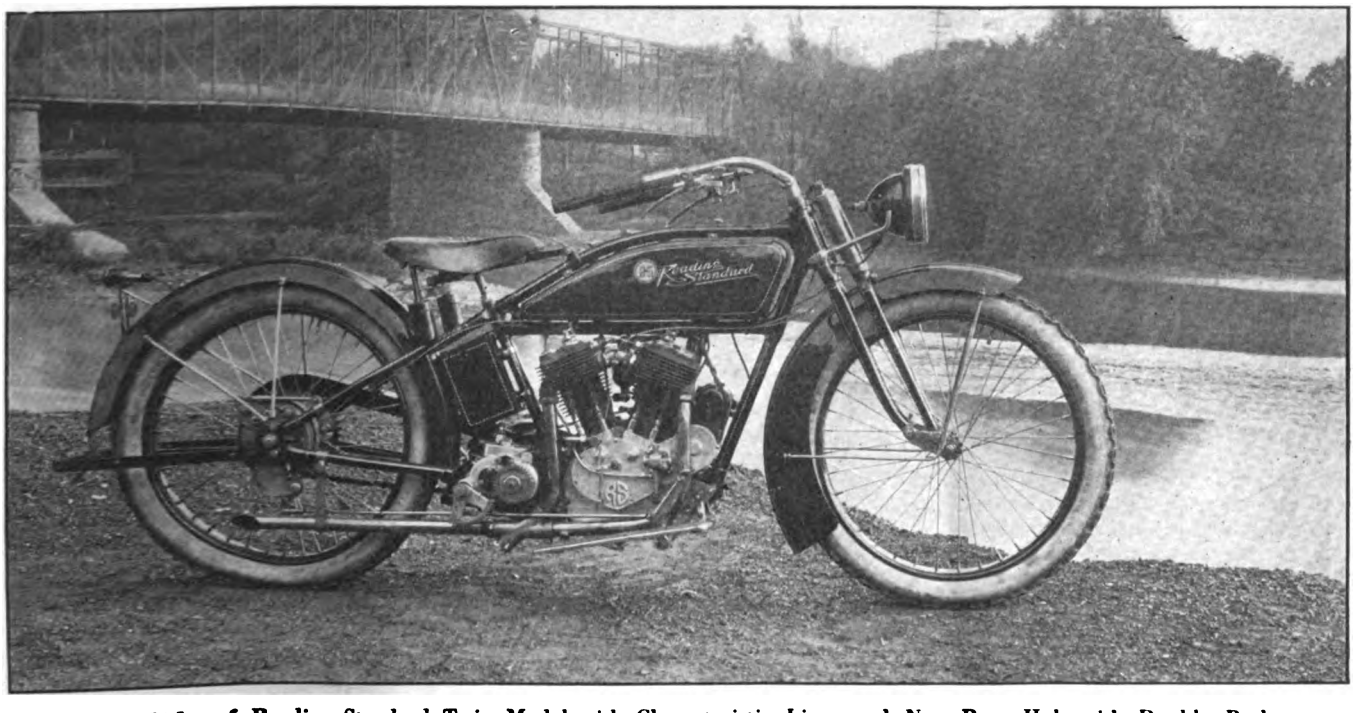
Keyed to Shaft

On the foot-starter side the ratchet pinion is keyed to the main shaft also. All end thrust is thus taken away from the ball-bearing, and in addition, the pinion is readily removed in case of necessity. The teeth on the pinion as well as on the sector are so cut as to match perfectly.

The safety locking device has been removed from the interior of the gear box and transferred to the shift lever. It is now impossible to move the shift lever on its quadrant until the clutch is withdrawn. While the 1916 locking device was very efficient, the new arrangement is far superior, for it is impossible for the rider to strain the shift lever or its connections.

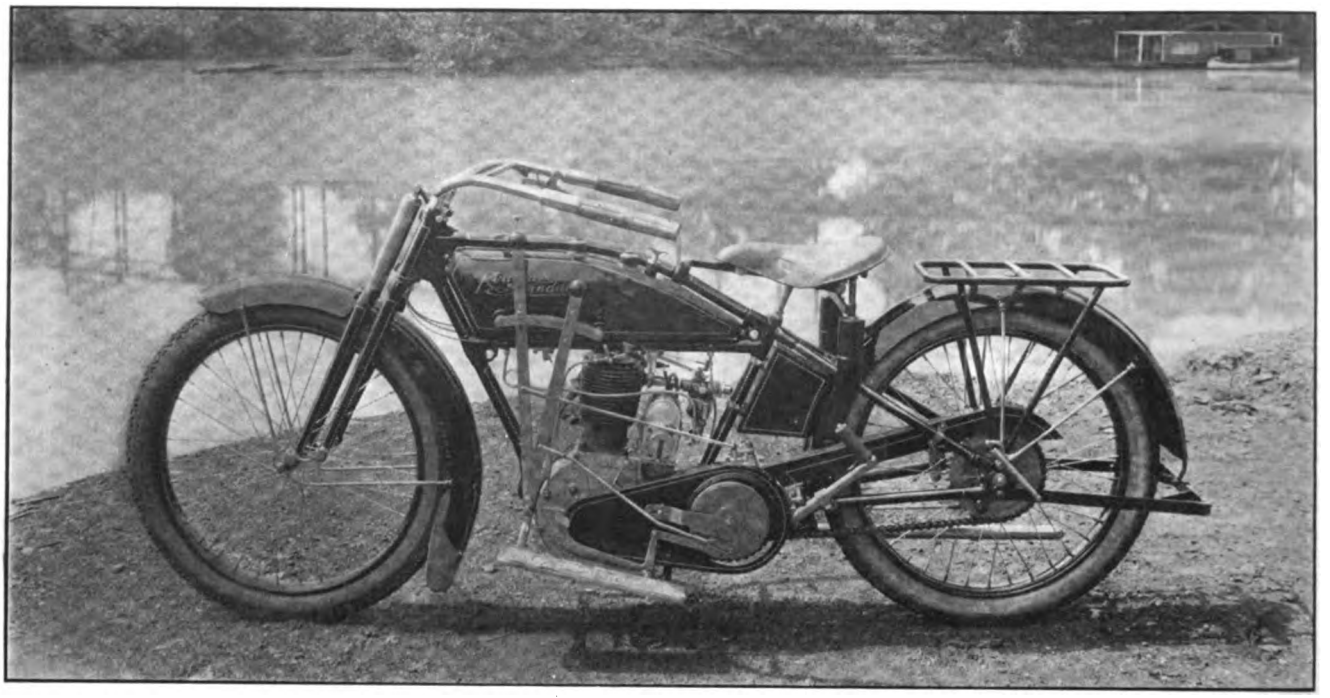
Vanadium nickel steel is used throughout on all gears and shafts. All steels are treated by the special process now in use in the Reading Standard factory.

The front forks on the 1917 models have



Right Side of Reading Standard Twin Model with Characteristic Lines and New Rear Hub with Double Brakes

Digitized by Google



The Reading Standard Single Cylinder Machine, Model 17-8, Using Same Frame and Fittings as Twin Models

been re-designed slightly, although the same principles of action have been retained. The rear portion of the fork is curved forward and new links are used, these being of the three-point type with large grease cups. Fork sides and other parts of fork construction are made heavier than in 1916. Solid reinforcements are inserted in the fork-sides and brazed to withstand sidecar service. The coil springs have been redesigned and are made from vanadium spring steel.

Front Fork Refinements

The frame has been made 100 per cent stronger for sidecar work. The tubing used is of special carbon steel with forged steel fittings. The tubing is heavier than before and heavy reinforcements are used at the most vital points, notably in the front portion leading from head to motor. The use of a knock-out axle in the rear permits the rear fork end forging to be closed, which also increases the strength at this point.

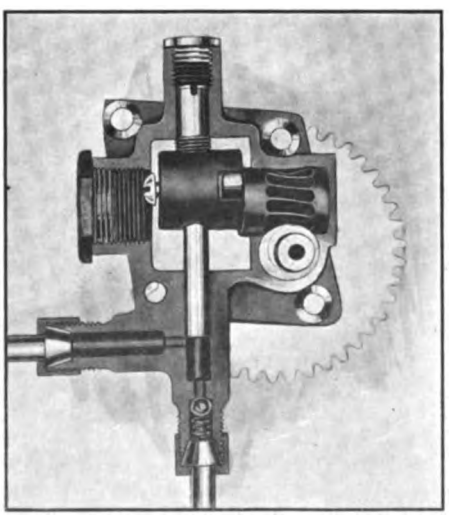
Rims used on 1917 models of the R-S are guaranteed to be much stronger than those fitted to previous models. The holes in the rims are countersunk, allowing for proper alignment of spokes. Forty spokes of heavy gauge are used in each wheel. The rear mudguard remains practically unchanged, while side splashers have added to the front mudguard.

Double Brakes Fitted

An entirely new front hub has been fitted, with much heavier ball-retainers and balls. The flanges are wide, making a much stronger wheel throughout. The new hub is of the knock-out axle type, to facilitate quick removal when occasion demands it. On the new rear hub are fitted two powerful brakes, an internal and an external, working independently. These brakes operate on a drum at the right side of the wheel, the external being operated by a foot lever close to the right footboard, while the internal is actuated from a lever under the left handlebar.

Larger Tank Capacity

The capacity of the tank has been slightly increased and new fastenings fitted. The tank now has nicely rounded corners in place of the square corners formerly used. The Reading Standard firm claims to be



Sectional View of Reading Standard Mechanical Oiler, Showing Simplicity

the pioneer in the use of the stream-line tank.

Accessibility to the chain has been carefully worked out. To take off either guard it is only necessary to remove two screws and a nut. The guards have independent fastenings. Instead of the chain guard being used for a starting crank stop, there is a special bracket and spring clip fitted to the frame for 1917.

The Reading Standard control for 1917 is practically unchanged from that of previous seasons. The three-speed locking device, as mentioned above, operates directly on the shift lever and the clutch has but one rod for both foot and hand levers. Throttle is worked by the right hand grip and spark by the left hand grip, genuine Bowden wire controls being used to connect both grip mechanisms to their respective devices. The valve lifter is under the right grip.

Bosch System Used

The Model 17-TE is fitted with the Bosch lighting system. The outfit consists of a large headlight with a 15-c.p. main bulb and a 2-c.p. pilot bulb. Either bulb is connected for lighting by a simple switch easily reached from the saddle. The horn is operated by a neat press-button on the left grip. The tail light and license bracket are built as a unit. A special, indestructible storage battery furnishes lighting current when machine is standing idle.

The main electric supply is furnished by the Bosch generator, which automatically charges the battery, assuring an ample supply of current at all times. This Bosch product may be termed an ignition and lighting unit, but the currents for lighting and ignition are produced independent of one another. Either can operate by itself and the operation of one does not affect the other. The price of the electrical equipment is $30 extra.

Standardized Construction

By utilizing the same frame for both single and twin models it is possible to use practically all other parts in common. This greatly simplifies the handling of repair orders and is a very important factor for the dealer to consider, enabling his carrying a complete line of parts on a small investment. All three-speed parts are interchangeable on all models, and even to the motor this is the case, with the exception, of course, of the crankcase and number of cylinders.

JONES SETS FASTEST PACE AT TOLEDO MEET

Astride His Harley-Davidson, He Snaps Off Win After Win in Impressive Style at Two-Day Fest of Interstate Racing Association—Mathews and Sudduth Also Score

TOLEDO, O., Sept. 3.—Although big events were scheduled at a number of other places on the map for this date, most of the best half-mile riders in the speed game seemed to choose Toledo as the spot for their efforts today, and the line-up for the races of the Interstate Racing Association included Maldwyn Jones, Shorty Mathews, Fred Nixon, Charles Sudduth, Chuck Morrison, Fred Meyers, and others only a little less advanced on the way to fame.

The track was fast, though a trifle dusty, and the time was good, Jones setting the best mark of the day when he won the five-mile final heat in 5:36. In this heat he had a safe margin over Mathews, who took second place, with Nixon getting third money.

Mathews Takes First

Mathews had also hung up a mark worth shooting at when he took the first elimination heat in 5:38. Nixon was second man across the line, and Sudduth, with his Thor, third.

Jones had won his preliminary heat without much trouble. Luther on an Excelsior getting second and Morrison third.

Then a special match race was started, with Jones on his motorcycle pitted against a racing Mercer automobile. It was a powerful, savage-looking brute, and tore the dust off the turns in a very impressive manner. But a front tire blew out in the second mile, and the race was off, being postponed to next day, when it would be run for best two out of three.

Shorty Gets Match

Jones and Shorty Mathews hooked up for a three-mile match race that was a peach of a speed scrap from start to finish. Neither could show any decided advantage, and the way they fought it out on the turns was no sight for a person given to nerves. The turns on the last lap were ridden sidewise by both of them, with a series of slides that looked like sudden disaster, but the wonderful skill of these two veterans kept them right side up and they roared over the tape in the snappy time of 3:19, with Mathews a nose ahead.

The wind-up race was the unlimited pursuit, this kind of event having proved very popular with the crowd last Sunday. The thinning-out began without loss of time, as Schaefer had trouble in starting and was passed while he was still pedaling. In the second lap Nixon marked Meyers' name off the list, and a few laps later Mathews sent Nixon back home. Sudduth, with his Thor, pulled up on Morrison and passed him, and Jones hove into sight back in the dust and began to colse up on Sudduth. Having disposed of this man, Jones set sail for Luther, the Excelsior rider, and checked him off the program by the time the tenth mile was covered.

Jones Comes In

Then it settled down to a finish fight between Jones and Mathews, with Shorty about two-thirds of a lap ahead of Jones. It was plain that the event would be a wearing-down battle, as neither had enough on the other man to get him quickly. Mile after mile was reeled off, with Jones beginning to show slight gains, but so small that it would take a long time to close the gap. At 14 miles he had whittled the margin down to half a lap, and was reducing it a little every round. In the eighteenth mile Jones had begun to gain more rapidly, and the gap narrowed down to a third of a lap. Then Shorty's oil tank gave up its last drop and he shut off to avoid burning up his motor, Jones shooting past to a winning. Jones' time for the 18 miles had been 19 minutes. Summaries:

First heat, five miles—Mathews, Indian; Nixon, Indian; Sudduth, Thor. Time, 5:38.

Second heat, five miles—Jones, Harley-Davidson; Luther, Excelsior; Morrison, Indian. Time, 5:40.

Consolation heat, five miles—Sudduth, Thor; Morrison, Indian; Meyers, Excelsior. Time, 5.57.

Final heat, five miles—Jones, Harley-Davidson; Mathews, Indian; Nixon, Indian. Time, 5:36.

Three-mile match—Mathews, Indian; Jones, Harley-Davidson. Time, 3:19.

Unlimited pursuit—Jones, Harley-Davidson; Mathews, Indian; Luther, Excelsior. Distance, 18½ miles. Time, 19:38.

HOW THE HONORS WERE SPLIT THE SECOND DAY

TOLEDO, O., Sept. 5.—Due to a judicious mixture of luck, brainy riding and motor pep, the winnings were well distributed among the various contestants at the meet of the Interstate Racing Association on Labor Day, Sept. 4. In the first five-mile heat Luther, Excelsior, led for a lap, and then Maldwyn Jones, Harley-Davidson, pushed to the front and stayed there till the finish. Nixon, on an Indian, tried hard to catch up, but could not make it. The finish was Jones, Nixon, Meyers (Excelsior). Time, 5:39.

Ray Creviston, Indian, fought a long and hard battle with W. Schaeffer, Excelsior, in the second heat. It was only by desperate riding that "Crevvy" finally got a small lead and won. Time, 5:41. Morrison, Indian, was third.

Luther set out to win the consolation heat, taking a healthy lead from the start. Meyers and Morrison fought for second position, but Morrison tumbled in the third mile. Luther came first and Meyers second, in 6:04.

Nixon Wins Final

In the five-mile final heat, Nixon and Schaeffer got off together, leading the field for the first lap, with Jones in third position. Jones passed Schaeffer in the third lap and was overhauling Nixon, when a skid brought him down and out of the running. Nixon, being leader, continued to the finish with Schaeffer second and Meyers third. Time, 5:49.

Jones settled his match with a Mercer racing automobile by winning two heats out of three. He conceded a standing start to the car, while being pushed off himself. Maldwyn finished the first three-mile heat in 3:35 with 100 yards over the Mercer, and then duplicated his performnce in the second heat.

There was a real race immediately afterward when Jones, on his Harley-Davidson, and Creviston, on his Indian, hooked up for a three-mile match. Both rode like demons, and it was anyone's race until the last lap. Creviston skidded on a turn in the third mile and came near going off, but recovered and kept on. The slip, however, enabled Jones to get ahead, and the Harley-Davidson man won with no trouble in 3:30.

In the unlimited pursuit race, Jones had motor trouble and was retired in the early stages. The race simmered down to a finish rapidly, with Nixon and Meyers riding alone. Meyers was passed by Nixon finally at 8½ miles. Nixon's time was 10 minutes flat.

MOTORCYCLE COYOTE HUNTING STIRS BAKERSFIELD

BAKERSFIELD, Sept. 4.—Hunting coyotes with motorcycle and lasso in the big cattle ranges northeast of Bakersfield is the latest sport introduced by the hardy riders of the crude oil metropolis. Ed Tice and Bert Gilmore have been down to the Venice picnic of the L. A. M. C., recruiting a bunch of rough riders to get up a big chase through the sand and sage late in September.

The coyotes are unusually plentiful this fall. When first started they are good for 40 miles an hour, but after being chased a few miles slow down to 20, when the rider attempts to make his capture without dismounting. A lot of new rules for the game are being worked up to make a good sporting day of it when the Los Angeles riders come up to indulge in the chase.

WARNER TO BE BACK ON TRACK VERY SOON

HUTCHINSON, Kans.—Paul Warner, of Ellsworth, the veteran Indian speedster, who had his leg broken in an accident at the recent MacPherson races, reports that he is now out on crutches and will be able to take part in motorcycle races in a week or two. It was at first thought that "Speck" would be permanently out of commission as a racer, but the doctors have assured him that he will be able to continue with the speed boys.

PLAN CLUB FOR HARTFORD

HARTFORD, Conn.—Local motorcyclists are planning to hold a meeting in the near future for the purpose of organizing a club. The first steps were taken at the recent outing and about a dozen riders have already signified their intention to join the organization.

HESS PROVES HE'S BEST AMATEUR AT COLUMBUS

(Continued from page 8)

provided contention all the way through of the sort that had the crowd on its tip toes, but he could not manage to beat out the flying "Crevvy"; Davis finished in second place and Glen Stokes "cinched" third money. "Crevvy's time for the quarter century was 20:21.

Davis had his little inning in the five-mile open "pro" number which he cleaned up in remarkably fine style in 4:02⅕ with Graves hotly pursuing him across the tape and Gene Walker, also riding an Indian, hanging on to Morty's pace.

Stokes Strikes His Gait

Glen Stokes had one grand little opportunity to show just what his Excelsior could do in the way of a speed performance in the two-mile open "pro" number, and the way he showed it made the crowd sit right up and begin to notice things. Stokes fairly flew twice around the dustless course and was clocked at 1:36⅖. And just to emphasize the Excelsior's capabilities Bob Perry stayed right along with his speeding team mate and finished in second berth, leaving the third money for Davis on the Indian.

John Hess proved conclusively that he was the best amateur attracted to the two-day speed affair by repeating and taking both the two- and the five-mile National Amateur Championship events, and coming so close to Sydney Dean, also an Indian pilot, in the 25-mile champ event that the latter won only by the figurative "nose." Hess's time for the two-mile champ was 1:51⅕, and he led home Kenneth, Indian, and Joe Hallock, Excelsior, in the order named.

In the five-mile event Hess pointed out the moneyed path to Dean, Indian, and Hallock, Excelsior, taking the biggest pot for himself in 4:23⅕.

A Question Raised

But while Hess's performance during the two-day meet by which he cleaned up four of the six national championship events in the amateur field would seem to "cinch" for him the Bosch trophy, especially so as he took second in the 25-mile event, the question of his amateur standing was raised today and it is whispered about that a protest will be lodged against him based on the assertion that he is employed by a Chicago motorcycle agent and that the machine which he rode is not his own property. Either one of the claims, if substantiated, is enough to make a full fledged professional out of this speedy amateur shooting star.

Dean's win in the 25-mile Championship event was made in 21:28⅘; Hess rode into second place and Hallock on the Excelsior into third.

The curtain was drawn on the day's program by a series of pot shots at the mile track record of 47⅗ held by "Crevvy." The record escaped unscathed, however, the closest approach to it being the time of 48 flat made by Davis on his Indian. Don Johns, whose fall of yesterday had kept him out of the running during all of today's "pro" events, managed to pull himself together enough to take a shot at Crevvy's mark and made the distance in 48⅖.

Morty Graves and Gene Walker lent a degree of color to the racemeet when their machines caught fire. Fortunately, both escaped uninjured, but the motorcycles were badly damaged. The only other mishap involved Kenneth Alberts who spilled twice during the running of the 25-mile amateur number but came off with nothing worse than a few scratches and a little shaking up.

The summaries:

Two-mile F. A. M. National Amateur Championship—John Hess, Indian, won; Kenneth Alberts, Indian, second; Joe Hallock, Excelsior, third. Time, 1:51⅕.

Twenty-five-mile F. A. M. National Professional Championship—Ray Creviston, Indian, won; Jim Davis, Indian, second; Glen Stokes, Excelsior, third. Time, 20.21.

Five-mile F. A. M. National Amateur Championship—John Hess, Indian, won; Sydney Dean, Indian, second; Joe Hallock, Excelsior, third. Time, 4:23⅕.

Five-mile Professional Open—Jim Davis, Indian, won; Morty Graves, Indian, second; Gene Walker, Indian, third. Time, 4.02⅗.

Twenty-five-mile F. A. M. National Amateur Championship—Sydney Dean, Indian, won; John Hess, Indian, second; Joe Hallock, Excelsior, third. Time, 21:28⅘.

Two-mile Professional Open—Glen Stokes, Excelsior, won; Bob Perry, Excelsior, second; Jim Davis, Indian, third. Time, 1:36⅗.

One-mile time trials against track record of :47⅗ held by Creviston—Don Johns, Indian, :48⅘; Glen Stokes, Excelsior, :48⅕; Bob Perry, Excelsior, :48⅕; Gene Walker, Indian, :49; Jim Davis, Indian, :48; Ray Creviston, Indian, :48⅘.

Discovered At, Not By, Columbus

IF the F. A. M. Booster Badges were not very much in evidence, take it from Shelby A. Falor, the new F. A. M. President, it was because the crowd was so great that the 200 odd boosters were lost in the shuffle. From returns available at the trackside, the trademen were fairly generous in their support of the meet and enough of the Booster Badges were sold to stimulate new enthusiasm in the hearts of the new F. A. M. officials.

And speaking of F. A. M. finances and trade support, it was also announced at the track that the Harley-Davidson Motor Co. has promised to donate to the F. A. M. the sum of $500 on about the same terms as a similar offer made at the Sacramento convention by the Excelsior Motor Mfg. & Supply Co. That offer called for a $500 donation when the membership totals 20,000 or for a $500 donation when the F. A. M. is incorporated. The Harley-Davidson folk offer $500 to be paid over when either one of these events shall have transpired.

While just about all of the real work incidental to staging the racemeet fell upon the broad shoulders of T. R. Thomas of the Goodyear staff, Jack Cameron and E. R. Stillwell were right on the job to make the trade visitors at home and thus relieve the overworked Thomas. And make believe that said Cameron and aforementioned Stillwell can't do the "merry mit" act!

There was not a hitch in the racing program. Credit for the smoothness goes in large measure to Roy S. McConnell, the Ohio State F. A. M. referee, whose ideas and experience lent individuality to the program as well as to Chairman Donovan of the F. A. M. Competition Committee, who was right on the job to see that things were carried through according to Hoyle.

And speaking of officials, Donovan himself handled the starter's gun and wielded it in an impressive manner; W. H. Snyder made an exceptional Clerk of the Course, and Harry G. Jacobs made his presence felt in his capacity as announcer. The judges were Shelby A. Falor and T. J. Sullivan, and the timers Edward Hawkins, C. E. Barr and P. I. Haynes. McConnell, of course, was referee.

It was like getting back to old times to see Oscar Hedstrom in the Indian racing camp. At one time he was caught putting on a tire and with as much skill as he had

(Continued on page 46)

SCHACK STARTS ON ANNUAL COAST TRIP

ANGOLA, N. Y., Sept. 1.—W. G. Schack, general manager of the Emblem Mfg. Co., maker of Emblem motorcycles and bicycles, left Angola last week headed westward on a trip which will carry him to the Pacific coast before he again heads for home. Once each year Mr. Schack makes a complete tour of the western and coast States calling on all of the regular Emblem dealers and interviewing jobbers and distributers who are seeking to take on the Emblem line. His trip generally embraces from five to six weeks and it is doubtful this time if he will be able to get back to Angola until the latter part of October, or perhaps not until after the Chicago show.

THIS VACATION TRIP WAS A RECORD-BREAKER

Four Members of Los Angeles M. C. Are Credited with Making Hardest Pleasure Journey Ever Chronicled; Los Angeles to Reno and Return, 1,137 Miles, by the All-Desert Route

By FRANK REED

Would You?

¶ If you had to plug mile after mile of sun-blistered desert trail, where even the ubiquitous automobile balks in despair;
¶ If you were forced to traverse unknown roads at night, with human habitations so scarce as to be almost negligible;
¶ If your running schedule was shot to pieces and you had to subsist on a can of cold beans;
¶ If your spills were numerous, and your eyes, nose and ears were filled with burning sand;
¶ If you had to keep at that sort of thing for eight days and cover 1,137 miles—would you call the trip a vacation?
¶ Well, that would depend entirely upon your sportsmanship. The four riders who figure in the accompanying article went through just such a program and are game for more. They belong to the new school of motorcycle roadsters who have implicit faith in the mounts and defy Nature in her sullenest moods. This is an unusual story of an unusual trip. You'll enjoy it.

On a Main Road in Mono County—Plenty of Sand and Sage Brush

LOS ANGELES, Cal.—All kinds of motorcycle records have been established on the Pacific Coast, but it has remained for four members of the Los Angeles M. C. to find a means of setting up a new sporting feature that is distinctly out of the ordinary. Ed. Peterson, George Martin, Ray Guthrie and Ralph Maydole, who have just come back from a journey of 1,137 miles, from Los Angeles to Reno and return, claim that they have made the most severe motorcycle vacation trip ever chronicled in these parts, and all who know anything about the conditions under which they rode agree with them.

On the All-Desert Route

They followed the all-desert route to Reno, through Inyo County and Bishop and returned through the high Sierras, via Truckee, and down the valley, touching at Stockton and Bakersfield and then taking the Ridge Route back to Los Angeles. If any trip of 1,137 miles could subject men and motorcycles to a harder test the four Los Angeles club riders would like to see it done. They made the journey in eight days, with a one-day layover at Lake Tahoe to rest up in.

The quartet left Passmore & Sayre's, in Los Angeles, at 2 p. m. Saturday, August 19, and made Mojave through the hot Bouquet Canyon and the lower desert at 6:30. Here they ate and slept to the tune of a howling desert wind storm.

To get out at six in the morning and reach Bishop by night was their ambition, but soon the sand began to get in its work. Guthrie was the first to demonstrate the quickest way out of a rut. Maydole soon took the first of his grand score of 18 flops for the trip; then Peterson, going downhill, dipped up a lamp full of sand after breaking glass and bulb. This fixed his forks so that they required a visit to a blacksmith who just turned over his shop to the boys, and a piece of pipe helped make a firm repair.

Peterson Cooling Off His Tires Just North of Bishop, Cal.

Five Hours of Plugging

The speedometers showed 80 miles from Mojave, and it was encouraging to learn that although only five hours on the road they had covered enough rough stuff to keep the average automobile busy a day and a half.

It was all desert to Lone Pine. The sand just gets in eyes and nose and mouth, and burns. Martin says that the water at Lone Pine, where they had dinner, was the finest he ever drank. After dinner Ed. Peterson, sick of the rut, tried riding the center for the 25 miles to Lone Pine. He hit a hot pace, wide open, and Martin followed with half throttle in the rut. That showed how sand uses up the power. Martin had the best of this arrangement.

At Independence they waited 30 minutes for the other two fellows. They made Big Pines at 4 p. m. the second day out, still 27 miles from Bishop, Maydole, leading, rode eight miles on a side road to Goldfield. A sliver of volcanic rock punctured Martin's tire. It was getting dark. Peterson had no

FATCH WINS TWO AND SETS NEW TRACK RECORD

LA PORTE, Ind., Sept. 5.—W. Fatch, an 18-year old rider from Crown Point on his Harley-Davidson, captured two first places in the card of four races at the fair grounds yesterday. Fatch's time for the 10-mile free for all was 10:50⅕ and for the 15-mile twin 16:18⅗. E. Hodson, Harley-Davidson, took the 10-mile stock opennig race in 12:23. Harry Freese, Indian, took the 15-mile for singles in 18:35. Fatch covered the mile in a trial in 1:04⅗, and setting a new record for the oval. The former time was 1:17. The attendance was nearly 1,000 and the track condition fine.

SPRAGUE STARS AT COSHOCTON ON LABOR DAY

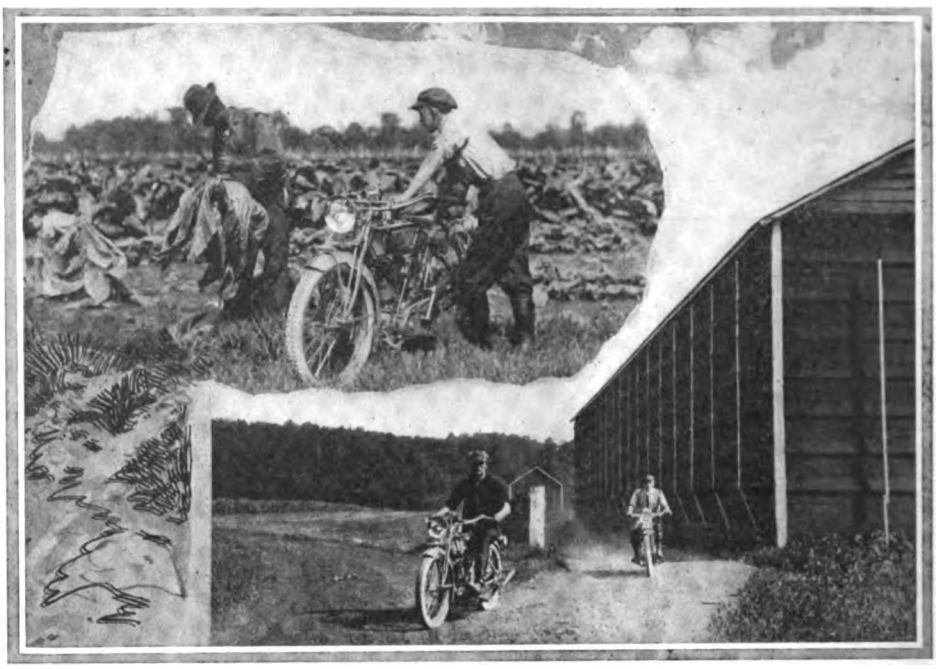
COSHOCTON, O., Sept. 5.—H. Sprague, Harley-Davidson, won the 10-mile and five-mile events at the meet yesterday under the auspices of the Central Trades & Labor Council. Sprague's time for the ten was 12:45 and for the five miles, 5:59. W. Bucher, Indian, was victor in the 15-mile open, in 18:20.

Gold, Harley-Davidson, came second in the 15-mile, with Sprague third. Bucher, on his red twin, took second place in the 10-mile, while Gold was third. Bucher also was second in the five-mile and again, in this race, Gold took the next position. The time made were considered excellent, figuring the state of the track.

WHEN A "BLUE STREAK" STRUCK SWEDEN

AKRON, O.—That Goodyear Blue Streak motorcycle tires perform as creditably in foreign lands as in their home country was shown recently in a 1,000-mile run staged out of Stockholm, Sweden, according to the Goodyear Tire & Rubber Co. Five of the six motorcycle riders using Goodyear tires finished the run with perfect scores.

PROVING THE MOTORCYCLE A GOOD "SMOKE PRODUCER"



A Couple of Pope Twins Doing a Variety of Useful Things on a Connecticut Tobacco Plantation—in the Fields and at the Barns

MORE and more every day are motorcycles finding their place on the farm. Their unequaled usefulness for running errands, getting around to the fields where work is going on, their ease of operation and economy are gaining for them the recognition they deserve.

It is small wonder then that the prosperous New England tobacco growers have enlisted the aid of the motorcycle and are finding it invaluable in their work, particularly because the shortage of help this year makes it pay for the boss to get over the ground from one operation to another as rapidly as possible.

The accompanying photographs illustrate some of the various phases of tobacco growing and harvesting.

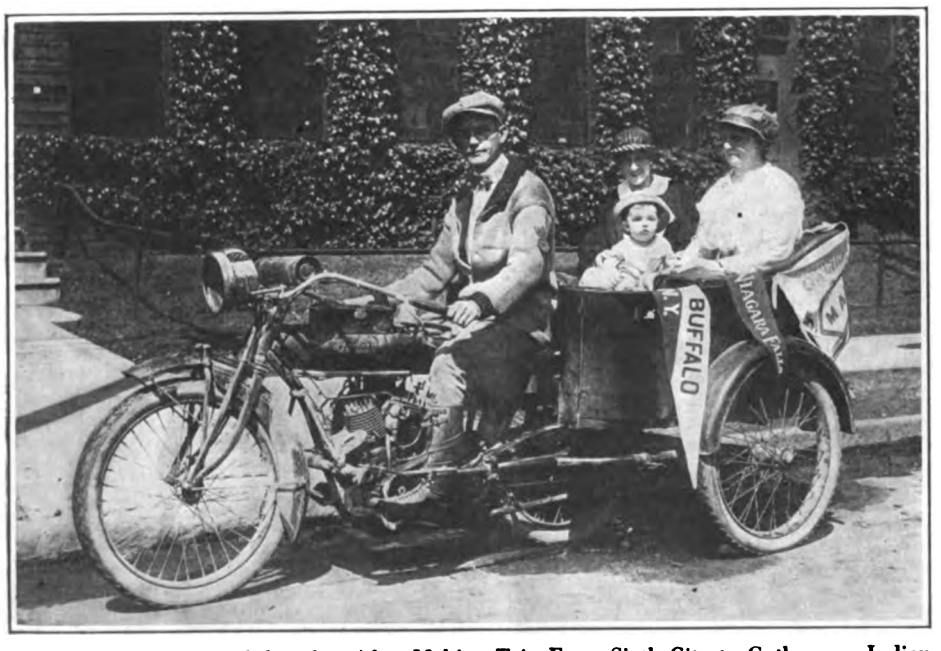
There are two methods of gathering in the tobacco pursued by the New England grower.

By one method, known as "priming," the large bottom leaves of the tobacco plant are hand picked as soon as they ripen, placed in baskets and carted to the large tobacco barns. Here girls and women are employed in stringing the leaves on twine, after which the tobacco is hung up to dry.

By second method, the entire stalk is cut down with a sharp hatchet and "strung" on a wooden lath, provided with a tip, which looks like a spear head. The laths, with from five to ten stalks strung on, are placed in racks on the wagon, carted to the barn and directly hung up.

The tobacco barns dot the landscape for miles in every direction. They are enormous affairs and practically all have hinged clapboards which can be raised to furnish ventilation.

THIS CLEVELAND FAMILY HAS BEEN "CYGNETIZED"



Formerly Were Automobilists but After Making Trip From Sixth City to Gotham on Indian with Cygnet Rear Car Are Fully Converted to the Combination

CAMPBELL IS AWARDED MEMBERSHIP PRIZE

WESTBORO, Mass.—Jes Campbell, New England manager for the Harley-Davidson Motor Company, has been awarded the prize by Secretary Gibson for turning in the most applications to the F. A. M. for the week of August 28. Mr. Campbell sent in 13 applications.

TWO MORE REGISTER

WESTBORO, Mass.—Among repair shops which have recently registered with the F. A. M. are those of W. & E. Beecroft, of South Highland avenue, Ossining, N. Y., and F. E. Dickey, Lincoln Center, Kan.

FORT WAYNE CLUB AFFILIATES

FORT WAYNE, Ind.—The Indian M. C., of which J. J. Schlink is secretary, has received notification of its affiliation with the F. A. M. from Secretary G. B. Gibson, in Westboro, Mass.

MORE OF UNCLE SAM'S MOTORCYCLE WARRIORS

Clean-Cut and Nervy Riders Who Are Surprising Army Officials by Their Machine Gun and Dispatch Performances Under All Sorts of Conditions

IN the picture at the top of the left hand column are members of the machine gun company of the Englewood (N. J.) Rifle Club, taken at Fort Ethan Allen, Vt., where they are in training. Immediately below are Cooks Vissing and Bryce, of the Second Massachusetts Infantry at Columbus, N. M. They are driving to the trenches with an Indian ammunition caisson carrying 3,600 rounds of rifle ammunition and a completely-equipped mess outfit.

At the left lower corner is a scene at Columbus, N. M., with "gasoline cavalry" manoeuvring. One of the Englewood Rifle Club's Maxim machine guns at Fort Ethan Allen is the subject of the illustration at the head of the middle column, and directly below is one of the Second Massachusetts' guns ready for business.

In the right upper corner is Piece No. 2, belonging to the Massachusetts regiment just mentioned, showing the adequate shield protection against rifle bullets and shrapnel fragments. The next view below shows Sergeant H. F. Drake driving Capt. H. F. Hatwell, Second Massachusetts, after a 50-mile jaunt into Mexico from the Columbus camp.

The standing figure next below is "Red" Armstrong, Indian racing man and expert rifleman, now with the Englewood force at Fort Ethan Allen. Earl, or "Red," as you choose, went into the tournament at that camp and qualified as expert with a score of 215 out of a possible 250 points. He used rifle, revolver and machine gun according to the rules of the match.

"Red" had never used a rifle or revolver before, at least not to any extent. On hearing of the tournament, he got a .22 calibre rifle and went back into the woods and practiced assiduously. When the time came, he went right at it with all three arms and copped out his 215. It took only 180 points to get expert rating.

The last picture is that of Lance Corporal J. W. Inglis, of Sidney, N. S. W., who left with an early contingent for service in Europe. He took with him the Indian shown in the picture, and uses it in preference to English and Australian models of two-wheeler. He is employed as a dispatch rider.

HAPPY CROWD ON MILWAUKEE GOOD FELLOWSHIP

Fourth Annual Outing Brings Out One Hundred Enthusiasts for Trip to Kilbourn—All Hands Finished and Received Sterling Silver Watch Fobs From Milwaukee Journal

By PATHFINDER

MILWAUKEE, Wis., Sept. 4.—When the last tired but happy tourists in the fourth annual Good Fellowship Tour of the Milwaukee M. C. checked in at the St. Charles Hotel, it marked the finish of one of the most successful events of the kind ever held in this country. The tour was held Saturday, Sunday and Monday, to the Wisconsin Dells, at Kilbourn, and return, a distance of 140 miles.

There were a hundred enthusiasts in the party and the sidecar outfits outnumbered the solo machines almost two to one.

A feature that attracted considerable attention was the appearance in the tour of a half dozen of the new olive drab 1917 Harley-Davidsons. One of these was used by Hugh Sharp, the pilot, with Irving Janke driving. The latter condition no doubt accounted for the fact that Pilot Sharp was frequently in hot water over the speed limit question.

Another feature was the number of feminine motorcyclists who accompanied the tour, both as sidecar passengers and drivers. The Misses Crystal Haydel and Lillian Hauerwas drove sidecar combinations.

The tour proceeded through Delafield, Johnson's Creek and Lake Mills, a stop being made for dinner at the last named point. The afternoon run was to Baraboo and through Sauk City to Prairie Dusac, which was the night control. Sunday, the second day, was set aside for the outing at the Dells, the drive to Kilbourn, over 14 miles of solid macadam, being made in the morning, and the return trip being made to Baraboo for the night.

The start for home was made Monday morning over roads that were soaked by an early rain. The tourists ran out of the rain belt, however, after putting 40 miles behind them. The return route was practically the same as that followed on the out trip.

Cup Goes to Janke

Paul Bress acted as tourmaster, and had as his aides Harry Grande and Elmer Owen. Hazen Parsons, E. L. Koeppell and William Chesak, comprising the board of judges, awarded the Lacy Crolius cup in the neat rider contest to Irving Janke, who looked at the end of the tour as if he had stepped out of a costumer's window, despite the fact that the route had been quite severe on togs. A critical examination of his machine failed to disclose a mud spot, and on the whole it looked as if it had just been taken from the crate.

The Mueller Cycle trophy was awarded to Arthur Eckes as being the best representative of the Good Fellowship spirit of the Milwaukee tours.

Every rider who started was in at the finish and received a sterling silver watch fob presented by the *Milwaukee Journal*. That newspaper sponsored the run and gave it columns of excellent publicity.

FORT WAYNE INDIANS TO HOLD ENDURANCE RUN

FORT WAYNE, Ind.—The Indian M. C. of this city announces the holding of its second endurance run on September 17, the route being from this city through Roanoke, Huntington, Wabash, Marion, Montpelier, Bluffton and Decatur to Fort Wayne. The distance is 142 miles.

Two schedules are to be maintained: 25 miles per hour for solo riders and 22 for sidecarists. The entry fee will be $1 and entries will close on September 16 at 6 p. m. Address J. J. Schlink, secretary, at 122 Columbia street, this city.

MADISON ASSOCIATION MEET FOR SEPT. 17

MADISON, Wis.—Seven events are slated for the meet of the Madison Motor Cycle Race Association, to be held at the Dane County fair grounds on September 17. The opening event will be a one-mile time trial for twins, and this will be followed by a five-mile for singles and a five-mile for twins. There will be 10-mile races for twins and singles, a 15-mile for singles and a 25-mile for twins.

The track is a one-mile oval with dirt surface. Entry is free, but post entry is $1. Communications should be addressed to M. J. Morrissey, secretary, 113 State street, Madison, Wis.

DAVIS EXPORT BUSINESS WAS LARGE

DAYTON, O., Sept. 2.—The export business of the Davis Sewing Machine Company has broken all records this year, and reports from abroad show that the field for the Dayton motor bicycle in particular is almost unlimited. Europeans, the general trend of foreign agents' reports says, are partial to lightweight machines which are clean and not heavily powered.

WEBB LEAVES DAVIS

DAYTON, O., Sept. 2.—H. W. Webb, who has been connected with the cycle department of the Davis Sewing Machine Company, maker of Dayton motorcycles and bicycles, has severed his connection with the firm to join the forces of the Domestic Engineering Company, makers of the Delco lighting systems for farms. He will be located in Philadelphia.

ROGERS HEADED BACK FOR GOSHEN

President of Chicago Sidecar Firm, Accompanied by His Wife, Is on Last Part of Extensive and Eventful Sidecar Tour Through Canada and the East

NEW YORK, Sept. 2.—President R. F. Rogers, of the Rogers Manufacturing Company, producing the Rogers sidecar, has left this city en route for his home in Chicago. He is using a Henderson with sidecar of his own manufacture, and is accompanied by Mrs. Rogers.

While in New York, Mr. Rogers visited Irving Beck, Eastern representative for the Rogers product, in his new quarters at 1691 Park avenue, this city. He arranged a number of details for the new season while here and expressed himself gratified with the business done in this section, in particular, during the 1916 season.

The Rogers left Goshen, Ind., three weeks ago bound for the East. They made their first stop at Detroit, and proceeded to Buffalo, Toronto and Kingston, Ont. Mrs. Rogers alternated in driving with her husband during the trip. Passing through southern Canada they went to Montreal and shortly afterward turned south and rode through the Adirondacks and Green Mountains into the Berkshires, thence into Massachusetts.

In New England the Rogers stopped in Boston and Providence, R. I., as well as in some of the smaller cities. In speaking of the mountain sections in which he had passed through, Mr. Rogers said: "I was brought up in the mountains and consequently love them. We have had a glorious trip, magnificent scenery and fine weather throughout. The roads were very good, with the exception of some in Canada. Our return trip will take in as much mountain country as possible, and we are starting back early as we wish to go while the weather is fine."

Mr. Rogers wears a Norfolk coat of homespun with riding breeches and English spiral puttees.

His riding costume makes for comfort as well as for neat appearance, and he says that his reception at hotels all along the journey has been a most cordial one. "If motorcyclists took care of their personal appearance," says the genial president of the sidecar firm, "they would all receive cordial welcomes, no matter where they stopped."

In speaking of the 1917 outlook in general, Mr. Rogers said that dealers all along the line were very optimistic and that some even looked for a huge season as compared with former years.

FRISCO DEALERS SELLING FOR EXPORT

SAN FRANCISCO, Cal.—While little has been said about it in the past, San Francisco dealers are getting a little export business right along, and in the aggregate it is an item of some importance. Some of the business is done direct, though much of it is through mercantile houses having connections in the Orient or the various Pacific islands. A rather striking bunch of export orders came last Friday to Maggini & Perkins, local Harley-Davidson agents, who made four sales that day, three of them for export. One was direct to Shanghai, China, and two were shipped through local wholesale houses. The fourth is to be used in electrical construction work near Montague, Cal.

FOUR-STATE RUN FOR PROVIDENCE CLUBSTERS

PROVIDENCE, R. I., Sept. 5.—Members of the Providence M. C. will participate in a run through four States on Thursday next, leaving the clubhouse at 8 a. m. on that morning. Four days will be consumed in the run. At present, ten members have signified their intention of joining the affair, which is under the direction of President C. K. Joslyn, Secretary G. Edwards and D. W. Gravelle.

The itinerary includes Hartford and New Britain, Conn.; Springfield, Pittsfield, Mass.; North Adams, and the Mohawk Trail to Greenfield, Springfield, Worcester and Boston, thence back to Providence. The party will arrive some time on Sunday, September 9.

Speed will not figure in the trip. The party will go for pleasure only.

WINNER IN RACE WITH MONOPLANE AT READVILLE

Donald Pope, Indian Speedster, Who Showed His Heels to Fast Flier in Recent Novelty Event on Popular Massachusetts Oval—Pope Is Astride Machine

DEMONSTRATE THE HARLEY-DAVIDSON GUN OUTFITS

PROVIDENCE, R. I., Sept. 7.—During the convention of the International Firemen's Association held here last week, hundreds of people were given their first look at a motorcycle machine gun and caisson. Frank J. Burnett, local agent for the Harley-Davidson, entered two new machines in the event, and they proved to be of much interest as the ancient squirters themselves.

The machine gun was operated by Lewis Knight, formerly a dispatch bearer in the United States army, now employed by Mr. Burnett, while the ammunition vehicle was in charge of Reginald Howarth, who has just returned from Plattsburg, where he taught the rookies how to ride.

Following the parade the machines were taken to Newport, where a demonstration was given before the Newport Arms and Defense Association, which is backed by wealthy Newporters.

WHAT DO YOU KNOW ABOUT MOTORCYCLES?

Photograph No. 2 in the Motorcycle Identity Contest will be found on page 35 of this issue. Every mail is bringing us letters from riders stating that the Contest is one of the most interesting features we have ever presented, and we believe you'll enjoy it. Page 35 tells all about it and gives the first list of those who submitted answers.

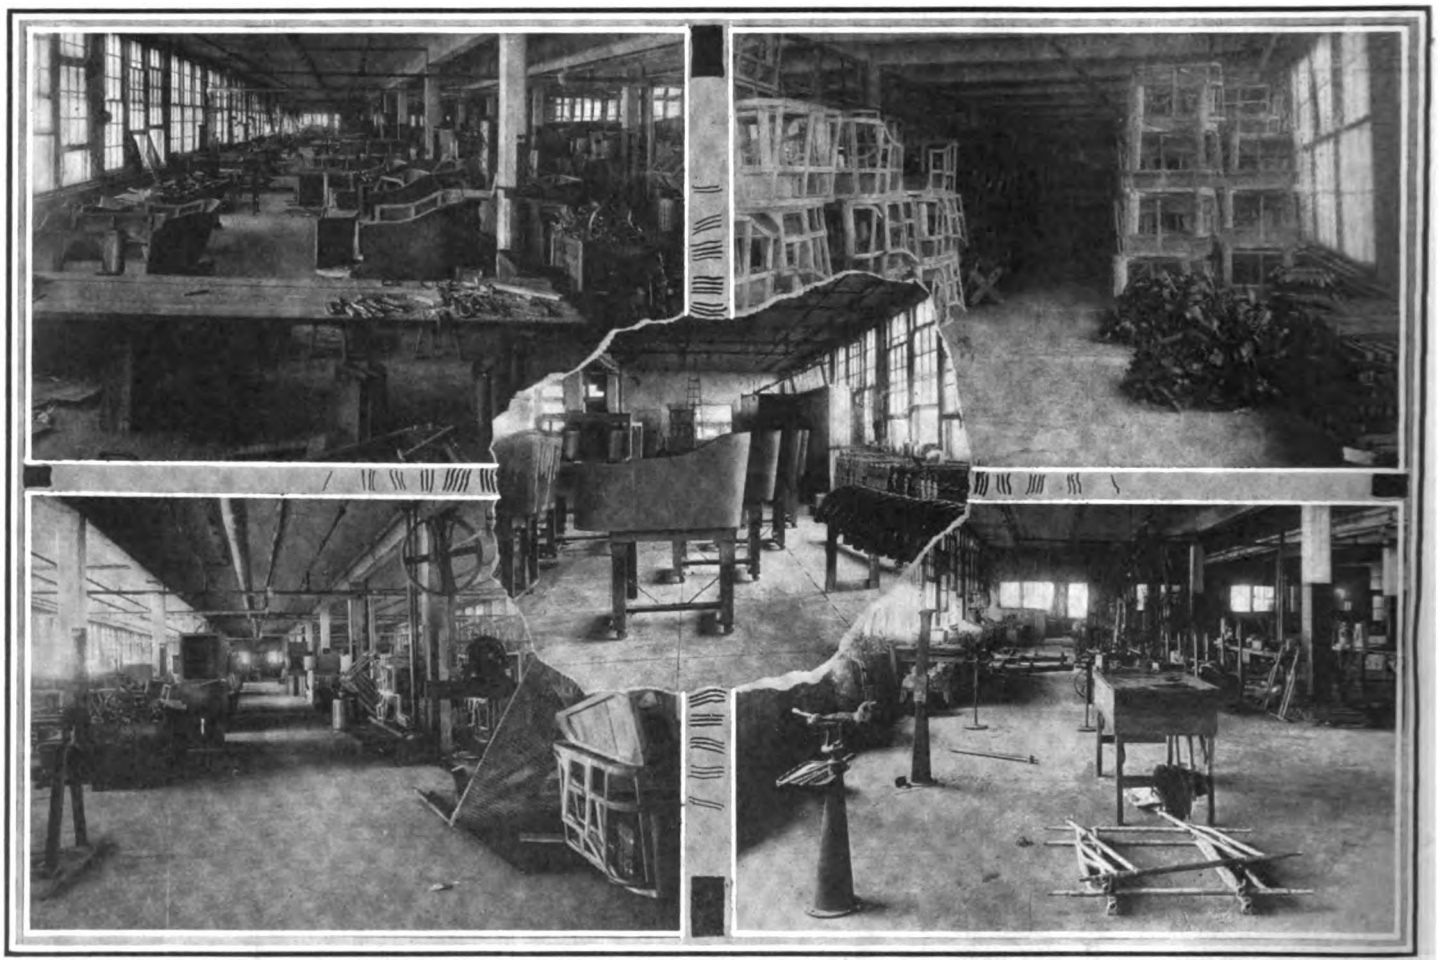
WHERE SPECIALISTS BUILD CYGNET REAR CARS

A Trip Through the Factory at Buffalo, N. Y., Shows Care Used in Constructing Popular Attachment and Demonstrates Rapid Growth of the Business



Upper Left, the Extensive Body Building Department with Wood Frames Being Metalled; Right, Stock Room, Where All Parts Await the Assemblers in Huge Quantities; Lower Left, Woodworking Section—Note Excellent Lighting; Right, Frame Department—In the Rear Is the Special Assembling Jig; Center, Bodies Awaiting Color Spray and Brush in the Paint Shop

BUFFALO, N. Y.—Since its introduction to the motorcycle trade last season, the Cygnet Rear Car has met with huge success and hence a trip through the factory where these cars are produced will be of interest to all who desire to share their riding pleasures with one or more passengers. The views shown herewith were taken at the home of this popular passenger-carrying attachment, the Cygnet Rear Car Company, 1200 Niagara street, this city.

While the Cygnet product is made in both pleasure and commercial types, there is no distinction made as to workmanship and finish between any of the models. The same care, in fact, is given to the van body as is given to the pleasure car; this is assured, on the one hand, by the company making all its parts right in the factory, and on the other by a picked force of specialists in all departments. Any unsatisfactory performances due to material or parts being obtained from outside sources are thus eliminated from the Cygnet product.

Frame Department

In going through the factory, the visitor starts with the frame department. Here are to be seen the various tubular parts and drop-forgings ready for assembly into the chassis. A large and heavy jig is provided here so that all frames shall be assembled exactly alike, without even a variation of 1/1,000 of an inch. While in this frame the joints are welded, thus ensuring against any slippage as when the joints are held by pinning.

Sand Blasting Frames

The frames after being welded are subjected to a sand blast, from which they emerge perfectly smooth and clean. There are no unsightly lumps of metal at the joints and the resulting smoothness ensures the enamel taking perfectly at such points and making the whole job appear neat.

Next in order is the body building department. Here the wood frames are built up from the parts previously worked up in the wood-working department. The frames are here made ready for metalling —putting the sheet steel outside panelling on, fixing the apron, etc. In the department devoted to this step in Cygnet construction are complete metal-working tools, benches and all manner of appliances for working sheet stock.

There is a special machine, costing $2,000, in this department, on which the fenders are rolled. The sheet steel used is formed, without cracking it, into the graceful curves which characterize Cygnet guards. Two men operate this machine.

Following the metalling of the body, it is transferred to the painting division, along with fenders, frames, etc. The enamel is put on all bodies and other parts by spraying, thus sending the color into all corners and ensuring an even coat all over the job. The bodies are mounted on wheeled frames so that they need not be handled until after the various coats have dried. Here may be seen racks of fenders in different colors and rows of frames all awaiting the enamellers in their shielded corners.

Extensive Stock on Hand

The stock room of the Cygnet firm is very extensive. There are tiers upon tiers of bodies in the rough, piles of springs and connections, cases of rims and hubs and quantities of the various components which make up the Cygnet chassis. A good idea of the magnitude of the resources of this firm can be gathered during a walk through this department.

The enamelling completed, the bodies and frame parts are taken to the ovens for baking. There is a huge battery of these

Digitized by Google

ovens, the capacity of which is thirty cars per day. The most approved methods of baking are used and great care is taken to see that proper temperatures are maintained, in order to ensure the perfection of coloring, etc.

Following the baking, the bodies are taken to the upholstering department, where the springs, filling and covers are put in place. As in other departments of the factory, all employees in this department are specialists in coach-upholstering.

Final Assembling

In the meantime, the chassis has been built up, enamelled and baked and its component parts (frame, wheels and tires and connections) have been brought to the assembling department. Here the components are put in place and the bodies attached, and it only remains for a final inspection before the rear cars are ready for shipping.

Near this department is one in which the Cygnet cars are attached to motorcycles. The cars are crated carefully close to the shipping department so that the minimum of handling is necessary to put the product in position for loading into the cars. A stock of crate frames is on hand at all times and it only remains to mount the Cygnets and nail the frames together after a paper wrapping has been put on.

There are 120 men employed in the Cygnet factory. In January of this season the firm leased one-tenth of the space used at present, thinking this would be ample for 1916 production, but less than five weeks later an increase had to be made. A continual increase then became necessary at regular intervals and at present the space occupied is ten times that occupied at the start of the manufacturing last Fall.

The company has on hand over $200,000 worth of material, enough to finish several thousand Cygnet Rear Cars. Prompt deliveries are thus ensured, no matter what the number called for.

PROPOSE MOUNTAIN PARK RACE FOR DENVER

DENVER, Colo., Sept. 4.—Realizing that Colorado Springs received a large amount of advertising from the automobile and motorcycle races held over the Pikes Peak highway recently, followers of the sport here are beginning to wonder if it would not be a good plan to put Denver on the racing map next year. "Why not a race over Denver's mountain parks next year in conjunction with the Pikes Peak climb?" is the question being asked. The course could be from the State capitol, out West Colfax, over the new Golden Road and through that town; then could come the dash up Lookout mountain and its curves of hair-raising windings; through Bergen park, out to Evergreen and then down the beautiful Beak Creek canon to Morrison; from there on the racers could make their fast time into the city, and coming down Logan or Broadway, finishing a contest that would startle the world. The distance over such a course would be somewhere between 60 and 70 miles.

MUCH OF CYCLE INTEREST IN FIRST "FIRESTONE"

AKRON, Ohio, Sept. 1.—Things of motorcycle interest are by no means forgotten in the first issue of *The Firestone*, the new house organ of the Firestone Tire & Rubber Co. An interest-compelling and valuable description of a "back to nature" exihibit, set up in the window of the Portland branch of the Firestone, with Harley-Davidson machines as the keynote of the display; a little tale of a motorcycle elopement on Firestone shoes; a word or two about the interesting trip of the Misses Van Buren across the country on Firestone-shod Indians, and a breezy tale of the wonderful record-breaking flight of Roy Artley astride his Henderson, from San Francisco to Los Angeles, serve to hold the interest of two-wheeler fraternity. There are also several shorter motorcycle items, as well as a column or two of absorbing bicycle tire material.

HOPKINS & ALZINA GET FIRST R-S DEMONSTRATOR

SAN FRANCISCO, Cal.—The local Reading Standard branch, in charge of Hopkins & Alzina, has received its first demonstrator, and after attaching a sidecar, is giving hill-climbing exhibitions. There are some very steep hills in this city and the performances are therefore a source of considerable interest and some sales already.

VENICE PICNIC MAGNET FOR 1,000 RIDERS

Annual Coast Affair Brings Out the "Neat Rider" in Force — The Official Count Brings to Light 571 Machines, Nearly All Carrying Passengers

Top, Counting Machines on the Pier; Middle, Riders with Miss Dale Fuller, Representing Dutch Brand Cement; Bottom, Theodore Terzenbach, Emblem

VENICE, Cal.—Fun and neat clothes were the two points in which this year's annual beach picnic of the Los Angeles M. C. outclassed all previous events. The only thing that prevented it from being a perfect success as a neat rider demonstration was the absence of Tommy Butler. After he had got his Palm Beach suit specially pressed for the occasion he had a rush call that took him off to Riverside. But it saved him from being second to Paul Derkum, who rode his special Indian 7 over the 20 miles of boulevard arrayed in spotless white flannel, and successfully defied one and all to show even the slightest smudge on his duds after the crowd checked in at Venice. And J. Barney Maurath, bestriding a Cleveland, would have served as a frontispiece for a catalogue of the Styleplus suit.

Old-Timers Are Neat

In the lineup old timers like Wells Bennett, Lester Miles, A. F. Van Order, H. A. Lillie, L. E. Reed and a score of others set an example of special care in uniform and neatness of the machine, and the standard of the whole attendance was high.

And, speaking of advertisements, there was E. E. Welborn escorting a young lady with beautiful eyes, a bewitching smile, a Dutch costume and a tube of Van Cleef Dutch Girl cement. H. A. Lillie claims that she was not the original Van Cleef Dutch Girl, but Miss Dale Fuller, of the Keystone Film Comedy Company. She made the hit of the day.

Sports Are Plenty

Dancing and swimming, bowling and eating and making the rounds of the joy booths made it a lively day for more than a thousand motorcyclists. Paul J. C. Derkum with August Wolters and Albert Brown made the official count, an annual feature of the Venice run. It showed 571 machines present. Nearly every outfit brought two riders, and the sidecar rigs occupied by family parties raised the average still more, so a thousand riders is a conservative estimate. Lester Miles claims he saw more than 200 machines, including a bunch of 35 from Riverside, come in during the afternoon, after the count was closed. This year's count shows machines present as follows: Indian, 248; Harley-Davidson, 132; Excelsior, 82; Thor, 52; Henderson, 18; Cleveland, 12; Reading Standard, 6; Yale, 4; Pope, 2; Merkel, 8; Minneapolis, 2; Thiem, 2; Emblem, 2; M. M., 1.

Tires—United States, 354; Firestone, 272; Goodyear, 220; Goodrich, 86; Federal, 60; Republic, 36; Fisk, 32; Racine, 28; Continental, 26; Diamond, 24; Penn, 18; Ajax, 10; Empire, 6; Miller, 4; Hendrie, 2; Savage, 1; Lee, 8; Vitalic, 1; Kelly Springfield, 8; Quaker, 4.

Sidecars—Indian, 18; Harley-Davidson, 18; other makes, 22.

Lightweights—Cleveland, 12; Indian, 12; Excelsior, 7.

VAN BUREN GIRLS PUT "FINIS" ON TRIP

New York Misses Roll Into San Francisco on September 2, Completing 3,300-Mile Trip in Two Months Less Two Days—Are Enthusiastic Over the Journey and Their Mounts

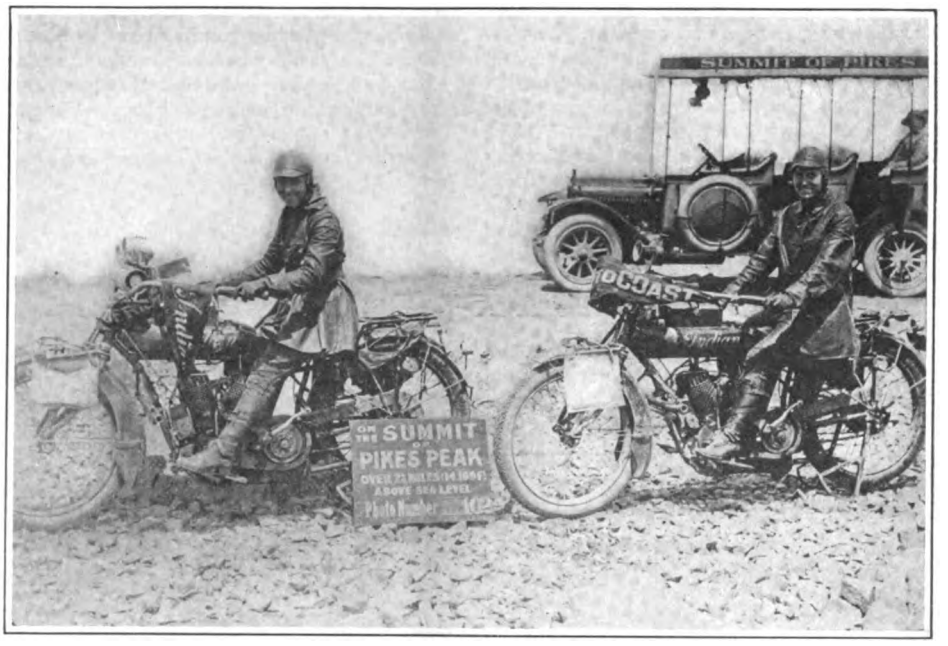
SAN FRANCISCO, September 2.—Adeline and Augusta Van Buren, sisters, of New York City, have completed successfully the most daring and difficult riding feat ever attempted by two young ladies. Riding Indian motorcycles they started from New York on July 4 and reached here today.

Difficult as most of the gentler sex would consider the sport of motorcycling at any distance even under the most favorable of riding conditions, the ambitious program which the Van Buren girls laid out for themselves caused not a little speculation among the most seasoned motor veterans. Many men who were familiar with the difficult passages which are to be encountered by transcontinentalists on any form of motor vehicle frankly expressed doubt of the ability of two slightly built girls to accomplish such a feat on motorcycles.

However, the Van Burens came through, and with flying colors. Difficult roads, unseasonable weather conditions, and hardships in untold number and magnitude were encountered at every turn. Washout roads, mountain slides, desert wastes, and every riding condition which constitutes a nightmare for the hardiest veteran motorcyclist, were some of the obstacles which these intrepid tourists found.

Particularly in passing the Great American Desert in the western part of Utah were the riding conditions hard, and incessant rains in Colorado delayed them there for several days.

The stamina of both the girls and their motorcycles were tested to the full, but both stood the terrific strain, and the Van Buren girls' performance will undoubtedly stand long as an unassailable record.



The Misses Van Buren, the Transcontinental Indian "Pilotesses" Snapped at the Summit of Pikes Peak, Colorado, a Short Time Ago

Both girls speak highly of the excellent performance of their motorcycles, and lay emphasis on the fact that if ever again they attempt a transcontinental trip it will be on Firestone-shod Indians.

The girls will stay on the coast for a week or ten days taking in the scenery and then will crate their machines and board a Pullman bound for little old Gotham and a winter of work tempered with fond memories of a memorable trip.

DETROIT FANS VIEWING THE NEW HARLEY-DAVIDSON

Happy Scherer Ferried the New Model to Grand Haven, Mich., From Milwaukee and Then Rode Across to Wandersee's Store in Record Time

HALF A HUNDRED IN JAMAICA JOY FEST

JAMAICA, L. I., Sept. 1.—More than half a hundred riders and friends were attracted by promises of "big doings" to the outing of the Jamaica M. C. last Sunday, and not one of the party was disappointed in the way those promises were fulfilled. A run to Patchogue occupied the time up until the luncheon hour and a regular Long Island duckling dinner served to bridge the gap between forenoon and afternoon; the luncheon was punctuated with music by various members of the company.

In the afternoon a stop was made at the Clifton House on Great South Bay and swimming was in order, and on the way back the party was overtaken by a rainstorm which drove the assemblage to cover at Amityville. The time was not wasted, however, for dancing and singing soon made them forget the drenching and when the storm had passed over they again set out with front wheels turned "Jamaicawise," each participant satisfied with the day's sport to the fullest.

LABOR DAY MEET AT TAUNTON, MASS.

TAUNTON, Mass., Sept. 5.—In connection with the Labor Day celebration here yesterday three bicycle races were carded for the fair grounds track. The one-mile open was won by James Flynn, who beat A. Sousa and R. M. Torrey in the order named. Thomas Henrickson accounted for the three-mile handicap from Louis Gilson and Raymond Greenbaum, while in the five-mile handicap R. M. Torrey finished in front of J. H. Reidy and Thomas Henrickson.

CAMPAIGN BRINGS IN 15 AT FIRST MEETING

Membership Movement in San Francisco M. C. Shows Fine Results at Session Following Start—Social Run to San Mateo

SAN FRANCISCO, Cal., Aug. 29.—The membership campaign recently inaugurated by the San Francisco M. C. is already having important results, as the old members are taking hold enthusiastically, and fifteen new members came in at the first meeting since the drive started. The best thing about it is that most of the new members are getting actively interested in club affairs.

Fourteen of the members held a social run Sunday, and managed to ride about 85 miles without going more than 30 miles out of the city. It was really something of a sight-seeing tour, and the party kept riding most of the day. Leaving the clubhouse at 9 a. m., they ran down to Belmont and turned up into the hills to the Spring Valley Water Company's lakes, where they stopped for a basket lunch. They struck off from the boulevard at Burns's store, following a winding country road to Woodside. The road was in fair shape, aside from a little dust, and led through some very picturesque country. From Woodside they went down to Redwood City, and reached San Mateo Beach, on the bay, about 2:30, stopping for a dip in the water.

The return trip to San Francisco was made by the San Bruno road, which follows the bay shore. Reaching the city early they took a little spin over the new boulevard around the top of Twin Peaks, which commands a wide view over the whole city and bay district from an elevation of about 900 feet. The day passed with no trouble of any consequence, and the run was greatly enjoyed.

WITH BALTIMORE'S CYCLE SOLDIERS IN CAMP

Motor Arms Defense Association Learning All the Tricks of the Soldier's Trade at Ft. Ethen Allen, Vermont

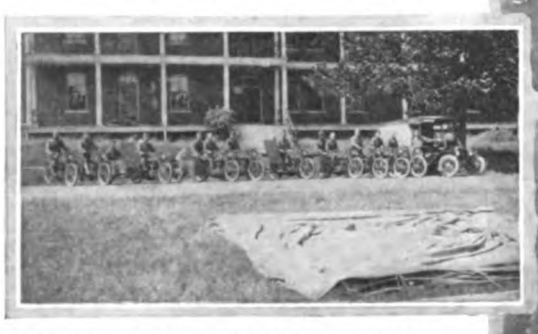
FORT ETHAN ALLEN, Vt., Sept. 4.—Practice in squad formation with motorcycles was taken up by the Motor Arms Defense Association's squad here during the last few days, a large field near the target range being the scene of the maneuvers. There are two squads in the Baltimore company, each being composed of two single machines, a machine gun, mounted, and a caisson. The uneven ground in the field made column formation extremely difficult to maintain, but the two squads led by Lieut. Robert Garrett on a single machine, went through the drill in fine style.

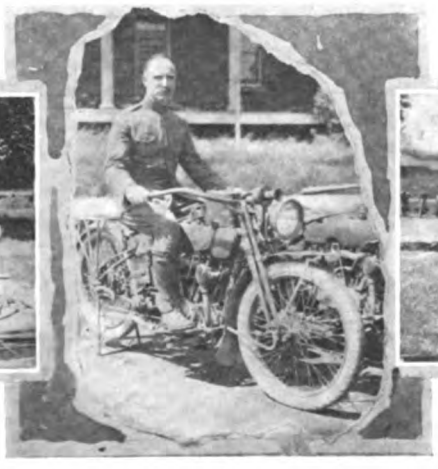
The men are being taught "a little bit of everything" these days. They are able to completely assemble and disassemble the Berthier machine gun; several of the men can take it apart blindfolded in 20 seconds. They can take apart a Springfield rifle and put it together without having any parts left over; they can do the same thing to an automatic revolver. Speaking of automatic pistols, Herbert Wallau, the factory expert with the Berthier machine gun, has recently received from Paris a five-shot automatic pistol, .32 calibre, that consists of only five pieces. It will fit in the palm of the hand and is wonderfully accurate.

A new "rough rider" has been added to the camp's roster. Corporal J. M. Mullen has earned this sobriquet on account of the aplomb which he maintains in hitting the high spots in Vermont and the adjacent country. He is always smiling and has never even been heard to speak crossly to his sidecar. There is considerable rivalry between the two camps.

Lieutenant Garrett, in speaking this morning of the offensive power of one company of 104 men of the Motor Arms Defense Association said:

"While it is improbable that a whole company would go into action in a single place, it would be well to remember that the eight machine guns, firing at their highest rate, could discharge 4,800 shots a minute. The company could move 200 miles a day under its own power. In the Civil War a regiment of 1,000 men, moving only 20 miles a day, could discharge 2,000 shots a minute. When the lesser number of men required and the greater measure of efficiency of a battery of motorcycles is considered, it may be easily seen how indispensable this new branch of the service will be."





At Ft. Ethen Allen with Baltimore's Defense Squad—Above, The Squad Assembled. Middle, Lieutenant Robert Garrett

The Squad Taking Its First Lesson in Erecting a Field Tent. After a Few Trials the Motorcycle Riders Became Adepts

BUSINESS OPENINGS FOR MANUFACTURERS AND JOBBERS

LEWIS, Kas.—R. G. Jenkins has opened a hardware store here. He is handling bicycles, lubricating oils and small tools.

EVANSVILLE, Ind.—The Gregson Hardware Co. has just been incorporated in this city. Catalogs are requested on bicycles, small tools, oils and varnishes.

LAWRENCE, Kas.—F. W. Cutter and G. E. Smith have purchased the Schaake Implement & Hardware store. The new name of the company will be Cutter & Smith, 912 Massachusetts avenue. Catalogs are desired on automobile accessories, bicycles, small tools and lubricants.

SAFFORDVILLE, Kas.—A. P. Brickell has bought the Bradfield Hathaway Company and requests catalogs on automobile accessories, bicycles, small tools, oils and varnishes.

ELMA, Iowa.—Tex & Schuler have bought the hardware business of W. P. Weed. Catalogs on bicycles, lubricating oils and small tools are requested.

BUNCETON, Mo.—The Hawkins Hardware Co. has purchased the business of Moore & Hurt. Catalogs on automobile accessories, bicycles, small tools and oils are requested.

POPLAR BLUFFS, Mo.—The Wright-Dalton-Bell-Anchor Store Co. requests catalogs on automobile accessories and small tools, bicycles and oils.

FAIRBURY, Neb.—H. E. Clapp has recently opened a hardware store here. Catalogs on automobile accessories, tools and lubricants are requested.

RIVERHEAD, N. Y.—H. Nelson Smith has purchased the business of Charles E. Bunce and will do a wholesale and retail business in the following lines: Bicycles, small tools, oils and varnishes. Catalogs are desired.

ZAP, N. D.—The Zap Mercantile Company has opened for business and will handle small tools, oils and bicycles.

BROWN SAYS A WORD ON AUSTRALIAN CONDITIONS

Melbourne Henderson Distributor Says the War Has Not Seriously Hampered Sales in the Antipodes—Speaks Up for the American Machine in General and the Henderson in Particular

DETROIT, Mich.—E. S. Brown, a member of the firm which distributes the four-cylinder Henderson motorcycle in Melbourne, Australia, is visiting the factory here to complete arrangements for Australian business for the 1917 season. He plans to remain for some time, so as to spend a number of days in various departments of the factory to familiarize himself with all the processes of manufacture, in order to take back all possible first-hand information on his return to Australia.

Mr. Brown speaks very interestingly of conditions existing in the great southern continent at this time and of the indications for the future. The outlook for the coming year is very bright, he reports, and he is confident of multiplying the number of Henderson sales materially.

At the outbreak of the war many predictions were heard there to the effect that motorcycle sales would fall off. As a matter of fact, however, there was only a temporary check, after which the business has grown up much stronger than before. The sale of American machines has made especial gains, due partly to the cutting down of manufacture of motorcycles in England, but largely to the fact that American construction meets Australian requirements to better advantage. Much trouble was experienced with English rims being too light, English frames not strong enough to stand the pounding of the bush roads, etc., while the heavier American products would stand the gaff and give the service that was desired.

Everyone in Australia rides a motorcycle, says Mr. Brown, because it is the most practical way of getting from where you are to where you want to go. The wealthy ranch owners have their big touring cars to carry their families or parties of customers or friends on trips, when several are going together—but

E. S. Brown

each man also has a motorcycle for his individual use when going anywhere alone or in a hurry. On an average there are four motorcycles to one automobile.

Stock ranching is one of the great industries of Australia, and each rancher has several motorcycles in service for himself and his men for use in getting about over the range. Roads are few and unimproved in a great part of the country, and the motorcycle must be built to stand unlimited hard pounding in order to make good in such service. Automobiles are at a great disadvantage under such conditions, and it has been found that the motorcycle can easily make long trips in much less time than the car requires.

Most of the roads are of stone, surfaced with metal that is peculiarly hard and flinty in nature. Tires seldom wear out there, as the roads chop them to pieces before there has been time to wear down to the fabric. This makes live, resilient rubber especially important for the treads, as a tire that resists the cutting effect of the sharp stones lasts far longer than one of a kind which might wear very satisfactorily on an ordinary road, but which parts more readily when the sharp corners chop into it.

This matter of tire wear is one point that has helped the belt-drive English machines keep their hold in this territory. The softer drive of the belt machines, while less efficient, was easier on tires as compared with the chain-driven twins. Australian riders found the difference in tire wear so great, under their road conditions, that many of them preferred to stay with the belt and its drawbacks. Mr. Brown reports that the four-cylinder machine has won enthusiastic favor in this respect, as the smooth flow of power is even less trying on a tire than the belt of an English twin, so that the Henderson has showed excellent tire life in that country.

GUTERMAN AT McALLEN WITH MOTOR SQUAD

Veteran Motorcyclist Sergeant Brings Company to New York Guard Camp in Texas After Pleasant Journey from Metropolis

McALLEN, Texas.—Sergeant Lou H. Guterman, of the Machine Gun Company of the 71st Regiment, N. G., N. Y., has arrived here and is active in looking after the interests of the army motorcyclists from the Empire State. Sergeant Guterman and a squad of his riders left New York on Monday afternoon, August 28th, and the trip to the southern point of mobilization was made without difficulty. Guterman reports that his party traveled in tourist sleepers and enjoyed all possible comforts throughout the trip from start to destination.

At several points the motorcycle volunteers were given a chance to leave the train and stretch their legs. At Tryell, Texas, they were royally entertained by the local Chamber of Commerce. The business men arranged to give the New York State soldiers an hour or two in a large swimming pool and other amusements were provided, automobile owners of the town took the soldier boys on sightseeing trips, and all in all the stopover was a most enjoyable one.

Guterman was unable to state upon his arrival here just what kind of work he and his riders would be called upon to perform at present, but he reported that the men were in excellent trim and prepared for any service that might be required of them by the authorities.

MOTORCYCLE FEATURED BY LOS ANGELES NEWSPAPER

LOS ANGELES, Sept. 4.—Featuring the motorcycle in warfare, with two photographs and a column article worked over from information in **Motor Cycle Illustrated,** the *Los Angeles Record* had the snappiest "Automobile Section" last Sunday of any of the city's four big newspapers. The pictures featured in the front page show Indian motorcycles, and the publicity thus given the motorcycle is due to the attention shown the paper by C. Will Risden, Indian distributor, who has convinced the editor that for the man who rides there is nothing equal to a motorcycle.

ST. PAUL TEACHER NOW IN MANKATO, MINN.

MANKATO, Minn.—A. P. Hodapp, teacher of advanced American History in the St. Paul High School, reached this city a few days ago on a motorcycle tour of the country which will cover 5,000 miles. He is using a twin cylinder Indian, which has been in use for four seasons. Hodapp traversed the states of Wisconsin, Illinois, Indiana, New York, Massachusetts, Connecticut, New Jersey, Delaware, Maryland, Virginia, West Virginia, Ohio, Iowa and Minnesota.

ANOTHER FOR PORTLAND POLICE

PORTLAND, Me.—Chief of Police Bowen, of Portland, has added a second motorcycle to his traffice squad. The first machine purchased gave such excellent results that the second order was placed without delay.

VERRILL UNCORKS SPEED IN BALTIMORE

Takes Five- and Ten-Mile "Pro" Numbers on Gentlemen's Driving Park Track—Mears Proves to Be Best Sidecar Pilot—Accident Mars the Race Meet

BALTIMORE, Md., Sept. 4.—"Krazy Horse" Verrill's marvelous riding and the crashing of a side-car through the fence at the fall race meeting yesterday of the Maryland Motor Association at the Gentlemen's Driving Park gave the several thousand spectators more thrills than they have ever felt at a meet around Baltimore for many, many moons. The side-car accident occurred in the ten-mile side-car event, one of the outstanding features of the afternoon. Paul Mamock, a professional rider, and Herbert Whiting, his mechanic, were slightly hurt when their machine skidded and left the track when traveling at speed.

Verrill evidently knows no fear, for he tore around the sharp turns of the Belvedere avenue half-mile oval at top speed and after once obtaining the lead never left the result in doubt. In the five-mile professional event, riding an Indian machine borrowed from one of the other racers, the Los Angeles speed demon went into the lead soon after the drop of the flag and was never headed, winning easily from Johnny Mounts and Freddie Tiemeyer, the Maryland title holder.

Again in Ten-Mile

Again in the 10-mile affair, he had things practically all his own way, pulling up at the end. There were four starters in this event, Verrill, Tiemeyer, Lawrence Keys, of Pittsburgh, and Johnny Mounts.

Keys and Tiemeyer were hopelessly outdistanced in the first three miles and Verrill and Mounts fought it out the rest of the distance. The coast rider always enjoyed a half-lap lead on his opponent, but in the latter stages Mount cut loose and gradually cut down the lead. Verrill, however, was so far out in front that he slowed down in the last quarter mile.

"Happy" Mears, also astride an Indian, captured two races, both being in the sidecar class. He easily won the five-mile event from Gus Heinz, while he also captured the 10-mile event. In the latter event Bert Heinz, of the Harley-Davidson agency, withdrew his other entry following the accident to Mamock and Whiting, who were also in a Harley-Davidson combination.

Consolation for Mullein

After being unplaced in the professional events, Jack Mullein, of Wilmington, walked off with the five-mile consolation event in handy style. George Gephardt, of this city, was second, while third place was won by Summerworth. Mullein assumed the lead soon after the start, and was never in any real danger. Gephardt at times uncorked some real speed, but the Delaware speed merchant was always on the lookout, and pulled away when threatened.

Oliver Shock, on an Indian, won the three-mile amateur race. Orville Cox was second, while Clarence Lowenstein was third. The latter had a bad spill on the far turn, but pluckily remounted his machine amid the applause of the spectators.

W. Sherman was the winner of the two-mile bicycle race. F. N. Sanborn was second, and B. Leischar, third.

The summaries:

Two-mile Handicap Bicycle Race—Won by W. Sherman; F. N. Sanborn, second; Leischar, third.

Three-mile Amateur—Won by Shock, Indian; Orville Cox, Excelsior, second; C. Lowenstein, Indian, third. Time, 4:22.

Five-mile Professional—Won by K. Verrill, Indian; J. A. Mounts, Indian, second; F. Tiemeyer, Excelsior, third; L. Keys, Harley-Davidson, fourth; J. W. Mullein, Indian, fifth. Time, 6:07.

Ten-mile Professional—Won by K. Verrill, Indian; J. Mounts, Indian, second; Freddie Tiemeyer, Excelsior, third. Time, 12:35⅗.

Five-mile Professional Sidecar Race—Won by Carey Mears, Indian; Gustav Heinz, Harley-Davidson, second. Time, 7:16½.

Five-mile Professional Sidecar Race—Won by Carey Mears, Indian. No time taken.

Five-mile Consolation—Won by J. Mullein, Indian; George Gephardt, Indian, second; J. Summerworth, Indian, third. Time, 6:31⅘.

BARNARD SHOWS BEST AT RED BANK

Takes 10-Mile Feature and Time Trials on His Indian—Asay and Brown Also Score—Track in Bad Shape

RED BANK, N. J., September 4.—Irving W. Barnard astride an Indian took the lion's share of the glory attaching to the racemeet staged on the half-mile track here today in connection with the Monmouth County Fair. Barnard took the feature event on the program, the ten mile open, which he completed in 14:20, leading home J. B. Asay, also astride a Hendee product, and John Cook, a Harley-Davidson pilot, in the order named, and also made the best showing in the single-mile time trials. Barnard made the double lap of the circuit on his single ported Indian in 1:14 flat.

Asay came back in the three-mile open and beat out Sid Brown and Cook to the tape, crossing the finish line in 4:30. Brown, who also rode an Indian, took the five-mile open from Asay and Cook in the order named, the time being 7:28½, and Asay managed to repeat in the three-mile handicap, which he won handily from Brown and Cook.

The meet drew some 9,000 spectators, but only four entries. The track was much the worse for dust and rough spots due to horse racing events run off prior to the motorcycle contest. The summaries:

Three-mile open—B. Asay, Indian, won; Sid Brown, Indian, second; J. Cook, Harley-Davidson, third. Time, 4:30.

Five-mile open—Brown won; Asay, second; Cook, third. Time, 7:28:30.

Ten-mile open—I. W. Barnard, Indian, won; Asay, second; Cook, third. Time, 14:20.

Three-mile Handicap—Won by Asay (¼ mile); Brown (scratch), second; Cook (¼ mile), third.

One mile time trial—I. W. Barnard. Time, 1:14.

READING STANDARDS GO WELL IN PHILADELPHIA

PHILADELPHIA, Pa.—The U. G. I. Company, of this city, has recently received another large shipment of Reading-Standard motorcycles. The total number of R-S machines received during the season of 1916 by this company is considerably over 100, and their contracts for the season of 1917 are even greater.

Considerable interest was shown among motorcyclists by the introduction of the 1917 R-S, which was seen on the roads of Berks County daily, where it is being tested out in the mountains. The wonderful hill climbing ability for which this machine is noted excites no little interest among motorcycle riders, and the Reading agency for this machine is filing orders daily for 1917 motorcycles which have been promised for delivery about the latter part of October.

TO GET MOUNT FOR POLICE

CONCORD, N. H.—Following the lead of other cites throughout New England, Concord has appropriated money for the purchase of a motorcycle to be used by the police department.

KEEP AN EYE ON CRANKCASE BOLTS

A Regular Examination of the Nuts Should Be Made to Prevent Wearing Lug-Holes Oval and the Motor Working Loose in the Frame—Excessive Vibration Shows Looseness

By GEORGE M. JOHNSON

ONE of the things that every motorcyclist should watch is the condition of the bolts that anchor the engine in the frame. When a machine comes from the factory the nuts are of course set up very tightly, but everybody knows that the slight vibration of a running motor, especially when it is new, is likely to cause nuts to loosen. Perhaps, instead of saying "is likely," we should say *may* cause the nuts to loosen.

This is a small matter in itself, and if promptly discovered and corrected can do no harm. But too many riders are somewhat like an auto owner I once knew. He purchased a good car, and in less than a year—he drove it carefully and his mileage was not very high—it rattled worse than a machine twice as old should rattle. The volume of rattle increased with the speed of the car, so that it provided a blind passenger with a fairly accurate speedometer. And this unfortunate condition was due entirely to the fact that the owner almost never touched a wrench to any part of his car.

Result of Looseness

Let us suppose that the anchor bolt nuts of a motorcyle engine become loose, and that nothing is done about it; what will be the result? Motor vibration will increase, of course. The experienced rider can usually tell by the *feel* that the motor is not right. This condition gets worse as time goes on, for the play the motor has in its anchorage is made greater by wear. The base bolts run through holes in the aluminum crankcase of exactly the right size. But aluminum, though strong, is not a hard metal, and it wears rapidly once it gets the chance. That makes the bolt holes too big for the bolts.

Now let us suppose that after some time of riding with a loose motor the owner, for some reason or other, leaves it at the repair shop, where its condition is quickly discovered. Of course the loose nuts will be promptly set up tight. No serious harm *may* have resulted. But if the holes in the aluminum crankcase have become a few hundredths of an inch too large, the chances are in favor of the trouble appearing again. In such a case tightening will probably result only in another working loose, and so on, with the time periods between the slacking of the nuts growing shorter with each repetition.

Put On Lock Washers

The nuts can be secured by lock washers and even additional lock nuts as well—but the result will be the same. As a matter of fact, the nuts do not actually work loose. The aluminum against which the motor base anchor plates rest wears because of the slight play that the anchor bolts have by reason of the over-size holes, so that the nuts *are* loose, even though they have not backed off the bolts even a slight fraction of a turn.

By this time that poor motor's condition is truly desperate. Only fifty miles of riding may be enough to cause the engine to be loose in the frame, no matter how tight it was at the start of the trip. There are exactly four things that the owner can do, and no more. 1st.—He can buy a new crankcase; and that will be pretty steep, especially when we add to the cost the charge for taking down the motor, fixing it up, and replacing. 2nd.—He can sell the machine, letting someone else worry about the loose motor, though this course would probably not appeal strongly to a person with any great sense of honor. 3d.—He can keep on riding the motorcycle until it is ready for the junk heap, or until the new crankcase becomes absolutely necessary to keep it out of the junk pile; and it might be said that the journey is likely to be a short one. 4th.—He can have a motor expert perform a rather difficult and involved surgical operation, which will save the patient's life, and at a cost of half or less of the new crankcase. This operation involves taking the motor out and fitting new bolts in the oversize holes. As the latter are worn oval, not perfectly round, they must first be drilled, and the holes in the anchor plates must also be drilled to correspond. To do all this drilling so that the holes will fit exactly when it is done is no job for an amateur. And should an inexpert workman tackle it, there is a good chance that the new crankcase will be needed after all.

Try Nuts Occasionally

When the motorcycle is again ready for the road, following this treatment, the rider must do as he ought to have done in the first place—occasionally try the nuts to see if they are remaining tight. Drilling the oversize holes in the crankcase left a weak rim of metal; now it is absolutely necessary that the motor be kept tight and relatively vibrationless.

The use of a sidecar seems to aggravate the tendency for the motor to work loose. There is certainly an extra heavy strain put upon the engine and especially upon the frame as a result of the side drag of the car. Since this is true it behooves the sidecarist to keep careful tab on the condition of this part of his outfit.

The writer does not wish to frighten anyone unduly with this description of the horrible results that may follow a little negligence. He does not mean to infer that this *must follow,* or that even a fair proportion of motorcycles are liable to have the trouble described. But it *does happen*; in fact, since confession is said to be good for the soul, it has happened on a machine owned by the writer. The lesson learned by that experience was a costly one, but it will never happen again.

Once a Month at Least

A brief examination once or twice a month is all that is required for a rider to know how his motor is holding. If the nuts are tight—and they probably will be—well and good. If they have loosened—even a trifle—set them up yourself without delay, or leave the machine at the repair shop to have it done. If you do the job yourself, see that you do it thoroughly. Tighten *all* the nuts, removing as much in the way of chain guards, oil and exhaust pipes, etc., as is necessary in order to get at the offending nuts. In nine times out of ten all the trouble will be with the back nuts; the forward don't seem to loosen up so readily. If there are no lock washers, it is worth while to remove the nuts entirely and put a washer under each one. Lock nuts will make the job even more secure. In setting up the nuts be reasonable; don't be so ambitious to get them tight that you risk stripping threads.

R-S GETS ANOTHER BIG FOREIGN ORDER

READING, Pa., September 5.—The Reading Standard Co. has recently closed another contract for 400 1917 machines. It is understood that these machines will be shipped to foreign ports. The Reading Standard Co. has had one of the most successful seasons in its career, although it is probable that the season of 1917 will be even better. Extensive improvements and additions are being made to the factory to take care of the coming season. Thus far practically 60 per cent. of next season's requirements have been contracted for.

KEEP SPOKE NIPPLES TIGHT

IN order to keep wheels in the best of shape it is well to go over the spoke-nipples regularly, at least after every run of any length. This will save lots of trouble in the long run, for when the spokes start to go they go in bunches. Keep 'em tight at all times.

Trade and Sport in Great Britain

By OLD RAMBLER

LONDON, England.—British motorcyclists are not taking the new taxes "lying down," but are trying to secure alterations of anomalies. It is rough on them that a tax of nearly $24 is due on some big twins—with gasoline at 64 cents a gallon, too—while some cars are let off with $21 tax. The Auto Wheel really ought not to be charged the same—$40—as a sidecar turnout which costs $500 or more, but such is the case. It is certainly a big jump from $5, against which nobody ever protested. The crux of the situation is in the blunder made of judging the power by the bore only.

Various agitations are afoot to secure revision of the new taxes, such as $5 for Auto Wheels, $12.50 for motorcycles of 5 h. p. according to R. A. C. rating (the square of the bore multiplied by the number of cylinders divided by 2½) and $24 for motors up to 8 h. p. Most of the motors listed at 4 h. p. would come under the 5 h. p. classification, at present.

Big Jump in Exports

American motorcycle manufacturers—who are practically the only "foreign" suppliers of machines to Britain during the war—must have been reading the portents pretty cleverly, by sending big supplies across before the British importation embargo came into operation on March 27. The official returns show that Britain imported 378 complete motorcycles in March, compared with 63 in the same month of 1915 and 8 only during February, 1916. The jump from 8 to 378 in the two months is so extraordinary as to make one wonder how it came about.

Ample Mudguarding

There are various ways and means of trying to keep one's self and the machine fairly decent in rainy and muddy conditions and in dusty weather. One means to this end has been incorporated in the Sunbeam, which, in addition to an ample mudguard on the front wheel with a flange or valance on the upper part of the guard, has a prolongation from the front of each footboard upward and curving slightly toward the rear. The top of this guard is level with the lower part of the tank and the rider has complete protection for the feet and legs. With this elaborate guarding, the rider will be as clean as anyone can possibly hope to be on a motorcycle.

It is a point of the Hendee Mfg. Co. that their machines are "red" Indians and most onlookers over here judge the average gory-colored motorcycle to be one of that firm's productions. But it is somewhat amusing to read in a consular report from India some time ago a hint that motorcycle makers should not supply red enamelled machines for India; further, that sales of American goods had been much interfered with in Britain's great oriental dependency, on account of color. It is printed that nobody wants to be thought a postman or policeman—red being the official color of the government vehicles—when riding a red machine. The funniest part of the advice was to the hint applied particularly to that great American product, the Indian. In other words, Indians for India shouldn't be red.

Rudges at Front

Both on the Eastern and the Western fronts of the battle areas there is any number of the well-known Rudge motorcycles—the marque that has won countless races in all parts of the world. Rudges are in use in various armies; in the first year of the war, 400 of this make were ordered by the Russian government, and such were the resources of the firm that the whole lot was on its way to Czardom the same month the contract was signed. J. W. Edwards had 200 Rudges pass through his hands during the first nine months of his service on the Western front, and he says that they were the only machines which did not have broken frames or wheels. "I have never had to change an engine through being worn out, though it is enough to wear any engine out the way they are used," he says, "but the Rudge machines stand up against them all."

Doings Down Hawaii Way

HONOLULU, Hawaii, Sept. 1.—Not because it really means anything in the way of national preparedness, but purely as a sporting proposition, Dave Ford, a member of the First Field Artillery Corps, stationed at Fort Schofield here, made the perilous trip over the Kole-Kole Pass on a twin cylinder Harley-Davidson machine from Schofield Barracks to Waianas on Sunday last. That the word perilous is apt in describing the route, may be judged from the fact that nothing aside from an army mule or a particularly sure-footed breed of horse has gotten over the Pass for some years past. The trip up from Schofield Barracks to the top of the Pass entails but little hardship, for the road, if not in the pink of condition, is at least passable. However, from that point down, there is risk enough for any rider what with a trail of the winding, precipitous sort washed out at every few yards by rushing mountain streams. The road a few years ago was fair and it is even said that at one time a battery of field artillery made the trip over the Pass, but judging by present conditions that must have been many years ago.

Ford experienced two bad falls, and in several places had to dig out a trail with a screwdriver. It took two hours and thirty-nine minutes to make the 11 miles between Schofield and Waianae. The return trip was made via Ewa and Waipahu in less than half that time.

His first fall was in the early part of the trip and was due to the starting of the engine while breaking on compression. He had shut off the gasoline and drained the carbureter, but in some way a small amount of gasoline got into the engine and started the machine down the precipitous slope at a furious rate of speed. Following this accident Ford disconnected the spark plugs to prevent any chance of a repetition.

His second fall was when he slipped off the trail and rolled with the motorcycle down an eight-foot bank. Neither the driver nor the machine was injured, but Ford was pinned under the heavy motorcycle. Fortunately for him some soldiers of the First Infantry, who were making the trip on foot, were near at hand, and helped get the machine back on the trail.

"I wouldn't make that trip again for a thousand dollars," said Ford when he returned to the garrison covered with bruises. "I am fortunate in having gotten through without some serious injury, and without injuring the machine otherwise than breaking a pedal."

On Sunday, July 30, S. E. Klemme, Ed. Rowold, D. C. Mitchell and Herbert ("Endurance") Cooper rode to Kole-Kole Pass to have a look around.

Going up from the Schofield Barracks side was easy, as the road is wide, although there are lots of short, treacherous turns where a wrong move would mean a drop off from three hundred to a thousand feet. These turns in many places are sandy, and there are large stones making it very treacherous.

Klemme upon investigating this bad stretch, decided to try out his machine on going down, which he did in great style, making one's hair stand on end, when rounding the turns. After he got to the bottom of the trail and had rested a little while, he decided to go up again. This certainly was a spectacular feat. At times he was on the saddle, sometimes in the air. At other times he would go at about six or eight miles per hour, and sometimes about twenty.

After arriving at the top, and resting up a bit, he said, "It looks dangerous, but I'll go through this again if anyone wants to bet any money on it."

R. F. D. OUTLOOK CLOUDS UP AGAIN

Antagonism of P. O. Department Militates Against Use of Motorcycles, Says E. J. Mueller, After Investigation

MILWAUKEE, Wis., Sept. 1.—That with the present administration in power the R. F. D. field is, to all intents and purposes, lost to the motorcycle manufacturer, is the sum and substance of a report on the R. F. D. situation which Assistant Sales Manager E. J. Mueller of the Harley-Davidson Motor Co. will render to the assembled manufacturers at the coming meeting of the M. M. A. in Buffalo, September 14. Mr. Mueller was appointed at the Atlantic City meeting to take up the matter once again with the postal authorities and determine how, if at all, the new appropriation bill putting the choice of vehicles squarely up to the department was going to affect the motorcycle in the R. F. D. service.

P. O. Department's Stand

As a result of his investigations, for which part credit, at least, is due to August Zimmerman, the Washington Harley-Davidson dealer, who remained in contact with the department after Mr. Mueller had been recalled to Milwaukee, Mr. Mueller will report that the department is extremely antagonistic to the motorcycle in any form, and absolutely set against the employment of the solo machine in carrier service. Fourth Assistant Postmaster Blakeslee, in charge of the R. F. D. service, in giving his objections to the solo machine to Mr. Zimmerman, claims that they are dangerous in this service; that departmental records show that motorcycle riders frequently lost mail matter and delivered it in soiled condition, and that the new compensation law enacted by Congress made the department liable for injuries sustained by carriers while on duty which militated against the use of the solo machine. To these specific reasons for discouraging the use of the power-driven two-wheeler, Mr. Blakeslee added a more or less general one. He asserted that the "joy riding spirit" was more predominant with those carriers who straddled motorcycles than with others.

While there are answers, of course, to each and every one of these objections in the case of the Postoffice Department, the answers fall upon deaf ears, and Mr. Mueller will recommend to the manufacturers, and the Harley-Davidson Company has already recommended to its dealers, that they do not waste any great amount of time and effort in the R. F. D. field.

Coupled with this investigation, the Harley-Davidson company staged an exhibit in connection with the R. F. D. convention in Chicago and from direct contact with the carriers themselves they learned that the feeling of carriers from the northern territory is distinctly for the light, cheap car as against the motorcycle, although, to borrow a political expression, the "solid South" in the carrier field is for the motorcycle. The chief objection of the carrier to the motorcycle is that he is exposed to the weather, althouhg the task of collecting mail matter from the box in view of the right-hand position of the side van was advanced by some carriers as the major drawback.

The Carrier Is Observant

The carrier, as a class, is very observant and is particularly impressed with the low running cost of the motorcycle as against even the lightest and cheapest of automobiles, but in view of the fact that this particular point gives rise to friction between the carrier body and the department, the carrier resents strongly motorcycle advertisements in their trade organs based upon the economy of operation. Friction between the carrier body and the department is observable everywhere which may or may not have a distinct bearing on the results of the coming election.

All thought of "hard times" is unheard of in the R. F. D. field, the carriers to a man being very optimistic.

U. S. TIRES WIN AWARDS AT PANAMA CITY

NEW YORK.—A diploma and gold medal have been granted to United States tires by the jury at the Exposicion Nacional de Panama, held in the city of Panama recently to commemorate the discovery of the Pacific by Balboa. The prize was the only one awarded for tires by the jury. The United States Tire Company is naturally highly gratified by the awards.

AUSTRALIANS CAPTURE 100-KILOMETER TEAM RACE

Bob Spears and Reggie McNamara Annex Labor Day Feature at Newark Velodrome—Alfred Goullet and Alfred Grenda Finish Second—Race a Hard One

NEWARK, N. J., Sept. 5.—Another hard team race was staged at the Velodrome yesterday, this being the only race carded for the day. The event was run over the 100-kilometer (62½ miles) route, and after the battle was over victory rested with the team of Bob Spears and Reggie McNamara, the Australians, who won the six-day race run a week previous.

Seventeen teams started in the race, and there were seven place prizes for the fortunate ones, which ranged from $200 for the winning combination to $75 for the team finishing in seventh place. Lap prizes at 50 cents per kept the good sized field going along at a steady rate.

Who Rode the Race

The teams that started were Spears and McNamara, Alfred Grenda, Australia, and Alfred Goullet, who last week became an American citizen; Oscar Egg and Marcel Dupuy, the Swiss-French team; George and Lester Bowker, Long Island; Ernest and Hans Ohrt, San Francisco; Jake Magin, Newark, and Jackie Clark, who paid the fine of $25, which had been tacked upon him for getting peeved in the Brassard race with Arthur Spencer a week before; Arthur and William Spencer, Toronto; Frank Corry and Charles Piercey, Australia; John Bedell, Long Island, and Ray Eaton, Newark; Fred Hill, Boston, and Francesco Verri, Italy; Lloyd Thomas, San Francisco, and Tommy Grimm, Newark; Willie Hanley, San Francisco, and Eddie Madden, Newark; Harry Kaiser and George Cameron, New York; Floyd Krebs, Newark, and Norman Anderson, Denmark; Gordon Walker, Australia, and Percy Lawrence, San Francisco; Eddie Rupprecht and John Schlee, Newark, and Joe Kopsky and Tommy Smith, Newark.

Berlin System Used

The race was decided on the so-called Berlin system, a sprint being staged every five miles, and at the 62½-mile mark. Points for the finishes were as follows: First, 1; second, 5; third, 6; fourth, 7; fifth, 8; sixth, 9, and seventh, 10. All teams that finished outside of seventh place were credited with 11 points each, the team scoring the least number of points winning.

McNamara won the first sprint from Corry, Hanley, Grenda, Clark, Eaton and Thomas. Goullet won the second from Magin, Madden, Egg, Thomas, Arthur Spencer and Hill, and Goullet also won the third from McNamara, Corry, Hanley, Thomas, Hill and Cameron. In the fourth sprint Grenda won from Magin, Bedell, Thomas, Ernest Ohrt, Madden and Spears, and the order in the fifth sprint was Goullet, Verri, Hanley, Spears, Magin, Corry and Egg. The sixth dash went to Smith over Spears, Egg, Hanley, Hill, Magin and Grimm, while McNamara led Corry, Goullet, Hill, Bedell, Egg and Magin in the seventh dash.

McNamara Is Consistent

McNamara again flashed over the tape in front in the eighth dash, leading Corry,

Bob Spears, Who With Reggie McNamara, Won Long Team Race

Cameron, Egg, Madden, Walker and Ernest Ohrt. The ninth sprint went to Smith and Spears, Grenda, Thomas, Magin, Corry and Egg followed in that order. The tenth sprint went to Dupuy over Kopsky, McNamara, Thomas, Corry, Grenda and Walker and the eleventh went to McNamara, who beat Clark, Hanley, Corry, Walker, Goullet and Thomas. The twelfth sprint resulted in a very close race between Grenda and Spears, the latter getting the decision of the judges after coming from eighth place in the last lap in a great ride. Dupuy, Magin, Thomas, Corry and Madden trailed Spears and Grenda. The final dash saw Corry win over Ernest Ohrt, Hanley, Goullet, Egg, McNamara and Thomas.

After the expert accountants finished their work it was found that Spears and McNamara had won with 63 points to 75 for Grenda and Goullet. Corry and Piercey piled up 97 points and took third money, while Hanley and Madden captured fourth with 104 points. Egg and Dupuy finished fifth with 108 points; Magin and Clark sixth with 109, and Kopsky and Smith seventh with 117.

The intermediate times for the race were as follows: Five miles, 11:02⅖; 10 miles, 22:19⅕; 15 miles, 33:27⅕; 20 miles, 44:17⅖; 25 miles, 54:26⅖; 30 miles, 1:05:08⅕; 35 miles, 1:15:42⅗; 40 miles, 1:26:38; 45 miles, 1:37:49; 50 miles, 1:48:42⅕; 55 miles, 1:59:41⅘; 60 miles, 2:10:46⅖; 62½ miles, 2:15:20⅕.

Spencer Brothers Lapped

The Spencer brothers were lapped at 23 miles, and again shortly after, the team retiring later. Rupprecht and Schlee, Krebs and Anderson, and the Bowker brothers were also tagged for a lap, but continued in the race for the lap money, they having that privilege according to the rules. The race was ridden in 2 hours, 15 minutes and 20⅕ seconds.

How the Points were Scored in Newark's 100-Kilometer Race

Team.	Sprint No.													Points.	Total.
	1	2	3	4	5	6	7	8	9	10	11	12	13		
McNamara	1	0	5	0	0	0	1	1	0	6	1	0	9	24	
Spears	0	11	0	10	7	5	0	0	5	0	0	1	0	39	63
Grenda	7	0	0	1	0	1	0	0	6	9	0	5	0	29	
Goullet	0	1	1	0	1	0	6	11	0	0	9	0	7	36	75
Corry	5	11	6	11	9	11	5	5	9	8	7	9	1	97	
Piercey	0	0	0	0	0	0	0	0	0	0	0	0	0	0	97
Hanley	6	0	7	0	6	7	11	0	11	11	6	0	6	71

STAEHLE, SPEARS AND GOULLET SCORE

Amateur Champion Makes Fine Showing—Kramer Again Falls a Victim to Spears—Goullet, Now U. S. A. Citizen, Wins 10-Mile Open in Hard Ride

NEWARK, N. J., Sept. 4.—Amateur Champion John Staehle; "Long Bob" Spears, the Australian, and Alfred Goullet, formerly of Australia, but now a citizen of U. S. A., monopolized all the limelight at the Velodrome yesterday afternoon. These three cyclists carried off most of the honors on the fine card of races staged by the local management.

Staehle, who had the amateur championship won before the meet of yesterday, annexed the final titular event, the five-mile, and made a record for himself for the season by taking five of the season's series and finishing second in the other. After winning the final championship race Staehle was presented with a floral piece, the gift of fellow-members of the Bay View Wheelmen, and the Bamberger Cup, the gift of L. Bamberger & Co., and then he did a tour of honor carrying both gifts. After that tour of honor a fan wrapped an American flag around him, and to the tune of the National Anthem Staehle gladly pedaled another circuit.

Spears Defeats Kramer

Spears had his chance in a match with National Champion Frank Kramer, and he defeated the East Orange man in two straight heats, making the fifth time that Spears had scored against the Yankee in a match this season. Spears made his victories in the heats decisive, Kramer seemingly being unable to cope with the lanky Antipodean.

When Goullet flashed over the tape in first place in the ten-mile open he scored his first win as an American citizen. The lad from Gippsland, Australia, was granted his final citizenship papers in this city on Friday, September 1, and hereafter will be known as hailing from this city, where he has his mother and his brothers with him. His victory was a most popular one in addition to being hard earned.

Fred Taylor in Front

Fred Taylor, who only recently returned to favor with the powers that be, he being suspended and barred from competition on account of his activities in connection with the outlaw movement last year, won his first race, the one-mile handicap, since returning to the fold. Harry Hoffman, San Francisco, finished second to Staehle in the five-mile title race, and Tom Bello, who won time prize in the New England Wheelmen's race on Pelham Parkway in the morning, ran third. Summaries:

One-mile handicap, amateur—Won by Fred Taylor, Newark (20 yards); second, William Weimer, Newark (90 yards); third, Andrew Ciaciuch, Buffalo (90 yards). Time, 2:01⅘.

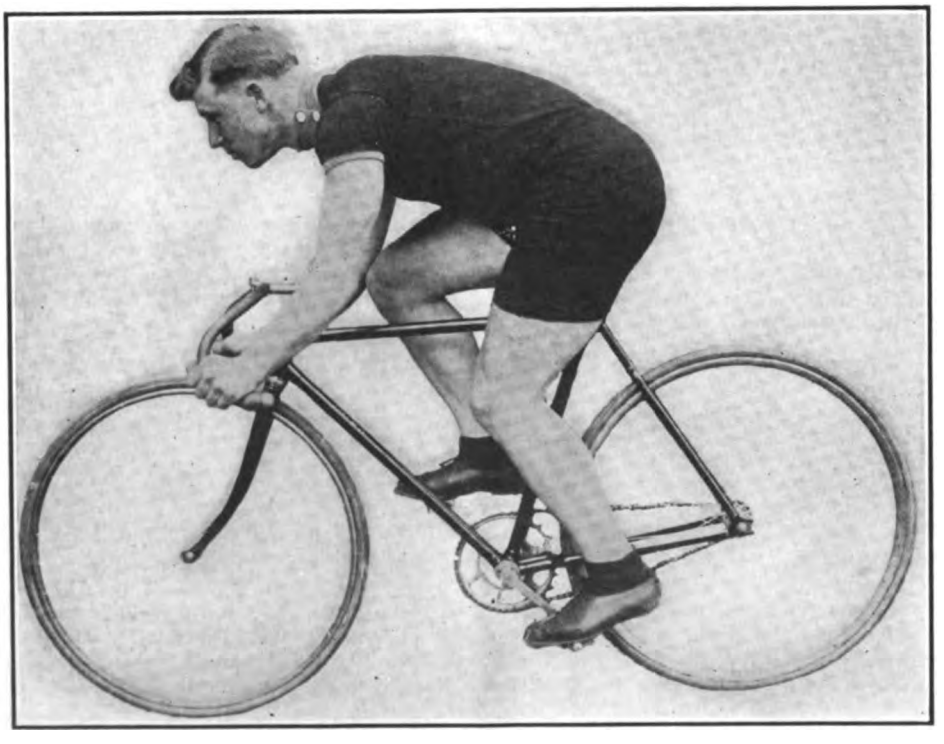
Five-mile national championship, amateur—Won by John Staehle, Newark; second, Harry Hoffman, San Francisco; third, Tom Bello, Brooklyn; fourth, Ed J. Carroll, San Francisco. Time, 11:38⅗.

One-mile Brassard race, professional—Arthur Spencer, Toronto, vs. Alfred Grenda, Australia. Won by Spencer. Time for last eighth-mile, 12⅗ seconds.

One-mile match race, professional—Frank L. Kramer, East Orange, vs. Bob Spears, Australia. Won by Spears in straight heats. Time for last eighth-miles, 12⅗ and 12⅕ seconds, respectively.

One-mile team match, professional—Eddie Madden, Newark, and William Hanley, San Francisco; Marcel Dupuy, France, and Frencesco Verri, Italy, and George Cameron and Harry Kaiser, New York. Madden and Hanley won first and third heats, Dupuy and Verri the second. Race won by Madden and Hanley; second, Dupuy and Verri. Time for last eighth-miles, 12⅗, 12⅕ and 12⅗ seconds, respectively.

Miss-and-out invitation, professional—Won by Fred Hill, Boston; second, John Bedell, Long Island; third, Lloyd Thomas, San Francisco; fourth, Percy Lawrence, San Francisco. Time, 6:24⅗. Distance, 3 miles.



Alfred Goullet Now a U. S. A. Citizen, Scored His First "Yankee" Win at Newark, Sunday, Sept. 3, in the Ten-Mile Open Feature

One-mile handicap, professional—Won by Charles Piercey, Australia (85 yards); second, Tommy Grimm, Newark (140 yards); third, Frank Corry, Australia (70 yards); fourth, Floyd Krebs, Newark (130 yards). Time, 1:49⅕.

Ten-mile open, professional—Won by Alfred Goullet, Newark; second, Jake Magin, Newark; third, Reggie McNamara, Australia; fourth, Fred Hill, Boston. Time, 20:44.

GEORGE SERES, FRENCH RIDER, IS INJURED

BOSTON, Mass., Sept. 3.—George Seres, the French pace follower, while competing in a one-hour paced race at the Revere Beach track last night, fell and received injuries that will keep him out of further competition this season and may hasten his departure for France.

Seres met Clarence Carman, the new paced champion, Leon Didier, another Frenchman, and George Wiley, the old paced champion, in the hour race. At the 38th mile, while Seres was in second place, two laps back of the leader, Carman, he punctured and fell. Seres was badly cut about the face and it was said his collarbone was broken. Carman won with Didier in second place and Wiley third. Carman covered 42½ miles in the hour.

Tim Sullivan, the New Havenite, had things his own way in the five-mile open for the professionals. Fred Herbert finished second, Paul Suter third and Pat Logan fourth. A tandem handicap for the same class went to Saxon Williams and Tom Connolly from the 80-yard mark. W. R. Greenquist and Fred McKenzie won the amateur events. Summaries:

Quarter-mile handicap, amateur—Won by W. R. Greenquist, Revere (105 yards); second, Eddie Keenan, Revere (95 yards); third, Tom Panacy, Brockton (90 yards). Time, 26⅘ seconds.

Two-mile open, amateur—Won by Fred McKenzie, Revere; second, Frank Jeehan, New Haven; third, Elmer Duncan, Everett; fourth, William Cupit, Roxbury. Time, 4:23⅕.

One and a half-mile tandem handicap, professional—Won by Saxon Williams, Buffalo, and Tom Connolly, Everett (80 yards); second, J. S. Grant, Lynn, and H. J. Reynolds, Forest Hills (160 yards); third, Paul Suter, Switzerland, and Charles Turville, Jr., Revere (40 yards). Time, 2:51⅘.

Five-mile open, professional—Won by Tim Sullivan, New Haven; second, Fred Herbert, Fall River; third, Paul Suter, Switzerland; fourth, Pat Logan, South Boston. Time, 11:15⅖.

MUSSELMAN CALLING ON PACIFIC COAST JOBBERS

CHICAGO, ILL., Sept. 3.—A. J. Musselman, manager of the Cycle Mfg. & Supply Co., is now on the Pacific Coast calling on the large jobbers in behalf of the Sturmey-Archer three-speed hubs and the Pye-Musselman cord tires. The jobbers without a single exception predict an extremely heavy demand for both products.

HENSCH WINS 5-MILE EVENT

BAYONNE, N. J., Sept. 5.—A five-mile bicycle race was held yesterday at City Park in connection with the Jersey Harriers. Fred Hensch accounted for first honors from J. Flanagan, who finished second, and A. Levinsky. The time was 14:05.

FARGO CLUB HOLDS FALL MEETING

FARGO, N. D.—The Mindak A. C., of Fargo and Moorhead, held its first meeting of the fall season at the club rooms a few nights ago. The club has had a fairly active summer, and is planning a social for the cool weather months.

N. E. W. 10-MILE RACE TO L. HARTMAN

Acme Wheelmen Rider Beats Field of 96 in Pelham Parkway Contest—Unione Sportiva Italiana Captures B. F. Goodrich Trophy Team Honors

NEW YORK, N. Y., Sept. 4.—L. Hartman, a member of the Acme Wheelmen, mounted on a Columbia racer, annexed first place in the New England Wheelmen's ten-mile handicap road race, which was run over the fast Pelham Parkway course in the Bronx section, yesterday morning. Out of an entry of 112 riders 96 of them lined up for the start.

Started with 13 Others

Hartman started from the 3½-minute mark along with 13 others, and he rode a steady race throughout and had the best finishing sprint. The first five riders to finish started from that mark and they crossed the tape in this order: Hartman; Walter Lundquist, Acme Wheelmen; William Henky, Empire City Wheelmen; C. Eiler, New England Wheelmen, and Harry Aron, Brooklyn Wheelmen. Hartman's time was 27 minutes and 58 seconds.

Tom Bello, the Unione Sportiva Italiana rider, beat out the other scratch men at the finish for time prize and Jerry Nunziata, his club mate, won second time honors. Fred Woisin, the Acme Wheelmen's star, annexed third time prize, and Eugene Aickelin, a member of the promoting club took down fourth time honors. Bello's time for the course was 27 minutes and 4⅘ seconds.

U. S. I. Take Trophy Honors

In the five-man team competition for the B. F. Goodrich trophy the Unione Sportiva Italiana had the lowest score. The New York Italian club riders scored 9th, 10th, 11th, 14th and 18th places for a total of 62 points. The Century Road Club Association's riders finished in 8th, 12th, 13th, 17th and 22d places, their tally amounting to 72 points. Third place in the team competition went to the Acme Wheelmen with 80 points and the New England Wheelmen scored 116.

A. O. Smith Cup Winners

The silver cup donated by the A. O. Smith Co., which was to go to the club having the largest number of starters, was won by the Unione Sportiva Italiana with 29 starters. The Century Road Club Association had 17 members in line and the Acme Wheelmen 13. The first 20 finished as follows:

Pos. Rider. Club.	Hdcp.	Time.
1—L. Hartman, A. W.	3:30	27:58
2—Walter Lundquist, A. W.	3:30	27:58⅕
3—William Henky, E. C. W.	3:30	27:58⅖
4—C. Eiler, N. E. W.	3:30	27:58⅗
5—Harry Aron, B. W.	3:30	27:58⅘
6—E. G. Bendi, A. W.	4:00	28:29
7—Ed Kain, unattached.	4:00	28:29⅕
8—C. Cestone, C. R. C. A.	3:30	27:59⅖
9—B. Brovarone, U. S. I.	4:30	28:59⅗
10—Charles Jensen, U. S. I.	3:30	27:59⅘
11—Charles Rabbino, U. S. I.	3:30	28:00
12—Louis Grace, C. R. C. A.	4:00	28:31⅕
13—George Steppelo, C. R. C. A.	4:00	28:31⅖
14—C. Zoccola, U. S. I.	4:00	28:31⅗
15—A. Levine, N. E. W.	4:30	29:01⅘
16—Louis Mahieu, H. C. W.	4:00	28:32
17—I. Tomasullo, C. R. C. A.	3:30	28:02⅕
18—M. Aglietti, U. S. I.	3:30	28:02⅖
19—Walter Renz, unattached.	3:30	28:02⅗
20—C. T. H. Tonges, N. E. W.	4:00	28:32⅘

Clubs—N. E. W., New England Wheelmen; H. C. W., Hudson County Wheelmen; C. R. C. A., Century Road Club Association; U. S. I., Unione Sportiva Italiana; A. W., Acme Wheelmen; E. C. W., Empire City Wheelmen; B. W., Brooklyn Wheelmen.

Tom Bello, Winner of Time Prize in N. E. W. 10-Mile Race

WALTHOUR SCORES AGAIN AT POINT BREEZE

PHILADELPHIA, Pa., Sept. 5.—Another win was added to the long string of the veteran "Bobby" Walthour, when he finished in front in the 100- kilometer (62½ miles) paced race at the Point Breeze track last night. Opposed to Walthour were Menus Bedell, the Long Islander; George Wiley, the Syracuse rider, and George Colombatto, the Italian.

The race was featured by numerous accidents and tire and motor trouble eliminated both Wiley and Colombatto from the contest, Wiley being forced out at the 25-mile mark, while the Italian had to withdraw about the fiftieth mile. Walthour finished a lap ahead of Bedell in 1:20:00⅘.

TWO RACES AT BETHLEHEM

BETHLEHEM, Pa., Sept. 5.—Two bicycle races were staged at Central Park yesterday afternoon in connection with the Labor Day celebration. The road race run over a 2½-mile course was won by John Sikora, a member of the Sokol A. A. James Salveg finished second and John Williams landed third place. The time was 12:06. M. Malac finished first in the five-mile race, he beating Michael Charch, Andrew Costello and James Salveg in the order named in 19 minutes.

WINQUIST ON RECORD RIDE

NEW YORK, N. Y., Sept. 6.—Record-breaking trips over the New York to Chicago course will be all the rage now that Fred Sanborn, the Baltimore rider, recently accomplished the trip in under eight days. William Winquist, secretary of the New York Division, Century Road Club Association, will leave here Sunday, Sept. 10, at 5 a. m., in a record ride to the Windy City and St. Louis, Mo. Winquist will ride a Columbia bicycle fitted with Goodrich tires, and upon his arrival in Buffalo will have an Atherton coaster brake attached to his mount.

WILEY TRIUMPHS AGAIN

PHILADELPHIA, Pa., Sept. 1.—George Wiley, the ex-champion back of the motors, won the 100-kilometer (62½ miles) race at the Point Breeze track last night. "Bobby" Walthour, the veteran, finished second and Clarence Carman, the new champion, third. Victor Linart, the Belgian, and Leon Didier, the Frenchman, finished fourth and fifth, respectively. The time was 1:17:43⅗.

COLOMBATTO LEADS IN 50-MILE

PHILADELPHIA, Pa., Sept. 3.—George Colombatto, the Italian paced rider, accounted for the 50-mile paced race at the Point Breeze track last night. Colombatto was opposed by Martin Ryan, the Newark Irishman; "Bobby" Walthour, the Atlanta rider, and Menus Bedell, the Long Islander, and the others finished in the order named. The time was 1:05:49 2/5. Colombatto led from the start and had the race well in hand all the way.

PEORIA CHICKEN RUN SEPT. 7

PEORIA, Ill., Aug. 31.—Announcement is made of the regular chicken run and annual meeting of the Peoria Bicycle Club at Mossville, a resort six miles north of the city, Thursday, September 7. Charles F. Vail, a charter member of the organization; M. X. Chuse and Henry W. Ulrich comprise the committee in charge.

CYCLIST CHANDLER

BOSTON, Mass., Sept. 1.—While training back of a motorcycle yesterday on the Lynn Boulevard, near the Revere Beach track, where he is one of the star sprinters, Ned Chandler, the negro cyclist, was painfully injured. The motorcyclist, who was pacing him, slowed up and Chandler crashed into the machine and fell. When picked up it was found he had sustained a broken collar bone and a broken shoulder, which will keep him out of competition for the balance of the season.

LOUISVILLE SHOP ROBBED

THIEVES recently looted the closed bicycle shop of Clarence Fisher, and made away with tools and merchandise valued at $75. Fisher recently closed his store to go with the Ford people. At one time Fisher operated a big bicycle, hardware and motorcycle store at Preston street and Broadway, a few months ago moving to 808 South Preston.

ROCHESTER DEALERS REVIVE RACING

Stage Five Events on Labor Day—Fred Roy Is Best Performer of the Day and Is Placed in All Races

ROCHESTER, N. Y., Sept 5.—It seemed like the good old days of cycling here yesterday. The Rochester Cycle Trades Association staged five races at Genesee Valley Park in connection with their Labor Day program, and the events, ranging from one mile to ten, were productive of excitement and brought out a large and enthusiastic crowd.

Fred Roy, one of the old favorites in past racing days, was the bright performer of the day. Roy accounted for the one-mile championship of Monroe county, also won the one-mile open and was placed in the other three races. The three-mile, five-mile and ten-mile races were handicap affairs and Roy was placed on the honor mark in each event.

Roy Wins Mile Open

The first event of the day was the one-mile open and Roy finished in front of Victor Reylaere and Medard DeConinick. Roy finished fourth in the three-mile event, Andre DeVogelaere getting the verdict from a long mark. Emanuel Vosbury finished second and Victor Reylaere third. Carmiel DeConinick won the five-mile handicap with Roy in second place and William Mathies in third position. Andre DeVogelaere won the ten-mile handicap race from the four-minute mark, while Roy finished second and Emile Smith, another long marker ran fourth. Carmiel DeConinick finished second to Roy in the Monroe county title race and Andre DeVogelaere third.

through Cleveland, Buffalo, Niagara Falls, Rochester, Syracuse, Utica to Albany. From Albany the young tourist rode on the east side of the Hudson, arriving here on Sunday, September 3.

Rides a Thistle Bicycle

The mount ridden by the young cyclist was a Thistle, a product of Beckley Ralston Co. of Chicago. His bicycle was fitted with Vitalic tires, Troxel saddle and a Musselman coaster brake. The outfit complete weights 84 pounds and, with the rider, totals 192 pounds; that is, young Ross said that was what he weighed when he started. A pleasure jaunt was his aim, and he made no effort at record breaking. His best daily mileage was 84, that being scored after leaving Rochester.

C. R. C. OF A. HOLD RACES ON HUDSON BOULEVARD

HOBOKEN, N. J., Aug. 28.—Three races were held yesterday over the Hudson County Boulevard by the New Jersey Division, Century Road Club of America. The one-mile scratch race went to the New Jersey Division's champion, A. L. Everard, who defeated H. Bell, Emil E. Fraysee and E. H. Gerard in the order named in 2:35. Everard also accounted for the three-mile race, the others finishing the same as in the one-mile. In the Brassard Fraysee defeated Gerard in a mile match. Several races are due to be held next month in which the club's representative in the Inter-Club Amatur Road Racing League's championships, October 1 and 8, will be selected.

EDGAR M. ROSS, CHICAGO LAD, ENDS LONG TRIP

NEW YORK, N. Y., Sept. 4.—Edgar M. Ross, a University of Chicago student, has just finished a bicycle tour from Marshall, Mich., to this city, covering approximately 1,400 miles. Ross had his bicycle well burdened with a suit case, blankets and other necessities to live the close to nature life en route.

The young cyclist, who is just around the 20-year-old stage, left Marshall on Sunday, August 7, and went across Michigan to Detroit. From the latter city he headed for Toledo, and in his travels passed

CARMAN-LINART BEST TEAM AT REVERE TRACK

BOSTON, Mass., Sept. 5.—Manager Nat Butler of the Revere Cycle track furnished his patrons with a fine card of races last night. The big feature of the meet was the 50-mile team race in which Clarence Carman, the new paced champion, and Victor Linart, the Belgian, were opposed by Leon Didier, the Frenchman, and Vincent Madonna, the Italian. Carman and Linart won the race by an even mile in 1:10:43⅕.

Pat Logan, the South Boston veteran, won the five-mile open, while another feature race, a pursuit match between Michael Barber, known as "Mike the Barber," and Iver Crowell, a race destined to furnish the comedy for the crowd, was captured by the latter after going 2⅞ miles. Summaries:

Half-mile handicap, amateur—Won by John Hackett, Watertown, 75 yards; second, J. W. Carruthers, Beachmont, 100 yards; third, Tom Panacy, Brockton, 105 yards. Time, 57⅘ seconds.

Two-mile open, amateur—Won by Fred McKenzie, Revere; second, Elmer Duncan, Everett; third, Frank Jeehan, New Haven. Time, 4:25⅘.

Quarter-mile handicap, professional—Won by Dennis Connolly, Everett, 75 yards; second, H. J. Reynolds, Forest Hills, 80 yards; third, J. S. Grant, Lynn, 65 years; fourth, Hardy Jackson, Revere, 70 yards. Time, 27⅖ seconds.

Five-mile open, professional—Won by Pat Logan, South Boston; second, Tim Sullivan, New Haven; third, Tom Connolly, Everett; fourth, Hugh McPartland, Boston. Time, 11:58⅘.

USES TOPS TO BOOM CYCLES WITH YOUNGSTERS

KANSAS CITY, Mo., Sept. 2.—E. B. Saufley, of the Saufley Supply Company, of Kansas, believes that it is well to impress a firm name upon the public by a process of education. Saufley is the local agent for the Excelsior, and has a nice parts business as in Kansas City and this territory. By a process of education Mr. Saufley also believes that it should begin with the children in the form of amusement. Therefore, he has provided for their pleasure a small top, the top of which proclaims that the Saufley Supply Company is in business in Kansas City.

Will Remember the Name

Upon such a form of advertisement for cycle agency Saufley says: "While in itself a bit peculiar, it is noticeable that a firm name is impressed upon the mind of a child, and stays put to such a degree that the child will remember it when ready to become a cyclist, and not only this, but it is noticeable that the parents always take a great deal of interest in the thing that the children are playing with, and therefore direct results can be obtained by furnishing an advertising plaything for the children." The demand for the tops has been very heavy, according to Mr. Saufley, and he believes that the advertisement will bear much fruit.

AMES IS SHOWING EMBLEM BICYCLE MODELS

KANSAS CITY, Mo., Sept. 2.—Fred Ames, the local agent for the Emblem motorcycle, true to his promise, now has on display road racing models and standard models of Emblem bicycles. Ames has taken a great deal of interest in the Kansas City Bicycle Dealers' Association, and is one of the race officials for that organization. The business in lightweight machines has been extremely nice, according to Ames, and he declares that the demand is all that he can supply.

BICYCLE DEPARTMENT IS DOING GOOD BUSINESS

COLUMBUS, O.—The Franklin Cycle & Supply Company, located on East Long street, is having an exceptionally good business in the bicycle department. According to the manager, laboring men are buying bicycles faster than ever, and the prospects for the future are exceptionally bright. The concern is also central Ohio agent for the Smith Motorwheel, which is quite popular in this territory.

NEW CENTURY CLUB CAPTURES C. A. C. C. TROPHY

SAN FRANCISCO, Cal., Sept. 1.—By taking the third straight semi-annual running of the series of Australian pursuit races for the California Associated Cycling Club's trophy, which was staged at the Golden Gate Park Stadium, Sunday, August 20, the New Century Wheelmen become the permanent owners of the handsome cup.

Only two teams contested for the trophy last Sunday. The Garden City team, from San Jose, and the New Century Wheelmen, of this city, were the only clubs having representatives. The Olympic Club and the Sampson Club failing to show up with teams. The New Century trio, composed of H. De Brie, M. Castillo and R. Welch, caught the Garden City's aggregation of G. Simondi, C. Flint and K. Winkie, after going 13 miles.

TRIPLE TRIO CYCLE TOUR

LEBANON, Pa.—A triple trio of riders of the Fifth Ward Bicycle Club, of this city, has just returned from a three-day tour awheel which embraced the following Pennsylvania cities: Reading, Lancaster, Hanover, York and Harrisburg. The party which left Saturday morning and returned Monday morning comprised Wade Bell, W. M. Meck, Ralph Mumford, Frank Kohr, Allen Zellers, Russell Fulmer, Robert Christ, Robert Urich and Harry Witman

SHORTY MATHEWS IS VICTOR AT LIMA MEET

LIMA, O., Sept. 5.—Shorty Mathews, riding an Indian, took the 25-mile, 10-mile final and Chamber of Commerce trophy in the meet held here yesterday. He also captured the initial race, a five-mile heat. Mathews' time for the 25 miles was 28:49⅗. The trophy was awarded for setting a new mile record for the track, Shorty covering the distance in 69 seconds.

In the five-mile heat which opened the meet, Mathews beat Charles Smith, Indian, easily. Smith took second place and Ralph Marshall, Thor, came third. Time, 5:49. The next five-mile heat went to Charles Sudduth, Indian, with Paul Wilkins, Harley-Davidson, second, and Rollie Blume, Indian, third. Time, 6:14.

The three-mile sidecar event was won by Sam Goshhorn, Excelsior, with Carl Watt, Indian, second, in 4:19. In the 10-mile final, Mathews won in 11:43½, with Wilkins, Harley-Davidson, second. The Chamber of Commerce trophy went to Mathews, after he covered the mile (two laps of the track) in 1:09. In the five-mile consolation, Blume came first; Marshall, Thor, second, and Rod, Indian, third. Time, 6:17½. The 25-mile order of finish was Mathews, Wilkins, Smith, Indian, the time being 8:49 3/5.

AUGUST STATISTICS SHOW STEADY GAINS

WESTBORO, Mass.—The Federation of American Motorcyclists has gained 116 affiliated members, 50 unaffiliated members and 148 have renewed during the month of August, Secretary Gibson reports. West Virginia leads in the number of affiliated members—26—for the month, while New York shows the most renewals—24. Kansas and New York tie in point of numbers, each having 29.

FREED AT LOS ANGELES

LOS ANGELES, Cal.—A. Freed, head of the Pacific Motor Supply Company, of San Francisco, has been in Los Angeles of late supervising extensive alterations at the local branch. Additional floor space has been taken in the second story of the building and better warehouse and service facilities are thus afforded. Plans for the alterations were made at the time the company took the distributing agency for the Indian in the northern half of the state.

WEST BACK FROM TRIP

ROCKFORD, Ill.—Charles West, of this city, has just returned from a vacation trip of 512 miles, which was made successfully with his sidecar outfit. West traveled from Rockford to Hopkinsville, Ky., his old home, accompanied by Mrs. West and their four children. It required but three days to make the journey, the itinerary being through Chicago, Indiana, Vincennes and Evansville. They spent a week at Mr. West's home in Kentucky and then returned to Rockford.

WHAT DO YOU KNOW ABOUT MOTORCYCLES ?

WHAT MAKE OF MOTORCYCLE IS THIS TAKEN FROM?

SAY fellows! We were easy on you last week. That little piece of a picture which we printed was put out as a "feeler"; a little trial picture, so to speak, to find out just how wise you fellows who straddle motorcycles are. And we found out! There were only two bad guesses in the whole batch of answers that reached the Contest Editor's desk before press time; and answers, by the way, are coming in in every mail. Those riders who had the detail picture spotted as the rear valve pocket of a 1916 Big Thor twin were correct as can be.

But look at the abbreviated snapshot above; then run and get your glasses and look all over again! This one's not so easy, is it? Better go and ask your rider friend what he thinks it is before you send in your answer. And better have your rider friend consult his rider friends, and his friends' friends; better get all the "info," "dope," "expert opinions," and plain guesses you can and then give it the final "O. O." before you commit yourself. For this particular picture is going to be a "poser" even for the old hands, else we miss our guess.

The riders who correctly answered "Thor" to the first number of the series are:

Thomas McClain, Jr.....Mercer, Pa.
Ogle Massey.....Boyleston, Ind.
L. H. Coddington.....Peekamose, N. Y.
Donald Ball.....Chittenango, N. Y.
Walter Palmer.....Brooklyn, N. Y.
Walton Weed.....Stamford, Conn.
Grant Moore.....Monticello, N. Y.
William Ennico.....New York, N. Y.
T. O. Wansleben.....Washinton, D. C.
Hermann Henssler, Jr...Philadelphia, Pa.
Walter Snyder.....Little Falls, N. Y.
L. W. Sierk.....Brooklyn, N. Y.
Dante Bonaguidi.....Bronx, N. Y.
Elwin Safford.....Corry, Pa.

And the men who missed their guess are:

George M. Johnson....New Haven, Conn.
Fred Horlacher.....Poughkeepsie, N. Y.

"Our own" George Johnson, who should have known better, thought the part belonged to an Indian, while with true loyalty to the machine which he straddles, Holacher claimed it as part and parcel of an Excelsior. Never mind fellows; this one slipup should only stimulate you to better efforts. There are lot's more guesses coming to you; lot's more "posers" for the other fellows to fall down on, so don't count yourselves out of the contest because you missed this easy one.

And you fellows who meant to send your answers in last week and then procrastinated, get into the contest with this number. There's nothing to be gained but glory, and perhaps a measure of prestige which comes of being known as a "motorcycle expert." So then if only to show your fellow riders how much you do know about motorcycles, send your answer before you forget it to the Contest Editor, **Motor Cycle Illustrated,** 21 Park Row, New York, N. Y.

PERHAPS YOU KNOW WHO OWNS THIS EXCELSIOR

CHICAGO, Ill., Sept. 2.—The machines that are "lost, strayed or stolen" are legion, but the Excelsior factory, as if to offset the score of those which are never located, discovered a machine without an owner. The machine came to light through the following letter written to W. M. Johnson, head of the Legal Action Department of the F. A. M., who immediately turned it over to the "X" factory:

"A 1915 Excelsior, probably a stolen machine, was found along a creek about three miles from here. Two boys who found it and who lived near, completely demolished the motor with a sledge. They give as their only reason for doing this that they wanted the frame to coast down a hill. We did not learn of it until late last evening and we went out and secured as much of the motor as possible.

"As we have said, the machine was a 1915, three-speed Excelsior. Owing to the crank case being so completely demolished we could learn only the last two figures of the engine number, which were 26. The three-speed number was 4,852. On the front wheel there was a Corbin-Brown speedometer, drive gear. The tires were Firestone casing and tube on rear wheel, Racine casing and Goodyear butt end tube on front wheel. From all appearances the machine had probably been hidden for several months. Hope that you will be able to locate the owner."

If you have lost an Excelsior answering this description and think that this possibly might be it, or if you know of anyone who has lost one, further information can be secured from Fred B. Mathis, sales manager for the Excelsior Motor Mfg. & Supply Co., this city.

TAKES FIRST SIDECAR RIDE

KENTON, Ohio.—Mrs. Susan Carder, who is 89 years of age this week, recently enjoyed a ride in a motorcycle sidecar. Scott Hoons, a local rider, piloted the machine and reports that the aged passenger thoroughly enjoyed the trip.

KEEPING UP MACHINE'S GOOD LOOKS

Some Hints on How to Maintain the Machine in Condition and Some Timely Advice on the Value of Appearances When the Time Comes to Trade the Mount for a New One

BY D. B. PANGBURN

IT'S a safe bet you can't find one motorcycle owner in ten who doesn't look forward to the time when he can turn in his present mount and get a new model. You do yourself. This hankering after the newest and best is perfectly natural, and the question of satisfying it is often strictly one of how much you can get for the old bus.

When you turn in the machine in trade the agent bases his offer on what he thinks he can get for it. In this case or in a private sale the fact remains that the looks count most. Would you buy a mangy dog unless it was a tremendous bargain, or you were in the sausage business where externals don't matter? Then why expect to get rid of a mangy looking motorcycle unless you give it away or sell to a junk dealer?

Value of Looks

I have in mind a medium sized automobile that has recently been put on the market. I've seen that car undressed, and it isn't much, but the makers thereof are very wise. They have put most of the expense of building into the outside finish; and the result?—why the cars are beauties. They go off like hot pancakes on a cold winter morning, and the buyer usually sells himself, in this wise. He gives it the once over and says:

"Some class to *that* car. Nothing wrong with it if they've taken as much care inside as out. She looks good to me. Put me down for one." The moral is plain; appearance is what sells.

"Humph!" I can hear you grunting. "What's the use of talking about selling at this time of year. I won't do anything like that until next Spring. Why bother now?"

It's just *because* you won't sell for six months that I'm talking now. It's natural enough to let things slide when the sale is so far in the future, but if you let your machine go too long without care the enamel loses its original lustre and becomes cracked and crazed, the bright work gets tarnished and dingy, the spokes and hubs rust—the whole machine looks ready for the scrap heap; and once it gets in this condition you can never make it look new again, try as you will. On the contrary, if you get at it often, it's only a small task each time to keep it almost as good as new.

Neatness Pays Well

'Tis not because of the added satisfaction to your self-respect that comes from straddling a clean, snappy looking, mount; not because of the extra protection to your clothes; not even because it helps the sport in general and your particular factory, to have well kept machines on the road, though that ought to appeal to the loyal rider, but for the actual saving in dollars and cents that you'll make when you sell it; that I say, keep your machine up; make a habit of keeping it right. The looks will make 25 per cent. of the selling price, and there's an unmistakable difference between the outfit that's been regularly cared for, and never lost its good appearance, and the one that's been hastily furbished up in an attempt to make a few hours' work cover a year's neglect.

One of the biggest motorcycle boosters I know of cleans his machine as often as if it were a baby. He never sleeps after a run without going over it. Result—people stare after it on the street because it looks so spick and span, so out of the ordinary. He can easily sell it for $25 more that the average, too.

Make a Good Job

The trouble with most cleaning is that it isn't careful enough. When this rider cleans up he doesn't merely spread some gasoline on with a brush, wipe the sides of the tank with a rag, and give the rest of the machine a lick and a promise with a feather duster. The latter is a grand little weapon for removing dust from spokes and rims—nothing better—but there its usefulness ends.

Let me make a few remarks here about this cleaning business. The easiest way to get the dirt off the outfit is to flush it off with gasoline and a brush. The easiest way in most things is the worst, and this case is no exception to the general rule.

Gas and Brush

For cleaning up the engine proper, where there are none but plain metal surfaces, and where there is likely to be more or less oil to hold the dirt, the gas and brush method can't be beaten. A half pint of the juice in a small can, and a ten cent paint brush for spreading it on will enable you to turn out a fine job.

There occurs to me at the present moment, however, only one quicker and surer way to ruin the finish on the enameled parts, and remove all their pristine gloss and beauty, than to make a habit of sloshing gasoline over them frequently; and that is to expose the boat to all kinds of weather and never clean it up at all.

The Happy Medium

Gasoline leaves the surface dry, but, after a few applications, dull. On the other hand, you don't want a cleaner which leaves a sticky coating, lying in wait, like a crocodile for a nigger, to catch all the dirt in range, and make you do the job over again. The sort of polish which really polishes and then leaves the surface glossy and dry, so dust won't catch on it, is the happy medium.

There are various preparations of this kind on the market. Some are in the form of wax, such as Johnson Prepared and Old English waxes. Others are in liquid form. In either case they are usually only furniture polishes, adapted to use on enameled surfaces. Read the label and get one that will leave a dry surface; any reliable concern will tell the truth on the label. One piece of advice. Don't get a polish with ether for the liquid part; it may spoil your enamel while being all right for furniture; use an oil-body polish. The liquid type is usually easier to apply than the wax, and has the advantage that it both cleans and polishes.

Avoid Metal Polishes

Now a word about the bright work. Beware of the ordinary "metal polish," especially the paste kind. Not all are bad; some certainly are. And here let me make a clear distinction between *metal polish* and *nickel polish*. What you want for use on nickel is a nickel polish.

Any compound of this sort contains some kind of grinding material, which when applied makes fine scratches. The trouble lies in the grinding material. If the scratches are fine enough they do not injure the surface, and they are so small that the eye does not pick out individual scratches, but the whole surface appears bright. The polishing agent may be whiting, as it usually is in liquid polishes, or it may be emery or some other such abrasive, as often occurs in the paste variety.

I repeat, beware of plain "metal polish." It is meant primarily for uncoated metallic surfaces, and is intended not only to polish but to remove rust, dirt, oil and grease with the minimum of effort. For this reason the average kind contains some cutting material such as emery or pumice-stone in pretty large size. It sometimes also has a little soap or alkali in it to help in cutting the grease and to hold the cutting powder; or it may contain acids to cut rust.

Killing the Finish

Such things make these paste metal polishes absolutely ruinous when used on the bright work of motorcycles. You might better get out your coarse valve grinding compound and use it, for either one will remove most of the nickel in short order, while the metal polish has the disadvantage that the alkali, if present, will cause the exposed iron to rust rapidly. I know a fellow who spoiled the hub and all the spokes in his front wheel, and a part of his handlebars as well, so they rusted in spite of him, with just one application of this sort of a polish.

If used before the parts are rusted, the three-in-one type of oil is good, because it polishes the parts to some extent and preserves the original finish. Frequent application of it during cold weather riding is desirable.

The main thing is to make a regular habit of cleaning the machine all over and carefully. If done frequently it is never a big job, and the extra twenty-five dollars or more that it will bring when you're getting that new model will more than repay your twenty-five cents spent on polish, and all your efforts, not to mention the good done the motorcycle game by your always appearing with a neat looking outfit.

MANY ACCESSORIES AT NATIONAL EXHIBITION

Standard American Cycle Goods Share Interest With Cyclemotor and Numerous Bike Models in Toronto Display—No Power Two-Wheelers Shown

TORONTO, Ont.—An extensive portion of the exhibits in the Transportation Building at the Canadian National Exhibition, held at Toronto for the two weeks starting August 28, was of direct interest to motorcyclists and bicyclists although there was not one motorcycle model on display. There were accessories without number while the leading bicycle manufacturers and jobbers showed their range of wheels and the tire makers also exhibited their best.

One of the conspicuous demonstrations was that of the John T. Wilson Company, Limited, manufacturers in Canada of the Cyclemotor, whose exhibit consisted of six motored wheels, cutaway models and parts which will form new features of the featherweight engine. The changes in the 1917 model of the Cyclemotor, which will be ready for delivery on October 1, are few. A noticeable improvement is the adoption of bronze main bearings for the tiny two-stroke engine which will give three times the service of the parts previously used. Another important change will be in the magneto. This will continue to be a national product but the design has been altered somewhat as the result of continuous experimental work during the past year. During the Fair one of the visitors was T. G. Anderson, general manager of the Cyclemotor Corporation of Rochester.

Many Bicycles on View

There was a great array of bicycles in each of the exhibits by the Canada Cycle & Motor Company, Limited, the Planet Bicycle Company, and Hyslop Brothers, Limited. A unique feature of the Canada Cycle Company's show was a wooden boneshaker which was compared with a shining new wheel of the latest type. Old Sol lamps were also given a good display at the C. C. M. stand.

The tire exhibits included those of the Goodyear, Firestone, Goodrich, Dunlop and Dominion companies while two brands of magnetoes, the Bosch and the Splitdorf, were shown by their respective distributors in Canada. A distinct exhibit was that of Prest-O-Lite gas tanks and batteries while spark plugs in quantity were displayed by various dealers.

Motorcycle and bicycle dealers and sportsmen came from far and near to inspect the exhibits and to exchange fraternal greetings. The President of the Canadian Wheelmen's Association, Alderman Louis Rubenstein, of Montreal, was on hand during the first week when he met bike officials and racers from other parts of the country. The dealer who covered the longest distance in order to do business at the Toronto Fair was undoubtedly J. G. Pape, of Vancouver, B. C., who is known wherever bicycles are sold in the Dominion. President F. A. O. Johnston, of the Canada Motorcyclists' Association and other officers of the motorcyclists' governing body were also frequently in evidence in the Transportation Building. It was with genuine regret, however, that many out-of-town agents discovered that the latest models of motorcycles were not on exhibition. "I have had five hundred people ask me where the motorcycle exhibits are," declared one of the bicycle men who was present throughout the two weeks of the show, Toronto stores were called on also.

TORONTO ISSUES TRAFFIC RULES

City Officials in Ontario Metropolis Give Sixteen Recommendations To Regulate Vehicular Conduct—Pedestrians Provided For

TORONTO ,Ont.—The City Fathers of Toronto have taken a definite step toward the regulation of all kinds of traffic, including the movements of pedestrians, upon the narrow streets of Ontario's capital and there is much of interest to motorcyclists and bicyclists in the matter. At a general meeting of citizens a long list of proposed regulations was drawn up in spite of the protest of Chief of Police Grasett against the adoption of "cumbersome by-laws." The chief declared that motorists as a rule are law-abiding citizens and must receive some consideration although a "few fools" undoubtedly required checking. The tendency of the speakers was that the time had arrived when pedestrians must be considered a part of the city's traffic and the consensus of opinion was that jay-walkers contributed to the majority of accidents.

Sixteen Recommendations

Sixteen recommendations were adopted by the meeting and it is interesting to note that practically every suggestion has a direct bearing upon the operation of motorcycles and bicycles on Toronto streets. Only a very few recommendations throw any discredit upon motorcycling or bicycling, however. The proposals, which are applicable to many cities in America, are as follows:

Every driver of a motor vehicle shall have a permit to drive. Headlights and sidelights on motor vehicles shall be so arranged that they will not constitute a menace to safety. Motor vehicles shall not turn corners or cross intersections at a rate in excess of eight miles per hour.

Slow moving vehicles shall keep to the curb. All vehicles shall stop six feet to the rear of standing street cars. All vehicles shall carry a light at night.

Motorcycles and bicycles shall not carry more than the load for which they were designed. Bicycles must be equipped with a warning signal. Bicycles must not be ridden on the devil strip. Bicyclists shall not attach themselves to other vehicles in motion.

Bicycles must not be operated without proper control at all times. The street is no place for circus feats. Push-mobiles, children's express wagons and roller skates must be confined to the sidewalks.

Children of three years of age and under must not be on the streets unless under the care of some responsible party. Pedestrians must be considered a part of street traffic and must be subject to regulations. The onus of placing responsibility for an accident must be upon the person injured if an accident occurs while a pedestrian is crossing a roadway between intersections.

SPECIAL WORK FOR TORONTOANS IN BRITAIN

TORONTO, Ont.—A comparatively large number of members of the Toronto Motorcycle Club, who enlisted for service with the Canadian Overseas Army, are now engaged in special duties in and around the Canadian depot at Shorncliffe, England, according to word received at the club headquarters here. These boys are still enjoying club life as their duties permit them to associate as of old.

Joe Golden, Hugh McCrossen, Eddie Kelso, Roy Thompson, Harold Armstrong, Suggitt, H. McDonald, Frank Rynex and Jimmy McNeil are among the Toronto club riders who found themselves together in England, although they crossed the sea at various times during the past eighteen months. Rynex and McDonald have been attached to a mechanical repair depot, and Rynex is a full corporal.

FOURTH RIDER PLATOON IS AUTHORIZED

REGINA, Sask.—The fourth platoon of motorcyclists and bicyclists to be raised in the Canadian middle west since the start of the European war has been authorized by the Canadian militia department. It will be raised in Saskatchewan, and the headquarters of the corps will be Regina. An interesting feature is that the officer in command of the platoon is Lieutenant C. E. McCarthy, one of a family of world-famed cyclists of bicycle boom days.

In the Dealer's Realm

CHARLES HANSON KILLED IN COLLISION

Veteran Indian Man in Kansas City Is Crushed Between Speeding Trolley Cars—Twenty-one Years in Cycle Trade

KANSAS CITY, Mo., Sept. 2.—Motorcycle and bicycle tradesmen in this section are saddened at the sudden death of Charles Hanson, the representative for Indian motorcycles. Monday, Hanson was just leaving his store at 1421 Grand avenue with a sidecar outfit when he was caught between two trolley cars and so badly injured that he died instantly.

Hanson was going north on Grand avenue when a speeding northbound trolley hit him and tossed the outfit between the tracks. To the horror of a huge crowd assembled for the G. A. R. parade at the time, a southbound car crashed into the Hanson outfit and crushed machine and driver. Blame is placed on the congested traffic conditions on the avenue and also on the high speed at which the trolley cars were run.

The funeral services were held today at the Church of the Nazarene. Orville Newby, of Newby Brothers; C. Hahn and some non-trade friends were the pallbearers. Practically every motorcycle and bicycle shop in the city closed this afternoon and sent a representative to the services. The procession to Mt. Washington cemetery was headed by a squad of motorcycle policemen, all of whom were personally known to the late Mr. Hanson.

Charles Hanson was 52 years old on his last birthday. He lived at 3933 Euclid avenue. He is survived by a widow and a son, Albert.

Hanson started in the bicycle business in 1894 with a line of standard wheels. He took the agency for the Columbia motorcycle in 1900, succeeding this with the Indian in 1901. He has continued with the Indian ever since. In 1915, when the Hendee Mfg. Co. brought out Indian bicycles, Hanson took the rights for this line in Kansas City. He was the most popular man in the trade and was noted for his fair treatment of all with whom he transacted business.

ORANGE INDIAN MEN HAVE MOTORCYCLE WEEK

ORANGE, Cal.—Carricker & Crowl, who have what experts claim to be the best-appointed small motorcycle store in Southern California, put over a big stunt for a town of this size recently. They had an Indian motorcycle sales week that came pretty near being Motorcycle Week for the whole city.

The partners got the thing up in style with a crack-a-jack window and store display, a lot of brand new machines on the floor, big advertising and special motorcycle stories in the Orange daily and weekly papers. They distributed handbills and circulars. Everyone who came into the store got an attractive souvenir. The affair lasted the full week and the immediate results were four Featherweights and two Powerpluses sold and a big list of good prospects.

READING-STANDARDS ARE MANY IN KANSAS CITY

KANSAS CITY, Mo., Sept. 2.—It is noticeable that there are quite a number of Reading-Standard motorcycles being ridden in Kansas City, and this is due to the activity of the local agency. It is now nothing unusual to see a green machine upon the boulevards.

KLAPP RETIRES FROM MOTORCYCLE FIELD

LOS ANGELES, Cal.—George A. Klapp, one of the best-known motorcycle salesmen in the West, has retired from business on account of temporary ill health. Klapp has just finished his fourteenth year of service in the cycle trade. He leaves the Pacific Motor Supply Company for a rest of two months.

CROUCH TAKES CLEVELAND LIGHTWEIGHT AGENCY

BLOOMINGTON, Ill.—Alvin Crouch has taken the agency for the Cleveland lightweight for this city and vicinity, and to date has delivered three of the little two-strokers. He has also sold a Harley-Davidson three-speed twin to Earl Waltz for messenger service.

URQUHART IS OUT AFTER MELON MEN

EL CENTRO, Cal.—Someone else beside the melon growers in this section is getting the kale for his product these days. He is Guy Urquhart, the local Indian agent. About two weeks ago the proceeds from the sale of El Centro's melon crop came in and Urquhart got busy. Result—four Powerpluses for the first week and three for the second, while at the middle of the present week be sent in orders to Risden in Los Angeles for two more. Urquhart is now trailing a new bunch of prospects to double the number for next week.

DAYTON DEALERS AT FACTORY

DAYTON, O.—Among the many dealers who have recently visited the factory of the Davis Sewing Machine Company were Messrs. Lane, Schuster and Adams, of Troy, O.; Cincinnati, O., and Covington, Ky. They all made a tour of the works and closed initial contracts for 1917.

TEUBNER HAS WICO BATTERY FOR MIDDLE WEST

DAYTON, O.—W. J. Teubner & Company, distributing the Indian in this city, has established a station for WICO storage batteries at his headquarters, 206 North Main street. This battery, made by the Witherbee Igniter Co., of Springfield, Mass., is fitted to Indian machines, and the Teubner firm has the rights to the entire Middle Western territory for it. Special service will be given to all dealers in this section for immediate delivery of repair parts.

MUNICIPAL SALES FOR VOSS BROTHERS

PEORIA, Ill.—Voss Brothers, Indian and Excelsior agents, have delivered a twin Excelsior to the local police department and also one to the Princeville department. An Indian van outfit has just been delivered to the local postoffice also. The Voss bicycle business is booming and they report sales as running way ahead of last year. The leading bicycles handled are the Dayton and the Banner Special, the latter their own nameplate machines.

MURRAY IS BUSY WITH 1917 HARLEY-DAVIDSON

KANSAS CITY, Mo., Sept. 2.—The motorcycle store and shop of John Murray has been very popular during the past week, which fact is partly due to the display of the new 1917 Harley-Davidson which is upon exhibition there. Murray says that the Harley-Davidsons are moving nicely during the last few weeks, and it does not seem that the local riders are going to wait to be supplied by the new machines, but will be easily contented to ride a few of the 1916 models a while.

JACKSONS HAVE RECORD MONTH IN AUGUST

SAN FRANCISCO, Cal.—W. E. Jackson, of W. E. & W. H. Jackson, distributing the Dayton, reports the biggest month's business in August that he ever had. The Jacksons find a continually growing interest in the Dayton Motor Bicycle and had been running short of bicycles, but a new carload of Yales came in from the Dayton factory just in time.

BELL HAS STAR LIGHTWEIGHT EXHIBIT

KANSAS CITY, Mo., Sept. 2.—W. Bell, Pope agent and local distributor of the Cleveland lightweights, which are becoming very popular, has upon his floors one of the most complete lightweight motorcycle displays in the city. The floor also has space for the "Clipper" and four or five other makes of bicycles, including the Pope.

THIS DEALER BACKS UP HIS POPE BY OFFERING PRIZES

QUAKERTOWN, Pa.—By way of demonstrating his faith in the capability of the Model L Pope, for which line he is agent, H. C. Fronheiser, of 26 Eighth street, recently offered three prizes for riders of other makes who could improve upon a test performance made on Ingram's Hill by a Pope motor with two riders up. The Pope climbed the hill from a standstill, carrying the tandem passenger, and Fronheiser was so impressed with the exhibition that he offered three merchandise awards for any riders who could make a better showing.

ROTHOLZ MOVES TO LARGER QUARTERS ON PARK AVE.

NEW YORK, Sept. 1.—After being at 1491 Fifth avenue for over fifteen years, Gus Rotholz, the veteran Reading Standard dealer, has moved to 1691 Park avenue, into quarters which are far larger than those he recently gave up. The move was necessary to get better accommodations for his increasing trade and certainly Gus' business during the past season has warranted it.

The new headquarters for the Reading Standard distributor in the metropolitan district are fireproof and have large floor areas, giving ample space for the storage of sidecar combinations. This is of great importance, as most of Gus' patrons have sidecars.

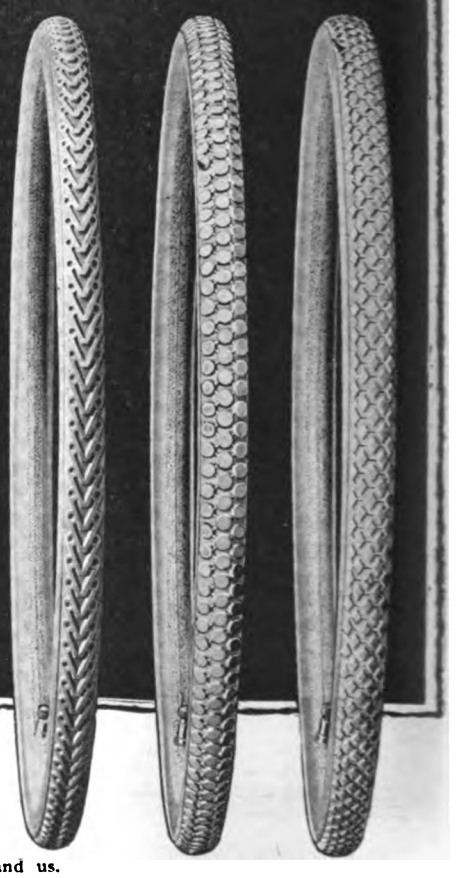
EMBLEM SALES FINE, SAYS JOHN T. BILL

LOS ANGELES, Cal.—Emblem sales are going well in this section, according to a recent statement by John T. Bill, who holds the distributing rights to the Angola-made machines.

3 Strong Leaders –

a complete quality line that meets every demand

VITALIC BRIGADIER ENDURO



ANY DEALER with a stock of these three tires is completely equipped to supply the demand of *every* customer that comes into his store—from the one who wants the *best regardless of price* to the one who wants a *good* tire at a *popular price*.

THE VITALIC

is built throughout of the best tire materials obtainable,—two plies of genuine *motorcycle* fabric frictioned with pure rubber, an inner tube of pure Para rubber so heavy as to eliminate any possibility of leak, an extra heavy non-skid tread of finest quality pure rubber. Will outwear any ordinary bicycle tire *more than two to one*. Once introduced it easily brings a higher price than other tires and always sells over and over again to the same trade because it *never* disappoints.

THE BRIGADIER

The best popular priced tire ever put on the market, far excelling others anywhere near its price. It is a four-ply tire, built with two plies of best Egyptian fabric all around the tire and two extra plies on the tread. A very high grade friction is used.

The extra heavy inner tube is made of a very high quality rubber. The Brigadier is made with gray side walls and a heavy large white studded tread as shown in the illustration.

THE ENDURO

Another excellent popular priced tire that fills a long felt need for a tire of lower price that has genuine quality. It is built with two plies of high grade Egyptian fabric with a very high grade friction, has a heavy inner tube of very good quality and a good substantial diamond studded white tread.

Write us today for sample sections of these three tires and attractive display material and dealer helps.

Your jobber will show you the tires.

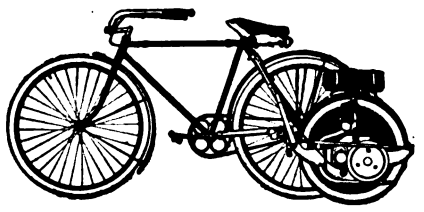
C. E. CRESSLER

Smith Motor Wheels, Motor Cycles, Bicycles and Sundries



Sheet Metal Work for Automobiles a Specialty

KINGSTON, N. Y., AUG. 15, 1916

As a business booster and a sundry seller for a bicycle shop, will say that there is nothing to compare with the "little red pushers." Every time I sell a customer a Smith Motor Wheel I always sell him a new pair of handle bars or a new saddle and in a good many cases I sell him a new bicycle. The Smith Motor Wheel gets the dealer who handles it talked about by the public and brings lots of people to his place of business to see it and to talk about it, and nine times out of ten they will make a purchase before leaving. I have been using bicycles on the road for business and pleasure and on the track for over 25 years, and I must say that I have never seen or handled anything in the cycle line that comes within 1000 miles of doing what the Smith Motor Wheel is doing and will do for the bicycle business.

Questions and Answers

CAM IS WORN

MY motor runs irregularly at certain speeds, one cylinder appearing to lag behind the other in firing or misses entirely. The carburetion is good and the valves are timed according to marks on the gears. The compression is good also.

Chicago, Ill. ALBERT BLACKWELL.

Look at the cam surface corresponding to the weak cylinder inside the contact-maker casing of the magneto. The surface is probably worn down. Remove it and block it up with sheets of paper until it is of the same height as the other.

TIMING IS OUT

AFTER having my twin cylinder machine overhauled I find it almost impossible to get it to fire correctly on either cylinder. The compression is good and the valves are timed according to factory marks.

Baltimore, Md. JOHN EDWARDS.

Look at the magneto and plug cables and see that No. 1 cable leads to the rear cylinder. If this will not cure the trouble, remove one of the gears in the magneto drive and turn the armature 180 degrees from its present position. You may possibly have the rocker lever riding on the wrong sector for each cylinder, which will cause the peculiar running referred to.

BAXTER SIDECARS

PLEASE give me the address of the makers of the Baxter sidecar. I desire to get parts for one which I now have.

Cleveland, O. JOE VOBORNIK.

The Baxter sidecar was formerly made by the Baxter Sidecar Co., of 119 Broadway, Cambridge, Mass. Some time ago, we understand, this firm ceased production, and we have not heard that they are making any cars for the last six months.

TOO EARLY A SPARK

MY 1915 twin has just been overhauled and runs well, giving lots of power. When going slowly on high gear it knocks with spark advanced, but ceases when I retard. Shall I reset the magneto?

Brooklyn, N. Y. E. J. CALKINS.

The timing is too early, which means that the spark is too far advanced for normal running. Set it back a tooth on the magneto drive train, or try resetting it as follows: Bring piston to dead center on compression stroke on rear cylinder; set timing lever at full retard. Rotate the armature in the same direction as the timing lever (on contact-maker casing) until the contact-maker lever is just lifting on No. 1 or rear segment. Lock the adjustment.

See, also that the cylinders are not carbonized after resetting the magneto.

AIR LEAK IS CAUSE

ONE of the cylinders of my twin machine seems to be shy on power. When running slowly, the difference in the exhausts of the two cylinders is very noticeable, one being snappy and the other dull. The compression, valve and ignition timing are correct..

Chicago, Ill. W. W. W.

Probably, there is a leak in or around the inlet valve dome on the cylinder which fires dully. Test out with soap-water or oil at all joints to determine the point of leakage. Be sure that one cylinder is not carbonized.

"I am growing fonder of my Pope with every mile"

"Last week I made a trip of 530 miles — from Mitchell to Mobridge, S. D., and back—and I did not have to adjust one thing on my machine. I carried my entire camping outfit, and the total weight was 680 pounds.

"I am a reader of one of the motorcycle papers and I derive a great deal of fun out of articles describing the so-called endurance runs which are staged in the East. I wish that some of these 'endurance riders' would come up to this new country where good roads are 75% mud holes and 25% ruts in the prairie.

"Under such conditions one can test the stamina of a machine, and I want to say that I am growing fonder of my Pope with every mile that is registered on the speedometer.

"400 East 3rd Ave.,
"Mitchell, S. D.

"ALFRED HUETTNER."

"Stuck in a mud hole." Alfred Huettner, the rider, emphasizes the fact that the machine was not posed for this picture. He says that he rode the best rut through the mud hole, and almost made it, as the picture shows.

The road is but little better than this for miles and miles along the "Yellow Trail" from Aberdeen to Mobridge. It takes a mighty powerful and dependable motorcycle to navigate it.

Riders on the plains are glad to pitch camp where dwellings promise sociability.

This and the other picture show one of the uses of the powerful Pope which is becoming more and more widespread. Motorcycling and camping relieves the outdoor enthusiast of the labor of carrying packs, takes him farther than he could go on horseback or on foot, and travels where an auto couldn't attempt to go.

MORE ACRES FOR GOODYEAR HOME PLAN

AKRON, O.—After three years of operation, the Goodyear Tire & Rubber Company's home-building plan for employees has proven so successful that an addition of 350 acres has just been made to the original 100 acres allotted.

The plan was originated by President F. A. Sieberling in an effort to help Goodyear workmen to become home owners without the prohibitive "first payment" required in the usual real estate deal. Now that so many workmen have grasped the opportunity of owning their own home—built and sold on a basis of rent with no initial payment—1,500 additional lots have been got to accommodate them.

None of the lots is less than 50-foot frontage. There is no monotonous "company house" arrangement in the scheme. Each home has its own individuality, reflecting the taste of the owner. Employees may follow their own ideas as to plans and any reasonable construction conforming to certain standards is permitted.

THIS VACATION TRIP WAS A RECORD BREAKER

(Continued from page 15)

light. Guthrie had to clean brushes, then repair his chain. It was certainly some 27 miles, at the end of a full day in the desert!

Peterson took the right road, but Martin, following, took the wrong fork and went all around Bishop. Not a light in the place. Finally he located a rancher, got directions, tried 'em out for two miles and then came back for more. At last he followed the rancher's old nag and tumbledown wagon into town, crawling through the sand at five miles an hour. Then Maydole rolled in.

North of Bishop the highway gang is working on a three-mile grade; no chance to detour. They make you go up before 7:30 a.m. or wait until the gang quits at 5. The boys started without breakfast and were looking for a house until 11:30. Then, in desperation, they cracked open a couple of cans of beans. There was no wood or water, so they ate them out of the can. They were clammy, but helped give strength for the awful grades, all in sand. Maydole had dropped two boxes of cookies along the road somewhere. This is where they were needed, but there was nothing doing.

Dead Man's Canyon

At 2:30 p. m. a side road into Dead Man's Canyon was taken to avoid the awful road through Mono Mills. The motors were almost worked to death in the grades and sand. This is the place where the Bishop garageman had said the only way to get 'em through would be to "pack 'em through on burros." Autos only make it by taking big sheets of canvas to lay down ahead in order to get traction. A machine that makes 25 miles in a day is doing well.

At last Mono Lake was reached; alkali water, not a living thing in it, no vegetation—just a big 600-acre island of volcanic rock and sand to relieve the monotony, and a wonderful view of the High Sierras back of Yosemite Valley.

Having gone through the part of the road reported impossible, the four rolled up to Hammonds and cheerfully called for a meal. It was 3:30, and the beans had long since settled.

"No meals served here till 6 o'clock," was the ultimatum of the woman in charge.

Desert hospitality! Ye gods!! After some debate they got more beans and some crackers, pineapple and peaches. Then, though Maydole was about all in, a start was made for Bridgeport, 27 miles away. The road was as bad as before, around the shore of the lake all afternoon. Maydole broke a chain and bent a sprocket. Guthrie had no light as darkness came on, so he took one rut and Peterson the other, to give him light. Ed "sashayed" around so much in the rut that Guthrie decided to feel his way alone. At 1 p. m. Bridgeport was still six miles distant. This meant a whole night of this kind of riding. A house, lighted, stood near the road. A knock on the door, and it was opened by a woman. A shotgun showed close at hand. Martin stammered out their story, and asked if they could stay around there somewhere until morning.

Desert Hospitality

"Yes, boys," was the answer, "I can give you two good rooms, and will cook you a hot meal right away."

The speechless quartet stood agape, then filed in. Desert hospitality! Well, you bet!! Peaches, pears and home-made candy were on the table. The woman went out to cook. Oh, what happened to the p. p. and h. m. c.? Then came codfish, taters,

TORONTO TRADE AWAITING 1917 MODELS

Dealers Have Taken Orders for New Machines Already and Are Wiping Out Late 1916 Shipments

TORONTO, Ontario.—Canadian motorcycle dealers, and prospective riders as well, are now waiting for the arrival of 1917 models which are due in the larger cities about September 15, according to advices received from several factories. There is not a dealer in Toronto who has not taken orders for 1917 deliveries and, in the meantime, tardy shipments of 1916 models are melting away as fast as they arrive.

4,400 Registered

Motorcycle registration licenses for the year had reached the total of 4,400 on August 26, and it is believed that the number of motorcycles in use in Ontario will reach 5,000 for the first time before the end of 1916, as a good sale of 1917 models this fall is anticipated. There are more than 300,000 Canadians under arms, but sales are more numerous now than before the war. Practically the only apparent difference which the big struggle in Europe is making is in the club spirit. The clubs are dead, but there will be a resuscitation after the war, it is believed. The motorcycle situation in Canada at the present time cannot be judged by conditions in sport circles.

Toronto dealers report that they are still being carried along on the wave of the big push which took place last spring. The "Bicycle Week" campaign has resulted in profitable results—so much so that both factories and jobbing houses have been swamped with orders all summer. It has not been a fight for the dealers to hold their own this year.

MODEL 17-PC CHASSIS LISTS AT $85 NOW

MILWAUKEE, Wis.—The Harley-Davidson Motor Company announces that the chassis for the high compartment, standard tread sidevan, Model 17-PC, is priced at $85 instead of $100 as originally quoted. The magnificent production facilities of the factory have enabled this reduction of $15 to be made. The price of $85 is of course f. o. b. factory in this city.

MOTORCYCLE SALES CO. TO OPEN IN PORTLAND

AUGUSTA, Me.—The General Motorcycle Sales Company of Maine has been organized to take over the business formerly conducted at 69 Preble street, Portland. The company will handle motorcycles and accessories, and is capitalized at $10,000. The officers: W. H. Whetsett, of Portland, president; A. M. Bird, of Portland, treasurer; Carroll B. Skillan, of Portland, clerk; W. H. Whetsett, J. H. Howe, A. M. Bird, directors.

in the old days, and the trade folk who saw him are under the impression that Oscar must have been practicing while on his farm the past few years.

Gus Rice of the Eclipse Machine Co., was one of the good F. A. M. boosters, and outside of losing his hat he claims he enjoyed being a member of the Booster Club. The hat he lost was a straw one and as it is getting late in the season Gus didn't seem to mind it very much.

Henry E. Haws, from the Firestone Tire & Rubber Co., travelling out of the home office, also is a member of the Booster Club and was there looking after the Firestone interests. If you have never met Haws just keep your eyes open for 6 feet and a half of Firestone enthusiasm—that's Haws to a dot.

RACEMEET POSTPONES KEYSTONE ENDURANCE

HARRISBURG, Pa., Sept. 4.—Because a racemeet is scheduled to be held on the Lebanon Fair Grounds track on September 30, the day set for the annual fall endurance run of the Keystone M. C. of this city, the run has been put over to occur a week later. It was thought that the racemeet might detract from a full display of interest in the run, and for this reason the endurance was put over.

A handsome spark plug case and a spark plug wrench . . **Free**

With four spark plugs that will outlast your engine . . **$4**

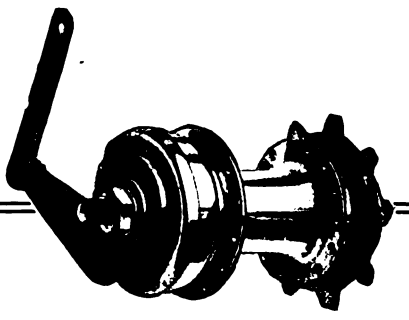
Mail us a $4 check or money order for four Splitdorf Spark Plugs (the plug with the Green Hex Jacket). We will forward you the plugs, with them we will send you, free, a highly polished spark plug case and a spark plug wrench, complete with detachable handle. The case is handsomely finished, and fitted with recesses for four plugs. Keeps your "extras" handy and compact. The wrench is one of the most convenient tools you can have.

These plugs are practically indestructible. Dozens of times they have run 20,000 to 30,000 miles without ever having been cleaned.

Made in all sizes and in types to suit every car, motor cycle, motor truck, motor boat, aeroplane, tractor and stationary gasoline engine.

When ordering, be sure to state size desired or name of engine.

SPLITDORF ELECTRICAL CO., Newark, N.J.



It Is To His Interests

to equip his bicycles with the best, most dependable and durable equipment on the market. It is not a matter of pride or sentiment, but one of cold, clear logic. If a brake works for him it earns its cost. If it falls down he loses money. Therefore, the man whose business it is to rent bicycles exerts great care in selecting a brake to put on them. You can watch it all the way through. Practically every man in this business eventually comes to the

CORBIN **DUPLEX COASTER BRAKE**

Ask any one of them and he will tell you. What he tells you will be virtually this:

"It does the work that other brakes won't do. Long after the others are dead on my hands it is running just as strong and smooth as ever. It stands for anything and the others won't. It saves money for me and that's my object. I equip my bicycles with it for that reason and no other. It's a good, steady, practical article—that's all."

But ask him yourself. It will be interesting to find out how close we've hit it.

(Continued from page 44)

hot tea with cream and all the milk they could drink. They had made just 99 miles from 5:30 a. m. to 11 p. m.

In the morning five old men were at a breakfast of bacon and eggs, German fried potatoes, mush and milk, cream, fruit and coffee, when the riders filed in.

"Boys, do you know where you are?" asked the woman. "You are at the Mono County poor farm."

Toward Nevada

They willingly paid the woman $1.50 apiece, and started on the run that took them them into Nevada. Here they found rock bottom roads, and called them good. At Gardnerville, in a big alfalfa district, a good dinner was found in a combination restaurant and saloon. Then there were good roads to Carson City. From Carson to Reno, 31 miles, they were told the road was good. It turned out to be bad; sandy and bumpy. Many railroad crossings in cuts were so hidden it was necessary to stop, rack the motor and go look to make sure no train was coming.

Reno was reached at 6 p. m., a town about as big as San Diego, and a lot livelier. The next morning candidate Hughes blew in, was met by cowboy escort, and there were big doin's.

At 10 a. m. the riders hit the road toward the Sierras. It was only 50 miles to Tahoe, through Dog Pass. At Truckee they bought gasoline and beer in the same place. At Lake Tahoe a stop of 1½ days gave time for an all-day ride around the shore in a launch. Trout sailed lazily around near the bottom, plainly in sight through absolutely clear water. Forest and rocky peaks of the Sierras make a picture never to be forgotten.

Next morning they rode over the passes of the Sierra summits to Stockton. At Placerville they struck the first paved road since leaving Saugus, 30 miles out of Los Angeles. All hands shouted with joy. This was on Friday. Dinner was eaten at Placerville. At Folsom two hours was spent going through the penitentiary.

Soon afterward Maydole got his worst fall. He hurt his ankle badly, but rode gamely holding it out one side into Stockton. He went to bed and the boys toted four big platters of grub down the street and into the hotel for him. "Must be a hungry crowd," said passers by.

Into Bakersfield

Next day the start was made for Bakersfield, over paved road to Tulare County, then oiled dirt road to the Kern County line, and pavement into Bakersfield. Artley had just covered this stretch, and they could not see how he made the time he did through Tulare.

Bakersfield, 7 p. m. Harry Taylor, Bert Gilmore and Ed Tice showed up, talking of the Venice picnic next day. Sunday morning the Bakersfield boys rolled at 4 a. m. The desert speedsters, or Rough Road Kings, as the Bakersfield crowd called them, started at 6:45, and got into Los Angeles over the Ridge Route at 11. Maydole went home to nurse his ankle. Martin took a bath and then turned the hose on his machine, tore down to Venice, and danced till 11 at night. "Some little vacation picnic," say the Rough Road Kings.

DETROITERS GATHER TO SEE 1917 HARLEY-DAVIDSON

DETROIT, Mich.—Considerable interest was shown by local motorcyclists in the announcement that "Hap" Scherer would arrive in Detroit with a brand new 1917, electrically equipped Harley-Davidson, fresh from the Milwaukee plant. Quite a crowd of riders gathered at the Wandersee store on Gratiot avenue to witness Scherer's arrival. E. J. Mueller, assistant sales manager of the Harley-Davidson factory, and August Zimmerman, Harley dealer at Washington, D. C., who arranged a reception, were also present.

Scherer covered the distance of 212 miles from Haven to Detroit in 6 hours 11 minutes, an average of over 35 miles an hour. A heavy rain, lasting about 8 hours, preceded the start of the trip and the roads were therefore in rather poor condition for a good deal of the way. Scherer reported a remarkable increase of efficiency in the 1917 Harley-Davidson motor over its predecessors.

BERRY REOPENS HIS STORE

LOS ANGELES, Cal.—T. E. Berry, the popular representative of Miami lines, has reopened his store. Alterations and repairs, made necessary by the recent fire, are now being rushed. Berry will devote the next week or so to refitting the place and disposing of the stock of Miami and Merkel machines which were damaged by the fire.

THIS MUCH IS CERTAIN

Electric Lamps and an "Exide" Battery furnish the most efficient and reliable light for motor cycle use

"Exide" Battery, Type 3-ZA-5 with cable type terminals

You no doubt realize the numerous advantages of electric light for motor cycle use.

The reliability of an electric lighting system is of course dependent upon the storage battery which furnishes the current.

The "Exide" Battery, type Z, especially designed for this service, is a quality-product, manufactured and backed by the oldest and largest battery maker in the country.

The battery is contained in a one piece, three compartment vulcanite case, having heavy walls and substantially re-enforced.

It is fitted with a one piece cover, having a flange which fits around all sides of each compartment.

The "Exide" Battery is equipped with a flood proof filling plug which overcomes slopping and spilling, and also limits the amount of water that can be poured into a cell to the exact amount needed to replace that lost by evaporation. The result is a clean, dry, and attractive battery.

Motor cycle dealers and users should write us at once and secure the name of the "Exide" Distributor nearest them.

HITTING THE DEEP MUD TO PICAYUNE, MISS.

There Was Plenty of Deep Water, Too, on This Thirty-two-Mile Trip, and Nearly Fourteen Hours Were Necessary

By JAS. W. PAUL

JACK MITCHELL, one of my pals, was anxious to get to Picayune, Miss., from our home town of Bogalusa, La., one afternoon. It was only 32 miles and on good roads only a matter of about one hour's riding, I figured. Mitchell said that the roads were good—and I believed him at the time—so after filling up with gasoline and oil we started off at 4 p. m., following the Pools Bluff route, which Mitchell said was good.

Nothing happened between Bogalusa and Pools Bluff, except an encounter with a mule. Mr. Mule met us riding along and shied violently, his rider flopping off onto the road more scared than hurt. At Pools Bluff we took the ferry over Pearl River, which is the State line between Louisiana and Mississippi. The ferryman told us there were good roads on the Mississippi side; he surely must have needed the money, so we were expecting nothing like what we got.

Into Deep Mud

After crossing, Mitchell and I started out on some of the "good roads" the ferryman spoke of. For about half a mile things looked fine, then we came to mud. It was axle deep, so the machine did nothing but spin the rear wheel. We dismounted and pushed it through about 200 yards of this stuff and finally reached hard ground, but after starting the motor found that the machine would not move. The motor would stall every time the clutch was put in, and as it had been in several times over the motor, I concluded that there must be water in the cylinders. There was.

Packed with Mud

We drained out the water, but the motor would not pull the machine yet. On looking over it, we found that both mudguards were so packed with mud that neither wheel would turn, so we went to work with screwdriver and pliers and cleaned them. It was a tough and dirty job, but we didn't care, for we were already wet up to our waists and so cold that we could hardly stand it. After the mud was cleaned out, we started off, but soon the machine was up to the tank in water again, and we had to get out and nearly swim for 100 yards with the mount.

The road then became a veritable pond and about the middle we came to a bridge which was under water, all but the high part in the middle. We leaned the machine against a tree growing up through the bridge and sat down on the railing for a smoke. Immediately the railing collapsed and we dropped into the pond. Fortunately, we got a grip on the handlebars as we went overboard and were thus enabled to climb back again.

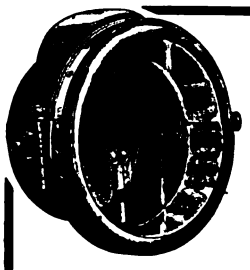
It got tiresome, waiting on this island (for that is what it was) so we shoved the machine off the end and started wading again. The road was corduroy and had a 10-foot ditch on each side, but we didn't know this at the time, as there was three feet of water on it. As we were feeling our way through, the machine suddenly went out of sight, all but the last bar on the luggage carrier. Mitchell just saved it from going under entirely, as he had a good hold on the back end. We worked over it for about 40 minutes before we got it back on the road out of the deep ditch where it had gone.

Four Miles in Three Hours

More wading and hard shoving followed and we finally got through and struck a little stretch of dry road. There was about 800 yards of this to ride, followed by more mud and water and regular stops for digging mud out of the mudguards to let the wheels revolve. Then came the hills. I looked at my watch. Nearly 7 o'clock to get through four miles of swamp and both of us ready to die in our tracks.

We mounted and tore along until we passed Cybur, a little sawmill town about 10 miles from Picayune. Here we started to have trouble with the two-speed gear in the rear hub. We yanked out the wheel, opened up the hub and found that the small bar in the gear which does the shifting had worn so that it would not work. There was nothing to do but to fix it so that it would stay in high permanently, which we did. We put the wheel back

(Continued on Page 52)



"Infallible" Lamps

Massive in construction, of one piece of heavy gauge steel, with mangin mirror lenses of the finest, with wind and dust-resisting doors, "INFALLIBLE" LAMPS are offered the rider as the highest example of lamp construction on the market. Automobile type burners, giving enhanced lighting capacity.

Headlight

HITTING THE DEEP MUD TO PICAYUNE, MISS.

(Continued from page 50)

and started off, to have to stop once more about seven miles further on. We were only three miles from Picayune, but so far as we knew it might have been 20. The gear came out again at this point, so we decided to camp for the rest of the night.

A Cold Camp

We were nearly frozen and soaking wet, so started a fire to dry out. We also built a barricade of logs to keep off the wind which was coming from the north and cold as the mischief, and then lay down to sleep. Two or three times during the night we woke up with chattering teeth and had to feed the fire with more logs. We managed to stick it out till morning, when we fixed the machine and sailed into Picayune, arriving at 5:50 a. m. We had taken 13 hours and 50 minutes to cover the 32 miles.

We hit a restaurant and tucked away two good man-sized meals as a first step toward recovery. Then we cleaned off what remained after a quick wash we took before eating and rested until noon. Then we started for Bogalusa, this time over the real good road where there was neither mud nor water to contend with. After getting lost once we reached home. We never had a bit of trouble coming back and the machine did 32 miles on a little over two quarts of gasoline.

Did we say "never again?" I guess we did not, for now we know which route to take, and besides, experience such as ours help the motorcyclist to maintain his reputation as being the gamest and most optimistic sportsman there is. Long live the motorcycle.

HERE'S A "WALKER" WHO STICKS TO MOTORCYCLE

LONG BEACH, Cal.—The experience of Ernest Walker, special delivery rider for the Postoffice Department here, is impressive evidence of the practical value of the power-driven, two-wheel machine for the man whose business requires covering long distances. Walker began to see the motorcycle idea back in 1912, when he bought his first machine, and he found that he could do his work so much more efficiently in this way that he has never been without one since.

In 1914 he bought a four-cylinder Henderson, with which he covered 40,000 miles during the following year. Last April he bought a new '16 four-cylinder, and has been rolling up mileage with it at an equally rapid rate. In his special-delivery work, starting and stopping is the big item, not only in time consumed, but in wear and tear on the machine. During one month of average service Walker kept tabs on his work and found that he had made over 3,500 stops and restarts in delivering messages.

Gasoline consumption has averaged around 65 miles per gallon during this time, he reports, while cylinder oil is so small a matter that he no longer keeps account of it.

OMAHA-DENVER HIGHWAY NEARING COMPLETION

DENVER, Colo., Sept. 4.—Cross-country motorcycle riders will be glad to learn that the Omaha-Lincoln-Denver transcontinental highway is to be completed. With the assurance of an appropriation of $2,500 from the Colorado highway commission, improvement work on the Burlington cut-off, the last leg of the Omaha-Lincoln-Denver highway to be completed, is well under way, and the road will be in first-class condition for tourist travel next season. Citizens of Adams county, Colo., have raised $600, the sum required by the State highway commission from the county before it could make its appropriation available.

READING M. C. ELK'S PARADE

READING, PA.—Once again the Reading M. C. has done honor to the Elks. During their state convention, which was staged here last week, the club organized an illuminated motorcycle parade which attracted considerable attention, both to the society and to the motorcycle.

ROCKFORD BOYS VISIT PEORIA

PEORIA, Ill., Aug. 31.—Gilbert Gridley, a former Peoria boy, and Raymond Wolf arrived here yesterday from Rockford, Ill., on their bicycles. They covered the distance, something like 170 miles, in twenty-four hours' riding. They will remain here for a few days and then hit the trail homeward.

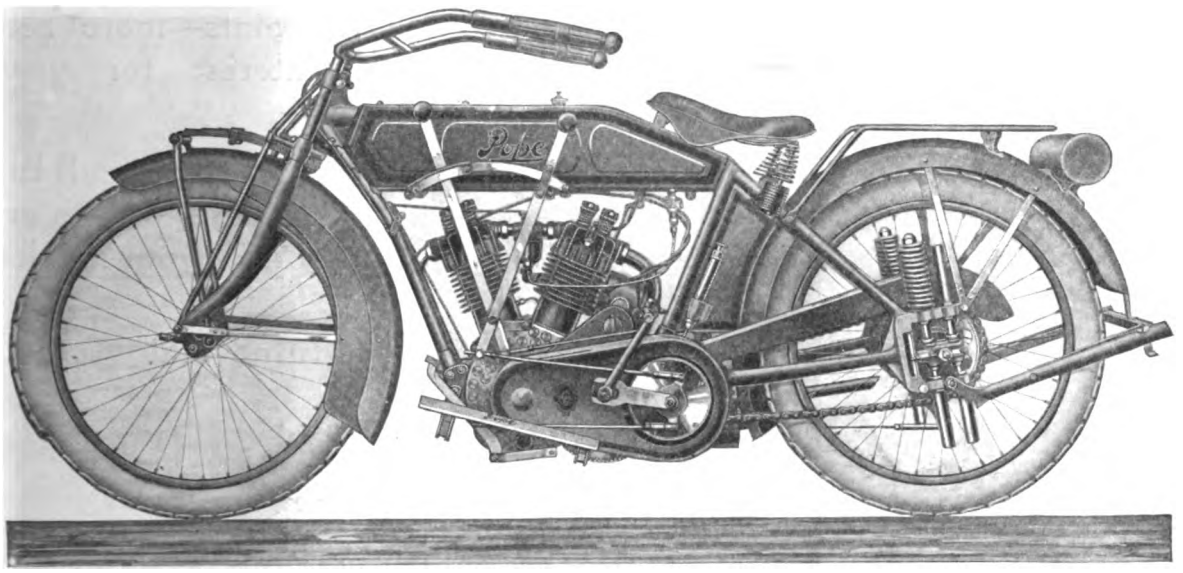
Look at These Lines!



COMPARE this illustration with that of any other motorcycle on the market. See if you can find one that appears cleaner-cut, more trim or more business-like than the Pope.

Notice how the lines of the Pope express its strength and solidity; how its slightly rakish construction suggests the speed of which it is capable.

Notice how every line harmonizes with every other; how every detail blends into the whole artistic triumph.

You will find no better example of the law that the more nearly perfect a thing is mechanically, the more it tends toward harmony in design.

Notice the free space all about the Pope motor that makes it easy to get at; the clearance between motor and gas tank that permits the removal of cylinder heads, cylinders and pistons without taking motor out of frame.

Combined with all the Pope advantages and exclusive features, the Champion of the Hills, finished in the well-known red-striped gray, is one of the most attractive outfits seen on the road.

BLUE STREAKS

Smaller Tire Stocks—Larger Sales

Bicycle dealers have stocked Goodyear Blue Streak Bicycle Tires as fast as we could get the facts about tire prices before them. They have learned that a big profit made on a high list tire does not mean a big net profit for the year.

They prefer to secure the larger volume of sales that Goodyear Blue Streaks bring because of the popular demand for a low price tire.

They prefer to carry one standard tire because it means carrying a smaller stock of tires, *leaving more capital for other lines.*

They prefer to sell Blue Streaks because the Goodyear Tire & Rubber Co. concentrates all its manufacturing experience on this *one single tube tire* and therefore makes a bicycle tire equal in quality to other tires selling as high as $5.00 or $6.00 apiece.

If you will consider the Goodyear Blue Streak proposition from a strictly business standpoint, you will agree that it is the one tire that can assure you the quickest and largest tire profits.

MOTOR CYCLE ILLUSTRATED

For the Trade and the Rider

13 Park Row
NEW YORK

Volume 12 **September 14, 1916** **Number 11**

ALL SIGNS PRESAGE RECORD-BREAKING 1917 CYCLE SEASON, SAY TRADE VISITORS

Messrs. Emerson, Henderson and Edwards, All on Motor Cycle Illustrated's List of Callers for Past Week, Agree in Belief That Unusual Activity in August Is Forerunner of Big Year's Business; Emerson and Henderson Prepare for Forty to Fifty Per Cent. Increases in Their Lines, While Edwards Reports Best Retail Conditions Since 1913

NEW YORK, Sept. 12.—The publishers of **Motor Cycle Illustrated** were regaled on Monday with quite a feast of trade optimism when this office was visited in turn by W. F. Emerson, of the Buffalo Metal Goods Company; T. W. Henderson, of the Henderson Motorcycle Company, and Jesse Edwards, the Indian man from Chicago. Facts and figures proving beyond all question a condition of remarkable prosperity in the cycle trades were presented by each one of the trio, all being supremely confident that good business in August was to be regarded as a forerunner of a crackerjack 1917 opening.

Factories Run to Capacity

Both Mr. Emerson and Mr. Henderson have been running their factories to capacity for a long time, and expect to be doing so indefinitely. Though extremely conservative, they did not hesitate to predict nothing short of record-breaking 1917 figures in the bicycle and motorcycle business respectively. Atherton brakes, on the one hand, and Henderson motorcycles, on the other, have both sold in considerably greater quantities this year than ever before, and a forty to fifty per cent increase in both productions for next year is regarded as more than a probabiltiy.

From the retail point of view, Jesse Edwards spoke of a very satisfactory showing in the Chicago sales of Indian motorcycles and bicycles. In fact, said Mr. Edwards, not since 1913 had he sold so many motorcycles in August. The demand for second-hand machines had been unusually large, so that his stock of used machines had been brought to a lower point than for years.

The statements of Messrs. Henderson, Edwards and Emerson are based upon comprehensive reports from many sources, as well as upon the figures that are available at their own offices, and in view of the fact that they bear upon the motorcycle field in both manufacturing and retail branches, as well as upon the accessory situation, invests them with particular significance at this time.

Interest in Models

Interest in the forthcoming new models of the various lines has reached a higher pitch this year than ever before, if the rapid-fire inquiries of impatient dealers and expectant purchasers count for anything, and on all sides there is full understanding of the fact that conditions are ideal for unprecedented progress by the American motorcycle in the coming twelve months. This is amply borne out by the attitude of the dealers concerning the early booking of orders and their systematic efforts to co-operate with the factories with reference to early shipments. In other words, as Mr. Henderson pointed out, there are definite signs of a concerted movement by the trade to make the most of what is obviously an inviting sales situation.

"Not the least important angle of the present highly satisfactory situation," said Mr. Henderson, "is the growing inclination of people who can afford automobiles to invest their money in the somewhat less showy but equally serviceable and much more economical motorcycle. I certainly look forward to an increasing tendency in that direction as the public is brought to understand the fascination and myriad advantages of the motorcycle as we understand them."

JOHNSON RESIGNS AS F. A. M. LEGAL ACTION CHAIRMAN

AKRON, Ohio.—President Shelby A. Falor, of the F. A. M., announces that he has accepted the resignation of Chairman William M. Johnson, of the Federation of Legal Action Committee, which was tendered to take effect September 7. No steps have been taken as yet towards appointing a successor to Mr. Johnson, but President Falor states that the matter will be given early attention.

Chairman Johnson has stated several times of late that the F. A. M. Legal Action work was making demands upon him out of proportion to the returns, and his decision to retire from active Federation services was not wholly unexpected.

FIRESTONE PLANS BIG CAPITAL INCREASE

Akron Tire Firm to Raise Stock to $50,000,000—700 Per Cent Dividend on Old Common Stock Issue

AKRON, O., September 11.—The Firestone Tire & Rubber Company, of this city, is carrying out plans to enlarge its capital to $50,000,000. This is to be divided into $40,000,000 common stock issue and $10,000,000 preferred stock issue. At present, the company has $3,000,000 in common stock and $1,000,000 in preferred, while its assets are such that the reorganization is to be accompanied by the payment of a stock dividend of 700 to 800 per cent., on the common stock.

An actual increase in the cash resources of the Firestone company, however, is to be given by the issue and sale of $5,000,000 of new 6 per cent. preferred stock, which will represent half of the $10,000,000 of new preferred that will be authorized. For the present, no new common stock is to be issued, excepting that distributed in payment of the stock dividend.

The old common stock is to be exchanged for seven or eight shares of new and the old preferred is to be redeemed at 110 and accrued dividends, according to the new plan. It is probable that the common stock, on which 20 per cent. dividends have been regularly paid, will be placed on a 5 per cent. basis. A meeting of stockholders has been called for September 30 to vote on the new plan. Preferred stockholders have received notice to surrender their certificates to the company at the Akron office not later than November 1 next nor earlier than October 15. They will receive checks at $110 per share, plus interest at 7 per cent. for the date of last dividends.

THE YOUNG SIDECARIST IN OUR COVER PICTURE

THAT the family interest in Rogers sidecars is not confined to the energetic head of the house is proven beyond question by the illustration which adorns our front cover this week, the smiling and confident youngster being the son of R. F. Rogers, manufacturer of the widely known line of passenger attachments.

Rogers, Jr., has been a sidecar enthusiast for some time past, and is always on deck when a trip is to be made. What's more, he enjoys nothing so much as an opportunity to grasp a wrench and make imaginary adjustments on the outfit, tapping and twisting here and there as the spirit moves him. The cover photo was taken recently while the youngster was waiting in pleasurable expectation of a run with Dad into the Chicago suburbs.

$500,000 BUILDINGS FOR GOODRICH COMPANY

AKRON, O.—New buildings costing $500,000 are to be erected by the B. F. Goodrich Company of this city during the next few months. One of these will be a new factory structure, and will be located south of No. 10 factory. It will cost $415,000. An addition to No. 10 factory itself will cost $38,000, while a No. 9 factory addition will cost $44,000.

SWENSON DISTRIBUTING THE F. A. M. MEDALS

PROVIDENCE, R. I., Sept. 11.—B. A. Swenson has received from the jeweler the medals for the winners in the recent F. A. M. Convention endurance run, and this week began distributing them.

Those who will receive the perfect score medals are: Harvey Bernard, Indian sidecar; H. G. Pfeil, Indian sidecar; Ivan Jacobs, Indian; Erwin G. Baker, Indian; E. H. Tracy, Indian; R. L. Veazey, Indian; J. N. Constant, Indian sidecar; T. J. Sullivan, Indian sidecar; F. O. Brown, Indian sidecar; Marie Brown, Indian; H. B. Putnam, Harley-Davidson; C. E. DeLong, Indian.

Those finishing with a score of 993, thereby getting a silver medal, are John Long and O. G. Underhill, with Harley-Davidson sidecars. Paul A. Merlhoff, Indian, who had a lower score, gets a bronze medal.

HEINZ COMPANY FAVORS TRACK RESTRICTIONS

A PERTINENT commentary on the recent announcement of the Harley-Davidson Motor Co. that it will not enter big twins on other than two-mile tracks, or singles on tracks of less than one mile, comes from the Heinz Motor Co., of Baltimore, Md., local Harley-Davidson representatives. Referring to the recent race meet at Baltimore in which several riders were injured, the Heinz company writes as follows:

"Owing to the thick dust on the track our solo rider made a very bad showing and in the sidecar races two of our men were nearly killed. They are now in the hospital, one with concussion of the brain and the other with a broken nose and a broken leg.

"Brother Gus was leading, with our man on a stock motor second. The dust kicked up by Gus was so thick that our other rider lost his way and crashed into a fence at the turn.

"We have no tracks at all fit for safe riding, even for sidecar events, hence are not disposed to risk the lives of our men."

CLARKSON MAKING FINAL TOUR OF U. S.

New Zealand Representative On Way Homeward After Lengthy Stay in This Country—Big Excelsior Allotment for 1917

NEW YORK.—J. B. Clarkson, of J. B. Clarkson & Company, representing the Excelsior in New Zealand, is now in this city making final arrangements before going through the West and returning to Wellington, New Zealand. Mr. Clarkson came to this country last January to look over American goods and sign up for a number of lines. One of his big contracts was made with the Excelsior Motor Manufacturing & Supply Company, of Chicago, for continued representation of the Excelsior in his own territory.

Mr. Clarkson's stay in the United States has, however, not been continuous since the first of the year. Several months ago, he took ship for Great Britain and remained abroad for a considerable period. Since his recent return he is making a final trip through the trade.

Mr. Clarkson has arranged for his 1917 Excelsior allotment of 1,000 machines, combining Big Valve twins and lightweight two-strokes. Although the compulsory service act is being enforced more and more strongly in New Zealand and in Australia, he is confident that he will be able to dispose of practically all of the machines in the allotment.

Mr. Clarkson represents a number of automobiles and accessories in Wellington and the island in addition to American and British motorcycles.

ELLETT LEAVES ECLIPSE; PLANS NOT ANNOUNCED

ELMIRA, N. Y., September 13.—Fred S. Ellett has resigned his position as mechanical engineer with the Eclipse Machine Co. Ellett has not yet announced his plans for the future nor has his successor been appointed by the Eclipse company.

Ellett has been identified with the Eclipse company for many years and specialized for a long time on producing parts for both motorcycles and bicycles. He designed the original Eclipse free engine clutch and is responsible for many of the subsequent improvements that have won for that device the recognition of so many motorcycle manufacturers; he also devised the Eclipse two-speed and the disk type of coaster brake.

WAUGHOP RIDES TO THE CLEVELAND PLANT

CLEVELAND, Ohio, September 13.—C. W. Waughop, of the Herbert F. L. Funke Co., Inc., eastern distributors of the Cleveland, with headquarters at 116 Broad street, New York, rode into the Cleveland factory from Gotham today to inspect the new models. Waughop made the distance in two days on the lightweight and had not the slightest trouble. He will remain at the factory for a few days getting some first hand information on the production end of the Cleveland business.

BILL OF LADING NEGOTIABLE AFTER JANUARY 1

WASHINGTON, D. C., September 13.—With the passage of the Pomerene bill by Congress and which is scheduled to go into effect on the first of the next year, the bill of lading which heretofore has not been a negotiable paper, will become a legal negotiable instrument. The bill also calls for the establishment of a uniform bill of lading for both interstate and foreign commerce, a provision which will do away with much of the complexity of the present system.

HARLEY-DAVIDSON CO. HAS "BRILLIANT" BURNERS

SPENCER, O.—The Monosmith Brothers Company, maker of "Brilliant" headlight burners, announces that the accessory department of the Harley-Davidson Motor Company will stock its product for motorcycles and is now making deliveries from the factory at Milwaukee.

The "Brilliant" burner, which was introduced to the motorcycle trade this season, applies in a practical way the incandescing gas-lighting principle to headlights for motorcycles and automobiles. It can be used in any form of lamp designed for the standard height lava tip burner in connection with a Prest-O-Lite tank or generator and is guaranteed by the maker to give three times the light of an ordinary burner.

BADGER BRASS MOVES NEW YORK QUARTERS

NEW YORK, Sept. 6.—The Badger Brass Manufacturing Company of New York is now located in its new quarters at 37 Warren street. The company completed its moving from 437 Eleventh avenue yesterday.

The company, which represents the parent firm, the Badger Brass Manufacturing Company, in Kenosha, Wis., handles the Solar line of bicycle, motorcycle, automobile and other vehicle lamps for the metropolitan district and a large territory surrounding.

TRADE DOINGS IN LOS ANGELES

Agencies Are Being Tuned Up Preparatory to Sales Campaigns With 1917 Models and General Business Outlook Is Promising

By FRANK REED

EMBLEM AGENT NOW HAS FINE NEW QUARTERS

JOHN T. BILL moved his stock today across the street to 940 South Main street. His store is still the southernmost in the 900 block, where most of the large stores of Los Angeles are located, but by moving next door to the Excelsior he has shortened up the motorcycle center of activity by about 50 yards, and strengthened the combined display effect.

The new store features an exceptionally deep and wide outdoor display space between the sidewalk and door, with display window on the south side. The Emblem motorcycle is the specialty of this store.

ARTLEY PLANS ANOTHER TRY FOR RECORD

HENDERSON Motorcycle Sales Co. officials are turning eyes and ears eastward in anticipation of news of shipment of the new model. A vigorous denial is made by the company of a report published in a motorcycle journal that Roy Artley has made an unsuccessful try to break the new San Diego time set by Art Holmes recently. They say Artley has made no trial against time on the San Diego road since he set his mark that was bettered by Holmes on the trip when he hurt his shoulder.

Artley went to San Diego a few days ago, but it was a leisurely jaunt carrying C. A. Sheppard on the tandem. Next week he is going to make a speed trial, and then whatever happens will be another chapter in the history of the double-hour mile-a-minute highway stretch.

NEW HARLEY-DAVIDSON ARRIVES

Passmore & Sayre, Harley-Davidson retail dealers, have received their first olive drab Harley-Davidson. The new 1917 demonstrator was received August 5 by express, and has been one busy little bus ever since. "Van" Van Order returns from vacation this week to get into the whirlwind campaign that opens the new season. The demonstrator has one of the new Harley-Davidson sidecars attached.

BERRY IS READY FOR BUSINESS

T. E. Berry is fixing up a real, honest-to-goodness store in readiness for the Thor. Blue and white decorations, nickelplated pulls on parts cabinet drawers, extra fine lighting effects, an office that looks like the specifications of an efficiency expert are some of the features; some class throughout. When the Thor arrives things will hum, says Berry.

CARLSON ON A VISIT

K. D. Carlson, western representative for the Corbin Screw Corporation, arrived in Los Angeles today on business.

SCHACK WILL ARRIVE SOON

W. G. Schack, president of the Emblem Mfg. Co., of Angola, N. Y., is reported due to arrive in Los Angeles tomorrow on his annual business trip.

SAN FRANCISCO BULLETINS

BARTON FINDS INTEREST IN THOR KEEN

Z. BARTON, manager of the San Francisco Thor office, dropped in for Sunday and Labor Day to attend to an accumulation of inside work, starting on the road again Tuesday morning. During the last few weeks he has visited every city, town, village and crossroads from San Diego to Fresno, and has done some business at every stop, besides making some important agency arrangements.

Mr. Barton notes that the dealers everywhere are showing a keen interest in the Thor, and the favorable impression created in the trade by the present energetic campaign is shown by the receipt of letters at this office every day from dealers all over the state, asking that agencies be held open until they have an opportunity to visit the office. Barton has already made arrangements for first class representation during the coming season in the strategic towns of San Diego, Fresno, Bakersfield and Porterville, and during the next few weeks will look over the field in the northern part of the state. Barton finds all the dealers looking for an advance in prices.

RUN TO FOLSOM PROVES A COMPLETE SUCCESS

SAN FRANCISCO, Cal. — Although scheduled as a combined club run over September 3 and 4, the trip to Folsom turned out to be mainly a San Francisco M. C. affair, 42 being present from that club. Considerable interest was added to the run by the presence of A. W. Green and his bride, whose marriage took place at Stockton the day before. The run formed part of their wedding trip.

A few of the members went to Oakland on Saturday night and rode to Stockton, going to Sacramento the next morning. The rest of the crowd left Oakland on Sunday morning and ferried to Benecia, taking the west side road and Yolo causeway into the State capital. Dinner was had in Sacramento, and at 2 p. m. the road was again taken for Folsom, 23 miles out.

A big dance was held at the Folsom Hotel that night for the riders. The home trip was started Monday morning, the full quota staying together to Oakland, where they arrived at dark. The total distance ridden was 300 miles.

START 600-MILE MOTOR TRIP

HUNTINGTON, Ill.—Charles Hersch and Herman Hock left this city a few days ago for a 600-mile motorcycle tour. They are carrying complete camping equipment and expect to be on the road about 10 days.

NEW SHOP ON KANSAS LIST

MANHATTAN, Kan.—The Smith Motorcycle and Repair Co. has just opened a new shop at 221 Poyntz street. The firm will take an agency this Fall and will stock complete lines of motorcycle and bicycle accessories.

Digitized by Google

1917 THOR SERVED IN SIX DIFFERENT STYLE

Five Distinct Twins and a Single Complete Line of Aurora Automatic Machinery Co.—Front Wheel Stand, Duplex Brakes, "Padded" Muffler and Chain Guards Among Major Improvements Found on the New Blue Fellows—Prices Have Been Increased Slightly

ONE brand new model—a heavyweight three-speed twin of 76 cubic inches cylinder capacity and which is rated at 15 horsepower—and a multiplicity of refinements, conveniences and detail changes all making for an even more thoroughly up to the minute Thor than this popular make of machine has been in the past, characterize the Thor announcement for the coming season. Among the chief detail changes embraced in the even half dozen Thor models that will be offered under the 1917 nameplate are the fitting of a front wheel stand, a thorough redesigning of the muffler cut-out and chainguards whereby if the new models are not for a fact absolutely silent, their approximation to that very desirable state is so close that, figuratively speaking, it would be a tight squeeze for a cigarette paper between the two, and the addition of a complete dynamo and battery electric lighting system as optional equipment on two of the three twin models.

The New Models

The new Thor line embraces the new heavyweight twin, rated at 15 horsepower and known as Model 17A; the regular heavyweight twin, rated at 12 horsepower and designated as Model 17-U; either of these models fitted with electrical equipment; the lightweight twin, rated at 6 horsepower and called Model 17-V; and the Thor "Super Single," a four-horsepower, single-cylinder machine which is catalogued as Model 17-Y.

As for prices the Thor has not been backward in following the trend of the times and adding enough to the list to cover in part at least the abnormal increases in the cost of production. The greatest increase falls on the lightweight twin, which now lists at $250 as against $225 for last year's model. The 12 horsepower model, which last year was priced at $265, now sells for $275, while the Giant Twin 15 horsepower model lists at $285. In either case $40 additional is charged for the electric lighting equipment, the electrical models being priced at $325 for the Giant and $315 for the 12 horsepower model. The Supersingle sells for $200.

The new Thor twin model has been designed with the distinct purpose of providing the additional power, pep and stamina needed when the motorcycle is used in connection with a commercial sidevan. The only feature which characterizes it from the regular heavy twin Model 17-U is the motor, which is designed with larger bore and stroke dimensions which accounts for the added power. The bore is 3.57 inches and the stroke 3.80, which figures out for a piston displacement of just a shade under 76 cubic inches. As was said before, the motor is rated at 15 horsepower but the rating is conservative as the motor can be speeded up to develop a full 18 horsepower.

In its outstanding features the motor is in every way similar to the 12 horsepower power plant and only in very minor details has that been altered since the 1916 models were announced. The big Thor

THE THOR ANNOUNCEMENT IN A NUTSHELL

Big Twins

Model 17-A, Fifteen Horsepower, three-speed.....Price, $285
Model 17-AE, same with electrical equipment.....Price, $325
Model 17-U, Twelve horsepower, three-speed.....Price, $275
Model 17-UE, same with electrical equipment.....Price, $315

Lightweight Twin

Model 17-V, Six horsepower, three-speed.....Price, $250

Supersingle

Model 17-Y, Four horsepower, two-speed.....Price, $200

NEW THOR FEATURES

Front wheel stand of novel design.
New three-ply muffler, absolutely silent.
New two-sleeve cutout, absolutely leakproof.
New handlebar brace.
New double-acting brakes on big twins.
New oiling arrangement.
Silent three-ply chain guards.

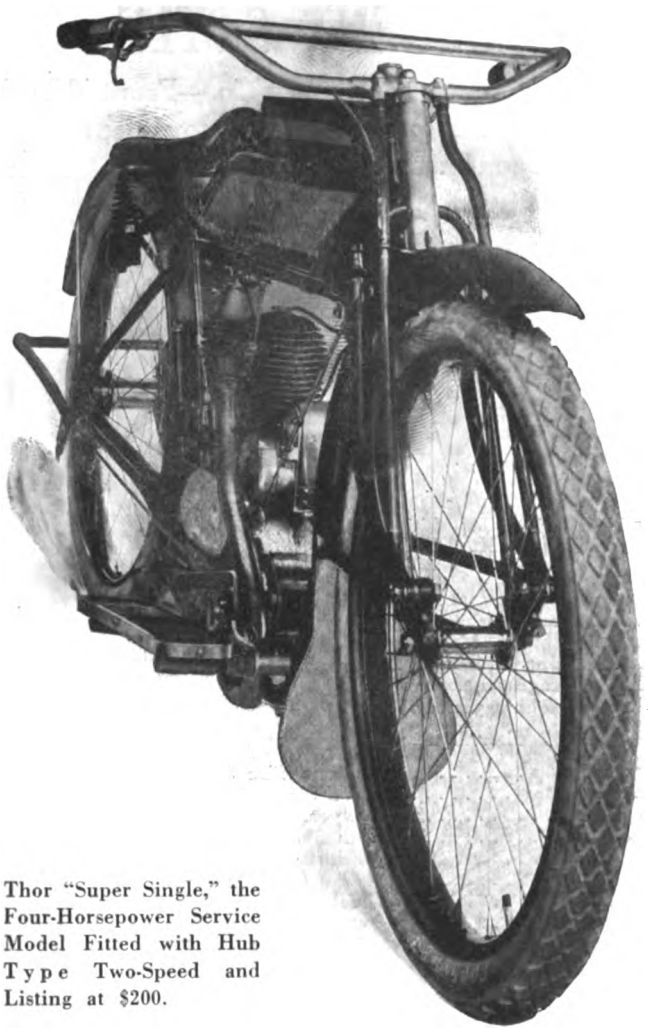
The Thor Lightweight Twin Fitted with Three-Speed Gear and Kick Starter Which Is Priced at $250

Digitized by Google



Thor "Super Single," the Four-Horsepower Service Model Fitted with Hub Type Two-Speed and Listing at $200.

twin motors are distinguished by the use of fully-enclosed overhead inlet valves, which not only silence the noise of the valve mechanism and eliminate much of the wear by effecting a thorough prevention of the ingress of dust and dirt and the egress of the lubricant, but also act to check air leakage which dilutes the mixture and is apt, in aggravated cases, to cause missing, irregular running and loss of power. The valve mechanism is housed in a pocket formed right in the cylinder casting itself and provided with a cover screwed in place by means of cap screws. The use of ball and socket joints in the valve push rods which has been a Thor feature for the past several seasons has been continued; this construction prevents misalignment and consequent binding of the push rods and ensures proper valve operation.

Schebler Carbureter

The mixture is supplied through the intermediary of a one-inch Schebler carbureter of special design, and a Dixie magneto is used to supply the ignition sparks on the Giant Twin machines. Lubrication is effected by means of the regular Thor mechanical oiler, and so effective has this valveless device proven itself in past seasons that there has been found no occasion to change or alter it. Making distinctly for greater cleanliness, and at the same time for convenience, however, the distribution of the oil leads has been altered somewhat, the tubes being so disposed on the new model as to be entirely out of the way but at the same time perfectly accessible.

The segmental kick starter operated on the right side has been continued without alteration, as well as the sliding type of three-speed transmission positioned on the countershaft. The gear shift quadrant is positioned within easy reach of the rider on the right side of the tank and is so interconnected with the clutch control that shifting cannot be effected without first releasing the clutch, either with the hand lever on the left side of the machine or the clutch pedal positioned on the left foot-board.

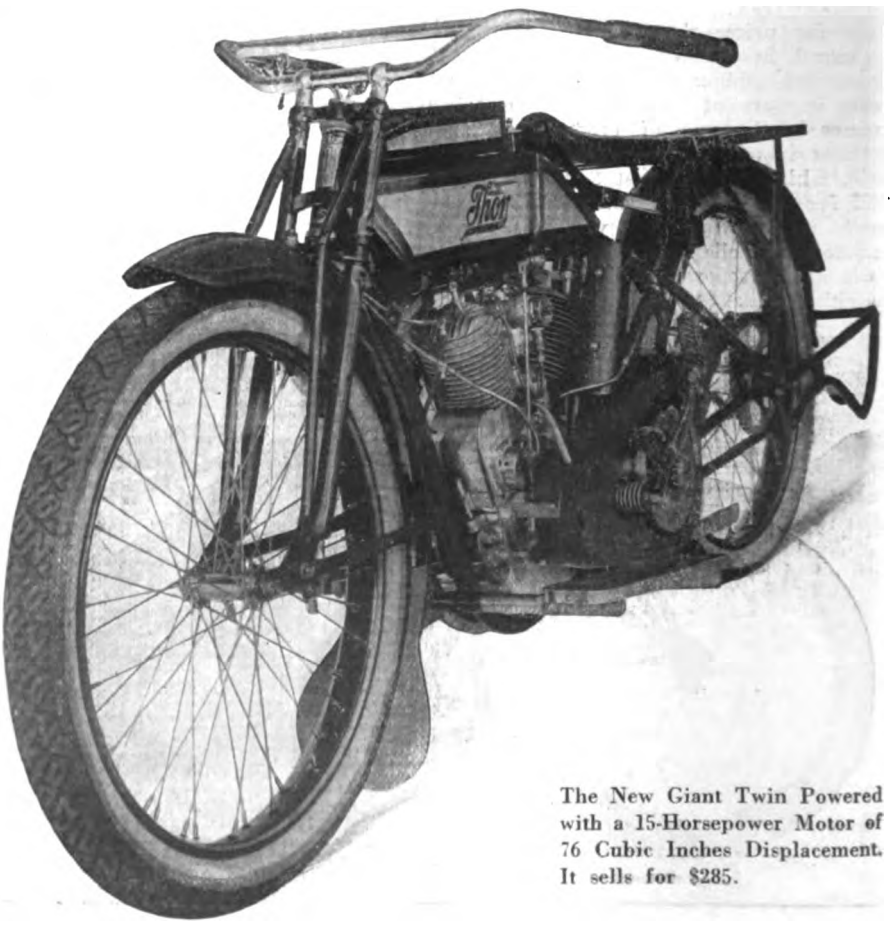
With a view of bringing the new Thor models just as close to the absolutely silent point as a motorcycle can be made, the new muffler has been constructed of two layers of sheet steel with a layer of asbestos sheeting interposed to further deaden the sound of the exhaust. Also tending toward the same end is the fitment of a cut-out which to all intents and purposes "hermetically" seals the passage when the cut-out is not in use. The device comprises a double sliding sleeve and it serves to eliminate all trace of that annoying "whistle" which is common to the cutout of more orthodox design.

Having by constant and continued experimentation hit upon this method of stifling the noise of the exhaust, the same principle has been applied by the Thor engineers to the chainguards to eliminate the last trace of the noise and rattle incidental to the operation of the chain on the sprockets. The new chainguards are formed of two steel stampings with a sheet asbestos "deadener" inserted between them and the results obtained by their application leave little to be desired.

Front Wheel Stand

A front wheel stand is something that long has been desired and the one fitted to the new Thor models will be fully appreciated by the fellow who has been up against the proposition of repairing a puncture without the means of holding the front wheel off the ground. The stand is pivoted to the front brackets of the foot boards and swings down under the machine and well out of the way when not in use. It is clipped in the inoperative position by means of a substantial spring clip, which, however, can be readily released when the time comes to use the device.

Of the many new features that lend distinction to the new Thor big twin models, perhaps none is more important than the new brake arrangement. The new brake is of the automobile type with an internal expanding and an external contracting brake both operating on the one brake drum. Both the band and the internal shoe are faced with Raybestos, providing a brak-



The New Giant Twin Powered with a 15-Horsepower Motor of 76 Cubic Inches Displacement. It sells for $285.

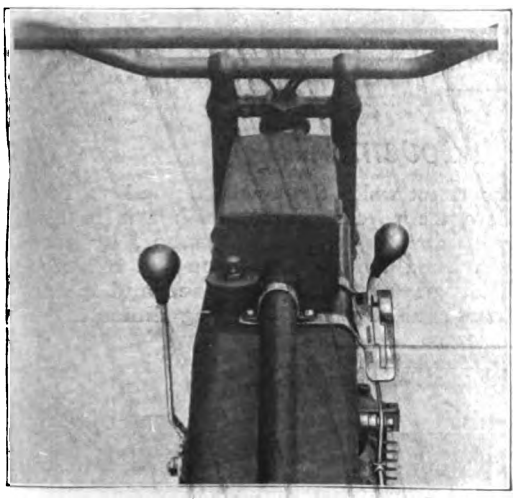
Digitized by Google

ing surface that is absolutely positive, long lived and free from all chance of burning.

The brake has been designed with ample surface to hold the machine under any conditions and this is augmented by the fact that the brake control arrangement is such that both brakes are applied at the same time by depressing the foot lever on the right footboard; an equalizing arrangement proportions the work on the brakes so that one is not worn out more quickly than the other.

Duplex Brake

Another new feature is found in the handlebar brace, which adds strength and rigidity to the already widely supported bars. With the idea of rendering the frames fully capable of bearing the stresses and strains incidental to pulling a sidecar or van without any tendency toward bending or breaking, the frame has been made of particularly heavy seamless steel tubing with ample reinforcement. The rear fork ends have been so designed as to facilitate removal and replacement of the wheel. The wheelbase of the big twin machines is 59 inches, and the design is such that an exceptionally low and comfortable saddle position is attained. The front fork is the

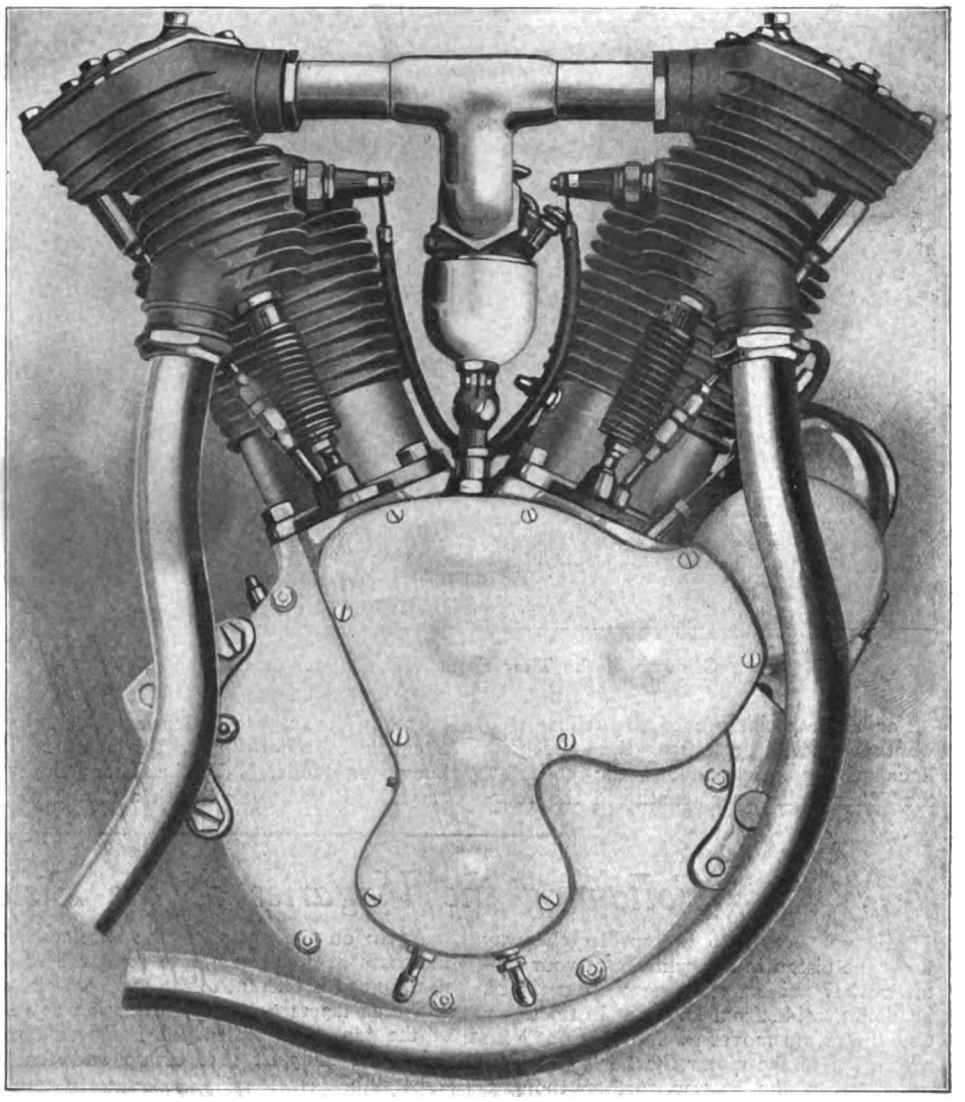


View of Control Elements

regulation Thor truss spring fork, with the springs housed in the forksides of the main fork.

Some special attention has been paid to mudguarding with the result that the new guards are a full five inches wide with deep flanged sides, the front guard being fitted with a leather splash apron as an additional protection for the rider. Carrying out to the last degree the "silent" idea which pervades the Thor plant, the rear guard is fitted with a double stand clip which absolutely prevents rattle when the stand is clipped in the inoperative position. The rear stand, by the way, is of the rocker type so that the machine can be rolled right up onto the stand with little or no exertion on the part of the rider. The gasoline tank, which is of the moulded type, has a capacity for 10 quarts of fuel, and the oil tank for three quarts of lubricant. The machine is fitted with a strong durable luggage carrier, and is finished elaborately with a two shade blue paneled tank and neat striping.

United States chain tread, Goodyear Blue Streak and Firestone non-skid tires will be fitted and saddle comfort assured by the use of a Troxel Jumbo saddle.



Detail View of the Valve Side of the Big Twin Motor, Showing Enclosed Valves

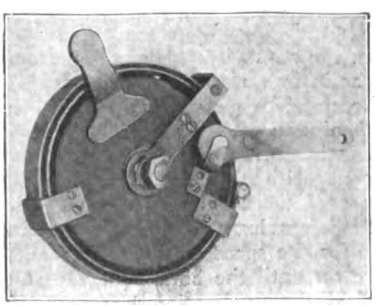
With the exception of the bore and stroke dimensions, which stand at 3.25 and 3.60 inches respectively, and which figure out for a piston displacement just within the 61 cubic inch limit, the specifications for the 12 horsepower Model 17-U are identical with those for the Model 17-A. As with the larger machine roller bearing connecting rod big ends and roller bearing crankshaft are standard on the motor, cutting the frictional losses down to a minimum.

A Bosch magneto is used on the 12 horsepower models.

The Lightweight Twin

The lightweight twin is powered with a little twin motor with bore and stroke dimensions of 2.75 and 3.25 inches respectively, and the piston displacement is 38.6 cubic inches. The inlet valves are overhead, though not enclosed, and as is the case with the big twin motors, are operated through the intermediary of push rods provided with ball and socket joints. The biggest point of difference between the large and the small twin motors, however, aside from the power developed, is in the cylinder design, the little twin being equipped with cylinders with separable heads, while the big twin motor has the cylinder heads cast integral.

The little motor is provided with a special Schebler carbureter, a Thor mechanical valveless oiler, and Dixie ignition. The new type of silent muffler and silent chain guards are fitted as well as the three-speed gearset and segmental kick starter. The wheel base is 57 inches and 2¾-inch United States, Goodyear or Firestone tires are fitted. The only improvement made on the big twins which does not apply to the lightweight is the fitment of the large double brake, the little twin being equipped with a coaster brake operated by means of a foot lever on the right footboard. Seating comfort is provided for by the use of a Troxel Truform saddle.



Duplex Brake in Detail

Glimpse of the Thor Front Wheel Stand in Use

For the especial use of the fellow who wants a service machine, the telephone lineman, the salesman and the collector, the Thor folk have continued the four-horsepower, single-cylinder model offered a couple of months ago; this machine is known as Model 17-Y, the Thor "Super-single." It is powered with a motor with bore of 3.25 and stroke of 3.60 inches, with a piston displacement of 30.50 cubic inches. In general arrangement of the frame and fittings, with the exception of the gearset, the model is patterned closely after the lightweight twin. It is, however, provided with a two-speed gear of the planetary type, fitted on the rear hub instead of the three-speed countershaft gear which is used on the twin. This model, which is finished in characteristic Thor style, is priced at $200.

Has 29-Inch Wheels

One of the really novel features of this Thor model, in fact is a distinct innovation in American motorcycle practice, is the use of 29-inch wheels instead of the orthodox 28-inch wheels which are standard for all save lightweight machines in the United States. The additional diameter is, of course, intended to render the machine easier riding and at the same time reduce tire wear to a minimum, it having been found that the larger wheel is more steady in going over the rough stuff and pot holes.

A feature that will appeal strongly to the dealer is the new Thor sales policy, a policy that calls for an early announcement, backed by the full ability of the House of Thor, to make instant delivery on each and every model in the line, a policy chuck full of co-operation with the dealer.

Following the Vagaries of the Piston Movement

DID you ever stop to consider the way the piston in the cylinder of your motor works? Like a great many other riders, no doubt, aside from knowing instinctively that the piston moves up and down at each revolution of the motor flywheel, you have never given the matter further thought. As a matter of fact, however, the movement of the piston in the cylinder involves much more than a simple up and down motion, all its vagaries of movement being due to the varying angularity of the connecting rod.

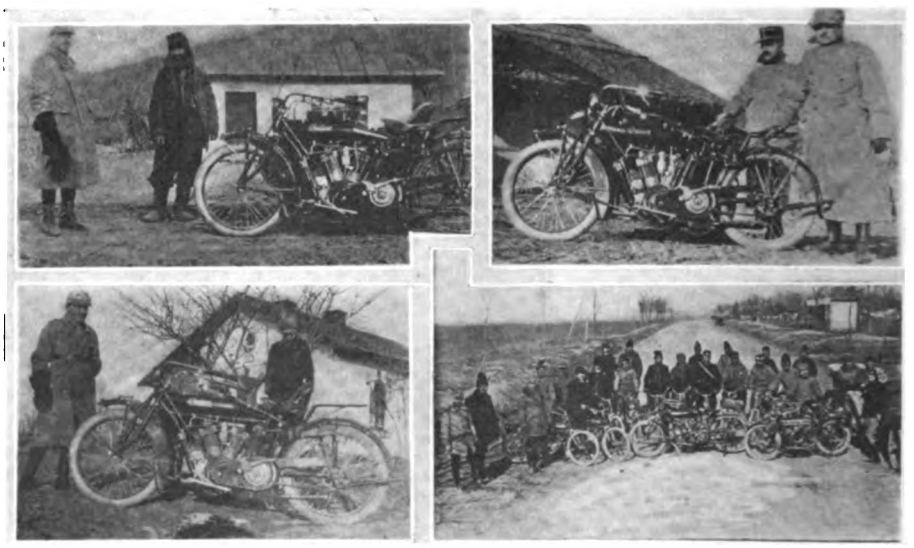
Consider, for instance, the piston at the top of the cylinder just about to begin its downward stroke. As the connecting rod crosses the top dead center, the piston stops for the fraction of an instant, neither moving up or down. But immediately upon crossing the dead center the piston begins its downward movement, gathering speed as the angularity of the connecting rod increases; that is to say as the crankpin approaches a 90 degree angle with the verticle.

Point of Greatest Speed

At first thought it would appear that the acceleration of the piston would be uniform until the quarter stroke was completed, when the piston begins to lose some of its speed until it again comes to a standstill when the crankpin reaches the bottom dead center in its stroke. This, however, is not the case. The pace of the piston increases at a uniform rate only until the connecting rod is in such a position that it makes a tangent with the circle representing the course of the crankpin. At that point the piston is moving at the most rapid rate possible for the speed of the engine, and from there on until the bottom of the stroke is reached, the acceleration decreases until the stoppage occurs and the piston begins its ascent.

Again on the upstroke, the acceleration increases at a uniform rate until the connecting rod is tangent to the crankpin circle and then tapers off until the motion ceases at the top dead center point. Instead of being the simplest sort of up and down movement which the laymen is led to believe, the movement of the piston is really quite complex and its movement, by the way has a decided effect upon the balance of the motor. Its irregular speed and speed changes make perfect balancing difficult.

ROUMANIAN OFFICER IS USING AN INDIAN



THE accompanying photos show an Indian motorcycle used by Lieutenant Thomas Joanin, of Bucharest, who is now in active service with the Roumanian army. Lieutenant Joanin has used the mount in connection with his official duties, and the remarkable service obtained has brought favorable comments from Roumanian army experts who have for some time past been studying the results obtained from motorcycles in military work.

Roumanian roads are far from perfect, and for several months past they have been especially bad in view of the fact that the heavy traffic of military movements has cut the surfaces into deep ditches. In writing to comment upon the service obtained from his Indian motorcycle, Lieutenant Joanin places emphasis upon the value of the cradle spring frame in overcoming the obstacles encountered in army dispatch work.

A DAY IN THE LIFE OF A BORDER RIDER

Mud and Much of It Bothers the Boys with the Motor Battery of the 71st at McAllen, Texas, But Motors Give Good Service

By SERG. L. H. GUTERMAN

Dispatch Rider of 71st New York at Camp McAllen, Tex. No War Tests Could Be Worse Than Those Imposed Upon the 71st Riders in Recent Manoeuvers

McALLEN, Texas.—Well, we are down here at last, the whole kit and crew of us, machines, guns and the rest of the outfit! And our first task is to get the machines together and in proper shape for operation on the sort of roads or near roads which we find here.

And speaking of roads, and the hardships incidental to endurance runs, you ought to see what we are up against! It has been raining for the past three days and the slippery, sloppy clay has been converted into a veritable mortar, so that it is necessary for us to remove the mudguards of our machines before we can ride at all. This near adobe soil just clogs in between the tire and the guard and jams things up so nicely that there is "nothing doing" on the go! The low saddle position provided on the Reading Standard machines with which the Machine Gun Company of the 71st N. Y. is equipped, helps some, for it is a case of ride with feet dragging all of the time in order to forestall spills, and even at that we are not always successful.

Three of us were ordered to make a 20-mile test ride in order to ascertain just what the conditions were, and any endurance run I ever entered back east was a huge joke compared with that 20 miles of the hardest kind of work. It takes an expert with a superabundance of grit to keep going, but luckily we have any number of that type of rider in our ranks. We came through without serious mishap, but we collected enough Texas real estate on our machines, clothes and faces to make a new little old Manhattan Island, more or less.

We hear whispers about the 71st has been ordered back to Camp Whitman in our own Empire State, but it is also rumored that the order is so worded as not to include the Machine Gun Company, which no doubt will stay on the border for some time to come. The company, by the way, has been divided into four sections, and after we finish assembling all of the machines, which we expect to do by tomorrow, a motorcycle will be assigned to each man and he is expected to keep it in first class running shape and clean as a whistle.

All that "bunk" about lack of proper food and a superabundance of work which we read before leaving for the border was disproved upon arrival. We manage to get "three squares" a day and the food is good, and while there is no doubt a whole lot to be done, not one of us has been overworked to date. That's just the "wail" of a few malcontents.

What They Are Doing in Tacoma

AMBLADE DOUBLES HIS SPACE

FRED AMBLADE, Tacoma Excelsior agent, has recently doubled his floor space to take care of a new lot of Excelsior machines; the change also gives him double window display space.

SOME VARIETY IN THIS OUTFIT

H. S. MORRISON and wife were recent Tacoma visitors, who drove in an Indian motorcycle "bug." He has used an Indian 7-h.p. engine and constructed a neat cyclecar with which he has been touring the States of Oregon and Washington during the past summer. Up to date he has traveled about 10,000 miles. To show that he is impartial, he has equipped the car with four different makes of tires, a Goodyear, a Fisk, a Firestone and a U. S. Nobby.

STRONG HAS PARCEL DELIVERY

ARTHUR STRONG, who makes his headquarters at Ray Day's store in Tacoma, believes in putting his Indian to a practical use, and has recently established a motorcycle parcel delivery. He carries anything up to 50 pounds on his machine at reasonable rates, makes special trips by appointment, and is kept generally on the jump.

MOTOR DISPATCH RIDERS USING NEW ARMY PACK

ONE of the lessons taught by the recent manoeuvers of motorcycle squads at the training camps and along the Mexican Border is that the old-fashioned army packs are hardly suitable for dispatch riders, who are expected to make long and fast trips over rough and often uncharted roads. As a result the motorcyclists still in service with the various regiments are being supplied with what is known as the 1914 army pack, which is also in general use by the infantry.

The accompanying photo, taken at the Peekskill camp recently, shows that the new pack is much more compact and sightly than the one formerly used, and that it can be carried by a motorcyclist without the slightest difficulty.

The riders of the First Motor Battery, which has been at Peekskill for the last six or seven weeks, have now stored their motorcycles at the armory in New York City pending further instructions from the military authorities.

Dispatch Rider with New Pack

40,000 SPECTATORS ENJOY GOODYEAR FIELD DAY

Record-Breaking Program Staged at Seiberling Park in Akron; 1,000 Employes Compete in Various Athletic Events and Fine Spirit of Co-operation Marks Entire Affair

AKRON, O.—The big field and track meet conducted by the Goodyear Tire & Rubber Company, at Seiberling Park, Akron, on Labor Day, was the most elaborate and comprehensive athletic carnival ever planned by a private corporation. Forty thousand people blanketed the hillsides, taxed the huge grandstand to its utmost capacity, and filled the gigantic field.

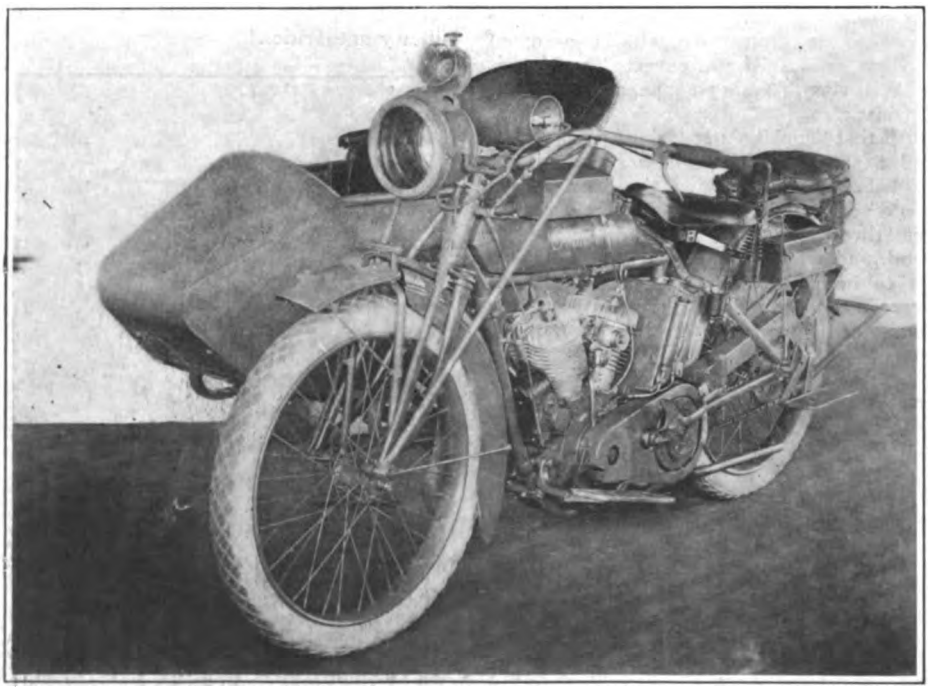
When President F. A. Seiberling originated the Goodyear home-building plan for employes, three years ago, his interest in the social welfare of Goodyear workmen and their families, prompted him to set aside a magnificent tract of 40 acres for athletic and amusement features. Within the property lies a small lake, offering all kinds of aquatic sports, around which has been built a magnificent field, including tennis courts, dancing pavilion, athletic track, restful parks and baseball field, with a huge grandstand, flanked on right and left by spacious bleachers.

In the elaborate Goodyear field meet on Labor Day more than 1,000 persons competed for supremacy in their respective branches of sport. There were races of every style and description, for the ladies as well as the men. Fancy diving, greased pole climbs, quoits, tennis, bait-casting, baseball throwing, obstacle races, nail driving, trap shooting, checkers, cock fights, clock golf, egg races, hurdles, jumps of all kinds, shot puts, bicycle races, sack races, relay races, dashes and greased pig chases were some of the events which entertained the throngs throughout the day. At times there were a dozen contests in progress in different parts of the field.

The boxing and wrestling bouts were fast and full of action, and the dashes close and exciting. A quarter mile balky mule race was one of the big hits of the day. The great surprise of the meet was the victory of the office men over the factory men in the tug-of-war. Following the athletic events at the close of the day a monster display of fireworks was set off on the baseball field. This was followed by a prize waltz.

The Goodyear field day has already marked a new epoch in the life of Goodyear. For a get-together, meet-each-other affair, it has eclipsed any former activity which the company has ever conducted. It has developed a wonderful Goodyear spirit which bids fair to rival the college spirit which is prevalent wherever there are colleges. Every Goodyearite has discovered that each one of his twelve thousand fellow workers is a kindred spirit, a genuine human being, with the same hopes and aspirations as himself. Goodyear officials have decided to make the big field meet an annual affair.

SIXTY-THREE OF THESE MACHINES WENT TO OUR ARMY



This Is One of the Indian Sidecar Combinations Recently Ordered by the U. S. Army. It Is Fitted with Dixie Magneto, Splitdorf Plugs, Prest-O-Lite Tank, Old Sol Lamps. Seiss Horn, F-N Tandem, Corbin-Brown Speedometer and Goodyear Blue Streak Tires

WHITE IS WINNER OF KANSAS CITY RUN

Harley-Davidson Sidecarist Only Contestant to Reach Joplin in Strenuous Mud Battle—Only Ten Arrive at Noon Control

KANSAS CITY, MO.—J. H. White, driving a Harley-Davidson sidecar combination, won the first prize in the two-day endurance run of the Kansas City M. C. to Joplin, Mo., and return, September 3 and 4. None of the other twelve starters in the run reached Joplin, the majority not being able to go more than 18 miles out of Fort Scott on the first day. Smith receives the pair of Goodyear tires offered as first prize.

The start was made at 5:30 a. m. on September 3. The weather was ideal, but rain the day before cut down the starters to 13. The first mishap occurred to President C. E. Whitcomb, of the club, who lost the bearings in his sidecar wheel and had to ride solo at Drexel. Haynes, Excelsior sidecar, turned over near Drexel, but righted and went on.

After leaving Drexel, it started to rain and the trouble began. Lee Rogers, Henderson, took a wrong road and abandoned the run 20 miles out. E. Robertson, Harley-Davidson, lost the road in the rain but regained it again. He finally reached Fort Scott, the dinner control, three hours late. Robertson was handicapped as starting No. 1 and not knowing the roads well.

E. B. Saufley and I. J. Haynes, Excelsiors, reached Fort Scott in due season, as did D. H. Vance, Harley-Davidson; G. E. Hymes, Indian; U. U. Smith, Excelsior; Clyde Smith, Excelsior; Walt Bemus, Harley-Davidson, and C. E. Whitcomb, Indian. J. H. White was in the control right on schedule. Dinner was eaten and tanks filled and the nine survivors once more took the road.

The rain came down harder and roads became quagmires, three men being frequently needed to get a solo machine in motion. About 18 miles past Fort Scott, the task was too great for eight of the riders and they got a wagon and came back to the Fort. White, on his Harley-Davidson, however drove on and arrived at Joplin two hours late.

MOTOR BICYCLES SELL ALL YEAR, SAYS ANKENEY

DAYTON, O.—Advertising Manager Ankeney, of the Davis Sewing Machine Company, maker of Dayton Motor Bicycles, complains that he cannot get an advertisement printed before it becomes out of date. "Take the case of an Eastern dealer a few weeks ago," says Mr. Ankeney. "We ran a notice to the effect that he had ordered 11 machines in 15 days. Before the advertisement came out in the trade and other papers, the same dealer had sold six more Motor Bicycles.

"The way that the orders for these machines are holding up this late in the regular season is remarkable and goes to prove that there is no beginning and end of season for the Motor Bicycles."

Digitized by Google

The two photographs shown here were snapped this year at the military training camp in Plattsburg, N. Y. The motorcycle "rookie" is seen on scout duty. Camps similar to that at Plattsburg are being opened this summer in many parts of the country.

YOU'RE WANTED AT THE MILITARY TRAINING CAMPS

THE fellow who owns a motorcycle is always sure of a royal welcome at the military training camps. His machine places him in a position where he is of immense value to his company of "rookies." And the rider, himself, through the variety of service which he is enabled to render, has both a fascinating and a health-building experience. He knows that his vacation is really worth-while; he is receiving a training valuable both to himself and his country, and yet he thoroughly enjoys every minute of his time spent at the camp.

IT PAYS TO BE NICE WHEN YOU MEET A COPPER

Harry G. Jacobs, Western Representative of Motor Cycle Illustrated, Polishing a Plainclothesman's Star so That He Will Be Enabled to Get in and Interrupt the Busy Manufacturer Long Enough to Sign Up an Advertising Contract. Yes, He Always Gets In

ROCKY MOUNTAIN CO. IN NEW QUARTERS

DENVER, Colo., Sept. 11.—The Rocky Mountain Motor Co., Henderson motorcycle dealers, have just moved into new quarters at 439 Broadway, this city. The former location of the concern was at 1635 Broadway. The Henderson dealers have much larger floor space in their new home, and the store is arranged in keeping with what an establishment of its kind should be.

BEAUVAIS HAD FINE YEAR WITH INDIAN

TAUNTON, Mass.—Fred Beauvais, local representative for the Indian, has sold over 40 Powerplus and Featherweight models this season and all used machines that he could get. His bicycle business has also been very gratifying and he intends to enlarge this department as well as that for the motorcycle for the new season.

Beauvais always accompanies the boys on their runs whenever possible and is well liked by all Taunton motorcyclists. The 1916 season was his first and he considers that the showing he made was excellent.

PURCHASE MADERA CYCLERY

MADERA, Cal.—George Vogeler and E. E. Bozman have taken over the Madera Cyclery and are starting a vigorous campaign toward expansion, especially in the motorcycle department. They have put in a large stock of parts and are ready to give first class service for all makes of machine.

GASOLINE AT 22 CENTS NOW

NEW YORK.—Gasoline is down to 22 cents a gallon in this city, following an announcement made by the Standard Oil Company. This is the second cut in price this season, the first being made on August 7. The reason given for the reduction is the heavy increase in crude oil production.

BUSY PLACING AGENTS

COLUMBUS, Ohio.—The Franklin Rubber company, central Ohio agent for the Excelsior, is preparing to place subagents in several towns in the neighborhood of the Buckeye capital. The territory includes the counties of Franklin, Deleware and Madison. Agents will be placed in London and Delaware.

DAYTON CONTRACTS POUR IN

DAYTON, Ohio.—Manager H. M. Huffman, of the Cycle Department of the Davis Sewing Machine Company, reports that contracts are coming in on all of the Dayton lines in a surprising manner. "This is very gratifying," says Mr. Huffman, "since no effort has been made to get the renewals of the 1916 dealers."

WHEAT SAMPLER ON INDIAN

THE Sperry Flouring Mills, Tacoma, have recently purchased another Indian machine, which is used by Rupert Nelson in gathering wheat samples from the various cars of wheat arriving daily on the waterfront. This is the second machine which has been purchased for this work.

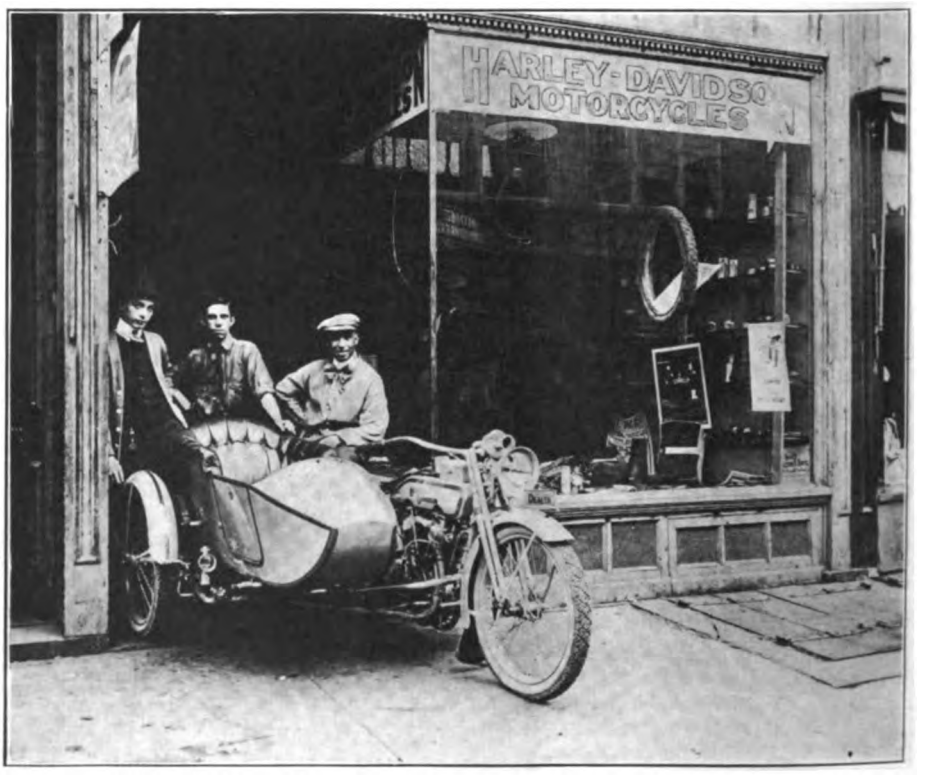
HILL CLIMB FOR SAN JOSE

SAN JOSÉ, Cal.—On October 8, the San José M.C. will hold a hill climb open to all riders. The climb will be under F. A. M. sanction and it is probable that the course used last Spring will be used, although nothing definite on this score has as yet been decided.

CLIMB MT. ASHLAND BY MOTOR

ASHLAND, Ore.—Sam Jordan and Elmer Morrison created something of a sensation by climbing to the top of Mt. Ashland with an Indian motorcycle, carrying tandem. A motion picture company had arranged to make several reels at the summit of the mountain and Jordan and Morrison decided to add a little spice to the program by making the ascent.

LIVE HEADQUARTERS OF HARLEY-DAVIDSON AT TRENTON



Establishment of R. S. Woods, at 150 North Broad Street, One of Jersey Capital's Veteran Dealers. Reading Standard Is Also Carried. Proprietor Woods Is in Doorway

ONLY FIVE PERFECT SCORES IN LIVELY CONTEST

Last Week's Answer Proved Easy for a Lot of New Comers, but Few of First Week's Perfect Men Doped Out Correct Answer—Contest Creates Countrywide Enthusiasm

WELL, Sir! That "poser" which we handed out last week proved to be an easy one for a lot of fellows; in fact up until press time, of all the answers received, we did not get one that did not identify the part correctly as belonging to a 1916 Reading-Standard machine. But answers are coming in with every mail so that we will be surprised if we do not get a couple of "bad guesses" before this number is in the mails.

Here's An Easy One

Just the same, we know for a fact that that was a hard test we put you fellows up against last week; and there must have been much burning of midnight oil, a whole lot of "doping" over catalogs and quite a display of "Sherlock Holmes" tactics to turn in so many perfect answers. But you won't have to resort to such "deep stuff" to find out what machine the little section of a picture in the circle above is taken from. It's all kinds of a "cinch" and likewise as plain as the nose on your face. But just a word of advice—"Watch your step."

But to get back to the past two weeks again: We have received another quarter of a hundred answers to the first week's contest and of the number only two proved wrong. Both George Morris of Bellville, Pa., and Luther Parker of Castilia, Ohio, thought that the Thor picture resembled a De Luxe motor. The other 23 have been credited with one point. Most of the latecomers write from points far removed from New York; from all four quarters of the United States. Which only goes to show the amount of interest the contest has created. It behooves you, fellows, to get your answers in as early as possible, for we cannot credit you with a point for a right answer unless the postmark shows that it was posted before the new issue reaches you.

Five Perfect Score Men

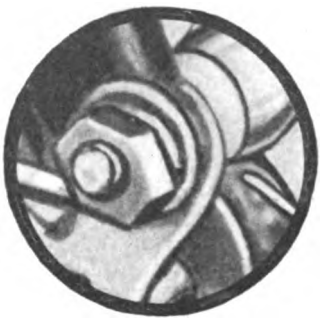
Comparing the answers to the last picture with those to the first, we find that only five contenders have succeeded in earning two points for correct answers to both pictures. The "perfect score" men are William Ennico, New York City; Herman Henssler, Jr., Philadelphia, Pa., L. W. Sierk, Brooklyn, N. Y.; Elwin Safford, Corry, Pa., and Glen Carlson, Saybrook, Pa. It is quite evident that the second picture was a sure enough "poser" for fellows like Tom McClain, Jr., Ogle Massey, L. H. Coddington, Donald Ball and the others who were listed as correct for the Thor picture last week or else they are very late at getting their answers in.

This Week's Good Guessers

The men who correctly answered "Reading-Standard" to the picture appearing in last week's issue are:

L. W. Sierk, Brooklyn, N. Y.
John Henssler, Philadelphia, Pa.
William Ennico, Bronx, N. Y.
Elwin Safford, Corry, Pa.
Peter Charbonneau, Danielson, Conn.
G. H. Horn, Brooklyn, N. Y.

WHAT DO YOU KNOW ABOUT MOTORCYCLES ?



WHAT MAKE OF MOTORCYCLE IS THIS TAKEN FROM?

Victor Pelezzare, Bronx, N. Y.
Ernest Anderson, Westport, Conn.
Charles Williams, Pittsfield, Mass.
A. J. Terhune, Hackensack, N. J.
Wm. Van Binsberg, Hackensack, N. J.
Charles Kopp, Bronx, N. Y.
A. F. Dexheimer, Philmont, N. Y.
Tracey Shepard, Bradford, Vt.
Herman Kopp, Bronx, N. Y.
M. H. Schlanger, New York City.
James Vokati, Poughkeepsie, N. Y.
William F. Adam, Kutztown, Pa.
Fred Byrne, Brooklyn, N. Y.
Glen Carlson, Saybrook, Pa.
M. W. Heiss, New York City.

Twenty-Five Late Ones

Those whose answers to the first week's picture were correct but too late for listing last week are:

Frank Harrison, Linden, Cal.
Glen E. Carlson, Saybrook, Pa.
Frank Schmidt, Tracy, Cal.
Clarence Love, Warren, Ohio
W. I. Brummitt, Topeka, Kan.
O. M. Erickson, Aberdeen, S. D.
Roy Shillinger, Brainard Sta., N. Y.
Arthur Anderson, Batavia, Ill.
Charles Williams, Pittsfield, Mass.
O. J. Salo, Red Lodge, Mont.
T. E. Campbell, Mammoth Spring, Ark.
Otto Swanson, Trowbridge, Ill.
Laurie Yonge, Ocala, Fla.
W. Leathe, Larchmont, N. Y.
Robert McCoy, Circleville, Ohio
Paul Stimson, Indianapolis, Ind.
R. H. Browning, Indianapolis, Ind.
A. B. Hullinger, Bradentown, Pa.
L. M. DeLong, Paris, Texas.
George Rees, Aurora, Ill.
George Hanson, Chicago, Ill.
A. Carlisle, David City, Neb.
E. L. Fullwood, Tucumcari, N. M.

The quintet of riders who by digging out the correct answers to both of the pictures have justly earned for themselves the tentative title of "motorcycle expert" are:

William Ennico, New York City.
Herman Henssler, Jr., Philadelphia, Pa.
L. W. Sierk, Brooklyn, N. Y.
Elwin Safford, Corry, Pa.
Glen Carlson, Saybrook, Pa.

This Pair "Went Wrong"

And the enterprizing pair who missed their guesses on the first week's picture are:

George Morris, Belleville, Pa.
Luther Parker, Castilia, Ohio.

Once again, Fellows, let us call your attention to the fact that the contest is still young—a babe in the cradle, so to speak. So if you have not yet entered come on in with this week's answer; or if you have been wrong on one picture, don't let that mistake cause you to drop out. There are a lot more pictures coming; some easy, some hard. Just for the fun of the thing; as a pure sporting proposition let us know what you do know about motorcycles or what you think you know.

There is no prize offered for the contest. We are simply giving you an opportunity to qualify among your fellow riders—and friends as a "motorcycle expert." You certainly will have to be "right there" with the motorcycle knowledge to identify every one of the pictures in the series correctly. If you want to share in the glory, send in your answer right away to the Contest Editor, **Motor Cycle Illustrated**, 21 Park Row, New York.

WHAT TO DO WHEN MUDGUARD STAY BREAKS

ONE of the troubles most frequently encountered on the road is breakage of the mudguard stays, resulting in a very annoying rattle when the rough spots are encountered. The real cause of the stay breakage is traceable to our roads themselves; the rough, pot-holed macadam surface and the uneven cobblestone road facing induce the rear wheel to vibrate so much and so often that the metal of the stay soon becomes crystallized and snaps off, generally right at the mudguard connection.

The proper thing to do when a stay breaks, if it is not convenient to replace the broken member with a new one on the spot, is to strap the mudguard firmly to the luggage carrier or rear fork stays, to prevent, insofar as is possible further vibration. If this is not done, the loosened guard will shake more than ever, resulting in snapping off of all the stays in short order and possibly a broken guard.

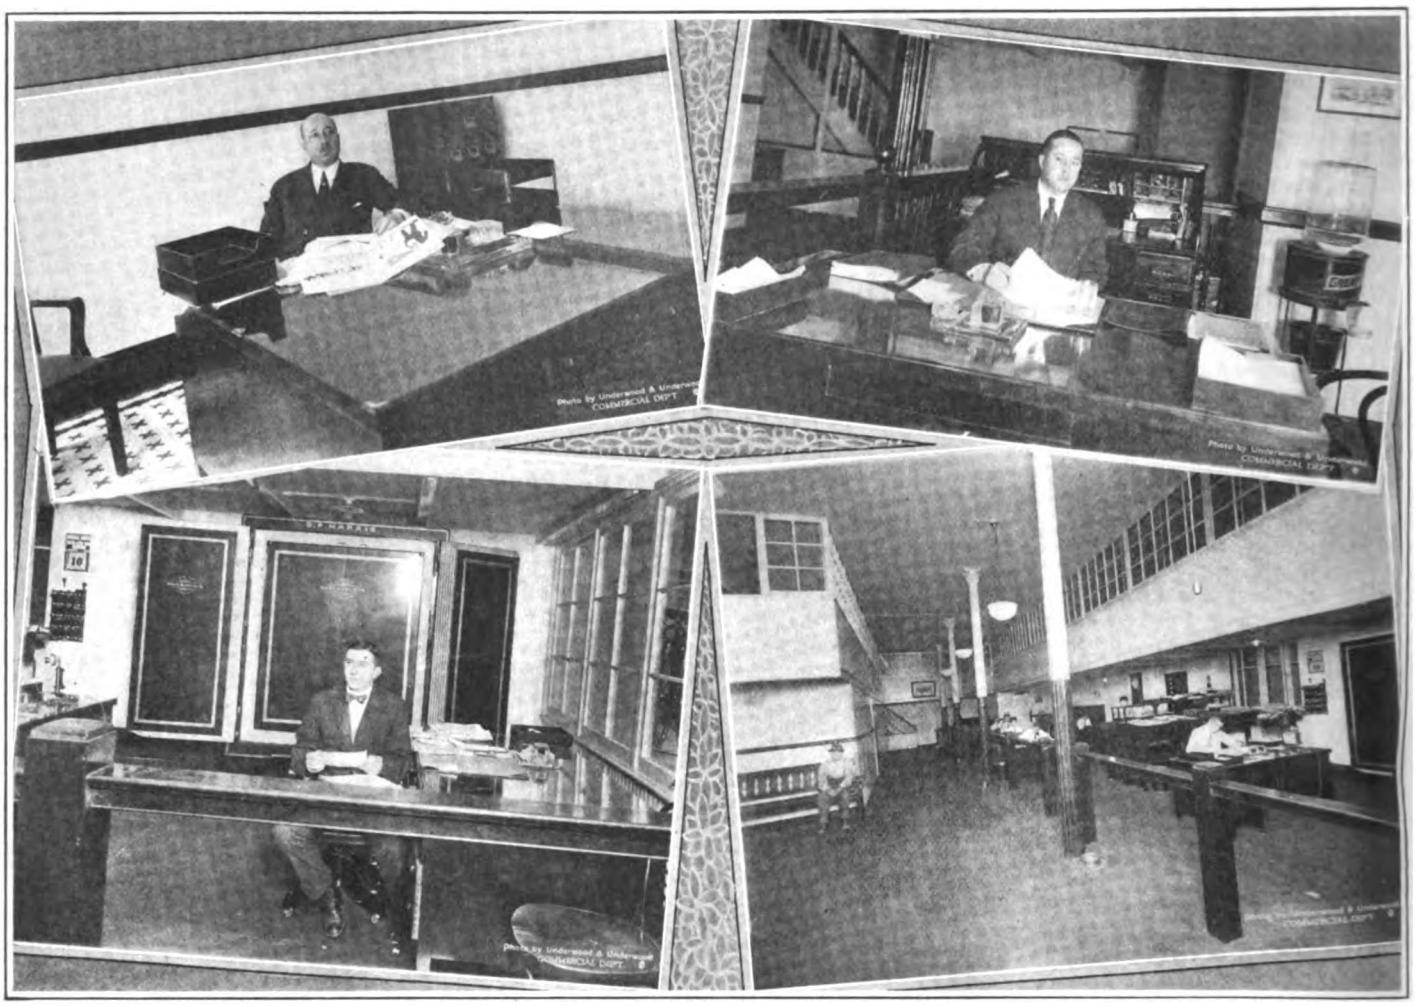
WELL-EQUIPPED "ROLLFAST" HEADQUARTERS



NEW YORK.—The finely appointed headquarters of the D. P. Harris Hardware Company, at Murray and Church streets, New York, is now occupied and things are humming in all departments. The offices are distinctly palatial, the finish being in mahogany and white enamel with the most up-to-date ideas in lighting and with fine window decorations. The outdoor signs, both electrical and wall, are most attractive.

A unique feature of the new Harris quarters is a large sample room extending around the entire upper floor of the building. Here in specially-fitted samples cases with black velvet cloth underlay are to be seen the entire line of the company. This sample room is the pet of and was arranged by Stanley Wilson, the secretary of the firm.

In the upper left illustration is President D. P. Harris at his desk in his private office, while to the right is Secretary Stanley Wilson in his attractive quarters. At the lower left is Treasurer "Sam" Munroe, with the firm's safe in the background. The fourth picture is a general view of the Harris offices.

Bargain Sales for the Motorcycle Store

Suggesting a Means of Disposing of Used Mounts Which Can Be Effectively Adopted by the Dealer—What One Sale Did

By R. FRANKLIN MUNDORFF

IN perusing advertising of local nature, does the notice of a bargain sale of furniture, household goods, wearing apparel or smokers' articles ever attract and hold your attention? Of course it does, if you are a real American, for it's the American's nature to look for bargains. Then, why not have bargain sales in the motorcycle establishment?

Every dealer—or at least a huge majority—takes in a considerable number of used motorcycles in part exchange for new ones. Now, these machines have to go the way of the new ones in the agency—which means they have to be sold. Therefore, it is most likely that a dealer can offer some real bargains in these used machines, and an annual bargain sale of these goods should have the effect of making a season for such sales. Incidentally, and by no means an inferior reason to that just mentioned, it will have the effect of cleaning up all, or nearly all, of the stock of used motorcycles.

Worked Out Finely

This bargain sale idea was tried for the first time in Kansas City, Mo., by Newby Brothers, representing the Thor, Henderson and Flying Merkel lines. The sales was advertised as a bargain sale and the advertising was true to the point. It was in justice to every make of machine in the city, too. Nearly 100 machines were on the floor at the start, and the advertising brought out a crowd of seekers of used machines that literally swept the floor clean.

There were a few competitive dealers who did not at first conform to the idea, but their prejudice is now being rapidly overcome. Newby Brothers proved its value to the motorcycle dealer, as well as to the piano house.

There is another class of machine which can figure in the bargain sale and which is a sort of "orphan" in lots of motorcycle stores. In this class belong the machines which have been sold, either wholly or in part, to some customer, but which have been ridden once or twice, perhaps. Literally, they are second-hand machines, but practically their value has only diminished by the running of a few miles. To sell these at the price of a used machine of the corresponding model is obviously unfair to the dealer; so at the bargain sales they can be listed as practically brand new and thus bring a higher price.

STOKES AND HICKMAN WIN AT LATONIA MEET

CINCINNATI, O.—Glenn Stokes, the Excelsior star, captured the five-mile qualifying race at the Labor Day meet at Latonia track, the occasion being the celebration of the Cincinnati Trade & Labor Association. Stokes also won the 10-mile final pro. B. Boide, also an Excelsior, came second in both events. Stokes time for the five and ten miles were, respectively, 4:22 and 8:57⅕.

The five-mile amateur race went to George Hickman, Excelsior, in 5:05⅘. Stokes also set a new record for the track, of 51½ seconds, the former time having been 54 seconds for several years. A crowd of close to 30,000 witnessed the events. The summaries:

Five-mile pro., qualifying—Glenn Stokes, Excelsior, first; B. Boide, Excelsior, second; H. Phillips, Indian, third. Time, 4:22.

Five-mile amateur—George Hickman, Excelsior, first; Cap Conners, Harley-Davidson, second; William Rohrmeier, Harley-Davidson, third. Time, 5:05⅘.

Ten-mile pro. final—Stokes, first; Boide, second; Phillips, third. Time, 8:57⅕.

SHREVEPORT RACES ENJOYED BY 5,000 FANS

SHREVEPORT, La.—Five thousand fans saw the Labor Day motorcycle races here. While the honors were pretty well distributed, Dave Kenny, on an 8-valve Indian, was the most consistent winner of the day. Summaries:

Mile time trial for Class B riders—Won by Drew, Indian. Time, 57⅘ seconds.

Mile time trial for Class A riders—Won by Dave Kenny, Indian. Time, 53⅗ seconds. This set a new record for the track.

Five miles for strictly stock machines—Won by L. A. Rutledge, Excelsior. Time, 5:29. Drew, second, and Jacobs, Harley-Davidson, third.

Five miles for Class A riders on stripped stock machines—Won by Kenny, Indian; Hilliard, Excelsior, second, and Correnti, Harley-Davidson, third.

Ten miles for Class B riders on stripped stock machines—Won by Drew, Indian; Rutledge, Excelsior, second, and Jacobs, Harley-Davidson, third.

Ten-mile free-for-all for Class A riders—Won by Kenny, Indian; Hilliard, Excelsior, second, and Correnti, Harley-Davidson, third.

Ten miles for Class B riders on stripped stock machines—Won by Rutledge, Excelsior; Schmidt, Harley-Davidson, second. Drew went out with tire trouble.

Five-mlie free-for-all for Class A riders—Won by Kenny, Indian; Hilliard, Excelsior, second, and Correnti third.

Ten-mile free-for-all for Class A riders—Won by Kenny, Indian; Hilliard second and Correnti third.

F. L. Zimmerman, Jr., F. A. M. referee, was in charge of the program, which was run off without a hitch.

INGEL, ON INDIAN, TAKES TWO AT SPRINGFIELD

SPRINGFIELD, Ill.—Chester Ingel, riding an Indian, won the five-mile pro. and the ten-mile free-for-all at the meet of the Springfield M. C. in this city on Labor Day, Sept. 4. His time for the five miles was 4:36 and for the longer race 9:07½. Ingel also went out for the track record of 53⅗ seconds, but could not do better than 55 flat.

Herbert Georg, Harley-Davidson, was victor in the hour race. The 10-mile club championship went to George Pehlman, Harley-Davidson, in 9:32. J. Landrigan, Indian, won the three-mile amateur novice event in 2:52. The summaries:

Three-mile amateur novice—J. Landrigan, Indian, first; G. King, Harley-Davidson, second; P. Meidel, Harley-Davidson, third. Time, 2:52.

Five-mile pro.—Chester Ingel, Indian, first; George Pehlman, Harley-Davidson, second; Herbert Georg, Harley-Davidson, third. Time, 4:36.

Ten-mile free-for-all—Ingel, first; Georg, second; Dagner, Indian, third. Time, 9:07½.

Ten-mile club championship—Pehlman, first; Georg, second; King, third. Time, 9:32.

Mile time trial—Ingel, 55 seconds. Former record 53 2-3, held by Holman Johnston.

One-hour race—Georg, first; George King, Excelsior, second; Pehlman, third.

SAHL VICTOR AT GRAND JUNCTION FAIR

DENVER, Colo., Sept. 11.—At the county fair held in Grand Junction, Colo., last week a five-mile motorcycle race was one of the main events. Fred Sahl, on an Indian, won the race, and Merlin Johnson, on a Harley-Davidson, took second money. Karl Sahl, the other rider entered in the race, was forced to drop out before the finish on account of stripped gears. Sahl's time for the five miles was 6:31, and he made one mile in 1:06.

HEAGY WINS KEYSTONE M. C. ROAD CONTEST

HARRISBURG, Pa., Sept. 11.—The sporting section of the Keystone M. C., of this city, held its second road race yesterday over a fine section of State road near Harrisburg. The contest was close, but at the finish, the best time was made by Ray Heagy, Harley-Davidson, 9:50. Roy King, on a machine of the same make, was second in 10:10, while G. Vanetta, Harley-Davidson, was third in 10:32. Fourth place was taken by D. Peters, Excelsior, and fifth by Irvin Hohl, Pope, in 11:11.

Riders from Lebanon, Carlisle, Newport and Lancaster came in for the event, as well as strong contingents from this city.

NO MOTORCYCLE RACES ARE HELD AT LOVELANDS

DENVER, Colo., Sept. 11.—No motorcycle races were held at the Larimer County fair, held at Loveland, Colo., last week as has been the custom in former years. One of the chief attractions, however, was a two mile race between Baxter Adams in his bi-plane and Frank Kunce, Colorado champion motorcycle rider, on his Harley-Davidson. The latter won the race.

RIDER AND HIS TROPHIES

William Cooper, Crack British Amateur, with Cups and Medals Won in Overseas Competitions. He Now Rides a Harley-Davidson

PREPARING FOR LEBANON KEYSTONE RACES

HARRISBURG, Pa.—Work is now under way getting the Lebanon fairgrounds track in condition for the race meet of the Keystone M.C. The track has been rolled and scraped and it is figured that by the 16th all will be ready for practice.

The card calls for seven events. There will be $275 in cash prizes as well as a number of merchandise awards. H. H. Schriver, of 1256 Market street, this city, is making the arrangements for the affair.

DANBURY TO HAVE MEET ON OCTOBER 2

DANBURY, Conn.—The Danbury Agricultural Society, of this city, will hold a motorcycle race meet on Monday, October 2, at the local fair grounds track. Seven events are listed, one being for amateurs and another, a five mile exhibition for the track record. Generous prizes are offered in the pro. events.

Entries will positively close on Friday, September 29, with post entries up to 30 minutes before race is called. The fee is 50 cents per race. Application for blanks, etc., should be made to Stanley T. Kellogg, Bridgeport, Conn., or G. M. Rundle, Danbury.

ACCIDENT TO COGBURN CALLS OFF EVENTS

WALLA WALLA, Wash.—An accident to "Red" Cogburn, Excelsior rider, on Sunday, September 3, at the local track was the means of calling off the meet on that date and on Labor Day. Cogburn was riding in the Australian pursuit event against R. D. Williams, also on an Excelsior, when he hit E. R. Leggett, the local Excelsior agent who was on the track and stepped right in front of him. Cogburn was thrown and seriously injured, while Leggett is not expected to recover from the collision.

HONORS ARE SPLIT AT ALLENTOWN MEET

ALLENTOWN, Pa.—Ray Zinzer, riding a Dayton, won the five-mile opening race in the motorcycle section of the Labor Day program at the fair grounds in this city on September 4. Miller, Harley-Davidson, was second and Bradley, Indian, third. Earl Van Holt, Harley-Davidson, took the 10-mile free-for-all, with Howard Bittner, Emblem, second. Zinzer won the pursuit race which followed, with Bittner again second.

In the five-mile silver cup race, Zinzer and Van Holt rode neck and neck for five laps; then Zinzer went into the fence and Van Holt won easily. Zinzer was using an Excelsior in this race, having changed from his Dayton for this event. He was not hurt at all. Nearly 10,000 saw the races.

With a Rear Car in Pennsylvania's Hills

An Account of a Ten-Day Trip on a Cygnet-Thor Outfit Through Eastern Part of Keystone State—Heavy Load Was Carried, but No Difficulty Was Experienced in Climbing the Grades

BY L. M. BRINTON

The Brinton Rear Car Outfit at Devil's Den, Gettysburg Battlefield

ONE of my most interesting trips, and, in fact, the most recent I made with a passenger outfit, was that ten-day one with a Cygnet rear car attached to my Thor twin. The start was made from Philadelphia on Tuesday, Aug. 22, and the trip was taken through the eastern and central part of the Keystone State.

It was no light load for a motorcycle that we carried on our Thor-Cygnet. The Brinton family, consisting of Mrs. Brinton, two boys, 10 and 6 years of age, and myself, formed the passenger load, while the baggage load consisted of a 7 x 9-foot wall-tent with poles, four large blankets, two ponchos, a suitcase, a grip, cooking outfit for four people, and a Thermos bottle. The outfit complete weighed 1,200 pounds.

Getting a Puncture

We packed the poles under the rear car body, fitting straps for the purpose. The poles were one-piece, 7 feet in length, and this was the obvious place for them. After getting everything ship-shape, we started off along the Lancaster pike to Coatesville and Lancaster, crossing the Susquehanna river at Columbia to Wrightsville. At this point we had our first puncture, due to getting caught in the railroad track on the bridge.

The ride continued on to Stoneybrook, six miles east of York, and here we camped in Miller's Woods for three nights. The second night we were caught in a heavy rainstorm before we could ditch the tent, and so had to work in the rain with the camp axe and a stick. We got the ditch finished and were comfortable thereafter. When the tent was dry on the third day, after another night's rain, we packed up once more and were on our way.

York was passed in short order, and we went through Thomasville at a good clip to get to Gettysburg and its historic battlefield. We made a tour of the field, climbing Little Round Top, Culp's Hill and the Devil's Den. In the latter place we had a photograph taken. Bidding the place a regretful farewell we rode on to Seven Stars, four miles west of Gettysburg, and there pitched camp. The next morning we had some visitorsa, all of whom marveled that we could draw such a load. Several said that the Cygnet was the greatest thing out and asked where it could be obtained.

We kept on that morning and climbed South Mountain. It was some climb, but the outfit went up like a major. On we went via Caledonia Park to Chambersburg, and here we met with another eager crowd, asking all kinds of questions about the Cygnet. Then on we rode to Shippensburg and Carlisle. At the latter place we found out how much the outfit weighed, using a track scales, and were almost staggered when the beam tipped at the 1,200 mark. In a small town, just east of Harrisburg, we made camp. It was Saturday night, and shortly after we got everything right for the night it commenced to pour.

Rain Halts Progress

We slept between rubber blankets all that night. Sunday dawned cloudy and we stayed around the camp. Monday it rained until noon and we did not get away until the following morning. Then we rode to Harrisburg and spent half the day there, following the Susquehanna afterward to Clark's Ferry, Halifax, Ingle Nook to Ditrich, at the foot of a mountain. This town has one house, the Mountain House, and as it was late, we got rooms and stayed there over night, the first time indoors since we left Philadelphia.

In the morning our after-breakfast run took us over the mountain to Elizabethville. It was a climb of one mile over the mountain, and not on high gear, either. Lykens was reached next, right in the anthracite coal district. We went through Short Mountain colliery, on foot, where 700 men work 1,600 feet underground. On to Williamstown next, then Tower City and Reinerton. Here we had a 3½-mile climb over another mountain and proceeded to Keffers, Donaldson and Tremont—all coal towns—over roads darkened with anthracite dust. Then came more hills, into Pottsville, the low gear having to be used most of the time.

The Elks in Reading

Resting in Pottsville, we soon got under way again and toured down the Schuylkill river through Port Clinton, Hamburg and Shoemakersville to Reading, where we struck the B. P. O. E. parade. For hours we saw nothing but Elks. We essayed to climb Mount Penn, the 600-foot peak above the city, and went up without trouble. By nightfall we made Philadelphia, 57 miles, and the tour was over.

We used 12 gallons of gasoline in all, and logged 405 miles. Our trouble consisted of the one puncture at Wrightsville on the first day. We were deluged with questions at almost every place we stopped, as to where the Cygnet could be had, how it went, etc. We were enthusiastic over the outfit, we need hardly say, after its performance in this mountainous section.

We at first had hesitated about getting a brake for the rear car, but when we had it in the mountains it proved almost invaluable. The car itself was useful in another way—owing to pouring rain we ate two suppers and a breakfast in it and were thoroughly sheltered.

TENNESSEE FEES HALVED

NASHVILLE, Tenn.—Starting September 1, the license fee for motorcycles, automobiles, traction engines, etc., was reduced one-half, the motorcycle fee being reduced from $3 to $1.50. In addition to this, some owners are required to pay 50 cents in the county in which they live. The State fee goes to the good road fund.

SARGEANT ON TOUR

OWENSBORO, Ky.—Charley Sargeant, Indian rider, who has been making an inspection tour of the shops in the Indianapolis-Louisville district, was recently in the city calling on Henry E. Pardon, head of the Owensboro and Henderson, Ky., Indian agencies. Sargeant came in by way of French Lick, Ind.

ATTLEBORO M. C. CLAMBAKE

PROVIDENCE, R. I., Sept. 11.—The Attleboro Motorcycle Club held its annual clambake yesterday. About 600 were in attendance from various parts of this State and Massachusetts. It was in charge of L. H. Cooper, George Stevens and E. Broadbent.

Tandem Touring Is Difficult in Brazil

Henderson Rider Who Carried Passenger to Rio de Janeiro for the Annual Carnival Found Stony and Pot-Holey Roads and Also Traversed a Marsh Knee-Deep With Mud and Water.

By DR. JOAQUIM PENIDO

JUIZ DE FORA, Brazil.—As I had desired for some time to ride to Rio de Janiero, where I could enjoy using my machine on the asphalt pavements, I decided to make the trip at the time of the great annual carnival which was held there in February.

The weather was very unfavorable as the time approached, as there were heavy rains nearly every day for the first three weeks of that month, but on February 26 the skies had cleared and I started out with my friend Lahyr Vincente riding the tandem seat of my four-cylinder Henderson.

The road from this city to Rio is poor even under most favorable conditions, and I knew that after the heavy rains it would be frightful. Reports from men who had just driven in with wagons confirmed this, and my friends laughed at me when I told them of the trip I intended to make. They said it couldn't be done by a motorcycle, and that I would be glad to stop at the first railroad station I could reach, to ship my machine back home.

Off in Spite of Rain

But I registered a mental resolve to show them that a motorcycle had more road-fighting qualities than they dreamed of, so I prayed that it would rain no more, slipped in the clutch, and we were on our way.

As is often the case, the streets on the outskirts of the city were much worse than the country roads, and this applied to our course going out of town on the União e Industria.

We reached the plant of the Companhia Mineira de Electricidade without any incident, after a 16-minute ride. Here we were joined by Antonio Weitzel riding a little 2¼ horsepower F-N, who rode with us as far as the village of Mathias Barnoza.

This section of the road—as every motorcyclist of Juiz de Fóra and Petropolis knows—is one of the worst of all, full of holes and liberally sprinkled with stones of every size and shape. We had to stop twice to straighten the tandem-seat footrests, which had been bent by striking stones and hollows.

Repairs at Mathias

At the village of Mathias we had these pedals repaired and reinforced by a blacksmith, after which we had a substantial cup of good coffee, bread and butter and proceeded on our way.

From this place we rode on through Serraria toward Entre-Rios. Here the road became even worse, as the floods had washed deep gullies across the road, forcing us to ride carefully and to stop and lift the machine across the washes. Near an extended bamboo avenue, along the Central Railroad, we were caught in a marsh which we had an awful time getting through. In fact, I believe that only the thought of the taunts of our friends back in Juiz de Fóra kept us from calling it off then and starting back home. That road was just the tip-end of the limit. At times the mud was up to our knees as we forced our way through this stretch of marsh with the machine.

We arrived at Entre-Rios at 11 o'clock, rather tired and hungry. Here we met a fellow rider, Joaquin Gomez da Silva, who was keenly interested by our experiences.

One incident which nearly halted our trip here illustrates the difficulties which confront the motorcyclist in this country.

The gas can which we sent from Juiz de Fóra had not arrived at Entre-Rios, where nobody but the only owner of an automobile had any gasoline. We called on him, but at first got no satisfaction, since he had but half a can of gasoline and it was only the third day of carnival. But after talking it over a while he became more friendly and agreed to let me send a bearer to the hacienda of Mario de Andrade to get the half can of gasoline, with the understanding that he would get an equal amount of mine when it arrived.

Upon leaving Entre-Rios we found that the mud had been dried here by several warm days, so as to be very rough. This continued as far as Hermojeneo Silva, where the mud changed to sand.

Afternoon Siesta

When we arrived at Campo de Grama, we decided to rest until the sun's mid day heat would pass, so we lay down in the shade and took life easy a couple of hours.

We left this place at 4 p. m., somewhat disturbed by reports we had heard of the sands we would meet on our way. We found these bear stories unfounded, however, as the road was quite passable for the remainder of the trip.

As it was growing late, I opened the throttle more and we traveled swiftly. The Henderson went at the road eagerly, rocketing up the hills and flying down the level strips.

Finishing at Petropolis

We reached Petropolis at 6 o'clock, and I had the pleasure of talking for a moment with the famous Dr. Oscar Monteiro, a true benefactor of motorcyclists by his indefatigable efforts in behalf of the development of the sport and improvement of the roads in our country.

But at evening there was a heavy rain which continued all the next day, so as to stop the carnival in the Brazilian capital, which had been the objective point of the trip.

This hard journey of 144 kilometers over such poor roads did much to make people in this section of the country realize that motorcycles are now a perfected means of transportation which really can be depended on.

We are all now eagerly awaiting the time when Brazil will be traversed by a network of good roads which will be a wonderful benefit economically for the country, as well as providing means for delightful motor trips on every holiday.

MOTOR BICYCLE IS AN ATTENTION-GETTER

This is What Happens in Dayton, O., Every Time a Dayton Motor Bicycle is Allowed to Stand at a Curb for a Few Moments; They All Look Like Prospects, Too

SUCCESSFUL PROVIDENCE OUTING

PROVIDENCE, R. I., Sept. 11.—Those who participated in the pleasure run of the Providence Motorcycle Club to Vermont, Thursday, Friday, Saturday and Sunday, returned late last evening, the entire trip having been made without mishap. J. G. Edwards, secretary of the club, was in charge.

JACK PINES ENDURANCE RUN AGAIN IN 1917

GRAND RAPIDS, Mich.—An announcement of national interest has just been made here by the Contest Committee of the Grand Rapids M. C., in the form of a statement that the Jack Pines endurance run will be held again in 1917. So much interest was aroused in this year's contest, which was conducted over one of the most severe routes ever mapped for such an event, that it has been decided to continue the trial on an annual basis.

The club officers announced that next year's cash prizes will be even more attractive than those offered for this year's run.

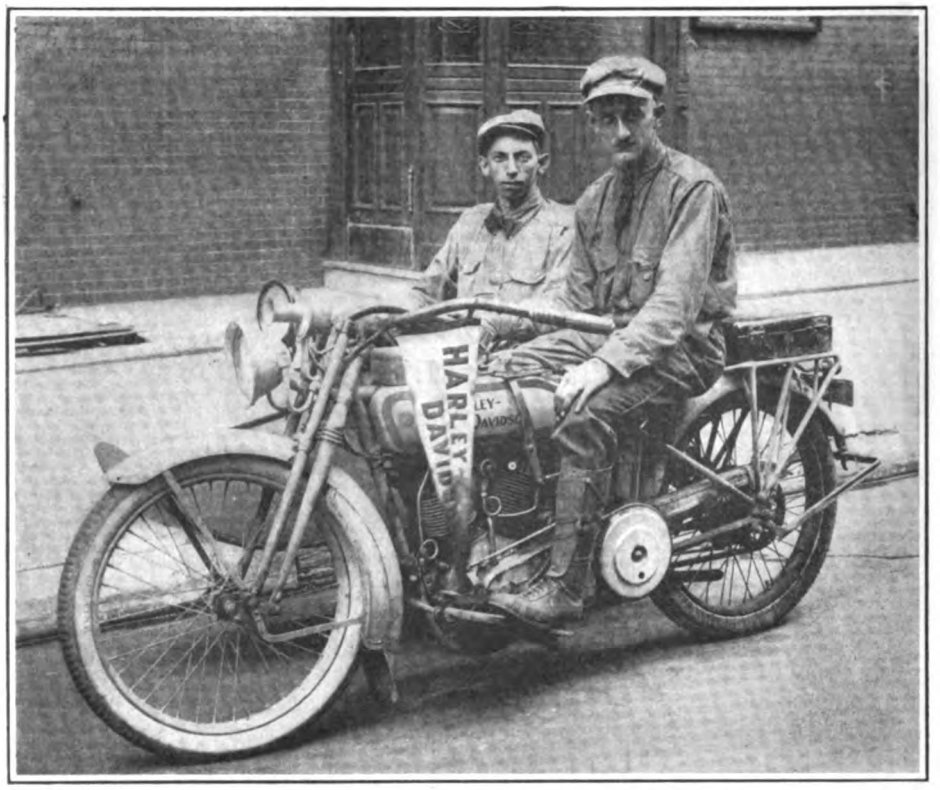
MADE 1,191-MILE SIDECAR TEST OF USCO TIRES



Fisher and Sharper on Arriving in New York from Indianapolis

NEW YORK, N. Y.—The accompanying photograph shows Ray Sharper, in the saddle, and Fred Fischer, both of Indianapolis, Ind., as they arrived in the metropolis on September 9. They left Indianapolis on Saturday, September 2, at 3 P. M., and proceeded eastward via Springfield, Columbus, Cleveland, Buffalo, Niagara Falls, Rochester, Syracuse and Albany, reaching New York at 8 A. M. on the 9th. Their total mileage was 1,191. Sharper and Fischer made the trip primarily as a test of the Usco tire for the United States Tire Company, and their reports show that their pneumatics stood up perfectly under the severe strain of the 12 hundred mile trip. They arrived in New York with Indianapolis air in each of the three Usco tires.

The return run to Indianapolis will be made by way of Philadelphia, Washington, Pittsburgh and Columbus. After arriving in New York the tourists made a run to Boston, and on their return from the Hub plans were immediately taken up for the home run to Indianapolis.

MOTORCYCLE VAN FOR TIRE SERVICE

KANSAS CITY, Mo., Sept. 9.—When the F. B. Goodrich Company established its branch in Kansas City, the general plan of the city and the topography of it made it necessary and more convenient to have a large warehouse close to the Union Station and a large uptown store. It happened that to secure the best business location it was necessary to situate the store a mile or more from the warehouse. The branch store then found that it was also necessary to establish a much more direct communication and connection with the warehouse than by telephone and messenger service; it therefore purchased a twin Harley-Davidson motorcycle with a delivery van. This outfit, driven by Leonard Miller, gives half-hour service between the store and the warehouse, Miller carrying orders to the warehouse and returning goods and bills of lading to the store. H. C. Smith, advertising manager of the branch, explains that it is now possible for the branch store and the warehouse to get the service results so much desired.

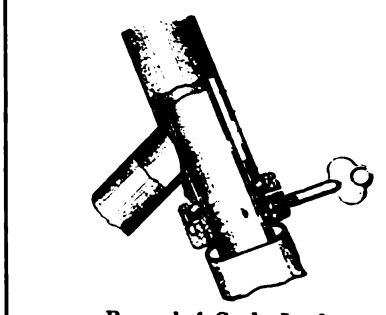
THIS LOCK PREVENTS THEFT OF CYCLE

PHILIP A. ROSENTHAL, of New York, has been granted a patent on a locking device for the steering head of a motorcycle or bicycle. This device consists of two main members, one being movable up and down on the steering head while the other is fixed thereto. Both members are arranged to interlock, the



Rosenthal Cycle Lock

movable member having a pin which may be set to engage in holes in the fixed member. The pin is controlled by a special key, which is detachable.

When the movable member is raised and the wheel turned until it is at an angle to the frame, the pin may be sent into a notch in the fixed member by means of the key and the machine left unridable. When in the lowermost position there is no interference with the movement of the handlebars or stem. The patent is No. 1,195,093.

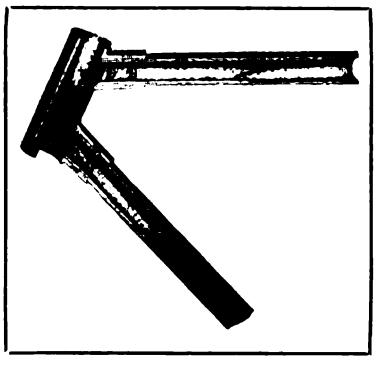
The Bigger, Better Bicycle Line

Of course you want to sell bicycles that will bring good will to you—and the friendship of those who buy from you. You want to make every bicycle buyer a booster for your store—and to give you the best advertising you can get. That's word-of-mouth help, the most effective selling help under the sun. We want to have you get this fact settled in your mind, for good and all—The Miami Line is the one that will do just what you want in the way of good will and customer friendship. Miami-made bicycles are stronger, better, more satisfactory than any other wheels.



This is true because they are the only ones made with the Hercules Four-ply Frame Construction which does away with vibration. This reinforcement extends eight inches back from the head in the tubing, and is made by four solid plies of steel, all brazed into one solid mass, so strong that it positively cannot buckle or break, through crystallization. The illustration tells the story. Note that there is no double bar or arch bar reinforcement to add weight to the Miami-made wheels shown on the two following pages. It isn't necessary. Hercules Four-ply Frame Construction resists all jolts, jars and bumps.

Our distribution facilities are wonderfully complete—so thoroughly have we covered the country that we are in a position to offer daily service in any part of the United States. Think of that great big advantage. Here is a good proposition for you to tie to. There's a square deal back of it and a good profit for you in every wheel you sell. Get in line *now* for the exclusive agency for one of the four Miami Nameplate bicycles. You'll get rigid protection and big merchandising helps. Turn the page and look at the numbers illustrated.

Racycle Bicycles

Retail Prices, $30 to $60

Here is our leader—built like a watch and as beautiful a job as you'd want to lay eyes on. It is, beyond question, the best bicycle made anywhere, by any name. There's a full measure of conscience wrought into it, and any man looking for genuine quality, simply can't resist it. It is the kind of wheel for *you* to sell because it will make good to the very limit and give complete satisfaction. It is equipped with the celebrated Racycle Crankhanger with added improvements which make it the strongest and best in the world. Send for the Racycle catalog—a work of art, worthy of the goods it shows.

Hudson Bicycles

Retail Prices, $30 to $50

This is the best all 'round wheel for the money that you could possibly stock. It can't be beaten as a sure seller. Every care is used in its making, too. None but men of highest skill have a part in its construction, from start to finish. It's a light, strong, fast machine that stands up and delivers. It has the fine quality that means long wear and tip-top service. Send for the Hudson catalog, too. It pictures and describes a line that means business for you. The famous D & J Crankhanger is used exclusively in the Hudson.

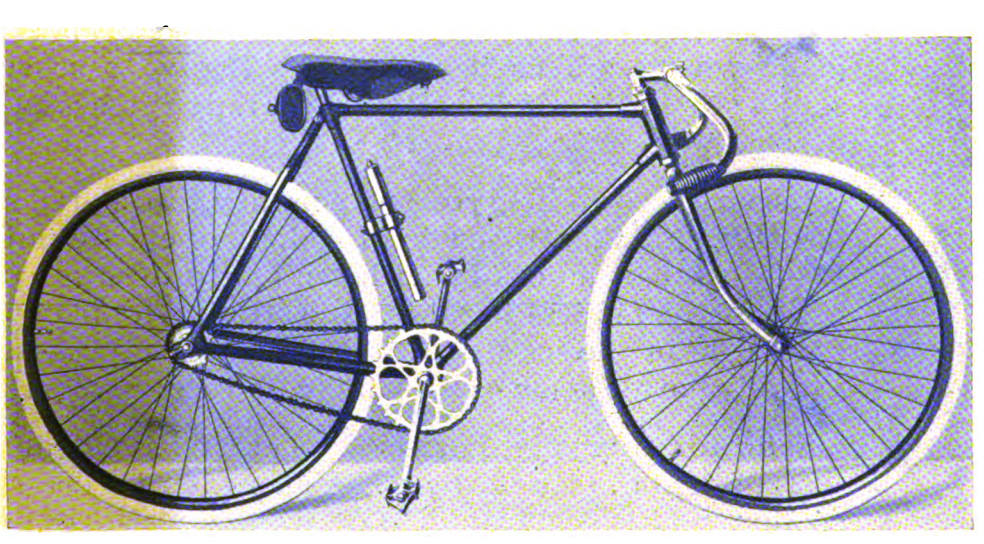
Miami Bicycles

Retail Prices, $30 to $45

The Miami is the fine selling line for those who want a wheel for constant everyday use. It is the ideal bicycle, in any model, for business requirements—for messengers and order clerks, collectors and others who keep on the go and need a real service machine. Here is a wheel that you can recommend with every assurance that its owner will get the best of satisfaction out of it. Send for the Miami catalog. Sent to you gladly.



Flying Merkel Bicycles

Retail Prices, $30 to $40

This is our line of popular price models for those who want to use a wheel for the purposes mentioned in describing the Miami Line. The owner of a Flying Merkel will get good looks, good quality, good service and compiete satisfaction. If there were a better way to build a bicycle, we'd make our lines all that way—but there isn't. And remember, please, we don't *assemble* bicycles—we *make* them. Send for the Flying Merkel catalog.

Miami Advertising and Selling Service

There will be a big, strong advertising campaign of all the four lines of Miami-made wheels this year. It's being prepared *now.* It will talk bicycles in a crisp, vigorous, business-like way, and it's bound to be a big selling help for you. It will be on the job so that you'll be able to get a lot of fine Christmas business through this carefully prepared and snappy publicity. It will appear in all the important magazines. Full details will be mailed to you in plenty of time for you to take advantage of it.

Besides this comprehensive advertising and merchandising campaign, we have inaugurated a strong Dealer's Selling Help Department that is going to work tooth and nail with every bicycle retailer who sells Miami-made wheels. This department will give sane and sound store aids and full sales co-operation in a wholehearted way.

Its purpose is to help you make money through added business. Frankly, if *you* don't make money, we can't. We know that a stock of wheels can't put profits into the bank for you unless it *moves.* We propose to help you put riders in the saddles of Miami-made Bicycles—and so we've made some careful and comprehensive plans.

Send for complete details of what we have done in this direction. Do it *today.* You never used a red stamp for a better purpose. You won't get a lot of tiresome letters in answer to this request—but a finely printed book that is built on salesmanship and a knowledge of retail requirements. So send for it right now on your business letterhead. It will pay you—pay you *well.*

FIRST MOTORCYCLE TRIP ACROSS PANAMA ISTHMUS

Hotel Man and Tandem Passenger Claim Distinction of Making Initial Ocean-to-Ocean Tour; Completed Journey in Nine Hours with Harley-Davidson Outfit, Mostly Over Railroad Ties

FROM ocean to ocean in just a trifle more than nine hours—not days, mind you, but hours—is the latest stunt achieved with a motorcycle. Credit for the idea and carrying it through successfully goes to J. E. Cassuben. Without maintaining the mystery any longer it should here be stated that the performance was across the Isthmus of Panama.

The most difficult factors with which Mr. Cassuben had to contend were railroad tracks, switches and rain. Some day Uncle Sam will have a paved road across the Isthmus. At the present time there are but two ways of travel, by rail and by water, through the canal. Mr. Cassuben, who owns a hotel, being the proprietor of the Retreat, conceived the idea that the trip could be made with a motorcycle and forthwith took his Harley-Davidson and did the deed, carrying William Cristoph as tandem passenger. In its detailed account of Mr. Cassuben's trip, the *Star and Herald* said:

"Leaving the water's edge on the Pacific side at 5:30 a. m., he took the usual road to Gamboa, arriving there shortly before seven o'clock. Between Paraiso and Gamboa the road was very muddy, and in many places blocked, and upon arrival at Gamboa he waited for the two morning trains to pass. Shortly after 8 o'clock he started on the 23 miles of railroad track, which was to bring him to the next road at Gatun, which he reached at 19 minutes after two o'clock. After a short stop he proceeded on his way to Colon, and reached the Washington hotel at 37 minutes after two, thus making the journey across the isthmus for the first time by motorcycle in a few minutes more than nine hours.

"The machine used was a Harley-Davidson of 11 horsepower, and the tires, which showed excellent condition after the trip, were United States tires. Mr. Cassuben was accompanied by William Cristoph, a mechanic thoroughly familiar with motorcycles.

"Although there was no engine or tire trouble of any sort the whole way, Mr. Cassuben stated that he had no idea when he started of the many difficulties to be encountered in motorcycling over so long a distance by railroad track. He first attempted to ride on the small path at the side of the track, but found this impossible, and had to make several trial rides at Gamboa before definitely starting the hazardous journey. The difficulty of finding so often both wheels between the ties, the many big rocks on the track and the number of switches, which made is necessary to lift out the machine each time, made the journey an exceptionally hard one.

"The Harley-Davidson motorcycle used weighed in all some 450 pounds, and the speed on the railroad track averaged between six and fifteen miles an hour, while the tires were pumped to a pressure of about 45 pounds.

"From Gamboa on the journey was made the more difficult by the heavy rain, which came down, which made seeing difficult and a careful watch had to be made for freight trains coming along. The spark plugs continually short circuited through the rain, and time was lost in drying them out again.

"Upon arrival at Colon Mr. Cassuben reported to Manager Geyer at the Washington hotel, and returned to Panama by the evening train. Seen by a *Star and Herald* man he stated that he had made the journey for his own satisfaction, and although he would not care to do it again, he was glad that he was the first who had crossed the Isthmus of Panama on a motorcycle. The machine seemed in first class shape, and the tires had borne the journey without any bad signs of wear; in fact they had given no trouble whatever, nor had the engine given any bother at all."

WHEN IT COMES TO SERVICE HERE'S AUTO MAN'S CHOICE

KLEMME CIRCLES HONOLULU ON TANDEM MACHINE

HONOLULU, T. H.—S. E. Klemme, with B. M. Gramberg on tandem, has just established an Around the Island record for tandem machines. He made the circuit of 89.6 miles in 2:08:30 on his Harley-Davidson.

It had been raining all night and the roads were dangerously slippery in many places. The pair started a few minutes after the rain ceased and rode over the 15 miles of poor rutty roads up the Pali. They had one fall coming up the Pali, and Gramberg had to have several stitches taken in his knee at the finish of the trip, as a result of the tumble.

Klemme is the rider who made the first ascent and descent of Kole-Kole pass and his feat will stand for some time. He used the same Harley-Davidson on both trips. Following are the Around the Island trips to date:

Solo—Erwin G. Baker, Indian, 2:04:36.
Solo—Ed. Cummins, Excelsior, 2:15:20.
Solo—Frank Ropero, Harley-Davidson, 2:07:47.
Tandem—S. F. Klemme and B. M. Gramberg, Harley-Davidson, 2:08:30.

Chatter, Chin, Comment

By E. F. HALLOCK

STRIKES me very forcibly that we motorcyclists are being blamed from some quarters for things we really do not do. Fringstance (F. P. A. stuff), ye Head Scribe and task master here comes through with a story that the motorcycle riders who pass his bungalow, which is located on just a slight grade somewhere out in the wilds of New Jersey, deliberately open their cutouts on striking the incline, much to the annoyance of peace-loving folks in the neighborhood.

I will be the last one to admit that riders are not careless on the score of opening the cutout upon the slightest provocation and sometimes without the scantest urging—I know some fellows who even take a down grade with the muffler wide open—but I think that we are sometimes blamed for having the cutout open when it is in reality shut as tight as a drum. Riding, for instance, with the spark retarded and the throttle open, or partially open, results in a noisy machine; and while, perhaps, the ensuing clamor may not be as penetrating as when the cutout is open, to the man who is being annoyed with incessant "put putting" by many passing riders, the effect is much the same.

It is only upon striking a grade or some other hard pull that the average rider is led to retard the spark so as to eliminate the spark knock, and I think that in many cases at least, what my friend takes for an open cutout is nothing more nor less than a retarded spark and an open throttle called for by the hill in question.

THERE was one point brought out at the recent national F. A. M. convention at Providence that struck me as being worth a whole lot of serious attention on the part of every rider. That is the fact that a large body of motorcyclists are a potential political force, and by working together for any good cause, and making the government officials, politicians and candidates for office know that they are banded together, big results can be obtained.

This week's mail brought in a report gotten out by Governor Whitman, of New York, who is a candidate for re-election, which bears evidence that a body of this sort can and will command the respect of the office seeker. The Governor's report, among other things, calls the attention of the motoring fraternity to the amount of "good roads" work accomplished during his administration as contrasted with previous administrations; as well as to the changes in the motor vehicle laws which are calculated to win for him the support of the motoring folks.

If a really big man like Governor Whitman sees fit by this means to appeal to the motorcyclists, how much more ready would the state congressman, senator and lesser fry be to please the motorcyclist were he given to understand that a fair proportion of his constituents were numbered among the two-wheeler adherents and were banded together to lend the weight of their influence for the man who, in office, would look out for their interests? We've been playing at "peanut politics" in the F. A. M. for the past five years, much to its detriment. Why not get together now and play the real game in a manner that will work out for our own good?

AFTER one season's trial of the electric lighting system, it's me for the juice every time. Not an instant's trouble, no worry, no dirt—I did not even have to think about it, except to put water in the battery occasionally. And anent that point, with the manufacturers bringing out "quick detachable" battery boxes, and the battery makers bending all efforts to facilitate the filling and eliminate the spilling at the same time, it looks as though even the little trouble attaching to the battery care is to be done away with for the next year.

TAKE it from the British papers, one of the leading partsmakers in that country is bringing out a mechanical oiler with a variable stroke, the stroke being controlled according to the throttle opening, and consequently according to the speed. It is a well-known fact that a motor consumes more oil at high speed than at low and that the amount needed is not exactly proportional to the speed; in fact, the oil consumption increases at a more rapid rate than the motor speed. The discrepancy, however, to use a street term, is not really worth losing any sleep over, up to speeds above 35 miles an hour. And above that pace the usual thing is for the rider to give the motor a pumpful of oil with the hand-pump from time to time. Looking at the matter from our angle of "simplicity first" it would seem that the variable stroke pump, for all the good it will do, is not worth the added complication the arrangement involves, even though the design has been worked out in a very ingenious manner by the maker.

SEPARATE us awhile from our friends and relatives, and see what changes are apparent when we are once again united! This same little thing was made quite apparent to me in connection with the motorcycle only last week. I have been riding one of the season's latest right-up-to-the-minute twins. And I have been wishing, on the average of at least once during every trip I took, that motorcycle manufacturers would pay more attention to the matter of mud-guarding, for it appeared to me that whereas this subject is one of the utmost importance in the making of motorcycle converts, scant, if any, attention had been paid to it in the past three or four seasons. But last week I deserted my 1916 twin and went back to ride my 1913 model, and my what a vast difference in mud-guarding was apparent!

I can ride many miles on my newer machine without getting half as dusty as I got in the first mile on the three-year old, a fact which brought home to me at first hand the real progress that has been made along this one line in the short intervening time.

And while on the subject, I might as well say that the only time I find the present mud-guard really inadequate is when I strike a slight puddle when I am speeding along with my tires in the car track; then I get a sprinkling and my sidecar passenger gets a near-bath. Does 1917 hold promise of further improvements?

BLUE S

Thor Performance Dependent Upon

We don't believe the Thor is equipped with Goody
Blue Streak Tires simply because of their sturdy, hands
appearance.

It is true, of course, that Blue Streaks do emphasize
clean-cut lines of the Thor.

But the Aurora Automatic Machinery Company, wi
nation-wide reputation at stake, naturally would choo
tire which would assure the best performance of t
motorcycles.

You know, as well as do the Aurora Automatic Mac
ery Company, that Goodyear Blue Streaks last longe
farther and so cost less in the end.

Be sure your dealer gives you Goodyear Blue Str
when you purchase your new Thor.

BOB SPEARS HOLDS THE BRASSARD

Australian Defeats Arthur Spencer, the Toronto Cyclist, for Armlet —Spencer Defeats Jackie Clark—Jake Magin and Alfred Goullet Win Features

NEWARK, N. J., Sept. 11.—After having held the Velodrome Brassard, a race which carries with it $50 per week to the holder, for two months, in which time he defeated such well known riders as Alfred Goullet, Alfred Grenda, Marcel Dupuy and others, Arthur Spencer, the Toronto rider, finally lost his money-making armlet to "Long Bob" Spears, the Australian. The dethroning of the Brassard king occurred at the local track yesterday afternoon before a crowd of over 8,000 people. Spencer, however, did not give up without a struggle, and the race was rather a rough one, with the Toronto cyclist supplying plenty of the rough stuff.

Spencer Fought Hard

Although Spencer lost out on his meal ticket he had ample revenge when he later in the day met Jackie Clark in a match race. The match was staged over the mile route and Spencer defeated Clark in two straight heats. A one-mile handicap, which was named the "Firemen's Two-Platoon Handicap," named in honor of the local fire fighters, who will make the two platoon fight an issue in the coming election, was a fast race, and Alfred Goullet and Reggie McNamara, riding from scratch, ran first and second in the near-record time of 1:51⅗.

Magin Wins Two

Jake Magin, the local rider, landed about all the other honors in the professional class. Magin finished first in the miss and out race, in a great finish, and then romped home in front of the big field in the five-mile open. In the last race Alfred Grenda attempted to go over two laps from home in order to beat McNamara, and Magin, benefitting by a good ride back of the big Australian, came out in the last half-lap and won by a safe margin.

The amateur races produced excellent racing and the events were hotly contested. John L. Staehle, the 1916 amateur champion, won the two-mile open in a fine finish, beating Andrew Ciaciuch, the Buffalonian, and Edward Byron, the Australian. The handicap for the amateurs at a mile was won by Marcel Berger, the San Franciscan, Summaries:

One-mile handicap, amateur—Won by Marcel Berger, San Francisco (115 yards); second, William Beck, Newark (100 yards); third, Andrew Ciaciuch, Buffalo (80 yards); fourth, Jerry Nunziata, Brooklyn (85 yards). Time, 1:56⅘.

Two-mile open, amateur—Won by John L. Staehle, Newark; second, Andrew Ciaciuch, Buffalo; third, Edward Byron, Australia; fourth, Tommy Fitzsimmons, East Orange. Time, 3:58⅘.

One-mile Brassard, professional—Bob Spears, Australia, vs. Arthur Spencer, Toronto. Won by Spears. Time for last eighth-mile, 12⅗ seconds.

One-mile match race, professional—Arthur Spencer, Toronto, vs. Jackie Clark, Newark. Won by Spencer in straight heats. Times for last eighth-miles, 12⅖ and 12⅘ seconds, respectively.

One-mile handicap, professional—Won by Alfred Goullet, Newark (scratch); second, Reggie McNamara, Australia (scratch); third, Eddie Madden, Newark (30 yards); fourth, Harry Kaiser, New York (90 yards). Time, 1:51⅗.

Miss-and-out, professional—Won by Jake Magin, Newark; second, Percy Lawrence, San Francisco; third, John Bedell, Long Island; fourth, Lloyd Thomas, San Francisco. Time, 6.04⅖. Distance, 3 miles.

Five-mile open, professional—Won by Jack Magin, Newark; second, Alfred Grenda, Australia; third, Willie Hanley, San Francisco; fourth, Reggie McNamara, Australia. Time, 10.05⅘.

Jake Magin, Who Won a Double at Newark

EUGENE AICKELIN WINS TWO N. E. W. TITLE RACES

NEW YORK, N. Y., Sept. 11.—Two of the four titular races of the New England Wheelmen were run off yesterday on the Eastern Boulevard in the Bronx, and the other two will be staged next Sunday. Eugene Aickelin won both the one-mile and the 6½-mile events. In the mile event J. Palmier finished second and C. J. H. Tonjes third, while in the longer race J. Palmier also finished second, C. Eiler third and Robert Kissman fourth. The time was 16:25.

A six-mile trial was also staged, and J. Boyes rode the course in 19:29, and a slow race over a quarter-mile course was won by F. Schindler. The four men who score the most number of points in the four title races will represent the club in the league championships next month.

LINART WINS WORLD DERBY AT REVERE TRACK

BOSTON, Mass., Sept. 10.—Victor Linart, the Belgian paced star, won the 100-kilometer (62½ miles) world's derby at the Revere track last night, and now wears the diamond studded medal that went to the winner in addition to the large financial award he received. Opposed to Linart was four of the best paced riders in the country in the persons of George Wiley, the former paced champion; Clarence Carman, the new title holder; Leon Didier, of France, and Vincenzo Madonna, the Providence Italian. Madonna finished second, Wiley third, and Carman fourth. The time was 1:29:06⅖.

Fred Herbert, the Fall River cyclist, accounted for the five-mile open for the professionals. Pat Logan finished second, Tom Connolly third, and Tim Sullivan fourth. John Barry won the one-mile handicap for the amateurs. Summaries:

One-mile handicap, amateur—Won by John Barry, Cambridge, 65 yards; second, John Hackett, Watertown, 115 yards; third, Frank Keenan, Revere, 95 yards; fourth, Frank Jeehan, New Haven, 55 yards. Time, 2:01⅕.

Five-mile open, professional—Won by Fred Herbert, Fall River; second, Pat Logan, South Boston; third, Tom Connolly, Everett; fourth, Tim Sullivan, New Haven. Time, 11:24⅘.

FINAL BICYCLE MEET FOR TAUNTON, OCT. 12.

TAUNTON, Mass.—October 12, Columbus Day, will mark the last meet for bicyclists in this city. The meet will be held at the Driving Park track, which is a half-mile dirt oval. There were races on Decoration Day and on Labor Day there this season, and the local dealers state that these were fine boosts for them. A similar result is expected from the October 12 meet.

26 RIDERS IN PORTLAND 10-MILE ROAD RACE

PORTLAND, Ore., Sept. 5.—Twenty-six riders started in the second annual 10-mile road race run under the auspices of the Portland Wheelmen's Club yesterday. The race was won by M. A. Kelly, who covered the course in 25 minutes and 10 seconds. Lloyd O. Smith finished a half-length back of the winner, and J. G. Garretson finished third. The balance of the prize winners finished a few seconds back of Kelly. The event caused plenty of excitement and was well attended.

FOUR STRONG MIAMI LINES FOR 1917

Racycle, Hudson, Miami and Flying Merkel Models Concentrated Upon by Middletown Company For New Season—Effective Selling and Advertising Service

MIDDLETOWN, O.—For the 1917 selling season, the Miami Cycle & Manufacturing Company is emphasizing four lines of its well-known bicycles, the Racycle, Hudson, Miami and Flying Merkel.

The Classy Lines of the 1917 Miami Are Shown Here

All these machines have a single top bar and embody the exclusive Hercules Four-Ply frame construction, which resists all bumps and shocks in a thoroughly effective maner.

The Hercules frame construction consists of a reinforcement of special form which extends eight inches back from the steering head in the tubing and is made from four plies of steel. These plies are brazed into one solid mass and cannot possibly buckle or break from crystallization. The construction does away with the use of arch bars or double top tubes to reinforce the frame.

The Racycle line of wheels retails at from $30 to $60. This line has forward-extension bars and the well-known Racycle crankhanger. Each model, with the exception of the speed machine, is fitted with front and rear guards and distinctive sprockets.

The Hudson line retails at from $30 to $50 and is long wearing in all models. It is fitted with the D. & J. crankhanger, exclusive to this line of bicycles. The Flying Merkel line, listing at from $30 to $40, consists of a series of popular-priced machines. The Miami line, priced at $30 to $45, is the series par excellence for constant every day use and for business requirements. Like the Racycle, all models are amply mudguarded.

Effective Distribution

The Miami Cycle & Manufacturing Company has thoroughly covered the country with distributing centers so that it is in a position to offer daily service at any point. A big and powerful advertising campaign on all four of the lines listed is now under way, taking in mediums in all lines of business and pleasure. In addition to the advertising end, the company has organized a strong Dealer's Help department which will co-operate with every bicycle retailer who sells Miami-made wheels.

SALESMAN IS TENNIS CHAMP

LOUISVILLE, Ky.—Shelton Arterburn, connected with the bicycle and sporting goods house of the Sutcliffe Co., in the capacity of bookkeeper and salesman, recently won the Kentucky State tennis championship by beating the 1915 winner in three straight sets, the scores being 6—2, 7—5, 6—2. Arterburn fell down in the finals last year, but is always a dangerous opponent.

JOHNSON U. S. I. CHAMPION

NEW YORK, N. Y., Sept. 11.—Nelson Johnson, the holder of the 10-mile American road record, won the championship of the Unione Sportiva Italiana run over the Eastern Boulevard in the Bronx yesterday. Johnson scored 17 points out of a total of 20, and J. Fargo finished second with 11 points. Unpaced trials were held to pick a team of four men for the Inter-Club Amateur Cycle Road Racing League's championships next month. The trials were held over a four-mile course, and Johnson, J. Ghirardi, Thomas La Rossa and C. Zoccola qualified, Johnson making the fastest time, he being clocked at 10:33⅖s.

CALL OFF RACE

HOBOKEN, N. J., Sept. 13.—No races will be held Sunday, Sept. 17, by the Century Road Club of America. The events that were to be staged on that date will be run Sunday, Oct. 29, instead. E. E. Fraysee, 724 Syms street, will in the future have charge of racing matters of this club.

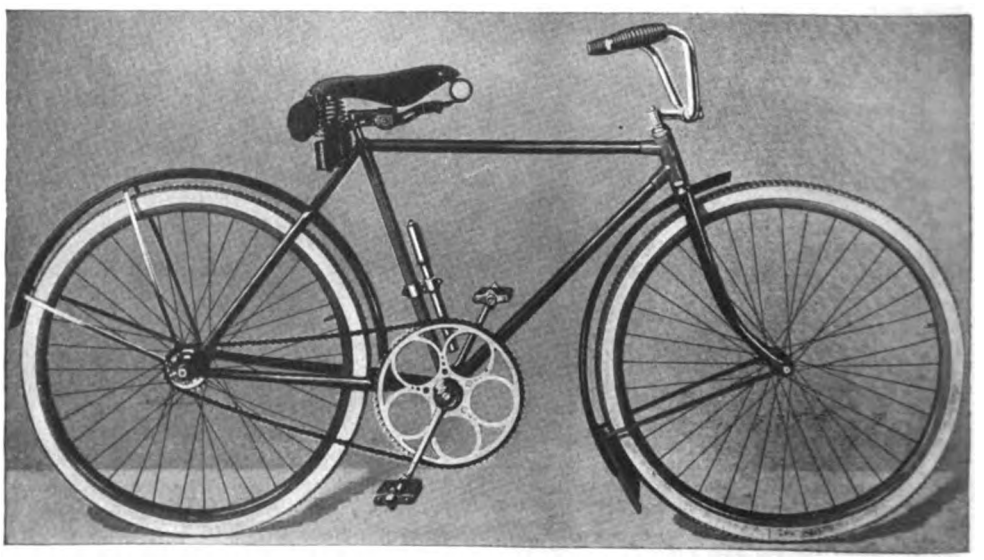
TAKES ON TWO MORE

MACOMB, Ill.—S. E. Purdum, the well-known cycle dealer, has added the Crown and Virden lines to his stock and has opened a vulcanizing plant. He reports much business in all departments.

ALCO CATALOG ISSUED IN THREE LANGUAGES

CHATTANOOGA, Tenn.—The American Lava Company, maker of Alco acetylene burners and gas tips, has just issued its Spanish-French-English catalog for export use. While the line shown is very extensive, the motorcyclists will be most interested in the Alco-Cyco No. 12, especially adapted for use with any standard headlight.

The Alco burners may be had in ¼, ⅜, ½ and ¾-foot sizes and any type of lamp base can be fitted. In the catalog there are a number of valuable tables for conversion of foreign moneys, metric equivalents in English, etc.



Distinctive Lines Are Noted in the 1917 Racycle

CHAMPION KRAMER DOES A "COMEBACK"

Takes Alfred Goullet, Bob Spears and Hans Ohrt Into Camp in Final Title Race—Clark Family Win Two Handicap Events

NEWARK, N. J., Sept. 13.—Although Frank Kramer had been in a slump as far as winning races was concerned the famous American champion demonstrated at the electric-light meet at the Velodrome, Wednesday night, Sept. 6, that he still retained a winning kick and his old cunning as well. He appeared to be the Kramer of old and his victorious ride in the five-mile National championship was well received.

Points Not Needed

As far as the ultimate winner of the championship was concerned the management was not forced to put this title race on, but it was run to complete the string. Kramer had the championship snugly stowed away by a safe lead and whether he won the race last night or was shut out of the final he was the king and the people had a chance to pay homage to him.

Alfred Goullet, now a citizen of the U. S. A.; "Long Bob" Spears, the Australian, and Hans Ohrt, last year's amateur champion, weathered the heats and semi-finals and they finished as named. The race was paced by singles and coming into the bell Kramer went on the inside of Goullet and Spears and streaked for home, winning by a safe margin. After winning Kramer was presented with a bouquet and to the tune of the Star Spangled Banner, and the plaudits of the crowd the champion made the customary triumphant "tour de honor."

Jackie Clark, who is getting to be quite a prima donna and retires after about every race meet, gathered a little glory when he won the half-mile handicap, while a namesake of his, the diminutive Benny, shone in the third-mile amateur handicap. The strong Australian team of Bob Spears and Reggie...McNamara copped the two-mile tandem open in a hair raising finish. Summaries:

Third-mile handicap, amateur—Won by Benny Clark, Newark (60 yards); second, William Beck, Newark (40 yards); third, A. C. Cammarata, Newark (55 yards); fourth, Arthur Miller, Newark (35 yards). Time, 53⅗ seconds.

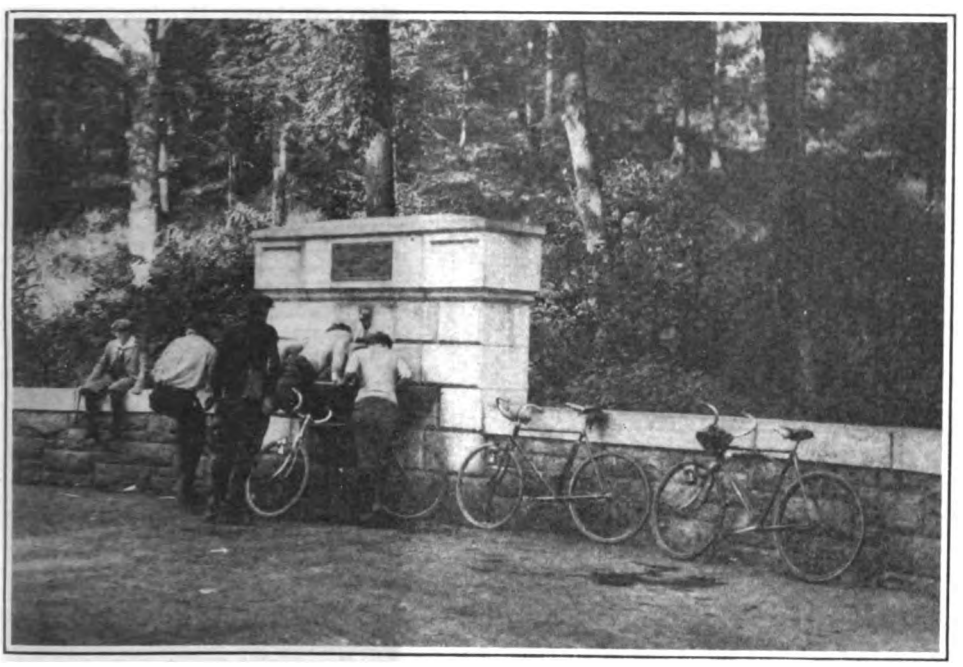
Two-mile open, amateur—Won by Tom Bello, Brooklyn; second, Harry Hoffman, San Francisco; third, Edward Byron, Australia; fourth, Walter White, Newark. Time, 4:05⅗.

Half-mile handicap, professional—Won by Jackie Clark, Newark (40 yards); second, William Spencer, Toronto (65 yards); third, Charles Piercey, Australia (30 yards); fourth, Ernest Ohrt, San Francisco (60 yards). Time, 52⅕ seconds.

Five-mile National Championship, professional—Won by Frank Kramer, East Orange; second, Alfred Goullet, Newark; third, Bob Spears, Australia; fourth, Hans Ohrt, San Francisco. Time, 11:21⅕. Last eighth-mile, 12⅗ seconds.

Two-mile tandem open, professional—Won by Bob Spears and Reggie McNamara, Australia; second, Alfred Goullet, Newark, and Alfred Grenda, Australia; third Jake Magin, Newark, and Lloyd Thomas, San Francisco. Time, 4:18.

ON THE C. R. C. A. RIDE TO NEWBURG, N. Y.



A Refreshing Drink at a Wayside Fountain at Cold Springs, N. Y., Satisfied the Tourists

CAPTAIN GRENDA BEATS A BIG FIELD

NEWARK, N. J., Sept. 11.—Walter Grenda, captain of the Bay View Wheelmen, won the five-mile handicap "cork" race run by that club yesterday. Twenty-two riders started and fourteen finished. Grenda had a handicap of 1½ minutes and finished in front of Larry Seuffert and John Martin, both of whom started with him, and Larry Smith, a 1:10 handicap man, in 13 minutes and 12 seconds.

CHAMPION STAEHLE LEADS IN AMATEUR POINTS

NEWARK, N. J., Sept. 11.—Amateur champion John Staehle leads the other amateurs at the Velodrome in point of winnings. Staehle has scored 58 points to 49 for Tom Bello, the second man, and 48 for Gus Lang, who is in third place. The standing of the ten leaders to date is as follows:

Pos. Rider.	1st	2d	3d	4th	Pts.
1—Staehle	9	3	2	0	58
2—Bello	6	5	1	2	49
3—Lang	5	5	3	2	48
4—Carroll	4	2	5	1	37
5—Byron	3	4	3	3	36
6—Fitzsimmons	1	5	0	5	25
7—B. O. Sicky	1	4	2	2	23
8—Beck	2	2	1	0	18
9—Dotterweich	1	1	4	2	18
10—Hoffman	0	3	3	1	16

Handicaps and opens only counted. Points: First, 5; second, 3; third, 2; fourth, 1.

McNAMARA LEADS FOR THE ALL-AROUND TITLE

NEWARK, N. J., Sept. 11.—Reggie McNamara, the Australian, leads in the competition for the all-around championship at the Velodrome. The "Iron Man" from the Antipodes has 101 points in the table and will no doubt be the all-around champion and collect $500 that will go with the title. Frank Kramer, the American champion, and Alfred Goullet, now an American citizen, each have 55 points. The standing of the first ten, up to and including the races of Sunday, Sept. 10, is as follows:

Pos. Rider.	1st	2d	3d	4th	Pts.
1—McNamara	10	9	10	4	101
2—Kramer	10	1	0	2	55
3—Goullet	8	3	3	0	55
4—Grenda	3	4	5	6	43
5—Magin	4	5	2	2	41
6—Spears	3	2	3	0	27
7—Madden	2	2	4	1	25
8—J. Bedell	0	5	3	3	24
9—Hanley	1	2	2	4	19
10—Corry	0	2	3	6	18

Handicaps and open races only counting. Points: First, 5; second, 3; third, 2; fourth, 1.

PATERSONIANS FORM CLUB

PATERSON, N. J., Sept. 12.—In an effort to further the interests of cycling and for social purposes, a group of youngsters recently organized the Haledon Fish Bicycle Club. Joseph Meyer was elected president; Victor Ulrich, secretary and treasurer, and John Ulrich was chosen as captain. George Ritchie was chosen first lieutenant, and Edward Gass second lieutenant and corporal.

FOREIGN CYCLISTS TO SAIL

NEW YORK, N. Y., Sept. 12.—When the French line steamer *La Touraine* sails for Bordeaux, France, on Saturday, Sept. 17, three European cyclists, who have been competing in this country during this season will sail for home. In the party will be Mr. and Mrs. Leon Didier, Mr. and Mrs. George Seres, of France; George Colombatto, the Italian, and Rudolphe Lehman, the Swiss pacemaker.

FRED PARREAULT EN TOUR

MALDEN, Mass., Sept. 11.—Fred I. Perreault, traveling centurian of the Century Road Club of America, recently completed a tour to North Adams, over the Mohawk Trail, through the Berkshire Mountains to Greenfeld and Fitchburg and return. He left here Aug. 27 and returned Sept. 3, having covered 391 miles. Perreault's mount was fitted with Palmer tires.

British Notes

BY THE OLD RAMBLER

Think of paying nearly a dollar a gallon for gasoline! That's the situation that confronts English riders at present. The Old Rambler in his current letter tells how British motorcyclists are acting under the strain.

He also discusses the technique of sidecar building, the limitations of the lightweight, the victory of a Harley-Davidson team in Italy, the trend of Italian designing, motorcycle competition in Holland, English munitions workers in speed trials and war cripples on motorcycles.

Get Acquainted With the Old Rambler; His Notes Appear Regularly in These Columns

MANCHESTER, Eng.—The motorcyclist in Britain at the present has to be content with six gallons of gasoline per quarter; and 80 cents a gallon at that! If the price of the precious liquid is jumped a bit more by the gasoline magnates and a trifle added to the present war-time tax of 12 cents a gallon, the price will be round about a dollar a gallon. Think of it, ye Americans who have wailed and howled when you have been asked for only a third of that sum or less.

The fellows over here, of course, don't want to consume a drop more of the dear stuff than they can possibly avoid at current quotations; but six gallons for thirteen weeks' wayfarings! Gee whiz!! Even mixed in the recognized successful way—two-thirds gasoline and one-third paraffin—it won't provide for more than a small fraction of the ordinary motorcyclist's mileage.

The result is that we have on the market "dopes" without end. There are "spots" which you drop into the gasoline tank, to improve the mileage—per gallon; there are scientific compounds with all sorts of fancy names, and at least one of them fetching an equally fancy price (it has been said that during August as much as $1.25 has been asked of the hungering traveler; and riders themselves are concocting mixtures and experimenting to overcome the dire straits of motorcycledom.

And the smells! Talk about "high" game; it's attar of roses and lavender in comparison to some of the exhausts. It would nearly be laughable, if it were not ludicrous, to hear and write of the efforts of Tom, Dick and Harry to overcome the gasoline problem.

Fuel Mixtures and Dopes in Plenty

What affect some of the mysterious mixtures will have on cylinders and other parts of the precious mechanism remains to be seen. Before benzole became at all a popular substitute for gasoline it had innumerable critics, who argued that the sulphurous ingredients of imperfect benzole caused the cylinder walls to be "pitted," and all that sort of thing.

I got an analytical chemist to conduct some searching investigations, and the results were duly published, to show that if a motorcyclist would only be careful to buy good benzole from good makers he ran no more risk of sulphur eating into the vital parts of his engine than by using gasoline. I bought benzole at that time at 14 and 16 cents a gallon, and got far more mileage per gallon than out of gasoline in the bargain. Nowadays one hears no more of those insinuations and darksome suggestions about benzole. The fellows would only be too glad to lay hands on plentiful supplies. And they wouldn't stop to argue whether it had been thoroughly washed at the benzole works. They would just take the stuff and be glad of it now that gasoline is fast soaring up to that nice, round, easily spoken "dollar-a-gallon" aforementioned. But benzole is not to be had at all. It is wanted for more grim purposes. However, after the war I prophesy that benzole will be a rival to petrol, and the prices of the latter will assuredly come kerflop!

IS THE MOTORCYCLE SIDECAR AN UNMECHANICAL IDEA?

IT is remarkable how popular the sidecar has become, when one looks at a sidecar combination from a mechanical point of view; for the sidecar obviously entails a strain on the motor bicycle. The latter is really a marvelous production to stand the side-stresses and the "pull" of the sidecar. People argue that there cannot be much detrimental side-strain of the engine or the bicycle because of the good results that thousands of motorcyclists get out of their machines. True enough; but that is not "because of," but "in spite of," the sidecar strains. Among the recent inventions over here to reduce the effects of anti-mechanical construction are:

(a) A sidecar frame which is geared up to the motorcycle—a long axle extending from the cycle to the sidecar frame, and a chain then transmitting the driving force to the ordinary axle of the sidecar.

(b) The Scott Sociable, in which the two travelers sit together in a companionable kind of way, just as in a car or tricar.

This Scott emanates from the same home as the famous competition-winning Scott motorcycle. It is not a three-tracker, however, like tricars, but a two-tracker. Two of the wheels are in alignment, as in a motorcycle; the other has its own track, like an ordinary sidecar wheel. But the frame work is a special one, designed to combat strains and stresses, and also to keep the driver and his chum close to one another. There have been a few adverse comments on the finished Sociable; but for motorcycle mechanical and engineering products the inventor can be backed against all comers.

LIGHTWEIGHT TWO-STROKES OFTEN TREATED UNFAIRLY

SOME riders don't exercise a cent's worth of common sense in regard to lightweights, but treat the motor as if it had all the reserve power of a fat heavyweight, by carrying a pillion-seat passenger, or a lot of luggage, or taking on a sidecar. This is not fair play; and though it is wonderful what some of the two-strokes will do, it would be a blessing if people would remember the lightweight's limitations.

Carefully driven and provided with a two-speed gear, the machine is capable of splendid results. Recent experience in the mountain passes of Wales proved that observation to be true to an impressive degree. The machine had already covered 5,000 miles without trouble; and although it was but a 2¼ h. p. two-stroke, it climbed the hills like a bird, and reduced 300 miles of mountaineering to a condensed dose of joy.

HARLEY-DAVIDSON TEAM CARRIES OFF KING ALFONSO TROPHY

A HARLEY-DAVIDSON team, comprising Lliviria, Marti and Llandoluce, scored a victory of which they and the American motorcycle makers may feel jolly proud; for the trio collared the cup given by King Alfonso in a 130-mile road race in Spain. The course was two circuits in the Guadarama and Navacerrada area, and two of the pimples en route were 4,500 and 5,000 feet above sea level.

The King, the Queen and some of their children were present on a specially-erected stand, and the weather was brilliant—just what you would expect of sunny Spain in summer.

SOME ITALIAN MOTORCYCLES BEGIN TO SHOW BRITISH TENDENCIES

I HAVE mentioned previously, in some notes about Turin, etc., that various Italian motorcycles were being turned out on decidedly English lines. They will therefore stand a good chance of sharing British orders after the war. These remarks refer to the latest Italian

What the Other Fellow Thinks of Us

Motorcyclist Who Temporarily Turned Automobilist Asserts That Cyclists Sometimes Create Bad Impression by "Road Hog" Policies; More Advice for the Chap Who Keeps His Muffler Open

BY D. B. PANGBURN

THERE are one or two points about the motorcycle game which have recently been impressed on my mind so forcibly that I want to bring them to the attention of the dealers and riders for the good of the sport.

Most motorcycle riders seem to feel that the average automobile driver is some sort of a cross between the biggest fool ever let live, and a natural born road hog. It is an unfortunate fact that this judgment is sometimes justified, but how about the other side of the case.

A short time ago I went on a long automobile tour with some friends. Here was a chance to see things from the autoists' side. One experience I shall describe. It is typical of many. On a winding road through the hills, all full of short sharp turns, paved it is true, but barely wide enough for two vehicles to pass, we came up behind a sidecar outfit. We were going faster than they were and wished to pass by, but we could not do so unless the driver would give us our fair half of the road. This he refused to do. For nearly ten miles he ran at his own pace, either in the middle of the road or on the left hand side, so that we could not possibly get by, short of running over him. Probably some autoists would have done so. We didn't, but our driver, who was familiar with that section of the country, remarked, "They do that way about half the time up here; they seem to think it's a funny joke."

Perhaps the motorcyclist may have had some auto play the same trick on him some time, and was trying to get even, but his doing that way with an innocent party didn't help matters any. Let me tell what it did do. It made one of the men in the car with us say:

"Well, you can bet your life I'll never buy one of those crazy things for *my* boy." Blaming the motorcycle, you see, when the rider only was at fault. The others all agreed with him. It meant a loss of several sales, ultimately, for someone, and no gain for anybody.

A Qualified Dislike

Again, I have a cousin who lives on a populous street, leading to one of the main roads out of town.

"I hate all motorcycles," she told me the other day. "That is, all except yours. I don't hate that merely because it belongs to you. They're all such awfully noisy old things. Why isn't yours that way?"

"It's because I keep my muffler closed," I answered. "They don't have to be noisy. It all depends on who's riding them."

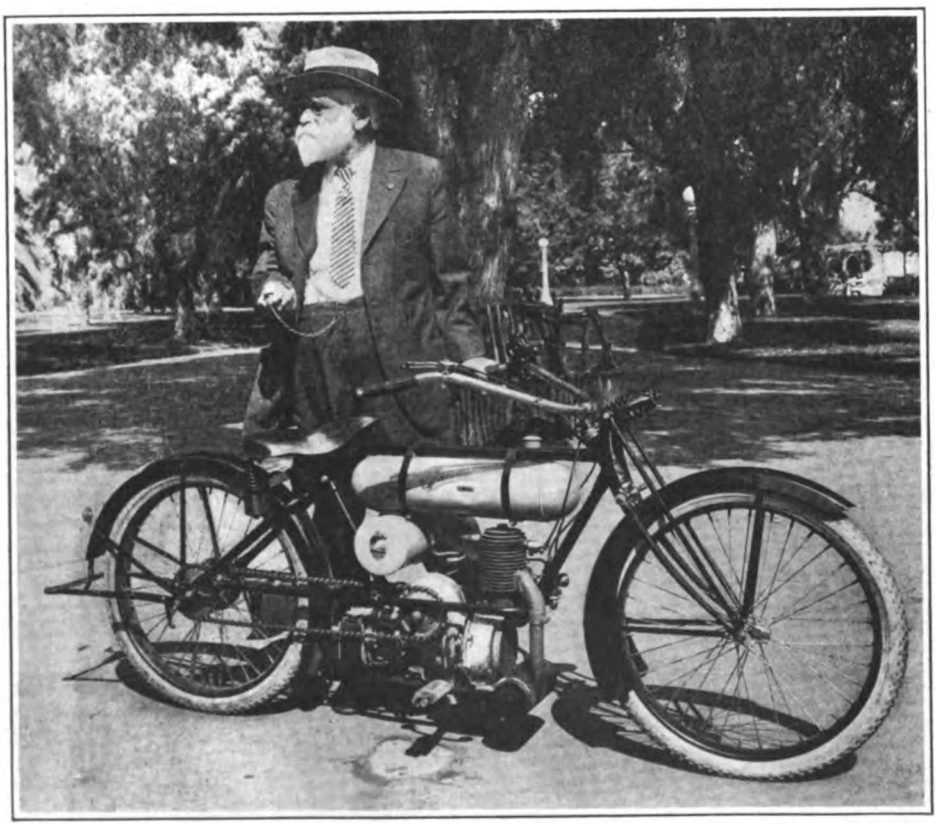
Now, the truth of the matter is, that my cousin lives just outside of the "zone of quiet" of one of the city's hospitals, and the fact that the motorcycle riders go banging past with mufflers open, totally disregarding the "zone of quiet" signs, has completely prejudiced her, and nearly everyone else in that neighborhood against them.

Another example of this sort was a mail collector who used to go through the streets from about 10:30 p. m. until midnight, buzzing his engine at a great rate. He had never been half taught to ride, and I don't believe he even knew what a muffler was, to say nothing of using it. He never did use it anyhow. He got to be such a public nuisance that finally he was taught how to use his machine and the noise stopped. Then there is the type of rider who likes to cut close to people to see them jump.

Open Muffler Fiend

The future of the motorcycle game, both as a business and a sport is largely in the hands of the present dealers (and riders) aided by judicious national advertising. Now, not one rider in ten is as inconsiderate of the rights and feelings of others as those I have described, yet in the same way that a sore thumb is always the one that gets hurt again, so the open muffler fiend is always the one that is noticed, and, though this may sound like old stuff to some, it is nevertheless true, that half a dozen such riders in any locality will do more harm in establshing a prejudice there against motorcycles on the part of possible purchasers than all the dealers' work and factories' advertising can undo in years.

YEARS DO NOT BURDEN THIS LIGHTWEIGHT RIDER



J. E. Jones, of Los Angeles, 73 Years Old and Wealthy, Who Uses the Cleveland Regularly and Asserts That He Wouldn't Be Without It

PIERCE TAKES TWO AT MALTA CLUB RACES

LANCASTER, N. Y.—Walter Pierce captured the five-mile and six-mile match at the meet of the Malta M.C. of Buffalo at the local track on September 10. Pierce's time for the five miles was 6:48, and for the six miles, 7:14 2/5. Pierce hails from Buffalo. Bob Duckworth, of Buffalo, was victor in the 10-mile pursuit race, winning against Fred Flash of Cleveland, in 12:23.

Fred Roth, of Blasdell, took the ten-mile match arranged with Pierce, in 11:23 2/5. Carl Haublub, of Buffalo, captured the 15-mile final, with Duckworth second and Flash third in 24:21.

OPEN MUFFLERS PEEVE OGDEN

OGDEN, Utah.—One of the first steps in a campaign to eliminate unnecessary noises in this city will be the suppression of open muffler fiends, say the city authorities. This order will apply to both automobilists and motorcyclists, and the new regulations will be strictly enforced.

Window Pointers

CHANGE YOUR WINDOWS FREQUENTLY

With the small retailer it is often the case that his windows are not changed frequently enough. His stock may be limited, and he thinks that a change would not look a great deal different. This may seem true, but it is surprising how differently one can make a trim, even with the same goods.

Some home-made fixtures may be necessary, but these can be easily made, and the display can be constantly made to appear different.

Once a week is not too often to change your window display. By that time, the goods are getting dusty, and their freshness is gone. Then the majority of your customers, if you live in a small town, have seen these things, and they welcome something new. A change in the price cards and the big wndow cards that you should have, will help to make the window appear different. At the end of a week, the inside of the windows begin to get dingy, and they need cleaning, anyway. For these and various other reasons, one week is as long as a display of these goods should be left in a window.

RULES FOR WINDOW RESULTS

Here are twelve rules for securing the best results from show windows:

1. The store front should have character and make a good appearance.
2. Make the windows all glass, dustproof and frost-proof.
3. Have your windows well lighted.
4. Plan your windows to overcome reflections.
5. Change the backgrounds frequently.
6. Have all merchandise thoroughly cleaned before placing in the window.
7. See that window is cleaned throughout.
8. Do not crowd the merchandise.
9. Do not let window decorations conflict with the merchandise.
10. Pose the merchandise in a broken line so it won't look like a row of nine-pins.
11. Display accessories in the window.
12. A neat showcard will answer many a customer's unasked question; price tickets on certain goods will sell more goods than a high-priced clerk.

WHOLE WINDOW SHOULD WORK

Presuming that you give your windows due care, look about and see if there is not more space you could use; some little corner, perhaps, where you keep the shade drawn, or which you cover with a sign in front. Do not let it escape; make it work; make it show goods.

You may think it time wasted, may think there are goods enough in the display you have, and, therefore, this extra work is superfluous. Have no such thought. Some passer-by will see the articles displayed every day, and one never can trace the sales which result from these silent appeals to the purses.

WINDOW LIGHTING

Several fixture concerns have placed upon the market a line of especially designed Tungsten fixtures. The lamps hang vertically and are fitted with reflectors. The combination is efficient as well as decorative when the reflectors are properly placed with respect to the lamp. For displaying goods, lamps should be out of sight, and distributed in such a way as to give uniform illumination.

For ordinary windows, an illumination that is very satisfactory can be obtained by using Tungsten lamps enough to consume about three watts per square foot.

Concentrating holophones should be used about eight or ten feet from the floor.

CLEAN WINDOWS INCREASE SALES

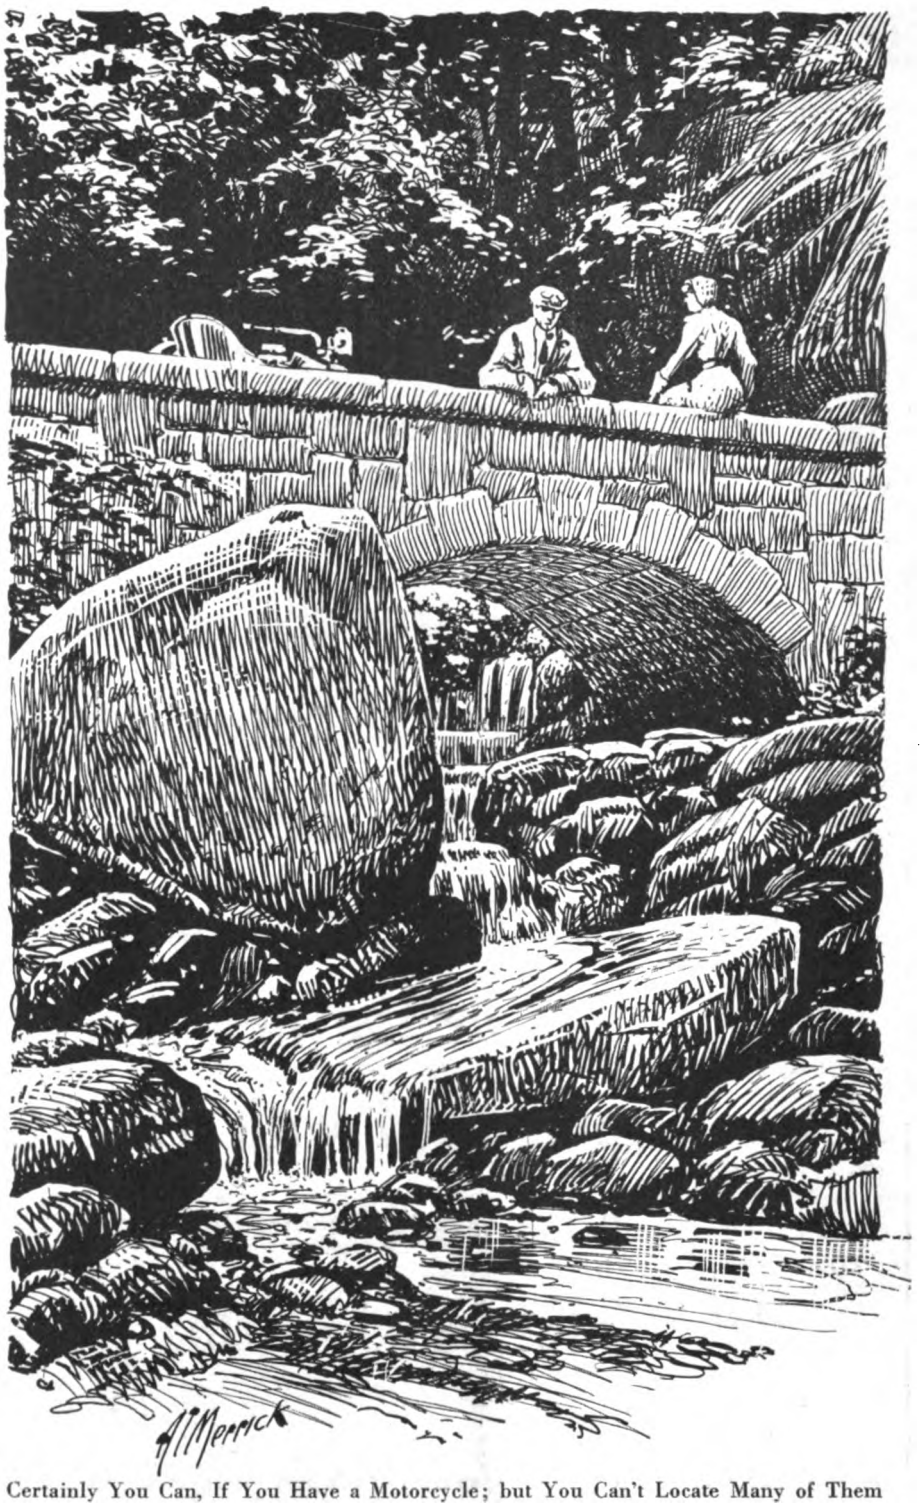
Wash the windows! This always should be a standing order in the store.

Dust outside the window obstructs the view; inside the window it damages the merchandise.

Frequent washings of the outside of the glass and occasional washings of the inside will pay big dividends. Forget about soap. Put a little soda in warm water and go to it.

To keep dust out of the window, nothing is so good as an enclosed background. Better get one ready now.

CAN YOU FIND SUCH BEAUTY SPOTS?



Certainly You Can, If You Have a Motorcycle; but You Can't Locate Many of Them via Trolley Car, or Even with a Cumbersom Automobile. The Motorcycle Is in Tune with Nature and Enables You to Get Off the Beaten Track

DEALERS

Some Newsy Bulletins on What They Are Doing and What They Plan to Do

If your establishment has not been mentioned in this department of late, Mr. Dealer, today is a good time to sit down and send along a little letter telling us how things are going. An item in the Dealers' Department of Motor Cycle Illustrated will help you in more ways than one. Keep us posted.

WHAT'S DOING?

MADDEN BROTHERS HOSTS TO LOCAL BRAVES

SOUTH MANCHESTER, Conn.—Madden Brothers, local Indian dealers, acted as hosts to motorcyclists of this city and vicinity on August 20, the occasion being the annual Madden picnic.

The party, consisting of about fifty riders mounted on everything from Featherweights to Powerpluses with sidecars and with cars of every late model from 1912 on, started from the Manchester common at 8:30 a. m. A quick run was made to the nearby lake, where sports of all kinds were indulged in as extensively or strenuously as suited the participants' inclination.

Plenty of fun was provided for all. Swimming, baseball, canoeing and other recreations were in order. A few motorcycle riding stunts were staged also. A liberal full-course dinner was provided by the host, and John McDowell, Indian traveler for Connecticut, set up the cigars. A few speeches were in order, and preliminary moves were taken toward the forming of a motorcycle club.

Several guests of honor gave considerable local prominence to the occasion, among them being the Police Court Judge, the sheriff, the police commissioners and captain and several of the local police officers, all as civilians.

A rollicking good time was enjoyed by all, and a lusty three cheers and a tiger to the generosity of their popular hosts were the parting salute given at the disbanding point late in the evening.

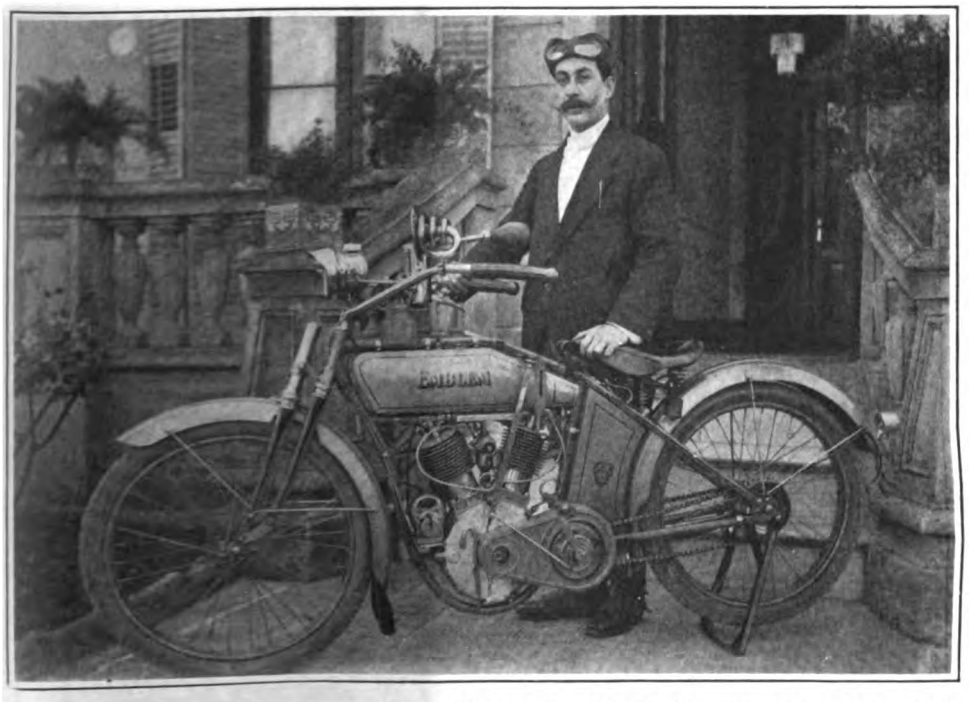
AN ENTHUSIASTIC EMBLEMITE IN ARGENTINA



Juan E. Muzzio, of Buenos Aires, Who Writes That His Emblem Has Given Him Eight Months' Excellent Service Without Any Repair Expense

ROTHOLZ DOING WELL IN PARK AVENUE PLACE

NEW YORK, Sept. 11.—Gus Rotholz, the veteran dealer, who recently moved to 1691 Park avenue, is now completely straightened out and is doing business at an even greater rate than before. The new quarters are provided with a gasoline pump and tank outfit and a full line of lubricants is now stocked.

The Park avenue place is absolutely fireproof and is exceptionally well lighted and ventilated. In the front part is a mezzanine floor with offices and lockers for patrons, access to this being by both outside and inside staircases. Rotholz is highly delighted with his new location and expects to do a big business during the 1917 season.

SYKES, OF TRENTON, BUYS OUT BELT'S AGENCY

COLUMBUS, Ohio.—One of the most important motorcycle deals in Columbus was closed last week when O. C. Belt of the Belt Motor Company sold the Indian agency to John Sykes, Jr., the Indian agent at Trenton, N. J. The transfer will be made about September 20. Mr. Sykes has not yet secured a location for the agency, but has several storerooms in the downtown section under consideration. The transfer includes the repair department, as well as the parts business, which is very large.

Sykes will operate both agencies, the one at Trenton and the Columbus agency, but the Columbus business will not be a branch in any way. The territory includes a few counties in central Ohio.

The Indian agency in Columbus was first taken by the Franklin Cycle & Supply Company, of which C. E. Barr was at the head. Later Mr. Barr took the agency and located at 136 East Gay street. O. C. Belt was associated with the firm under the name of the Belt-Barr Motorcycle Company.

ADVERTISING TO REACH ALL CLASSES

Dealer Should Use Equal Proportions of Pleasure and Commercial Advantages and Race Results in Order to Effect All Possible Sales

By IRA R. ALEXANDER

DENVER, Colo.—The motorcycle dealer of today knows that it pays to advertise, but naturally, different dealers have different ideas on the subject. Here in Denver and other parts of Colorado since the Pikes Peak races, a large number of dealers have been using the results of those events as the basis around which to build up their advertising. Newspapers, window signs and bulletins embodying the results of this climb are the means which have been used in this connection.

This type of advertising pays, without a doubt, but at the same time the dealer should not forget that other forms pay just as well. It seems as though a number of dealers in different parts of the country are depending upon races almost entirely as sources from which to draw advertising material. But there is a certain proportion of the population which cares nothing for motorcycle racing, and does not follow the sport, and such advertising means nothing whatever to them.

Pleasure and Commercial Ads.

It is this class of trade that the dealer has to reach by some other means if sales are to be made. Advertising the pleasure or the commercial advantages of the motorcycle will get to them as a general thing, and in fact the dealer should take pains to embody these points in his regular line of publicity.

A good example of advertising the motorcycle as a pleasure vehicle was given recently by Floyd Clymer, the well known rider and motorcycle dealer of Greeley, Colo. He is a believer in making use of races in furthering the sales of the motorcycle, but he also believes it should not be a one-sided affair when it comes to advertising. To show the possibilities of the motorcycle as a pleasure vehicle Clymer arranged a motorcycle picnic for owners of motorcycles in Greeley. The affair was held in the mountains about 50 miles from that city, and, of course, the distance was covered on the machines.

Boosting the Picnic

The start was made at Clymer's store at 9 o'clock, and the picnic grounds were reached about 11 that morning. It was agreeed beforehand that the speed limit would be 25 miles an hour. The picnic was announced in the Greeley papers a week before the affair was to take place by an advertisement inserted by Clymer. Thus the store received advertising, and people that did not own motorcycles were made to see the possibilities they offered as far as pleasure is concerned. It is needless to say that Clymer made the best of the run to and from the picnic grounds in giving those accompanying him pointers on the value that can be gotten out of a motorcycle. This will bear fruit, as the motorcyclists making the trip will become good advertisers for Clymer and the motorcycles he has for sale.

This week the W. W. Whiting motorcycle store in this city has a window arrangement of different papers (**Motor Cycle Illustrated** among them) that carry Harley-Davidson ads., and the papers and magazines are arranged so the ads. show. People passing the store stop and look. In doing so they become interested, and some of them go inside to investigate, the way to a sale being thus paved.

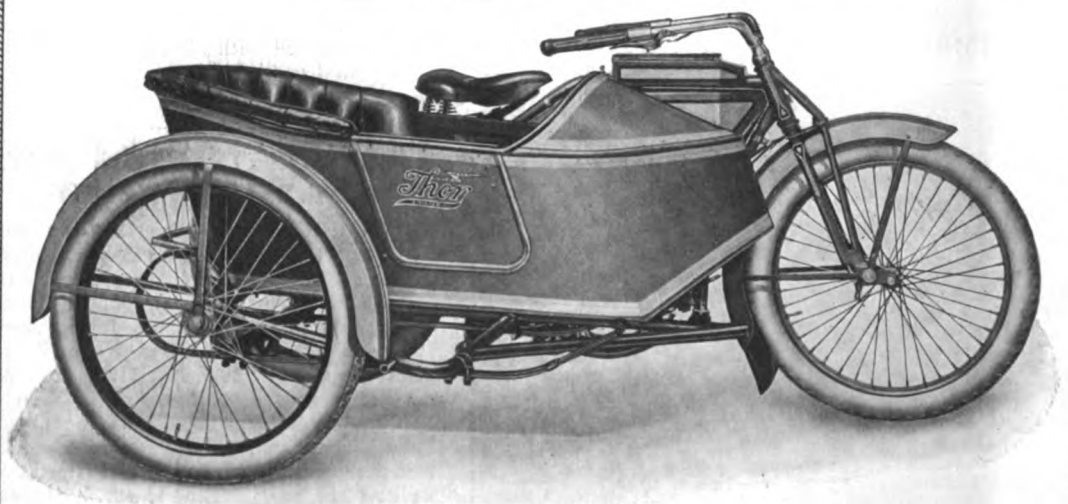
Value of Window

The window is the dealer's catalog, and he should arrange it in such a way that it will attract attention and be a paying advertisement. Displays featuring the motorcycle as a pleasure vehicle and as a commercial asset should be featured, and the motorcycle as a racing machine should not be allowed to fill the window all the time.

Dealers in this city, as well as dealers in other parts of Colorado, have found out that it pays to let people know the success others are having with their motorcycles. If a certain well known firm is getting good service from a machine in a commercial way—let other business men know about it by advertising the fact, personally, through the mails, in the newspapers, window displays, or some one of many other ways.

(Continued on page 48)

Rogers Sidecars



OFFICIALLY ADOPTED AS STANDARD EQUIPMENT FOR THE 1917 THOR

The manufacturers of the Thor have devoted years to establishing its reputation as the motorcycle supreme.

Their adoption of the ROGERS places thereon the seal of their approval and its recognition as the **SIDECAR SUPREME.**

BEAR IN MIND, the ROGERS is also the one and only UNIVERSAL sidecar and any ROGERS Sidecar can be made to fit perfectly the new 1917 Thor or any other standard motorcycle, by changing only a few inexpensive parts.

If you own a ROGERS, you do not need to change your sidecar every time you get a new motorcycle.

NEW DEPARTURE COASTER BRAKE

Thousands of Dealers are saying this daily to prospective buyers.

They point with pride to the New Departure in every bicycle on their floor and thus add weight to their words.

No argument is needed to prove New Departure reliability because millions of riders have learned the lesson by experience.

Millions of prospective riders know it, they know that what the other fellow swears by, must be best for them. And all agree that absolute reliability is the big feature of the Brake That Brought the Bike Back.

This reputation should become one of your best assets. Combine it with the New Departure Sales Helps and increase your sales.

We will tell you the whole story if you will write us.

THE NEW DEPARTURE MANUFACTURING CO., BRISTOL, CONN., U. S. A.

For assurance of prompt attention to your wants mention MOTOR CYCLE ILLUSTRATED.

Digitized by Google

(Continued from Page 46)

If some well known person in your city makes a long tour with little or no machine troubles on a motorcycle you sold him put a machine of the same kind in your window and on a card have the story printed in good-sized type and place it beside the machine. People are bound to stop in front of your window, and in reading the card they will think about the possibilities you are offering them in urging them to purchase one of your machines.

Too much dependence should not be placed on racing results for the dealer's advertising. Let people see the joys obtainable by the use of the machine for pleasure. Point out to the business man what a big aid, commercially, the motorcycle can be to him. When pushing all three of these advertising means, do so with each on about an equal footing, and you will have a mighty strong aid in making sales. This is written from experience; it has been tried out and proved to be decidedly a paying proposition.

COUGHLIN TAKES ORDERS FOR SIX HENDERSONS

BRONX, N. Y.—Gene Coughlin, of Gene Coughlin & Company, 922 Washington avenue, who recently took on the Bronx County rights for the four-cylinder Henderson, has already taken advance orders for six of the 1917 models.

"The fine performance of the Henderson in the past season and in previous years has given riders such confidence in it that they have started to order 'blind'—that is, without seeing even a catalog," says Coughlin. "I am sure that there will be a big season with the four-cylinder in this county for 1917."

The Coughlin repair shop is working at high pressure just now, overhauling machines of various makes.

DALLAS DEALERS RUN FINE LABOR DAY CARD

DALLAS, Tex., Sept. 5.—Over 3,000 people turned out for the excellent card of races arranged by the Dallas Cycle Dealers' Association yesterday at Fair Parks. Six races in all were staged and the riders put up many exciting rides during the afternoon. The Australian pursuit race came in for more than ordinary interest from the crowd.

The first event on the card was the free-for-all amateur State championship, which was won by Gordon Alexander. A girls' race was run, and Miss Flora Clarke carried off first honors. E. J. Cortines, the handicapper, won the two-mile handicap, while the half-mile boys' race, for youngsters under 12 years of age, was captured by Edgar Behrens. L. L. Scott won the professional State championship, and a two-mile motor-wheel race went to the credit of Jess Mitchell. L. L. Scott also accounted for the Australian pursuit race from M. W. Sales and Albert Willard, after going 13½ miles.

LOFTES GOES TO BOSTON

PROVIDENCE, R. I., Sept. 12.—J. Clarence Loftes, formerly with B. A. Swenson, and later with the Harley-Davidson Sales Company, has entered the employ of the General Motorcycle Sales Company in Boston, of which W. F. Halliday is the local representative.

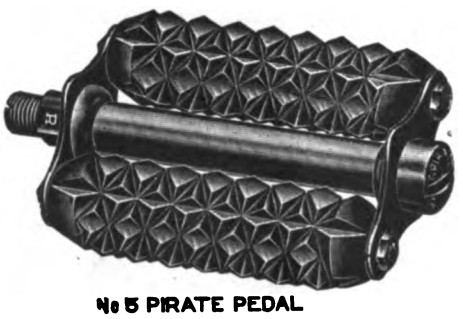
WESTERN MOTOR SUPPLY MEN ON TRAVELS

EL PASO, Texas.—Joe Burkey, general manager of the Western Motor Supply Company of El Paso, is in Tucson and Phoenix on business, and plans to visit Los Angeles before returning to this city.

G. H. Sender of the same company has just returned from a two weeks' trip over western Texas and eastern New Mexico. Sender reports that he found business conditions good for the motor man generally and that motorcycles are fast coming into their own in the west. Sender reported that many new machines are being placed and that the business in handling tires and accessories is growing rapidly. The bicycle shops are also prospering, he said, for bicycles are not being forgotten while many ride motorcycles.

SIGNS THOR AT HONOLULU

The Okahiro Bicycle Shop, of Honolulu, has just closed a deal for the Thor agency for the Hawaiian Islands. This establishment has a large and growing business and will give the Thor, which has not been represented in the islands for some time, quite a prominent position. Mr. Okahiro writes that he is putting up a fine brick and concrete building, which will be occupied before the end of the year.



No 5 PIRATE PEDAL

Two Pedals That Are Immensely Popular

Their design and construction assure strength and comfort. Especially is this true of the No. 5 PIRATE, whose deep corrugated rubber cushions are not only soft to the feet, but absorb shocks and keep the feet from slipping.

The No. 4 STANDARD is a new addition to our large and comprehensive line of Rat Trap Pedals. It is strongly made, well designed and gives a splendid foot hold.

Digitized by Google

18 Years Ago—

A keen-eyed man was bent in absorbed concentration over a work-bench, on which was mounted a bicycle wheel. A church chime boomed the hour of midnight—the fitful glow of the flickering gas cast weird shadows on the walls of the little shop. But still the man worked, turning the wheel this way and that. At last he straightened up, heaved a deep sigh and breathed "I've got it at last"!

He spun the wheel until the spokes fairly whined, then touching a little lever on the side of the wheel, brought it to an abrupt stop. Again he spun the wheel, and again he touched the lever, but more lightly than before, and the wheel slowed down to a gentle halt.

Thus, eighteen years ago, was the MORROW, the pioneer coaster brake, brought into being. Since then more than a million riders attest to the perfect braking service of the MORROW—its utter reliability and surety.

Don't you think a brake with a record such as the MORROW should be the one for you to stock?

JACKSON IS ENTHUSIASTIC OVER 1917 PROSPECTS

DAYTON, O.—W. H. Jackson, of W. E. & W. H. Jackson, Dayton representatives in San Francisco, Cal., has been at the factory of the Davis Sewing Machine Company during the past week. He left Saturday for the Pacific Coast, enthusiastic over the prospects for a large bicycle business with both Yale and Dayton lines throughout his territory.

"Never have I seen the Davis factory so busy as it is now," said Mr. Jackson. "Nothing surprised me more than to see the volume of stock on hand, such as frames, equipment, etc., and it certainly has convinced me that the factory is prepared to take care of all orders in ideal shape. Both the Dayton & Yale bicycle lines look better to me than ever before, and with such fine assurance of prompt delivery, the sales force certainly has a clear field ahead."

En route to San Francisco, Mr. Jackson will stop at Denver, Ogden, Salt Lake City, Spokane, Seattle and Tacoma, calling on the Dayton representatives in these cities.

MANY ATTEND LINCOLN FARM DEDICATION

LOUISVILLE, Ky., Sept. 9.—Motorcyclists from many parts of Kentucky and adjoining States made a Labor Day run over the Dixie Highway to attend the inaugural ceremonies at Lincoln Farm, the birthplace of Abraham Lincoln, at Hodgenville. This farm was taken over by the Government and made into a national park. President Wilson, among other notables, made an address at the dedication.

Herbert Kline, of Kline Brothers, Harley-Davidson dealers, headed a party from Louisville. He was accompanied by Mrs. Kline in the sidecar. Most of the going to Hodgenville was good, but a few sections were very bad.

When the Dixie Highway is finally completed it is expected that many tourists will make the run to Lincoln Farm and on to Mammoth Cave. The farm is 72 miles from Louisville.

NEW HARLEY-DAVIDSON INTERESTS YOUNGSTOWN

YOUNGSTOWN, O.—"Hap" Schroeder, the Harley-Davidson traveller, caused considerable excitement here on September 8 when he rode up to the Mahoning Cycle Company's store on a 1917 electrically-equipped Harley-Davidson. A big crowd had gathered to see the new machine.

Carl C. Kaiser, proprietor for the Mahoning Cycle Company, handling the Harley-Davidson, has sold 125 machines during the past season, and expects to sell over that amount during 1917.

SWENSON OFF FOR VACATION

PROVIDENCE, R. I., Sept. 11.—B. A. Swenson will leave this week for a two weeks' vacation, which he will spend "somewhere in the woods of Maine." B. A. will go alone, with a sidecar outfit, and will carry quite an equipment, which will include fishing tackle, shooting irons, tents, blankets and the like.

WICKWIRE VISITS HENDEE-VILLE ON HIS HONEYMOON

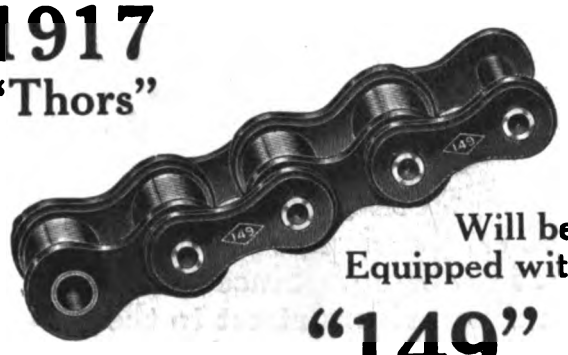
SPRINGFIELD, Mass.—Among recent visitors at the Indian factory were Rex D. Wickwire, Indian dealer at Miami, Florida, accompanied by his wife. Mr. and Mrs. Wickwire dropped in at the Hendee headquarters while on their honeymoon, their marriage having taken place at Miami on August 16. They spent several days in Springfield, after which they rode away in a new 1916 Indian Powerplus sidecar combination.

Wickwire reports having had an excellent season and is enthusiastic over the outlook for 1917 sales in his territory. He and Mrs. Wickwire will make the complete run back to Miami in the new outfit which they obtained at the factory.

VALLEJOANS PAY VISIT TO HARLEY-DAVIDSON WORKS

VALLEJO, Cal.—Word has been received from George Hallerman and Albert Lawrence, of this city, that they have arrived in Milwaukee, their destination. They made the trip on Lawrence's machine with but little difficulty, aside from some summer storms in the mountain region. The letter said that the pair had seen the 1917 models at the Harley-Davidson factory and were on their way back, taking the Lincoln Highway.

1917
"Thors"



Will be Equipped with
"149"

The specifying of "Diamond" motorcycle chain (No. 149) as standard equipment year after year by one of the largest manufacturers of high grade motorcycles in the United States, the Aurora Automatic Machinery Co., of Chicago, Ill. (makers of the "Thor" Motorcycle), is satisfactory evidence that "Diamond" motorcycle chains (No. 149) are thoroughly reliable.

The manufacturer of a high grade motorcycle cannot afford to make a mistake in the selection of equipment. You will not make a mistake if you specify No. 149 equipment on your motorcycle.

THE BEST DRIVE SPARTAN FOR LIGHTWEIGHTS

Select A Belt Drive Lightweight for 1917

IT is obvious to all live dealers that Lightweight Motorcycles are opening up a big field, a bigger field than the motorcycle has ever before catered to.

This new and larger field will be encouraged by simple design—the fewer "contraptions," the more appealing that Lightweight will be; the more readily understandable it is, the more easily sales can be made.

With this sound logic, one item measures up BIG, it's the transmission; eliminate double drives, slipping sprockets, and all the other "what nots" and you clear away a good deal of puzzling material and weight.

In a word, sell a belt drive Lightweight, one with that proven perfect drive for Lightweights, it is simple, it is lasting and smooth, it is the perfect drive when completed by the perfect belt, the

BRITISH NOTES

(Continued from page 41)

product that claims attention, viz., the 8 h. p. Frera, which has V-twin cylinders set at a 45° angle, with 1,400 c.c. capacity. Fittings include a countershaft 3-speed gear-box, with a multi-disc clutch controlled by hand. As in English machines, this Italian sidecar motorcycle has lugs specially brazed on as part of the frame, to insure as much rigidity as possible of the sidecar members. Another idea in equipment is that the chain transmission is wholly encased in oil-tight chain guards; in fact, the whole turnout has a markedly British appearance. American readers will note with interest that the Splitdorf magneto is included.

The Frera makers have supplied a lot of 4 h. p. single machines and 2½ h. p. lightweights for the Italian army.

SPORTING AFFAIRS STILL ATTRACT ATTENTION IN HOLLAND

THEY'RE not making life absolutely subservient to the war in Holland, for quite recently there have been big doings on both road and track in the little land of dykes and windmills. The Dutch Volunteer Brigade had a nice sporty affair in the shape of a 36-hour trial over a 560-mile course. Obviously speed was not the primary element, but consistent running and due observance of various regulations. It speaks well for the Hollanders that 31 competitors finished the long ride on time. A couple of two-stroke James machines and a notable lot of Douglases—both British products—made a good show.

The first motorcycle race meeting on a track in Holland afforded a rare spectacle. The course was a wide one—for over 20 competitors lined up in a row at the start of one race. British products won four of the five races, which were run on a grass track. A good job it wasn't on a small scale!

MUNITIONS WORKERS SHOW WELL IN HILL-CLIMBING COMPETITION

THE Britisher is notorious for working hard and playing hard, so it is no wonder that Army Ordnance workers have sought relief in motorcycle sport for their needful recreation after hard work on war goods. Sixty-five of them entered for a recent program. There were some star artists among them, and one of them got away from the starting point like the shot of a gun.

From a standing start a five-furlong hillclimb was covered in 62 seconds by Gillet on a 4 h. p. B. S. A., in the single-cylinder class with change-speed gears. The climb was made by A. Knight on a 1910 Triumph in 59 seconds, in the fixed gear class; by R. T. M. Ayshford on a 1912 7 h. p. Indian in 52⅖ seconds, in the two-cylinder class; and in 105 seconds by T. Binns on a Triumph in the sidecar section. In Class III (twin-cylinders) an Indian was placed third, in addition to Ayshford's premier placing.

MOTORCYCLES ARE BEING SPECIALLY ADAPTED FOR CRIPPLED RIDERS

THE war is sure to deprive a lot of motorcyclists of a hand or arm, but it won't deprive them of motorcycle ardor. Many ex-soldiers are driving cars specially adapted, and that motorcycles can likewise be made suitable for a keen rider is proved by the case of two chums, Sydney Davis and H. Winstone, of Kettering. The former rides a two-stroke Sparkbrook and Winstone a Douglas. Davis' right arm ends at the elbow, so all the controls are on the left handle grip, and the right-hand side of the bar is, instead of being curved in the usual way, made straight, with a cushion at the end for Davis to rest his elbow on. Winstone's machine has the exhaust lever on the right grip (as he has no left arm), and that was the only alteration needful for him.

One-legged riders are no longer a rarity. One of the crack competitors in our Tourist Trophy races belongs to that section of affected but enthusiastic riders.

McALESTER FIRM FORMED

McALESTER, Okla.—The McAlester Auto & Supply Company has been organized here with a capital stock of $5,000. The company will handle tires for automobiles, motorcycles and bicycles, and also a full line of accessories for all machines. The incorporators are W. M. Redpath, Elmo Smith and M. S. Jordan.

"INFALLIBLE" Spark Plugs

"Quality"—that's the keynote of the "Infallible" Spark Plug's construction. We offer the "INFALLIBLE" Plug to the trade as the highest example of spark plug perfection. Deep-combustion chamber, giving a spark of remarkable depth and strength—heat-proof electrodes that are proof against all action of oil and carbon, mica insulation as enduring as time itself. Sold at a price all can afford to pay —75c.

TORONTO RACERS ARE KILLED IN ACTION

Official Casualty List Reports Deaths of Wilson and Knight on Western Battle Front—Reimer Returns Badly Crippled

TORONTO, Ont.—Much of historical importance has occurred during the past week which has directly affected Canadian cyclists. Two of the country's most prominent wheelmen paid the supreme sacrifice while a third came home with his body riddled with bullets.

The official casualty lists published in Toronto bore notice of the death in action of Private Walter Wilson who, before the war, was known as Scotty Wilson, champion sprinter and Australian pursuit rider. He came to Toronto from Scotland eight years ago and immediately entered into cycling activities with zeal. For two years he was the Canadian quarter-mile champion and for several seasons before he enlisted he was a formidable rider in pursuit contests. He was a member of a trench mortar battery at the time of his death. He leaves a wife and one child. On Sunday, September 10, Vice-President R. A. Falconer, Secretary Richard and other officers of the Canadian Wheelmen's Association paid a visit to the home of the late champion when a substantial tribute was paid to the memory of the soldier-cyclist.

According to a notification from the Militia Department, Private Norman C. Knight, another well-known Toronto bicycle racer, died of wounds recently. Private Knight was a member of the Eaton Bicycle Club before he enlisted for overseas service. Confirmation of this notification is being anxiously awaited here.

Sergeant J. B. Reimer, a member of the 1st Canadian Contingent, and a former cyclist of prominence, returned to Toronto a few days ago with bullet wounds in his body and knee. His fighting days are over as his wounds have incapacitated him for further service. Before the war he was employed by Walter Andrews, the Toronto Harley-Davidson distributor. He will return to his former position as soon as he is finally discharged from the service.

TRANSCONTINENTAL HIGHWAY IS PLANNED

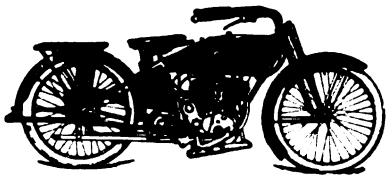
TORONTO, Ont.—At a meeting of the Military Hospitals Commission at Toronto, the unanimous decision was reached to prepare for the building of a model transcontinental highway from the Atlantic to the Pacific in Canada by ex-soldiers after the conclusion of the present hostilities in Europe. It is expected that approximately 300,000 war veterans would be available for this work after the termination of the struggle and, with the help of so many men who have become accustomed to outdoor life, it is believed that the Dominion Government could speedily provide the needed traffic line. The project would not only solve the problem of demobilization, since it would allow of the gradual disbandment of troops from coast to coast, but it would make an entirely new field for the motor-touring public, it is declared. Incidentally, the farmers would use it for moving of Canada's grain crop, it is urged.

MISSOURI AND IOWA RECIPROCATE WITH ONTARIO

OTTAWA, Ont.—Missouri and Iowa are two more States which have entered into a reciprocal arrangement with the Province of Ontario for the recognition of motorcycle licenses, according to official advices just received. There are now seventeen States which have signed the license reciprocity agreement with the Ontario authorities. In the cases of Missouri and Iowa, the period of stay without license charge for an Ontario motorcyclist is twenty-one days, and vice versa.

SPENCERS TO RECEIVE OVATION ON RETURN

TORONTO, Ont.—Bicycle officials, riders and others are already looking forward to the home-coming of Art and Bill Spencer, the Toronto bike stars who have created a name for themselves at the Newark Velodrome this year. According to word received at the Spencer home here, the two cyclists expect to take part in a six-day race at either Boston or Chicago after which they will return to Toronto for the winter. The showing of the Spencers at Newark has created wide interest in Toronto and it is anticipated that they will be given a public reception upon their arrival.



Every Ride A Joy Ride

There is no limitation to the pleasure of motorcycling when you ride the

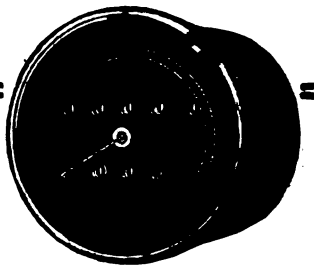
1917 R-S MOTORCYCLE

You can leave the zone of machine shops with a feeling of safety. You can climb hills that defy the ordinary motorcycle. A twist of the wrist and the R-S immediately responds with any speed you dare ride.

The R-S has the simplest, coolest, surest, most powerful little motor ever produced. Most economical, silent and simple, and most comfortable. Here is a machine you should investigate when in the market for a motorcycle.

Write for details and agency proposition.

Reading Standard Company
501 Water St., Reading, Penna.



It's Good Enough for Uncle Sam

More striking or conclusive evidence of the superiority of the Corbin-Brown Speedometer could not be advanced than the fact that in the placing of a recent order for 63 motorcycles the United States Government specifically stated that all machines be equipped with this instrument or equal. The order has been placed with us. The

CORBIN-BROWN SPEEDOMETER

needs no stronger endorsement than this.

If it is efficient enough to handle the work cut out for it by the War Department it is efficient enough to warrant its being equipped to your motorcycle. Do this at once.

Investigate for yourself.

WEBSTER CAPTURES BIKE RACES AT TORONTO

TORONTO, Ont.—The first bicycle racing in Toronto since last spring formed one of the features of the Canadian military championships which were staged at the Exhibition half-mile track on Saturday, September 9. Two events were held and the winner in both instances was Corporal Norman Webster of the 109th Regiment, Toronto, who outsprinted a field of forty cyclists on both occasions. One event was a mile open contest while the second was a three mile handicap in which Webster started from scratch.

The results: One mile open—Won by Corporal Norman Webster; second, Private R. Goldsmith; third, Corporal George Wright. Time 2:28.

Three-mile handicap—Won by Corporal Norman Webster; second, Private Roy Hendry (250 yards); third, Private Woodcroft, (300 yards). Time 8:04 2/5.

Old Timers Strive

A feature of the races was the attempted come-back of several old-time Canadian bicycle stars. One was Barney Mitchell, who wore the colors of the Royal Canadian Bicycle Club in the so-called boom days of cycling. Another was Sergeant-Major Don McGillicuddy, a veteran of the present war, who competed successfully throughout Ontario before the outbreak of hostilities. Both failed in their attempted comeback but they received the plaudits of the grandstand, nevertheless.

The cyclists of the 109th Regiment, Toronto, came close to carrying off the team championship of the day as they scored twelve points against the seventeen tallies registered by the 180th team.

BINETTE WINS AT FIRST QUEBEC MEET

QUEBEC, Que.—Costly silver cups and medals were presented to the winners in the first real motorcycle races ever staged in Quebec, the ancient capital of Canada. The contests, consisting of three, five and ten mile races, were held on the Exhibition half-mile track in the presence of 2,000 interested spectators. Seven French-Canadian speed merchants tried conclusions and the honors were divided by those who straddled Excelsior and Harley-Davidson motorcycles. The crowd became greatly agitated when one of the speedsters spilled on a corner of the track but the competitor was able to start again in the same race.

The results:

Three-mile race—Won by Binette, Excelsior; second, Marier, Excelsior; third, Montambault, Excelsior. Time, 3:45.

Five-mile race—Won by Binette, Excelsior; second, Boivon, Harley-Davidson; third, Mercier, Excelsior. Time, 6:24.

Ten-mile race Won by Boivon, Harley-Davidson; second, Martineau, Excelsior. Time, 12:54. Seven started but only two finished.

DELIVERS LAWN MOWERS WITH A MOTOR WHEEL

PROVIDENCE, R. I., Sept. 11.—E. H. Sainsbury, a dealer in and repairer of bicycles at 59 Plainfield street, has equipped a bicycle with a Smith Motor Wheel, which he uses for delivery purposes. A large box is constructed on the rear of the machine, which he uses for carrying articles to be delivered to his customers.

He makes a considerable business of sharpening lawn mowers, and to get them out quickly the bicycle outfit is used.

BIKE DEALERS BENEFIT BY TROLLEY STRIKE

CHATTANOOGA, Tenn.—During the recent street car strike in this city the bicycle dealers were among the largest advertisers in the city, and did some real business. There was a tremendous demand for second-hand wheels of all kinds, and old bicycles which had not seen service for years were trundled out of the attics, scrubbed down, treated to a set of tires, a little oil and graphite and placed on the streets. An old-time darkey or two managed to dig up some of the old high-wheelers, safeties, etc., and business men, laborers, messenger boys, etc., all joined the ranks of the riders.

CHAMPIONS PERFORM WELL

GEORGE WILEY and Clarence Carman, the old and the new American motor-paced champions, accounted for the 100-mile motor-paced team race at the Point Breeze track last night. Leon Didier, France, and "Bobby" Walthour, Atlanta, finished second, and George Colombatto, Italy, and Vincenzo Madonna, the Providence Italian, ran third. The time was 2 hours, 3 minutes and 32 2/5 seconds.

The New Idea on Motorcycles

This year saw a big change in motorcycle tendencies. Most of it was produced by the realization of a new idea in the Cleveland Motorcycle. The idea has spread around the world and is here to stay.

The motorcycle has had the same defects of immaturity as the automobile—clumsy design, overweight, excess power, the mania for speed and an astonishing ignorance of where it was going to land.

Just as the automobile became sensible, quit racing, refined itself in design, lost its surplus weight and came within the price-range of millions, so has the motorcycle.

The first one that did it successfully was the Cleveland.

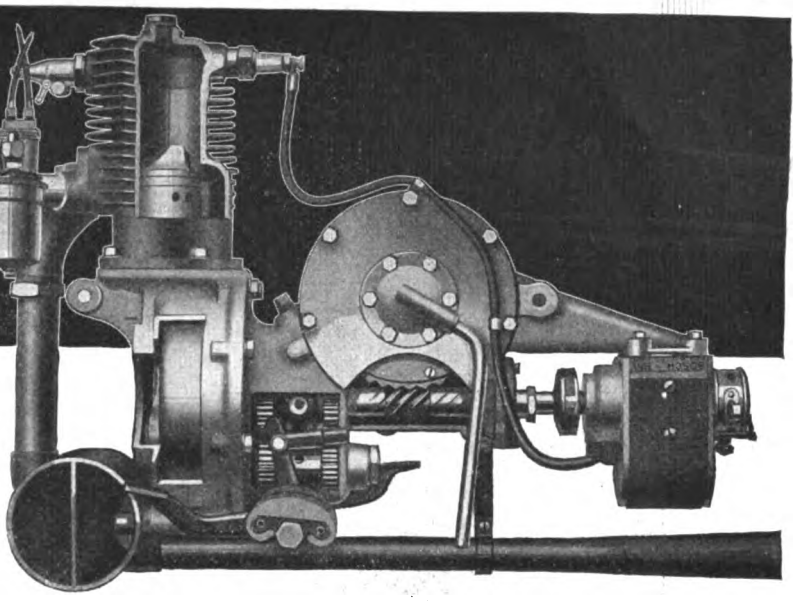
Just as the automobile was a bad proposition for dealers while it was raw, but a fortune maker when it came to its senses, so with the motorcycle.

The dealer proposition on motorcycles is going to change for the better in the next few months. Prompt action, with a view into the future, will enable the right dealers to turn profits they never got before.

The Cleveland Motorcycle for Men and Women

Digitized by Google

Make it Pay on Motorcycles



Why waste time trying to sell something that has to be forced on the market when you can easily hand over exactly what the market is asking for?

The Cleveland Motorcycle is the coming car—for men and women—for boys and girls, for all ages, all services, all conditions.

Dealers who take up the Cleveland will end their doubts about the future of their business—will have something of permanence—a backbone for future growth.

Quantity is the thing. One of our dealers sold 500 Clevelands in less than six months. We have orders from Holland, Spain, South America, Australia, everywhere.

We need a few serious dealers who are sensible enough to see that the motorcycle that sells for $160.00 will practically sell itself — by hundreds and thousands—establishing a business that will grow from year to year —bigger and better.

The Cleveland is the only motorcycle that is built—in miniature—to automobile specifications—the only one with worm drive and every part of absolutely highest quality. Fewest number of parts, unique design, S. K. F. ball bearings, Bosch magneto, Brown & Barlow carburetor, Firestone non-skid tires, drop-forged frame fittings, aluminum castings, multiple disc clutch, two-speed transmission — all time-tried and foolproof. Runs 75 miles on a gallon of gasoline, climbs any travelled road and has all the power and speed any reasonable person wants—35 miles per hour.

The Cleveland Demountable Power Unit

Note the absence of clumsy mechanism. The entire unit can be removed from the frame by taking off two nuts. All units interchangeable. Power stroke at every revolution. Ideal compression chamber in crank case. No valves. Absolutely precise port action. Simplest and most compact motor on the market. Weight 150 pounds.

Important

This model is here to stay—it can't be improved. The only thing we have added to the 1916 model is a kick-starter at $10.00 additional if wanted.

For available territories, more complete information about the machine and the outline of our advertising and sales helps for dealers, write at once to

New Tire Sales

EARLY season wheels are now needing new tires.

You can turn the attention of these new tire purchasers to your store by distributing the handsome Goodyear Bike Caps in your neighborhood.

These attractive Bike Caps have proved one of the most effective helps we have ever offered to bicycle dealers.

There is no reason why you cannot repeat the success of other dealers by giving out these caps to the men and boys in your neighborhood.

80,000 of these gay colored caps, with the dealer's name on the front, are already spreading good will for these dealers in different cities and towns of the country.

These caps we sell you at cost, a trifling expense. You give them out with purchases only. They go everywhere and create favorable comment about you and your store.

A postal from you places a sample cap with prices on your desk. Write for them today.

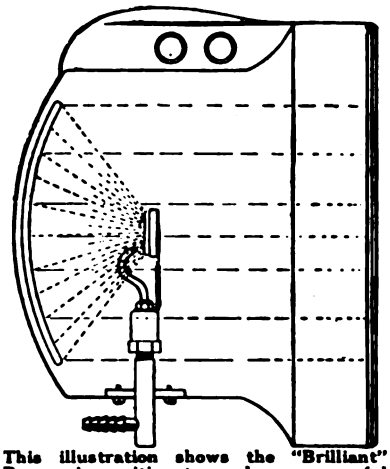
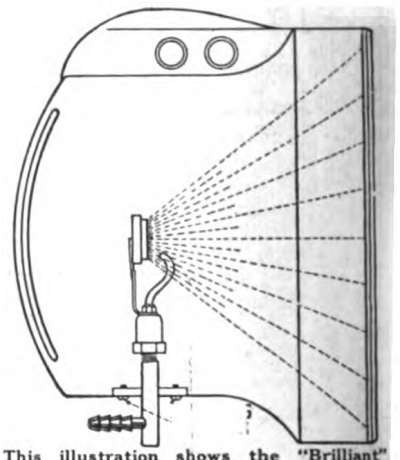
Here's The Way— To Better Light—



This illustration shows the "Brilliant" Burner in position to produce a powerful beam.



This illustration shows the "Brilliant" Burner in position to produce a soft, diffused, white light.

BRILLIANT BURNERS

THE PERFECT HEADLIGHT

WILL GIVE YOU THREE TIMES THE LIGHT YOU ARE NOW GETTING WITHOUT USING ANY MORE GAS—or—THE SAME LIGHT ON ONE-THIRD THE GAS.

You always have a dependable light—absolutely steady—no flicker—no jarring or blowing out even without the front glass in the lamp. In short, you have

Electric Brilliancy with Prest-O-Lite Reliability.

Riders appreciate the best of lighting equipment for night riding. This man has learned which is the best.

The "Brilliant" Burner enables you to see the road better than you had ever thought possible. Riders say "Makes night riding a pleasure."

We can tell you about the things we guarantee for this Burner, that it will not crack the reflector, it can be turned down, its adaptability to city ordinances by a single half turn, the quality and quantity of light—but to get in the saddle behind the light is to appreciate it. Try it. Get a set from your Dealer or send direct. The price is $2 per set prepaid.

KALAMAZOO, Mich., May 23, 1916.

THE MONOSMITH BROTHERS CO.,
Spencer, Ohio, U. S. A.

Gentlemen:

I am sending you herewith a money order for One Motorcycle Set Brilliant Burners, if they will fit an Old Sol No. 8 Lamp.

I showed that adertisement of yours in Motor Cycling and Bicycling of May 22nd to some of the riders here and they said that they did not believe it would make any difference in the light and that it would burn out. So I am sending for a set to put on my Motorcycle.

Please send me some literature on same and please rush. Yours truly,

(Signed) H. K. Voss.

432 Jasper Street.

KALAMAZOO, Mich., Aug. 11, 1916.

THE MONOSMITH BROTHERS CO.,
Spencer, Ohio, U. S. A.

Gentlemen:

Some time ago I bought one of your Brilliant Burners and wish to say that it is everything you claim for it. I would not be without it as it is better than the Electric, and it does not blind people walking or riding in front of it.

It makes night riding a pleasure as I can see the road better than with the old burner, and my gas lasts longer. Everybody that sees it says "Some light you have there."

Please let me know how much an Automobile Set costs as I have had several ask me the price.

If I could not get another, I wouldn't take $10 for mine. Yours truly,

(Signed) H. K. Voss.

432 Jasper Street.

DEALERS! WE WANT YOU TO KNOW THAT—

Our efforts are concentrated entirely on the manufacture and sale of one product—"Brilliant" Burners for Motorcycles and Automobiles. And "Brilliant" Burners are no longer an experiment, but a tried and proved means of properly headlighting Motorcycles and Automobiles—practical in every sense of the word.

Our Factory and the Dealer's Salesroom are The Way to Better Light for the Motorist.

Order at once. You can sell a set of Brilliant Burners to every Prest-O-Lite user. They sell themselves. Greatest self-advertisers. You should let us show you what other dealers are actually doing. Send for literature and Proposition to Dealers.

"Brilliant" Burners can be used, and are easily installed, in any form of lamp adapted to the use of the standard height bat-wing or fan-tail burner in connection with a Prest-O-Lite gas tank. The combination is ideal.

We GUARANTEE Brilliant Burners to do all that is claimed for them in our advertising and printed matter.

You Need This Brilliant Dependable Light

Good light is of vital importance to every motorcyclist. The operation of a motor-cycle is such that the rider must have a clear vision of what is directly ahead. In daylight this is easy, but at night it's different. The rider needs a light that is brilliant, penetrating and gives him perfect vision of the road ahead. Prest-O-Lite gives you all this and more. It is very convenient—always dependable—and will never fail you in a "tight" place.

For these fundamental points of excellence, Prest-O-Lite is the choice of experienced riders the world over. Thousands of municipalities owning motor-cycles will have nothing else in their departmental service.

Easily Attached to Any Motorcycle

On any motor-cycle you may buy you can get Prest-O-Lite. Your dealer can make you up a very attractive equipment combination that includes "Prest-O-Lite, a good lamp and a mechanical horn," at a very conservative price.

See that you get Prest-O-Lite. Its initial cost is small—its upkeep expense is trifling.

Write for our free motor-cycle lighting booklet.

COFFMAN ANNOUNCES CYCLE SHOW PLANS; BIGGER AND BETTER THAN EVER BEFORE

Chicago Show for Coliseum, November 13 to 18, and New York Show in Madison Square Garden, December 4 to 9—Show Committee Enlarged to Include Cycle Parts and Jobbers' Representatives—Chicago Exhibits Will Be Rushed to New York by Fast Freight in Special Cars

TOLEDO, Sept. 19.—General Manager Coffman of the Motorcycle and Allied Trades Association fired the first gun in his campaign to make the coming Chicago show an even bigger and better affair than it was last year today.

In opening his campaign to obtain a record breaking number of exhibitors at the Chicago show, which is scheduled to be held in the Coliseum during the week of November 13 to 18, Coffman calls the attention of the trade to the fact that every make of American motorcycle and practically every make of bicycle will be gathered together under the roof of the big building.

He lays emphasis on the fact that some 1,800 dealers and 100 jobbers visited the last Chicago affair.

Formerly the National shows have been run under the exclusive direction of the Motorcycle Manufacturers' Association, but the present show is being run with the help of the entire trade, for both the Jobbers' Association and the Cycle Trades and Accessories Association are represented on the show committee. The committee comprises Arthur Davidson, of the Harley-Davidson Motor Co.; T. W. Henderson, of the Henderson Motorcycle Co.; Frank J. Weschler, of the Hendee Mfg. Co.; Frank T. Chase, of the Frank Mossberg Co.; Fred. W. Grubb, of the Union Supply Co.

At the close of the Chicago show arrangements have been completed to load all the exhibits on special cars and rush them through to New York by fast freight so that the exhibitor is spared all the trouble of separate shipment and there will be no doubt about his exhibit getting in on time. The New York show is slated to be run in Madison Square Garden during the week of December 4 to 9.

It is pointed out that, as the coming Windy City show is expected to be bigger and better than ever before, it is essential that intending exhibitors decide on their space requirements at the earliest possible moment.

BOSCH AGAIN BREAKS GROUND FOR ADDITION

Newest Wing to Springfield Factory Will Provide 60,000 Square Feet of Floor Space —Building to Be Rushed

SPRINGFIELD, Mass.—The recent large addition to the extensive plant of the Bosch Magneto Co. of this city is to be further augmented by another large structure which will provide 60.000 additional square feet of floor space. The ground has already been broken for the new building, and arrangements have been made by which the contractors will rush the construction work to the utmost in order to afford facilities at the earliest possible date for taking care of the increased demand for Bosch products.

The new addition is to be a single story building for the more particular branches of Bosch manufacturing, and consequently is to have a roof of the saw-toothed type which will provide maximum lighting and ventilation. When this second addition has been completed the Bosch company will have added more than 130,000 square feet of manufacturing space to its works during 1916.

It was believed when the first addition was made to the plant that the scope of the plant was sufficiently large to meet all demands that would be made upon it for a year, but such was not the case.

MOTOR WHEEL EMPLOYES ARE INSURED

MILWAUKEE, Wis.—Each employe of the A. O. Smith Co., maker of the Smith Motor Wheel, who has been with the company more than a year, is now covered by a group life insurance policy that the company has taken up. The amount of the policy grows each year until reaching $1,000.

KANSAS CHAMP MEET BRINGS FORTH A TIE

Spec Warner and Ray Weishaar Both Aggregate 13 Points at Dodge City — Protest May Alter Results

DODGE CITY, Kan., Sept. 14.—"Spec" Warner, of Ellsworth, and Ray Weishaar, each gathered in 13 points for the Kansas State championship at the six event meet staged on the two-mile speedway here today. Warner, astride an Indian, of course, took two firsts, which netted him five points each, and a second, which brought his total up to 13; Weishaar, on a Harley-Davidson, took four seconds at three points each, and a third at one point, which made the totals equal.

If, however, the protest entered by Referee Irwin Keller against Don Johns is al-

POPE SALES FORCE VISITS WESTFIELD

Representatives From All Territories Gather at Factory to Go Over New Models—Royally Entertained

WESTFIELD, Sept. 18.—The sales force of the Westfield Mfg. Co., accompanied by some of the local factory officials, journeyed to New London, Conn, Saturday for a week-end automobile trip. There were about 25 in the party. At New London a banquet was served and Sunday a trip was enjoyed on the Sound in a yacht as guests of President Walker. The boys returned Sunday night brimfull of enthusiasm and ready to start out on their several routes.

Today and tomorrow further conferences are to be held and the salesmen will be well along on their rounds by the last of the week. The 1917 models of both bicycles and motorcycles are bound to bring business to the local factory in big chunks and the convention of the salesmen the past week has been one of the most profitable ever held. The men have held conferences with various heads of departments and have also been royally entertained. Among those present at the conferences were Joseph Redlinger, Jack Yates, M. G. Littlefield, C. A. Leander, Charles T. Quinn, O. J. Oberwegner, Frank R. Swayne, Thomas B. Hallbourg, D. L. Marshall, B. A. Edgar and D. G. Ryan.

HASTINGS GOES WITH N. Y. SPORTING GOODS CO.

NEW YORK, N. Y.—"Ted" Hastings, formerly in charge of the Australian branch of the Hendee Mfg. Co. and more recently a member of the Indian advertising department has assumed charge of the export department of the New York Sporting Goods Co., New York Indian distributors and large jobbers. Hasting's wide experience in the Antipodes, and a thorough knowledge of the export business gained prior to his entry in the motorcycle business fit him ideally for his new duties.

STOKES BREAKS LATONIA TRACK RECORD

LATONIA, Ky., Sept. 11.—Glen Stokes on an Excelsior walked off with all the glory in the four event meet staged on the local single-mile track today. Stokes took the ten-mile professional, the five-mile professional and the single-mile time trials; in the latter he established a new record for the track, bringing the figure down from :54 to :51½. George Hickman on an Indian won the five-mile amateur event, which drew the curtain on the program.

VITALIC CLUB HOLDS FIRST SOCIAL EVENING

ERIE, Pa., Sept. 18.—The Vitalic Club, which includes all members of the office force of the Continental Rubber Works, gave a social evening last Friday evening.

The party took the form of the old-fashioned corn roast, and about forty members were carried out into the country a distance of five or six miles in the big Continental truck. A big log fire held its usual charm and brought back many of the old-time songs and games. Late in the evening they were served with a hot luncheon and following this came the corn and marshmallows.

Incidentally, the Vitalic Club is doing much to promote the bonds of friendship among the Continental office folk, and this little affair is but the beginning of a series of social evenings

FOUR PERFECT IN KANSAS ENDURANCE

Consolation Run Brings Out Six Contenders of Whom Two Are Penalized — Tie to Be Run Off

KANSAS CITY, September 18.—In order to clear up the situation growing out of its endurance run to Joplin, Mo., last week when all save one of the dozen contestants made rapid tracks for home without stopping to sign the checking sheets when a storm broke, the Kansas City M. C. ran consolation run to Topeka today which brought out an even half dozen contenders, although 11 were scheduled to ride.

The route carried the riders from Kansas City where they checked out at six o'clock this morning, through Bonner Springs, Lawrence and Topeka which was reached at ten o'clock in the morning. The return journey was started at three o'clock and the riders checked in at the finish at seven tonight. The total distance was 159 miles.

G. Hymes, on an Indian, Lester Rogers, on a Henderson, Walter Bemus, on a Harley-Davidson, and Claude Whitcomb, on an Indian, finished with perfect scores. In order to decide on the distribution of prizes, the quartet will hold a little run of their own, the winner to take his choice and so on down the line.

KANSAS CHAMP. MEET BRINGS FORTH A TIE

(Continued from page 9)

lowed, Weishaar will get the title in fine style, for Johns won two of the events in which the Harley-Davidson pilot was the runner up. Johns was protested on the ground that he is not a resident of Kansas, and rode under protest.

Warner Takes Short Events

Warner cleaned up the single mile "pro" in :44⅗, leading home Weishaar and Johnson, also on a Harley-Davidson in the order named. . In the two-mile "pro" the finish was the same, the time being 1:25⅕.

The five-mile event went to Johns in 3:28⅘; second was Weishaar and third Johnson. The ten-mile finish was identical, the time being 7:08⅘.

Daniel Boone, on a Harley-Davidson, took the ten-mile sidecar race, and was followed home by Alexander, Indian, and Center, Excelsior, in the order named. The time was 12:00⅘.

Johnson came into his own in the 25-mile feature, winning in 19:31⅗ from Warner and Weishaar.

M. M. A. PASSES OUT; M. & A. T. A. COMES IN

Charter of Motorcycle Body Amended to Include Parts Makers and Other Boosters at Buffalo Meeting

BUFFALO, Sept. 14.—To all intents and purposes the amalgamation of the Motorcycle Manufacturers' Association, Inc., and the Motorcycle and Allied Trades Association was legally completed at a special meeting of the former body at the Hotel Lafayette today at which the broader name of the latter association was assumed, the constitution and by-laws amended to conform with the newer and broader purposes of the enlarged body, and the way paved for the alteration of the charter to conform with the changes made.

Those present at the meeting were President T. W. Henderson, Henderson Motorcycle Co.; Frank J. Weschler, Hendee Mfg. Co.; C. B. O'Hare, Aurora Automatic Machinery Co.; Horace M. Huffman, Davis Sewing Machine Co.; and Secretary E. F. Hallock. President Henderson held proxies for the Harley-Davidson Motor Co., Westfield Mfg. Co., Reading-Standard Co. and A. O. Smith Co.

The amendments to the constitution and by-laws all were directed toward broadening the scope of the organization to include manufacturers of parts and accessories, jobbers and other concerns interested in the promotion of motorcycle sales as well as the motorcycle makers, and in a general simplification of the various provisions to eliminate red tape. Among the biggest of the changes is the enlargement of the board of directors from five members to seven and a change in the dues and initiation fee. The meeting adopted a resolution empowering the board of directors to take such legal steps as are necessary to alter the association's New York State charter.

Until the next meeting, which will take place in Chicago during the show week, when the informal association formed at Milwaukee in June last becomes part and parcel of the enlarged motorcycle body, the present officers and board of directors will remain in office. The chair appointed Messrs. O'Hare, E. M. Jackson, Quinlan, Speaks, Walls and Briggs as a membership committee to line up new members for initiation at the next meeting of the body.

MOTORCYCLE PROMINENT IN SAVINGS BANK CAMPAIGN

DETROIT, Mich.—The motorcycle, or rather the sidecar combination, figures most prominently in a savings bank campaign conducted by the Wayne County and Home Savings Bank of this city. The sidecar rig is shown in a large drawing in contrast to an automobile, and under this drawing is an admonition about living within your means and not trying to run a touring car on a motorcycle income.

The two chief sentences in the letterpress under the drawing are: "Put the difference in the bank" and "A family can't get ahead without money."

OPPOSED MOTOR LIGHTWEIGHT HEADS INDIAN LINE

Newcomer in Hendee Series is Remarkable for Perfection of Balance, Flexibility and Smooth Running; Rates at 2¾ H. P. and Sells for $165—Triple Stem Forks and Two-Unit Tank Are Among New Powerplus Features

SPRINGFIELD, Mass., Sept. 20.—Following its custom of offering the motorcycle public something new each season—and in every case a distinct advance over that which has preceded it—the Hendee Manufacturing Company announces a sensational departure from the orthodox form of two-cylinder motor as the leader of the Indian line for 1917. This motor, which is fitted to the Indian Lightwin, is of the opposed cylinder type and is absolutely vibrationless and remarkably flexible. It has an astonishing range of speed and is smooth-running at all openings of the throttle. It is of the four-stroke type and has the mechanically-operated inlet and exhaust valves situated side by side.

The Indian Lightwin—which is pronounced "li-twin"—is fitted with three-speed gearset, Light Pressure starter, double loop frame and spring fork. The opposed motor, which is rated at 2¾ horsepower, is set horizontally in the frame with the cylinders fore and aft. The flywheel is external and one hand lever on the right bar controls all speeds of the motor. It is a machine of light weight possessing the advantages of the larger Powerplus models, with enough power and speed to go anywhere that the rider may desire.

While the motor on the Lightwin is utterly distinct from any previous motorcycle powerplant construction in this country, it is by no means an experiment. Abroad, this form of motor has been adopted as regulation by the British and French armies for despatch riding and convoy work, in which any powerplant is subjected to the most grueling tests, day after day. It was given the O.K. because it combined extreme flexibility with power and perfect operation under the most trying conditions of service at the front for two years. It is needless to say that the Hendee engineers, even after the record which the opposed cylinder motor has, gave it a long and severe series of tests before offering it to the public for the new season.

But while the Lightwin occupies such a prominent position in the 1917 Indian line, the Powerplus Big Twin has by no means been overlooked for the new season. There are five big improvements on this model over the 1916 construction, as well as sixteen of lesser value, but nevertheless of due importance. The five major improvements are the triple-stem front fork, the refined motor, the enlarged two-unit gasoline tank, the quick-acting gear shift lever and the webbed vanadium steel frame. The others include improved fork rocker arms, double anchorage for the handlebars, integral sidecar lugs, four braces on each side to the rear mudguard, a new design of starter lever catch and a larger capacity tool box situated at the side of the frame under the saddle. Castellated nuts are now fitted on the front axle.

The 1917 Indian line consists of the following models: Type N, Powerplus twin with cradle spring frame and three speed gearset, $275. Type NE, Powerplus twin with cradle spring frame and three speed gearset with complete electrical equipment including ammeter, $315. Type O, Lightwin, with opposed cylinder motor, double loop frame and three speed gearset, $165. Type P, Powerplus twin Police model, with cradle spring frame and single gear, $250. Type R, Powerplus twin "Military Model," with rigid frame and three speed gearset, tandem seat, auxiliary gasoline and oil tanks and olive drab finish, $265. The Powerplus motors all develop from 15 to 18 horsepower on dynamometer test. Prices are in all cases f. o. b. Springfield, Mass.

In addition, the Hendee folks offer the Type S, an improved Indian sidecar with adjustable axle at $80, and the Type T, a commercial or delivery van with adjustable axle and body 40 x 21 x 21 inches with metal cover at $70.

The motor on the Lightwin or Model O is of the two cylinder type, the cylinders being horizontally arranged 180 degrees apart, fore and aft. The cylinders are fitted with generous cooling ribs, with the valve chambers on top of each casting when assembled in the motor. The mechanically - operated inlet and exhaust valves are side by side on the upper portion of the cylinder, the pushrods being actuated by rockers from a separate camshaft. The valves are of the mushroom type and the guides are flanged at their outer ends. The pushrod guide for each valve has a similar flange and over these flanges on each cylinder is fitted a valve guard which is readily removable and which protects the valve stems and springs from dirt, etc. It goes without saying that the tappets are adjustable.

The sparkplug, of Splitdorf make, fits in an aperture in the inlet valve chamber on each cylinder and is vertical in position. Pistons with two rings in the head are used. The connecting rods have big ends of the marine type, each bolt being fitted with castellated nuts. Shims are fitted in the big ends to allow for taking up wear. The crankshaft has two throws, arranged 180 degrees apart and accurately balanced.

The aluminum crankcase is cast with a sump or well for lubricant in the lowest part. Bosses on this crankcase take the holding-down stud-bolts, by means of which the motor is fitted to the double

INDIAN TYPES AND EQUIPMENT FOR 1917

TYPE N.—Powerplus twin cylinder with cradle spring frame and three speeds—$275.

TYPE NE.—Powerplus twin cylinder cradle spring frame with three speeds, complete electrical equipment including ammeter—$315.

TYPE O.—Lightwin, two cylinder opposed motor with double loops frame and three speeds—$165.

TYPE P.—Powerplus twin cylinder Police Model with cradle spring frame and single gear—$250.

TYPE R.—Powerplus twin cylinder "Military Model" with rigid frame, three speeds, finished olive drab. Tandem seat, auxiliary gasoline and oil tanks included in price. Military construction throughout—$265.

TYPE S.—Improved sidecar with adjustable axle—$80.

TYPE T.—Standard delivery van with adjustable axle, body 40 x 21 x 21 inches, metal cover with latch—$70.

EQUIPMENT

MAGNETO—Dixie, Splitdorf Electrical Company, Newark, N. J.

ELECTRIC GENERATOR—On Type NE, Splitdorf Mag-Generator, Splitdorf Electrical Company, Newark, N. J.

LAMPS—On Type NE, Hornlite and Old Sol tail light, Hawthorne Manufacturing Company, Bridgeport, Conn.

CARBURETER—Schebler or Indian Special. Wheeler & Schebler, Indianapolis, Ind., and Hendee Manufacturing Company.

SPARK PLUGS—Splitdorf, Splitdorf Electrical Company, Newark, N. J.

CHAINS—Duckworth, Duckworth Chain & Manufacturing Company, Springfield, Mass.

GRIPS—Pennsylvania, Pennsylvania Rubber Company, Jeannette, Pa.

BATTERIES—Witherbee, Witherbee Igniter Company, Springfield, Mass.

SADDLES—Troxel, Troxel Manufacturing Company, Elyria, O.

TIRES—Goodyear, Goodyear Tire & Rubber Company, Akron, O.; United States, United States Tire Company, New York; Firestone, Firestone Tire & Rubber Company, Akron, O. Choice in order given.

BALL-BEARINGS—Fafnir, Fafnir Bearing Company, New Britain, Conn.

VANADIUM STEEL SPRINGS—Hawkridge Brothers, Boston, Mass.

TUBING AND RIMS—Standard Welding Company, Cleveland, O.

VANADIUM STEEL TUBING—Ohio, Ohio Seamless Tubing Company, Shelby, O.

ALUMINUM CASTINGS—Harley Manufacturing Company, Springfield, Mass.

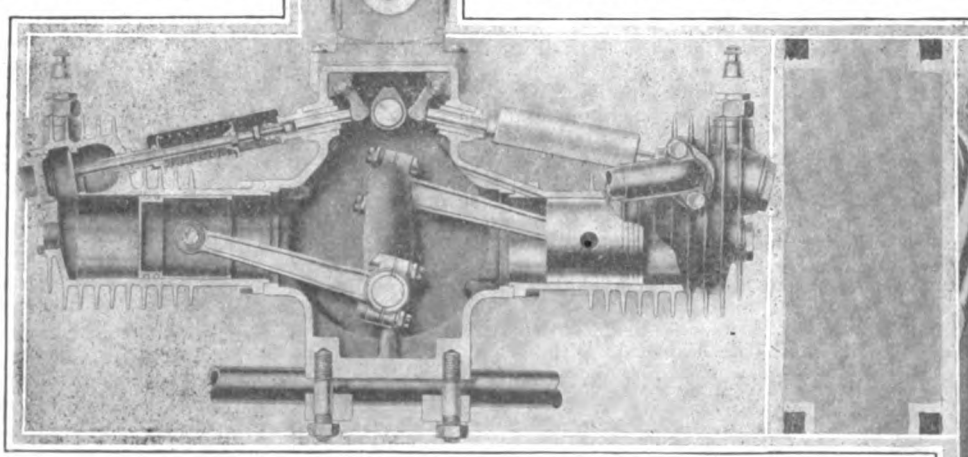
Right Side of Type O Lightwin Showing Gear Shift and Brake Controls. Note Large Muffler and Tail Pipe

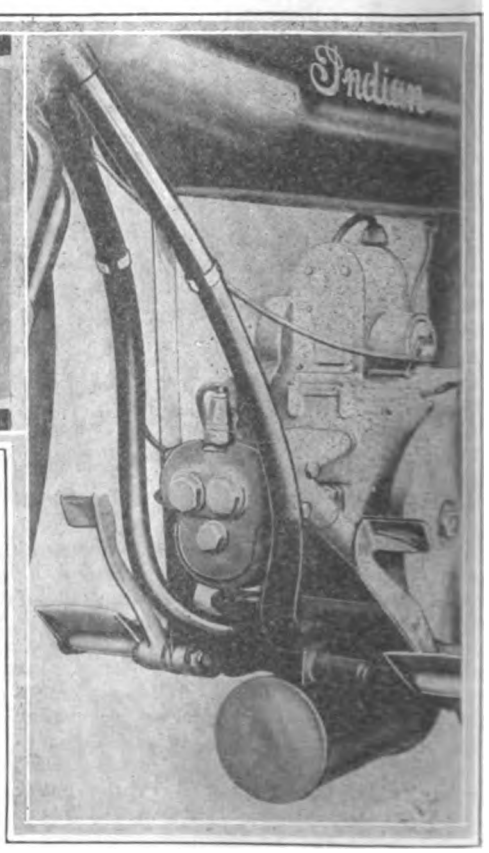
loop frame. In addition to balancing the crankshaft, the connecting rods and pistons are balanced with utmost precision.

The Lightwin motor has a bore of 2 inches and a stroke of 2½ inches, giving a piston displacement of 16.70 cubic inches. While rated at 2¾ horsepower, this motor gives 4 horsepower on dynamometer tests. The crankshaft is prolonged at the left side to take the front drive sprocket and outside flywheel, the latter being a steel forging of high quality. The timing and valve gears are located in an external casing formed integral with the crankcase casting, and only three gears are used. The intermediate gear of the train, having twice as many teeth as that on the crankshaft, carries the distributor which passes the current to the spark-plugs at the proper interval. The gears are lubricated from the oil in the crankcase. The uppermost or third gear of the train drives the Dixie magneto, being keyed to the armature shaft.

The carbureter fitted is specially built in the Hendee plant for this motor. It is of the automatic type, all proportions of air and gasoline being controlled by the throttle. The inlet pipes have the minimum of curves, ensuring an easy entrance of mixture to the cylinders. Lubrication is by splash, the sump holding ample supply of oil for over 100 miles of running at normal speeds. Additional oil is provided by a hand pump fitted to the side of the separate oil tank. This tank has a capacity of one quart, which, with the contents of the sump, gives ample lubricant for over 250 miles of travel.

The muffler is fitted below the motor,

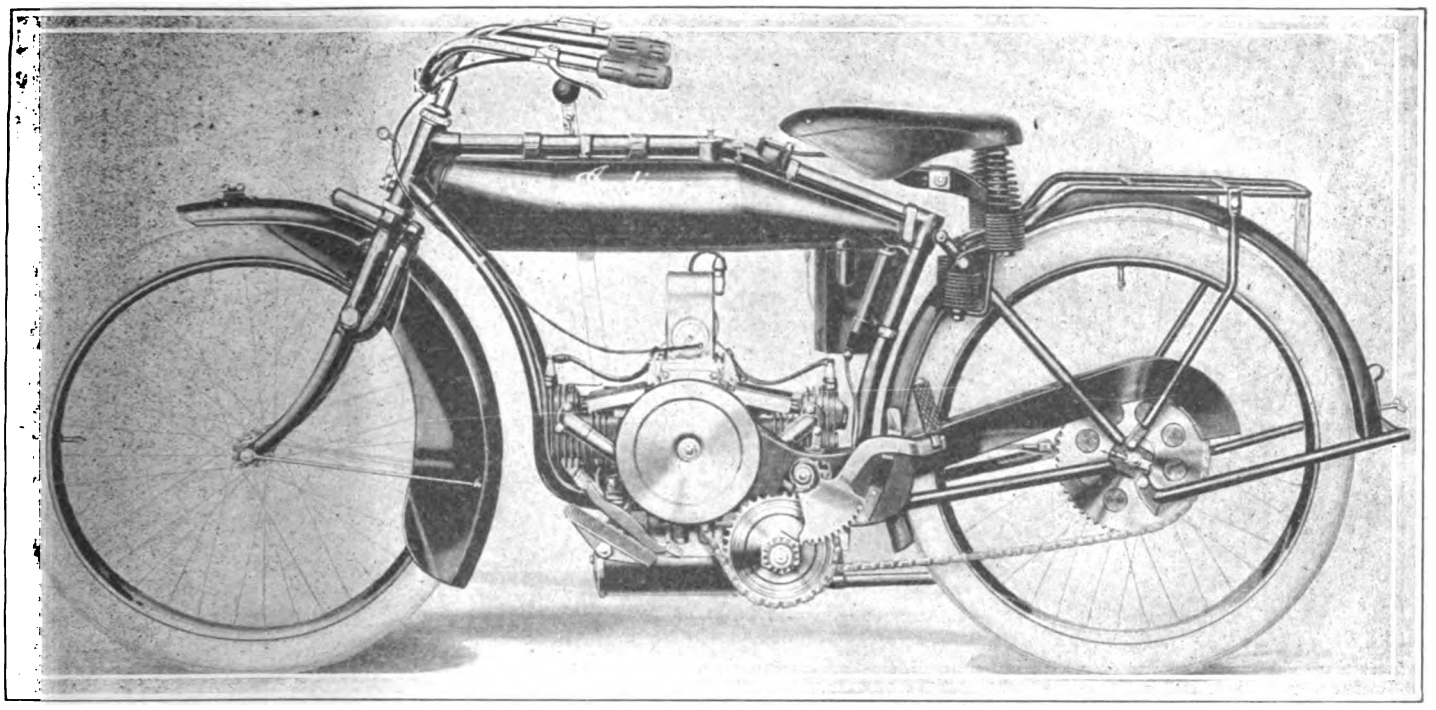




Above is a section of the Type O or Lightwin motor, showing the simplicity of the working parts. At the top is the magneto with its high tension cable, and immediately below is the exhaust cam between the two rockers for the front and rear exhaust valves respectively. The one-piece balanced crankshaft with the marine-type big ends on the connecting rods comes next. At the lowest part of the section is the sump or well containing the lubricating oil and the holding down bolts attaching the motor to the double loop frame.

The view at the right shows the accessibility of the valves between the tubes of the frame at the front, also the footrest and pedal brackets and the muffler. The brake pedal is at the left of the illustration, with the gearshift lever directly in rear of it. The clutch pedal, which is of the rocker type, is mounted on its own shaft just ahead of the flywheel, the shaft extending to the opposite side of the frame and there connecting with the worm-device operating the disc clutch. The muffler is quickly detachable and is of large capacity.

Digitized by Google



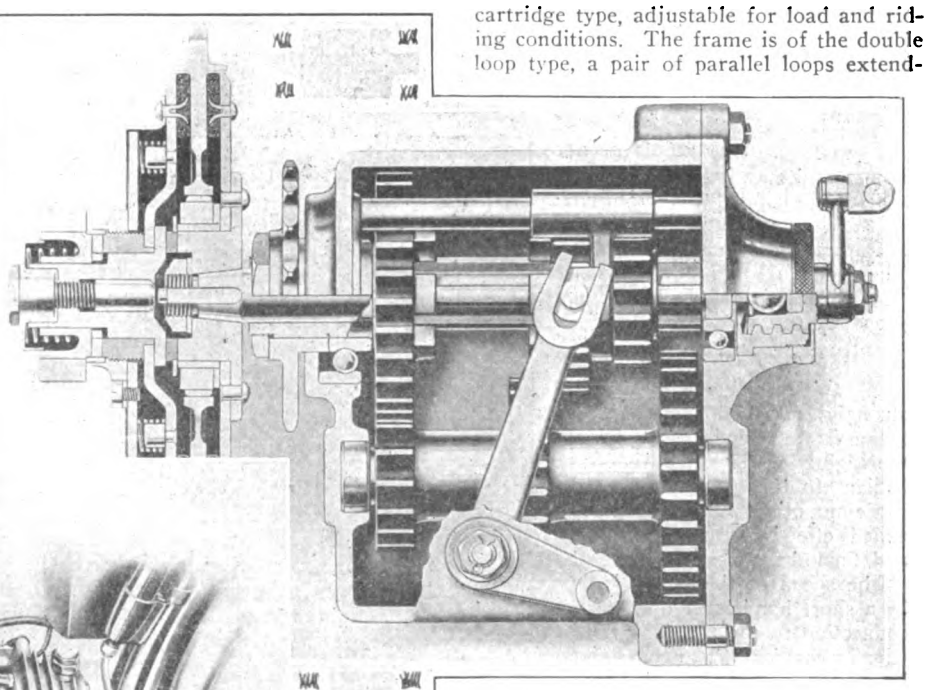
Flywheel Side of Lightwin with Opposed Cylinder Motor, Cushion Cartridge Spring Fork and One-Piece Chain Guard

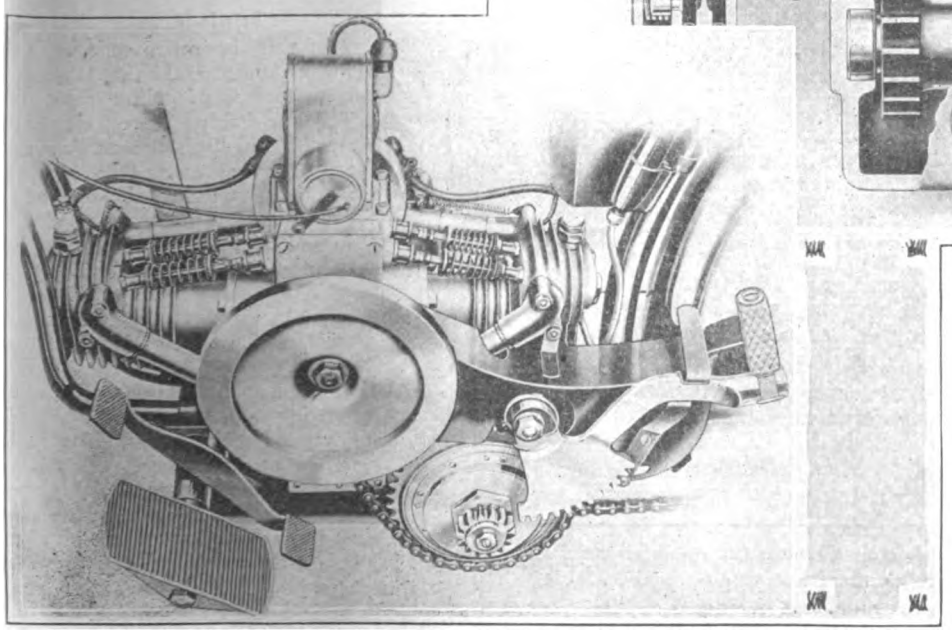
with separate inlet pipe leading into it at the upper portion. The motor is so carried that by loosening two bolts it can be readily removed. It is of ample capacity and is so constructed as to totally eliminate back pressure. A tail pipe is fitted to carry the exhaust well to the rear.

Primary and final drives are by chain, of the Duckworth type, 3/16 inch wide and ½ inch pitch. The clutch is the Indian dry plate type with Elektra friction lining in contact with steel. There are two Elektra discs with one steel disc between them. This clutch is mounted on the main shaft of the three speed gearset in countershaft position. The three speed gear is of the progressive type, with dog clutch direct drive on high gear. Intermediate and low gears are of the sliding type. The main shaft and sleeve are carried on ball-bearings, while the layshaft is borne on high class bronze bushings. The clutch is operated by a shaft passing through the hollow mainshaft of the gearset, a worm and nut device on the right side acting on this shaft by linkage from the clutch pedal.

The Light Pressure starter sector acts on a ratchet-mounted pinion on the extension of the main shaft of the gearset. The starter arm is pivoted on a boss on the frame at the left side. One complete movement of the start turns the motor over three times.

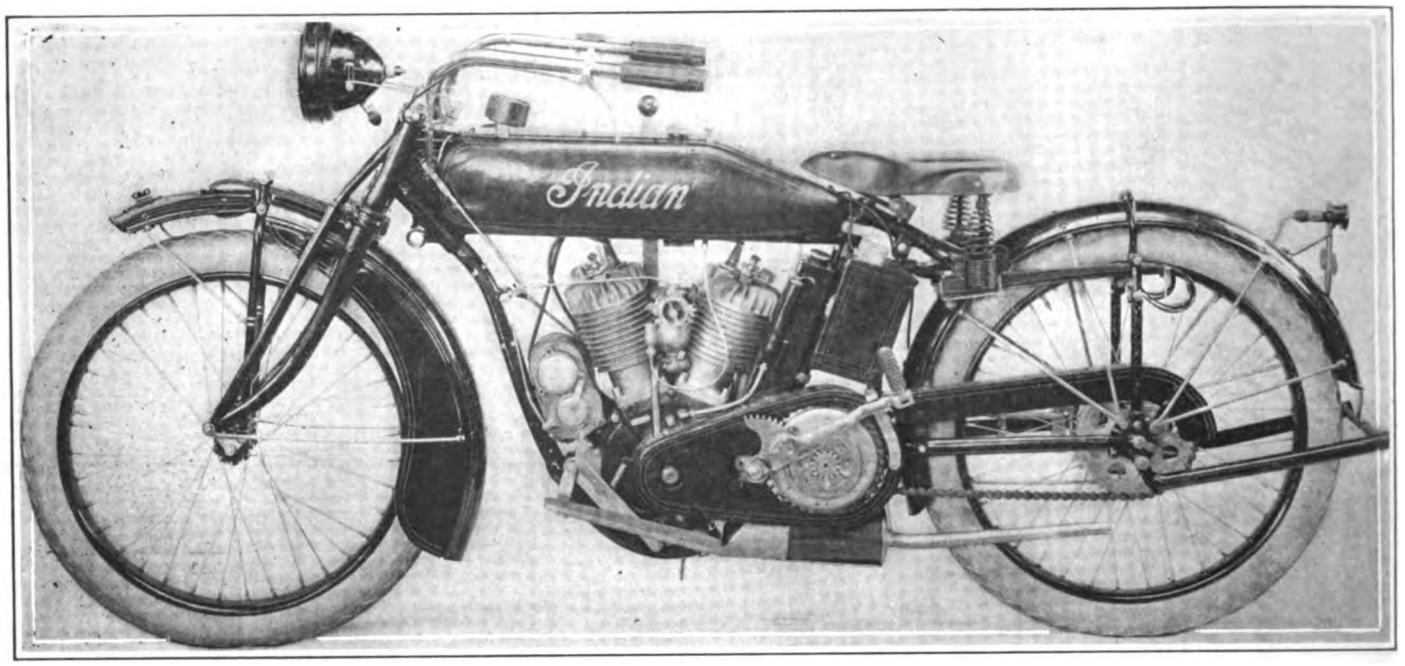
The front fork is of the Indian cushion cartridge type, adjustable for load and riding conditions. The frame is of the double loop type, a pair of parallel loops extend-





At the left is the powerplant of the Lightwin with mechanically-operated valves arranged on top of the cylinder, outside flywheel and sparkplugs in vertical position. The Light Pressure starter and one-piece chain guard, as well as the footrest and clutch pedal are clearly shown. Above is a section of the three-speed gearset with clutch mounted on the mainshaft. The clutch is operated by the worm-device and through rod from the opposite side of the box.

Digitized by Google



Left Side of Type NE, Electrically-Equipped Twin with Hornlite, Ammeter, Mag-Generator and Combined Tail Light and License Bracket

ing from the steering head diagonally and finally in a horizontal direction at the lowest part. These tubes form a cradle to which the motor is attached by a double cap-square and four bolts. This means of attachment renders the motor easily removable from the frame. The top tube slopes toward the rear and carries the 2½-gallon gasoline tank by stout bands. The tank is of stream line form and is fitted with priming gun and needle shut-off valve.

The Cantilever Comfort saddle is mounted on the sloping portion of the top tube. The saddle proper is mounted on a long and resilient tongue of spring steel and is borne at the forward end in a special fitting attached to the top tube. The saddle absorbs all road vibration. The height from the saddle proper to the ground is 29 inches.

Carrier and Stand

A tubular luggage carrier, strongly attached to the rear frame is standard equipment on the Lightwin. The stand is of the Indian folding type with anti-rattle mounting. A one-piece chain guard effectively covers both primary and final drive chains.

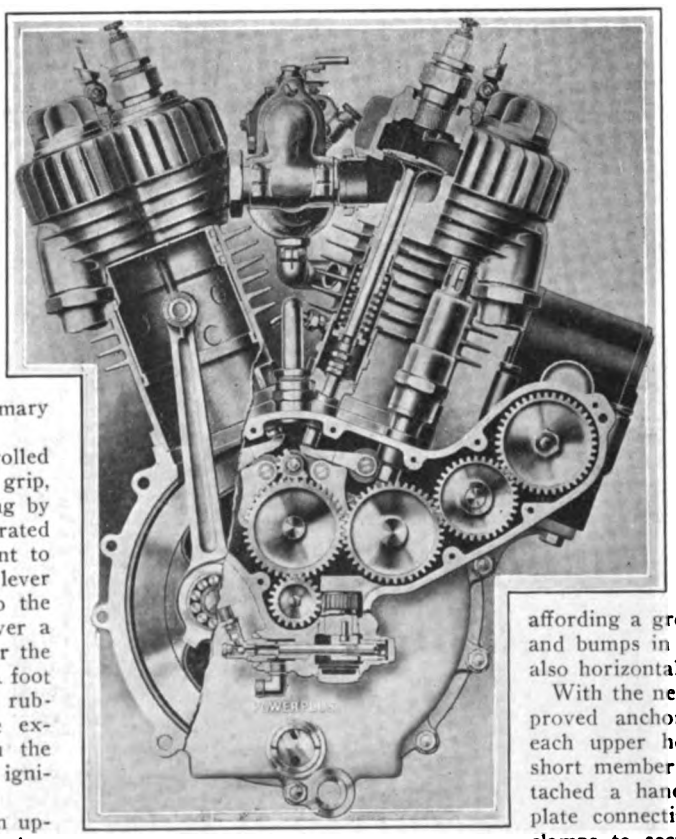
The speed of the motor is controlled by a short hand lever on the right grip, connection to the throttle arm being by wire mechanism. The clutch is operated by a rocker pedal placed convenient to the left footrest. The gear shift lever is at the right side, convenient to the rider's hand, the lever working over a notched quadrant with positions for the three speeds and a neutral point. A foot lever of ample length close to the rubber covered footrest actuates the external contracting band brake on the right side of the rear hub. A fixed ignition timing is used.

The handlebars are of the Indian upright type with comfortable rubber grips. Mudguards are of ample size with beaded edges, the front guard being fitted with deep sidewings to protect the rider from side splash. Wheels have 36 spokes, front and rear, and are 26 inches in diameter. A choice of Goodyear, United States or Firestone tires in the order named is offered, the size in each case being 26 x 2¼ inches. The wheelbase is 49½ inches.

Exceptional Price

The tool equipment, which includes the tire kit, is carried in a leather covered toolbox at the left side of the luggage carrier. Finish is standard Indian red with nickel trimmings. The list price is $165.

The range of speed of the Indian Lightwin is from 6 to 45 miles per hour, all on the movement of the throttle lever. The machine is very economical, covering 80 miles to the gallon of gasoline on ordinary running.



Section of Powerplus Motor with New Three-Ring Pistons and Longer Cylinders. Note Cooling Ribs on Exhaust Valve Caps

Accessibility a Feature

Accessibility is a marked feature of the Lightwin. As mentioned above, the muffler can be taken off by slacking two bolts which hold the footrest bracket and gearset to the loops of the frame. The taking off of four nuts allows the motor to be taken from the frame. The valve caps can be readily reached and work done on the valves without moving the motor from its position. Access to the valve springs and tappets is obtained by removing guards which fit over flanges on the guides, these guards snapping in and out of position.

Triple-Stem Fork

Of the big improvements in the Powerplus models the triple stem front fork is of prime importance. The forksides are prolonged straight through the crown to the top of the stem and have a common anchorage to the end of the stem, this anchorage being a forged plate of heavy construction. Truss rods lead in front of each forkside from end to end, affording a greatly increased resistance to shocks and bumps in the direction of the fork axis and also horizontally.

With the new fork construction there is an improved anchorage for the handlebars. Within each upper hollow end of the forksides fits a short member to the upper end of which is attached a handlebar clamp. The forged anchor plate connecting the forksides is provided with clamps to secure these short members in place. The handlebar height or position can be regulated to any angle desired by this construction. a feature found in no other fork of the same type.

Digitized by Google

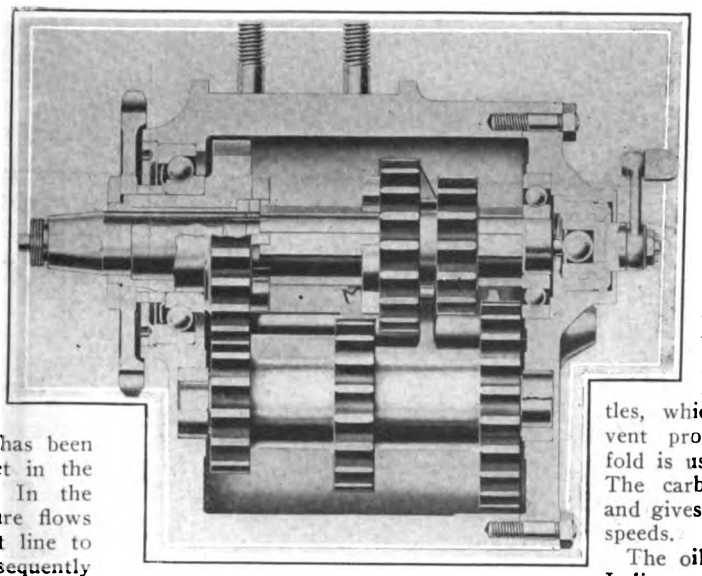
The Powerplus twin motor, seen externally, shows but a very few minor changes, but it is within that the 1917 powerplant is improved. The cylinders are made ¼ of an inch longer than in 1916 and the pistons are also increased ¼ of an each in length. The piston pin is now located below the center of the piston and three rings are fitted. The increased length of the piston gives a longer bearing surface in the cylinder and a resulting longer life in service. Noise and side slap are entirely eliminated.

The freest possible flow of mixture to the inlet valve chamber has been secured by eliminating the pocket in the space below each inlet valve. In the 1917 Powerplus motor the mixture flows from the carbureter in a straight line to the base of the valve and consequently enters without resistance when the valve is opened. In the previous model, the pocket gave opportunities for condensed gas to collect and enrich the mixture, which while it did not interfere with the performance of the motor was undesirable. The elimination of the pocket in each case has made the performance of the Powerplus even more efficient than before.

The exhaust valve caps are now provided with cooling ribs of ample surface, cast on the top of the cap. The ribs are of great value in keeping the exhaust valves at an efficiently low temperature under the hardest kind of service, and while apparently a minor feature of construction are really important in the performance of the motor.

Powerplus Accessibility

Unusual accessibility is another feature of the Powerplus motor for the new season. The entire valve mechanism, timing gear train and magneto drive gears are exposed by the removal of a single housing cover. The oiler is also reached by removing this same cover. Each cylinder can be removed from the crankcase with the motor in the frame without interfering with the other. The valve stems and tappets are reached by removing or lifting the cover provided to protect each. Access to the valves does not necessitate interference with the carbureter in any way. The magneto members are readily accessible, also.



Three Speed Gearbox Used on Powerplus Machines with Ball Bearings on Main Shaft and Bushings on Lay-Shaft

The bore and stroke of the Powerplus motor is the same as in 1916: 3⅛ inches by 3 31/32 inches, giving a piston displacement of 60.88 cubic inches. While rated at 7 horsepower, the motor develops 15 to 18 horsepower on dynamometer test.

The gasoline tank is of the two-unit type for the 1917 season. It is of stream line form and gives a smooth flat top to the machine, making the space available for speedometer, ammeter or other instruments. The two units have a combined capacity of 3½ gallons and each is provided with a large automobile type filler cap in a standpipe and a shut-off needle valve. The fuel outlet pipe from each unit joins slightly below the tank and there is a common fuel pipe to the carbureter. The construction is such that the rider can use one compartment until empty with the assurance that the contents of the other will be available as soon as the corresponding needle valve is opened.

Choice of Carbureters

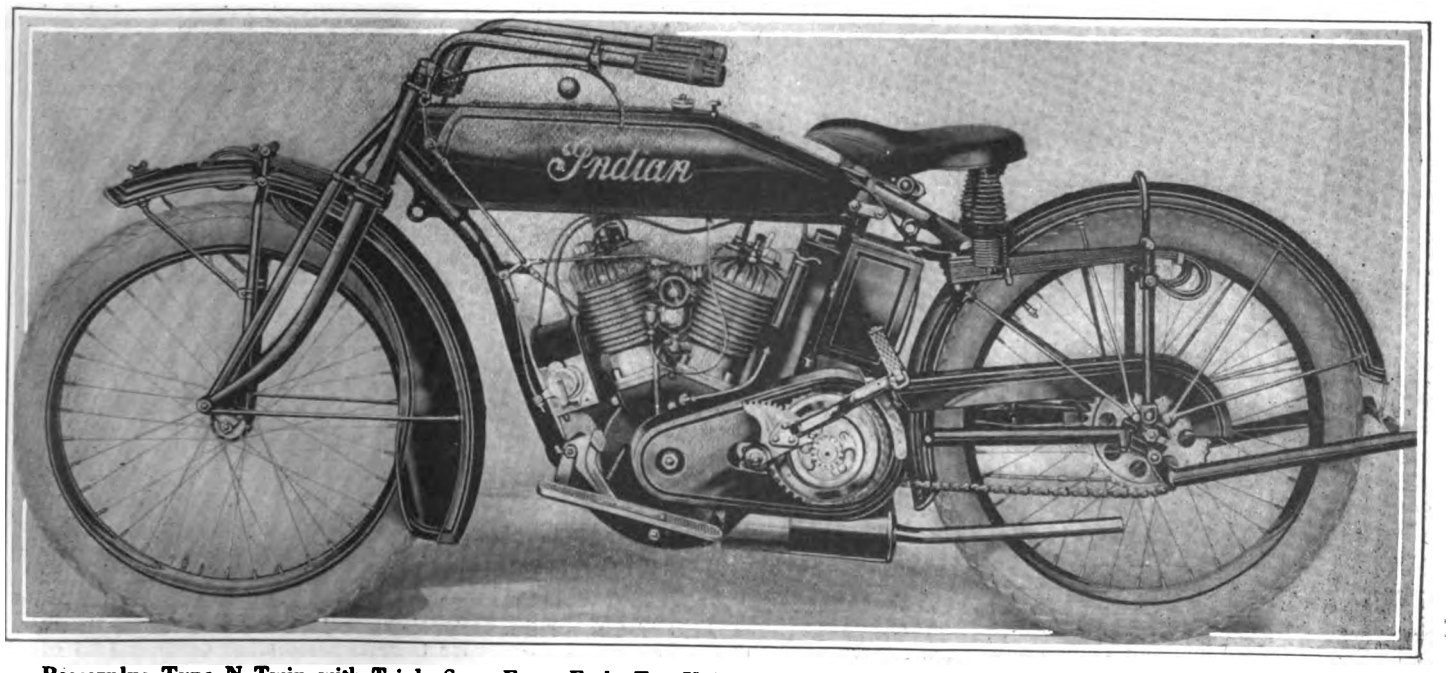
The carbureter provided for the 1917 Powerplus is either an Indian model Schebler or an Indian special, at the option of the purchaser. The special carbureter is built exclusively in the Hendee plant and is of the automatic type. It does away with all leaky throttles, which dilute the mixture and prevent proper operation. A large manifold is used when the carbureter is fitted. The carbureter is practically wear-proof and gives the correct mixture at all motor speeds.

The oil tank is separate as in previous Indian construction and is placed in rear of the motor. The filler cap is large and the hand oil pump is attached to the side of the tank.

The gear shift lever is now direct acting and moves in a vertical plane. It is pivoted at a boss on the seat post cluster and has single rod connection to the fan-shaped operating lever on the gear box. The shift lever works in a stepped quadrant which is attached by arms to the tank clips above and below. The gear positions are marked on the quadrant at each step. The form of the quadrant prevents "running through" a gear unintentionally.

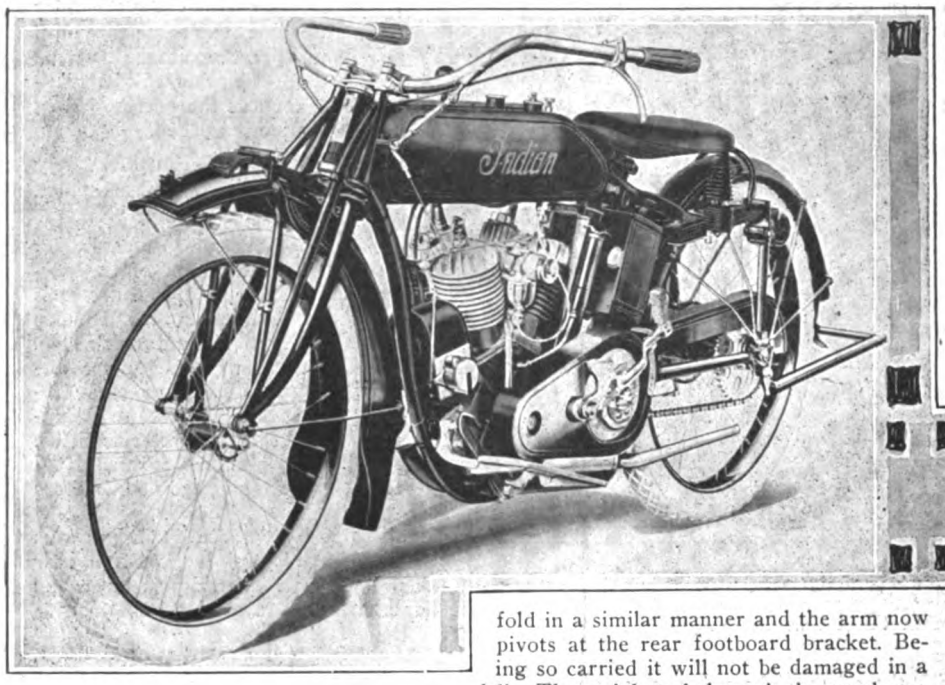
The clutch lever works on a quadrant attached to the tank on the right side and has a floating pivot the same as in the 1916 Powerplus construction. The interconnection with the clutch pedal is also similar to that of the previous Powerplus models.

The steering head is made stronger than in 1916 and a deep web is provided integral with the diagonal and top tube head extensions. This web gives a huge increase of strength without adding to the weight of the head. It carries the bosses for the throttle and spark rockers. The spark and throttle levers are kept from sliding off by



Powerplus Type N Twin with Triple Stem Front Fork, Two-Unit G asoline Tank, New Grips and Toolbox Under Saddle Cluster

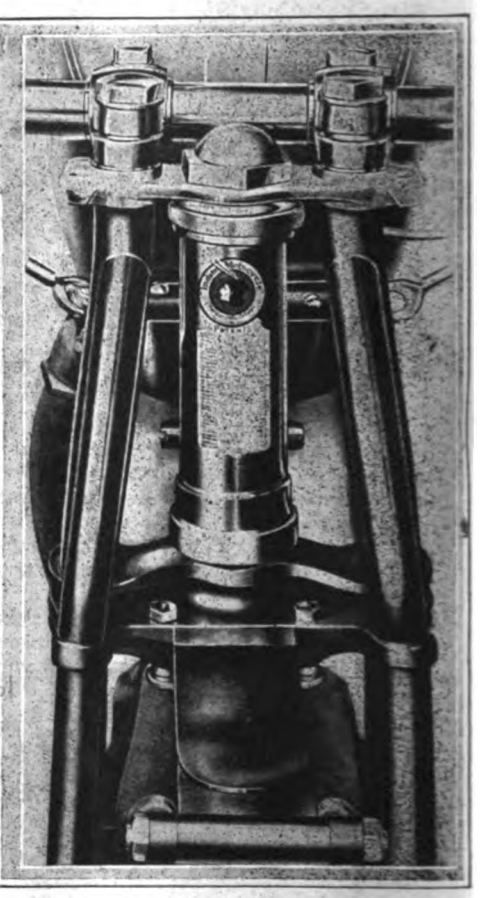
Digitized by Google



The toolbox is now located at the side of the frame under the saddle and above the three-speed gearset. It is of large capacity and is readily accessible. The location leaves the top of the gasoline tank free for instruments, etc.

The front axle is fitted with castellated nuts on each end, ensuring against possible loosening.

At the Left Is a Quartering View of the New Type N, While Below Is Seen the New Steering Head and Fork Construction with Handlebar and Stem Details



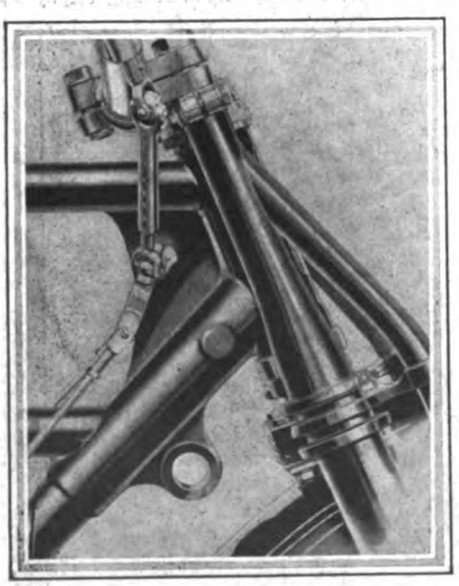
screws passing through the hubs of the levers and which run in slots on the end of the rod. The position of the levers is such that they cannot be hit by the forksides when the wheel is turned to either extreme position.

The steering head forging also carries the front lug for the sidecar below the diagonal tube extension. This and other sidecar lugs are now integral with the frame. Vanadium steel tubing is used throughout the frame.

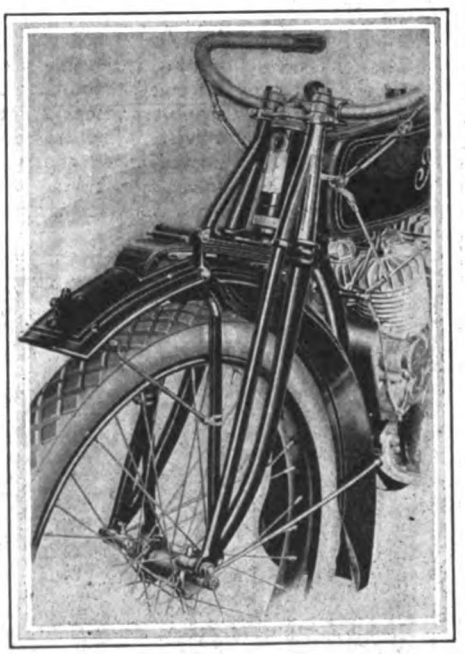
The fork rocker arms are made heavier and given increased bearing surface. Each is provided with an individual oiler to ensure positive lubrication. The clutch pedal is of the single pad type and is spring-returned to the engaged position. The lever arm has been lengthened to afford easier operation and at the same time to enable the footboard to fold without striking the pad. The footbrake pedal arm has also been lengthened to allow the footboard to fold in a similar manner and the arm now pivots at the rear footboard bracket. Being so carried it will not be damaged in a fall. The pedal stud through the crankcase has been eliminated.

The catch for the Light Pressure starter has been changed in design and attaches to the chain guard. It ensures the arm being held in position when not in use. There is no chance of the arm or tread interfering with the rider's foot or clothing with the new catch.

Four braces on each side are provided for the rear mudguard, eliminating loosening and rattle. This gives an extra brace as compared with the 1916 construction. The front end of the rear mudguard is fastened in a special manner to the bottom bracket, so that breaking away or loosening is impossible. Both front and rear mudguards are of pressed steel with beaded edges, side wings being fitted to the front guard to arrest steering splash.



New Steering Head with Web on Powerplus Types Showing Mounting of Control Rockers and Integral Sidecar Lug



Triple Stem Fork on Powerplus Type N. Note Strength of Truss Tubes and Sturdy Handlebar Mounting

It goes without saying that the tried and true Cradle spring fork and Cradle spring frame are used on Powerplus models. The Cradle spring frame is broadly patented and is used only on Indian motorcycles. To include it involves heavy manufacturing cost to the Hendee company, but as it gives Indian riders a riding ease and comfort par excellence, the makers of the Indian gladly defray the additional expense, which is in accord with Indian policy when greater service and convenience are involved.

The construction of the Cradle spring frame is simple. On either side of the rear wheel is a set of eight chrome vanadium steel leaf springs, held to a heavy horseshoe-shaped forging at the front, this forging being integral with the seat post cluster. The rear ends of the spring are scrolled and connect to the tips of the rear wheel fork through a heavy connecting link in the form of an arch over the rear wheel. The rear fork is hinged to the frame just behind the three speed box. Tests show that with the cradle spring frame there is a vibration of only 1/64 of

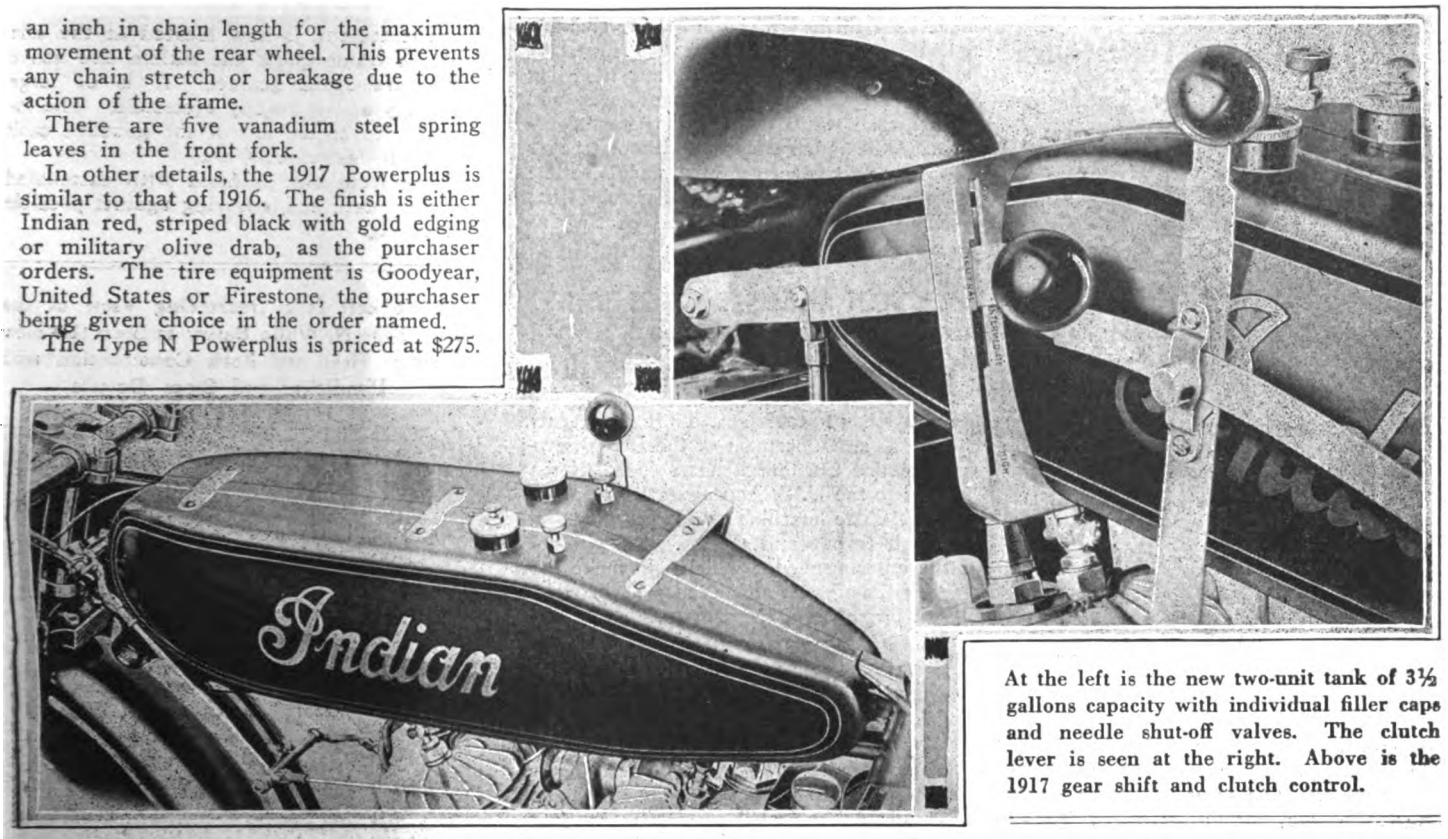
Digitized by Google

an inch in chain length for the maximum movement of the rear wheel. This prevents any chain stretch or breakage due to the action of the frame.

There are five vanadium steel spring leaves in the front fork.

In other details, the 1917 Powerplus is similar to that of 1916. The finish is either Indian red, striped black with gold edging or military olive drab, as the purchaser orders. The tire equipment is Goodyear, United States or Firestone, the purchaser being given choice in the order named.

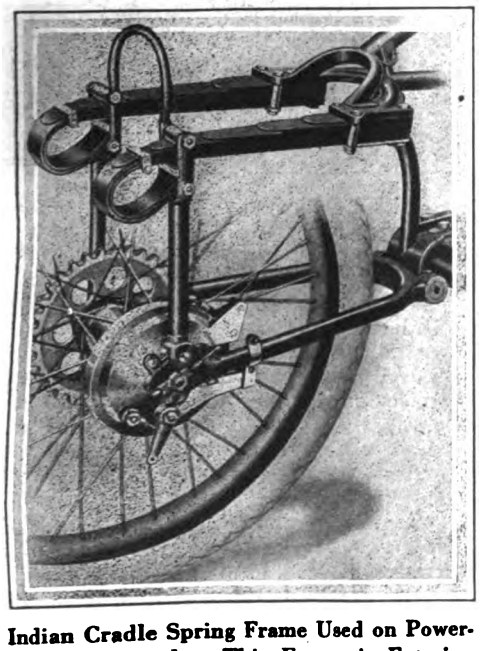
The Type N Powerplus is priced at $275.



At the left is the new two-unit tank of 3½ gallons capacity with individual filler caps and needle shut-off valves. The clutch lever is seen at the right. Above is the 1917 gear shift and clutch control.

The Type NE Powerplus has the Splitdorf Mag-Generator fitted in place of the Dixie magneto on the Type N, Hawthorne Horn-Lite and tail lamp, Witherbee storage batteries, Splitdorf ammeter and control switch, the latter being located on the toolbox top. It is priced $315.

The Type P Powerplus Police model has the cradle spring frame and Powerplus motor, but is single geared instead of having a three speed gearset. It lists at $250. The



Indian Cradle Spring Frame Used on Powerplus Exclusively. This Frame is Entering Its Fifth Year of Successful Service

"Military Model" with rigid frame and Powerplus motor costs $265.

For 1917 the Indian sidecar is roomier in the body than before. The length is increased by six inches and the width by four inches. The stream line form of body has been retained, the increased length making it, if anything, more graceful than before. The body is made of 16-gauge sheet steel. There is a larger space for storage in the nose or forward part than in the 1916 model.

Extensible Axle

The chassis is of the extensible axle type, giving a range of tread from 42 to 60 inches. There is a double gooseneck connection to the motorcycle. The frame is of the exclusive Indian dropped construction of 1¼ inch seamless steel tubing with double truss members. The springing is such that the sidecar rides with the ease and comfort of a Pullman coach. The Type S sidecar lists at $80, an increase of $5 over the 1916 figure.

The standard delivery van, Type T, has the adjustable axle feature and is fitted with a body of the following dimensions: 40 inches long, 21 inches wide and 21 inches high. It is fitted with a metal cover provided with a latch. The price is $70. The Hendee Manufacturing Company has a special department devoted to the development of the commercial van and will be glad at any time to figure on special outfits for individual requirements.

RODE FROM SALT LAKE TO GOTHAM TO STUDY

Pair of Mormon City Excelsior Riders Come Nearly Across the Continent to Attend Columbia Courses

NEW YORK, Sept. 18.—O. K. Parry and M. Skolfield, a couple of Salt Lake City boys, who have matriculated with the College of Physicians and Surgeons of Columbia University, arrived in New York this week from the Mormon City via the "Excelsior route." The couple left their home city just three weeks ago, and made the distance in 16 riding days, stopping long enough along the route to take in the various points of scenic value.

The machine they rode was an Excelsior two-speed model bearing the 1914 nameplate; it was equipped with Goodyear tires and Bosch magneto, and, aside from bent pedals, occasioned by numerous falls along the route, and a deranged muffler, which came of dropping into deep mud pits, the pair met with no trouble whatever.

They followed the Lincoln Highway to Denver, and, as they express it, found it mostly a myth, and from "Mile High Town" to Omaha they followed the route of the Omaha, Lincoln and Denver road. The course from Salt Lake to Denver was sandy and well rutted, and it was here that the pair experienced most of the falls.

From Omaha on the Lincoln Highway was again followed to Chicago, where the riders spent three days in and around the Excelsior factory.

The pair carried a full camping equipment with them across the prairie country, and did not bother to hit the towns at night; one night they spent in a little log cabin that passed for a schoolhouse, and were awakened in the morning by the arrival of the much surprised school teacher and her flock of future presidents. The camp equipment was shipped back from Chicago, relieving the machine of the unnecessary weight.

DAYTON SELLS BICYCLES TO U. S. ARMY

DAYTON, Ohio, September 18.—Marking the entrance of the bicycle into the service of the United States Army comes the announcement of the Davis Sewing Machine Co. that it has shipped fifteen bicycles to the U. S. Aeronautical station in Florida. The machines will be given a thorough tryout and undoubtedly will act as the entering wedge which will make the way for the adoption of the bicycle throughout all branches of the service.

LACK OF ENTRIES HALTS GRAND RAPIDS MEET

GRAND RAPIDS, Mich., Sept. 18.—The motorcycle races scheduled to have been conducted here in connection with the West Michigan State Fair during the last week failed to materialize. Although invitations were sent out to riders, not enough manifested interest by entering to warrant the staging of the events. The racing season locally, therefore, has come to an end.

FOUR PERFECT IN GRAND RAPIDS RUN

Fifth of Series Staged by Grand Rapids M. C. Attracts Nine Entries; Seven Riders Finish on Time

GRAND RAPIDS, Mich., Sept. 18.—The fifth and final of a series of motorcycle endurance runs was conducted under the auspices of the Grand Rapids Motorcycle Club over a route covering in all a total of 294 miles.

Of the nine riders to start, Red Heth, Long, Steel and Livingston finished with perfect scores. Hoogerhyde, Smith and Levandusky finished on scheduled time, but not with perfect scores. Two riders, DeYoung and Galloway, finished behind schedule.

The route was over both good and bad roads, and was a test for both the rider and mount. A speed of 20 miles an hour had to be maintained by the riders. Leaving Grand Rapids they went through Leota, Marion, Harrison, Clare, Mt. Pleasant, Ednore and Greenville. Starting time was 4:01 A. M., and the first in finished by 7:42 P. M., per schedule.

REPORT SUCCESSFUL SEASON

ELGIN, Ill.—Treiber Brothers, Excelsior agents, and William Dedlow, Merkel agent at Elgin, state that the season now closing was an unusually good one, and that the outlook for advance sales was never better.

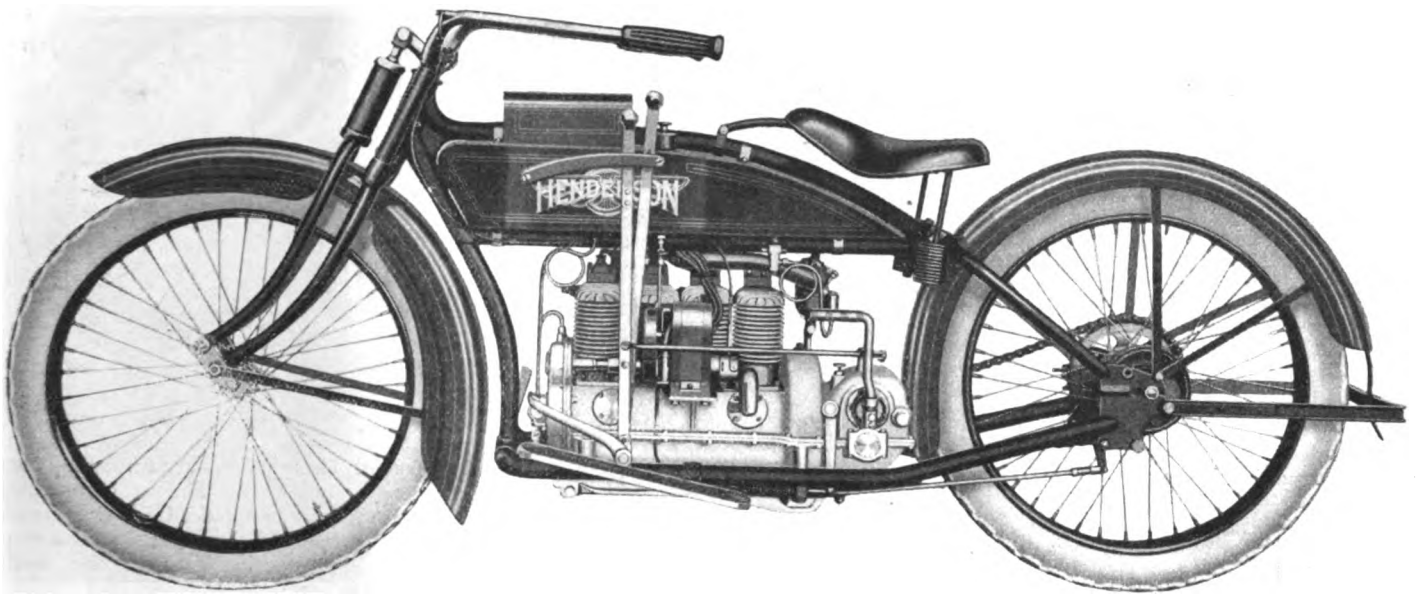
UNIT POWERPLANT FOR 1917 HENDERSON

New Season's Construction on Four-Cylinder Machine Incorporates Three-Speed Sliding Gear and Multiple-Disc Clutch Built in Flywheel in Common Motor Base — Scientific Manifold Construction—Concentrating on One Model for Coming Year



Left side of new three-speed Henderson, showing gear-shift lever, new foot starter, and other details.

DETROIT, Mich., Sept. 20.—One model with unit powerplant combining a three-speed progressive sliding gearset and multiple disc clutch built into the flywheel is offered by the Henderson Motorcycle Company, of Detroit, Mich. The gearset and clutch are built as integral parts of the motor, within the aluminum housing of the motor base or crankcase. The construction gives great compactness combined with the neatness and pleasing appearance which has characterized previous models of the four cylinder Henderson. The price of the new Henderson is $325, the same as in 1916, although a number of big improvements and new features have been incorporated in its construction.

New Features Are Plenty

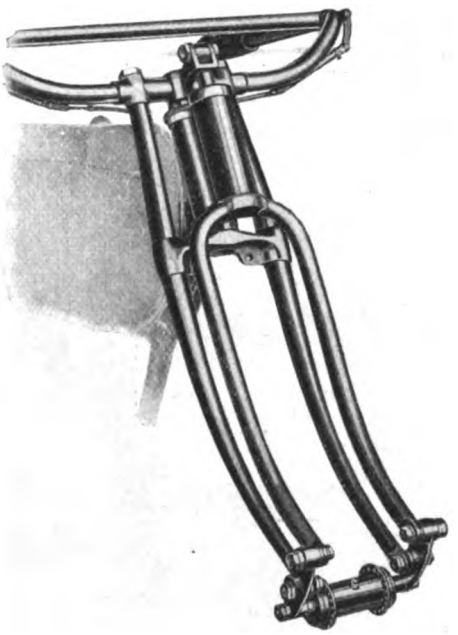
While the unit powerplant construction is the most conspicuous of the 1917 improvements, it is by no means the only one of major importance. An intake manifold of novel design, yet of great value in the feeding of the correct amount of mixture to each cylinder at all ranges of speed, is a second and vital new feature. The front axle trails back of the fork for the new season, caster fashion. The kick starter is improved in construction and is located on the left side of the crankcase instead of on the right as in former models. There is an interlock on the gear shift also.

A priming cup is fitted to the intake manifold to facilitate starting in cold weather. A gasoline gun is provided in the filler cap of the fuel tank. The mudguards are made wider and there is plenty of clearance between them and the tires for the fitting of chains. The mechanical oil pump has been improved and a new method of adjustment furnished.

The final chain drive is now on the right side of the machine with the external contracting band brake on the left side of the hub. This has not, however, changed the position of the foot levers controlling the brake and clutch, for the same arrangement as in 1916 has been retained: clutch pedal at left and brake pedal at right.

The typical Henderson dual clutch control, large automobile type bearings, one-piece crankshaft, warm air intake from muffler to carbureter, saddle and big valves have been continued for 1917.

The change gear on the 1917 four cylinder Henderson is of the progressive sliding gear type, with direct drive on high. It is located in the rear of the extension of the motor base, the main and lay shafts lying transversely to the plane of the machine, the lay shaft being above. The crankshaft of the motor is prolonged to carry the multiple disc clutch and its tail carries a bevel pinion which meshes with a bevel gear on the main shaft of the change gear. The final drive front sprocket is on the right side exterior to the motor base. Gear ratios are 4.3 on high, 7.5 on intermediate and 10.2 on low.



New front fork of 1917 Henderson. Axle trails back of fork tips, swinging back and up when obstruction is encountered. Triple-stem design, making it impossible for front wheel to twist out of line with handlebars. Especially strong sidewise for sidecar service.

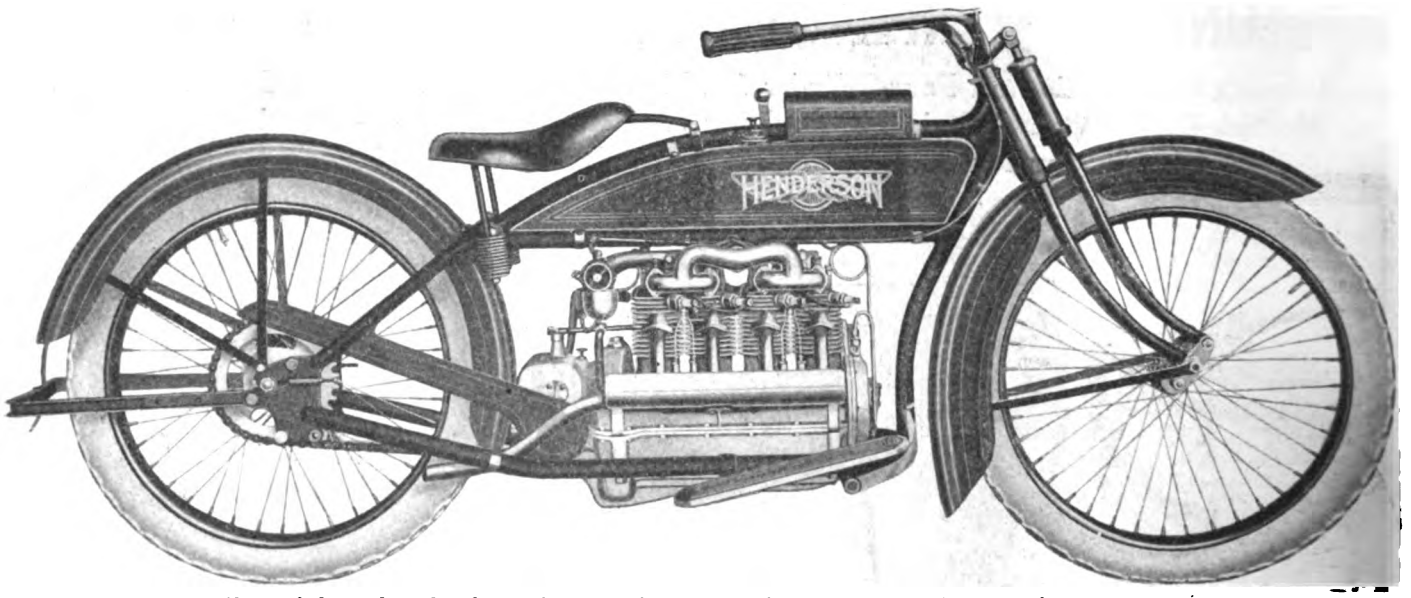
Ample Size Throughout

The gears in the change gear are made as large and strong as those used on many of the lighter makes of motor cars. Every part is big and husky, being built to stand up under the most severe service. The bearings are all of large size to give smooth running and long life. The spline shaft runs on adjustable bronze bearings, ⅞ inch in diameter and 1¼ inches long. These bearings are designed so that wear can be taken up readily after several season's hard service, thus doing away with the renewal of bearings. Play in the bevel gears can be taken up without taking the motor base apart, a distinct convenience to the user and repairman.

The countershaft of the three-speed runs in big bronze babbitt-lined bearings which are capped so that wear can be taken up. These bearings are one inch in diameter and 1⅛ inches wide, providing an excess of load-bearing surface that reduces friction and multiplies the life of the bearing. The gears of the three-speed are 8-10 pitch, stub tooth, with face ⅝-inch wide, giving plenty of working surface for the heaviest load and providing a surplus of strength that practically eliminates wear.

These gears are thoroughly lubricated at

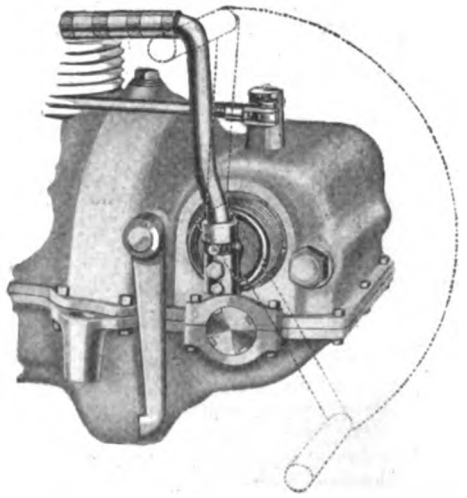
Digitized by Google



View of the right side of 1917 four-cylinder motorcycle, showing new features of construction.

all times, running in an oil bath which is automatically renewed from the oil in the motor base, so that friction is reduced to the minimum and wear done away with. No attention is required from the rider, even the simple matter of supplying oil being attended to automatically by the positive splash system.

Gear-shifting is made pleasantly smooth



Showing the new Henderson foot starter. The dotted lines show the starting lever turned to position for use and the arc of its stroke down and back. The great leverage makes it easy to operate, while the motion passing through the transmission causes the engine to revolve rapidly so as to start readily. Each down stroke of the starter turns the motor over two full compressions.

by the carefully-designed shape of the teeth of the sliding central gears and of the clutch dogs. The teeth of the intermediate gears have smoothly rounded corners so that they slide into mesh readily, without noise or roughness. The dogs on the sides of the sliding gear, for engaging high or low gear, are chamfered slightly so that they automatically slip into full grip as soon as engaged, insuring quick and positive change of gear.

The clutch is of the type which has proved so successful in the best automobile construction, and is used here for the first time in motorcycle design. It is built into the flywheel of the motor and runs in an oil bath, so that perfect lubrication is assured at all times, avoiding wear and providing the oil film that is so essential for smooth engagement and positive holding power. This oil bath is constantly supplied with lubricant from the motor base, so that no attention is required from the rider.

The Multiple Disc Clutch

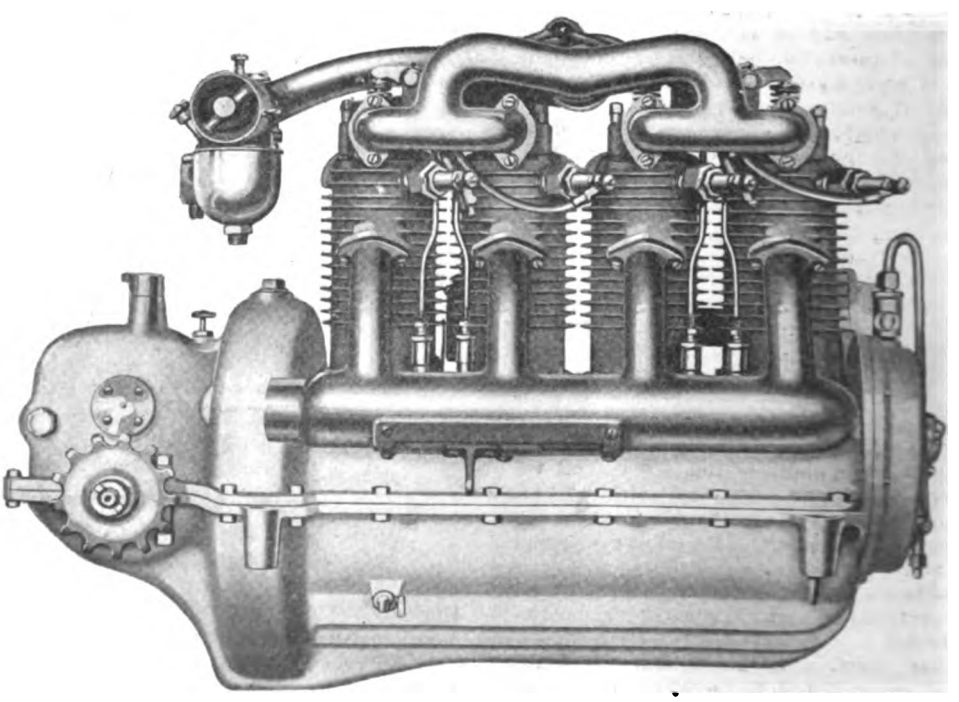
The clutch is of the multiple-disc type, using seven large surface steel discs, carefully tempered and ground. The discs are ⅞ inch in diameter and ¼ inch face, giving over 187 square inches of friction surface, more than ample for the heaviest loads. The large surface gives this clutch exceptional pulling power without great spring tension.

Eight long, specially-tempered vanadium-steel coil springs press the discs into engagement. These springs are unusually long —2⅛ inches when free—and are compressed to 1¼ inches when placed in the clutch. This insures smooth, even tension and positive holding power. Wear of the clutch discs is automatically compensated for and need of adjustment entirely done away with. Being located in the flywheel the clutch works at engine speed, which adds greatly to its efficiency because the power-transmitting ability of a clutch of any given size is in proportion to the speed at which it runs.

The unusually large size of this clutch, and the manner in which its design is worked out, combine smooth action and soft engagement with great holding power.

The remote possibility of injury to the transmission through careless or improper shifting is eliminated by the interlocking system of controls. A cam on the foot clutch lever holds the gearshift positively in place until the clutch pedal is depressed.

The clutch can be operated either by



Right side of the 1917 Henderson motor, showing new intake manifold.

Cutaway view of the unit powerplant of the 1917 Henderson. Three-speed sliding-gear transmission housed in motorbase. Multiple-disc clutch of very large size built into the fly-wheel and running in oil bath. Similar in design to the transmission of the finest automobiles. New intake manifold, flanged carburetor connection, and other motor details also shown.

hand or foot, as preferred by the rider. There is the hand lever on the left side of the tank and the foot lever by the left footboard. To shift gears, the rider simply presses the foot lever to free the clutch, at the same time moving the gearshift lever to the desired position, the clutch being re-engaged, as the pressure of the foot lever is removed.

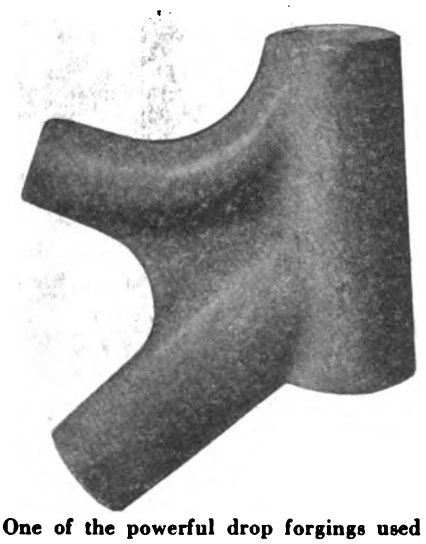
The chain which transmits power to the rear wheel is of the extra heavy type, ⅝-inch pitch and ⅜-inch wide, with the new type of powerful, heavy-service side links. It is enormously stronger than the older type of motorcycle chain, making it especially adapted to the greater power developed by the new motor, and for use in conjunction with the low driving gears of the three-speed.

Improved Manifold

The marked increase of power developed by the 1917 Henderson motor is in part due to the improved type of intake manifold which is used. This insures a full, fresh charge of gas for each cylinder, which is so important in the attainment of extreme high speed and maximum power. Perfect distribution is obtained by the new manifold, each cylinder getting the correct volume of gas and a uniform mixture. The size and shape of the passage from the carburetor is designed so that the incoming mixture passes quickly and with minimum resistance to the combustion chamber and is perfectly vaporized when it reaches the cylinder.

Gas passages in the cylinder are carefully proportioned to facilitate rapid movement of gases, so that the combustion chamber is quickly and thoroughly scavenged of burned vapors and a full, fresh charge of live gas is injected. Both intake and exhaust valves are very large, in accurate proportion to the bore of the cylinder, each valve being 1¼ inches in diameter.

With its new features of refinement the motor is not only faster and more powerful, but may be throttled down to very low speeds. It will glide along at a mere walk, with the unwavering push of the four cylinders rolling it steadily on, and has wonderfully quick pick-up and acceleration. Every



One of the powerful drop forgings used in the Henderson frame. This particular forging is the steering head connection, an important point, to which it gives a big surplus of strength.

1917 Henderson is capable of speed of 70 miles per hour or better.

The four-cylinder motor is of the high-efficiency, long-stroke type, with bore of 2 17/32 inches and a 3-inch stroke. The total piston displacement is 60.40 cubic inches. All bearings are of generous size, giving unusually large working surface so as to reduce friction and wear to a minimum. The three bearings of the main shaft are, from front to rear, 1⅜, 1⅝ and 1½ inches wide, more than ample for the heaviest loads. These bearings are of the finest bronze, babbitt-lined, such as are used in the most costly automobile motors. They polish to a mirror finish in use, so that the hardest service has little effect on their surfaces, resulting in remarkable freedom from friction and long life.

Pistons and Shafts

Pistons are of hard gray iron, each fitted with two rings that are ground on three sides to insure perfect fit. The connecting rods and the main shaft are steel drop forgings, carbonized and carefully oil-tempered.

The crankshaft is a one-piece forging, which insures permanent alignment and ease of accurate reassembly if the motor is taken down after having had long service.

Oil is supplied to the motor automatically by a mechanical plunger pump, driven by worm gear, which feeds oil in exact proportion to the needs of the motor. A new design of flange connection simplifies the construction of this pump greatly and makes it very easy to get at in case the rider desires to clean out dirt or other foreign matter.

A new method of adjustment makes it very easy to change the oil feed in case a different kind of oil or change in conditions makes it desirable. All that is required is to turn the adjusting screw one way or the other—nothing to take apart and no tools needed but a screwdriver.

Warm Air Intake

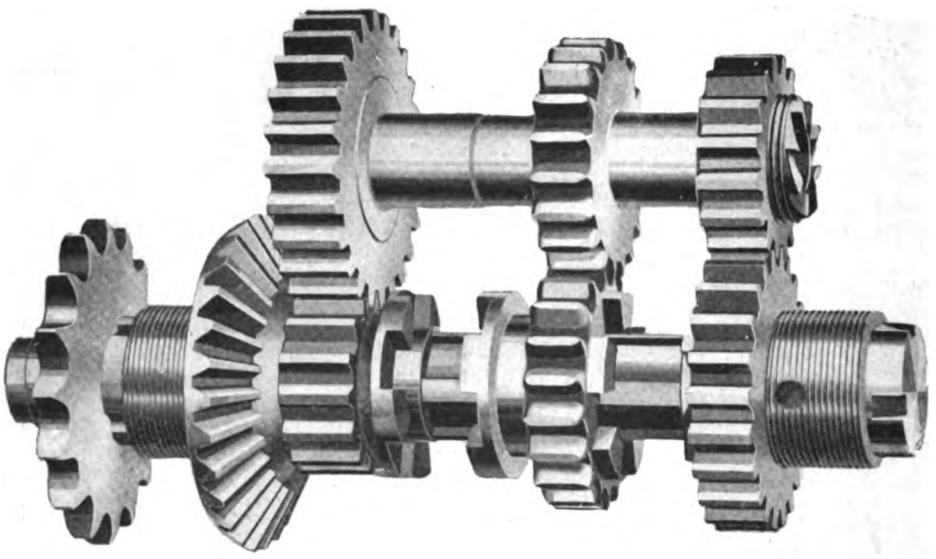
A Schebler carburetor of a model especially adapted to the requirements of this four-cylinder motor is used, its efficiency being intensified by a special warm-air intake. A pipe from the lower air intake of the muffler passes through the full length of the muffler, where the flames of the exhaust envelop it so as to heat the air in the pipe on its way to the carburetor. Perfect vaporization and quick combustion is thus insured—an especially valuable point in cold weather or when using the poor grades of gasoline.

The 1917 carburetor has a flanged connection to the manifold, so that it can be removed simply by taking out three bolts instead of unscrewing union nuts.

The new Henderson kick starter is simple and strong in construction, and positive in action. In its usual position the foot lever is folded back out of the way and out of engagement, on the left side of the transmission case. When turned to position for starting the motor, a cam movement engages eight big steel dogs so that when the lever is pushed down by the foot, it spins the engine over and starts it readily.

As the motion passes to the engine shaft through the gears of the transmission, the revolutions are rapid so as to make starting quick and positive. One downward pressure of the starting lever turns the engine over two full compressions, producing un-

Digitized by Google



Gears of the three-speed Henderson transmission, showing their large size. Gears 8-10 pitch, stub tooth. Sliding central gear has corners of teeth smoothly rounded to facilitate smooth, easy engagement. Size and strength equal to the gears of many automobile transmissions. Bearings unusually large and capped so that wear can be taken up from the outside after several seasons' hard use.

usual effectiveness. When the foot is removed from the starting lever at the end of the down stroke, a spring returns it to the top position and folds it back into place.

Priming Cup Fitted

A priming cup on the intake manifold allows gasoline to be injected to assist in starting in very cold weather. A gasoline gun for this purpose is located in the gasoline tank filler cap.

The cleanliness of the Henderson pleases the rider who takes pride in his own appearance and that of his machine. The distinctive type of motorbase allows no chance for oil to leak, to gather dirt and soil the clothes. The machine is easily kept clean and the rider can dress neatly without fear of oil spots or grease.

The mudguards of the new Henderson are unusually wide and extend well around the wheels, so as to protect both rider and machine from road dirt or splash from the wheels. The rear guard is pivoted so that by merely removing two bolts it can be swung down out of the way to give easy access to the rear wheel—a great convenience for making tire repairs or other work. Plenty of clearance is allowed between tires and mudguards so as to avoid clogging the wheels with mud in bad weather. There is ample room for use of tire chains on both wheels.

New Type of Fork

The frame is of the distinctive suspension cradle type, very low and strong, using 13-gauge, 1¼-inch seamless steel tubing, with large and powerful drop forgings for all connections and fittings.

The new fork is of the caster type, the wheel moving back and up when a road unevenness is met, causing the machine to glide smoothly over the obstacle. The triple-stem design, with fork-sides of round section, makes this fork very strong sidewise as well as vertically and longitudinally, adapting it particularly well for sidecar use. The new fork design is reported to give unusually steady steering in sand or mud, as well as extremely smooth riding.

The handlebars are wide and low, placing the grips in just the right position to give most comfort on long journeys, without cramping the wrists or shoulders. This is also a great help in handling the machine on difficult roads.

Very low riding position adds to the excellent balance of the machine and makes the new Henderson very easy to handle at all times. The top of the saddle is about 29 inches from the ground, so that even a short man can place both feet on the ground when seated on the saddle. The saddle is of the same special integral construction as in 1916, built in as part of the machine.

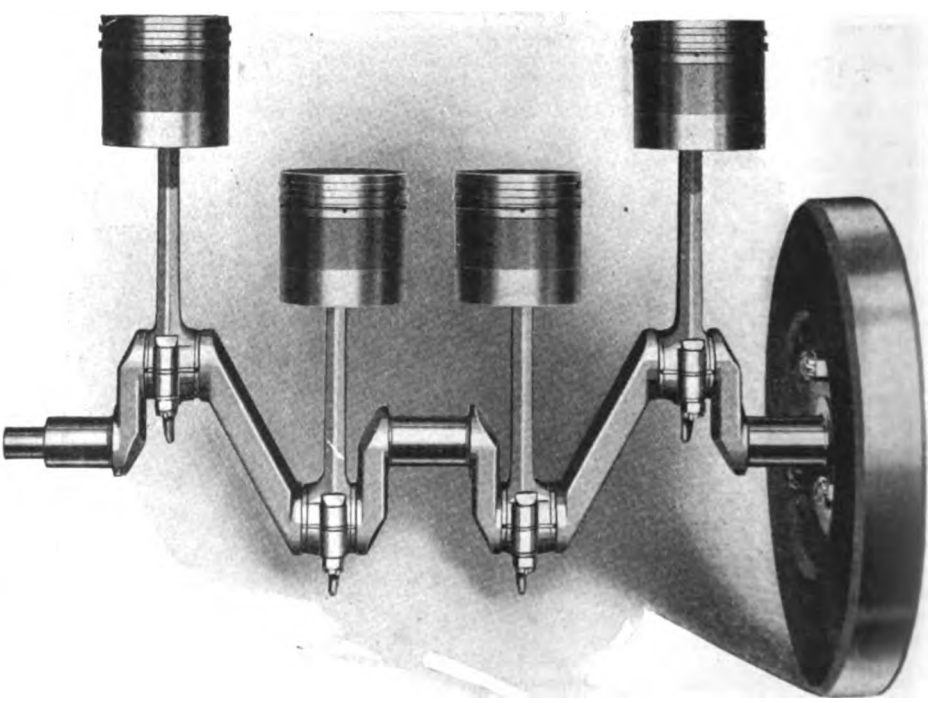
The footboards are roomy and long, to accommodate rider of different height and reach, and are hinged so as to fold up in case of a fall. They are covered with rubber mats to prevent the feet slipping. The location of the footboards with relation to the saddle and handlebars is just right to make the rider feel comfortable and natural, so that he can handle the machine to best advantage.

Handy Brake and Clutch Levers

The clutch and brake foot levers are also placed at the points where the rider's feet find them instinctively, without losing time or attention in a critical situation by feeling for the control levers. The clutch pedal on the left and the brake on the right allow the exact degree of control that the rider wants, at any instant.

Riders are especially enthusiastic over the wonderful balance and ease of handling the new Henderson. This is one of those qualities that depend on many factors, and which are often difficult to attain, but can hardly be over-valued. Partly because of the extremely low center of gravity, partly by the careful distribution of weight over the machine, partly by scientific frame design and the angle of forks and rocker arms with relation to other members—these and other details combine harmoniously to make the Henderson hug the road and steer steadily and easily at high speeds or on bad roads.

Realizing the strong demand with which this new Henderson will be met, the factory has made preparations for a greatly increased output, laying plans many months in advance to insure adequate supplies of all materials. The sales of the 1916 Henderson



Crankshaft, pistons and connecting-rods of the Henderson motor. The crankshaft is a single drop forging, illustrating the simplicity and strength of the design of this four-cylinder motor. Note fingers on lower end of each connecting rod, which dip into the oil and insure positive and uniform lubrication to the cylinders.

Digitized by Google

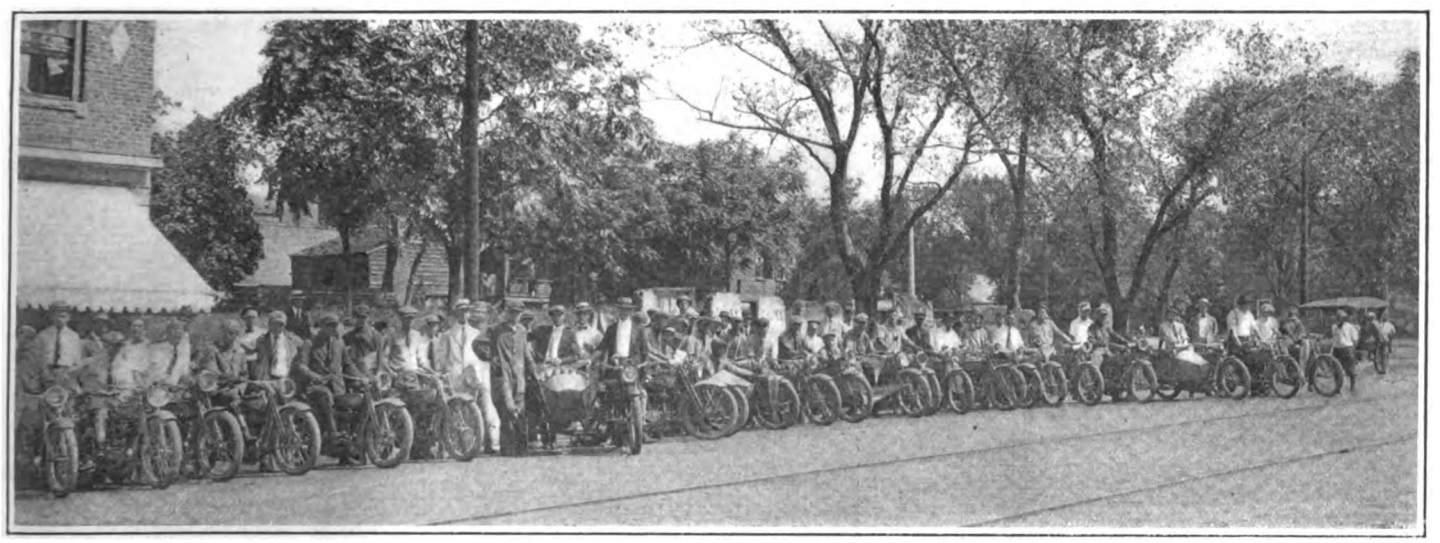
far exceeded production, and President T. W. Henderson foresaw that the 1917 output would be still less equal to the demand unless special measures were taken.

So he contracted for great quantities of materials eight and ten months ahead of time. Many thousands of dollars worth of new and improved high-speed machinery has been installed. The organization of every department of the factory has been perfected so as to insure the most rapid and efficient handling of accurate work in great quantities, and the forces of workmen have been enlarged in all departments of the shops where more men could be used to increase production.

One result of the manufacturing efficiency effected by this increased production is that it enables the Henderson folks to avoid any increase in price. Though many costly new features and big improvements of greater value are built into the new model, it will be sold at the same price as the 1916 two-speed, $325.

All the efforts of the Henderson factory will be concentrated on the one model, no single-speed model being listed as the demand for the multi-speed machine has become practically universal. For sidecar work it is indispensable.

HOW MOTORCYCLISTS OF COLUMBIA, S. C., TURNED OUT FOR RECENT RACEMEET



Part of the Brigade of Seventy-five Harley-Davidson Riders Who Gathered in South Carolina City to Attend the Speedfest on Labor Day; Sidecars and Tandems Were Plentiful at This Popular Annual Gathering

BUSINESS OPENINGS FOR MANUFACTURERS AND JOBBERS

JACKSONVILLE, Fla.—Catalogs on small tools and lubricating oils are desired by the Lackawanna Hardware Company, at 1816 Lackawanna avenue.

TAMAQUA, Pa.—The Hadesty Hardware Co., Inc., has just been incorporated. It was founded in 1857. The goods stocked include bicycles, automobile accessories, small tools and lubricants.

BROCKET, N. D.—The Schuldt Brothers Lumber Company has recently been established here. Catalogs on small tools and oils are requested.

HERKIMER, N. Y.—The Herkimer Hardware Company, Inc., has purchased the stock of C. W. Palmer & Co. Catalogs on automobile accessories, lubricating oils and small tools are desired.

PLAINFIELD, N. J.—The M. & L. Auto Co., Inc., desires catalogs on tires, automobile accessories, oils, greases and tools.

AUGUSTA, Ill.—George H. Minier, who recently purchased the stock of the Steinbarger hardware store desires catalogs on bicycles, automobile accessories, oils and tools.

AUBURN, Iowa—H. W. Staples has started in business here and desires catalogs and information on lubricating oils and small tools.

ARMADA, Mich.—The Kruse Sons Co. has opened a hardware store and will deal in bicycles, enamels, accessories, tools and lubricants.

MANKATO, Minn.—Murphy & Busch request catalogs on small tools, oils and enamels.

HELENA, Mont.—The Helena Hardware Co. has been incorporated and will deal in automobile accessories, bicycles, small tools, lubricants and enamels.

LAUREL, Mont.—The Kassner Hardware Co. has started in business here and desires catalogs on automobile accessories, bicycles, oils and small tools.

FRANKLIN M. C. IS ORGANNIZED IN WOONSOCKET

WOONSOCKET, R. I.—The Franklin M. C. has just been organized here with the following officers: William E. Blanchard, president; D. D. Davis, secretary; C. C. Arnold, treasurer; Joseph Landry, road captain; Carl Hafgren, W. B. Brown, John Rollinson and C. C. Arnold, lieutenants; Everett Davis, C. C. Arnold, membership committee; W. E. Blanchard, E. D. Davis and C. C. Arnold, club run committee.

For the present the club will meet at Arnold & Dean's garage, and all riders of Woonsocket and vicinity are invited to attend the meetings and get acquainted.

FRENCH REPORTS PROSPEROUS SEASON

BALTIMORE, Md., Sept. 18.—Robert R. French, local agent for the Racycle bicycle line, reports that he is doing the business of his life this season. During the past week his bicycle sales amounted to over $300, while his accessories added a few more "iron men" to the total. His sales this year marked a 100 per cent. increase over last year, and it would have been greater, but he had trouble in getting bicycles from the manufacturers. Mr. French will take over on October 1 a sub-agency for the Indian motorcycle.

"CHET," LIKE OLIVER TWIST, WANTS SOME MORE

Kirkland, Ill., Sept. 12. 1916.

CONTEST EDITOR:—

In regard to asking my rider friend to ask his rider friend to ask his rider friends, what make of a machine the snap shot shown in Motor Cycle Illustrated, Sept. 7th, was taken from, they all say, from a Reading Standard, of course. Come on with some more; I enjoy them very much; I guessed that Thor last week, but did not get around to mail it in. Hope this one gets in in time for next week's Illustrated.

Yours respectfully,

CHET. SERVICE.

CLEVELAND ADDS KICK-STARTER FOR 1917

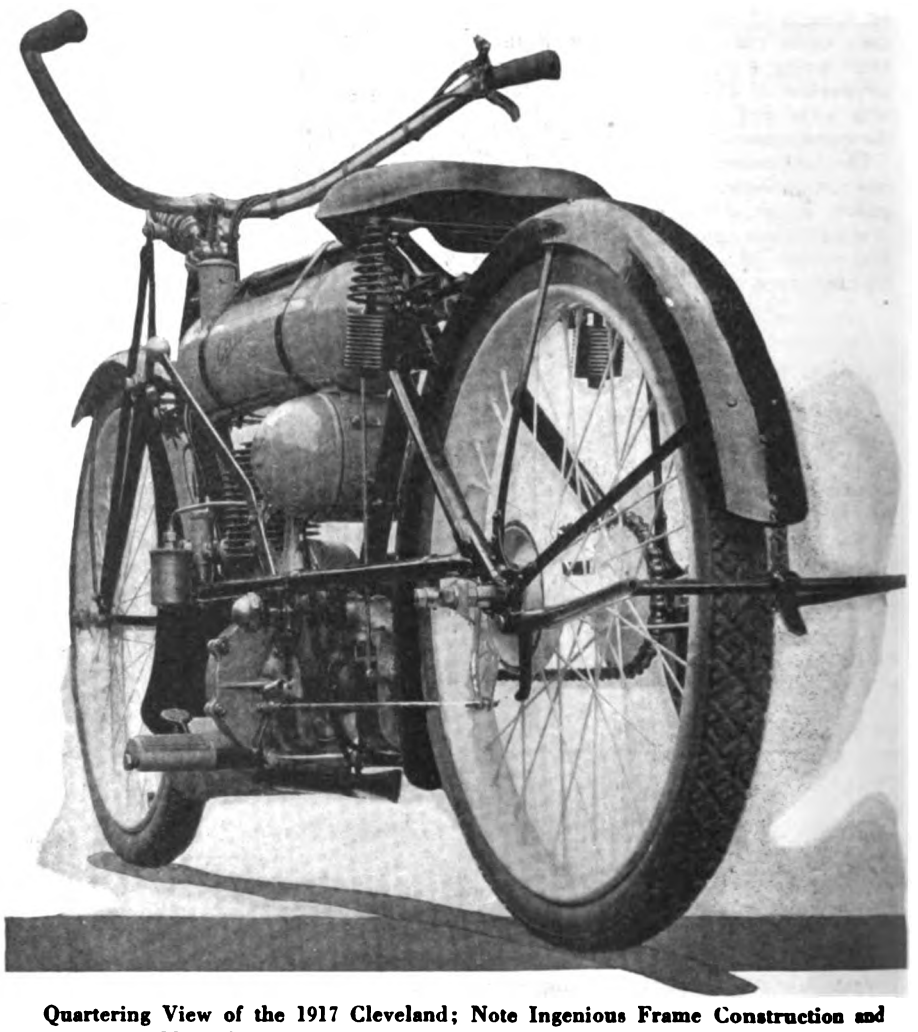
Two-Stroke Lightweight Is Now Provided With Foot Cranking Device, but General Construction Is Otherwise Unaltered — One Model, With Two-Speed Gearset and Multiple Disc Clutch Is Offered—Price Is $160

CLEVELAND, O., Sept. 20.—So excellent was the design and construction of the Cleveland two-stroke lightweight during the 1916 season that the maker, the Cleveland Motorcycle Manufacturing Company, of 7209 Platt avenue, this city, has made but one addition for 1917—a kick starter. The model having the sliding jaw clutch has been discontinued and one model only—with multiple disc clutch, unit powerplant and primary worm drive—is listed for the new season. It is priced at $160, an advance of $10 over the price of the corresponding model of the past year.

New Kick Starter

The Cleveland kick starter is of the gear and sector type, the starter arm acting by a downward and backward motion. The pad is hinged to fold out of the way of the rider when not in use. The starter arm is fitted with a spring which returns it to the inoperative position when the foot is removed and is so fitted with relation to the frame that a fall will not injure it. One complete motion of the starter arm turns the motor over several times. The kick starter will be fitted to all Clevelands after November 1.

Front View of Cleveland Showing Comfortable Riding Position



Quartering View of the 1917 Cleveland; Note Ingenious Frame Construction and Method of Carrying Unit Powerplant Within the Frame

The 1917 Cleveland two-stroke is of the lightweight type, weighing about 150 pounds and rating at 2½ horsepower. The motor is of the three-port type, the bore being 2½ inches and the stroke 2¾ inches. A single flywheel is fitted, housed in the crankcase, and a single crankpin is used. The main shaft extends to the rear to form the line shaft of the two-speed gear forming the next section of the unit powerplant. Below this line shaft is the layshaft with two integral gears. The slider with its dog clutches is mounted on the line shaft.

Worm Drive Used

The prolongation of the main shaft carries the worm of the primary drive. This worm has exceedingly ample bearing surface and is reversible, allowing the machine to be wheeled by hand with the motor idle. Above the worm and meshing with it is the worm-wheel mounted on the countershaft; at the right extremity of this countershaft is the sprocket for the final drive, which is by Coventry chain. A further extension of the shaft ends in a coupling and the magneto is driven through this coupling. The magneto, a Bosch high tension waterproof type, is thus directly driven and no noise or trouble from oil leakage is possible. The magneto is carried on the rearmost projection of the unit powerplant casing with the magnets upside down.

Induction Lubrication

The motor is lubricated by the induction system, in which the oil and gasoline pass from the tank and through the carbureter to the crankcase together, where the oil separates out and goes to the bearings. The two-speed gear and worm drive both run in an oil bath, making lubrication both simple and effective. Ample size ball and roller bearings are used to give durability and efficiency.

The shift of gears is controlled as in 1916 by a rocker pedal at the right footrest. The crankcase, countershaft housing and gearbox in the unit are of high grade aluminum, while the best quality of alloy steel is used for shafts and gears. The mixture is furnished by a Brown & Barlow single-jet carbureter, throttle and air controls being fitted to

Digitized by Google

the right handlebar. Connection to the carbureter is by Bowden wire mechanism. The compression release is operated by a lift-lever below the right bar for 1917.

Silencing Details

The muffler, as in 1916, has an expansion chamber of more than ample capacity to take care of the gases at the highest speeds of the motor. The result is most quiet running, the note of the exhaust being a smooth purr rather than a succession of sharp sounds. A tail-pipe with enlarged end also contributes to the noiselessness of the exhaust.

The fuel consumption of the Cleveland two-stroke lightweight is 75 miles to the gallon, as an average, while it will run at a maximum speed of 35 miles per hour. The center of gravity is very low and the clearance at the same time is ample.

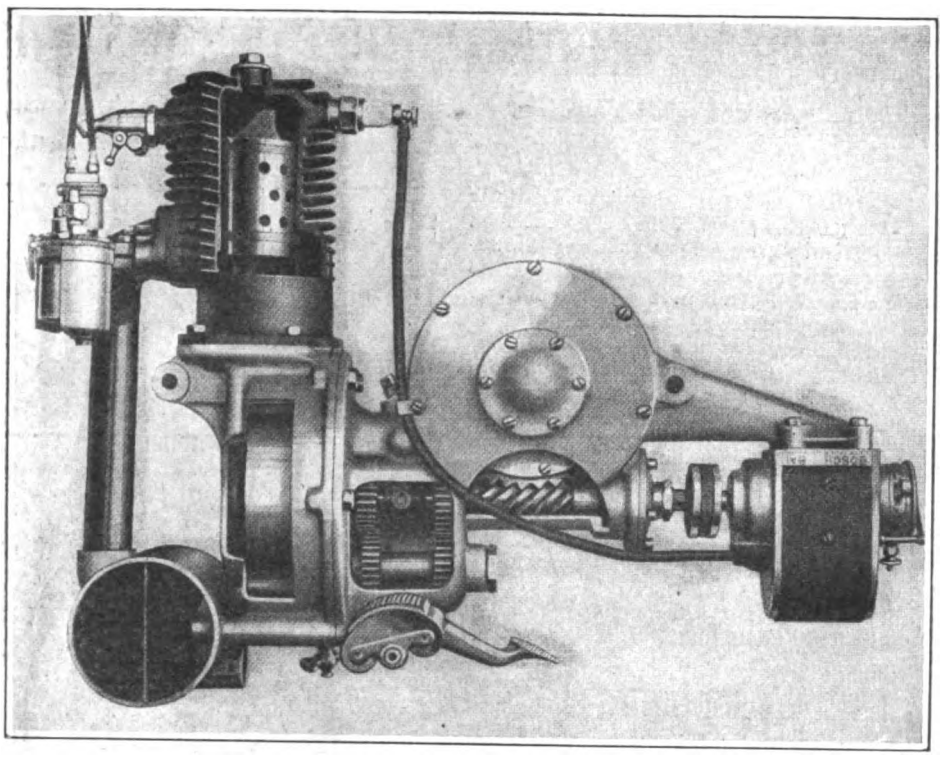
Control Arrangements

The multiple-disc friction clutch is controlled by a ball-end lever at the left side of the tank. This lever pivots on the countershaft end and has a stout and rigid quadrant. The lever is so located that it will not be damaged by falls. The ignition timing is controlled by a short lever just in front of the saddle on the frame, as in the 1916 models. The band brake is on the left side of the rear hub with connection to the pedal at the left footrest.

The novel and characteristic rocker spring fork is continued for the new season, as is the cylindrical fuel tank with capacity of 1½ gallons and the transversely-located cylindrical toolbox. The gear ratios are the same as in the preceding models: 6.1 on high and 10 on low.

Hubs and Guards

The hubs are of the knock-out type. The rear hub and the properly designed rear mudguard permit of the ready removal of the rear wheel. The front mudguard is fitted with ample side-wings to protect the rider from steering splash.



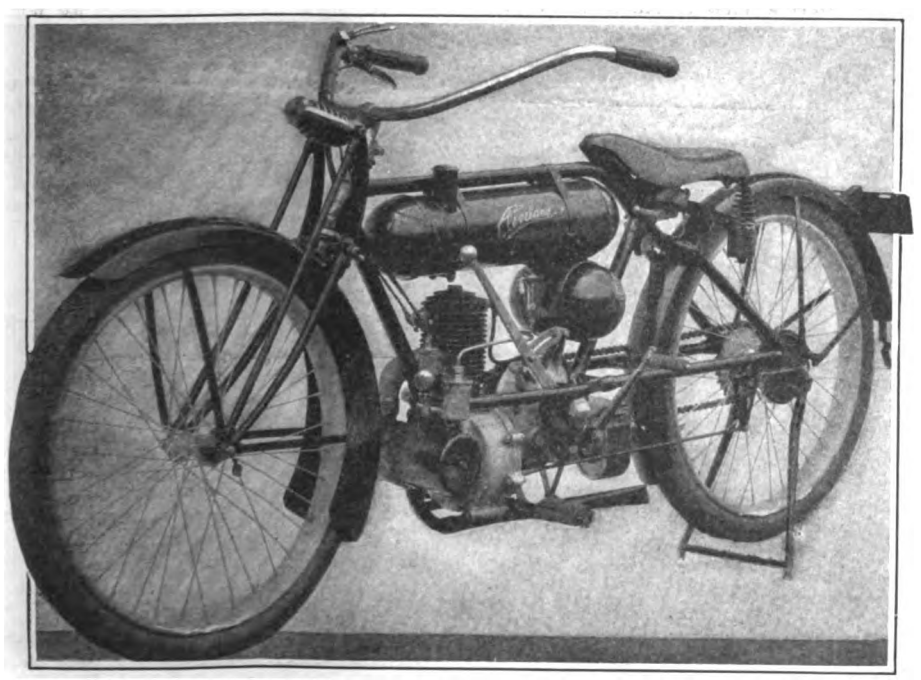
Unit Powerplant in Section; Muffler With Diaphragm, Flywheel in Crankcase, Two-Speed Gear, Worm Drive and Direct-Actuated Magneto

All frame parts are drop-forged and the highest quality of seamless steel tubing is used.

The wheels are 26 inches in diameter and are shod with 26 x 2¼-inch Firestone tires. The wheelbase is 53 inches. The saddle used is a Troxel Truform. Finish is durable black enamel with gray and nickel trimmings. Price is $160 f. o. b. factory.

The Cleveland two-stroke is built in an up-to-date and well-equipped factory devoted to this work alone. The organization is backed by ample capital. The machine itself, for over one season, has been thoroughly tried out in long and grueling endurance runs, special tests and commercial applications. By such tests any weak points in design will be brought out, but it speaks well for the Cleveland engineers that there were none such; hence the 1917 model is practically the same as that of 1916, with the exception of the added kick starter.

The Cleveland officials are working on publicity and advertising plans which will provide the dealer with every kind of useful information and assistance and which will firmly establish the relation of the Cleveland lightweight to the present and future motorcycle industry. The Cleveland is not a high-powered and heavy mount, but on the other hand has ample power and speed to go anywhere. Its price is moderate, the firm points out, in comparison with motorcar quotations of recent date.



New Cleveland Lightweight Two-Stroke With Kick Starter; the Characteristic Rocker Type of Spring Fork, Suspended Tank and Toolbox Are Clearly Seen

SEA FISHING ENGROSSES JERSEY CLUBMEN

NEWARK, N. J., Sept. 18.—About 30 members of the New Jersey M. C. forsook their motorcycles yesterday and went deep sea fishing for a change. They were led by Captain Cordes, the fishing expert of the club, who took a course in a correspondence school on the subject. Walter Ker went along to see that bait was well supplied to the crowd. A pool for the largest fish caught is the feature of the outing.

Next Sunday the club-run will be held over the course of the Jersey Jaunt—the club's fall road competition. An idea of the condition of the route, also mileage, will be obtained. The arrangement of the Asbury Park, Trenton and Washington checkers will be made at the same time. The run will leave the clubhouse at 8:00 a. m., and any out-of-town riders who wish to join in are welcome.

CONTEST ANSWERS FLOCK IN FROM ALL QUARTERS

Nearly 100 Riders Answer Second Week's Picture—Many Correct on the Third Week—Fourth Picture May Prove Stumbling Block for the Wise Ones

WHEN an editor wanders into the field of prophecy, verily he is lost. When introducing that Reading Standard picture to those of our readers who are possessed of an investigating turn of mind, we predicted that it was going to be a "poser" for most of them. And therein ye Contest Editor was dead wrong and likewise much deluded. For of a total of 94 who came through with answers, all save two had the correct dope.

Nevertheless, our prediction of last week was as correct as can be. We said that the little puzzler would prove easy for most folk, and that we were absolutely correct is proven by the fact that out of thirty answers received up until press time just that many correctly assumed that the little cutout was taken from an Indian and pictured a portion of the front wheel hub and the spring fork rocker.

Can We Beat the Sharks?

Seems that about the only way to stump the many motorcycle "sharks" who are in the contest is to print a picture of a spoke, or, perhaps, a nice little section of the exhaust smoke of one of the models, and even then, judging by past performances, some of the keenest of the contenders would undoubtedly come through with the right answer in the very first mail.

Well here we go again this week with a little flea-eye view of a 1916 model which is passably hard, yet passably easy (Safety First stuff for editor-prophets). Go to it yourself—don't ask your friends. That friend business makes it too easy. About every rider in Newark, N. J., sent in the correct answer last week on a sheet of paper that looked like a petition to convert a big town in a dry state into a thriving little oasis.

Still Five Perfect Scores

To date there are five contenders with perfect scores. They are: Grant R. Moore, Monticello, N. Y.; William Ennico, New York City; T. O. Wansleben, Washington, D. C.; John Henssler, Philadelphia, Pa., and Charles Williams, Pittsfield, Mass. Of course, with answers coming in with every mail, there is scant doubt but what there will be many more perfect scores. The incoming answers have increased the number of perfect scores on the two first pictures from five, where it stood last week, to 21.

Only two answers to the first picture were received this week which could be allowed. They were from R. W. Krotzer, of Sandpoint, Idaho, and Mark Owen, Butte, Mont., and in both cases the postmarks proved conclusively that the answers were posted before the new issue had been received. Three other answers were received which left room for doubt on this score and so we could not allow credit for them. They were submitted by Elmer Webbers, Rock Rapids, Ia.; Walter Kannowski, Alpena, Mich., and Miss Millicent H. Mulliner, of Chicago. Never mind Millie! Your second answer was correct and was in in ample time.

The girls, by the way, promise to give the male "experts" a run for the glory accruing from this contest. Aside from Friend Millie, Mrs. Douglas Adams, of Keene Valley, N. Y., and Miss Jennie Forrie, of Port Jervis, in the same state have thrown their Paris chapeaux in the ring in an effort to capture first honors for the suffragettes.

The two contestants who went wrong on the Reading Standard picture were Frank Fitzgibbons, of Menno, S. D., who thought he recognized some Pope features in the snapshot, and J. Felix Carson, of Grand Junction, Colo., who was sure it bore earmarks of the Feilbach Limited.

We wish to say a word of deep condolence to George Montgomery Hill, of Long Branch, N. J., who evidently wrote to "Cousin Violet" and the "Contest Editor" at the same time and then got the envelopes mixed! Now, George, just sit right down and send the "Contest Editor" Cousin Violet's address and we will forward your letter to her in a nice scented pink envelope with a stamped and addressed envelope enclosed for the return of your answer. And just to show our good nature, we will call you correct in all the pictures to come—provided Cousin Violet sends us her picture along with your answer.

THE unit power plant of the 1917 four-cylinder Henderson is another constructive advancement of the kind that has set this machine distinctly apart from ordinary motorcycles.

Though new in motorcycle building, this idea has become standard with many of the finest and most costly automobiles; it is logical that the four-cylinder Henderson should introduce this feature of better design in the making of motorcycles.

It Creates New Business for the Dealer

THE 1917 Henderson brings the alert dealer a chance for *big* increase of business—no matter how successful he may have been before.

For it opens entirely new fields for sales.

It appeals to the kind of people who would not consider owning an ordinary motorcycle at all.

It brings to the dealer's store the highest class of patronage, the most desirable kind of customers.

It meets so perfectly the desires of the multitudes of people who had not previously been able to find a motorcycle that would satisfy their critical requirements of silence, smoothness and refinement combined with high efficiency.

The Henderson dealer increases his sales greatly from this vast new field of customers as well as retaining the trade of veteran motorcyclists who have learned from experience the advantages of four-cylinder power.

Henderson Motorcycle Co.
1158 Cass Ave., Detroit, Mich.

GENTLEMEN:—I desire to consider your proposition for the Henderson dealership in this territory. Please send me the new illustrated catalog describing the 1917 Henderson, and explain the details of your offer.

Remarks:

Dealers' applications for territory for the 1917 Henderson should be filed immediately, as the demand for this new machine is so strong that it will hardly be possible to take care of those who speak late. Preference will of course be given to dealers whose applications are received first, in awarding exclusive territory. Fill out the blank and mail at once.

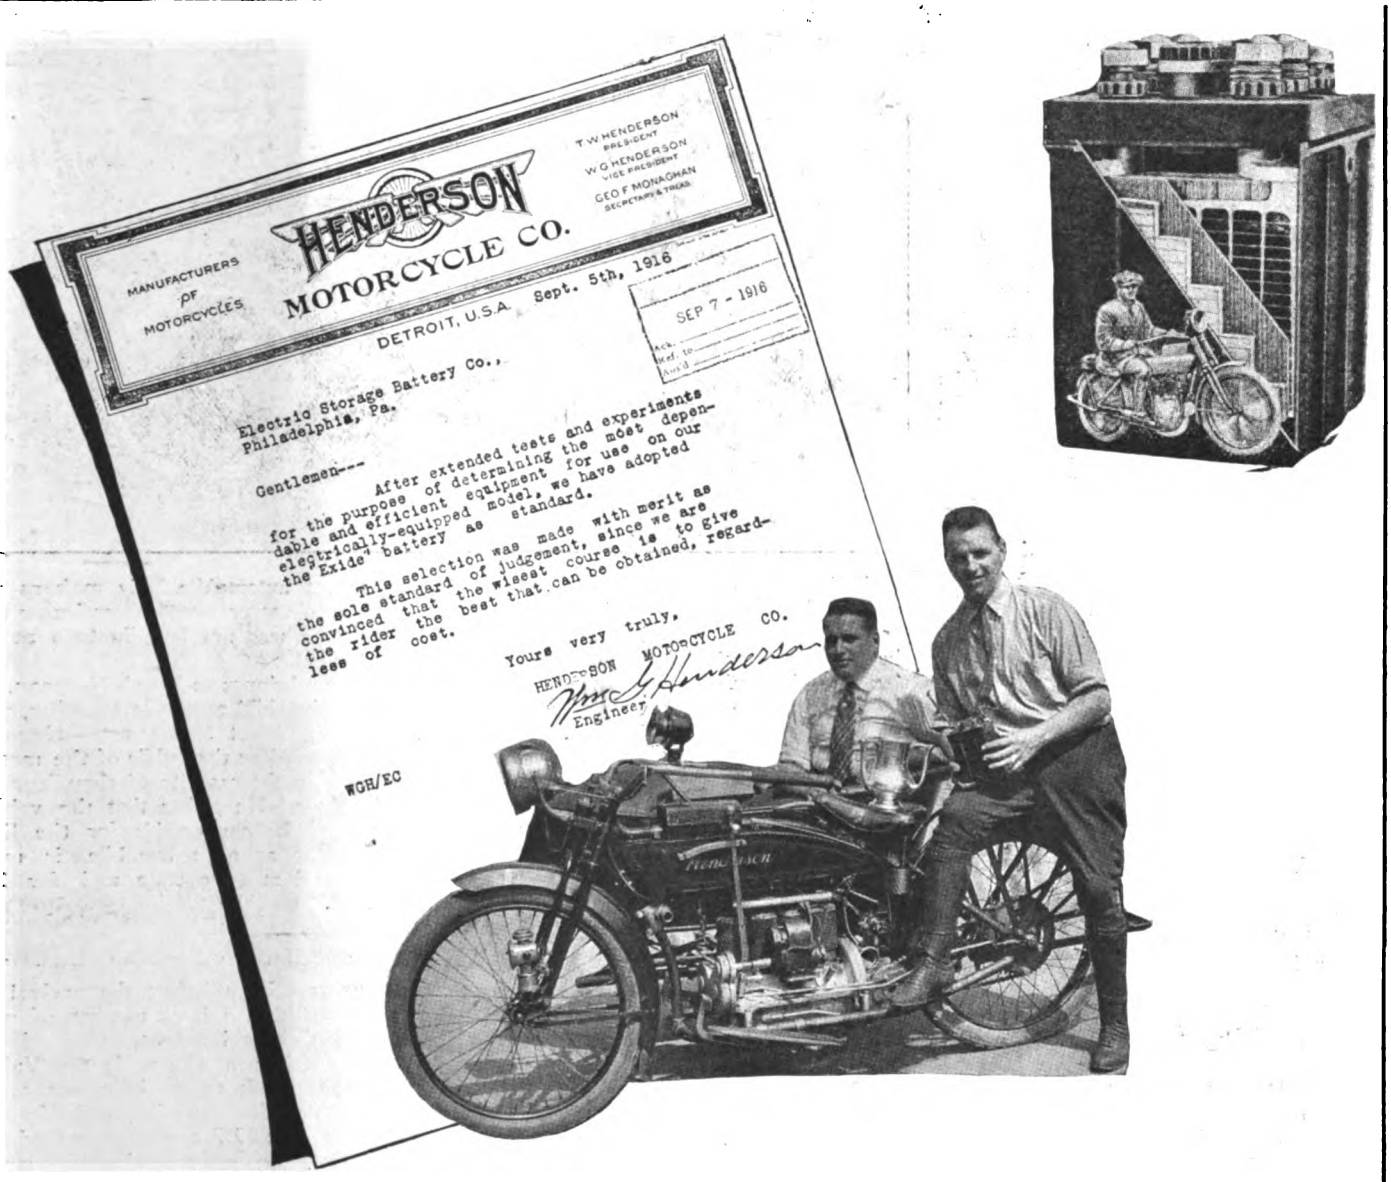
"We Have Adopted the 'Exide' Battery as Standard"



Gene Coughlin, the Bronx Henderson distributor, who is shown holding an "Exide" battery, says: "I've nothing but praise for the "Exide" In the New Jersey 24-Hour Endurance Run, it was the consistent work of the "Exide" that enabled me to win first honors, and the cup you see here. At times during the night my battery was entirely submerged by ditch water but it kept on working just the same."

PERRY TAKES GRAND ISLAND FEATURE

Excelsior Pilot Covers Course at 75-Mile Clip — Parkhurst Second—Indian Team in Bad Spill

OMAHA, Nebr., Sept. 17.—The 100 mile race at Grand Island, Nebr., on Sunday was won by Bob Perry, mounting his Excelsior, with Leslie Parkhurst, Harley-Davidson, second, and Otto Walker, also astride a Harley-Davidson, in third place. Fourth and fifth also went to Harley-Davidson riders, Harry Muhl following Walker across the tape, while Le Roy Roland was the fifth man to finish. The Indian team, composed of Creviston, Graves and Johns, piled up while hitting a warm pace, but evidently none of the Wigwam speedsters was seriously hurt. Time for the century was 75 minutes, 12 seconds, or an average of 77.36 miles an hour. The race was witnessed by a good sized crowd of speed fans and much interest was worked up in the event in spite of the fact that many were disappointed through the spill which removed from the first line competitors the Indian veterans, Creviston, Graves and Johns.

Perry's Excelsior was equipped with Bosch Magneto, V-Ray spark plugs, Goodyear tires, Renold chains and Schebler carburetor. The Harley-Davidson machines carried the same equipment, except for their Wright plugs.

Ray Creviston won the 25 mile event, on his Indian, with Bob Perry, Excelsior, second, Otto Walker, Harley-Davidson, third. Creviston's mount was equipped with Dixie magneto, Anderson plugs, Hedstrom carburetor, Goodyear Blue Streaks and Renold chain. The time for this event was 17:45 3/5.

Harry and George Muhl, riding Harley-Davidsons, finished first and second, respectively, in the 25 mile club race. Powell, with Indian sidecar, was the victor in the 10 mile event for passenger machines. The races were held under the auspices of the Grand Island Motor Cycle Club.

San Francisco Bulletins

ARTLEY'S WORK ON HENDERSON IS BOOSTING SALES

SAN FRANCISCO.—Mr. Angwin, of the Motorcycle Sales Co., Henderson agents, has just returned from a business trip to Sacramento. He reports that Roy Artley's performances on the Henderson between Los Angeles and San Diego, and between San Francisco and Los Angeles, have made him and the Henderson known to people all over northern California and that numerous sales prospects have been lined up as a result of his record-making trips.

The Motorcycle Sales Co. is selling all the second-hand Hendersons it can obtain, and also had a waiting list of purchasers for 1917 machines.

PLENTY OF ACTIVITY FOR FRISCO M. C. RIDERS

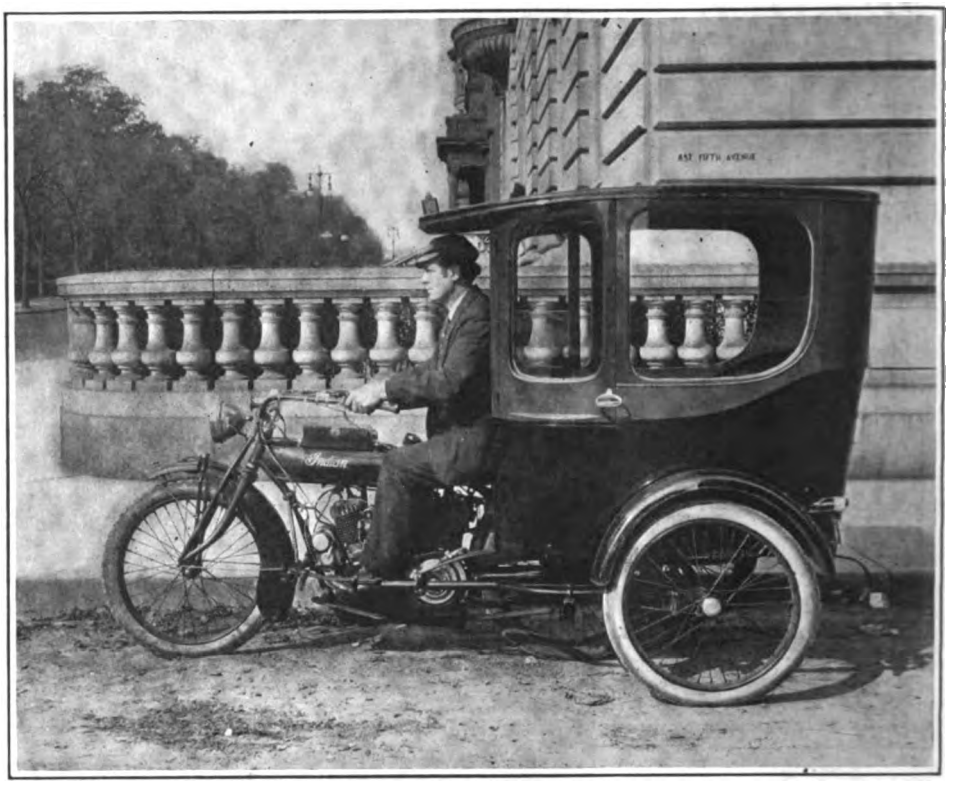
SAN FRANCISCO.—The San Francisco M. C. had a very successful social Thursday evening, September 7, at the clubrooms, the attendance being the largest this summer, and 11 new members being lined up. The membership contest is growing quite lively, and the club promises to be one of the largest in the country before long if the present rate of expansion is maintained.

At the next meeting arrangements will be made for the annual dance. A club run was held to the famous quicksilver mines at New Almaden, between San Jose and Gilroy, September 17. There are still seven club riders with perfect scores for the season's runs.

ADVANCE ORDERS ARE HEAVY

SAN FRANCISCO.—Jack Fraser, manager for the Appeal Mfg. & Jobbing Co., says that advance orders for Harley-Davidson machines are heavier this year than ever before. Even before the arrival of the demonstrator, a large number of purchasers had been lined up. One of the company's salesmen who made the Valley trip recently took orders in nearly every town between San Francisco and Merced, even before the 1917 announcement of the Harley-Davidson company had appeared. The agencies are well lined, says Mr. Fraser, and there are indications that few changes will be made for the coming season.

MOTORCYCLE "LIMOUSINE" SERVES THIS ACTRESS



NEW YORK.—The "motorcycle limousine" has made its appearance on the streets of New York, and true to its ideals the limousine in question does transportation duty for a fluffy little actress who at the present moment is an understudy to Miss Mary Pickford of motion picture fame.

The limousine comprises a Powerplus Indian and Cygnet Rear car combination to which a convertible enclosing top has been fitted to shield the little lady from the elements. The top is by no means a makeshift, but has been applied by one of New York's best automobile body makers and the casual observer would never know that the machine was not built in toto at the Cygnet plant.

The outfit belongs to Joseph Neuman, the father of the child actress in question, who lives at 308 West 38th street. Neuman, who is pictured on the saddle of the motorcycle, acts in the capacity of chauffeur for his daughter. He claims that the vehicle is every bit as comfortable for the little screen artist as an automobile, is more handy for him to operate and far less costly.

MOTOR-COP GETS A "COMEBACK"

MOTOR Policeman George W. Griffin, of San Benito County, who has helped to make San Juan grade famous, and who has become famous himself for the number of arrests made on that stretch of road, was himself the victim of a pinch on September 7 in his home town of Hollister. He was charged with driving an automobile on a sidewalk. Griffin drove up on the sidewalk to block the way of a friend as a joke, and the town marshal came along in time to see him. Griffin has a lot of friends who greatly appreciate this joke on a policeman.

Trade Items from Newark, N. J.

By E. B. HOLTON

NEWARK, N. J., Sept. 18.—The Carl W. Bush Company, Harley-Davidson distributors for this section of New Jersey, is holding daily exhibitions and demonstrations with the "Giant in Khaki" outfit.

The firm has invented a game entitled "Take one ride, or you may expect one on the 25th." It goes like this: "Link" Holland or "P. W." gets you in the sidecar, then they give that new '17 the throttle and away you go for the nearest hill. Up you are shot like an arrow, then they throttle down and climb so slow you expect to stall, but nothing to it. All the time they are telling you about the new things under the cylinders, so that by the time you are due back at the store you will do something rash to get that particular machine, but Carl then takes you in hand and calms you, and sees you write your name on a piece of paper, all the time explaining how you will be one of the first to get one of the 1917 models due on September 25 in a carload lot.

Then you rush out to the curb to get another glimpse of the beauty and—darn it, someone else is out for a demonstration. So all you can do is sit and wait for that carload due the 25th.

WM. R. SPEAR, Thor, has Bert Coryell, long identified with Frank C. Cornish, working for him in the repair department. They have begun to pester Spear about the 1917 Thor, and when it will be on view, and where it is, with the news of the next year's model is not yet cold in the papers.

WATSON KLUCZEK, Reading-Standard, is at the factory getting acquainted with the 1917 model, while William Buchanan is in charge at the store. There are very nearly 50 R-S solo and sidecar outfits rolling round this city at present, and the agents are well pleased with the sales record they made in 1916.

Buchanan has just disposed of the fourth dark-blue R-S to a waiting customer, and the color has taken on sight with a lot of local riders.

Twenty-two sidecars were the number disposed of by Kluczek, the Rogers and Pullman makes being about equal in popularity.

CHAS. KREBS, who recently bought out the Frank C. Cornish Est., has signed with the Henderson for 1917, and has booked an order for the new model before the announcements have been made.

He expects a demonstrator by the 25th of the month.

LANTZ SOLD FORTY DURING 1916 SEASON

JERSEY CITY, N. J.—Morton D. Lantz, handling the Harley-Davidson and Cleveland in Hudson County, has just signed for 1917 and wears a pleased smile when he is asked how business was for the year that is drawing to a close. Outselling his original contract of 40 machines by 23 motorcycles is the cause of the grin. Maybe the placing of 30 sidecars also had something to do with his cheerfulness.

He placed three Harley-Davidsons with the Bayonne Police Department, after a competitor had the whole order for six motorcycles of another make.

"Bill" Bergfels, well known in road competitions in the metropolitan district, has charge of the repair department and helps to keep the service end of the business right up to the minute at all times.

NEWSY NUMBER OF THE GOODRICH

The September number of *The Goodrich*, the bright and newsy house organ of the B. F. Goodrich Company, is now being distributed. From cover to cover the 30-page booklet is replete with attractive photographs, trade items, snappy cartoons and general articles for riders and the trade. Considerable space is devoted to speed accomplishments on Goodrich tires, but utility branches of tire service are not overlooked nor is touring.

THEY'RE STILL TALKING ABOUT GOERKE'S PICNIC IN JERSEY

NEWARK, N. J., Sept. 20.—Practically every one of the 125 riders who attended Walter Goerke's second annual picnic at Greenwood Lake to the New Jersey M. C. is referring to it as the best time he or she ever had, and the chances are that they will talk about it until the next time Walter plays host to the crowd.

There were stunts of all kinds: climbing the greased pole, swimming, canoe tilting, sack races and plenty of eats. Then there were things that the ladies could—and did—go in for: potato races and such things. The rope broke when the married men were pulling against the bachelors, to the great enjoyment of the spectators. All hands sure did enjoy themselves.

In the picture at the left is the finish of the sack race, while in the center is seen a competitor walking the greased pole above the lake, to get a card off the end. At the right is a bunch starting off on the *Theodora*, Walter's pet gasoline launch, for a trip around the lake.

Depicting a Few of the Many "Stunts" Which Enlivened Goerke's Picnic

Here's "Theodora." There Was Just Enough Room for the Last Picnicker

Trade Doings in Los Angeles

LEBELL FIXES UP BIG STORE FOR MOTORCYCLES

THE Pacific Motor Supply Co. is rushing additions and alterations at its store on South Main street, preparatory to pushing a vigorous campaign on the motorcycle distributing agency, which it will announce October 1. Additional overhead space has been taken, and is already completely equipped for a shop capable of handling every class of repair work, with space and machinery for a dozen expert repairmen. A big elevator of the most modern type will take a wagonload of crated machines up at one lift. There is ample space for a big stock of motorcycles, and the arrangement of shelves and bins for parts and accessories is something that would delight the eye of any stockroom expert.

Manager E. Lebell and A. Freed, head of the company, who has been down from San Francisco, have worked out every detail to a fine point, and all arrangements show the class that comes from being planned by capable veterans in the business.

BERRY TO OPEN THOR CAMPAIGN WITH PICNIC

ENTERTAINMENT de luxe is what they will call the Thor opening in Los Angeles. Distributor T. E. Berry has the new store nearly all painted. Next week it will be resplendent with stock of machines and a complete line of Thor parts. Then Berry will give his indoor picnic, and the Thor folks will eat, drink and be merry through the evening. Berry is getting up some novel stunts.

One feature he is banking on is a story-telling contest for both men and lady riders, with a prize for the most original and interesting story of a motorcycle experience. Judges will be Frank Reed, of **Motor Cycle Illustrated**; J. J. O'Connor, editor *Pacific Motorcyclist*, and W. Ed. Edwards, *Motorcycling*.

EDISON OPENS LOS ANGELES BRANCH

LOS ANGELES, Cal.—The Edison Storage Battery Supply Co. has opened up its third Pacific Coast branch at Fourth and Main streets in the San Fernando building. The branch will be in charge of James F. Regan, who has been acting as local distributor for the alkaline battery. The other branches are located, one in San Francisco, and the other in Seattle, Wash.

VERY LATEST IN BATHING SUITS

Modest bathing suits was the watchword at the last run of the L. A. M. C. It turned out fine. It all started in the annual watermelon run. The melon gatherers brought in several sackfuls. After everyone had consumed his two or three there was nothing left but the sacks. "What will we do with the sacks; too bad we can't eat 'em," said George Martin. Then some daredevil looked down at the swimmin' hole among the willows and said the magic word. Inside of three minutes every sack had two leg holes, a pair of shoulder strings, and one live motorcyclist inside. Good stunt—try it yourself!

MILES ON DECK AGAIN

Lester Miles is being congratulated on getting by an attack of appendicitis without an operation. Les is back at the store, trying to restrain himself and let his partner Martin do most of the work—but finds staying idle hard work in itself these stirring days in the motorcycle trade.

L. A. M. C. JOINS BAKERSFIELD IN COYOTE HUNT

LOS ANGELES.—Dick Bissett has recruited nearly half a military company of Los Angeles rough riders to go up and help the Bakersfield bunch, led by Bert Gilmore and Ed Tice, in the great southern California coyote hunt. The crowd goes up via the famous Ridge route along the mountain summits, drops down into the desert, and holds a grand midnight barbecue. Then it's blankets for about three hours, and just before dawn the beaters spread out encircling a huge mesa, open 'em up and let 'em roar, and shorten up the circle. Here is where Mr. Vulpis Cyoticus gets up on his ear and beats it toward the center of the circle, where the sand-trained crowd waits behind a sage-brush screen. Then—but that remains to be seen.

CLEVELAND RIDERS TO ENJOY PICNIC

C. Will Risden, Cleveland distributor for the West, is arranging a big outing of Cleveland riders for Sunday, September 24. The crowd will assemble at Risden's store on West Eighth street at 9 a. m., and ride to Seal Beach via San Pedro and Long Beach. There they will participate in contests for a fine list of prizes, enjoy swimming, dancing, and eat one big feed provided by the host.

SMITH TAKES WALD TANDEM

C. L. Smith, the South Olive street jobber, has just taken the California agency for the Wald tandem. He says: "I saw a little Wald ad. in **Motor Cycle Illustrated**, and the tandem looked as if it might be good. I wrote for a sample, and found it was all right, and the California agency was open, so we closed a contract which gives me the State agency. It will fit on any luggage-carrier, and the rapid growth of lightweight business here gives it a big field."

Bicycle Section

CYCLE TRADES DIRECTORATE FORMED

Committee of Nine Representing Three Cycle Trades Associations Forms Permanent Body to Carry On Bicycle Exploitation Campaign at Hotel Astor Meeting— Christmas Bicycle Campaign Launched

NEW YORK, Sept. 18.—The work of the "Million Bicycles" Committee, which began at the mid-winter meeting of the several cycle trades associations in New York City last January, culminated on Thursday afternoon at the Hotel Astor, New York, in the organization of the United Cycle Trades Directorate. This body of nine men marks a mightily progressive step and means greater use of the bicycle in the years that are to come, with consequent greater profit and better business to all concerned, including the many thousand retailers of bicycles throughout the United States.

The sole and exclusive purpose of this directorate is to utilize to the utmost brains and money of the industry in a big propaganda for convincing the millions of people who do not now ride a bicycle that it is one of the best things for business, pleasure and health.

Success Arouses Interest

The success of the "Million Bicycles" Committee in arousing interest and stimulating a very considerable increase in the sale of bicycles early in the season, especially in connection with Bicycle Day, indicates how much greater results can be expected from the big plan as proposed by this committee at Atlantic City and now to be put into operation.

While the work to be carried forward this coming year will undoubtedly bring wonderful results, it is the purpose of the directorate to proceed with its work in an even larger way the second year. In other words, the directorate will build fundamentally, steadily and surely, and not attempt to promote a propaganda that will exist only for a few months and produce spasmodic results.

Printz Presided at Convention

At Atlantic City, D. F. Printz, president of the Cycle Parts and Accessories Association, presided at the joint session of his organization and the Bicycle Manufacturers and the Bicycle Jobbers, at which he was authorized to appoint this directorate. Realizing the importance of a movement that is undoubtedly the most ambitious of any yet undertaken by the cycle trade, he consulted with the presidents of the several organizations and asked them to name gentlemen to attend the Astor House conference for the purpose of discussing the directorate.

At the outset of the conference, which was well attended, President Printz expressed his personal opinion that the directorate should be made up of principals or proprietors and that appointment should be made largely from the East where it would be comparatively easy for the directorate to get together and spend several days each month in doing its work. An abundance of material for the directorate is located in the Middle West, on the Coast and in the South, but the conference agreed with him that the gentlemen in those localities would find it a hardship if not an impossibility to attend the regular meetings of the directorate and, therefore, men were suggested to him by the conference who live within a short distance of New York.

D. F. Printz, Who Was Elected President of the Cycle Trades Directorate

The work of the directorate is so general in its scope and so thoroughly important to every man in the trade that the co-operation of the manufacturing and jobbing interests everywhere will be solicited in the organization work.

Following the conference and appointments the directorate was organized as follows:

President, D. F. Printz, of the Reading Saddle Co., Reading, Pa.; secretary, Charles F. Olin, of the New Departure Mfg. Co., Bristol, Conn.; treasurer, Louis Schwab, of the Stevens Company, New York City; other members are: Colonel George Pope, secretary, Bicycle Manufacturers' Association; J. P. Fogarty, of the Westfield Mfg. Co., Westfield, Mass.; H. S. Wise, of the Miami Cycle & Mfg. Co., Middletown, Ohio; DeWitt Page, president of the New Departure Mfg. Co., Bristol, Conn.; Keyser Fry, of Reading, Pa., who is president of the Cycle Jobbers' Association of America; J. W. Grady, of J. W. Grady & Co., Worcester, Mass.; Fred A. Baker, president of the New York Sporting Goods Co., New York City.

President Printz and Treasurer Schwab are both from the Cycle Parts and Accessories Association, in addition to Mr. Page. Each association is represented by three members.

Finance Committee Appointed

A Finance Committee was appointed, consisting of Messrs. Schwab, Wise and Grady, and the Million Bicycles Sales Promotion Committee now consists of Harry S. Quine, of Akron, Ohio; C. F. Olin, of Bristol, Conn., and Horace Huffman, of Dayton, Ohio.

The Finance Committee will collect the fund necessary for carrying out the work of the directorate. The work of this committee will be entirely confined to the parts and accessory manufacturers and jobbers, as the bicycle manufacturers have already provided for supporting the propaganda.

Christmas Trade Opportunities

Mr. Olin called to the attention of the directorate the splendid opportunity open for selling a large number of wheels as Christmas gifts. President Wise of the Bicycle Manufacturers' Association stated that the bicycle makers would be in a position to supply wheels for an extraordinary demand at that time. Therefore, the directorate authorized the Sales Promotion Committee to go ahead with a special campaign for Christmas selling of bicycles. The committee had already done some work along this line and is now completing the plan for the campaign and will hold a meeting before the end of the month for rounding out its co-operation with the dealer, so that in all parts of the country the retailers of bicycles will be urged to work with the directorate in putting the bicycle forward as a Christmas gift.

The committee already has the assurance that the daily and weekly newspapers will work with the dealers and the leading boys, girls and women's publications will also run special bicycle reading material at about this time. Full details of the plan will be announced later, and Secretary Olin feels certain that every dealer will be enthused by the opportunity this Christmas plan offers him for selling many bicycles during the season of the year when his sales are ordinarily very few.

AUSTRALIAN RIDERS HAVE GALA DAY

Antipodean Cyclists Make Cleaning at Newark—Spears Beats Kramer in Brassard and Spencer in Match—McNamara's New Record —Grenda Wins Three-Mile Open

NEWARK, N. J., Sept. 18.—"Long Bob" Spears, the Australian cyclist, had a very profitable session at the Velodrome yesterday afternoon. The speedy native from the lair of the kangaroo, disposed of Frank Kramer, the American champion, in the weekly running of the one-mile Brassard, and then took Arthur Spencer, the Canadian, into camp in a match race at a mile.

Spears in the Brassard rode a wonderful race and came around Kramer in the last turn, doing the last eighth-mile in 11 4/5 seconds. The Australian had dropped off of Kramer a little over a lap from home, and Kramer jumped when he saw Spears was away back. At the bell Kramer had a commanding lad, but Spears, showing everything he had in the speed line, gradually overhauled the fast East Orange man, and just got Kramer at the tape.

Spears Had to Hustle

In his match race with Spencer Spears had to show his best wares in order to win. The race was originally scheduled for best out of three heats, but as one heat was ordered no race by the referee the contest was not decided until four heats had been run. Spears won the first heat in which Spencer was fined $10 for rough riding, while Spears also won the second, but the referee ordered the heat thrown out and fined Spears $10 for rough riding. Spencer accounted for the re-running of the second heat, and in the fourth and last heat Spears rode around Spencer in the last half-lap and gave the Toronto lad plenty of room.

Another Australian, this time Reggie McNamara, had a chance to shine later in the day. A one-mile handicap was put on in an effort to break the existing record for the distance. The mark was 1:47 3/5 and was made by Alfred Goullet, the Newarker, at Salt Lake City, Sept. 8, 1912. Five scratch men started, they being, Frank Kramer, Alfred Goullet, Alfred Grenda, Reggie McNamara and Bob Spears. Willie Hanley had 70 yards; Eddie Madden, 60; Arthur Spencer, 50; Marcel Dupuy, 40; Jake Magin, 30, and Oscar Egg, 20.

McNamara's Great Ride

Hanley led for the first lap and swung out of the way, the others doing likewise in turn after doing their bit. At the bell Oscar Egg led with Kramer on his wheel followed by Grenda, McNamara and Goullet. Spears had been dropped off and was out of the running in the first half-mile. McNamara made his bid shortly after the bell and in one of the most strenuous rides seen at the track won by a safe margin over Grenda, Goullet and Kramer, and in doing so established a new mark of 1:45 for the distance.

Alfred Grenda accounted for the three-mile open for the pros., leading Jake Magin, Willie Hanley, Fred Hill and Alfred Goullet over the tape in that order. Willie Spencer, the Toronto rider who recently turned professional, won his first race in that class, when he came home in front in the half-mile handicap In a tandem-paced match Alfred Goullet defeated Oscar Egg in two out of three heats by clever headwork and riding.

Little Benny Clark and John Staehle, the amateur champion, accounted for the simon pure races. Clark finished first in the two-third-mile handicap, while Staehle lasted the longest in the Australian pursuit race. Summaries:

Two-third-mile handicap, amateur — Won by Benny Clark, Newark (100 yards); second, Chris Dotterweich, Newark (25 yards); third, Harry Hoffman, San Francisco (75 yards). Time, 1:13⅗.

Australian pursuit race, amateur—Won by John Staehle, Newark; second, Fred Taylor, Newark; third, Tommy Fitzsimmons, East Orange; fourth,

Manager John M. Chapman, Who Plans Big Six-Day Race Circuit

Tom Bello, Newark. Time, 5:25⅘. Distance, 2½ miles.

Half-mile handicap, professional—Won by William Spencer, Toronto (60 yards); second, George Cameron, New York (40 yards); third, Lester Bowker, Long Island (70 yards); fourth, Percy Lawrence, San Francisco (40 yards). Time, 52⅖ seconds.

Three-mile open, professional.—Won by Alfred Grenda, Australia; second, Jake Magin, Newark; third, Willie Hanley, San Francisco; fourth, Fred Hill, Boston. Time, 5:47⅘.

One-mile Brassard race, professional — Bob Spears, Australia, the holder, vs. Frank Kramer, East Orange. Won by Spears. Time for last eighth-mile, 11⅘ seconds.

One-mile match race, professional—Bob Spears, Australia, vs. Arthur Spencer, Toronto. Spears won first and third heats. Time for last eighth-miles: 12⅘, 12⅖ and 12⅕ seconds, respectively.

One-mile invitation handicap, professional—Won by Reggie McNamara, Australia (scratch); second, Alfred Grenda, Australia (scratch); third, Alfred Goullet, Newark (scratch); fourth, Frank Kramer, East Orange (scratch). Time, 1:45. New world's record.

Two-mile tandem-paced match, professioinal—Alfred Goullet, Newark, vs. Oscar Egg, Switzerland. Goullet won second and third heats. Times for last eighth-miles, 12⅖, 12⅖ and 12⅗ seconds, respectively.

AICKELIN COPS N. E. W. TITLE

NEW YORK, N. Y., Sept. 18.—With a total of 31 points in the titular races of the New England Wheelmen, Eugene Aickelin is now the champion of that hustling organization. Aickelin won the three-mile club championship run yesterday afternoon over the Eastern Boulevard course. J. Palmier finished second and G. Palosoy third. In the five-mile race Palosoy won from B. Boyes and C. J. Tonges in that order. No times were taken.

ROAD RACING REVIVED AT READING MEET

Negro Youth Takes Feature Event and Keyser Fry Prize —Young Girls and Boys Perform Well

MACUNGIE, Pa., Sept. 17.—Bicycle road racing was revived here last Saturday before a crowd of 3,000 spectators, many of them coming from nearby cities and towns. In addition to a two-mile race for boys, who had not passed the 14-year stage, and a one-mile race for girls, a 14-mile road race to Foglesville and return, was run.

Andrew Henry, a negro youth, astride an old heavy bicycle that looked as though he had dug into the attic to bring forth, copped the first honors in the long event. Henry covered the course in 50 minutes even. Howard Franks rode to a close finish with the winner and won second honors. Herbert Christman, of Kutztown, finished third, and Joseph Schantz, a localite, accounted for fourth place.

Twenty-Two in Girl's Race

Miss Marguerite Schantz finished in first place in the one-mile race for girls, beating out 22 other competitors. Second honors went to Lillian Fisher, while third place was accounted for by Miss Lillian Christman. The two-mile race for the youngsters furnished plenty of excitement. Edwin Bortz set a hot pace from the start and easily won from the other 11 starters. Joseph Schantz finished second and Jacob Stevens third.

A fine list of prizes were donated for the race. The winner of the 14-mile race received the Keyser Fry prize, a Reading Standard road racing model, the donation of Keyser Fry, of the Reading Standard Cycle Mfg. Co., and auto and cycle jobber. Bicycle accessories and medals made up the other awards.

MOTOR WHEEL FEATURE

COLUMBUS, O.—A unique race was held at the Columbus Driving Park recently in conjunction with a labor celebration, which shows the utility and speed of the Smith Motor-Wheel. A race was arranged only for riders of Motor Wheels and in all five riders entered. The distance was fixed at three miles. After an exciting race, in which there were no mishaps, the contest was won by Joseph Miller in six minutes flat, or just 30 miles per hour.

KOKOMOS IN NEW ENGLAND

BOSTON, Mass., Sept. 18.—Agencies are being placed throughout New England by the Hub Cycle Co., for the Kokomo line of tires. The following salesmen are meeting with much success in placing the Kokomo agencies: Joseph J. Hoffman, James Egan, Herbert Sterling and Charles F. Corey, the sales manager of the company.

SERES AND DIDIER SAIL

NEW YORK, N. Y., Sept. 17.—Leon Didier and George Seres, the French racing cyclists, accompanied by their wives, sailed for Bordeaux, France, on the French line steamer *La Touraine*, yesterday afternoon.

NEW YORK TO CHICAGO RECORD BROKEN

William Winquist Shatters Fred Sanborn's Mark by 7 Hours and 11 Minutes—Rode 249 Miles in Last Session Without a Stop

CHICAGO, Ill., Sept. 17.—William Winquist, the Century Road Club Association rider, who started a week ago from the City Hall in New York City in an effort to better Fred M. Sanborn's recently-made record from New York to Chicago, arrived here today at 4 p. m., having clipped 7 hours and 11 minutes from the Baltimore man's mark.

Winquist left City Hall Square, New York City, Sunday, September 10, at 5:15 a. m. and reached Albany at 7:45 p. m., with a total of 158 miles. The second day saw the record-breaking cyclist at Syracuse, he having left Albany at 5:10 a. m. and arrived at the Salt City at 7:30 p.m., his second day's mileage adding 152 miles to his total. Syracuse was left at 5:25 the third morning and Buffalo, 163 miles away, was reached at 10:30 p. m.

Late Start at Buffalo

The long trip on the third day caused a late start on the fourth, but Winquist got away from Buffalo at 8:10 in the morning and arrived at Girard, Pa., at 8:15 that night after covering 110 miles. He left Girard at 6:20 the following, or fifth morning, and arrived at Elyria, O., at 7:00 p.m., covering 116 miles for the day. The next day's starting time was 6 o'clock in the morning and he finished at Wauseon, O., at 10 p. m. that night, with 143 miles added to his score.

From Wauseon to Chicago straight through was his schedule and he left the former point at 6:30 a. m. on Saturday, the sixth day, and arrived here at the City Hall at 4 p. m., finishing up with a total of 249 miles for the ride from Wauseon to this city, making 1091 miles in all for the trip. His elapsed time figured 7 days, 11 hours and 45 minutes, as against Sanborn's mark of 7 days, 18 hours and 56 minutes.

SIX-DAY RACES PLANNED FOR THIS WINTER

Boston and New York "Grinds" Assured—Chicago and San Francisco Possible

NEWARK, N. J., Sept. 19.—Plans in connection with a circuit of six day races for the winter months were discussed at a meeting between all of the professional riders now racing at the Velodrome, which was called by Manager John M. Chapman, of the Cycle Racing Association. Not much was accomplished and another meeting will be called for later in the week.

It was announced, however, at the meeting that the Boston and New York "grinds," fixed features, would be run regardless of whether the other races that were talked of would be run or not. The race in the Hub will be held at the Boston Arena between November 6 and 11, with a sprint meet for Saturday, November 4. The New York race will be held the first week in December.

Manager Chapman states that he is desirous of staging six-day races in Chicago and San Francisco and that the Cycle Racing Association is willing to give the cyclists most of the receipts. In case the 'Frisco race is held Chapman will go to Seattle and Portland to locate there, then work back east by way of Minneapolis and St. Paul. The disastrous war of the past year will not be repeated if the proposed races go through, for the bicycle riders will have some employment and the promoters less worry for the coming season.

RAY CALDWELL FIRST IN C. R. C. A. WEEKLY POINT

NEW YORK, N. Y., Sept. 18.—Raymond Caldwell, a 20-second man, won the six-mile weekly point race of the New York Division, Century Road Club Association, which was held over the Pelham Parkway course yesterday afternoon. Sixteen riders started and a dozen finished.

Max Halpern, who had a handicap of a minute and a quarter, finished second; Joseph Caldwell, 20 seconds, third; Gustav Hurray, 1:15, fourth; Vito Cestone, 20 seconds, fifth, while sixth place and fastest time was captured by John Marquart, who started from scratch, he covering the course in 16:22 1/5. Edwin Jensen, scratch; Willard Knecht, 1:15; James Tomosulo, 40 seconds; Louis Grace, 20 seconds; George Steppelo, 40 seconds, and Mayer Cigal, 1:15, finished as named.

RACING ON THE PELHAM PARKWAY COURSE, N. Y. CITY

Ray Caldwell Easily Wins the C. R. C. A. Weekly Point Race

GRANDJEAN BEST IN ZURICH-ST. GALL ROAD RACE

ZURICH, Switzerland.—Arnold Grandjean, the veteran rider, and E. Strasser, of Rheinfelden, made the best time in the military and amateur categories in the 80-kilometre (49.6-mile) race between Zurich and St. Gall on August 20. Grandjean's time was 2:36:40, while Strasser took 2:39:40 to complete the course.

The military riders, numbering 17, were started at 4:45 a. m. with the huge crowd of amateurs half an hour later. The first part of the course was fairly level, but the Schwartzenbach incline caused the withdrawal of one military and nearly a dozen amateurs. Grandjean was well ahead of the field at Gossau, 42 miles out, and was never headed. Sixteen military and 61 amateurs completed the run.

BOSTON SEASON CLOSES

BOSTON, Mass., Sept. 17.—With the running of the races at the Revere Beach track last night racing for the year was brought to a close. The feature of the meet was a 50-mile motor-paced team race between George Wiley and Clarence Carman, the Americans, and Victor Linart, the Belgian, and Vincent Madonna, the Providence Italian. The foreign team carried off first honors in the last race in 1 hour 7 minutes and 55 2/5 seconds. Carman fell at 25 miles and was forced out of the contest.

FOREIGN RACING NEWS

At a recent race meet held at the Treptow track in Berlin the feature was a one-hour team race. Walter Rutt, the German champion, and A. Steineke carried off first honors, while Willie Lorenz and Niederkrome finished second. At the same meet Albert Schipke won the motor-paced match, run in two heats at 25 and 40 kilometers (15.5 and 24.8 miles). Bruno Pawke finished second in each heat and the times were 22:15 and 35:29, respectively.

Ten thousand people turned out for a 100-kilometer (62½ miles) team race at the Parc des Princes track, Paris, Sunday, Aug. 20. Masson and Chocque won the race from Julian Pouchois and Marcel Berthet, Van der Hove and Baumler and Puech and Grassin. Thorwald Ellegaard, six-time winner of the world's championship, and Louis Darragon, a former world's champion pace follower, started but retired before the finish.

At Halle, Germany, Sunday, August 13, Eugene Stabe won the 1,000-meter sprint race from Frank Hoffman and Kops. Stabe also won the lap race and Muller, a 90-meter man, won the handicap. The paced race was accounted for by Gustav Janke, a former German paced champion.

STOKES RIDES TO VICTORY AT MADISON

Takes the 25-Mile Feature and 10-Mile Open on His Excelsior, Leaving Minor Events for Davis and Korn—Davis on Indian Lowers Mile Track Record to 49¾ Seconds

MADISON, Wis., Sept. 17.—Glen Stokes, astride an Excelsior, walked off with the lion's share of the glory accruing from the six-event meet staged here today on the Dane County Fair Grounds track. Stokes took the feature number on the card, a 25-mile open event in hair-raising style and also managed to bring home the bacon in one of the two ten-mile numbers which graced the program.

Jim Davis on an Indian and Korn on a machine of the same make divided up the remainder of the events between them, Davis taking the single-mile time trials in 49⅗, lopping off almost three seconds from the track record of 52 held by Gene Walker, and five-mile twin contest. Korn won both the five-mile and the ten-mile events for 30.50 class machines.

The day broke dim and chilly and only about a thousand spectators dotted the grandstand and bleachers. However small, it was an enthusiastic crowd and the sort of sport provided had the spectators on their feet throughout the six events.

Korn Finishes First

The five-mile single event was the first number on the program and the call brought five entries to the starting line; Escherich, the Cyclone pilot, was prevented from entering according to schedule by a broken piston earned during a speedy practice spin. The start of the event was delayed slightly by Verrill whose chain parted as he was getting under way for the rolling start. Irving Janke on a Harley-Davidson set the pace for the first few minutes, but went out on the fourth lap with a broken piston. Korn then assumed the lead and was not again headed.

Jim Davis got the biggest hand of the day when he succeeded in whirling his red Indian once around the course in the time trials and establishing the new track record for the distance. Korn, Verrill and Stokes were also under the mark set by Gene Walker early this season.

The exploit of Kenneth Verrill during the ten-mile single event was the wonder of the day. Verrill broke a piston ring on the sixth lap, but managed to effect a repair in time to get back in the running and roll home over the tape in third place after Fredericks; Stokes went out of the event on the seventh lap with plug trouble. Davis took the five-mile twin event only after a hard battle with Stokes who challenged his position from gun to gun and was then beaten out only by a nose, so to speak.

Left Them Behind

In the ten-mile open Stokes jumped into the lead on the very first turn of the circuit and uncorked such a burst of speed as to keep Davis and Verrill on the jump. His pace was so fast that he made the fourth lap in 47 3/5 the fastest lap of the day. Escherich retired from the contest early with motor trouble. Stokes' burst of speed opened up a sufficient lead for him early in the contest to insure his winning. and he rolled across the tape an easy victor.

The speedy Excelsior rider was prevented from repeating his tactics in the 25-mile feature by the superior generalship of Verrill who jumped into the lead at the gun closely followed by his team mate Davis. The speed duel between this pair continued until Davis was forced to retire on the sixth lap with a broken valve and a couple of laps later Verrill, too, went out with a fouled plug and Korn edged his way past Stokes into the premier position. Korn managed to retain his advantage until the 22d lap when Stokes, although riding with a damaged front wheel, went by him like a shot on the turn and managed to retain his lead until he crossed the tape a winner in 22:01. Verrill in the meantime managed to get running again and followed Korn across the tape and walked off with third money.

The summaries:

Five miles, 30:50 class.—Won by Korn, Indian; second, Fredericks, Harley-Davidson; third, Verrill, Indian. Time, 4:49.

One mile time trials.—Won by Davis, Indian. Time, :49¼. Second, Stokes, Excelsior, :50⅘; third, Verrill, Indian, :51; fourth, Korn, Indian, 51⅕; fifth, Escherich, Cyclone, :53⅗.

Ten miles, 30:50 class.—Won by Korn, Indian; second Fredericks, Harley-Davidson; third, Verrill, Indian. Time, 8:30.

Five miles, 61-inch class.—Won by Davis, Indian; second, Korn, Indian; third, Verrill, Indian. Time, 4:12⅗.

Ten miles, 61-inch class.—Won by Stokes, Excelsior; second, Korn, Indian; third, Verrill, Indian; fourth, Davis, Indian. Time, 8:30.

Twenty-five miles, 61-inch class.—Won by Stokes, Excelsior; second, Korn, Indian; third, Verrill, Indian. Time, 22:01.

RAIN MARS KANSAS STATE FAIR EVENT

Downpour Leads Many of 29 Participants to Neglect to Stop at Checking Controls

HUTCHINSON, Kan.—Rain storms caused a hurried finish for the Kansas State Fair motorcycle run from Hutchinson to Wichita Sunday, Sept. 10, most of the riders disregarding the checking stations in an effort to get home before rain fell. Practically all succeeded, though those who had trouble got a ducking.

Twenty-nine machines checked out from the Hutchinson *News* office. The route led through Burrton, Halstead and to Newton, over the New Santa Fe trail, and south from that city to Wichita, 64 miles. The Meridian trail was used into Wichita and both roads were like boulevards.

Controls Neglected

Walt Cunningham, Wichita Harley-Davidson dealer, piloted the crowd into town and they checked in at the Wichita *Beacon* office. Later a tour of the boulevards and paved streets was made. Clouds coming up caused the riders to check out early and hike for home. Controls were passed up in all the towns. The riders checked out a minute apart and were to have checked at all stops. Hutchinson dealers paid for the gasoline and oil for all riders. The entrants follow:

Frank Paterson, Harley-Davidson; Clifford Redd, Harley-Davidson; W. H. Ellesworth, Harley-Davidson; C. C. Pierson and wife, Indian; Everett Mettlin, Indian; M. E. Robinson, Indian; Allen Teter, Harley-Davidson; George Goertzen, Indian; R. M. Hazen, Indian; Will Phillips, Indian; Clarence Miller, Indian; Herbert Meloan, Harley-Davidson; Walter Clark, Harley-Davidson; Dwight Moore, Harley-Davidson; R. E. Fillmore, Excelsior; Frank Hines, Excelsior; Allen Burris, Harley-Davidson; Ed. Rowe and wife, Harley-Davidson; Galen Barrett, Excelsior; A. R. McConnaughey, Indian; Turk Rarrick, Indian; Frank Stallman, Indian; James White, Excelsior; C. N. Brown, dealer, in sidecar; W. Leibman, Excelsior; Arnold Kline and wife, of Kingman, Harley-Davidson; Espey Fowler, Harley-Davidson; G. T. Bronlewee, Excelsior; Don McCammant, Pope; Mannie Farguharson and wife, Harley-Davidson.

JONES STARS AT CLEARFIELD MEET

CLEARFIELD, Pa., Sept. 14.—Maldwyn Jones, on his Harley-Davidson, outrode the field in the five mile and the ten mile events at the meet on the local track yesterday. His time for the five was 6:39 and for the ten mile 13:09 4/5. E. C. Albright, Indian, won the three mile consolation in 4:26 2/5. Attendance was 8,000. The summaries:

Five-mile—Maldwyn Jones, Harley-Davidson, first; R. Barclay, Indian, second; R. Rencel, Indian, third. Time, 6:39.

Ten-mile—Jones, first; Barclay, second; Rencel, third. Time, 13:09⅘.

Three-mile consolation—E. C. Albright, Indian, first. Rencel had carbureter trouble and did not finish.

LUTZ TAKES THREE AT NEBRASKA CITY

NEBRASKA CITY, Neb.—Birdie Lutz, riding an Indian, was victor in three out of four races in this city on September 10. Lutz took the three mile, and five mile pro. races and made the best time in the mile trial. Ray Hart, Excelsior, captured the 10 mile and got second place in the three mile. Reeder on a Thor was second in the long race. The summaries:

Three-mile—Birdie Lutz, Indian, first; Ray Hart, Excelsior, second; R. Johnson, Harley-Davidson, third.

Five-mile—Lutz, first; Hart, second.

Time trial for mile—Lutz, 1:19; Hart, 1:25.

Ten-mile—Hart, first; Reeder, Thor, second; Lutz, third.

ROHRBACK WINS NOVELTY RACE

READING, Pa.—Warren Rohrback, local motorcycle racer, won a sensational race on a one-eighth mile track at Carsonia Park, this city, his opponent being Max Hess, champion "one-arm" roller skater of the world. Rohrback passed Hess on the seventh lap and made the mile, run on a waxed maple floor without raised curves, in three minutes eight seconds.

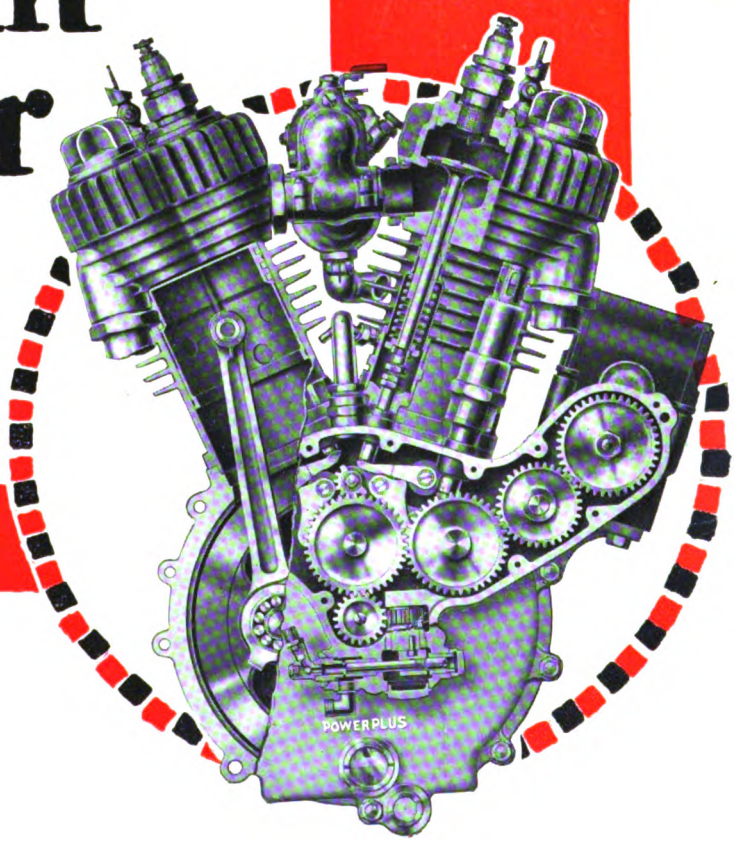
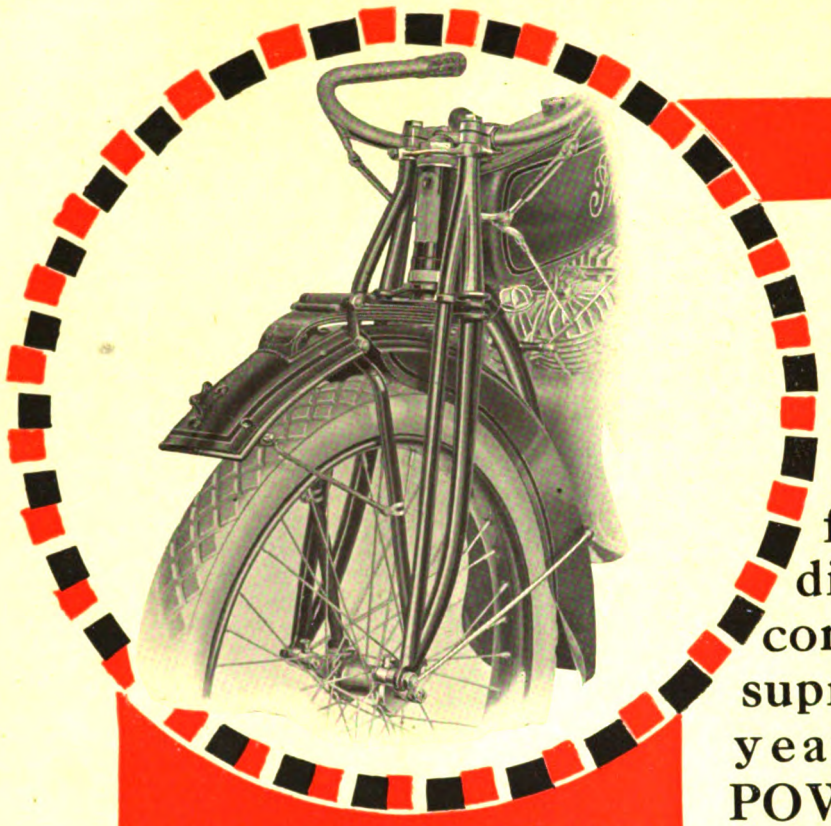
Presenting the 1917 Indian

– Powerplus
– Lightwin
– Side Car



Digitized by Google



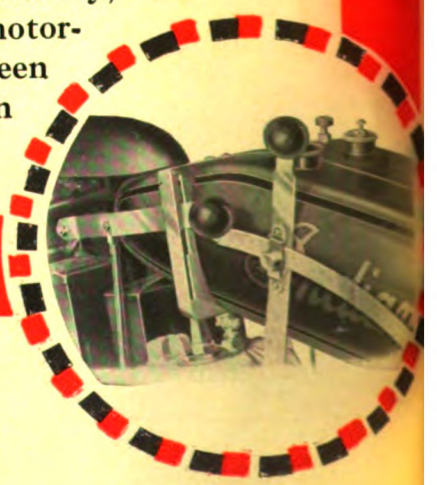
New Indian Triple Stem Forks. Bigger braces to fork sides, giving double anchorage for handlebars, assuring positive steering, increasing shock resistance. Handlebars are adjustable to any angle, a feature found on no other fork of this type. Cradle Spring suspension. Vanadium steel tubing with internal reinforcements. Drop forged fittings. (See 1917 Catalog for details.)

WITH four big, smashing improvements and sixteen lesser but important refinements, the 1917 Indian marks the sixteenth consecutive year of Indian supremacy and the second year of the wonderful POWERPLUS MOTOR.

The supremacy of Indian mechanical progress never was so strongly emphasized as it is in the 1917 model of the Big Twin Powerplus. Strength, stamina, and service are its predominant features. It is the finished product of the world's greatest minds in motorcycle engineering — the outcome of untiring effort and unstinted capital combining in the production of a motorcycle as nearly perfect as men, money, materials, and modern manufacturing methods can make it.

Backed by a year of startling performances that have made motorcycle history in all parts of the civilized world, the Powerplus Motor enters its second year as the fastest, most powerful, strongest, most accessible, cleanest, quietest *stock* motor ever put into a motorcycle frame.

The 1917 model, as usual, introduces only such changes as tend to give the rider the best, most trustworthy, most highly perfected improvements in motorcycle construction developed from sixteen consecutive years of successful application to motorcycle efficiency ideals.

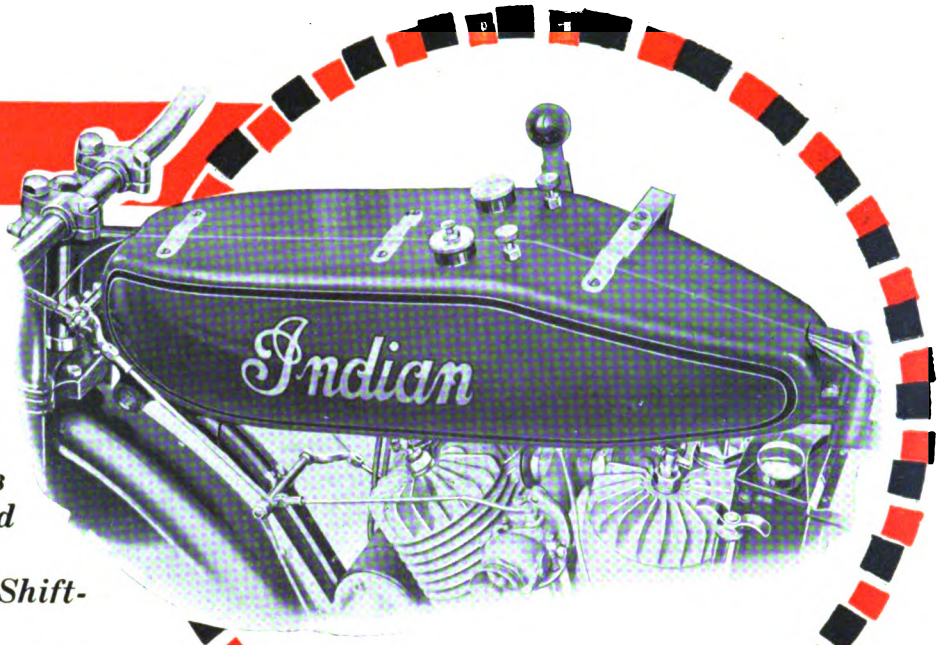


Gear Shifting Lever. Pivots under saddle and projects forward, moving up and down in arc in selective type quadrant. Assures quick and positive shifting with least lost motion. (See 1917 Catalog for details.)

Digitized by Google

Conspicuous among the 1917 improvements — all of which are fully described on another page of this publication — are:

Refined Powerplus Motor
Indian Triple Stem Forks
Enlarged and Remodeled Gasoline Tank
Quick and Positive Gear Shifting Lever
Webbed Vanadium Steel Frame



Gasoline Tank. Capacity 3¾ gallons, gasoline only, eliminating troublesome leaks from gas to oil compartment. Streamline design. Heavy gauge pressed steel. (See 1917 Catalog for details.)

In addition to these improvements, the 1917 Indian carries several highly important refinements which contribute materially to the wear-resisting qualities of the Indian, and—for the fifth year—the internationally famed CRADLE SPRING FRAME, the comfort device which enables the rider to sit comfortably in the saddle for long, continuous hours on rough roads without experiencing fatigue.

This broadly patented device is found only on the Indian. It cannot be used on any other machine. It is the recognized method of producing maximum comfort in motorcycle traveling. Although it means a high, extra manufacturing cost, the Hendee Manufacturing Company has added it at ***no extra cost*** to the riders.

The 1917 Indian Side Car has been constructed with a view to giving the occupant big car riding comfort under all normal and abnormal touring conditions. It has an adjustable axle, permitting a range of from 42″ to 60″ tread. The exclusive Indian streamline design body has been lengthened, thus assuring the greatest possible riding ease and affording increased storage space under the hood. Clamps for attaching side car to motorcycle have been abolished, all connections now being quickly detachable. A long weatherproof protecting apron which completely covers the car when not in use has been provided. The 1917 Indian comes to you as a perfected whole—as a masterpiece of mechanical completeness that recognizes no counterpart — backed to the very limit by the largest motorcycle manufacturers in the world.

Cradle Spring Frame. A comfort device used only on Indian and protected by patents. Levels rough roads. Permits long hours in saddle without fatigue. (See 1917 Catalog for details.)

Lightwin Four Cycle Twin Cylinder Opposed Motor, showing arrangement of crank shaft, pistons, connecting rods, valve lifting mechanism. (See 1917 Catalog for details.)

AND now we spring a sensation by announcing the little general of the lightweight brigade—the 1917

Indian Lightwin

the absolutely *vibration-proof* lightweight champion of the world.

Think of a motor that goes merrily along exploding regularly with every revolution, without effort, and yet so sweetly, smoothly, purringly that you can't feel the slightest vibration! That's the

New Indian Four Cycle Opposed Motor

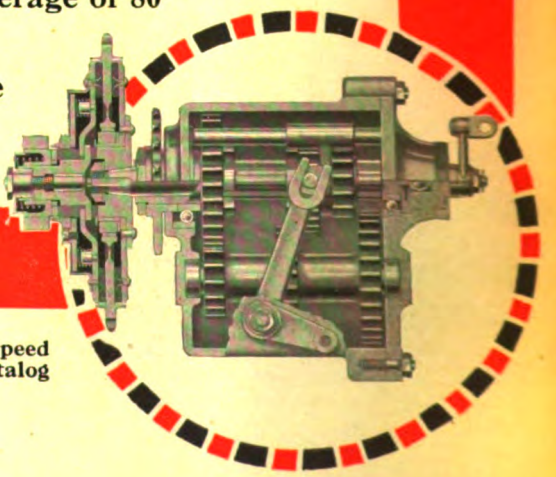
This sturdy, speedy little motor is set in the frame ***horizontally,*** and has a low center of gravity.

You can throttle it down to 6 or 8 miles an hour without the least jerking or labor on the part of the motor.

The control is extremely simple. A small lever on the handlebar which can be operated ***with one finger*** controls motor speed from zero to maximum.

Being of the four cycle type, the machine scavenges the burned gas thoroughly, making a much more efficient unit than the two cycle type, giving an average of 80 miles to a gallon of gasoline.

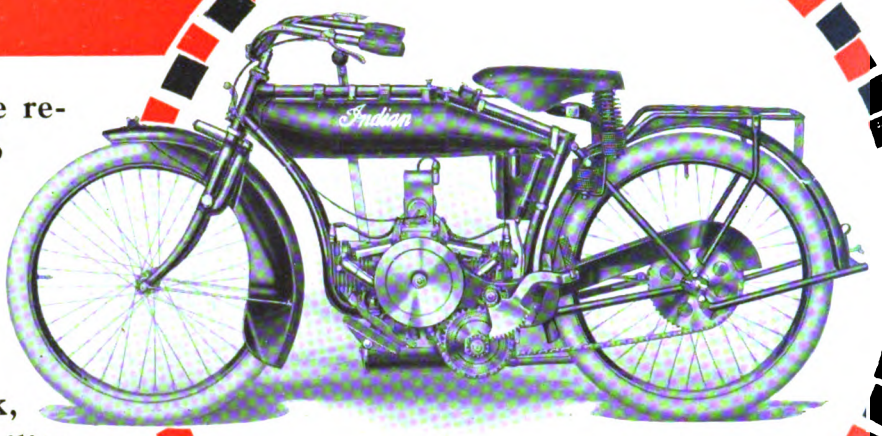
Here, then, is a lightweight motorcycle possessing the advantages of its more stalwart brother, with just enough



Section of Lightwin Three Speed Gear and Clutch. (See 1917 Catalog for details.)

Digitized by Google

speed and power to meet the requirements of riders who want to enjoy the benefits of motorcycling in modified form. It has Three Speed Gear, Light Pressure Starter, Cantilever Comfort Saddle, Spring Fork, Double Loop Frame, Flexibility, Quick Pickup, Roomy Foot Rests, Luggage Carrier. Here, too, is a motorcycle far and away different from other machines of its type — a motorcycle with individuality, with initiative, with Indian newness of thought and mechanical development, with Indian backbone, snap, and muscle-endurance.



Model O Lightwin Three Speed with Twin Cylinder Opposed Motor. $165.

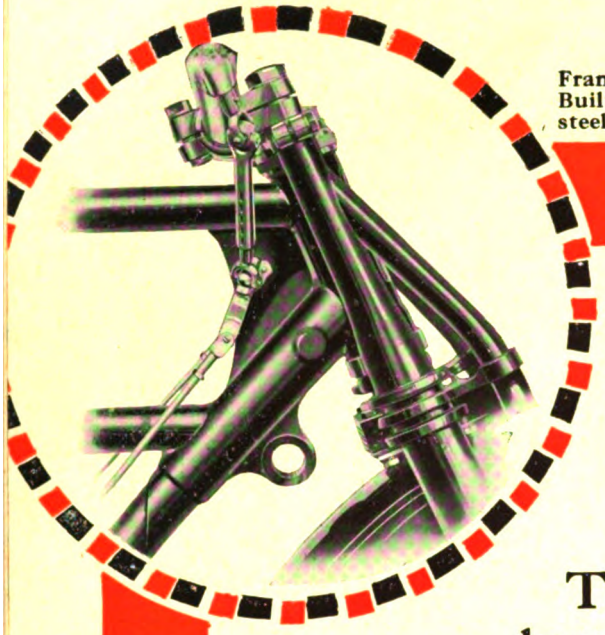
The boy who wishes to graduate from the bicycle to the motorcycle, but to whom the initial outlay, cost of maintenance, and mechanical complexities of a Big Twin are too great, will be quick to recognize in the Indian Lightwin a machine peculiarly his own.

Parents, too, will indulge his preference for the Lightwin because they will see it is a machine which he can easily handle, which will not get beyond his control, which represents a modest first cost and a moderate upkeep expense, which does away entirely with any possible prejudice to weight and power.

The low riding position, the Cantilever Comfort Saddle, the Spring Fork — all these combine to give a riding ease unknown to any other lightweight motorcycle.

Lightwin Loop Frame with double loop tube. Vanadium steel. Drop forge fittings. Low riding position. (See 1917 Catalog for details.)

Digitized by Google



Frame. Head webbed between two upper frame tubes. Maximum strength. Built-in lugs for Side Car connections. Cradle Spring suspension. Vanadium steel tubing. Drop forged connections. (See 1917 Catalog for details.)

THE 1917 Indian Lightwin opens the floodgates to heretofore unexplored sales fields. Thousands of potential buyers will welcome its coming as embodying the principles and ideals for which they have long waited. Men in all classes, in all professions, of varied vocations, will accept it as embracing their conception of comfortable, safe and inexpensive motor locomotion.

TROXEL SADDLES

REGULAR EQUIPMENT ON INDIAN MOTOCYCLES

Little does the average person realize the victory the above few words mean for Troxel Saddles.

But any manufacturer who has bid for Indian equipment of any kind has a deep appreciation and high regard for a competitor that secured the Indian contract.

When a Saddle or any other device is made regular equipment on Indian Motocycles there is one requirement above all others which is the basis on which the selection must be made—

QUALITY

Quality as applied to Troxel Saddles means a great many things—it is not an empty word.

Indian Saddle Quality means all good things blended into one—Material, Workmanship, Service.

Quality you cannot see—it displays itself through use, although a pleasing appearance of the saddle is commendable.

Quality calls for a high price—when the best raw materials are demanded and the workmanship must be of a high standard, a higher cost is expected, but the result must be

WEAR AND SERVICE

The Hendee Manufacturing Company demand the best—the competition is keen, and only the worthy secure Indian contracts.

Troxel Saddles have made good in the past on the Indian Motocycles and elsewhere.

THEIR FUTURE IS GUARANTEED

BLUE S

SPEED—Grit—Stamina.

Indian power and Indian endurance are in evidence on every winning score-board.

On the race-track, on the road, or in commercial service, the Indian has won a world-wide reputation.

Why?

Performance! Performance in the tight pinches. Performance in rough going. Performance in heavy duty service.

The Indian delivers because the Indian is built to deliver. It delivers in every detail—in engine, in tires, in every part that bears a strain or adds to comfort.

You can be proud of Indian ownership.

BLUE STREAKS

WHEN the Hendee Manufacturing Company chose Goodyear Blue Streaks as the feature tires for the Indian, they had Indian performance in mind.

They wanted a tire that would uphold the confidence in the Indian reputation, and they accepted Blue Streaks as superior because they knew the reputation of The Goodyear Tire and Rubber Company as master tire builders.

They knew that Goodyear Blue Streaks were best fitted to carry the Indian the longest mileage at the least expense.

You are safest in asking for Goodyear Blue Streaks only on your new Indian.

Standard Equipment for the 1917 Indian

FOR the fourth consecutive year the Hendee Manufacturing Company has specified the

WICO
Motorcycle Battery

No greater tribute than this could be paid to the sustained, consistent high quality service performance of the WICO Battery—that perfect accumulator for motorcycles with its seven points of recognized superiority.

WICO is the *first* motorcycle battery ever made. Today it is *first* in number of sales, in quality, and in durability. *That's why it is in use on the 1917 Indian!*

"OLD SOL" FOR *Indian* AGAIN

FOLLOWING precedent, the Hendee Manufacturing Company have selected for the 1917 *Indian* the *absolute best* in motorcycle accessories.

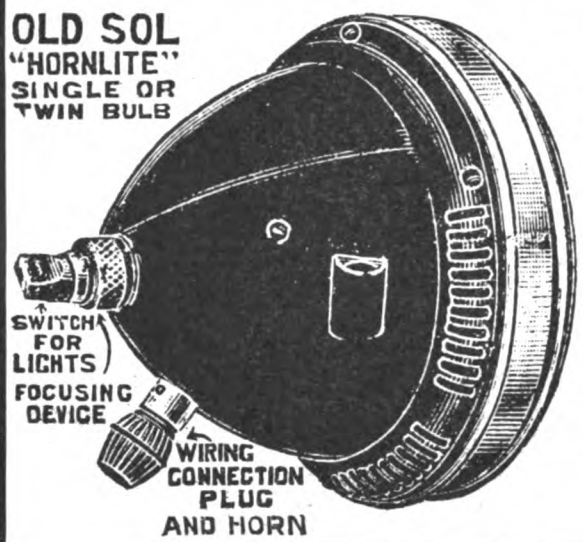
Digitized by Google

You get quick results from advertisers when you mention MOTOR CYCLE ILLUSTRATED.

OLD SOL HORNLITE

For over seven years "Old Sol" equipment has been the *ne plus ultra* of motorcycle lighting systems.

It has sought to conserve the ideals of motorcycle riders by giving them the highest quality materials and workmanship, the greatest radius of strong, road-penetrating light, and a serviceable horn of adequate warning power, combined in a single outfit that would forever do away with cumbersome and unnecessary fittings on the handlebars.



All these features are incorporated in the "Old Sol" Hornlite. The horn mechanism is encased in the lamp body, which is perforated with small holes for the emission of horn signals.

Each "Old Sol" Hornlite is supplied with necessary plugs, ready to be attached to wiring, and is equipped with a 6-V, 21 C. P. Single Contact, *SPECIAL NITROGEN BULB.* The Tail Light is a 6-V, 2 C. P. double anchored, TungstenBulb, Single Contact.

Harley Specialized Products Will Be Used in the 1917 Indian

THIS is the sixth consecutive year that the Hendee Manufacturing Company have specified Harley products for the Indian Motocycle.

Harley products never have failed to pass the severest tests of the Hendee engineers.

They are the products of a company that has devoted its undivided attention to the manufacture of high duty bearing metals which, in gasoline engine construction, must withstand the hardest usage to which metal castings can be subjected.

We are founders and manufacturers of Aluminum, Bronze, Brass, Copper, and Composition Castings and of Die Castings in All Alloys of Aluminum, Zinc, Tin, and Lead.

FAFNIR BALL BEARINGS

FOR THE 1917

Indian

Once again have Fafnir Ball Bearings been selected by the Hendee Manufacturing Company's engineers, as exclusive equipment for the Indian Motorcycle.

Because in seasons past, they have successfully stood the test, it follows as a natural consequence that the comfort and freedom from trouble of the 1917 rider should be insured through the use of Fafnir Bearings.

The motorcycle manufacturer knows through actual experiment and demonstration, just what equipment stands the most severe service.

On the road and on the track, in every section of the country, Fafnir Ball Bearings have demonstrated in actual performance their reliability and endurance to thousands of motorcycle riders.

It is the highest possible tribute to Fafnir Quality then, that they should be continued as standard equipment for the 1917 Indian.

TIRE SITUATION IN NORWAY IS ACUTE

British Embargo Acts to Limit the Supply and Prices Go Soaring; Will Affect Motorcycle Exports

NEW YORK, Sept. 17.—That the tire situation in Norway and other Scandinavian countries is acute, and that unless American manufacturers acting as a body in conjunction with the American government do something to relieve the situation the importation of American motor vehicles into those countries during the next season will fall off considerably, comes to light in a letter of protest from a Norwegian importing concern.

Motor vehicles sent to Norway are shipped at the present time without tires, following an agreement with the British government made by the American exporters enabling the British to control the shipments of rubber. The agreement was made in return for the lifting of the British embargo on crude rubber which threatened to seriously cripple the American rubber industry.

It is claimed by the Norwegian firm that the number of tires permitted to enter Norway is far below the actual demand and for that reason the prices have become prohibitive and motor vehicles are scarcer.

FRENCH AGENT COMPLAINS OF IMPORT REGULATIONS

NEW YORK.—A letter just received from Roger Majou, 51a Rue Nationale, Marseilles, France, throws an interesting sidelight on the present export situation by stating that French importers of motorcycles are seriously hampered because of having to deal through English representatives. The writer states that he has closed his motorcycle agency, largely because American manufacturers of motorcycles did not seem able, or willing, to deal direct with him.

Some motorcycles and bicycles were available to the French agent, but the general upheaval due to the war, coupled with the unsatisfactory conditions governing imports of American cycle products, have resulted in his suspending operations for the present.

JOHNSON BUYS OUT DAVIS

HUTCHINSON, Kan.—S. M. Johnson, of Kansas City, Mo., has purchased the Davis Motor Co., and will continue the shop at 26 Second avenue West, handling the Harley-Davidson. He will change the name to the Hutchinson Motorcycle Co.

Drouhard Bros., Harley-Davidson agents for southern Kansas, have a 1917 model machine on exhibition at Danville, Kan., and it will be brought to Johnson's shop for the Kansas State Fair.

SCHENECTADY INCORPORATION

SCHENECTADY, N. Y.—The Mohawk Valley Garage Co. has just been incorporated to handle automobiles and motorcycles. The firm is capitalized at $5,000. Incorporators: C. H. Lewis, J. H. Meehan and B. W. Peebles, all of Schenectady.

ANOTHER LICENSE STORY

SEYMOUR, Ind.—That a bill of sale for a new machine, being driven across the State to an adjoining State, does not answer for a State license was the opinion of the Police Court Judge of Seymour, Ind., who fined Wright Barr, of Louisville, who was driving a new machine from Chicago to Louisville. Barr had been informed that a license was not necessary until the machine had been owned 10 days, but the judge couldn't see it that way.

SPEEDERS TO BE DISCIPLINED

CARTHAGE, Mo.—Speeders, both automobile and motorcycle brands, have been bothering the police of this place for some time past and the authorities decided that the only way to stop the violations was to purchase a motorcycle. The new motorcop is now on duty.

GLOYSTEIN INJURED TRYING FOR RECORD

Twin Falls Excelsior Rider Fractures Skull During Attempt to Better Erwin Baker's Three-Flag Performance

PORTLAND, Ore.—Orville Gloystein, who started on Sept. 7 from Blaine, Wash., on the Canadian border to better Baker's "Three Flag" record to Tia Juana, Mexico, met with a serious accident near Salem, about 50 miles from this city. While travelling on his Excelsior by night at speed he fell and fractured his skull. He was taken to Salem, Ore., and placed in hospital, but did not regain consciousness until September 10. He is expected to recover.

Gloystein is a member of the firm of Gloystein Brothers, of Twin Falls, Idaho. He is well known in this section of the country as he has made a good many trips up and down the Coast, but this is the first time he has attempted to establish a record.

The "Three Flag" record, held by E. G. Baker, Indian, is 1,665 miles in 81 hours from the Canadian border to the Mexican border. Gloystein was following Baker's route at the time of the accident.

POSTING KENTUCKY HIGHWAYS

LOUISVILLE, Ky.—Painters have been busy for several weeks in charting the new Jackson, Lincoln and Dixie highways in this vicinity, and it is now very easy for the rider to follow the charted highways. The work has been about completed in Indiana, Illinois, Kentucky, and through Tennessee. The Jackson highway officials have had a white band painted on the poles, and the letters "J. H." painted in black on the white background.

A CONSISTENT BOOSTER

Assistant Sales Manager E. J. Mueller, of the Harley-Davidson Motor Co., Who Is One of the Most Active Workers for Recognition of the Motorcycle in the R. F. D. and Commercial Fields

MT. HOOD RECORD INTACT AFTER ANOTHER TRIAL

PORTLAND, Ore.—M. C. Webster, Jr., Ted Gilbert and Henry Kline, Harley-Davidson enthusiasts of this city recently attempted to beat the Mt. Hood altitude record of 9,000 feet on their Harley-Davidson machines, but succeeded in reaching an altitude of 7,500 feet only, or 1,500 feet less than that established by a trio of peerless riders on Aug. 20.

The above mentioned riders are among the best in this part of the country, and did not give up until after making repeated efforts, but finally decided that they were wasting a lot of good hard work as their machines would sink so deep in the snow that they could hardly lift them out. The boys unanimously decided to allow the record to stand for the present, but all agree that they will go after it at some more opportune time.

THOMPKINS WINS AT CHILDRESS MEET

CHILDRESS, Texas.—Many motorcyclists from Western Texas and Oklahoma attended the motorcycle races at the Childress County Fair here on September 5. The 25-mile race on a circular track of one-half mile was the only event carried out. This race was won by J. H. Thompkins, of Granite, Okla., riding a Harley-Davidson twin, time 41 minutes. Roy Craig, of Childress, riding a twin Indian, was second with a time of 42½ minutes.

REVOKED HIS LICENSE

PROVIDENCE, R. I.—The first motorcycle license to be revoked for speeding is that of William Cornell, of this city. The revocation was ordered by the Rhode Island Board of Public Roads. Cornell was recently ordered to halt by a policeman and refused to stop when ordered to do so. He was overhauled and summoned, being fined as a result. On the case being referred to the State Board, the revocation was ordered.

TRICK RIDER ON ROAD WITH INDIAN MOUNTS

PROVIDENCE, R. I., Sept. 19.—George Houghton, a trick rider on the motorcycle, whose home is in Providence, left this week for his regular yearly tour on the stage. Houghton called at the plant of B. A. Swenson Saturday long enough to have his machine looked over. He rides an Indian.

Houghton says he uses two 1912 models that are in as fine condition today as when he bought them. He states that practically the only expense he is up against is the tires, which wear out quickly on the stage.

INDIAN PICNIC IN LOUISVILLE

LOUISVILLE, Ky.—The Indian picnic will be held at Harrods' Creek, the old hunting ground of the local warriors, on Sunday, October 1, according to recent announcement of Frank Marshall, manager of the Century Cycle Co., Louisville agents. Mr. Marshall states that business this summer has practically been double that handled last year, there being an excellent increase in the bicycle department.

PROPOSE BI-STATE CLUB

FRANKLIN, Ky.—Motorcyclists representing about ten cities in southern Kentucky and northern Tennessee, including such towns as Hopkinsville, Franklin, Russelville, Ky., Adams and Springfield, Tenn., are endeavoring to organize a bi-state motorcycle club. W. J. Tomerlin, of Springfield, Tenn., is chairman of the committee, and is seeking to get the riders of the various cities together to organize a permanent body. It is proposed to arrange for tours, and annual picnics in the future, one large picnic to be held each season.

FUNKE MAKES HIS OWN ANNOUNCEMENT

NEW YORK.—Genial Herbert Funke, the big eastern Cleveland distributor, is certainly consistent. Knowing that the Cleveland announcement was due to appear in this issue he reserved his own little announcement of a new Funke, late 1916 model, so as to appear at the same time as the new Cleveland's debut.

Also, to follow out the Cleveland idea, this is Funke's second model, similar in design to the first which is a boy.

The new addition to the Funke home howled at the sunrise at 4:30 a. m. Sunday, September 10. He weighed eight and a half pounds, cylinder capacity 62 cubic inches, but NOT noiseless.

NO MOUNTS FOR CANTON YET

CANTON, O.—The Canton police department will not receive its much needed additional motorcycles just yet, as the council committee has reported adversely on the chief's request for two more machines for the traffic force.

PICNIC DUE IN OCTOBER

LOUISVILLE, Ky.—Kline Brothers, the Harley-Davidson agents, are planning to have their usual picnic sometime about the middle of October, it having been decided to postpone the date until riders away on vacations return to the city. Early picnics as a rule have found many of the firm's riders on camping or other trips, or too busy with other sports to attend, but not so in October.

HUNT TAKES HENDERSON

SAN JOSE, Cal., Sept. 18.—H. G. Hunt has taken the agency for the Henderson for Santa Clara county. He will make his headquarters in this city where he is planning to open a model establishment calculated to do the four-cylinder machine full justice.

A Lesson for Every Working-man in America

F. H. Timm and Frank Fox, of Norwalk, Ohio, ride to and from work every day seated side by side on a Pope Lightweight motorcycle. Rain or shine, they cover the 4½ miles of fairly bad roads on schedule time. For almost a year now, this sturdy little machine has drawn its double load without showing the slightest wear except on tires and belt.

Nothing unusual about this—nothing to crow about—you say. That's the point. This sort of service has become such a usual occurrence that we are apt to lose sight of the thousands of workingmen who save time, carfare, and long walks by riding Pope Lightweights.

To these men, the Pope Lightweight means absolute dependability, speed up to 45 miles an hour, and from 75 to 100 miles of comfortable riding at a cost of a gallon of gasoline and a little oil. They know it has power enough for the hills and the bad spots, and strength enough to stand the strain of daily mistreatment.

If you haven't all the facts about this Lightweight, see it at the nearest Pope dealer, or write for a catalog.

In the Dealer's Realm

ROCKAFELLOW DOUBLED HIS SALES IN 1916

FLEMINGTON, N. J.—Carl Rockafellow, who handles the Excelsior in Hunterdon County, has made remarkable gains in his motorcycle and sidecar sales this season. He has more than doubled the sale of new machines, all of which are Prest-O-Lite equipped as the demand is for this lighting in his section. There is practically no demand for electric models.

All his sales in the sidecar line have been Rogers, and he has placed several third-wheel attachments with riders of other than Excelsior models. He has the Firestone tire agency for Flemington and vicinity, also.

CUMBERLAND RETURNS FROM CYGNET TRIP

NIAGARA FALLS.—Homer Cumberland, the live Indian dealer of Niagara Falls, has recently completed a most successful trip through the Adirondacks and back, using an Indian Powerplus, in connection with a Cygnet rear car.

Total mileage of 1,445 miles was covered without any trouble whatever, not even a puncture.

The Cygnet car traveled over all sorts of roads, and Mr. Cumberland is very enthusiastic over his 100 per cent. perfect score on the trip.

McCARTNEY HAS MORE ROOM IN NEW QUARTERS

ROCKFORD, Ill.—James W. McCartney is closing his first season as agent for the Excelsior at Rockford. He has delivered 21 machines to date and reports a number of prospects for the new models. He has also placed in service five Dayton Motor Bicycles.

McCartney recently moved into new quarters at 110-112 Madison street, where he has doubled the space formerly at his disposal. The new headquarters has two floors and a large basement. Among the features of the establishment is an up-to-date welding department, in which all hands are being kept exceptionally busy during the last few weeks.

Bicycles were recently added to the stock, and 36 Pope and Excelsior wheels have been delivered so far.

MAPS BROUGHT IN THE NAMES

MADISON, Wis.—One of the most effective schemes that has come to notice of late for obtaining a list of prospects is that used by the Capitol Cycle Company of this city. G. H. Hammar, proprietor of the company, recently sent out a snappy form letter accompanied by a card that will entitle the bearer to an up-to-date road map of Wisconsin when it is properly filled out and returned to the Capitol Cycle Company. The card has blank lines for the name of the rider, his occupation, address, make of machine, etc. The road maps were much in demand and as a result the Capitol Cycle Company was enabled to work up an excellent list of prospects.

KEGEL "STARTS SOMETHING"

FREEPORT, Ill.—Joe Kegel, Harley-Davidson dealer, rode to the factory at Milwaukee last week with Leslie Leveque to take away his 1917 demonstrator. On his return to Freeport he held an impromptu exhibition at his store and attracted quite a crowd of fans. He is now located at 44 South Galena street. Kegel reports having sold 16 twins, six of them electrically equipped, and one delivery van during the past season.

BOOSTING COMMERCIAL OUTFITS

PEORIA, Ill.—Paul E. Gott, Harley-Davidson dealer at Peoria, has just returned from the factory, where he went with several friends to obtain his 1917 demonstrator. Gott has been especially active in working up commercial sales of late, and has delivered a machine to the Bell Telephone Company, another to the State Loan Company, for use by their collector, and machines to the City Loan Company and Weisenborn Land Company. Gott reports that to date he has delivered 48 three-speed electrically-equipped machines, and has 12 orders for 1917 models.

DAYTON VISITING LIST IS GROWING DAILY

DAYTON, Sept. 18.—F. B. and R. Towner, members of the firm of Towner Bros., Dayton agents at Rochester, N. Y., called at the Davis Sewing Machine plant this week on their way to Cincinnati and Kentucky points. They were traveling overland on their Daytons and had no trouble in making the long ride. They expect to return to Rochester next week with renewed enthusiasm for the 1917 campaign.

Ed Shade and Roy Smith, two Dayton motorcycle riders from Philadelphia, also were visitors at the Dayton plant during the week of September 18.

Baker Nears El Paso

Harold N. Baker, who is riding a Dayton Motor Bicycle from San Diego to Boston, advises the Dayton factory that he will arrive in El Paso about September 20. Mr. Baker is jogging along eastward and taking his time to see the country en route. He is paying his own expenses by odd jobbs along the way.

If the demand for Dayton sweaters is any indication of the weather to come, we may expect some blizzards this winter. Advertising Manager Ankeney, who keeps a number of Dayton sweaters on hand for Dayton dealers to supply to their riders when needed, has found an unprecedented number of orders within the last few weeks. These sweaters are supplied to the riders at cost by the factory.

FUTER CONTINUES BUSINESS

JANESVILLE, Wis.—The Futer Repair Company has succeeded the Futer & Jones Company as Harley-Davidson agents at Janesville. Jones has left the firm to engage in other work. The new company has a repair shop at 108 N. First street, where it carries a full line of Harley-Davidson machines and motorcycle accessories.

WON PRIZE IN PARADE

MADISON, Wis.—The Capitol Cycle Company entered a sidecar outfit, beautifully decorated with flags and flowers, in the recent preparedness parade in Madison, and carried off the prize for the best decorated machine. The company handles the Harley-Davidson line.

KRAUSE BROS. KEPT BUSY

JANESVILLE, Wis.—Krause Brothers, who are closing their first season as Excelsior agents here, report excellent business. Their sales of second-hand mounts have been unusually lively of late. F. W. Krause leaves in a few days for the northern Wisconsin woods, where he will spend some time in hunting and trapping.

Well Arranged Store Is Big Sales Aid

Neatness and Cleanliness Go a Long Way Toward Attracting and Holding Custom—Separation of Shop and Salesroom Essential Features

By IRA R. ALEXANDER

DENVER, Colo., Sept. 18.—A big asset to any motorcycle dealer in making sales is a clean and well-arranged store. A salesroom which is attractive and well lighted is going to put the prospect visiting it in a more cheerful frame of mind, and that in itself makes it easier to interest him in the machines on display. People passing on the sidewalk in front of a neat motorcycle store will be attracted by it, and the firm that is responsible for the store receives advertising that leads, in many cases, to a sale later on.

Successful Tryout

The leading motorcycle dealers of Denver have tried out the plan and found it a big success in helping them make sales. Not so very long ago the motorcycle stores of Denver each consisted of one room in which the repair department and sales department were all together. This state of affairs made it almost impossible to keep them in a very attractive condition. Also at times the noise made in repairing machines rendered it almost impossible to talk to a prospective buyer concerning the merits of a motorcycle.

Today, however, things are vastly different. Take, for example, the store of the Mead Cycle Company, the Denver home of the Excelsior; of Boyd & Williams, Indian dealers; or the Rocky Mountain Motor Company's store, Henderson dealers; also the new W. W. Whiting store, where the Harley-Davidson is sold. In each of these establishments we find the repair department and the sales department separated. The walls of the salesrooms are tastefully and attractively decorated and hung with pictures that are of interest to motorcycle folks.

Advertising matter, catalogs, and papers and magazines—such as **Motor Cycle Illustrated**—that are of interest to motorcycle owners and prospective owners are neatly arranged on tables. There are comfortable chairs in the salesrooms where visitors to the store can be seated while they talk over and arrange the business which brought them there. The salesrooms are arranged with the idea in view of making them just as attractive to those who visit them as possible, and in carrying out this idea the Denver firms have made the selling of motorcycles just that much easier.

It has also been seen that the motorcycles on display in the salesrooms are arranged so as to show them to as good advantage as possible.

The stores are not only arranged as attractive places for prospective buyers to visit, but riders that already own machines are given to understand that they are perfectly welcome to come to the stores at any time. A large number of them do, and many a race and many a pleasure tour is "repeated" in the attractive motorcycle stores of this city. The proprietors of the stores know that in encouraging this kind of thing they are but furthering the cause of the motorcycle.

Yes, the attractive motorcycle store really is becoming more and more the regular thing today, and it is helping to increase the sales of the machines.

CLINE GETS SEVEN ORDERS FOR 1917 MODELS

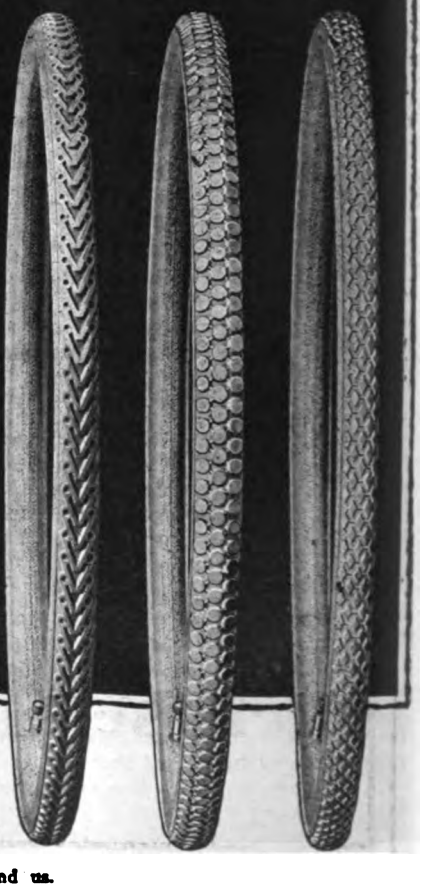
GRAND RAPIDS, Mich.—C. C. Cline, representing the Harley-Davidson in this city, has received his 1917 demonstrator and to date has received seven orders for the new models. Cline also reports many commercial sales for the past season, having delivered six sidevans to various merchants. Two of these were singles for the Michigan State Telephone Company, two electrically-lighted twins to the sheriff's office and two of the same model to the Grand Rapids police department.

Mrs. C. C. Cline, the wife of the agent, is the only lady rider of her own mount in Grand Rapids and will be astride of a new '17 model in a few weeks. Cline reports 1916 sales as one-third greater than any previous season.

3 Strong Leaders —

a complete quality line that meets every demand

VITALIC BRIGADIER ENDURO



ANY DEALER with a stock of these three tires is completely equipped to supply the demand of *every* customer that comes into his store—from the one who wants the *best regardless of price* to the one who wants a *good* tire at a *popular price*.

THE VITALIC

is built throughout of the best tire materials obtainable,—two plies of genuine *motorcycle* fabric frictioned with pure rubber, an inner tube of pure Para rubber so heavy as to eliminate any possibility of leak, an extra heavy non-skid tread of finest quality pure rubber. Will outwear any ordinary bicycle tire *more than two to one*. Once introduced it easily brings a higher price than other tires and always sells over and over again to the same trade because it *never* disappoints.

THE BRIGADIER

The best popular priced tire ever put on the market, far excelling others anywhere near its price. It is a four-ply tire, built with two plies of best Egyptian fabric all around the tire and two extra plies on the tread. A very high grade friction is used.

The extra heavy inner tube is made of a very high quality rubber. The Brigadier is made with gray side walls and a heavy large white studded tread as shown in the illustration.

THE ENDURO

Another excellent popular priced tire that fills a long felt need for a tire of lower price that has genuine quality. It is built with two plies of high grade Egyptian fabric with a very high grade friction, has a heavy inner tube of very good quality and a good substantial diamond studded white tread.

Write us today for sample sections of these three tires and attractive display material and dealer helps.

Your jobber will show you the tires.

"Genius is One Part Inspiration to Three Parts Perspiration"

Thomas Edison, the electrical wizard, is credited with the above epigram. His life is a shining example of the truth of this adage.

Consistent, plugging, unrelenting tracking down of an idea to its final success; these are the ingredients that *must* enter into every successful enterprise—and these are the basic foundations of the MORROW triumph.

Eighteen years of coaster-brake building is a long time. BUT—it would mean nothing if we had not profited by each year's experience and continually improved our product. Thus, it is only logical to assume that one product, continually improved since its conception 18 years ago, MUST be as highly developed as any piece of mechanism can possibly be.

Such is the history of the MORROW. And today, the MORROW Coaster Brake, with its oversize braking surface, the largest of any bicycle brake made, its big, husky ball bearings, its simple lubricating system and its hair-trigger braking surety, is the best investment the bicycle rider can make—and the finest, most eloquent salesman the dealer has in his store.

MANUFACTURERS OF MOTORCYCLES

HENDERSON MOTORCYCLE CO.

T. W. HENDERSON PRESIDENT
W. G. HENDERSON VICE PRESIDENT
GEO. F. MONAGHAN SECRETARY & TREAS.

DETROIT, U.S.A. Sept. 8th, 1916.

Hawthorne Mfg. Co.,
Bridgeport, Conn.

Gentlemen:

We are renewing our contract with you for "Old Sol" Hornlite Electric Light Equipment for the electric model of the Henderson four-cylinder motorcycle for the 1917 season. Our policy is to provide Henderson riders with equipment of the highest grade obtainable, which is the reason for our choosing this light for the coming year.

The Hornlites used on electrically-equipped Hendersons in 1916 furnished uniformly pleasing and efficient service, reports from riders all over the world expressing strong satisfaction.

With hearty wishes for your continued success, we remain,

Yours very truly,
HENDERSON MOTORCYCLE CO.
Wm. G. Henderson
Engineer.

Italian Army Has Fine Repair Works

All Makes of Motorcycle in Use by King Victor Emmanuel's Forces Are Taken Care of in Well-Equipped Establishment at Veneto

VENETO, Italy.—Under the direction of Colonel Maggiarotti, of the Ordnance Department of the Royal Italian Army, there has been established in this city a "hospital" for motorcycles and bicycles. The organization of this repair works is most complete, practically every assembling and repair operation being possible in the plant. The organization is a model combination of military and manufacturing efficiency.

Probably the most interesting department is the assembling room, in which many makes of machine are to be seen on their benches being given final touches before trying out. The testing is an important feature of the works-procedure, as each repaired machine must pass the riding and other trials before being returned to the headquarters bureaux for distribution to the despatch riders and scouts. In the assembling and testing sections may be seen Italian, American, British, Swiss and French models in great variety.

Tool and Magneto Departments

A complete machine tool equipment is provided for the making of such spare parts as are not available from the magazines or from the stocks of the local and general agents in the different cities. The Department has found in a number of cases, that it is cheaper to make up new parts than to purchase them or requisition them and has accordingly kept the lathes and millers busy. There is a complete magneto repair section under the direction of skilled men who in civil life did nothing but this work.

The stores department contains huge quantities of oils and gasoline in barrels, the amount being sufficient for over two months' demand from all motor vehicles in army service. This is constantly being added to as the demand requires. A large room with shelves is also provided, spare parts being carried in great quantity and readily accessible.

BUMILLER HOST TO CINCINNATI INDIAN M. C.

CINCINNATI.—One of the most enjoyable "pow-wows" of the current season was held by the Indian M. C. of Cincinnati on the evening of Thursday, Sept. 14, at the residence of Herman Bumiller, on Observatory Road, in Hyde Park. Bumiller, whose company, the Herman Bumiller Co., handles the Indian in Cincinnati, was the host of the occasion, opening his beautiful house and grounds to his friends among the riders.

In spite of threatening and chilly weather more than 30 of them turned out for the occasion, headed by Olin Ross, who handles the motorcycle department at the Bumiller store. The house and grounds were appropriately decorated for the occasion, and although it was a little chilly outdoors, the program offered by the host was sufficient to keep the boys from thinking of the last days of summer. A big dinner was perhaps the most enjoyable feature of the meeting, although addresses by Mr. Bumiller and others were well worth listening to.

BRAZENOR LIGHTS HEAVILY ON ONE RUMOR

BROOKLYN, N. Y.—Though British to the core and "pro ally" as a matter of course, it is not the German propaganda which is disturbing the peaceful state of mind of "Bob" Brazenor who handles the Harley-Davidson in Brooklyn. Just the same Bob is much disturbed by the circulation of a rumor to the effect that he is not to handle the Harley-Davidson in Brooklyn for next season and wishes it to be made emphatic the story is erroneous. Bob Brazenor & Co., Inc., will continue to handle the Harley-Davidson from both the Bedford avenue store at 1157 Bedford avenue and from the Jamaica store at 594 Jamaica avenue.

CLYMER TAKES ON CLEVELAND

DENVER, Colo., Sept. 18.—Floyd Clymer, motorcycle dealer of 607 Eighth avenue, Greeley, Colo., has secured the agency for the Cleveland motorcycle in his territory, and last week received quite a large shipment of these machines.

For assurance of prompt attention to your wants mention MOTOR CYCLE ILLUSTRATED.

Questions and Answers

A. M. C. PARTS

PLEASE tell me where I can get parts for an A. M. C. motorcycle, made by the Allied Motors Corporation of Chicago.

Trotwood, O. J. M. NISWONGER.

Communicate with the Motorcycle Parts Manufacturing Company, 2127 Michigan avenue, Chicago, Ill., for such parts. We know of no other firm from which A. M. C. parts can be obtained.

A TRIO OF QUESTIONS

PLEASE answer the following: 1—Does a magneto cutout in any way injure the machine or magneto. 2—What cities will I pass through from Washington, D. C., to Chicago. 3—Will a Maryland and Federal District license be all that will be required for this trip.

Washington, D. C. JOSH COOPER.

1—The magneto cutout does not in any manner injure the motorcycle or the magneto. 2—Frederick, Hagerstown, Chambersburg, Pa.; Bedford, Stoyestown, Ligonier, Youngstown, Greensburg, Pittsburgh, Beaver Falls, Darlington, O.; Unity, Columbiana, Salem, Deerfield, Twinsburg, Cleveland, Elyria, Wakeman, Norwalk, Bellevue, Clyde, Fremont, Woodville, Toledo, Oberlin, Wauseon Archbold, Bryan, Waterloo, Kendallville, Ligonier, Goshen, South Bend, La Porte, Valparaiso, Hobart, Hammond, Chicago. 3—The Maryland and D. C. licenses will be all right.

WRITE TO HAMMONDSPORT

I AM desirous of getting parts for an Erie motorcycle and would like the address of the makers.

Bunker, Mo. OTTO ERWIN.

The Erie motorcycle was formerly made in Hammondsport, N. Y., by the Motorcycle Equipment Company. This company, we understand, still has some parts for the Erie machines, so communicate with them.

IRREGULAR RUNNING

I HAVE a 1913 twin which has been recently overhauled and which is now running peculiarly. It will run finely for about a quarter of a mile and then hit on one cylinder only, after that picking up and repeating the performance. Fuel pipe is not clogged, carbureter is clean and plugs good. The compression is perfect and the magneto timed according to marks on gears.

Kirkland, Ill. CHET. SERVICE.

See that all joints between the carbureter and the cylinder which balks are tight, noting the valve dome joints in particular. Note the spark from both plug terminals of the magneto; if one is weak look at the contact-maker and see if the corresponding cam is worn more than the other. Run the machine in the dark and look for leaks in the plug cables.

ROVER AND HUMBER

PLEASE give me the address of the makers of the Rover and Humber motorcycles, and also the names of the American agents.

Cincinnati, O. C. H. LONGLEY.

The Rover is made by Rover, Limited, Coventry, and the Humber, by Humber's, Limited, Coventry, England. There are no American agencies.

WANDSTRAT JOINS RANKS OF BENEDICTS

CINCINNATI.—Joe Wandstrat, the popular rider and salesman in charge of the Excelsior motorcycle department of the Brendamour store, gave his friends a decided surprise a few days ago when he and Miss Adele Gerowe, a beautiful and accomplished young lady of Covington, Ky., were quietly married, stealing away immediately thereafter for an Eastern honeymoon. Wandstrat has been with the Brendamour Sporting Goods Co. for several years, handling the motorcycle department as well as other important lines, and he is one of the most valued members of the Brendamour staff.

His marriage was not altogether unsuspected by his close friends, as his attachment for the young lady was well known; but the skill with which the pair kept the approaching wedding under cover, and escaped the usual fuss and feathers, left even the wise ones with nothing to say.

SUGGEST TRAFFIC ORDINANCE

OWENSBORO, Ky.—The Owensboro Industrial Club has prepared the draft of a model traffic ordinance which has been submitted to the Rotary Club and the Automobile Club, and will shortly be submitted to the city officials.

The ordinance includes regulations concerning open mufflers, rear and front lights, dimmers, definitions concerning bicycles, motorcycles and other vehicles, and the classification of all vehicles, outlining the boundaries of the congested district, and regulating speeds in all parts of the city.

NEW MOTORCYCLE MEMBER

DENVER, Colo., Sept. 18.—The Denver Auto Trades Association began its winter activities last week with a meeting at the Adams hotel. At this meeting a number of new members were admitted into the association among which was the Rocky Mountain Motor Company, Henderson motorcycle dealers.

ON HONEYMOON TRIP

Rex D. Wickwire, of Miami, Fla., and Mrs. Wickwire Bird's-Eyeing Springfield from Roof of Hendee Factory While on Their Wedding Tour. Rex Handles the Indian

DENVER POLICE WANT RIGOROUS ANTI-SPEED LAW

DENVER, Colo., Sept. 18.—Chief of Police Armstrong, of this city, is anxious that some law be enacted which will help rid Denver of speeders. On the subject the chief says: "Until Denver has a law which gives the police power to revoke the licenses of reckless drivers and intern their machines, the speeder will always be a menace to public safety. There is only one way to correct the bad habit of motorists and that is to make it absolutely impossible for them to drive their machines. When this is accomplished Denver will be free from speeders."

It is not at all unlikely that some action on the subject will be taken here soon and that a law along the lines of the one advocated by Chief Armstrong will be enacted.

BIRKENBACH BACK ON THE JOB AGAIN

COLUMBUS, Ohio.—Leo P. Birkenbach, head of the concern bearing his name, which handled bicycles exclusively on East Long street, Columbus, is now about recovered from a five months' serious illness caused by a nervous breakdown. During his illness he spent several months in Florida, later going to Hot Springs and then to Denver He expects to take up the active management of his business soon.

He reports a good demand for bicycles and the sale of approximately 500 during the present season. The move to the East Long street location has been a great stimulant to the business.

WOE BETIDE THE DALLAS SPEEDSTER!

DALLAS, Texas.—Sheriff Reynolds of Dallas County has blazed a new trail in dealing with automobile speeding on the county highways. The sheriff has created a motorcycle squad of deputy sheriffs and assigned to them the task of patrolling the county roads and chasing and arresting those who exceed the county speed laws. So far as known this is the first instance in Texas where a county motorcycle squad was created and given the exclusive task of chasing speeders. The men will work just as the motorcycle police squad has worked on the city streets, chasing automobilists and noting the speed registered by their speedometers, which are tested, tried and so arranged that they are self-registering, thus making a permanent record of the chase which may be offered as evidence in court.

ALLENTOWN VISITORS HAVE MANY POPE MODELS

WESTFIELD, Mass.—One of the greatest varieties of Pope models seen in one group of riders was that of the Allentown, Pa., contingent which visited the Westfield Mfg. Company's factory a few days ago. There were two side-car outfits, one being a Model R-15 two speed and the other a Model L-16 single geared twin, a T-16 three-speed ridden solo and a Model H lightweight.

In crossing the Blue Ridge and Berkshires, the rider on the single-geared twin with sidecar had little difficulty in negotiating the steep grades, while the Model H took them easily. The riders included Walter Bartholman, Ralph P. Geigen, A. Heil.

ENGINEER AND RACING MAN

Serge Sapojnikoff, of Petrograd, Russia, Holder of Russian 100 Kilometre Road Record. Who Is Now Visiting American Motorcycle Factories

MADE TOUR OF 933 MILES

CARMI, Ill.—Fay Bowman, of this city, has just completed a motorcycle tour from Sioux Falls, S. D., to Carmi, a distance of 933 miles. His riding time was 4 days.

THREE ADDED TO LIST OF AFFILIATED CLUBS

WESTBORO, Mass.—Two new clubs have affiliated with the F. A. M. and a veteran body has renewed its affiliation after a lapse. The new clubs are the Superior, of 1516 Sixtieth street, Brooklyn, N. Y., and the F. A. M. of Detroit, Mich. The secretary of the Superior club is James P. Golden, whose address is at the club house, while H. B. Scheid, of 112 Warren street, East, acts in a similar capacity to the other organization.

The Memphis M. C. of Memphis, Tenn., has renewed its affiliation. The secretary is C. J. Cowan, of 135 West Iowa avenue.

SCHEID AND BLUXOME WIN MEMBERSHIP PRIZES

WESTBORO, Mass.—Secretary-Treasurer G. B. Gibson, of the F. A. M., announces that H. B. Scheid, of 122 Warren street, East, Detroit, Mich., has been awarded the prize for sending in the most applications for the week of September 4 to 9. Scheid sent in 21 applications.

For the week of September 11-16, John D. Bluxome, of 219 Foster avenue, Brooklyn, N. Y., was given the award, his number being 17.

GIRVEN & CO. REGISTER SHOPS

WESTBORO, Mass.—Samuel Girven & Company have registered their two shops with the F. A. M. The main shop is at 86-88 Main street, Westerly, R. I., while the second shop is at 49 West Main street, Mystic, Conn.

TRADE <E> MARK

AGENCY
SMITH
MOTOR
WHEEL

READING, PA., August 1, 1916.

Haverford Cycle Co.,
Philadelphia, Pa.

Attention of Mr. Breen.

Gentlemen:

Kindly pardon us for the delay in complying with your request for a testimonial letter regarding the Smith Motor Wheel.

I admit that in the early part of the year 1915, I was very skeptical about this little device, and its future, and it was only due to Mr. Sladkin's persuasion that I took it on. Right at the present time, I consider the Smith Motor Wheel agency a very valuable asset to any dealer, and I dare say, it will become more valuable every year.

To say that it is a success in every way, is putting it mildly. The power developed by this little motor is wonderful. One trial ride by a prospect is sufficient to "knock out" any false opinion he might have regarding same. It's "standing up" qualities, for wear and tear, have surprised me.

The best proof, I can offer, is that every Smith Motor Wheel owner is a Smith Wheel Booster. The hardest obstacle we have had to contend with, in the sale of them, is the false opinion expressed by the "know it all," who is usually found to have never been in close contact with one, or the owner of one.

In my opinion, there is a big future for the Smith Motor Wheel, and a profitable future for the dealer who handles them.

Yours very truly,
PENN CYCLE & MOTOR CO.,
M. Schaeffer.

A Few Spare Links

By E. B. HOLTON

Just been giving the "17" Harley-Davidson outfit a good look—see, and believe me, fellows, if the Mexican trouble did no other good, it brought out a real all-weather finish in that military olive-drab. The only thing we don't agree on is the point where the Milwaukee concern stops enameling. Why not, Messrs. Harley-Davidson Company, go over the nickel with your paint brush and enamel the spokes, controls and bars as well? No motorcycle is a parlor ornament, you know. And there is absolutely no novelty in cleaning the nickel after the second week—now is there, fellows?

That front-wheel stand, tucked away under the motorbase on the 1917 Harley-Davidson, where it is out of sight, yet at the same time readily accessible, sure does look good to a lot of us fellows who have searched around for a rock to "jack" the front-wheel up at some time or other to make a road-side adjustment or repair.

What's the matter with a sidecar wheel stand as well; that would come in handy every now and then, when a nail without a conscience does its darnedest with the tire.

The sidecar stand would be an article for an accessory house to market, and undoubtedly it would find a ready sale with the thousands of sidecar owners in the United States.

Great nights these, for moonlight riding, but the air is chilly and you need a mackinaw for comfort. Talking about night riding. Did you ever notice that you invariably get a puncture or break a chain in the darkest spot for two miles? Nothing like an electric model then with a bit of extra wire and a trouble lamp to brighten the scene of action.

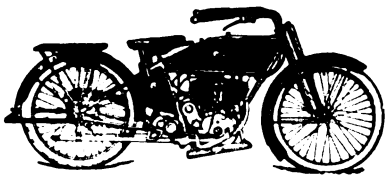
Saw a good stunt pulled in a garage Sunday night. Lad with an exhausted Prestotank pulls in, looks unsuccessfully for a new one, which, of course, the garage man doesn't keep—that is in motorcycle sizes. He has car tanks though, so he hooks his big Presto to the small tank on the motorcycle and pushes in six atmospheres, or enough to see the lad home. Remember I used a candle in the headlight once, but, Gee, how it did burn down in a mile! That's a hint for the gasless, anyhow.

Must have been a good meet at Columbus—big crowd and fast times made—but it does look strange not to see any of the Milwaukee machines in the box-score. Better get together, gentlemen of the M. M. A., and decide about this big twin-on-the-mile-track question; it's a far-sighted business policy to make the racing game as safe as possible, and the speed of the 61-inch twins sure has gone up something remarkable in the past year. We are traveling so fast nowadays in races on this side of the Atlantic that there are those who doubt the authenticity of the Dodge City and Sheepshead Bay times, for the 300- and 100-mile distances. Above 85 miles per hour passes belief with some of our English cousins. Can you blame them, though, when you consider that "Bake" rode 1,000 miles in 21 hours 3 minutes on Australian roads, while H. A. Collier, with a British motorcycle, reeled off but 775 and a fraction in 24 hours on an English track?

We sure will have to cut down on the length of those Sunday trips soon now, fellows. Darkness is creeping up on Old Father Time, so that it is but little after six when you have to light up.

Didja ever notice that as soon as it comes night and you are still on the road you get twice as weary and hungry as when the sun was shining? 'S fact, and the miles seem to get longer too. That sorta takes the joy out of the day's outing unless you have a good jolly bunch along.

When I first swung over from belt-drive to chain-drive, a lad who knew told me to keep half-links out of the short-drive chain. Well, that I did—that is, until this year, when it could not be avoided, and I'll be hanged if I haven't broken six so far in 5,500 miles of riding. He sure was right, I can testify to that. Wonder why that is? They don't break in the long-drive chain as readily. Probably get onto the sprocket teeth oftener.



Every Ride A Joy Ride

There is no limitation to the pleasure of motorcycling when you ride the

1917 R-S MOTORCYCLE

You can leave the zone of machine shops with a feeling of safety. You can climb hills that defy the ordinary motorcycle. A twist of the wrist and the R-S immediately responds with any speed you dare ride.

The R-S has the simplest, coolest, surest, most powerful little motor ever produced. Most economical, silent and simple, and most comfortable. Here is a machine you should investigate when in the market for a motorcycle.

Write for details and agency proposition.

CLUB AND TRADE NEWS OF LONDON BOOSTERS

London M. C. Reorganizes Official Staff; Riders Attend Big Picnic; Henderson Agent Takes Larger Quarters

LONDON, Ontario.—At a recent meeting of the London Motorcycle Club a reorganization of the board of officers took place because of resignations of those who had enlisted for overseas service. Walter England was chosen to succeed Al Gatecliff, who has gone overseas with a hospital unit, as president, while W. J. Lake was the unanimous choice for the position of vice-president. It was decided to hold a series of meetings in the homes of various members where social events can be enjoyed at the close of business sessions.

The Bicycle & Motor Sales Company, representing the Indian and Pope in London, recently conducted a picnic and sociability run which attracted every rider in town. George A. Wenige, manager of this concern, was the host of a dinner in the McKellar House, Glencoe, which the cavalcade reached just before noon. Wenige also handed out cigars to the male participants and boxes of candy to the ladies. This is an annual event with London motorcycle enthusiasts and is always looked forward to.

E. M. Bissett, Henderson agent here, has been compelled to seek more spacious quarters on account of his growing business. He has secured fine premises in the center of the city, into which he will move on or about October 1.

Frank Benson, Harley-Davidson representative for this county, has also obtained a heavy share of business this year. He reports an extraordinary demand for used machines. His stock is absolutely cleaned out.

The bicycle business of W. A. Walker of London East has increased to such an extent that he has established an automobile delivery service to facilitate matters.

HALIFAX AND DARTMOUTH M. C. HOLDING NIGHT RUNS

HALIFAX, N. S.—Practically all of the twenty-four members of the Halifax and Dartmouth Motorcycle Club have been taking part in the enjoyable tours which have been staged weekly along the shore of the Atlantic and to Waverley for some time past. The favorite procedure among the riders is to tour to an appropriate point in the evening after work and return to the city early next morning.

A recent run of this sort was held to Truro, sixty miles from Halifax, and the participants were able to reach home early the next day without trouble. There are now about forty motorcyclists in Halifax and Dartmouth.

CANADA CYCLE SALESMEN AT CONFERENCE

OAKVILLE, Ont.—The summery town of Oakville, situated on the new model highway between Hamilton and Toronto, was selected for the annual convention of salesmen of the Canada Cycle & Motor Company, Limited, bicycle manufacturers and distributors of American-made motorcycle and bicycle accessories. Twenty-four officials and salesmen of the company gathered for the three-day convention, some having traveled from the extreme West, as well as from the East, in order to be present.

The discussion covered a wide range of subjects relating to the sale and distribution of bicycles and accessories, and there was no doubt in the minds of all those present that the bicycle had come into its own. Announcement was made that the new factory and warehouse of the company at Weston, Ontario, would be ready for occupation in October.

DALLAS CITY POLICE TO USE BICYCLE CORPS

Find Two-Wheeler Economical and Handy in Patrolling Territory After Prowlers and Thieves

DALLAS, Tex., Sept. 15.—Officials of the local police department are preparing to mount a detail of policemen on bicycles for night patrol duty. It is claimed that bicycles are much better for making emergency calls at night than motorcycles, as burglars, night prowlers and others can easily hear the motorcycle men coming and can make their escape, whereas the bicyclists can approach quietly and in many cases can make arrests where the motorcycle men fail.

Motorcycle men will be kept for many calls but in cases where the officers need to approach quietly the bicycle men will be used. Police Commissioners Winfrey and Chief of Police Ryan are satisfied that the bicycle will prove a valuable addition to the city police department. It has not been decided just what make of bicycles will be used, but the Indian is being looked on with favor. Whatever make of wheel is used, must be equipped with strong electric lights.

WILEY GETS REVENGE

BOSTON, Mass., Sept. 17.—George Wiley, the Syracuse pace follower, won the re-running of the World's Derby, which was taken by Victor Linart, Saturday night, Sept. 9, at the Revere Beach track last Wednesday night. Linart finished second, Vincent Madonna third, Leon Didier fourth and Clarence Carman last. The race was at 100-kilometers (62½ miles) and Wiley covered the distance in 1:29:15 4/5.

AN ILLINOIS CYCLE HIKE

GALESBURG, Ill., Sept. 16.—Rev. E. M. North, of the East Main street church, accompanied by 15 of his flock last week toured on their bicycles to a nearby woods for a day's outing.

BOISE TO CHICAGO AWHEEL

CHICAGO, Ill., Sept. 16.—Leland Mason, a 19-year old Boise, Ida., youth, has just completed a bicycle tour to this city, making the trip, which covered 2,350 miles, on a heavily laden wheel, his outfit weighing in the neighborhood of 100 pounds. Young Mason will enter the Northwestern University to study medicine.

PHILADELPHIA SEASON ENDS

PHILADELPHIA, Pa., Sept. 15.—Racing for the 1916 season was terminated at the Point Breeze track last night. The last race for the season was a 50-mile motor-paced race between George Wiley, Syracuse; "Bobby" Walthour, Atlanta, and Clarence Carman, the 1916 paced champion. Carman won with Walthour in second place. The time was 1:01:20.

DALLAS BICYCLE BUSINESS

DALLAS, Tex., Sept. 15.—Hans Johnson, local cycle dealer, has just received a carload of Racycle Bicycles, which he is pushing in the Dallas trade territory. Mr. Johnson says he finds this bicycle gives excellent satisfaction and is in greater demand than any other make that he has handled. He finds it necessary now and then to have a rush order come by express to fill orders he has placed.

NEW TEXAS BICYCLE

DALLAS, Tex., Sept. 16.—Charles Ott, local bicycle dealer, is making efforts to place a wheel manufactured and sold under the name of Ott's Special. Mr. Ott reports that this bicycle has given universal satisfaction and many messengers of the A. D. T. Service and various delivery companies of the city have expressed preference for this wheel over other higher priced makes. The wheel is medium-priced, but is strongly and substantially built.

MARKET FORGE ADDS TO LIST

CHELSEA, Mass.—The Market Forge Company, maker of bicycle carriers, baskets and stands, has added the manufacture of mudguard braces and guards to the list of products. Louis Beckwith, of the company, has just returned from a most successful trip on the road with Market Forge products.

TAKES ON KOKOMO LINE

BOSTON, Mass.—The Hub Cycle Company, of 14 Portland street, has taken on the complete line of Kokomo bicycle tires and will represent this line for New England. The following salesmen are now out placing agencies: Herbert Sterling, J. J. Hoffman, James Eagan, and Sales Manager Charles F. Corey.

They Say

Quinlan Says

"We have just contracted for our entire requirements of Bosch Magneto for the coming year, and this is the very best possible recommendation that we could give, indicating that we are willing to pay what appears to be a high price, in order that we may be assured of the very highest type of ignition.

"Our Service Department advises that they have experienced absolutely no trouble with the Bosch Magneto, and our Purchasing Department states that they are receiving satisfactory deliveries, and as representative of the Sales Department, the writer appreciates the value of Bosch equipment on the Cleveland."

O'Hare Says

"It is a matter of almost universal public record, that we spare no expense or effort in applying to Thor motorcycles the best that money can buy or scientific acumen can develop. Therefore, in order to be religiously consistent in this one great policy, we believe that our choice in the selection of 'BOSCH' equipment is following, to the fullest measure, the rider-interest policy of the house of Thor."

Theurer Says

"We have always considered quality first instead of quantity," writes E. Theurer, general manager of the Reading Standard Co., "and naturally we must equip our machines with the highest type of ignition, which we consider is the Bosch Magneto.

"When magnetos were first placed on motorcycles, we specified Bosch. During these seven or eight years we have had no trouble whatsoever, and this fact alone compels us to consider only Bosch equipment in the future.

"We do not know what ignition trouble is, our agents are satisfied, and the public demands Bosch."

Be Satisfied *When it's ignition, you can't have it too good — Bosch is good — they all say so* **Specify Bosch**

Can You Say the Same

THE collection of comments on the opposite page has been taken from communications from the trade since the 1917 announcement. These expressions will tell you better than we can what the trade thinks of the 1917 models.

It is general knowledge that Harley-Davidson dealers made a "clean-up" last year—that the popularity of the Harley-Davidson motorcycle was the talk of the trade.

For 1917 the Harley-Davidson line offers immeasurably more to the ambitious dealer who wants to sell something just a little better than the rest.

What are Your Plans

We believe that we have the best line on the market, and it is only reasonable for us to want to place the Harley-Davidson line with the best dealer in each town. In most places we have the right man now. In other towns we are planning to make changes. We want to hear from those who feel that they are equal to the occasion—those men who have enough faith in their own ability to want to tie up with the best.

Harley-Davidson Motor Co., Milwaukee, Wis., U. S. A.

—and now a Harley-Davidson Bicycle

(In the same Beautiful Military Drab that marks the 1917 Harley-Davidson Motorcycle)

FOR more than 15 years Harley-Davidson motorcycles have been successfully sold in constantly increasing numbers, until now enthusiastic dealers are handling the products of the great Milwaukee factories all over the civilized world.

The name Harley-Davidson has come to be associated with the very highest quality of material and workmanship. This is one reason why a very decided demand has sprung up for a bicycle of the same remarkable quality. Harley-Davidson dealers have pressed us time and again to market a bicycle that they could sell with the knowledge that it was up to the Harley-Davidson name and reputation—a bicycle which they would know would stand up as other Harley-Davidson products have stood up in strenuous service.

So for 1917 there will be a line of Harley-Davidson bicycles that will eclipse, we believe, in genuine value, any line now on the market. There will be men's bicycles, ladies' bicycles, boys' bicycles and girls' bicycles, and they will be absolutely the finest we can offer. That is saying a good deal, but the bicycles will back up the statement.

Digitized by Google

or the Line You Handle?

"We have had crowds of riders calling day and evening to see the 1917 model. Everyone, as far as we can understand, is wonderfully well pleased with same."

"The writer has never seen a stock motor of anywhere near so much speed and power, as we have tried this machine on some of the worst hills that we could find. It really climbed the worst hills as though hills were not there. Apparently the machine is just as speedy as one of your racing models."

"A number of the boys whom we let try out the new machine do not understand how or where it gets so much more speed and power than the 1916 models."

"There has been a big crowd around the 17-J ever since it arrived."

"The new color takes the fellows' eyes."

"It sure has the 'pep' and 'speed.' "

"The new color will make quite a hit."

"Already we have received deposits for seven 1917 machines."

"We are pleased with the new color."

"We are highly pleased with the speed and power of the new motor."

"I feel sure that this motor will make 1917 a most successful year for the Harley-Davidson."

"The boys are tickled with the 'pep' the motor shows."

"We are enclosing orders for nine machines."

"Undoubtedly the most beautiful motorcycle that we have ever seen."

"Undoubtedly the color will make a great hit throughout the country."

"It is surely a beauty."

"The 17-J is the best machine I have ever ridden."

"I have let a bunch of the fellows ride it and they all say the same—'some boat.' "

"You can bet this will be another Harley-Davidson year."

"I am going to make a clean sweep this year if I can get the machines."

"Have just received the 1917 model and it is a beauty."

"I did not think you would ever be able to make a better machine than last year's model, but you surely have done so."

"Everybody is wild over the 1917 model and prospects are great."

"The new motor certainly is a wonder. Everybody who has tried it up to now wants to know how much I will allow for their old machine."

"I don't believe I ever rode a motor with the 'pep' that this one has."

"Since the new model arrived we have had a steady stream of admirers looking it over."

"We are more than pleased with the new model and after riding it we are sure it will sell very rapidly."

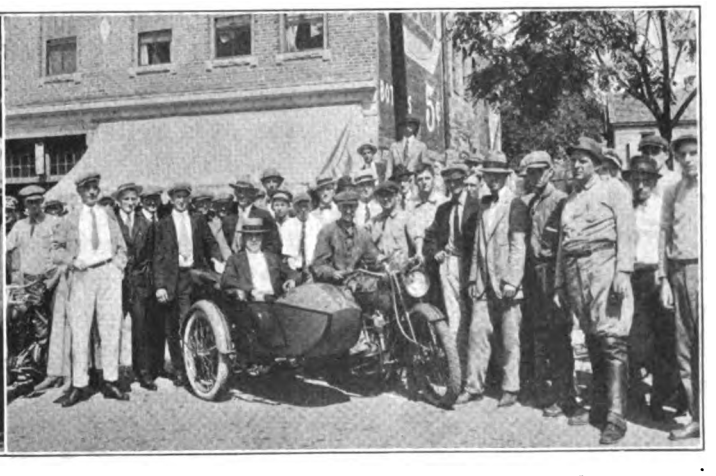
"Our demonstrator arrived yesterday and it is a beauty. We are more than pleased with the latest product of the Harley-Davidson Motor Company."

"The 1917 model arrived yesterday and I must say that I was more than pleased with the looks, and I was tickled to death with the performance on the road. I really believe this machine has more power in high than last year's model had in intermediate. The new color military drab is great. I think it adds vastly to the appearance of the machine."

"The 1917 model came in today. The new color is very striking and beautiful and is quite distinctive. All who have looked at it admire it very much. The new improvements will add much to its efficiency. It exceeds our highest expectations."

Harley-Davidson Motor Co., Milwaukee, Wis., U. S. A.

The enthusiastic reception accorded Happy Scherer, Harley-Davidson traveler, when he arrived in Detroit with his military drab Harley-Davidson, the first 1917 Harley-Davidson motorcycle to reach the city.



The crowd of admirers who gathered to inspect the 1917 Harley-Davidson upon its arrival in Columbia, S. C. Harley-Davidson dealers from all over the state placed their stamp of approval upon "the streak of military drab" by signing 1917 contracts on the spot.

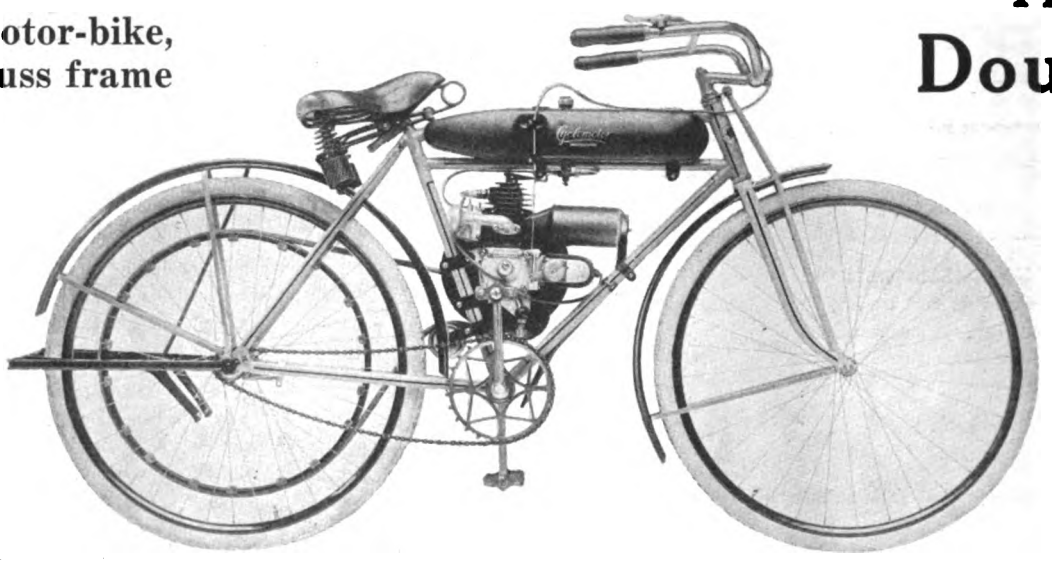
Double-Ba

DOUBLE BAR MODEL
fits any motor-bike, arch or truss frame



More Sales and Bigger Profits for Dealers

With this announcement of the new double bar frame model which completes the popular Cyclemotor line, dealers will be quick to see the immense *new sales possibilities* opened up to them and the unlimited opportunities afforded to build up a bigger and broader Cyclemotor business the coming season.

Each and every bicycle rider can now become the proud possessor of a reliable motor attachment and have it fitted to the *particular style bike frame* which he prefers. And, in harmony with our present product, the new model tank is strictly "Cyclemotor" in finish and workmanship. When attached to the motor bike type bicycles now on the market it gives a graceful, attractive appearance and makes an easy-to-handle, lightweight motorcycle which is a pleasure to own and ride.

We are safe in saying that even the predictions of the most optimistic dealers are sure to be surpassed with this "double-barrel, rapid-fire" sales line.

Improvements and Refinements

Improved Control Cable Casing
New Type Breaker in Magneto
Tickler on Carburetor
Improved Idler and Driving Pulleys
Bronze Main Bearings instead of Babbitt

Not only will the double bar model enable the dealers to greatly multiply their Cyclemotor sales, and more easily dispose of new bicycles and accessories, as well, but the *improvements and refinements in the motor itself* are sure to impress new customers and make every rider a booster.

For example: A new method of forging the crankshaft has been developed which entirely eliminates injurious internal stresses in the ma-

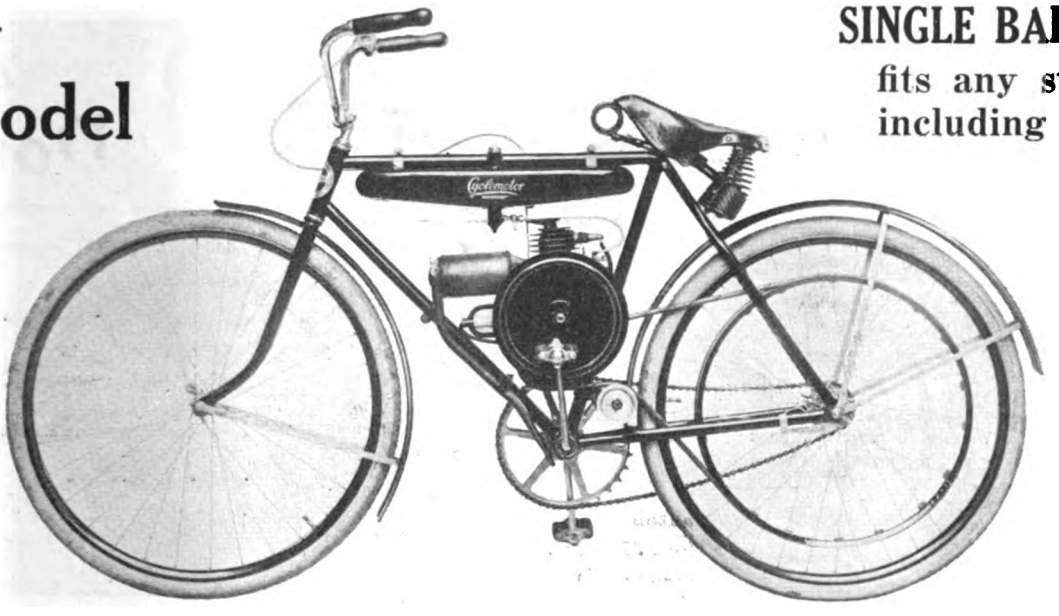
Cyclemotor

WHEELING WITHOUT PEDALS

SINGLE BAR MODEL
fits any style bike,
including 20" size



Increased Mileage and Service for Riders

terial while increasing the strength of the shaft fully 50%, with no additional weight. A tickler has been placed on the carburetor; bronze main bearings replace babbitt ones in the crank case; a new type breaker, especially constructed to operate at high speeds, is built into the magneto; and improved control casing, idler pulley and driving pulley will be furnished with the 1917 models. And our present practice of testing *still continues.* Each and *every* motor is required to satisfactorily pass severe tests on the block, and under full load against electric dynamometers, before being accepted for shipment by our inspection departments.

But in spite of these additions and improvements the retail price *remains the same.* Hence, our dealers now have the entire field of bicycle riders to supply with a product *better than ever,* and with a more liberal selling policy to work on.

Regular Equipment

"National" High-tension Type Magneto
"Spartan" Round Twisted-leather Belt
"Renold" Roller Chain
"Benton Case-hardened" Spark Plugs
"Doehler" Aluminum Die-castings

Our old dealers will appreciate the big sales and profits in store for them the minute the new models arrive at the store, and all other motorcycle and bicycle dealers are invited to investigate our paying proposition before the few remaining good territories are closed out. Write at once for particulars, stating what bicycle lines you handle, and let us tell you of the progress other representatives are making.

We can show *you* how to multiply your sales and profits without increasing regular expenses.

THE BEST DRIVE SPARTAN FOR LIGHTWEIGHTS

The Cyclemotor Engineers Again Select the Spartan Belt

AFTER a year of close scrutiny of the parts and accessories that have helped to make the Cyclemotor so successful, Spartan Belts have again been selected as standard equipment.

When the problem of transmission was up for solution, the Cyclemotor engineers investigated widely and thoroughly. They found that the popularity of belt drive, the success of belt drive, the durability yet simplicity of belt drive could not be bettered—so belt drive was decided upon; and because the maximum in belts was desired, the belt selected carried the famous Spartan trademark.

That the 1917 Cyclemotor again will be equipt with Spartan Belts is important to every dealer—first, because it proves the correctness of belt transmission for Lightweights; second, because it proves the best belt is the

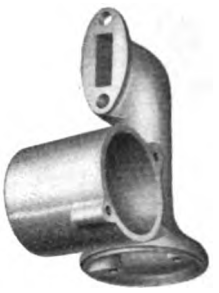
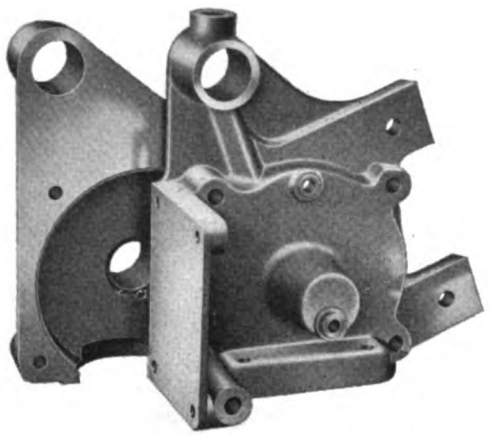
DOEHLER DIE-CASTINGS

in ALUMINUM

have been developed to a high state of efficiency. Cast by the "DOEHLER" process from an aluminum-copper alloy, they have a high tensile strength, an excellent finish, and being of like uniformity insure a perfect interchangeability of parts.





The essential requirements in the construction of the **Cyclemotor,** of strength coupled with lightness of weight, are amply met in the generous use of DOEHLER ALUMINUM DIE-CASTINGS.

The upper cut represents the carburetor body, and the lower cut the crank case used on the CYCLEMOTOR—both DOEHLER ALUMINUM DIE-CASTINGS.

BLUE STREAKS

Making Sales on Higher Costs

There is only one answer to rising selling costs—*get more turnovers.*

Therefore it is profitable to reduce the selling price of bicycle tires in order to increase the turnover.

This is the basis of the Goodyear Blue Streak Bicycle Tire Policy.

By concentrating all manufacturing effort on this one tire, we are offering the bicycle riders of America a higher quality tire at a lower price—$2.50 each, everywhere.

Although the margin of profit to the dealer may be smaller per tire, Goodyear Blue Streaks assure a larger volume of sales, and therefore a quicker stock turn and a larger net profit.

There is only one Goodyear Bicycle Tire—the single tube non-skid Blue Streak.

This *one quality* tire, at *one price* and *one guarantee* enables you to carry a smaller tire stock and yet satisfy every possible tire demand.

When you carry a miscellaneous tire stock of many colors, sizes and grades you are adding a stock expense and a selling expense without increasing your selling volume.

Bicycle dealers with an eye for future profits are selling Goodyear Blue Streaks in preference to carrying heavy stocks of high priced tires.

And they are making at the same time many more permanent satisfied customers.

MOTORCYCLE ILLUSTRATED

For the Trade and the Rider

13 Park Row
NEW YORK

Volume 12 • **September 28, 1916** **Number 13**

BICYCLES ARE COMING FROM HARLEY-DAVIDSON

Call for Quality Wheel by Many Harley-Davidson Dealers to Be Answered by Milwaukee Factory—Line, Which Will Be Complete, Will Be Made at Motorcycle Plant and Will Be Marketed Under the Factory's Nameplate.

MILWAUKEE, Sept. 27.—Like a bolt out of a clear sky comes the announcement that the 1917 line of motorcycles will be rounded off with a complete line of bicycles which will be made "in toto," so to speak, at the Harley-Davidson plant and will be marketed under the Harley-Davidson nameplate.

However unexpected the announcement comes to the trade at large, the decision to go into the bicycle field was made by the Harley-Davidson folk only after due consideration of the venture from every possible angle; consideration which lasted over several seasons. While those in the trade who can sense the trend of the times will not be backward in assigning as the underlying cause of the move the foresight on the part of the Harley-Davidson folk which prompts them at this stage of the business to line up a vast field of recruits who will eventually take to the motorcycle, undoubtedly the immediate cause of the decision is to be attributed to a continued and ever increasing call from Harley-Davidson dealers for a bicycle to match the motorcycle in quality.

A Complete Line

Quite as a matter of course, and consistent with the Harley-Davidson practice of the last 15 years with regard to its motorcycles, the bicycle line will be a quality line. It will be replete with men's, women's and juvenile models, each model embracing the best construction, and only the best, found in the bicycle industry today; linking up the simpler two-wheelers with the power driven Harley-Davidsons is the military drab color matching the color of the motorcycles exactly which has been adopted for the entire cycle line.

Aside from the beautiful lines and fine finish of the Harley-Davidson bicycles, every detail both seen and unseen has had the most careful consideration. Finely adjusted steering head bearings and properly designed front forks have resulted in unsurpassed light steering qualities.

Sturdy hangers, well supported on carefully ground bearings, insure very easy running.

Equipment is in keeping with everything else. Rims, spokes, hubs, coaster brakes, saddles and tires are of first water quality and finish.

CLEVELAND-FUNKE ARRANGEMENT OFF

Change in Sales Policy Eliminates Distributor and Puts Eastern Territory Under Direct Factory Supervision

NEW YORK, Sept. 27.—Announcement has just been made by Herbert F. L. Funke, until now Eastern distributor for the Cleveland Lightweight, that he will not handle the Cleveland in the future. Arrangements will be made by the Cleveland Motorcycle Manufacturing Company to deal directly with their representatives in this territory, which will be in charge of C. W. Waughop, who promoted the interests of that machine while connected with Mr. Funke's company.

A deal has practically been consummated whereby Waughop, who by the way is a dyed in the wool lightweight enthusiast and a full-fledged Cleveland booster, will establish headquarters in New York whereby he will be constantly in touch with every dealer coming under his immediate jurisdiction. Waughop has had a wide and varied motorcycle experience following a thorough coaching in motor vehicle salesmanship gathered when he was St. Louis agent for the Cadillac. He has traveled for motorcycle manufacturers in practically every quarter of the United States and is personally acquainted with most of the dealers from the Atlantic to the Pacific and from the Gulf of Mexico to the Canadian border.

(Continued on page 12)

ANY REASON WHY THIS COULDN'T HAPPEN IN YOUR CITY, MR. DEALER?

SOME time ago the Worcester, Mass., *Gazette* arranged with G. L. Clift, local Harley-Davidson agent, to hire fifteen motorcycle van outfits for a certain number of hours each afternoon. The machines were used in hustling the *Gazette* to news-stands. They did the work and pleased the *Gazette* folks. Liked 'em better every day. Finally said they couldn't be without them. So they bought them outright.

Yes, sir, the *Gazette* publishers planked down the money for those fifteen van outfits and did it smilingly. Going to buy a few more in the near future, too. They will be garaged near the newspaper office and Clift has been engaged to keep the whole flock in tune.

What about your local newspapers, Mr. Dealer? Are they going to overlook that winning hunch of the Worcester *Gazette?* Not after you get to 'em with your sales talk, eh? Well, today's the day. Go right after them. You have the goods. Talk speed and economy to a newspaper man and he's yours,—body, soul and bone-rimmed spectacles.

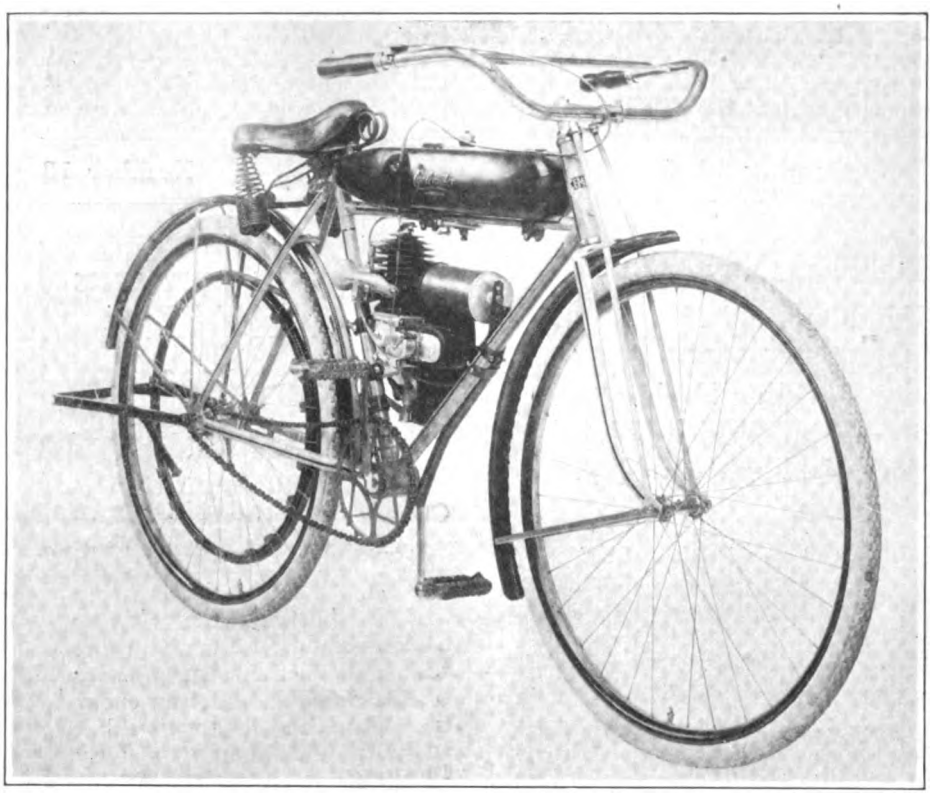
DOUBLE-BAR OUTFIT FOR 1917 CYCLEMOTOR

Bicycle Attachment Now Adaptable to Any Style of Frame—Two-Section Stream-Line Tank on New Model—Single-Bar Cyclemotor Continued for New Season—Motor and Magneto Construction Improved in Minor Details.



Double Bar Cyclemotor Outfit with Two-Section Tank on Motorbike Type of Bicycle

ROCHESTER, N. Y., Sept. 26.—Following the excellent reception accorded the Cyclemotor during the 1916 season, the maker—the Cyclemotor Corporation, of Rochester, N. Y.—has widened its scope to a greater degree by bringing out a double-bar outfit in addition to one very similar to that used in the season just passed. This double-bar outfit, with the single-bar outfit, enables the fitting of a Cyclemotor to any bicycle frame now made.

The addition of the double-bar outfit is, however, by no means the only improvement that has been made by the Cyclemotor folks. The crankshaft is now forged by a new method which greatly increases its strength without adding to its weight. Bronze bearings are used for the crankshaft in place of the babbitt bushings of 1916. The crankcase interior is grooved to facilitate the passage of oil to the main bearings. There is a new locking device on the driving pulley. The control has been re-designed to give smoother operation.

The carbureter is now fitted with a priming pin. The National magneto has now a specially constructed contact-breaker which operates perfectly at the high speeds of the Cyclemotor engine, and the windings have been reproportioned to the same end. The idler pulley has been made stronger.

The special tank for double-bar bicycles, referred to above as the double-bar outfit, is made in two sections to set down over the top of the two upper frame members on such models as the motorbike and truss frame. In this position it is securely held in place with special adjustable clamps which properly fit the frame no matter what the shape of these frame members may be.

Spacers are provided between the sections of the tank to prevent them from being squeezed together enough to cause damage in case the frame tubing is unusually small in size. The halves or sections of the tank are joined at the bottom by a piece of copper tubing so shaped that

ARMSTRONG BREAKS THE SEATTLE-PORTLAND TIME

Makes 194-Mile Distance in Slightly Over Six Hours on 1917 Excelsior—Lost 30 Minutes by Arrest

SEATTLE, Wash.—Bud Armstrong, astride a 1917 three-speed Excelsior, has established a new record for the 194-mile distance separating this city and Portland. Armstrong covered the short double century in 6 hours and 5 minutes.

Leaving Seattle, he covered the 42 miles to Tacoma through fairly heavy traffic at nearly mile-a-minute pace, covering the distance in 50 minutes. At Chehalis he was held up a full half hour by a speed cop and fined $5 for exceeding the speed limit by something like 50 miles an hour. From Chehalis on, he encountered not the slightest trouble and is fairly certain that his new time will not be equaled for some time to come.

WEED ON THE JOB EVEN WHEN TAKING VACATION

KANSAS CITY, Mo., Sept. 23.—R. A. Weed, house salesman for the Saufley Supply Company, dealers in Excelsior motorcycles, Smith motor wheels and Pierce and Excelsior bicycles, has recently returned from a two weeks' vacation. Weed spent almost all of his time in the Missouri towns of Joplin and Springfield, but while there he could not remain away from the motorcycle business and brought back the reports that, while the business has been of a most high grade and excellent character at Joplin, the Springfield merchants have been having a great deal of difficulty. It is generally expected, however, that the business will begin increasing at Springfield very soon.

CLEVELAND-FUNKE ARRANGEMENT IS CALLED OFF

(Continued from page 11)

Mr. Funke has done a splendid business with the 1916 Clevelands, having appointed a considerable number of dealers throughout this part of the country, while they, in turn, have been furnished with a machine which is giving their customers splendid satisfaction. The change in Mr. Funke's plans and those of the company has come about as the result of inaugurating a new policy in handling Cleveland sales which, though splendid during the past year, already promise to be considerably larger in 1917.

BELL COUNTY MEET SLATED

TEMPLE, Texas.—Dan H. McKenzie, secretary of the Bell County Fair Association, announces that arrangements have been made for a series of motorcycle and bicycle races here during the Bell County Fair, October 3-7. Riders from Dallas, Houston, Galveston and other Texas cities will be present and participate in the races. Liberal cash premiums for the winners have been provided, and these are expected to attract some fast riders. Events will be arranged for both amateurs and "pros."

CROLIUS HEADS ADMEN CLUB OF MILWAUKEE

Advertising Manager of Harley-Davidson Motor Co. Elected to Presidency at Annual Meeting

MILWAUKEE, Wis., Sept. 26.—Lacy Crolius, advertising manager of the Harley-Davidson Motor Co., and chairman of the publicity committee of the Motorcycle and Allied Trades Association, was elected president of the Advertisers' Club of Milwaukee at its annual meeting.

Mr. Crolius is a charter member of the ad club and for the past year served on the Board of Directors. The Milwaukee admen's organization is considered one of the livest in the country and has won numerous trophies offered by the national organization for its work in safeguarding the advertiser and the public by propagating sentiment advocating truth in advertising.

Frank Effinger, former publicity manager for the A. O. Smith Co., was elected secretary. Effinger now is engaged in free lance work in this city and is handling several advertising accounts.

WANTS AMERICAN MACHINES FOR EXPORT

NEW YORK, Sept. 27.—E. E. Schwind, representing the Normanna Co., 117 East 18th street, this city, is desirous of making connections with American motorcycle manufacturers not already represented in Norway, Sweden, Holland and Denmark. The Normanna Co. has suitable connections in each of the Scandinavian countries capable of doing the American machines full justice, according to Schwind. He also desires to make arrangements with accessory manufacturers for the same purpose.

CAMERON AND STILLWELL IN CHICAGO

CHICAGO, Ill.—Among trade visitors to this city during the last few days were W. J. Cameron, assistant sales manager of the Goodyear Motorcycle Tire Department, and E. R. Stillwell, in charge of the company's Bicycle Tire Department. Messrs. Cameron and Stillwell were as busy as usual in looking after Goodyear interests on their arrival here, but found time to state that Goodyear motorcycle tire orders point to big doings in the power bike industry for 1917.

LEE PLACED AGENCIES IN FIVE VALLEY CITIES

SAN FRANCISCO, Cal.—Tennant Lee, Henderson representative for California, passed through this city a few days ago, on his way home from a trip up the Sacramento Valley. He spent the time on this trip looking over the situation generally and placed agencies for the four-cylinder machine in San Jose, Chico, Sacramento, Tracy and Vallejo. He is now in the San Joaquin Valley on similar business.

TWO NEW MODELS IN DAYTON BICYCLE LINE

Both Are Juveniles and List at $30 with Coaster Brakes—Full Line Includes Seven Models Ranging in Price From $45 Down—Time-Honored Dayton Features Retained—Eleven Big Jobbers Give Country-Wide Service to Dayton Dealers.

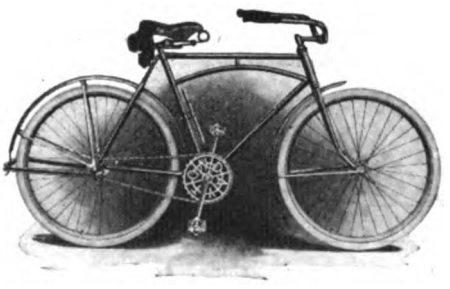
DAYTON, Ohio, September 27.—Quick to sense the trend of the times in the remarkable increase in the bicycle business of last year, and realizing full well the advantages accruing from placing its dealers and distributors in the enviable position of being able fully to take care of an even greater increase predicted and expected for the coming season, the Davis Sewing Machine Co. has rounded out and completed its already replete line of bicycles by the addition of two juvenile models which are bound to strike a note of keen approval throughout the trade.

The new machines are Model 145, Boy's Roadster, and Model 146, Girl's Roadster, and are identical save as to the frame design; both retail at $30, fitted with any standard coaster brake. Frames are of ⅞-inch seamless steel tubing and either model can be had in both 16-inch and 18-inch frame sizes. The handlebar is the 19-inch Schineer and the saddle is a Troxel No. 6 with Cumfort Cushion springs. The models are shod with Fisk Premier tires, with black treads and white side walls; drive is through the intermediary of Diamond No. 71 chain. Ideal Jr. pedals are standard equipment on both models.

Standard Carmine Color

In finish, the juvenile models compare in every way with the full size machines which have always been noted for their appearance and durability of finish. The color is the standard Dayton Carmine.

Five other models are included in the 1917 Dayton line, the leader being the Arch-Truss roadster, Model 144 put out in 20, 22 and 24-inch frame sizes to meet the requirements of the most exacting purchaser. The model, which is distinguished by virtue of the arch-truss double bar construction from which it takes its name, lists at $45, fitted with coaster brake.



Dayton Arch-Truss Roadster

Also of the double bar frame type is Model 142, the Dayton "Motor-Bike" model which takes its name from the fact that its lines follow closely those of the modern motorcycle. The machine lists at $42.50 with coaster brake. The Dayton Roadster Model 140, which is the most popular of the Dayton offerings is priced at $37.50 with coaster brake. It is built in three frame sizes, 20-in., 22-in., and 24-in., with front and rear mudguards. The cranks are the Dayton one-piece, with Ideal rubber pedals. The No. 6 Ideal adjustable handle-bar, 22 inches wide, with 2½-inch forward extension and stitched leather grips is used. There is a choice of Eagle Eazy or Motor-Bike No. 2 saddle and Continental Brigadier or Fisk Premier Gripfast tires, both with the popular black tread. No. 15-1 tool bag with good wrench, oiler and repair kit and nickel frame pump complete the equipment. Any standard coaster brake may be specified.

(Continued on page 33)

DONOVAN LAYS PLANS FOR 1917 COMPETITION

Chairman Recommends Rules for Lightweights and Motor Wheels, Also for Racing Circuit

CHICAGO, Ill., Sept. 25.—In referring to the subject of racing for the 1917 season, John L. Donovan, chairman of the Competition Committee, F. A. M., stated to a correspondent of **Motor Cycle Illustrated** that as soon as the committee met he would suggest that the trade rider class be restored. He also said that new rules would have to be drafted for lightweight machines and Motor Wheels and there would be many events for such machines this season.

A racing circuit of ten big events is to be formed to be run off on the leading tracks of the country, such as Sheepshead Bay, Dodge City, La Grande, Chicago and Cincinnati, the chairman said. Riders who had taken part in outlaw events would be barred from competing in these races. Mr. Donovan also expressed his intention of refusing sanctions to tracks not having proper safeguards for riders.

Laying Dust on Tracks

Another thing that the chairman will insist on for 1917 is adequate measures for laying the dust on tracks. Some preparation, such as calcium chloride, must be used so that riders will not be endangered by clouds of dirt, as has been the case on many of the tracks in the 1916 season. The form and location of the exhaust pipes on racing machines with regard to raising dust was also criticised by Mr. Donovan.

All racing machines must be under 61 cubic inches displacement, and at the conclusion of each big race the winning machines will be torn down and examined to see that the motor comes within the specifications. The chairman will

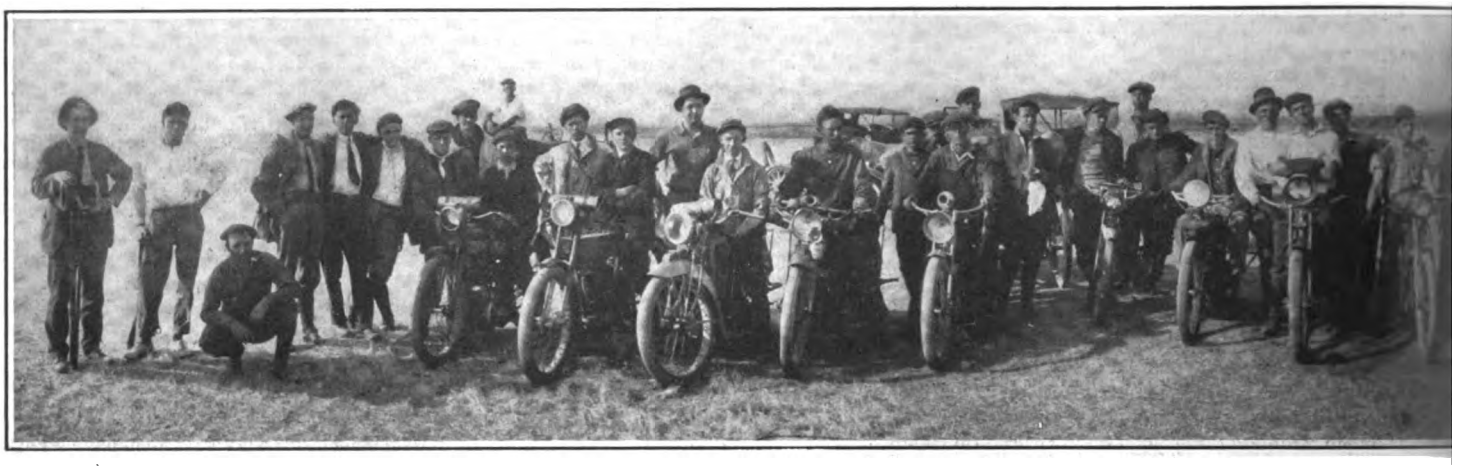
WANT A BRAND NEW THRILL? WELL, JUST TR

Bakersfield, Cal., Boys Invite Los Angeles Riders Over to Take a Whirl At It, and Fif Day and Spectacular Stunts Are Staged Aplenty; Bakersfield Crowd Entertains Visito



Line-Up of Bakersfield and Los Angeles Riders at Finish of Chase After the

LOS ANGELES, Cal.—Daybreak on the Lerdo Plain was an hour to strike terror to the hearts of the sheep-killing coyotes the day the Bakersfield motorcyclists gave their Los Angeles friends a chance to join in the most thrilling sport yet invented. Polo, aviation and catching swordfish on light tackle all have their devotees in Southern California, but let anyone who wants a new thrill in sportsmanship listen to the yelp of a pack of coyotes pursued to the death by fifty motorcyclists, mufflers open and roaring, horns crackling, and riders giving the roundup yell. Thrills! Man, it's a picture long to be remembered.

All night the husky lads from Bakersfield and Los Angeles had been enjoying a banquet royal that stamped the Bakersfield fellows as princely hosts. "Wienies," watermelon, pickles and buns—and, oh, you big, wide, long, deep box o' chicken! And coffee, you bet. It kept the crowd awake. They were still eating when Bert Gilmore yelled "Coyote there." In ten seconds half the crowd were mounted and roaring across the great plain, twenty miles long and twelve wide. Toward the foothills it roughened, and here the coyotes lay in hiding in little washes and gullies.

Captures the First

The first victim was brought in by E. J. Pourroy, of Bakersfield, riding a Harley-Davidson. Pourroy jumped his game a mile and a half away, and took the rough ground along with the smooth at a 35 pace. At that he rode seven miles before the game little runner blew up and lost his wind. Pourroy ran him to a standstill in a winding wash, jumped off and put his foot on Mr. Coyote's bean and held him until Sweeney rolled up with a sidecar. They brought him into camp with a strap tight around his neck.

R. H. Tucker brought in the second, dead. He ran him into a shallow hole, jumped off his Thor, yanked his nibs out by the hind legs and whanged him over the nut with his pump. Good-bye old pump—but what would you care if you brought a coyote up to a bunch of 50 rough riders hanging from your handle bars?

Back and fourth they rode, beating the plain clear to the foothills. This was no rolled field. There were fire breaks, irrigation ditches and squirrel holes; Eddie Tice with that unique loose saddle position of his bobbed over the prairie like a duck on the ocean waves. It tried the forks to the limit. Old Blick Wolters, of Los Angeles, tried to bite a hole in his handlebars when he bumped the other side of a squirrel hole, and came in with a lip his best girl wouldn't know for a week. Ray Little tried out his speed against a jackrabbit; the jack tilted back his long ears when he heard the roar of the motor, and started to get to Brooklyn to meet the Van Buren girls when they get home on the Santa Fe flyer.

Fifty Were Chased

At 9 o'clock 50 coyotes had been started and chased off the map. Then came more grub for the hungry; those Bakersfield fellows are liberal entertainers all right—then a jaunt back to talk it over, and the Los Angeles boys rolled home over the wonderful Ridge Route vowing that of all good times of the L. A. M. C. they were indebted to the Bakersfield crowd for the best.

Trade Doings in Los Angeles

CARL GOUDY JOINS HOFFER AS "X" DISTRIBUTOR

LOS ANGELES.—Carl Goudy has bought T. C. Girton's interest in the Girton-Hoffer Co., Excelsior distributors for the big territory extending from Bakersfield, Cal., to El Paso, Texas.

A new company has been formed in which Goudy is associated with Fred Hoffer under the name of the Goudy-Hoffer Co. The San Diego store which Goudy has been operating is taken over by this company, and will be operated as a branch. Girton's plans for the future have not yet been announced.

LUDLOW WINS IMPROMPTU MATCH

In a little race of friendly rivalry that has been the occasion for a lot of good-natured joshing and some side bets, Freddy Ludlow on a stock Powerplus cleaned up Blick Wolters on his big-valve Excelsior. It was a three-mile sprint out on the level highway in the San Fernando Valley, pulled off just before the crowd started to Bakersfield. Blick says Freddy must have been going 85 or he wouldn't have got away with it.

HENDERSON OUTLOOK IS BRIGHT

Roy Artley postponed his speed trip over the San Diego road to make a business trip to Calexico. When he returns there will be something doing. The Henderson agency is getting signs that point to a big year. They never before got so many letters inquiring for agencies. Secretary F. A. Sutphen gave the representative of **Motor Cycle Illustrated** a

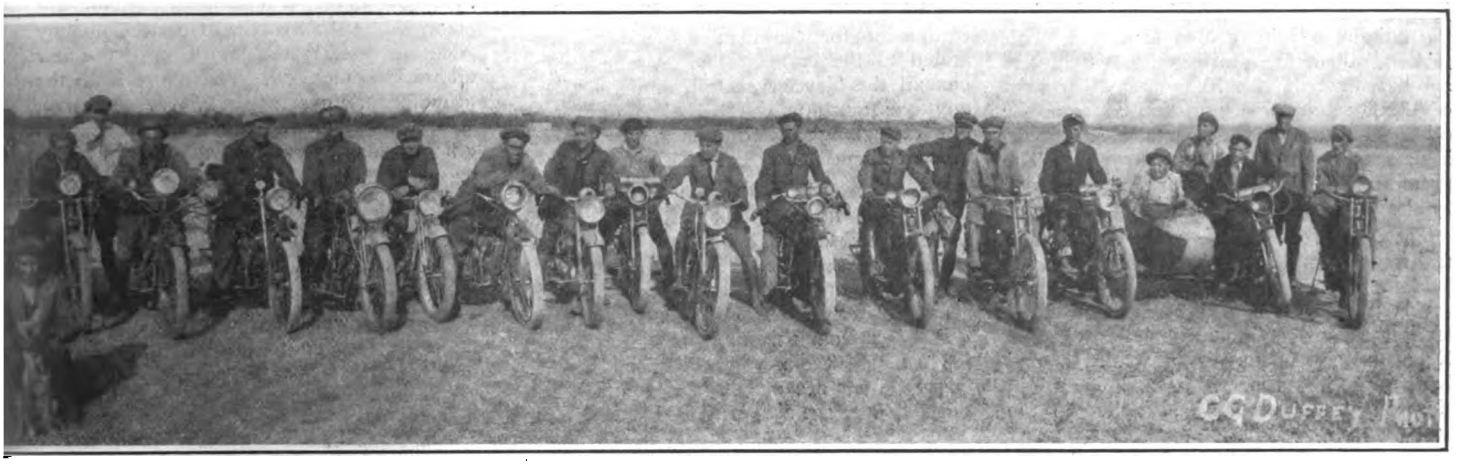
NING DOWN COYOTES ON YOUR MOTORCYCLE

ift-Footed Coyotes Are Rounded Up in a Big Drive; Rough Riding the Order of the y Fashion and All Hands, Except the Coyotes, Vote the Affair a Big Success



E. J. Pourroy and His Victim, the First One Bagged, Are in the Foreground

look at some of them, and they were written by men who mean business.

THEY'RE BUILT TO LAST

Tommy Butler has the cash in his pocket to prove that they build motorcycles good these days. He sold his 1916 Indian mount and sidecar that he had driven 17,000 miles for $340.

1916'S STILL IN DEMAND

Southern California boys are not hanging back for new models when they want motorcycles. Carriker & Crowl, of Orange, sold two Powerpluses last week, and Charlie Moist, of Long Beach, added one to his good score for the season.

BOOKING ONE A DAY

Passmore & Sayre have shown a deposit a day for a new Harley-Davidson for every day of the past two weeks since the olive drab demonstrator arrived.

BERRY'S THOR OPENING

Saturday evening, September 30, is the date set by T. E. Berry for his big Thor opening. Beer, punch and smokes for the crowd and the great motorcycle story-telling contest! Prizes—for the winning lady, a handsome sweater; for the winning gentleman, a shotgun warranted to be a game-getter.

AZUSA KNEW HOW TO CELEBRATE

The little town of Azusa called on the motorcycle boys to help get out the crowd for a celebration of an important event in local history. They had a thrilling race of local and nearby talent. Pomona supplied winners of first and second on Excelsiors, an Indian rider got third, and a Henderson fourth.

SEES FUTURE FOR LIGHTWEIGHT

W. G. Schack, president and general manager of the Emblem Mfg. Co., has been making his annual visit of business and pleasure, making headquarters with John T. Bill, Emblem distributor. Mr. Schack, after noting the continued improvement of the vast system of California good roads, and learning of the gradual improvement in employment conditions, prophesied a glowing future for the lightweight in this territory.

Newsy New Items From Tacoma

TACOMA, Wash.—W. P. Glasgow, Tacoma dealer in Harley-Davidson machines, has obtained the first demonstrator of the 1917 models, which was received here just 10 days after the 1916 season closed.

The early arrival of the new mount had been anticipated, however, by Glasgow, as he had his 1916 stock all sold and the shop all nicely cleaned up awaiting the new arrival. The factory decided to send the first demonstrator to Tacoma because the good sales record made by the Glasgow staff in Tacoma and the remainder of Pierce county this season seemed to warrant it.

Glasgow has taken space at the Western Washington Fair at Puyallup, 12 miles distant from Tacoma, where an eager crowd view the new model in the afternoon, while in the forenoon the machine is on exhibition at the "A" street salesrooms.

AFTER SCHOOL RIDERS

Elmer J. Bergstrom reports a nice season on the Miami Power Bicycle, and has also made numerous sales of Flying Merkel bicycles. He is making a bid for the school riders, and has a cozy salesroom and well-fitted repair shop near the Lincoln High School.

FULLER IS BACK

H. C. Fuller and party of the Fuller Cycle & Supply Co., local Henderson and Dayton motorcycle dealer, has returned from a four-days trip to Lake Crescent. The party consisted of Mr. and Mrs. H. C. Fuller and Mr. and Mrs. B. F. Gabriel, and the 400-mile trip was made on Hendersons equipped with sidecars.

The roads were found in excellent condition through Olympia, Shelton, Hoodsport, and 50 miles of the trip was made along the bluff above Hood's Canal. Two hills of between 30 and 40 per cent. were encountered on the way, but were negotiated in good shape.

HUNSACKER RODE 50 MILES WITH BROKEN LEG

POMONA, Cal.—S. P. Hunsacker, Harley-Davidson agent in this city, has just given a most remarkable exhibition of gameness in riding 50 miles back to Pomona after breaking one of his legs in a plunge off a mountain trail. Accompanied by several other riders, Hunsacker was ascending the side of Mt. San Gorgonio, in the San Bernardino range. At a turn in the road Hunsacker was crowded by an automobile and fell about 40 feet down the mountain side, breaking his leg.

The machine was hauled back to the trail and repaired; Hunsacker was given first aid and the return was made to Pomona. The plucky rider did not collapse until he arrived in this city. He will be round again in a few weeks, the doctors say, and is now doing well.

N. Y. SPORTING GOODS IN LARGER QUARTERS

Metropolitan Indian Distributor Moves to Five-Story Building and Takes Extra Floors in Adjoining Structure to Properly Accommodate Increase in Cycle Business

NEW YORK, Sept. 25.—In order to properly care for the great increase of its motorcycle and bicycle business, the New York Sporting Goods Company, of 15 Warren street, this city, has taken over the entire building at No. 10 Warren street, just across the way and also two floors of the building adjoining, Nos. 12 and 14. This gives the firm five stories, a basement and sub-basement at No. 10, with a floor area of 17,500 square feet, and two floors in the other structure of 10,000 square feet, making a grand total of 27,500 square feet. The premises at No. 10 were formerly occupied by the Baker firm.

The New York Sporting Goods Company and its predecessor, F. A. Baker & Co., has held the Indian agency for New York for over ten seasons. The present distribution territory for the Indian includes Greater New York, Hudson County, N. J., and Long Island, but an additional county in New York will probably be added in the near future.

Well Lighted Showroom

The first or ground floor of the new cycle store of the company is arranged with a showroom at the front. The entrance is flanked by two extra deep windows with large single plate panes, each window being capable of holding a motorcycle and a sidecar combination or six bicycles. Down each side of the room in the rear of the salesroom are arranged shelves for motorcycle accessories with a desk for the chief of each section at the end. In the rear is the parts department, for Indian parts, and this, as in former quarters, is arranged on a most systematic basis. A skylight over the parts department gives ample daylight, while five large direct-indirect electric lights take care of artificial illumination.

The basement is devoted to the receiving and shipping department. In this department are long tables with deep and wide compartments underneath and also around the walls. In these compartments are placed the baskets loaded from the upper floors, and in turn the contents of each basket is wrapped for shipment. This system does away with losses in packing and ensures satisfaction to both the consumer and the firm.

Supplies in Sub-Basement

The sub-basement is given over to the storage of motorcycle supplies. Here may be seen compartment after compartment of lamps, speedometers and horns; racks of tires and other motorcycle fitments. The basements and all floors are reached by stairs and an elevator with a capacity for a whole sidecar or rear car combination.

On the second floor is the wholesale bicycle department. Here the parts, fitments and other goods for the Pierce and the firm's standard name plate wheels are kept. Like the other departments, arrangements for quick sorting, packing and wrapping of the goods are of the highest order. The third floor is devoted to the storage of bicycle tires, and the characteristic order of the whole establishment is again seen here.

On the fourth floor, still of No. 10 Warren street, is the bicycle assembly and storage department. In the front are benches and tools by means of which any wheel can be fitted up or altered as desired. The equipment for the firm's bicycles is here added to the crates. The storage section has all the bicycles crated on end so that any one machine can be taken out without disturbing any other. There are at present about 2,000 bicycles in storage.

On Fifth Floor

The fifth floor is given over to motorcycle assembling and storage of used machines. In the front portion of this floor is a first class shop, while the machines are kept in orderly rows in the center and rear.

Passing from this floor to the west the top floor of the new building is reached. On this floor are more bicycles stacked on end and here are also crates of sundries for bicycles. This floor and the one below it measures 50 x 100 feet within the walls. The floor immediately below is devoted to bicycle storage.

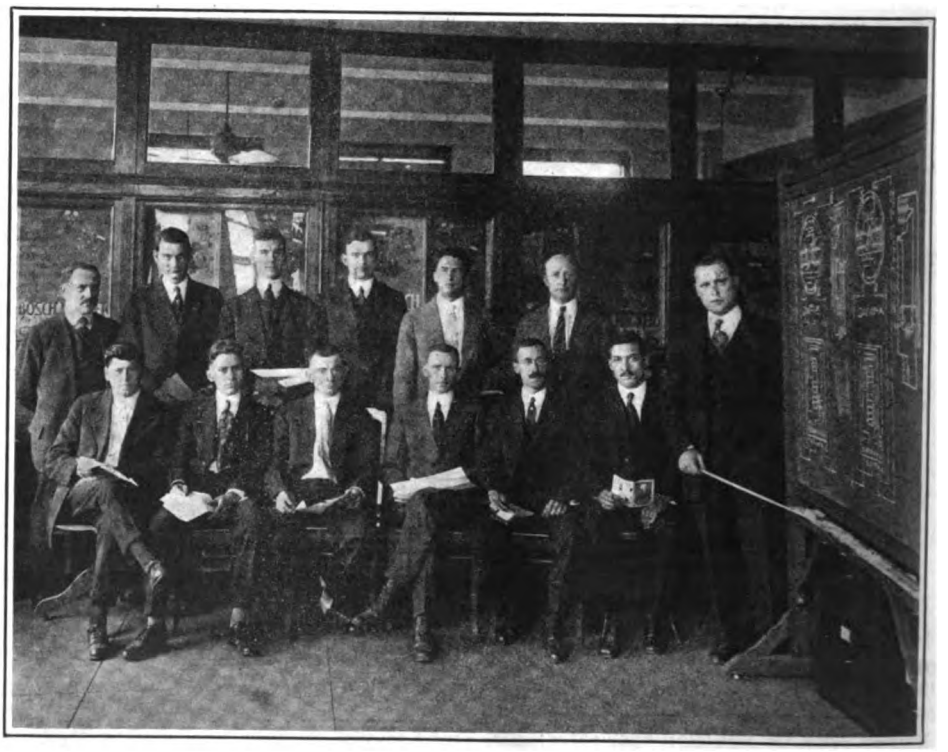
A Quick Move

The thoroughness with which things are performed at the Sporting Goods Company is demonstrated by the condition of the new building this morning. The move from the old motorcycle quarters at 15 Warren street was started late Saturday afternoon, and by noon today everything was moved to the new places and business was going on without interruption. Finishing touches in all departments were being made this afternoon.

The premises at 15 Warren street are now utilized exclusively for sporting goods, whereas they were divided between this line and the cycles up to last week. The removal of the cycles across the street will give the sporting goods the space which was greatly needed.

BOSCH OPENS SCHOOL OF INSTRUCTION

Country-Wide Educational Plan for Magneto Company's Employees in Branches and Service Stations Now Under Way—Scope of Work



Class in Session at New York Headquarters of Bosch Magneto Company

NEW YORK, Sept. 22.—The Bosch Magneto Company, of 225 West 46th street, this city, is now holding its school of instruction for service men of the Bosch distributors and service stations. The Bosch School, as it is called, is held at San Francisco, Chicago and New York, so that the Western, Middle Western and Eastern territory is covered. The instruction at these centers is by classes, although individual instruction can be given.

The Bosch School is a country-wide educational scheme for the purpose of teaching by lectures and practical work the functioning of Bosch apparatus, the how and why of construction and the methods of correcting the evil results of careless handling by the consumer. Installation work is also gone into thoroughly. School classes are held at least once a year and oftener as occasion demands.

One or more of the mechanics of each

Digitized by Google

distribution center and service station can attend. The Fall sessions of the school are held in September and November—generally speaking, two classes in September and one in November. The classes will be followed by visits of the Bosch Special Engineering Service men to the establishments of the distributors and service stations for the inspection of these establishments as to their facilities for handling Bosch work and for an examination of the workmen engaged in giving Bosch service. Class education is held at the various Bosch branches, all of which are completely equipped in every way. It might be said that the branches are small manufacturing plants, so complete is their organization and machinery apertaining to high tension magneto work.

The class education is divided into four sections: general lectures, laboratory work, service work, installations, all as applied to Bosch ignition, starting and lighting systems. Sessions generally run for one week, but may be carried on longer if the students require further instruction. It should be noted, however, that in the first place each representative must be thoroughly acquainted and informed in the four divisions of education before he is permitted to handle repairs and adjustments in connection with old and new Bosch products.

This condition is compulsory, and in fact is part of the Bosch contract with the service station. The contract makes it necessary that every official Bosch service station have a complete service plant, a full set of Bosch tools and testing apparatus and that it has one or more mechanics educated at the Bosch Schools. It is recognized that this system of education is rather expensive, but it is logically correct and proper for the rendering of the service required for electrical apparatus as applied to the automobile, motorcycle, motorboat, etc. Real service has been the Bosch watchword and the education of the service men is probably more exacting than any other similar plan in the motor vehicle field.

INDIAN ORGANIZES AN ILLINOIS COMPANY

Headed by Jesse Edwards, It Will Supersede Present Chicago Branch Arrangement—Augurs No Change in Indian Policy but Will Expedite Matters for Trade Served by Chicago Branch

CHICAGO, Sept. 27.—Plans are all but consummated for the organization and incorporation of the Hendee Mfg. Co. of Illinois, which acting as an entirely separate company from the factory, will conduct the business of the Chicago branch of the Indian concern. Jesse Edwards, of the Edwards-Crist Mfg. Co. and Chicago branch manager for the Indian will assume the presidency of the new company; Frank J. Weschler, general manager of the Hendee Mfg. Co., will be vice-president and Frederick Secord will be secretary and treasurer.

In outlining the purposes of the new organization, Mr. Edwards makes it plain that the change does not forecast the slightest change in the policy of the Chicago branch, which, of course, will remain identical with the factory policy. In conducting the middle-west business as a separate institution, rather than a limb or offshoot of the Springfield plant, and vesting full responsibility in the officials, it is expected that Indian matters in the territory served by the Chicago branch will be expedited and that, all decisions being made right at Chicago for that particular territory, dealers as well as riders throughout it will benefit materially.

The territory served by the Windy City branch on Indian motorcycles, bicycles and sidecars, which formerly included the states of Illinois, Wisconsin, Michigan, Indiana, and Iowa has been enlarged for the coming season by the addition of Kentucky. In the matter of parts, the Chicago company will continue to serve the entire Middle west. Wilmar Reichert and F. B. McFadden will cover the territory for the Chicago company and will leave on their initial trips for the 1917 season about the first of October.

DE FALCO SHOWS BEST IN CRESCI'S SECRET RUN

Makes the 38 Miles From Vineland to Atlantic City in 1:38:07, Just 7 Seconds Off Set Time

VINELAND, N. J., Sept. 24.—John DeFalco today won the second annual secret time contest held by Anthony Cresci, Jr., Harley-Davidson dealer for this section of Cumberland County, from a field of 48 motorcyclists who competed solo, tandem and sidecar.

The route led from Vineland to Atlantic City and measured 38 miles. The time chosen by Benjamin Stevens, mayor of Vineland, was one hour and 38 minutes, and meant that the winner had to ride the course at the average speed of 24 miles per hour. Right here we might say that Mayor Stevens owns a car and appreciates the smooth gravel roads of this section of the state, then, too, he may have had in mind the fact that the boys like a little speed occasionally.

After the field had checked in on the outskirts of town Cresci headed a parade of motorcyclists through the main street of Atlantic City to the Inlet House where 80 men and women sat down to a shore dinner "on Cresci."

The dinner finished, the prize winners were announced as follows:

John DeFalco, 7 seconds difference, Goodyear Blue Streak Tire; Will Tracy, 1 minute and 50 seconds, Firestone Non-Skid Tire; Harry Jovenalle, 2 minutes and 48 seconds, United States Tire; Ceasar Raffo, 3 minutes and 10 seconds, Headlight; Dom. Cucino, 3 minutes and 25 seconds, Handphone; Alfred Nester, 4 minutes and 32 seconds, Set Splitdorf Plugs; Chas. Connery, 4 minutes and 35 seconds, Exhaust Whistle.

PROVIDENCE SEES FUTURE IN BRIGHT COLORS

PROVIDENCE, R. I., Sept. 20.—Prospects for a big season in the motorcycle trade are good, according to the local dealers, most of whom are getting in their 1917 lines. At one store, the motorcycle business has practically shut out the soliciting of new bicycle business.

William N. Burnett, manager of the local Harley-Davidson store on West Friendship street, has just disposed of a machine to the Post Office for the use of special delivery carriers. He is after the Providence fish dealers to put in sidevans. Burnett says that there is a big demand for machines on all sides from both old and new riders and that his repair forces are working overtime to catch up with business.

Only one machine is unsold at B. A. Swenson's, and this one came yesterday. Swenson says: "I can't keep up with my orders. I am way behind on Indians and could sell loads of them if I could get them. 1917 will be a great, big season."

W. F. Halliday, Henderson man, is going out after the commercial users and has lined several up. He is sure that he will land a number when the new Henderson demonstrator arrives.

KENTUCKY SCENE OF A "REVIVAL" MEETING

Boosters From Nearby Towns Meet at Adams and Form an Association—Plans Bright for Future Events

LOUISVILLE, Ky.—What promises to be a new era of motorcycle enthusiasm in this vicinity began with a meeting of about 70 riders recently at which a temporary association was formed in Adams, Tenn. Boosters from Adams, Springfield, Nashville and Clarksville, Tenn., and from points in Kentucky including Hopkinsville, Franklin, Elkston, Louisville, Russellville and other points were present. Many of the riders were accompanied by feminine enthusiasts and the meeting was one of the most interesting ever staged by advocates of the power two-wheeler in this part of the country.

Thirty-five machines made the trip to the meeting point, practically all of them being equipped with side-cars or tandems. Refreshments were carried in several of the side-cars, and following the dinner a program of amusements was enjoyed.

So successful was the gathering, that those present immediately began to lay plans for a big picnic to be held at Flemings, Ky., near Hopkinsville, July 4, 1917. Steps will be taken at once to interest all the motorcyclists from that section of the country, and there are strong indications that next year's turn out will break all records for such affairs in the south.

VAN BUREN GIRLS MOTOR ACROSS MEXICAN LINE

Transcontinentalists Make Run to Tia Juana, and Finally Start for the East Again—Receive Special Medal at San Diego Exposition—Are Entertained Royally in Los Angeles

By FRANK REED

LOS ANGELES, Cal.—The Van Buren girls left Los Angeles by train at 9 a. m. September 18, for the East, via Grand Canyon, New Orleans and Washington, D. C., at which points their chief stops will be made.

Paul Derkum has shipped eastward the Indian motorcycles on which the girls made their transcontinental tour. "Beyond question the Van Buren girls have made one of the most noteworthy motorcycle trips ever accomplished," says Derkum, "chiefly because they have proved that the motorcycle is a universal vehicle. They have shown that it does not take a big husky man to handle a standard twin machine. When you consider that one of the girls weighs 105 pounds, and the other only 117, and that they made the whole trip without accident, motor trouble or any dangerous adventure, one has to admit that they accomplished their purpose with marked success."

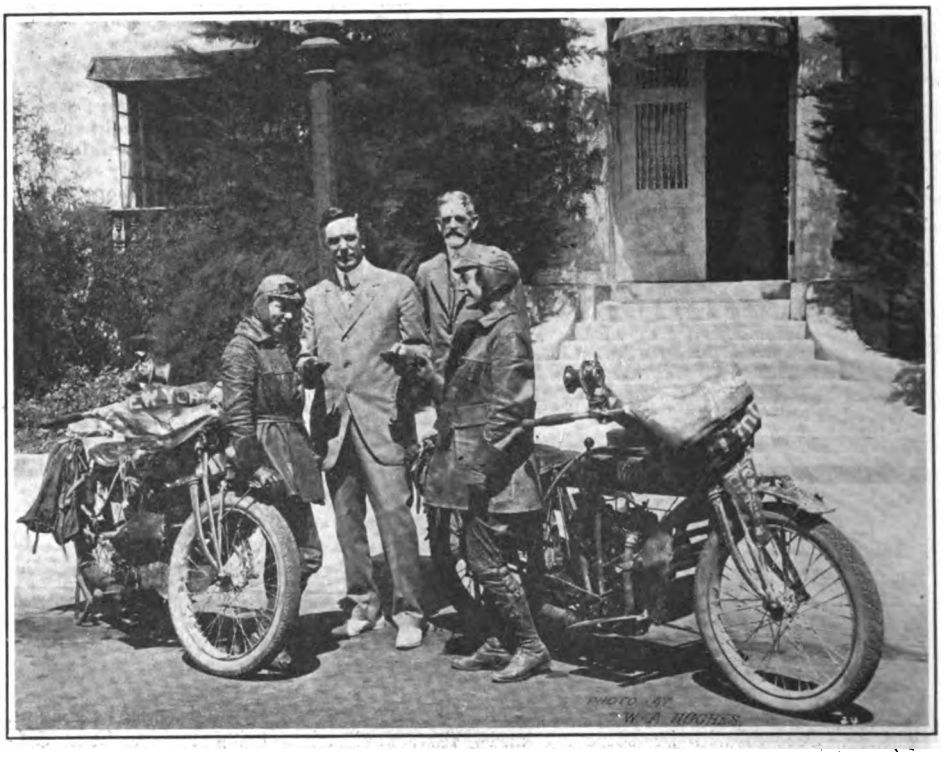
On Sightseeing Trip

While the Van Buren girls were in southern California they spent ten days in sightseeing. They were met by a reception committee, Paul Derkum representing the Indian factory and W. A. Rix and J. Y. Johnston of the Firestone Co. It will be recalled that one of the outstanding features of the trip was the faultless service of the Firestone tires with which the cross-country motorcycles were equipped. During their stay the girls were entertained by Derkum and Manager A. T. Smith, and by representatives Hobgood and Johnston of the Firestone staff.

To complete their tour to the southwesternmost quarter of the United States, the girls went over the road alone on their motorcycles to San Diego where they were congratulated by President G. A. Davidson, of the San Diego Exposition, and presented with a special medal commemorative of their tour terminating at the Exposition. From there they went over to Tia Juana, Mexico, thence back over the road to Los Angeles.

Riverside and Catalina

Their next trip was under the guidance of J. J. O'Connor and J. Y. Johnston to Riverside, where they had dinner at the beautiful Glenwood Mission Inn. They also visited Catalina Island and other beauty spots of the scenic paradise of the Southwest. Coming across the country, both of the girls carried a full kit of Firestone accessories, and the only use they were obliged to make of them was as Samaritans on the road, helping others. Miss Adeline changed a tire, chafed on the side by a water-bag, and repaired two punctures. Miss Augusta Van Buren came through with an absolutely perfect score. The photographs taken in southern California show the excellent condition of the Indian motorcycles, and of Firestone tires on which they have made their 5,000-mile trip over all kinds of road conditions.



Misses Adeline and Augusta Van Buren Receiving Medals from Officials at San Diego Exposition—President Davidson Is Making the Presentation

PIONEER RIDER COMMISSIONED CHAPLAIN

TORONTO, Ont.—The first rider of an Indian motorcycle in Canada has just enlisted for active service. This is Reverend J. D. Morrow, of Toronto, who has been appointed chaplain of the 180th Overseas Battalion with the rank of captain. Eleven years ago Chaplain Morrow surprised local citizens by riding into town on the two-wheeler and for a number of years he used the Indian in the performance of his parochial duties in the poorer sections of the city. The consistency with which Chaplain Morrow rode the first Indian gave American motorcycles such a boost that they have now almost completely ousted the British models.

CRESCI CLOSES HIS 1916 SEASON WITH 57 SALES

VINELAND, N. J.—Anthony Cresci, of this town, has closed his 1916 books after disposing of 48 Harley-Davidson motorcycles and nine sidecars of the same make. Although this is the flat section of the state, Cresci sold 45 twins and only three single-cylinder models. Twenty-two of the twins were three-speed models and but two of the sales were electrically equipped. About ten of the machines were kick-starters.

Cresci had his '17 demonstrator on the floor about six hours when along came one of his riders who has an ambition to get the first machine each year and who didn't want to lose his record, so now Cresci is waiting for another of the "Giant in Khaki" machines. He has an order for a three-speed Harley-Davidson for the local police department.

At the present time Cresci is planning organizing a motorcycle club among his riders and is erecting a two-story concrete block building behind his agency to house them. The first floor to be used as a storage and repair shop by the boys and the second floor as a meeting room.

HERMOSILLO-PHOENIX TO BE RUN AGAIN

PHOENIX, Ariz.—Announcement is made that the international race from Hermosillo, Sonora, Mexico, to Phoenix is to be staged again—over the 400-mile route. It is stated that the racers will leave Hermosillo November 9th, with a night control at Nogales, which town straddles the international boundary line. Nogales is about 185 miles north of the starting point.

From Nogales the route is through Tucson and Florence to Phoenix. The road race will be toped off by a speed program at the Arizona State Fair, November 13-18, including a desert race and the one hour National F. A. M. championship.

WILMINGTON WATERMELON RUN

WILMINGTON, Del.—Members of the Wilmington M. C. enjoyed an outing on Sunday, September 10, a trip being made to Augustine Beach, where a watermelon party was staged.

Digitized by Google

PROVE HIGHLY DESIRABLE FOR COLLECTORS

LONDON, Ont.—The *London Advertiser,* one of the largest dailies in the Dominion of Canada, is using two motorcycles for its collectors. These machines have displaced two light automobiles and in turn are the successors of the horse and carriage system used up till about four years ago.

Mr. Frank Adams, the business manager for the *Advertiser,* in speaking of the superiority of the motorcycle over other vehicles for collecting and similar advice, stated that one of the big advantages of the power two-wheeler was that the collectors could—and would—go anywhere on their machines. "With the automobiles," said Mr. Adams, "the men found difficulty in going over narrow lanes and paths, and often did not traverse them for that reason. Using the motorcycles, they ride everywhere."

The machines used are a twin Indian and a single cylinder Pope, the former having been in service for two seasons. Both are giving excellent service.

COOLEY SOLD TWENTY-TWO

JOLIET, Ill.—A. B. Cooley, Indian man, reports the sale of 22 new machines during the past few months, which is twice the number he sold last season. He is featuring Goodyear and Goodrich tires in his sales. Cooley recently added the Indian bicycle lines as well as one bearing his own nameplate.

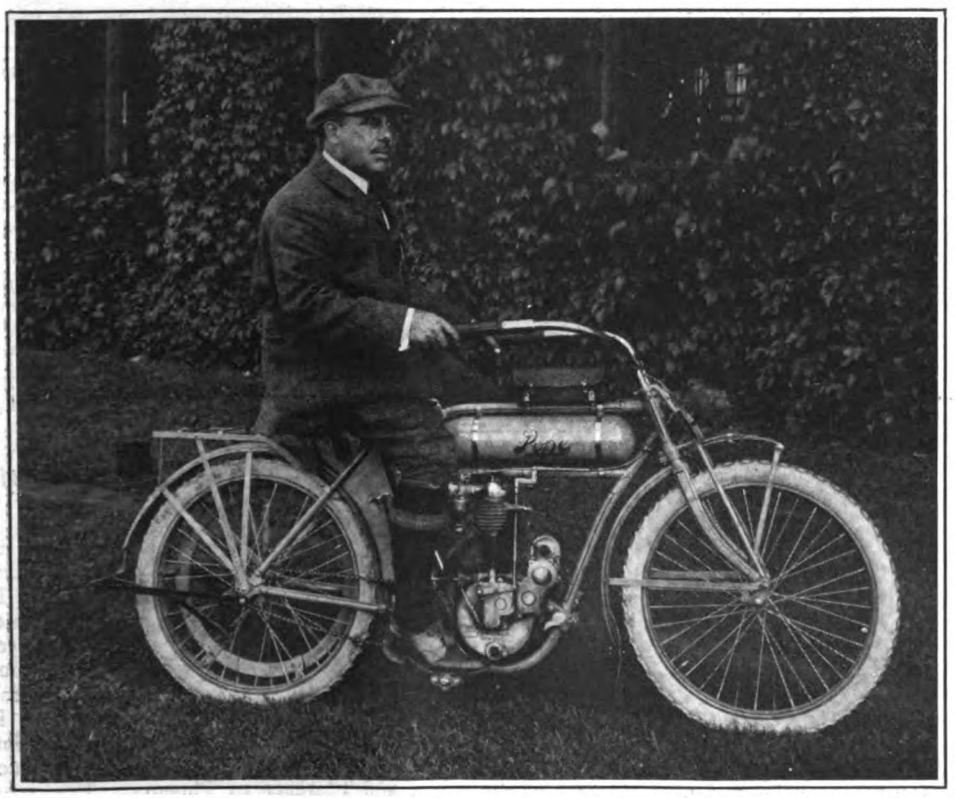
DON'T FORGET THE VALVE STEMS

THERE is a right and a wrong way of performing even so simple an operation as grinding in the valves of the motor. One of the little details which the average rider omits when he is grinding in his valves, for instance, is to examine the valve stems and remove from them all carbonized oil or other filth that is liable to cause the stem to bind in its guide; also to examine the stem carefully to see if it is bent or if, for any other cause, it has been binding in the guide. A little attention to these details will be found fully worth the time and trouble involved.

THINGS ARE FINE, SAYS RICE

CHICAGO, Ill.—A. C. Rice, sales manager of the Eclipse Machine Company of Elmira, N. Y., is in this city on a business trip. "How do I find things?" said Rice, "why, fine; never better."

ST. ONGE TAKES TO THE POPE LIGHTWEIGHT



WESTFIELD, Mass.—Fred St. Onge, of Montreal, has always been an enthusiastic booster for all types of bicycles and motor-propelled two-wheelers. He has ridden every type of bike from the "ordinary" to the modern bike-booster-fitted wheel. His latest acquisition is a Pope lightweight, which he got on his last visit to the Westfield Manufacturing Company's big plant.

Fred looked out in the yard while at the plant and saw an old Pope lightweight, one of the first of these Popes ever built. He at once saw possibilities in it and jumped on for a short ride. He bought the machine as soon as he came back from the spin and used it during his two week's stay in Westfield, afterward having it shipped to Canada for him. The picture shows St. Onge on his Pope in front of the Westfield factory ready for an early morning run.

HANSON AND LANDES BUSY ON 1917 PROSPECTS

KANSAS CITY, Mo., Sept. 23.—A great deal of excitement is now in evidence about the local wigwam of Albert Hanson. Little groups of riders and customers are to be seen almost any time during the day discussing things in general, but those things are those that pertain to the new '17 model Indian machines and the recent announcement of the Hendee Manufacturing Company. All through the excited bustle Hanson and Landes are working hard upon the new prospects and already have their field ready for the first demonstration.

SELLS THREE CLEVELANDS IN VINELAND

VINELAND, N. J., Sept. 24.—John Parsoner, Cleveland lightweight dealer in town, has disposed of three of the well-known two-cycle motorcycles and is planning a busy campaign for 1917, as the lightweight has attracted much inquiry because of its lightness, simplicity and ease of operation locally.

MADE GOOD IN SALES END

TORONTO, Ont.—One of Toronto's crack salesmen and racing men is Wilfrid Morrison, who is chief of staff for Walter Andrews, Harley-Davidson distributor for Ontario. Morrison broke into the motorcycle game before he was out of short trousers and in five years' time he has developed into a full-fleged sales expert. He has traveled the whole of Eastern Canada for the purpose of placing agencies for motorcycles. Morrison practically forsook the stage for the motorcycle, as he played leading juvenile parts until his voice developed a break.

UNITED MOTORS BUY LOVELL-McCONNELL

Maker of Klaxon Warning Signals Passes Into Hands of Concern Controlling Remy and New Departure

NEWARK, Sept. 18.—The Lovell-McConnell Mfg. Co., maker of Klaxon warning signals, at least one model of which is designed for use on motorcycles, has been purchased lock, stock and barrell by the United Motors Corporation of New York, simultaneously with the purchase of the concern the name has been changed to the Klaxon Company.

As a result of the change, F. Hallett Lovell, Jr., for many years principal owner and president of the concern retires from active connection with the company, although he still retains his directorship.

The United Motors Corporation, by the purchase of the Klaxon interests, adds a sixth concern to its line of accessory factories specializing in automobile and motorcycle parts. Aside from a couple of plants making automobile fitments alone, it now controls the Remy Electric Co., the New Departure Mfg. Co. and the Klaxon Co., all of which are well known in the two-wheeler trade.

PITTSBURGH TO HAVE BIG SPEEDWAY SOON

PITTSBURGH, Pa.—J. B. Callahan, president of the Pittsburgh Speedway Association, announces that there is to be constructed in this city a speedway for motorcycle and automobile racing in the near future. The cost, Mr. Callahan says, is to be close to $1,000,000.

A deal for 600 acres of land was closed last Wednesday by the association and work on the course will begin within a short time on this property. The speedway will consist of a two-mile track for motor races and a horse oval inside. It will be located a short distance southeast of this city.

DOMINIE LAUDS CYGNET

WALLINGFORD, Conn.—George M. Stockdale, M.A., pastor of the Methodist Episcopal church in this city, has just returned from a trip through the Adirondacks with a Cygnet Rear Car outfit. The Rev. Mr. Stockdale is very enthusiastic over the trip and particularly over the performance of the Rear Car, which he considers an ideal vehicle for touring.

IS THIS A DELIVERY RECORD?

ROCKFORD, Ill.—That the days of the horse delivery vehicle are numbered was demonstrated a few days ago in this city by Earl Bengston, who runs a motorcycle rapid delivery service. On a wager, Bergston delivered 17 packages to different parts of the city in 21½ minutes. He rides a Harley-Davidson with side-van attachment.

ELIZABETH MOTOR-COPS NAMED

ELIZABETH, N. J.—Two motorcycles have just arrived here for the use of the local police. Chief Mulcahy announces that he will assign Patrolmen Joseph Sattler and Frank Brennan to the machines. Elizabeth is on the line of much heavy automobile and motorcycle traffic between Newark and southern Jersey, and speed fans have given the local authorities much trouble.

TAUNTON INDIANS IN FINAL RUN

TAUNTON, Mass.—The Indian M.C. of this city held its final club run of the 1916 season on Saturday and Sunday, September 16 and 17. The members left Taunton on the 16th and rode to Portland, Me., stopping there over night and returning the next day. The total distance travelled was 367 miles. Sixteen started and all finished. Alfred Beauvais, Indian man, was tourmaster.

MOTOR-COPS BUSY IN WACO

WACO, Tex.—One of the chief features of Waco's recently inaugurated campaign for greater public safety is a highly efficient squad of motorcycle police. The officers have almost entirely eliminated motor speeding from the list of city ordinance violations and have assisted with many other branches of police work.

WORCESTER NOVELTY RUN

WORCESTER, Mass.—The Worcester M. C. has completed arrangements for a novelty endurance run to be held Sunday, October 1. The plans for the contest have been worked out in secret, and the riders have no knowledge of the kind of a road contest they are to participate in. The only point announced is that the run will cover 100 miles.

POWELL WITH FIRESTONE

SPRINGFIELD, Mass.—George M. Powell, formerly a member of the sales department of the Hendee Mfg. Co., has resigned to join the sales force of the local branch of the Firestone Tire & Rubber Co.

SHIPPED ONE TO WEST AFRICA

LOUISVILLE, Ky.—The Century Motorcycle Company, of this city, shipped a machine a few days ago to Lagos, West Africa. The purchaser is E. J. McLain, who is now in this country on a visit. McLain will return to West Africa shortly and expects to find his new motorcycle awaiting him on his arrival.

WANTS MOTORCYCLES FOR COPS

PARIS, Ill.—Sheriff Ray McAllister has been so favorably impressed by the results obtained in police departments which used motorcycles, that he will petition the Board of County Supervisors at their next meeting for authority to obtain one or more motor patrols.

BACK FROM CANADIAN TOUR

NEW BEDFORD, Mass.—Milton S. Brown and Herbert A. Casavant, two local motorcyclists, have just returned from a tour through Canada in which they covered 1,281 miles in eleven days. Their only trouble on the long trip came in the form of punctures. Although many of the roads covered were in a poor condition, they experienced no motor trouble. Both riders used 1916 Power-plus Indians, and struck an average daily schedule of 100 miles.

SCHERER AVERAGES 42½ TO GRAND RAPIDS

Harley-Davidson Traveler Is Delayed by Tire Trouble in Trying for Record Between Fort Wayne and Grand Rapids

GRAND RAPIDS, Mich.—"Hap" Scherer, on his Harley-Davidson, set out Thursday last, September 20, to beat the time made by the "Northwestern Limited" between Fort Wayne and this city. Scherer left Fort Wayne at 7:30 and arrived here at 12:30, having followed the route of the G. R. & I. Railroad through Kendallville, La Grange, Vicksburg and Kalamazoo. His average was close to 31 miles per hour, elapsed time.

Scherer lost 70 minutes en route by changing three tubes, taking on gas and several involuntary halts of short duration. This makes his actual running time 3 hours and 50 minutes, or an average speed of 42.52 miles per hour for the 154 miles. The "Northwestern Limited" makes the trip in 4 hours.

The attempt to set a record by Scherer was rather an impromptu affair, and no advance arrangements had been made. The roads between the two cities are about as follows: Twenty miles of good surface, 80 miles of fair going and the balance rough and sandy. The Fort Wayne *Journal-Gazette* recorded the start and the Grand Rapids *Herald* checked him in at the finish.

INDIAN OUTING CLUB HOLDS ANNUAL CLAMBAKE

SPRINGFIELD, Mass.—On Saturday afternoon the Indian Outing Club, composed of Indian factory men, held its annual clambake at Goslin's Grove, Agawam. A regular old-fashioned clambake, with all the fixings, was served by a local caterer, and a bounteous plenty of eats served to put the gathering in its best of merry humors. Sports were arranged, and entertainment was provided, and a royal good time was enjoyed by all.

As guests of the Indian Outing Club, there were present all of the Indian Travelers who gathered at the factory for the annual convention.

WOODRUFF IN MILWAUKEE

MILWAUKEE, Wis.—Lee S. Woodruff, of the Okay Motor Mfg. Co. of Brooklyn, N. Y., is now in Chicago in a swing around the Middle West. He is signing up agents for the Okay in the larger cities and expects to exhibit the little motor attachment at the Chicago show if proper space accommodations can be had.

FINNEY CHANGES POSITION

AKRON, O.—W. E. Finney, St. Louis manager for the Goodyear Tire & Rubber Company, has been appointed to take charge of the mechanical goods department in western territory. He is to be succeeded in St. Louis by W. G. Cameron, recently manager of the Dallas, Tex., branch.

MORE PICTORIAL EVIDENCE OF THE MOTORCYCLE'S UNIVERSALITY

Timely Slants at Motorcycle Men and Doings From Many Sources

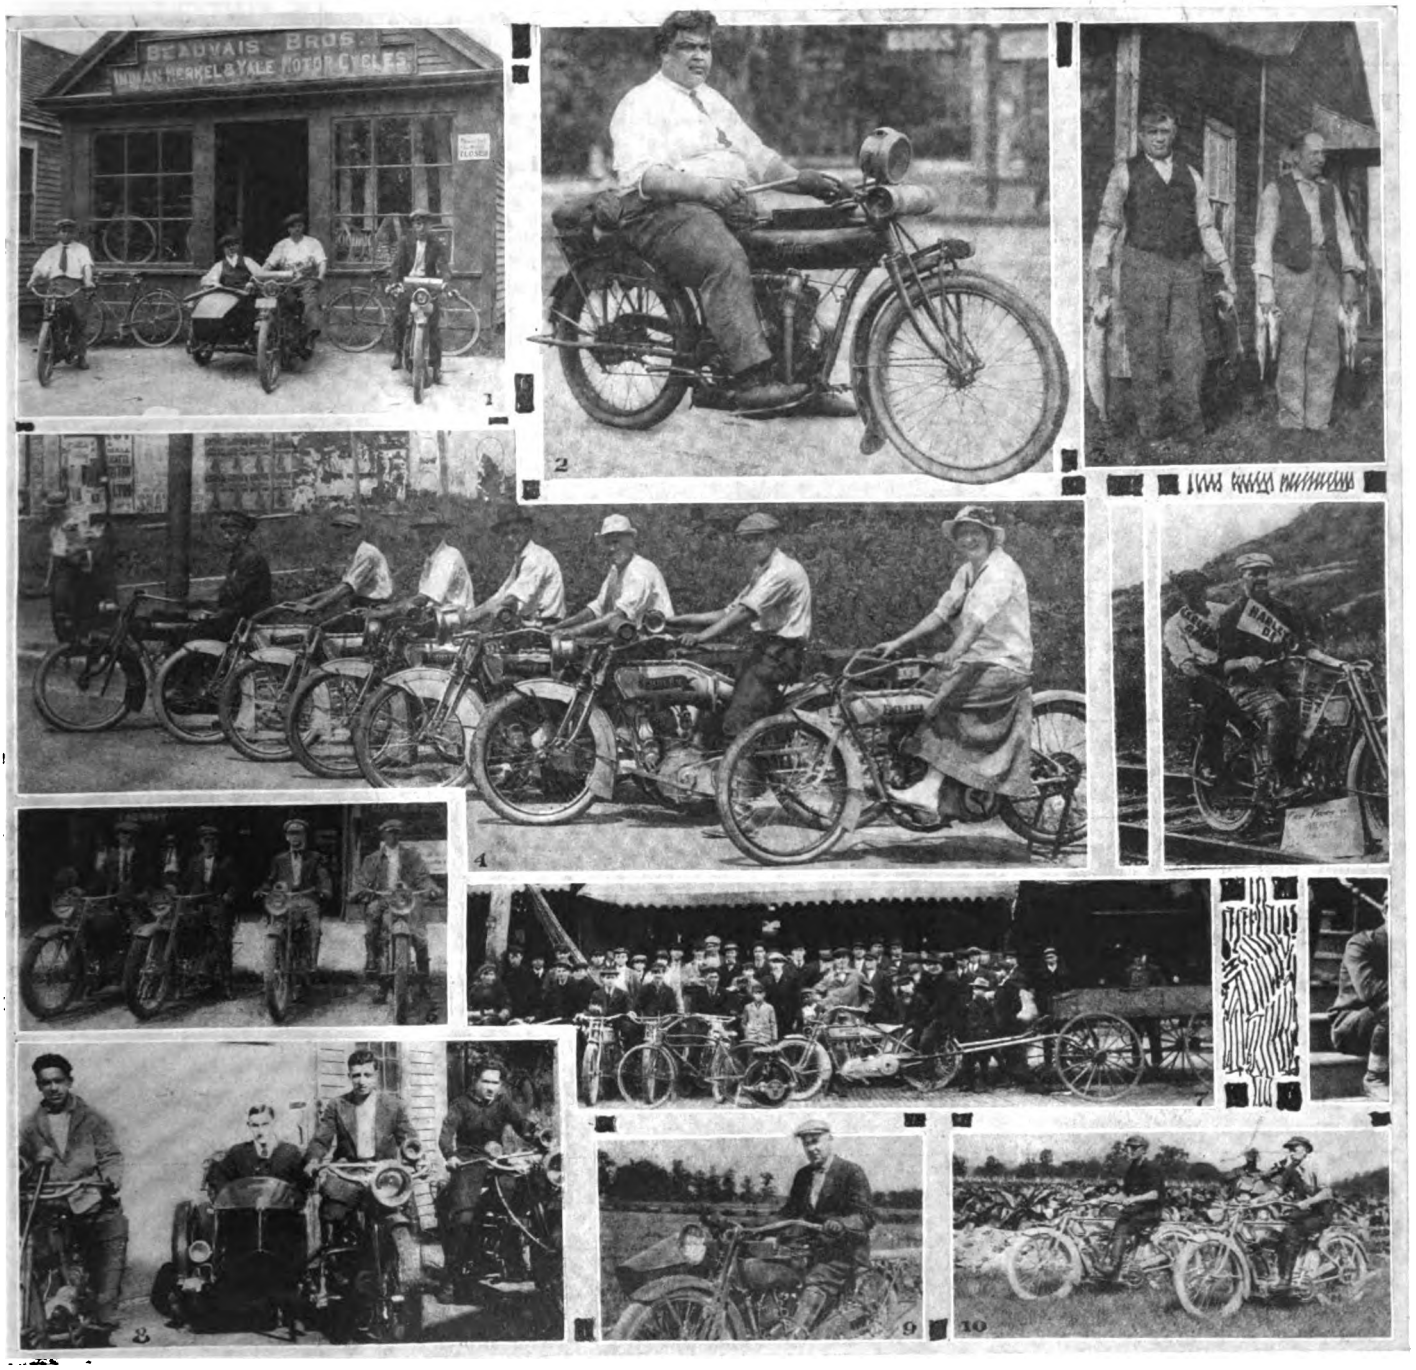

PHOTO No. 1 shows the agency of Beauvais Bros. in Taunton, Mass. Indian and Flying Merkel Machines are handled. 2. Sam Froelich, of Harrisburg, Pa., who tips the scale at something like 250 pounds, astride an Indian. He uses the machine almost daily, and says it is 100 per cent comfortable. 3, Bill Davidson and a neighbor, Simon Volz, at the Davidson camp. "'S easy to get fish like these," says Bill, "if you know how—and where."

No. 4, a few of the Emblem riders in Kansas City lined up for inspection preparatory to a Sunday outing. 5, J. E. Cassuben and William Christoph, with the Harley-Davidson on which they recently made the first motorcycle trip across the Isthmus of Panama. 6, Four motor cops of Washington, D. C., with their new mounts. 7, How the S & S Sporting Goods Store, in Coshocton, O., proved the pulling power of a Harley-Davidson.

8, W. F. Halliday showing off the new Henderson in Providence, R. I. Halliday is in the saddle of the sidecar combination. 9, Salesman of the Akron Motorcycle Co., Akron, O., giving the new model a road try-out. 10. Pope machines used in connection with tobacco harvesting in Connecticut.

EXTENT OF GOODYEAR BUILDING PLANS

AKRON, Ohio.—Twelve hundred and fifty men are now engaged in the work of erecting new buildings for the Goodyear Tire & Rubber Co. Not many years ago, it is pointed out, there were fewer men than that on the entire factory payroll. In sixteen years the company grew up to a point when it can point to a 47-acre floorspace factory. Now, in two years, it is practically doubling what it took sixteen years to achieve.

HILLYER RENEWS CONTRACT FOR HENDERSON

BROOKLYN, N. Y.—The Central Motorcycle Supply Company, of 1407 Bedford avenue, has signed up again to represent the Henderson in Brooklyn and Kings County.

W. A. Hillyer, head of the company, states that he is putting in a complete stock of parts and accessories for the 1917 season. "It will be a big one," says Hillyer.

A Few Spare Links

By E. B. HOLTON

IF there is any one thing that "gets my Angora," it is to stop and make an adjustment or patch a tube in the busy section of a city.

It is then that you are the center of attraction; also the recipient of much advice from the interested ones in the crowd. But what is worse is to hear a lad tell another all about his cousin's or uncle's motorcycle, a machine that never fails.

Rather a complete overhaul in peace along the roadside in the country than a fouled spark-plug in the big towns!

Met a fellow with a 29 by 3½ shoe on the rear wheel of a sidecar outfit recently who claimed remarkable mileage for it. Wonder why the tire people have never brought out a little heavier casing for sidecar use. To drag a load of 900 to 1,000 pounds on one tire is some little strain on the 28 by 3s and they are standing up nobly, but there is a distinct field for a shoe that is designed especially for sidecar drive wheels.

Isn't it the limit how some of us will abuse a motor, the transmission and clutch just to say we made this or that grade on "high." Time and again you will see a rider climbing a stiff grade with a multispeed twin outfit, with full knowledge he is racking things, hanging on in "high," retarding his spark and easing his clutch in and out, until the whole sheebang is ready to stall, just to crow to his pals that he came up from Topamville all the way without shifting once. The same applies to rounding corners with the clutch out, then easing it in without dropping to second.

What's the use of toting round three speeds if you aren't agoin' to use 'em, hey?

Saw a lad the other day shave his margin of safety down too close for comfort. He was bowling along up the avenue, when a painter's wagon, with ladders projecting over the tailboard crossed his path. He had it all judged to a nicety, figuring on just clearing the outfit, when the horse stumbled and pulled up slightly. Then you should have seen Mr. Solo Rider swerve to the right. He cleared it, but had there been anything on that side to prevent the quick move—well, we'll draw the curtain on the rest. And it all came from not making enough allowance for the unforeseen. This time the rider got away with it. Will he have the break with him next time? Aw, what's the use of talking. We all take too many chances, and preach to the other fellow too much.

Another thing, fellows, that is dead wrong is to take a passenger on his first motorcycle ride, either sidecar passenger or tandem, and scare him half to death with a wild burst of speed. 'Taint right, and it sometimes queers the motorcycle for keeps with some of your victims. Many a time you hear a young fellow say, "Gee, I wouldn't ride a motorcycle if you gave it to me." And when you quiz him as to his prejudice out comes a tale of a wild ride on the back of a friend's machine or a spill due to "grandstand stuff."

It's all wrong, Brodie, it's all wrong! And it loses recruits to the best sport in the world, the royal sport of motorcycling.

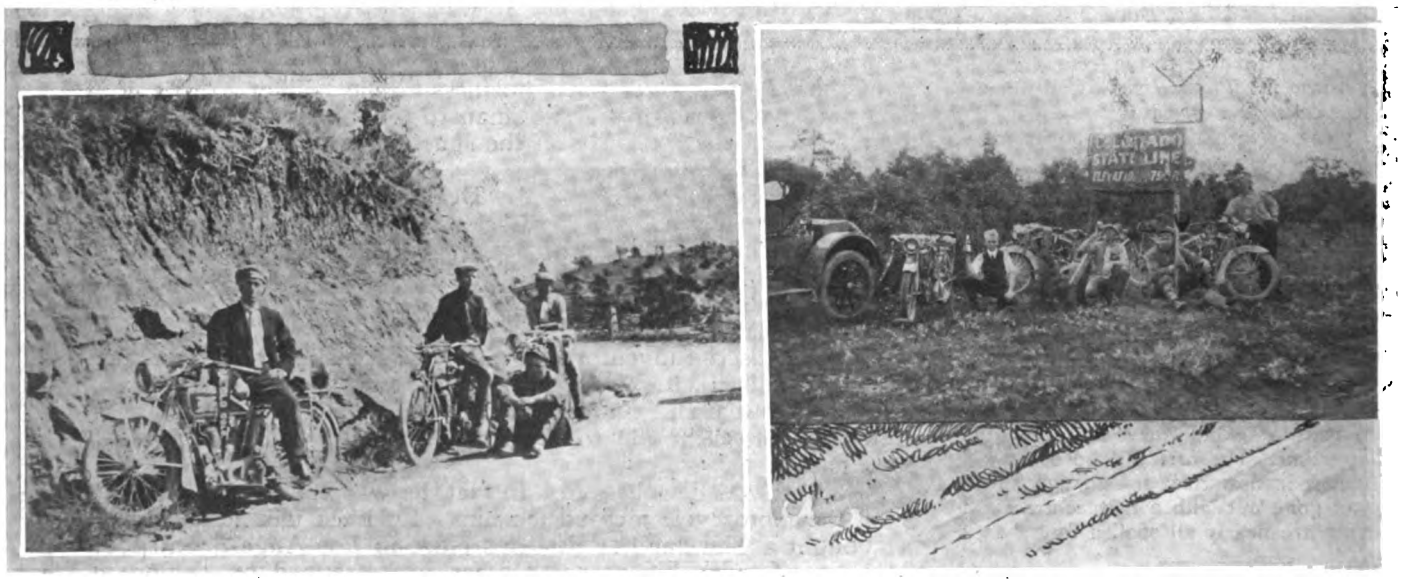
Here's one from the other side, and as it is good, I hope we adopt it into our own lingo. It is the English appellation for the double-opposed motor and is "flat-twin." The beauty of it is that it fully describes the type and at the same time is short. By the way, the "flat twin" has had a thorough tryout on the other side, the English Douglas being far and away the most popular mount on the market in England, price and weight considered. There are several other successful makes of the 180 degree twin in use on the other side.

"INTERNAL BATH" FOR THE MUFFLER

HERE'S a season's-end trick which in many cases will much improve the running of the motor. Inject about half a pint of a mixture of wood alcohol or denatured alcohol and kerosene into the muffler while it is still warm after the day's run and allow it to remain in the chamber overnight; that is, as much of it as does not leak out or evaporate.

In the morning gently tap the sides of the muffler with the handle of a screwdriver and it will be found that practically all of the carbon deposit has been scaled from the sides and plates of the silencer and will be blown out with the exhaust immediately the motor is started. A clean muffler makes for a smooth operating motor, and a season's run, especially if overmuch oil is used, will generally result in a liberal deposit of carbon on the baffle plates and sides of the device.

PUEBLO ROADSTER ON TRIP OVER RATON PASS, 9,000 FEET ABOVE SEA LEVEL



PUEBLO, Colo., Sept. 22.—Pueblo motorcyclists recently rode their machines to Raton, N. M., a distance of 123 miles from Pueblo. To traverse the distance they had to cross Raton Pass, approximately 9,000 feet above sea-level. They traveled over a superb road built both in Colorado and in New Mexico by convict labor, taking three days for the complete journey.

Despite the comparatively low elevation of the pass the party went through a cloud on the way to the summit. The difference in temperature between the bottom and the top is surprisingly pronounced. Frequently snow drifts remain nestled in shaded spots almost all summer.

The completion of hundreds of miles of convict-built roads in the Rocky Mountain region has rendered motorcycling more enjoyable than ever before. It now is possible for a rider to ride long distances without dismounting.

FRISCOMEN ENJOY MERCURY MINE RUN

San Francisco M. C. Members Have Fine Trip to Quicksilver Deposit Near New Almaden on September 17 Outing

SAN FRANCISCO, Cal.—The official run of the San Francisco M. C. to the quicksilver mine near New Almaden, Santa Clara County, on Sept. 17, proved an unusually pleasant outing and was well attended. The weather was fine and rather cool while the route was over practically perfect roads. About eight of the members left the clubrooms at 8 a. m. and picked up as many more at Colma, just south of the city. They then rode to San Jose.

Here they were met by a number of members from Oakland. Learning that the mine was reached either by a climb up a trail or a three-mile ride on a rather poor road, the party selected to climb the trail and there examined the mine. Returning to San Jose about 3 p. m., they tucked away a fine chicken dinner and returned home the way they came.

The club is considering a clambake, which will probably be held on Oct. 15, at a point near Richmond. This will be one of the two club feeds which are held each year, the first for 1916 having been at Half Moon Bay. A committee has been appointed to work up initiation stunts for the new members and other forms of entertainment.

DOINGS OF AN ACTIVE SAN FRANCISCO QUARTET

SAN FRANCISCO, Cal.—W. H. Jackson, Coast representative for the Davis Sewing Machine Co., is calling on the trade at all important points while on his way home from the factory at Dayton. He has closed an agency in Denver, Colo., and another in Salt Lake City, Utah.

Z. BARTON, manager of the local Thor branch, returned for a short time from the road last week. He stayed for two days and then was off on his whirlwind sales campaign.

EDWIN F. MERRY, distributor for the Excelsior, has just returned from a three weeks' outing in the mountains. He is making things hum even more than when he left for his holidays.

JACK FRASER, San Francisco manager for the Appeal Manufacturing & Jobbing Co., has his first 1917 Harley-Davidson demonstrators and they are being worked overtime. His first carload of the new machines is now due, and though he has not yet gone out with a new contract, the contents are nearly all spoken for.

BUY OUT RISDEN BRANCH

RIVERSIDE, Cal.—Hanson & Nelligan, a hustling young firm in Riverside, have bought out Risden's branch and moved in. Clyde Hafer, manager for Risden, has been transferred to a still better position at Risden's headquarters in Los Angeles.

Commercial Possibilities? Why, Listen: Here's a Chap Who Increased His Sales 300 Per Cent. in One Month With a Motorcycle!

Lockett and His Outfit.

EVERYBODY connected in any way with the motorcycle industry knows that there are a thousand and one methods of adapting the power two-wheeler to commercial service—that it is a time and money saver and a business-builder par excellence—but it is not always easy for a salesman to give specific data—names, figures and all the rest of it, on the spur of the moment, to back up his claims. Therefore—

It is strongly suggested, Mr. Dealer, that you mark well the significant experience of B. S. Lockett, of Hot Springs, Ark., who is just now hitting the highroad to prosperity in the vicinity of Los Angeles, Cal., with his Cleveland lightweight. Here's his story. Remember it the next time you are talking commercial motorcycle sales:

Lockett is the inventor of a patent clothesline. He manufactures and sells it himself. He plugged along afoot, in street cars, and sometimes with a horse and buggy and had to scratch gravel pretty hard to clear $14 to $15 a week. It was hard work, with poor pay.

Lockett was discouraged. In fact, he was about ready to quit. Then the motorcycle idea struck him. Luckiest idea he ever had. He bought a Cleveland at Risden's place in Los Angeles and took to the road, with his patent clotheslines strapped on behind as shown in the photo. In a short time he had boosted his income to $50 a week. His business increased 300 per cent. the first month and the increase has now reached 500 per cent. Lockett is banking $30 to $50 a week and is steadily extending his scope. He carries about 80 pounds on the rear of his mount and covers 75 to 100 miles a day, calling on hardware and grocery stores.

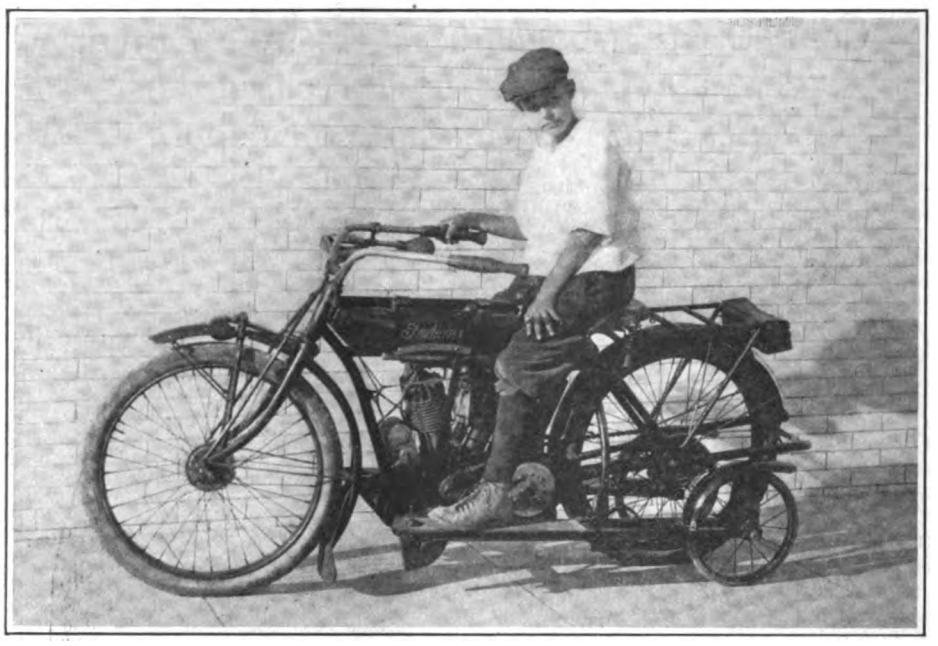
JUST FROM LOS ANGELES—A MOTORCYCLE STABILIZER



LOS ANGELES, Cal.—Joseph A. Blondin of this city, has invented the stabilizer for motorcycles, shown in the illustration herewith. The stabilizer consists of a frame incorporating footrests and small wire wheels, one on each side, and each side-frame is pivoted at the front end. At the middle portion it is resiliently connected with the upper end of the rear frame of the motorcycle close to the seat, thus allowing yielding movement of the stabilizer on the roadway.

A piston and cylinder with a spring beneath the piston afford an efficient combined pneumatic and mechanical springing device.

The stabilizer is readily attachable to and detachable from the motorcycle and is compact and durable. Mudguards are fitted to each of the stabilizer wheels which are in permanent contact with the road. Patent No. 1,117,476 has been granted to the inventor.

MURRAY TAKING ORDERS

KANSAS CITY, Mo., Sept. 23.—Jack Murray got through the first bit of advertising of the new Harley-Davidson model now ready for demonstration at Kansas City. Murray has booked a nice bunch of orders for early delivery, but is only bemoaning the fact that he is as yet unable to get his advertisements ridden. The reason is that the factory has not shipped the machines for his customers as yet.

DONOVAN SAYS A WORD ON 1917 COMPETITION RULES

(Continued from page 13)

also insist on a stricter classification of riders who take part in such events.

For 1917 the rider classification will be: A—eligible to any event from one to 300 miles; B—eligible for any event up to 100 miles; C—for any event up to 50 miles; D—eligible for any event up to 10 miles on one-mile tracks and five miles on half-mile tracks. The trade rider and amateur classes complete the list. The ownership of the machine he rides is required of each amateur and merchandise prizes only must be competed for by him. No alteration of machine from standard make by an amateur is allowed.

In conclusion, Chairman Donovan stated that the 1916 season had been a most successful one and the accidents of the season have been on small tracks and at unsanctioned meets.

TO HOLD ENDURANCE RUN

PHILADELPHIA, Pa.—Arrangements have been made by the Motorcycle Club of Philadelphia for an endurance run of 260 miles into the mountains, and the date will be either October 8 or 15. Applications for entry blanks should be addressed to the Motorcycle Club of Philadelphia, 1703 N. 33rd St.

MANCHESTER CLUB FORMED

HARTFORD, Conn.—About 75 riders of this met in Cheney Block on September 20 and organized a club to be known as the Motorcycle Club of Manchester. The following officers were elected: W. J. Atwood, president; Thomas Raby, vice-president; Michael Donaghue, secretary; E. J. Ryan, treasurer; Messrs. Madden, Schultz and Edgar, managers.

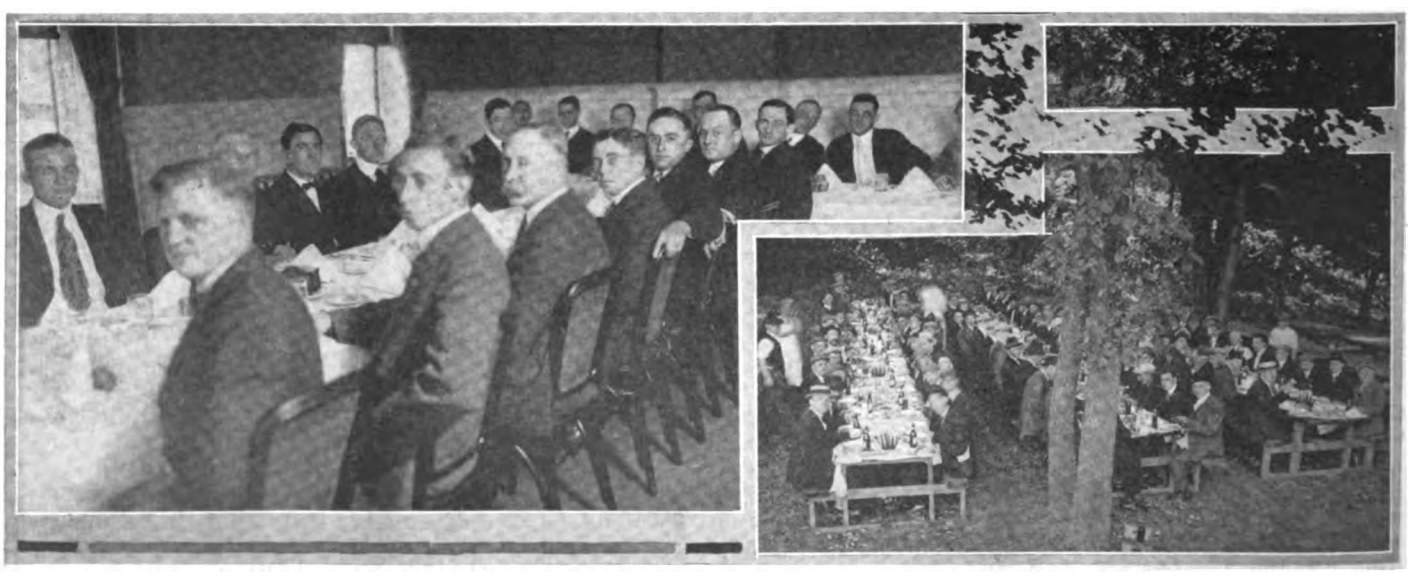
WARNER BOOSTS STOCK

LOUISVILLE, Ky.—The Ray E. Warner Company, Firestone Tire distributors in this city, has just boosted its capital stock from $2,500 to $3,000. The company also handles motor accessories.

HUTCHINSONITES ON RUN

HUTCHINSON, Kan.—A party of fifteen Hutchinson motorcyclists made a run to Nickerson a few days ago. Regular Sunday trips will be made by the riders until the cold weather intervenes.

HERE'S WHERE INDIAN TRAVELERS STAND ON THE "EAT" QUESTION



At the Left Is a Glimpse of the Special Banquet Extended to the Salesmen at the End of Their Annual Convention, While on the Right Each and Every One of Them Is Recognizable Among the Group Attending the Picnic of the Indian Outing Club. Item Covering Both Events Appears on Another Page of This Issue

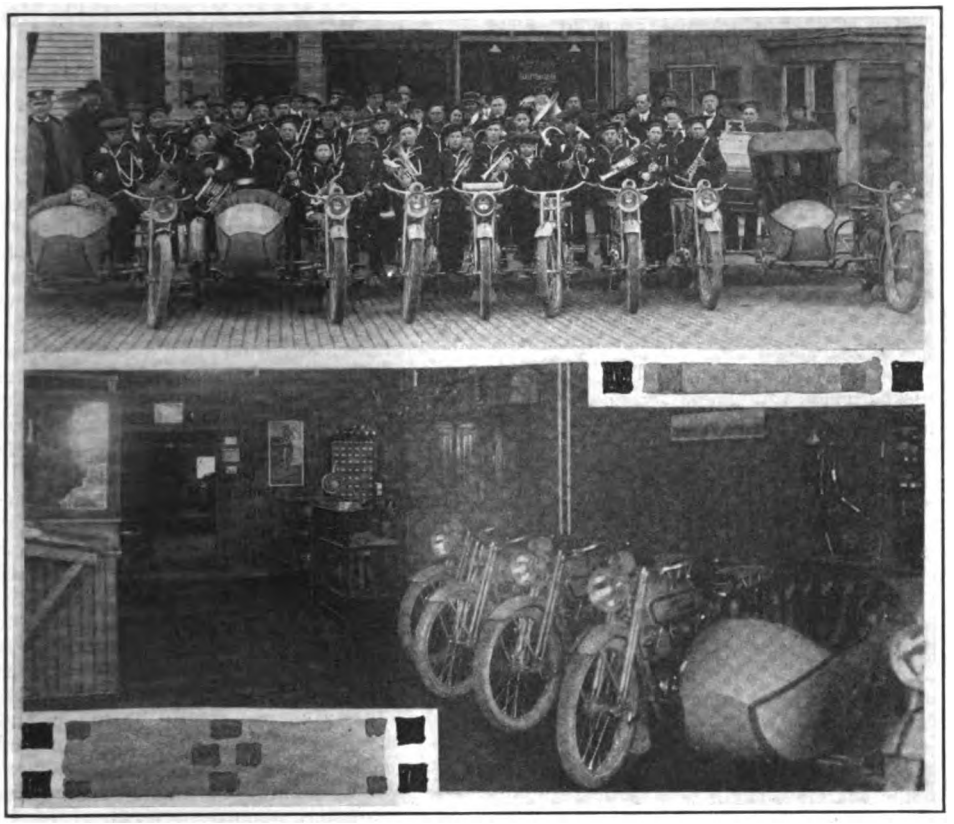
HERE'S A BUSINESSLIKE AGENCY—SCOTT'S IN MARION, IND.



Above Is the Boy's Marine Band Which Lent Distinction to the Opening of Glen A. Scott's New Salesrooms, While Below Is Just a Glimpse of Their Interior

MARION, Ind.—Glenn A. Scott, handling the Harley-Davidson in this city, believes in doing things on a modern business basis. He has his bookkeeper's office and cashier's desk enclosed in glass and a private office to transact business in. His repair department is a model one and it goes without saying that order and cleanliness are insisted upon all over the place.

Scott says that the cashier and bookkeeper section as he fits it is valuable in that not only is it neater than the usual way of placing these departments, but also it automatically gives more confidence to customers and insures prompter payments. "The private office," says Scott, "is where all leases and contracts are drawn up. I lost several sales before putting this office in by outsiders overhearing the conversation of my prospects and customers and trading their information to others. Now I can hold the undivided attention of my man."

When Scott opened his new salesroom at 307 South Branson street, he hired the Boys' Marine Band of 30 pieces for the occasion. As a preliminary he hauled the band around town in sidecars and then had it play at his store. The illustration at the top shows the band in front of Scott's place, while below is a corner of his salesroom.

ARMY TAKES 2 EXCELSIORS FROM GIRTON-HOFFER

LOS ANGELES, Cal.—An order for two Excelsiors has been received by the Girton-Hoffer Company, distributing the Excelsior in the Southwest, from Lucero Brothers, El Paso, Texas agents, for the use of the regular army. The two machines will be ridden by Quartermaster Sergeant Scott and First Sergeant Stehman at Sierra Blanca, Texas.

Business is very active on the Excelsior in Los Angeles. Girton-Hoffer received another carload on the 14th and at noon on the day following had sold four on new retail orders placed at their store.

THANKSGIVING RACES OFF

PHILADELPHIA, Pa.—The Motorcycle Club of Philadelphia has decided to cancel its Thanksgiving race program, owing to the death of Bill Brier, who was injured recently on the Belmont track. According to present plans, the club's next speedway at Hatboro.

MACHINE WEATHERS TORNADO

Boatswain's Mate Had It on U. S. Destroyer Terry When Latter Sank in West Indian Storm—Machine Ran as Well as Ever When Recovered

THERE are all kinds of stories of motorcyclists battling with muddy roads, sand storms, mountain grades and even fording rivers, but to Charles Clegg, of the U. S. torpedo boat destroyer Terry, goes the honor of being the first to take a motorcycle through a West Indian hurricane. Mr. Clegg is a boatswain's mate in the U. S. navy, serving on the destroyer Terry.

Everywhere the Terry goes, with it goes Boatswain's Mate Clegg and also his Harley-Davidson motorcycle. In each port the machine furnishes its owner a lot of pleasure, but on board ship it travels lashed to one of the funnels. This is necesary because the hatches on a modern torpedo boat destroyer are so small that there is no room for a motorcycle. Much of the time while at sea the decks are awash and the seas even pile up around the funnels.

Exposed to Weather

"During several voyages we have encountered severe storms," said Boatswain's Mate Clegg in a recent letter. "The Harley-Davidson, lashed to one of the funnels, has been exposed to all kinds and conditions of weather. When on duty in Dominican waters we were ordered from Monti Christi, Republica Dominicana, to Puerto Plata, Republica Dominicana. When entering Puerto Plata we struck a submerged wreck and the Terry sank before I could save my machine.

"Our decks were wholly submerged, and I was unable during the first day to save my machine, but on the second day I finally, after considerable trouble, got it clear and sent it ashore. After clearing the engine and all parts of salt water and sand and cleaning the magneto with gasoline I kicked off the machine and she ran in fine shape.

Terry Is Raised

"The Terry was finally raised, and while being towed back to Charleston, S. C., we truck a terrific West Indian hurricane while off the Bermuda Islands, which, by the way, was the same in which the U. S. S. Hector was lost. We encountered mountainous seas for three days and my machine was again almost constantly under water.

"We finally won safe to Charleston and I got my machine on terra firma once again, and after a little cleaning, had a run of about ten miles. Magneto trouble developed and I had to have my magneto repaired by the Bosch people in Atlanta, Ga., having been thoroughly saturated by salt water. A few days ago I discovered a small hole in the gas tank, but it was easily repaired, and apart from that and the magneto the machine is in excellent condition."

MONTREAL TO HAVE ONLY DOMINION MOTOR SHOW

MONTREAL, Que.—Probably the only motor show in Canada during the next six months will be the exhibition which has been planned for Montreal next January. As usual motorcycles, bicycles and accessories will form a strong feature of this display which will be staged from January 13 to 20. The manager of the show will be T. C. Kirby, who has handled the exhibits during previous years here. An application for space has already been received from the A. E. Bregent Company, distributors for the Smith Motor Wheel.

KEYSTONE MEET AT LEBANON ON SEPTEMBER 30

LEBANON, Pa.—An attractive race program will be held at the track here on September 30 by the Keystone M. C. of Harrisburg. The card will include a 25-mile State championship event, and several five and ten mile races. Seventeen entries have already been received, among which are C. Johnston, the Cyclone speeder, of Wellsville, O., and Bill Lineaweaver, Indian rider from this city.

The Lebanon track is a half-mile oval, but is well banked and high speeds can be had on it.

FIRST 1917 MODELS ARRIVE IN CANADA

TORONTO, Ont.—The first of the 1917 models to arrive in Canada were received in Toronto on Saturday, September 23. They were the first of the new Harley-Davidson and Henderson families. The stores of both Percy A. McBride and Walter Andrews, two of the local distributors, were crowded for the occasion of the uncrating of the two latest creations.

H. M. Kipp, in charge of the Toronto Wigwam, has just returned from a visit to the Springfield factory of the Hendee Mfg. Co., where he looked over the entire new range of Indian models.

FUERST IS THOR RETAIL MANAGER IN CHICAGO

CHICAGO, Ill.—H. F. Fuerst has been appointed retail sales manager of the Chicago headquarters of the Thor, at 1307 South Michigan avenue. He was formerly with the service department of the Aurora Automatic Machinery Co. factory.

RELIEF IN SIGHT FOR CANAL ZONE RIDERS

Former Legal Action Chairman Johnson of the F. A. M. Has Secured Favorable Action by Congress to Reduce Fees

CHICAGO, Sept. 27.—There are at least 105 members of the F. A. M. who have no need to ask "What do I get for my dollar?" They all are located in the Panama Canal Zone, and have been suffering for the past several seasons under a $10 license fee, besides a $1 tag fees and a $2 reciprocal tag fee to permit them to ride in the Republic of Panama. In other words, it cost the Canal Zone rider $13 to navigate 58 miles, for that is the extent of the rideable roads in the Zone.

Through the efforts of the former chairman of the Competition Committee of the F. A. M., William M. Johnson, however, the immediate prospect of relief from this obviously unfair state of things is in sight.

Chairman Johnson presented the matter in person to the Isthmian Commission at Washington; the boys asking that the fee be fixed at $5. The commission apparently agreed that a change should be made, and the police department in the Zone approved a change in the speed regulations, which was then 8 miles in the city and 15 miles in the country, permitting a speed of 15 miles in the city and 25 in the country. It was found that no relief could be secured except through Congress. It was also found that in other respects the ordinances concerning license tax, sanitation and other matters of regulation should be changed.

Honorable Fred A. Britten, of Chicago, introduced in Congress House Bill No. 15,955 to enable the commission and the executive to recommend the appropriate changes. Honorable James A. O'Gorman, of New York, introduced the same bill in the Senate. Favorable action has been taken in the House and the Senate, which will result in new regulations more favorable to the motorcyclists.

SILVEX MOVES ITS OFFICES

BETHLEHEM, Pa.—Following out a policy of strict concentration, the offices of the Silvex Co., maker of Bethlehem spark plugs, have been consolidated with the factory in South Bethlehem. Formerly the offices were located in New York City.

FOR YOUR SAKE, "L. H.," WE SINCERELY HOPE

Peekamose, N. Y., Sept. 3, 1916.

CONTEST EDITOR:—

"What do I know about motorcycles?" you ask. I may be mistaken, but that little piece of a picture looks like it came from a Thor. Am I not right? This is my third copy of **Motor Cycle Illustrated**, and I certainly enjoyed it and lay everything aside till I finish it.

Yours truly,

L. H. CODDINGTON.

THE MAIL DOESN'T ARRIVE JUST BEFORE SUPPER

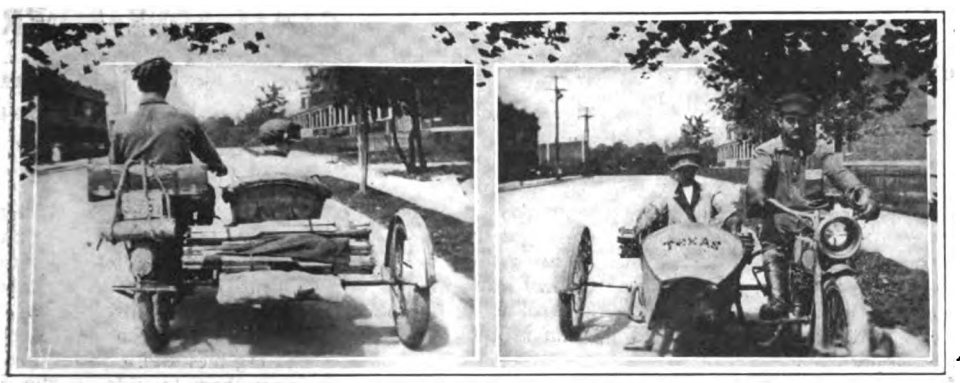
CAMPED OUT ON TOUR FROM WACO TO NEW YORK



Mr. and Mrs. Meyers and Their Harley-Davidson Outfit

NEW YORK, Sept. 19.—Mr. and Mrs. S. D. Myers, of Headley, Tex., dropped in at the office of **Motor Cycle Illustrated** a few days ago on the completion of a motorcycle and sidecar journey from their home town to the city of white lights and dark subway excavations. They left Headley on August 12 and made their tour on a leisurely schedule, covering 2,300 miles in all, owing to side runs and a rather circuitous route. The couple carried a complete camping outfit, and experienced only one night when a rainstorm drove them to the shelter of a barn. Every other night they slept in their tent.

Starting from Headley with a 1916 Harley-Davidson machine, which already had seen 18,000 miles of running, the tourists passed through Amarillo, Tex.; Dodge City, Kansas City, St. Louis, Terre Haute, Indianapolis, Keystone, Ind.; Dayton, Akron, Columbus, Cleveland, Buffalo, Niagara Falls and Albany to New York City.

Mr. and Mrs. Myers state that they made the trip simply for the fun of it, and that they have enjoyed every mile. Their motor gave them no trouble, and there was only one puncture to bother them. After giving New York the double-o for a week they will aim their combination in the direction of the Rio Grande once more.

GLAD TO O. K. YOUR ANSWER, GLEN, AND

Saybrook, Pa., Sept. 11, 1916

CONTEST EDITOR:—

The answer to this week's question is "Reading-Standard," unless I have missed my guess.

I think this contest will be very interesting and will show some of us how little we know. I have been a rider for four years and am supposed to know most machines from A to Z, but this will undoubtedly show that there are some things that I don't know about the new models.

I also like your magazine, as it is full of "pep."

Yours very truly,

GLEN E. CARLSON.

GLAD YOU RECOGNIZE A "PEPPERY" PAPER

LENDING GINGER TO MILWAUKEE CLUB TOURS

MILWAUKEE, Wis., Sept. 26.—Sunday tours are getting to be a feature of the activities of the Milwaukee M. C. The club's annual fish fry at West Bend was held with Wallace Wrede, president of the club, as tourmaster. On the following Sunday the club went to Racine with Elmer Owen as tourmaster. A different T. M. picked for every run lends variety and has been found very successful in increasing interest in the weekly runs. Sheboygan and Whitewater are down on the schedule as objective points for the next runs.

Miss Lillian Hauerwas is head of a committee which is arranging for a Halloween party on Oct. 30 for club members and their friends.

CALL FOR VOTE ON FISK CAPITAL INCREASE

Meeting of Stockholders Set for October 2 to Consider Increase of Capital Stock by $12,500,000

CHICOPEE FALLS, Mass.—October 2 has been set as the date for a stockholders' meeting of the Fisk Rubber Co., to vote on the matter of increasing the capital stock by $12,500,000. Of the new stock, $7,500,000 would be first preferred convertible, and $5,000,000 second preferred. At the same time the stockholders will vote on increasing the common stock by an amount sufficient to take care of the conversion of the present outstanding second preferred stock, and the proposed new preferred issues. The adjustment of Fisk stocks is to be completed by reducing the amount of the authorized capital stock by $5,000,000, the amount of second preferred stock, Series B, authorized a few months ago but not issued.

The new first preferred stock, if authorized, is to be convertible into common stock prior to January 1, 1922, in the ratio of four shares of common to five of preferred, and between January 1, 1922, and December 31, 1926, at $150. There is now outstanding $2,000,000 second preferred stock that is convertible into common up to November 1, 1917, and the stockholders will be asked to approve an extension of this period to November 1, 1923. Holders of the present first preferred will be offered pro rata $5,000,000 of the new first preferred at par and accrued dividends, while holders of the present second preferred will be offered $2,500,000 of new second preferred on the same terms.

BROWN WINS AT PARIS

PARIS, Texas.—Motorcycle races proved one of the main attractions on the closing day of the Lamar County Fair here on September 16, and riders from all parts of Texas were here to participate. Only two events were staged, both free-for-all, the first over a four-mile course, and the second over a five-mile course. Pete Brown, riding a twin Indian, won both events, in which there was a $100 cash purse to the winner of each event.

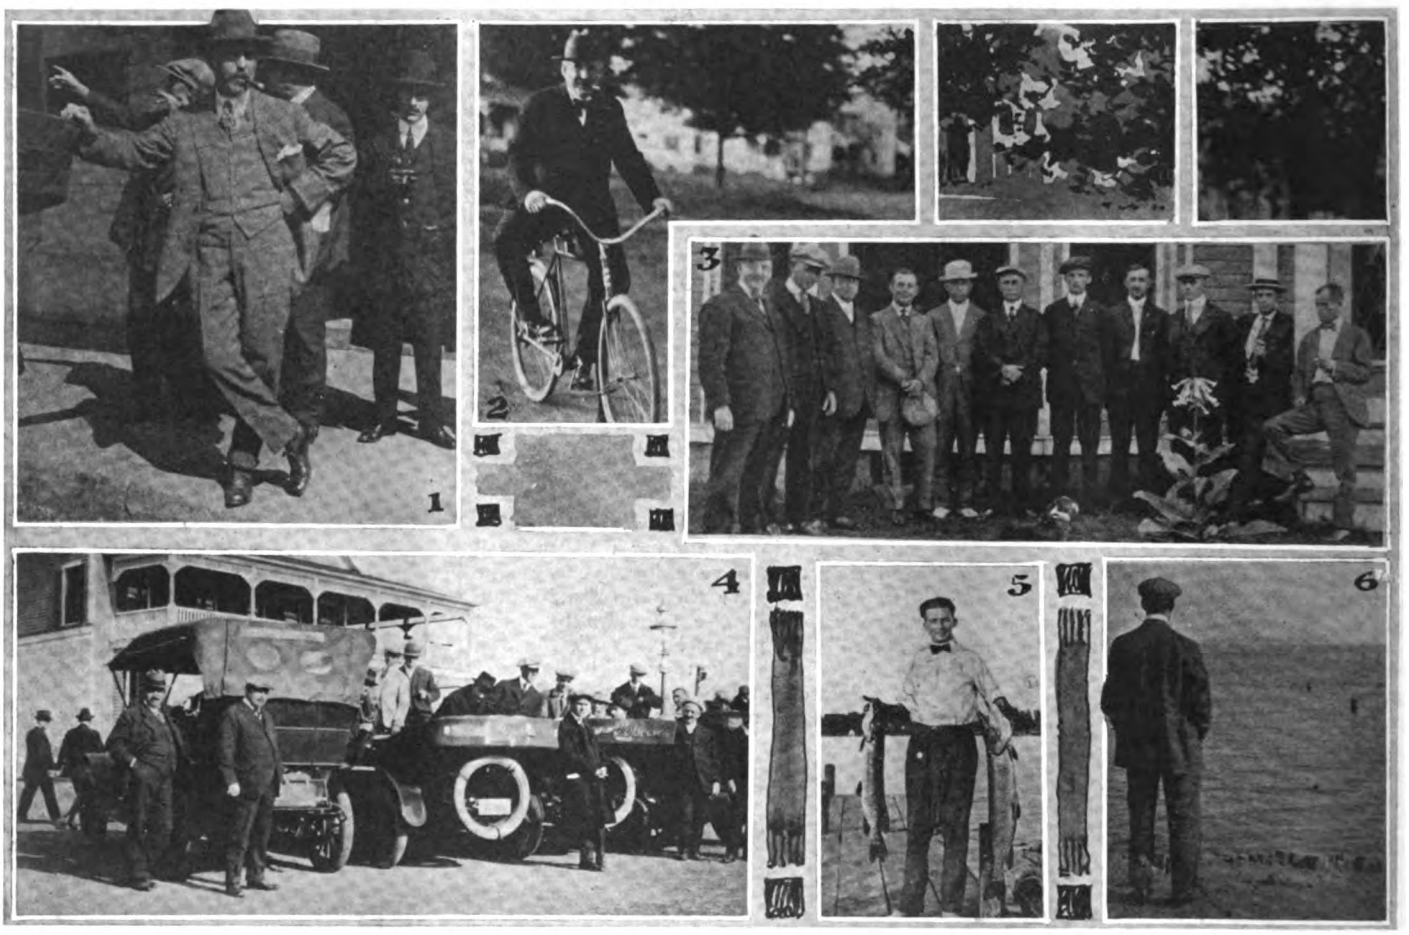
WHEN THE 11 POPE TRAVELERS INVADED WESTFIELD

There Was Much Ado Besides Cut and Dried Business Conventions, as These Camera Views Will Attest—All Keyed to a High Pitch of Enthusiasm



1, General Manager J. P. Fogarty Ready to Start; 2, Special Representative B. A. Edgar in the Saddle; 3, Pope Salesmen at the Factory; 4, At Cox's Hotel, Savin Rock, New Haven, Conn.; 5, How Jack Yates Spent Part of His Vacation; 6, Stillman Watching the Water Nymphs

WESTFIELD, Mass.—Some additional sidelights on that annual salesmen's convention at the Westfield Manufacturing Co.'s plant were given out by Publicity Manager Porzer today.

There were a dozen less one of the Pope enthusiasts who gathered at the plant and throughout the two weeks of the convention, there was peace for no one in and around the Pope plant. After hours, they seemed to be everywhere at once in search of excitement but always venting genuine Pope enthusiasm.

Who's Who in the Photo

In the lineup photograph of the conventioners, which was taken in front of the home office, reading from left to right, the first man in line is B. A. Edgar—he likes Westfield so well that, with his family, he spends his vacation there. C. A. Leander next in line, spent most of his summer riding around Chicago. M. G. Littlefield, the dean of Pope salesmen, hails from Freeport, Ill., where he is one of the leading golf enthusiasts. O. J. Oberwegner comes from Toledo, and by the smile on his face he seems happy to get back. Jos. Redlinger, standing right next to him, probably spent his summer farthest away of all, as he was busy superintending the erection of his new home in Mobile, Ala. D. G. Ryan spent his vacation by the sea at Block Island. Jack Yates came from his home in Minneapolis, Minn., where he found a great deal of pleasure in riding his pet Pope motorcycle on the home track. D. L. Marshall, on left of Mr. Yates, found his summer interests in the hills about Philadelphia, while Frank R. Swayne and Thomas B. Hallbourg, the next in line, were content to enjoy the summer pleasures in their home town of Westfield. Charles T. Quinn, at the extreme right, spent his vacation between Matunuck, R. I., and Providence.

The first week of the convention, through some unknown channel, the local newspaper obtained a lot of personal data about each of the Westfield representatives, and presented it, apparently without the least reserve. That night the circle at the hotel was complete, and was as busy as a sewing bee. Bets were offered to disprove some of the printed statements, and many threats of libel suits were made by the men, but they finally calmed down and admitted that the joke was on them.

The Convention Doings

During the convention, a number of sessions were held in various parts of the factory, where the salesmen became more familiar than ever with the work of making Pope products. There were sessions also in which the men were made acquainted with the work, and plans of each of the various departments.

"Ad" Plans Make a Hit

Of the many points of interest the one that appealed to them strongest was the plans for the 1917 advertising campaign, which promise to eclipse anything that the Westfield company has ever done. Saturday and Sunday of the first week were devoted by the salesmen and the office sales force, to a motor trip to Savin Rock, Conn., the night stop being made at New London.

As the convention days passed, the men became more and more enthusiastic over the proposition which they have to offer the trade this year, and each one left for his territory convinced that the 1917 line of Columbia bicycles and Popè motorcycles is the finest it had ever been his fortune to sell.

THIS PAIR MADE RAPID TRIP

ALTOONA, Pa.—Messrs. Harold James and Claude ("Snake") Walker, both of this city, but who have been located with the Eddystone plant of the Baldwin Locomotive Works at Philadelphia, Pa., made a hurried trip to this city last Saturday, completing the distance of 243 miles in eight hours and twenty minutes.

PICTURE CONTEST AROUSES COUNTRY-WIDE INTEREST

But the Pictures Prove Easy for Most Riders—Promise of Harder Views to Come—Ten "Motorcycle Experts" to Date—But Many Have 750 Per Cent Average

HERE comes a big slump in "motorcycle experts"! So far in this contest they have been sort of a drug on the market, so to speak, but beginning right here, right now, on this very page there is going to be a change. The four pictures preceding the one appearing in the next column have proven easy for quite a few riders; but this week's little puzzler requires some real motorcycle knowledge—and that lets that Newark (N. J.) bunch out at any rate.

But seriously speaking, or writing, we earnestly believe that the picture given this week will prove the hardest of those that have appeared to date. And that, we might add, is going some, for, while the number of correct answers to the contests of weeks gone by have far exceeded the number of incorrect ones, it must be remembered that unless a contender is absolutely sure that he is right, he will not commit his answer to paper. That this is the case can be gathered from the fewness of contenders who have perfect 1,000-point scores to date.

Last Week's Returns

The returns from last week's picture show that the number correct on all four pictures is just ten; there are, however, about a score of contenders whose batting average to date is 750, while a full half hundred have hit in the four preceding weeks to an average of 500, having come in with the correct answers on half of the pictures.

The full "box scores" and batting averages for all of the better than 100 contenders will be given in the next issue; we are holding it off until then in order to see if we cannot trip up some of the winners.

Now then, Friend Wansleben, of Washington, out with your draughting tools and scale off this picture and see if you

WHAT DO YOU KNOW ABOUT MOTORCYCLES ?

WHAT MAKE OF MOTORCYCLE IS THIS TAKEN FROM?

cannot retain that 1,000-point average you have to date; and Elwin Safford, of Corry, Pa., better get all the club boys together so that you will not lose caste as the local "motorcycle expert." And the same thing applies to each and every other of the ten high score men. The pictures from now on are going to be much harder, and it behooves you to spend an hour or two sizing up and familiarizing yourself with every make of motorcycle that passes you on the street or road.

Title Will Be Earned

Yea Bo! Anybody who gets that title of "Motorcycle Expert" and manages to retain it throughout this contest is going to earn it and no mistake.

There were nine more correct answers to the Reading-Standard picture which came in too late for mention in the last issue; this brings the total number of correct answers to that particular picture up to 103. So far there have been 73 correct answers to the Indian picture, which evidently proved a bit harder for most fellows; but Indian answers from the coast, from Havana and other distant points are still coming in so that before the final word is said on that picture undoubtedly the answers will also total over the 100 mark.

But by the way the Pope answers are coming in—there are 76 to date, of which 75 are correct—the Pope picture bids fair to eclipse all the others. But our guess is that there will be very few correct answers to the picture this week.

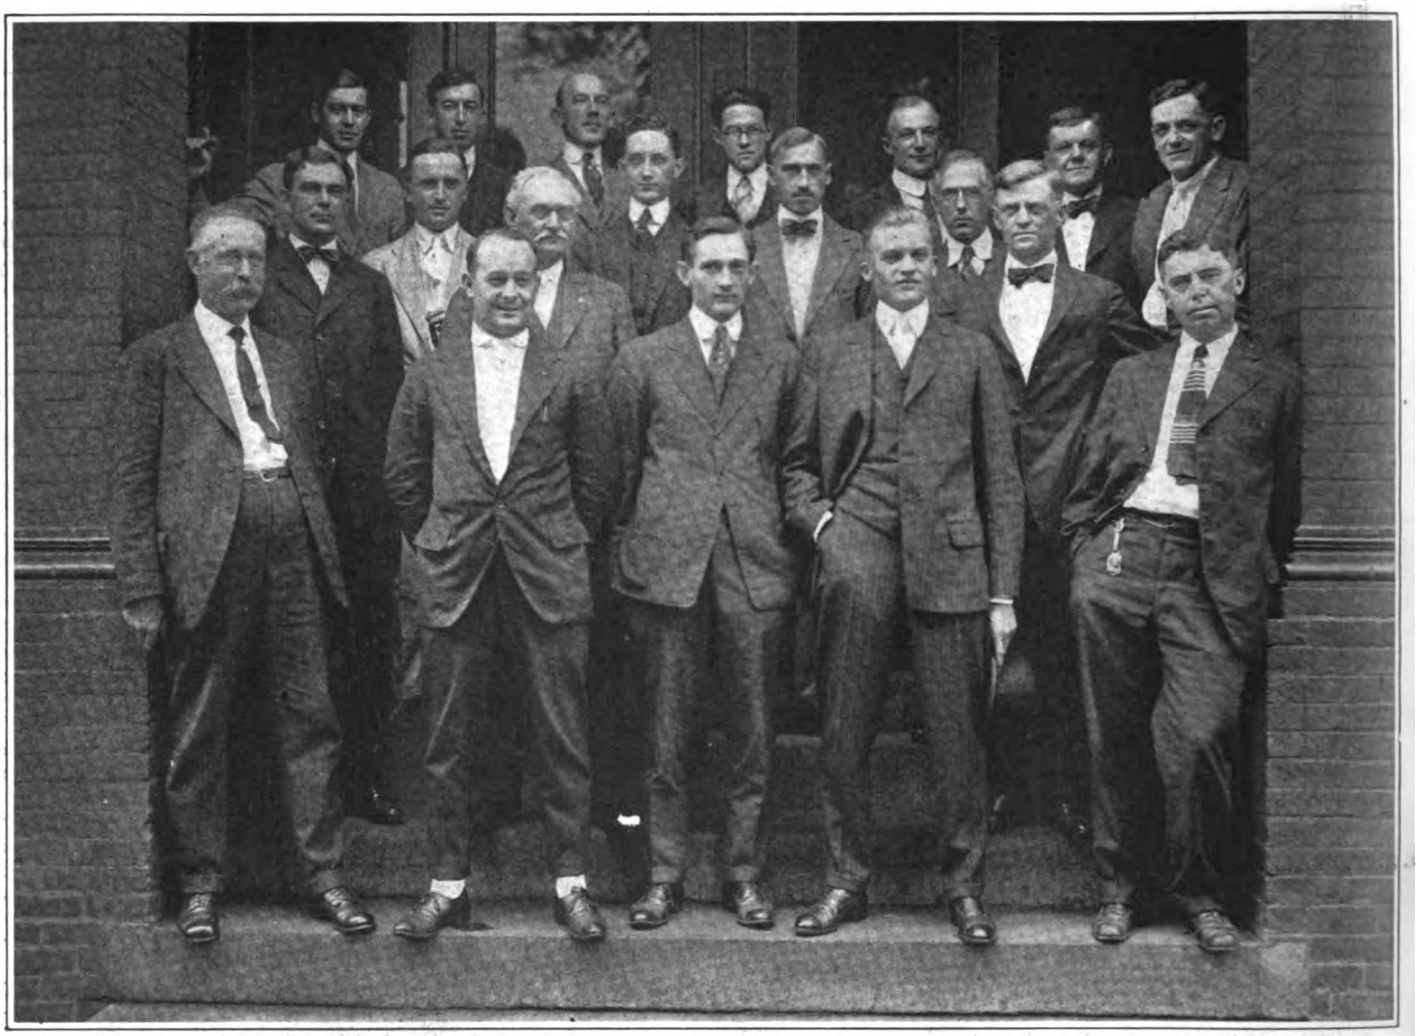
FIRST LINE VETERANS OF THE HENDEE MFG. COMPANY'S SALES SQUAD



These Indian Travelers, with Several Department Heads, Were Snapped During a Conference at the Factory in Springfield, Mass. Front Row, Left to Right—Towle, Bernard, Jacobs, Gilbertson and Godin; Second Row—Seidell, Atwood, MacDowell, McCann, Kipp, Advertising Manager Priest, Stevens; Top Row—Parts Manager O'Brien, McFadden, Henderson, Publicity Assistant Metcalfe, Maslen, Edwards and Shomo

JEANROY SELLS 57 DAYTON MOTOR BICYCLES

NEW YORK.—Louis Jeanroy, of Driscoll & Jeanroy, Dayton distributors at 209 West 126th street, has been enthusiastic about the Dayton Motor Bicycle since it first came out and his books to date show that his enthusiasm was not a vain one. No less than 57 of the little front-wheel drive machines have been sold by him and he has orders on his books for six more at the present writing.

"It's hard for me to keep one in the window," says Jeanroy. "I settle one there and pretty soon I have to take it out and deliver it. On several occasions I have had to use a placard in the window in place of the machine. Four times this season I have been stripped of Motor Bicycles and had to wire in a rush order to the Davis people to keep up with the demand."

ZUCKER TAKES THE INDIAN IN CLEVELAND

CLEVELAND, O.—John Zucker, one of the most progressive dealers of the middle west, has taken over the distribution of the Indian for Cleveland and adjacent territory, formerly held by L. J. Mueller of Cleveland. The territory comprises 11 counties in Ohio.

Zucker is located at Sixth-eighth street and Superior Avenue. He will carry a large stock of 1917 machines at all times together with a most complete line of Indian parts, enabling him to give factory service in both retail and wholesale trades throughout the entire territory.

THOR FOR NAVY STATION

NASHVILLE, Tenn.—W. E. Davis, handling the Thor in this section, has just delivered a 12 horsepower twin Thor to the U. S. Navy Recruiting Station in Nashville. The machine will be used to cover all middle Tennessee territory.

TO IMPROVE CLUBROOMS

FREEPORT, Ill.—The Freeport M. C. is about to improve its quarters. The treasury now contains several hundred dollars, and a committee has been appointed to obtain additional equipment for the rooms without delay. The committee are M. W. Barkman, Dell Cole and Joe Kegel. The winter program of the club will be opened next month, and a very attractive indoor season is planned.

TRIO OF TRADERS VISITS INDIAN WIGWAM

SPRINGFIELD, Mass.—Traders from New Bedford, Chicago and Newark, N. J., paid a visit to the Indian factory last week. From the Massachusetts village came H. L. Thomas with a passenger on his Powerplus tandem machine.

Thomas reports the same good sale of Indians in his territory as of yore and testifies to a big increase in the sale of Indian bicycles. He has used successfully a quantity of imitation dollar bills in his bicycle sales plans, each bill printed with an advertisement of his line and giving the holder the value of $1 in the purchase of an Indian bicycle. The idea has worked excellently, particularly among school children, who often find their first impetus to save money is in this contribution of $1 from the Thomas Cyclery.

Jesse Edwards, the big Chicago distributor—Edwards Crist Mfg. Co.—spent several days at the Wigwam looking over the new models and discussing booster plans for 1917.

Walter Goerke, the Indian man from Newark, N. J., was up the first part of the week making arrangements for the new season.

FLORAL GIFT NO JINX TO McNAMARA

Strong Australian Received Gifts and Floral Piece From His Lodge and Upset Old Tradition—Kramer Wins Match From Spears

NEWARK, N. J., Sept. 25.—Yesterday at the Velodrome was termed "McNamara Day," and when the races for the day had finished there was no doubt that the day was a truly McNamara day. The strong Australian was presented with a handsome watch and fob by members of the Knights of Columbus, of which he is a member, and then dolled up in a new shirt and decorated with a big floral ring he paraded once around the circuit leading the fife and drum corps of that lodge.

As a rule in sporting circles the gift of a floral piece is generally looked upon as a jinx. There may be a jinx to some of the sporting celebrities, but in McNamara's case it proved to be the opposite. McNamara went out and beat the pick of the Velodrome stars in the two-mile invitation, a race having 18 starters, and then met and defeated Oscar Egg, the Swiss in a 10-mile tandem-paced race.

Kramer Forgets to Count

In the two-mile invitation Frank Kramer, the champion, who earlier in the day had taken Bob Spears' scalp in a match race, evidently thought he was stronger than he really is, or has forgotten how to count laps, tore to the front at two laps to go, but at the bell showed signs of tiring fast. McNamara made his bid on the back stretch and breezed home a winner by a half-length over Alfred Grenda, and Jake Magin followed Grenda by a like distance.

The tandem-paced race was spoiled by the fact that McNamara had the best teams and made a runaway race of it. Floyd Krebs and Norman Anderson, two "vets" who are candidates for superannuation, were pacing Egg when Grenda and Corry, with McNamara in tow, jumped away, and before Egg could get another team on the track McNamara soon had a big lead, which before the termination of the race was stretched to a lap. It was evident that Egg had splenty of speed and strength left and had he had ample pace would have given McNamara a battle, but he was forced to trail the strong Australian home.

Champion in "Come Back"

Frank Kramer must have tired of having Bob Spears beat him in match races, for the champion rode with more desperation than he has shown in the past two months. Kramer won the first heat from in front, doing the last eighth mile in 11⅕ seconds, While Spears accounted for the second, he also riding from in front. Kramer, in the third heat, went to the front and in about as strenuous a tussle as has been seen at the track in many a day managed to hold Spears off and win. It was a popular victory and Kramer was quite elated when Spears shook him by the hand in a congratulation stunt after the third heat.

Spears Shares in Glory

Spears was not without his share of glory when the day was finished, and he was made welcome at the pay window by beating Alfred Goullet, now of Newark, in the weekly running of the Brassard. An "Alternance" match at a mile saw Eddie Madden, the local lad, win two heats and score 25 points to 23 for Marcel Dupuy, the Frenchman, 13 for Francesco Verri, the Italian, and 11 points for Jake Magin, another localite. Fred Hill accounted for the "miss and out."

A surprise was sprung on John Staehle, the amateur champion, by Harry Hoffman, the 'Frisco rider. Staehle looked to have the two-mile open for that class well in hand when Hoffman came with a fine burst of speed and just nipped Staehle at the tape. The amateur handicap at a half-mile resulted in a win for Tom Bello, the strong Italian, who won the road race of the Harrison Pleasure Club, in the morning. Summaries:

Half-mile handicap, amateur.—Won by Tom Belle, Brooklyn, 30 yards; second, Nelson Johnson, New York, 65 yards; third, Bennie Clark, Newark, 55 yards; fourth, Al Krushel, Buffalo, 80 yards. Time, 55⅕ seconds.

Two-mile open, amateur.—Won by Harry Hoffman, San Francisco; second, John Staehle, Newark; third, Fred Taylor, Newark; fourth, Ed Byron, Australia. Time, 4:11⅘.

Half-mile handicap, professional.—Won by Menus Bedell, Long Island, 40 yards; second, Arthur Spencer, Toronto, 15 yards; third, William Spencer, Toronto, 50 yards; fourth, Alfred Grenda, Australia, 15 yards. Time, 54⅘ seconds.

One-mile "Alternance" match, professional.—Won by Eddie Madden, Newark; second, Marcel Dupuy, France; third, Francesco Verri, Italy; fourth, Jake Magin, Newark. Dupuy beat Verri and Magin in first heat. Madden won from Verri and Magin in the second. Dupuy won third heat from Madden and Verri. Madden won last heat from Magin and Dupuy. Madden scored 25 points to 23 for Dupuy, 13 for Verri and 11 for Magin.

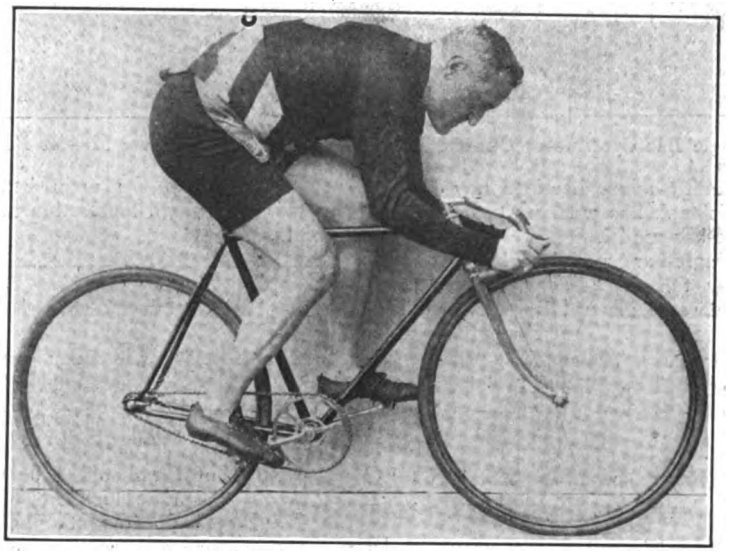
One-mile Brassard race, professional.—Bob Spears, Australia, the holder, vs. Alfred Goullet. Won by Spears. Time for last eighth-mile, 12⅕ seconds.

One-mile match race, professional.—Bob Spears, Australia, vs. Frank Kramer, East Orange. Kramer won first and third heats. Times for last eighth-miles, 11⅘, 12⅖ and 12⅕ seconds, respectively.

Miss and out, professional,—won by Fred Hill, Boston; second, William Hanley, San Francisco; third, Frank Corry, Australia; fourth, Percy Lawrence, San Francisco. Time, 6:42⅖. Distance, 3⅕ miles.

Two-mile invitation, professional.—Won by Reggie McNamara, Australia; second, Alfred Grenda, Australia; third, Jake Magin, Newark; fourth, Alfred Goullet, Newark; fifth, Frank Kramer, East Orange. Time, 4:04⅗.

A CHAMPION WHO "CAME BACK"



Frank Kramer, the American Title Holder, Who After Numerous Defeats by Bob Spears Finally Defeated the Australian

Ten-mile tandem paced match, professional.—Reggie McNamara, Australia, vs. Oscar Egg, Switzerland. Won by McNamara. Time, 18:42⅘.

BRODY TAKES B. V. W. BRASSARD

HARRISON, N. J., Sept. 25.—On account of the race of the Harrison Pleasure Club, in which several members were entered, the regular weekly "cork" race of the Bay View Wheelmen scheduled for yesterday was called off. Instead the Brassard race was run on the River road and Peter Brody defeated Richard Schlee for the armlet. The race was at a mile and the time was 3:55.

B. V. W. THANKSGIVING DAY RACE

NEWARK, N. J., Sept. 27.—On Thanksgiving Day, Nov. 30, the two-hour team race of the Bay View Wheelmen will be held and all the star amateurs now competing at the Velodrome will be in the line-up. The race will be run at Weequahic Park and a rain date has been set for Sunday, Dec. 2.

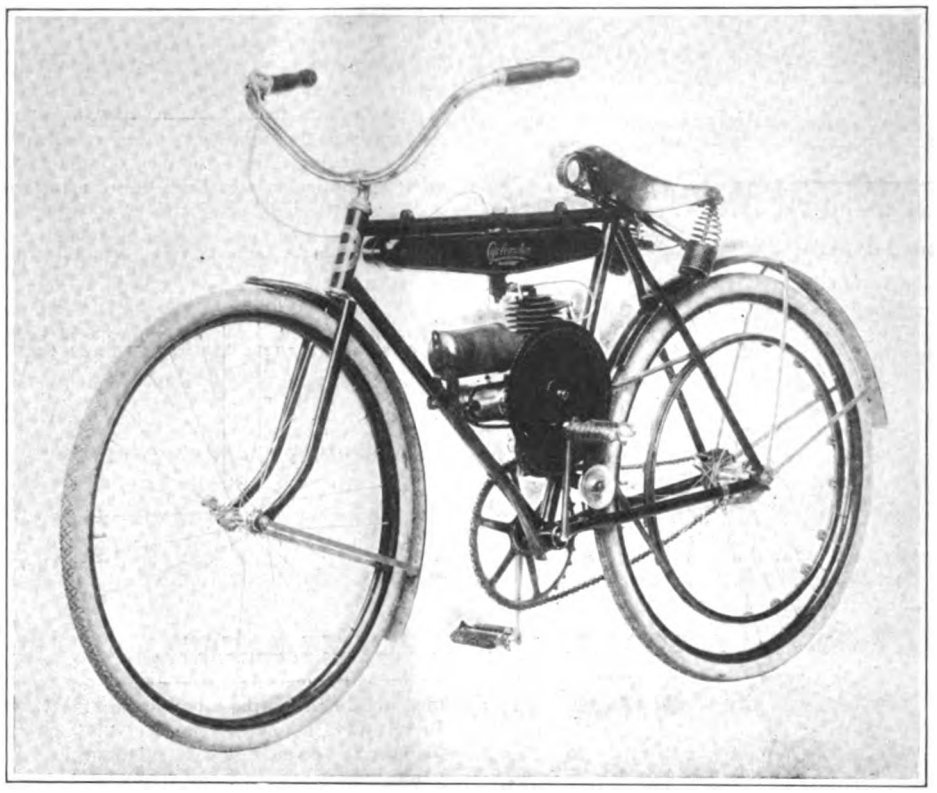
DOUBLE-BAR OUTFIT FOR 1917 CYCLEMOTOR

(Continued from page 12)

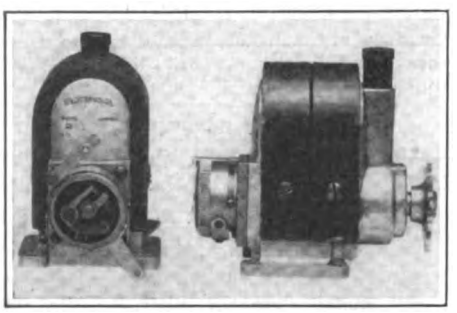


Single Bar Cyclemotor Outfit Seen From Flywheel Side; Note Muffler Position

it will readily adapt itself to any size of bar. This tank has a larger capacity than the single-bar model.

The single-bar model, which is continued for the new season, carries practically the same general lines and appearance as in 1916. The motor assembly, supplied with both models, has been slightly reduced in weight, but the design and construction has not been altered. Both the single-bar and the double-bar tanks are of true stream-line form.

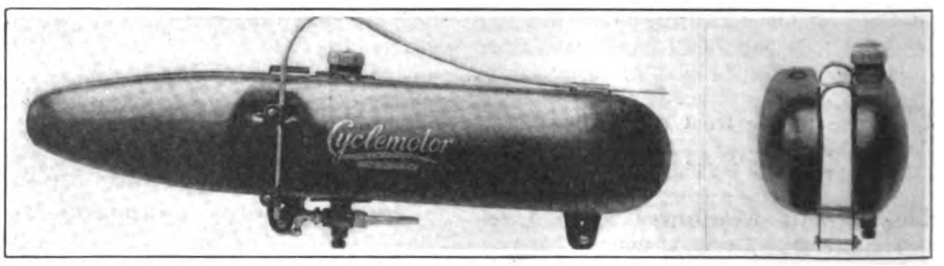
There are numerous structural changes



Improved Type of National Magneto

in the motor which add to its serviceability. A new method of forging the crankshaft has been developed which entirely eliminates injurious internal stresses in the material while increasing its strength 50 per cent with no additional weight. Bronze main bearings are fitted to the crankcase in place of the babbitt used heretofore, in order to increase the life and give superior service.

The 1917 driving pulley is fitted with a new locking device which prevents loosening on the shaft. Special alloy steel is used for the pulley to give greater strength. The crankcase interior is grooved to conduct the oil to the main bearings, thus assuring thorough lubrication at these vital points.



Two-Section Tank in Side and End Views; It Fits Any Two-Bar Bicycle

Smoother and easier operation is a feature of the 1917 control. A part of the wire casing is made from tubing, one end of which is accurately machined to receive a new type of control rod guide entirely contained within the casing. This arrangement does away with the former type of control rod guide, which was applied underneath one of the carbureter screws on the 1916 model.

No Carbureter Changes

The recesses in the control handle are made to such a shape as to conform exactly to the natural curve of the control wire. These improvements result in a much smoother-working mechanism and allow the use of a stranded cable without broken strands or sticking.

The National magneto for the 1917 models is especially adapted to the high speed of the Cyclemotor. The contact-breaker is constructed to operate perfectly at the highest as well as at the lowest speeds, and the windings have been reproportioned to meet with absolute satisfaction the conditions imposed by the high-speed motor.

No radical changes have been made in the carbureter's working parts, but a primer has been added to facilitate easy starting. This primer is so designed that when the pin is depressed it causes the float to act like a piston, forcing the fuel to the tip of the jet, where it will be readily drawn out by the suction of the motor.

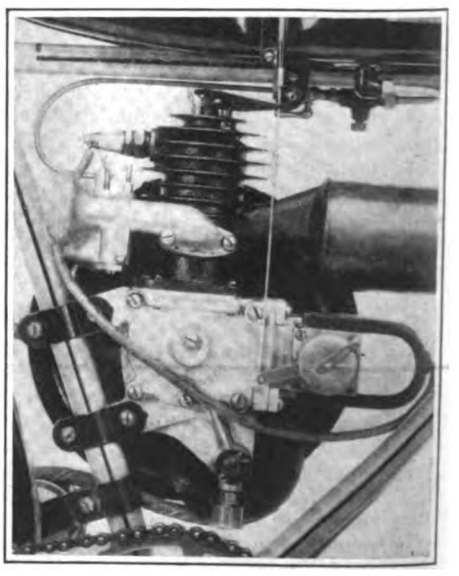
The idler pulley remains practically the same in appearance as before, but is of more rigid construction.

The single-bar outfit lists at $55, while the new double-bar Cyclemotor is quoted at the same figure. The belt is a Spartan round section and twisted. The sparkplug is a Benton.

Dealers Not Overlooked

In conjunction with the increased 1917 production, the factory tool equipment has been greatly increased to produce Cyclemotors to the highest degree of mechanical perfection. A new section of the factory has been completed and special machinery is already installed for this work. Each individual motor will be required to undergo the usual severe final test, so that the Cyclemotor rider will be assured of a very smooth running machine.

While extending every possible effort to develop the Cyclemotor engine and parts to a higher plane of efficiency, the company has not overlooked the dealer and the co-operation which should be had with him in sales helps. Realizing that the two-stroke motor has opened up a comparatively new field of prospects, the Cyclemotor folks have prepared a complete instruction book containing a detailed description of the two-stroke motor, and helpful information concerning the care of the Cyclemotors in his territory.



Cyclemotor Power Plant From Right Side

Digitized by Google

A new and more liberal selling policy will be extended to dealers, the Cyclemotor folks say, enabling them to receive bigger profits on sales. This in turn permits better service to customers and promotes more intense satisfaction to everyone associated with this progressive bicycle attachment line.

Realizing the value of the die-casting in an outfit of this kind and that such work is best performed by specialists, the Cyclemotor Corporation has had the crankcases made up from aluminum alloy die-castings by the Doehler Die-Castings Company, of Ninth and Court streets, Brooklyn, N. Y. The carbureter body and the throttle lever are also die-cast, the same firm furnishing these parts.

TWO NEW MODELS IN DAYTON BICYCLE LINE

(Continued from page 13)

In addition to these there is the Dayton Racer, Model 143, which sells at $40 without coaster brake.

The reputation for careful, painstaking construction in frames and parts which the Dayton bicycle has enjoyed for so many years will not be lowered during the 1917 season. The large smooth-running bearings which feature the Dayton will, of course, be continued as well as the Dayton one-piece crank. The frames are all reinforced with fish-mouth sections with double reinforcement at the crank-hanger, which has long been a source of satisfaction to Dayton riders.

The distinctive Dayton Carmine finish will prevail in 1917 and the heavy bronze monogram D which has been known to the cycle trade for twenty-two years will naturally be as much in evidence as ever.

In fact, the name Dayton is to be brought home to millions of prospective customers this year where the story has been told to tens of thousands before, according to the announcement of advertising plans which the Davis company will shortly make public. It is understood that details are now being worked out for a campaign that will run through national magazines and trade papers all during the early bicycle buying season.

The eleven big jobbers who have distributed the Dayton for several years past will continue to handle the line this season.

The Dayton Roadster

They are: J. W. Grady & Co., Worcester, Mass.; Haverford Cycle Co., Philadelphia, Pa.; W. H. Grover, Norfolk, Va.; Walthour & Hood, Atlanta, Ga.; H. A. Testard, New Orleans, La.; The Sutcliffe Co., Louisville, Ky.; Beckley-Ralston Co., Chicago, Ill.; The Pettee Cycle Co., Denver, Colo.; The Washington Cycle & Supply Co., Tacoma, Wash., W. E. & W. H. Jackson, San Francisco, Cal.; and Wm. H. Hoegee & Co., Los Angeles, Cal.

NEWARK YOUNGSTERS EMULATE THE STAR PROS.

NEWARK, N. J., Sept. 24.—Living around the professional stars at the Velodrome has put the speed bug into a number of youngsters in the neighborhood of the famous track. Their ambitions are seemingly to be numbered among the future stars of racing, and a number of them had an opportunity to try speed here yesterday.

A 15-mile team race was run around the Orange Terrace, near the track, and the changing of partners and the speed shown by some of the youngsters would give credit to the more experienced and older riders. John Walsh and Tom Hand, two 15-year-olds, accounted for the race, with Alfred Rolf and Louis "Dip" Kengott in second place.

EVERARD WINS A DOUBLE

HOBOKEN, N. J., Sept. 18.—A. L. Everard won both the two-mile open and the two-mile handicap races staged by the New Jersey Division, Century Road Club of America, on the Hudson County Boulevard, yesterday. In the two-mile open F. Peterson finished second; H. Bell, third; J. Schmidt, fourth; E. Fraysee, fifth, and F. McMillan, sixth. Everard was scratch man in the handicap and he beat H. Bell, 10 seconds; J. Schmidt, 15 seconds; F. McMillan, 25 seconds, and F. Peterson, 5 seconds, in the order named. In the Brassard race E. E. Fraysee defeated F. McMillan.

BOYS' RACE FOR SALEM, O.

SALEM, O., Sept. 17.—One of the features of the Homecoming Harvest Festival, early in October, will be a bicycle race for boys under 15 years of age. A number of valuable prizes have been donated.

CURTAINS DRAWN ON BOSTON RACING SEASON

Linart and Madonna Won Last Paced Race From Wiley and Carman—Tim Sullivan Takes 5-Mile

Tim Sullivan, the New Havenite, wound up a successful season by taking first honors in the five-mile professional open from Pat Logan, Fred Herbert and "Saucy" Paul Suter.

A half-mile handicap for the same class was accounted for by Charles Turville, Jr., who had 85 yards handicap. The quarter-mile handicap for the amateurs went to W. R. Greenquist, a 90-yard man, while the two-mile open for the simon pures was won by Fred McKenzie.

Summaries:

Quarter-mile handicap, amateur—Won by W. R. Greenquist, Revere (90 yards); second, John Carruthers, Beachmont (90 yards); third, Clem Robinson, Boston (70 yards). Time, 28 seconds.

Two-mile open, amateur—Won by Fred McKenzie, Revere; second, Elmer Duncan, Everett; third, William Cupit, Roxbury; fourth, John Fardig, Orient Heights. Time, 4:28⅗.

Half-mile handicap, professional—Won by Charles Turville, Jr. (85 yards); second, Hugh McPartland, Boston (85 yards); third, Dennis Connolly, Everett (65 yards); fourth, Hardy Jackson, Revere (110 yards). Time, 57⅘ seconds.

Five-mile open, professional—Won by Tim Sullivan, New Haven; second, Pat Logan, South Boston; third, Fred Herbert, Fall River; fourth, Paul Suter, Switzerland. Time, 12:02⅕.

GENDRON WHEEL LINE IS COMPREHENSIVE

Comprises Score of Adult Models and Eight Juveniles as Well as a Trio of Commercials—The Features Described

TOLEDO, O., Sept. 25.—An even twenty adult models are listed in the 1917 catalog of the Gendron Wheel Co., which has just been issued, the models ranging in price from $25.50 to $63.75. Eight juvenile models are also listed, the boy's models ranging from $17.25 to $25, while the girl's models run from $18.75.

The three leaders of the 1917 line will be the Defender motor-bike model, which will sell for $36; the Gendron Highway, selling for $33.75 and the young men's special motor-bike model at $28.50. For cyclists desiring a higher priced model the Gendron Climax motor-bike, which is fitted with three-speed hubs, luggage carrier, tire pump and with mirror attachment besides being electrically equipped with front and rear light and horn reflector, is offered.

Three Commercial Models

Three special models for commercial and delivery purposes are the Handy "Carry-All" model, at $32.25; the Ideal, at $56.25, and the Buckeye model, which is listed at $40.50. A Speedway racer is offered for $30, and is guaranteed to give the speed riders entire satisfaction. The ladies' models are the Reliance Roadster, listed at $30, and the Queen Ladies' Roadster, which sells for $32.25. The other models in the Gendron line will take care of the wants of the cyclist in almost any line, pleasure, touring or commercial.

The Equipment

Almost any equipment can be secured on the various models. Standard coaster brakes, the Atherton, the New Departure, Corbin or the Sturmey-Archer three-speed can be supplied according to the specifications, the three-speed hub being on the De Luxe model. Fauber crank hangers are also a strong point in the Gendron line for 1917.

Troxel saddles, Crescent wood rims, Diamond E spokes and roller chains are also included in the models.

The frame construction on all Gendron models calls for special notice. The frames are made of 19-gauge Shelby seamless steel tubing. All brazed connections are strengthened by resilient fish-mouth reinforcements. The forks are braced and are as strongly built as the frames. An optional list of colors can be had according to the specifications, while rear stands and carrying baskets can be secured on the commercial models. The finish is as fine as can be turned out.

TOM BELLO OF BROOKLYN WINS HARRISON RACE

Defeats Field of Over 70 Riders in Hard Contest — Unione Sportiva Italiana Takes Team Honors

HARRISON, N. J., Sept. 25.—Over 70 cyclists started in the road race of the Harrison Pleasure Club, held over a course that measured about 17 miles, yesterday morning. Tom Bello, the strong Brooklyn Italian and star of the Unione Sportiva Italiana, won from the big field, beating Lawrence Gaffney, of the Empire City Wheelmen, by a length, while John Marquart, a C. R. C. A. rider, finished third and Jerry Nunziata, also from the Unione Sportiva Italiana, ran fourth. Bello was timed in 43 minues and 55⅗ seconds.

Race a Scratch Event

The race was a scratch affair, and it was a pretty sight as the big field got away. Thousands of people lined the triangular course, and there was a large turnout at the start and finish. A few riders suffered spills while going over trolley tracks, but they fortunately escaped with nothing more serious than bruises.

In the team competition the Unione Sportiva Italiana carried off first honors in the B. F. Goodrich trophy contest. The New York Italian club scored first, fourth, fifth, eighth and eleventh, scoring a total of 29 points. The Century Road Club Association, with a total of 25 points, finished second.

How They Finished

The first 25 of the 50 or more that finished the race follow: First, Tom Bello, U. S. I.; 2, Lawrence Gaffney, E. C. W.; 3, John Marquart, C. R. C. A.; 4, Jerry Nunziata, U. S. I.; 5, Louis Hiban, U. S. I.; 6, Eugene O'Mara, B. V. W.; 7, Chris Dotterweich, National Turn Verein; 8, Rene Braet, U. S. I.; 9, Edwin Jensen, C. R. C. A.; 10, Arthur Niemenski, H. C. W.; 11, Charles Jensen, U. S. I.; 12, Anthony Attardi, E. C. W.; 13, Robert Henderson, B. V. W.; 14, George Harvey, U. S. I.

Fifteenth, Carmine Fontana, U. S. I.; 16, James Alfonso, U. S. I.; 17, F. Kuddler, Maple A. C.; 18, D. E. Lands, unat.; 19, Vito Cestone, C. R. C. A.; 20, Ray H. Nester, B. V. W.; 21, N. Aglietti, U. S. I.; 22, Edwin Kain, U. S. I.; 23, Steve O'Panowicz, B. V. W.; 24, Harry Aron, B. W.; 25, George Steppelo, C. R. C. A.

Clubs—C. R. C. A., Century Road Club Association; U. S. I., Unione Sportiva Italiana; B. V. W., Bay View Wheelmen; B. W., Brooklyn Wheelmen; H. P. C., Harrison Pleasure Club; C. R. C. of A., Century Road Club of America; H. C. W., Hudson County Wheelmen; E. C. W., Empire City Wheelmen.

ALTOONA BICYCLISTS ON SPIN

ALTOONA, Pa.—A score of local bicycle enthusiasts, constituting a club of all good fellows, on Sunday took a spin to Williamsburg, Pa., and return. Old Sol extended a helping hand in the enjoyment of the riders by making his appearance in the early morning and warming the cool mountain air.

The spin was a delightful one, and each rider returned to this city with many tales of speed and spurts and incidents occurring on the trip. The entire distance covered 35 miles.

CARLOAD OF DAYTONS FOR PETTEE CYCLE CO.

DENVER, Colo.—The Pettee Cycle Co. will continue to handle the Dayton bicycle line throughout Colorado. The firm has found that these machines are giving remarkable satisfaction and a big business is expected for the 1917 season. A carload order has been entered with the Davis Sewing Machine Co.

CRESCENTS TAKE FINE TRIP

BALTIMORE, Md., Sept. 25.—Members of the Crescent Bicycle Club staged a run to Pumpbreys Station, situated on the Annapolis Short Line R. R., yesterday. The trip was an interesting one and led the tourists over a 30-mile stretch, carrying them through the fine Anne Arundel county. The start was made at 9:30 a. m. and the trip finished at noon. Next Sunday the club will hold their annual fall century run to Washington.

KELLER WINS B. V. W. RACE

NEWARK, N. J., Sept. 25.—William Keller accounted for the two-mile open "cork" race of the Bay View Wheelmen held yesterday morning. Robert Benwell finished second and Fred Knoller third. Larry Smith, Ray Nestor, Eugene O'Mara and Alfred Andres trailed in the order named. The time was 6:58. A one-mile Brassard race was won by Richard Schlee, who defeated Chris Boehn in 4:02.

SCADTEN SCORES A WIN

BROOKLYN, N. Y., Sept. 25.—A one-mile bicycle race run in three heats was one of the features of the Brooklyn Athletic Association games at the Parkway race track yesterday afternoon. H. Scadten won the first and third heats, D. Feinburg, finished second, and J. Milbauer, third. The times were, 3:10, 3:11 2/5 and 3:09 1/5, respectively.

NEW EASTERN HEADQUARTERS

HARTFORD, Conn.—The Eastern Cycle Co., D. Marholin, proprietor, handling the Excelsior and Henderson in this city, is moving to a handsome new building directly opposite the old headquarters on Main street. The new establishment is one of the finest of its kind in this part of the country.

LORENZ CLEANS GERMAN CARD

NEW YORK, N. Y., Sept. 27.—Willie Lorenz, the German sprinter, who has appeared in the Madison Square Garden six-day races, won all three races at the Dusseldorf, Germany, track Aug. 20, according to information just received. Lorenz defeated Willie Arend, a former world's champion, and Brehmer and Ahlborn in the 1,200-meter scratch race; captured the 2,000-meter handicap from scratch and won the 3,200-meter lap race.

GERMAN CYCLIST A WAR VICTIM

NEW YORK, N. Y.—Sept. 27.—Word has just been received that Bruno Demke, one of Germany's premier paced stars, has been killed while serving in the aviation corps of the Kaiser's forces. Demke, who had volunteered for the aviation end of the service, met his death at the military aviation field at Doberlitz, Wednesday, Aug. 23.

TO FEATURE CHICYCO BRANDS

JOLIET, Ill.—John Woodman, proprietor of Woodman's Sporting Goods House, states that the 1916 season has been the best that his store has yet had in the bicycle line. He will feature the Chicyco Cycle Co.'s brands for 1917.

Motorcycle News Continued

ANOTHER CLIMB SLATED AT METEOR ROCK

SAN JOSE, Cal.—Hill-climbing events at Meteor Rock, at Alum Rock Park, near this city, aroused so much interest early in the season that the San Jose M. C. has arranged to hold another climb up this big grade. Riders from all around the Bay are expected to participate. H. T. Manchester, president of the club, has been in San Francisco discussing the matter with riders. The date is set for Oct. 8.

RENFRO AND PICOKE WIN AT ARDMORE MEET

ARDMORE, Okla.—The Ardmore Motorcycle Club conducted some excellent motorcycle races during the Carter County Fair here September 15 and 16. The races were run on a one-mile circular track and some good time was made. Only two events were staged, both five-mile races. In the first race, Renfro, riding an Indian, was first; Picoke, riding a Harley-Davidson, second. Time, 7:27.

In the second event, also a five-mile race. Picoke, riding an Indian, was first, with Renfro, riding a Harley-Davidson, second. Time, 7:55.

AWAITING ARRIVAL OF 1917 READING STANDARDS

SAN FRANCISCO, Cal.—Hopkins & Alzina, the Reading Standard distributors, have sold the only machine they had as a demonstrator, and are now staying close to the store pending the arrival of the new machines, the first of which are expected early in October. Before letting the old demonstrator go, they did quite a lot of spectacular hill-climbing, with a 180-lb. passenger in the sidecar, which got them a number of inquiries.

They are greatly pleased with the improvements in design in the '17 R-S, and will start an active campaign as soon as they can show the machine.

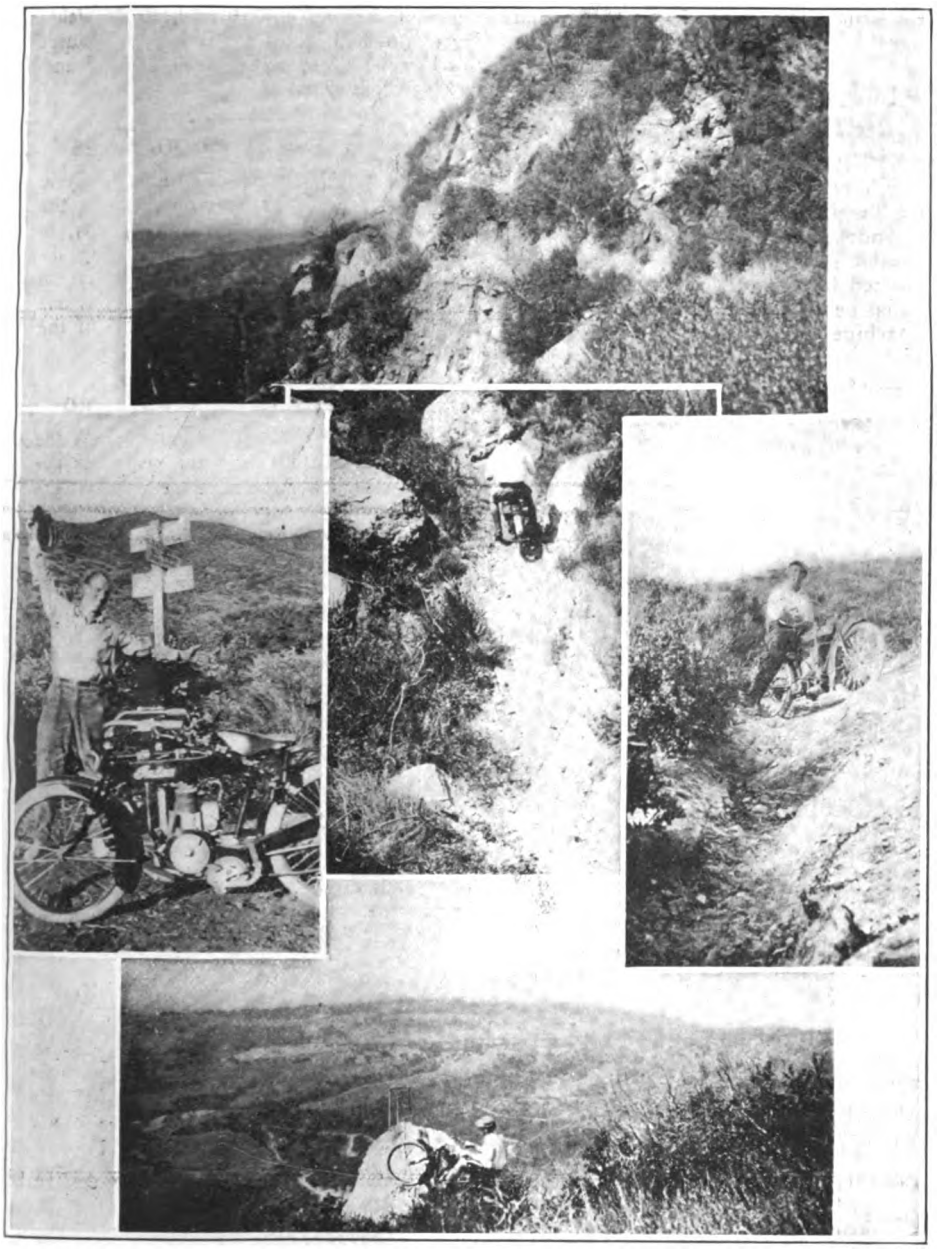
HENDRICKS FEATHERWEIGHTS OVER LA CUMBRE TRAIL



A Quintet of Views Showing Hendricks Climbing the La Cumbre Trail With His Indian Featherweight; Note the Grades and the Desolate Character of the Country

SANTA BARBARA, Cal.—The famous La Cumbre Trail near here has at last been covered by a motor vehicle, and the honor of being first over the trail goes to the Indian Featherweight. R. A. Hendricks, of Santa Barbara, is the man who drove this difficult passage, and not a little of the credit for the performance goes to the rider's skill.

Barely more than a poorly marked footpath, the La Cumbre Trail winds up from Santa Barbara for a distance of over five miles form the foot of the mountain. At points the trail drifts out to the very edge of a precipice, where an inch to the right or left would mean a plunge to the valley 2,000 feet below.

This creditable performance of the Featherweight caused considerable enthusiasm among the motorcyclists of Santa Barbara. It led also to the issuing of a challenge by the Santa Barbara Indian dealer in which he offered $50 to any man who could drive a lightweight of any other make over the same trail. So far he has had no occasion to make out any 50 dollar checks.

HALF A CARLOAD BOOKED FOR DALLAS RIDERS

DALLAS, Texas.—An immediate demand every late model Harley-Davidson that can be had, is the report that comes from the sales manager of the Harley-Davidson Sales Company of Dallas. This company is expecting to receive a carload of new Harley-Davidsons in a few days in preparation for the rush of business during the Texas State Fair here October 13-29, and already orders have been booked for fully half of the machines that will come in that car.

The new three-speed electrically equipped machine is in greatest demand, and the orders are booked far ahead. Riders are universal in their praise of this machine, declaring it is the most nearly perfect motorcycle yet put out. The Dallas county motorcycle squad, who are to chase automobile speeders on the Dallas county roads, have adopted this as their machine, and they claim that not one speeder has yet got away when the "Big Harley" got behind him.

ENGINEERS PREDICT FUEL SHORTAGE FOR 1917

GLOBE, Ariz.—Speakers at the convention at the American Institute of Mining Engineers, held in this city a few days ago, predicted that a more serious shortage of gasoline than that now existing would soon make itself felt throughout the country. The engineers believed that the first effects of the shortage would be felt on the Pacific Coast and that a near-famine would extend to most other parts of the country.

W. R. Hamilton, of San Francisco, presented the gasoline data to the engineers. He asserted that the only possible way to increase gasoline production was by the increased production of light oil or casing-head gasoline, also the grade of market gasoline, or by successful innovations in refining methods.

BURROUGHS SIGNS FOR 100

BOSTON, Mass.—W. J. Burroughs, Harley-Davidson dealer in Bridgeport, Conn., visited Boston a few days ago and signed up with Jes Campbell, district manager of the Harley-Davidson here, for 100 of the 1917 machines, to be equipped with Firestone tires throughout.

PORT ARTHUR TIRE FORMED

PORT ARTHUR, Texas—The Port Arthur Tire Company of Port Arthur has been organized here with a capital of $2,000. The incorporators are: A. F. Hughes, C. M. Dismukes and J. R. Campbell. The company will handle automobile, motorcycle and bicycle tires and accessories.

A ROCHESTER LIVE-WIRE

Why the *Pope* Motorcycle Satisfies

The rider who delights in the thrill of speeding smoothly along the open road—

Who gets real pleasure from feeling in his mount the urge of almost unlimited power—

And who finds real contentment in possessing an absolutely dependable piece of mechanism that instantly responds to every command, and sturdily takes him on any road where fancy leads—

He is the rider who is absolutely satisfied with the

Pope Three-speed Twin

Manufacturers everywhere build overhead valve motors for motorcycle racing, but in the Pope alone is the overhead valve standard construction in the stock models.

This construction is proving its value every day in maintaining the Pope reputation for power and speed.

It permits absolutely round cylinders that are machined outside as well as inside—resulting in thin, deep and accurately made flanges which rapidly and evenly cool the motor.

Some manufacturers use spring forks or springs directly beneath the rider, but the Pope is the only motorcycle that has not only a spring fork but a suspension which springs both machine and rider as in automobile construction.

Pope dependability is maintained by the continual refinement of detail and the ever-increasing safety-factors worked out by Pope engineers — by making every part stronger than necessary, using heavier chains than are found in any other motorcycle, and continually strengthening every detail.

Write for a catalog and see the latest Pope at your dealer's

Chatter, Chin, Comment

By E. F. HALLOCK

The Columbus Meet in Its True Significance

THE Columbus F. A. M. meet, which was promoted for the express purpose of raising funds to relieve the somewhat tangled financial situation which confronts the new administration, netted the organization just $18 and some odd cents.

Which news, of course, will prompt most of us who live and ride far enough east to get an occasional whiff of the salt sea air of the good Old Atlantic, to smile slightly and say to ourselves, in good old American fashion, "I told you so!" For just about every fellow within riding distance of the Seaside track felt that the "ten-per-cent.-of-the-gate" offer made by the Sheepshead Bay track for the meet was much to be preferred to Columbus with its uncertainties and risks.

But pause a minute, fellows, and consider. Certainly $18 is not the only return that Columbus netted the F. A. M. For one thing, the meet proved that the F. A. M. itself could and can promote a meet and at least not lose money. And listen, boy! Many is the professional promoter with plenty of time and a fund of experience at promoting racemeets, who has come off much worse than the raw novices who worked up the details of Columbus affair in less than two weeks. If anything, the officials are to be congratulated for the showing they made on the first attempt.

Will the Experience Be Used to Advantage?

THERE is not a doubt in the world but what those chiefly interested in the venture have learned much that is useful about race promotion, and I for one will be sorely disappointed if the knowledge gained is not applied to good advantage at a series of F. A. M. racemeets for next season. And I firmly believe that each of these meets can be made a source of financial gain for the body.

Even that is not all. The sale of the "Booster Badges" was not as great as had been anticipated, but at that the scheme brought in close on to $500 and proved conclusively that there are at least half a hundred trade men possessed of an eagle's worth of interest in the well being of the body. And fifty boosters of the sort who do not shy at digging down in their own jeans to the extent of ten dollars are worth a whole lot to the national riders' organization at the present time.

Here's a New Twist for the Sunday Club Run

SPEAKING of the F. A. M., its trials and tribulations, we are all agreed that what the Federation needs most at the present moment is members. Each of us knows this perfectly, yet we all sit down and wait for the other fellow to go out and bring in the new blood.

And why? Simply because we are left to work independently; there is no concerted effort on the part of the whole body to interest the thousands of riders now without the pale of the organization and convert them to membership. And most of us who are not traveling salesmen hesitate to ask a stranger to part with two dollars, even though we know in our own hearts that it is to his own interest to be included in the ranks.

While that sort of thing is distasteful to us as individuals, however, when we travel in a body are we not bolder? Supposing then, we lend a new twist to the Sunday run of the club and call it an F. A. M. membership run. Suppose we ride along in a body and tackle in a body every rider we meet on the road. Suppose we go primed with facts and figures; with arguments of the convincing sort; fully prepared, in other words, to answer that eternal question, "What do I get for my dollar?" It is almost inconceivable that many of the fellows thus "held up," to put it bluntly, who are possessed of the cash will shy at joining on the spot, and certainly many a fellow who never heard of the F. A. M. and many who now look upon it with scant respect will begin to feel that it is a worth-while progressive organization after all.

How About an Annual F. A. M. Membership Day?

ONCE again. If we were to apply the same scheme on a nation-wide scale; if we were to inaugurate an "F. A. M. Membership Day" annually, a day on which all clubs and all riders would go out on the highways and byways and preach the doctrine of federation goodness to every rider they meet, would the body not profit immensely by it? Would it not, for instance, be possible to collect, in short order, that $500 offered by the Excelsior folk and an equal amount offered by the Harley-Davidson factory when the membership reaches 20,000? Perhaps two or three such days a season would be even more beneficial than one.

If there be doubters, they are respectfully referred to the results obtained in the way of sales made and publicity obtained by the annual exploitation of "Indian Day"; again, they are asked to glance over the report of the "Million Bicycles" Committee and see what results were obtained by concerted action on the part of the entire cycle trade by the exploitation of "Bicycle Day." If concerted action of this sort can be turned into financial profit by the Indian factory and exploitation of "Bicycle Day" can be made to redound to the benefit of the bicycle trade, there is not a reason under the sun why a "Membership Day" cannot be made a source of profit to the F. A. M.

And don't forget, fellows, that soliciting membership by the roadside in this manner will lend divergence to the run and can be made a real sporting event loaded to the muzzle with interest for the individual participant.

A Word on the Standardization of Controls

ON THE matter of suggestions to the manufacturers, a word anent the matter of controls might be in order. It is a fairly difficult feat for the average rider, accustomed to riding one make of machine, to straddle another and feel instantly sure of himself. He has to learn all over again every time he changes from one make of machine to another.

Of course, there are arguments in favor of each type of control and each arrangement of the control elements. It would seem well worth while, however, for the manufacturers to get together in their association, determine once and for all which is the best all around arrangement, and then standardize on it, even as the automobile trade, with a mere handful of exceptions, has standardized the control of the automobile.

And while on the subject of automobiles, I might point out that it would work to advantage to have motorcycle controls as similar as they can be made to the automobile controls.

I cannot help but feel that such a course would work out for the benefit of the trade at large in that it would, for one thing, lessen the chances for accident and thereby work to eliminate the unfavorable publicity which always follows a smashup involving a motorcycle.

SORRY, ELWIN, TO CAUSE ANY TROUBLE

Corry, Pa., Sept. 11, 1916.

CONTEST EDITOR:—

My guess of the picture in the September 7 issue is that the picture was taken from a Reading Standard. You sure have got everybody guessing. The riders here nearly had a fight to get the September 7 issue to see what it was.

Yours truly,

ELWIN SAFFORD.

BUT THEN, YOU KNOW, A CONTEST'S A CONTEST

The Attainment of An Ideal

To make the bicycle easier to ride—to make it safer to USE—to make it easier to SELL—that has been our goal in the building of the MORROW Coaster Brake.

The mere fact that a brake that could do these things, and do them better than any other brake, would mean a fortune to the makers, was not the main impelling motive in the building of the MORROW.

The vital issue was that we were dedicated,—it was our life work,—to building a brake that would serve best the bicycle industry; to make smoother the sales road between the manufacturer and the rider; to properly protect the rider and lighten his pedalling task. The reward was SURE to come.

Morrow

And we have succeeded—as thousands upon thousands of riders are ready and eager to attest. Eighteen years of ripened experience have gone into the present MORROW—the most perfect, the strongest and simplest bicycle brake ever made.

We can convince you.
Give us a chance.

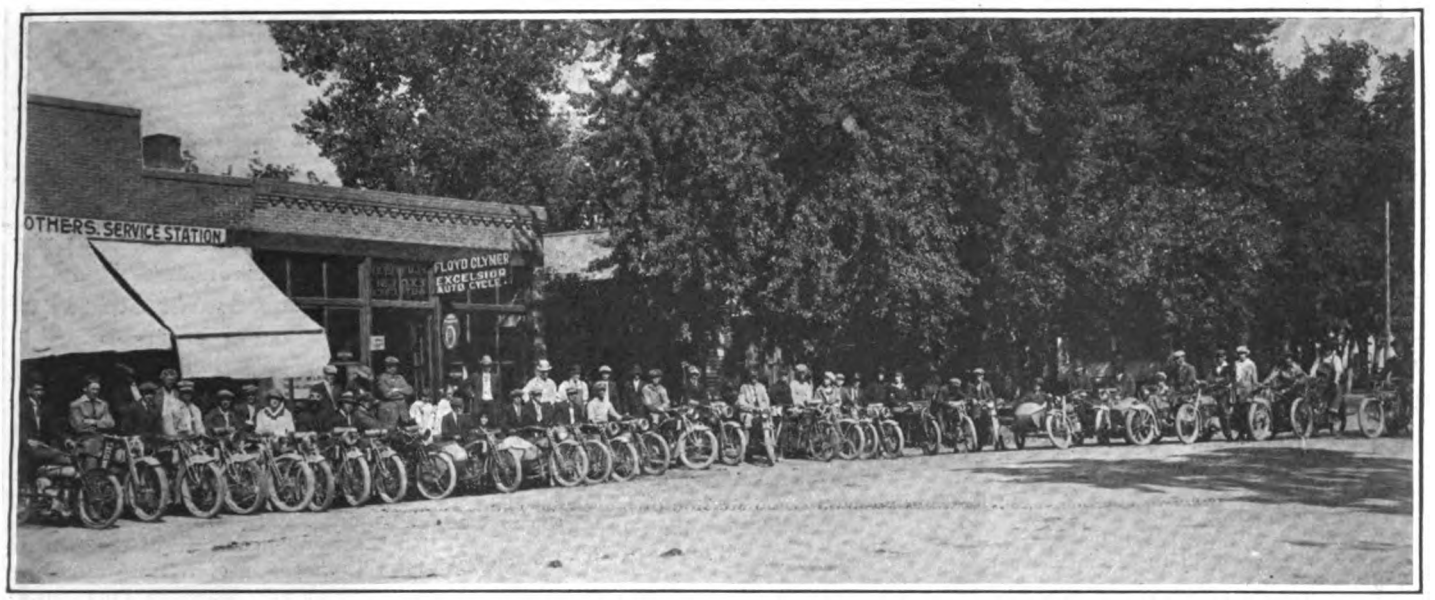
THE SNAPSHOP ARTIST GOT THIS AT FLOYD CLYMER'S PICNIC



Some Seventy-Five Riders, Many of Them Accompanied by Their Wives or Sweethearts Attended the Picnic to Montrose Inn, Which Was Staged by the Greeley, Colo., Excelsior and Harley-Davidson Dealer Recently

WE SHOULD HAVE SEEN A "CHAMP" IN CLYMER!

YE gray-uniformed mail man brought in the following epistle from the Mead Autocycle Co., Denver, which sheds much light on a situation which quite evidently was somewhat beclouded in the mind of our "Mile-High-Town" correspondent:

"Enclosed please find clipping from page 19, fourteenth issue, where you state Frank Kunce is Colorado State champion on a Harley-Davidson. Frank Kunce is not, and as far as we can find out, never was Colorado State champion. For 1915 this honor was won by Vard Rose on an Excelsior at Overland Park track. On August 12, 1916, Floyd Clymer, also on an Excelsior, won the Colorado State championship, Vard Rose not competing.

"We believe credit is due Floyd Clymer, and would ask, in justice to Mr. Clymer, that proper correction be made in the next issue of **Motor Cycle Illustrated.**"

DINNER WINDS UP INDIAN TRAVELERS' SESSION

SPRINGFIELD, Mass.—Sunday evening the annual dinner given by the Hendee Mfg. Co. to its salesmen marked the close of the 1916 salesmen's convention. The dinner was given at the Highland Hotel, covers being laid for thirty.

The 1916 Indian salesmen's convention proved one of the most successful salesmen's gatherings in the history of the company. Meetings were held daily at which talks were given by General Sales Manager Frank J. Weschler, Domestic Sales Manager E. M. Jackson; Oscar Hedstrom, mechanical engineer; J. B. MacNaughton, of the Promotion Department, and Jesse Edwards, Chicago distributor of the Indian line.

Those travellers who were present were: John MacDowell, New England; Harvey A. Bernard, Pennsylvania; J. W. Henderson, Colorado; Ivan Jacobs, Central States; O. V Atwood, South Atlantic States; Robert Gilbertson, Minnesota; F. D. Shomo, Texas; E. H. Towle, Oklahoma; F. B. MacFadden, Chicago, and Arthur Stephen, Kansas.

MOORE IS STOCKING SAN DIEGO WITH CLEVELANDS

C. WILL RISDEN has developed a remarkably successful selling system for Clevelands. He signed a contract giving the San Diego agency to H. R. Moore, and coached him on the system. Moore has followed it to the letter, and in one month has jumped to the front as the most successful Cleveland agency in the West. He sold his first machine August 5; it arrived the 8th, and from then to September 7 he sold 29 machines.

GOODYEAR FALL WINDOW DISPLAYS READY

AKRON, O., Sept. 25.—The change of the season is given due consideration in the handsome window displays now being sent out by The Goodyear Tire & Rubber Co. for appearance October 1 in show windows all over the country.

The design has already attracted much favorable comment, and will give a combination of the pictorial and floral in well-balanced effect.

Wistaria vines and flowers are used in the festooning that accompanies the grouping of tires in the first Fall display. There will also be a painting and other placards—all used as an artistic and interest-compelling setting for sturdy All-Weather Trade fabric tires.

EQUIPMENT USED ON ALL-DESERT TOUR FROM LOS ANGELES TO RENO AND RETURN

SEVERAL readers have requested information concerning the equipmen used on the 1916 Harley-Davidson motorcycles ridden by Messrs. Peterson, Martin, Guthrie and Maydole in the Los Angeles to Reno all-desert tour, which was described in **Motor Cycle Illustrated** for September 7. For their benefit the following details, obtained by our Los Angeles correspondent, are given:

All four machines were fitted with Bosch magnetos and Schebler carbureters, the mounts used by Martin and Guthrie being stock models and the other two what are known as "semi-stocks." Peterson's machine was equipped with Firestone tires, New Lite generator, S & M lamp, Stewart-Warner speedometer, Indian standing light with Radio dry cell lighting a 3-volt bulb,—also seven feet of extension cord with a trouble lamp; Renold extra heavy chains.

George Martin used Diamond Black Tread tires, K & W light generator, S & M lamp, Indian standing light with Ever Ready battery supplying a 3-volt light, Stewart-Warner speedometer and Duckworth chains.

Guthrie had his mount equipped with Firestone tires, Solar bicycle lamp, Jones speedometer and Duckworth chains. Maydole used Firestone tires, K & W light generator and Duckworth chains.

Varied Activities of the Dealers

LANG HAS ORDERS FOR 48 NEW MACHINES

Chicago Harley-Davidson Distributor Has 43 Twins and Five Singles of 1917 Models on His Books

CHICAGO, Ill.—With three 1917 models and a commercial van on his sales floor at 1704 Michigan avenue, C. H. Lang, the Harley-Davidson distributor for this city and Cook County, is all set for the Fall selling season. To date he has booked orders for 43 twins and five singles, the machines to be turned over immediately they are received from the factory.

The past season has been the most prosperous for the Lang agency since it was opened 15 years ago. Over 900 machines have been delivered from the Michigan avenue store during the past year, of which 165 were singles and the balance twins. All of the singles with but one exception were for commercial service, as Lang has been boosting the single for commercial work. He recently delivered 45 singles to the People's Gas Light & Coke Co., making a total of 117 singles used by this firm. All are equipped with sidecars. Eighty per cent. of the twins delivered by Lang last season were electrically equipped and the outlook for 1917 is that a greater percentage will be so equipped.

J. F. Bright, formerly with the Edwards-Crist Co., is the new manager for C. H. Lang and is in complete charge while Lang is on his vacation down south.

William Kramer has taken the sub-agency for the Harley-Davidson from C. H. Lang and has opened an up-to-date repair shop at 7444 Madison street.

S. T. Kubachi has taken the Harley-Davidson agency for East Chicago and has opened at 4857 Magoon avenue.

SYKES IS INVOICING HIS COLUMBUS PURCHASE

COLUMBUS, O.—John Sykes, Jr., of Trenton, N. J., who recently bought out the motorcycle business of the Belt Motor Co., arrived in this city a few days ago and started to invoice the stock on hand. The location of the Sykes Indian distributing agency in this city will be announced later.

The Belt Motor Co., having disposed of its motorcycle interests, is to devote its attention to the sale of automobiles exclusively.

CHICAGO HENDEE SELLS TO BLUE ISLAND POLICE

CHICAGO, Ill.—Wilmar Reichert, of the Chicago branch of the Hendee Manufacturing Co., has just closed a sale with the Blue Island police department of Blue Island, Ill., for a Powerplus for immediate delivery.

The first 1917 demonstrator has been received at the branch and is the center of much interest. The orders for the '17 Powerplus are piling in, too.

CAMPBELL ADDS BICYCLES AND MOTOR WHEEL

LA CROSSE, Wis.—Campbell's Cycle Agency, at 225 North Third street, handling the Harley-Davidson, has sold an electrically equipped twin to the La Crosse police department, and commercial outfits to the Ickley Sausage Co. and the Langdon Meat Market. The firm has taken the agency for the Smith Motor Wheel also and added a complete line of bicycles. The Princeton and Miami lines are the bike leaders for Campbell's this season.

Kansas City and Thereabouts

KANSAS CITY, MO., Sept. 27.—Arthur Stephens, factory representative of the Hendee Manufacturing Company, who has been in Kansas City taking the place of Al Crocker, who has been visiting the factory, says that the Joplin, Mo., Indian agent, the Hafer Auto Co., has brought the total of their sales in Joplin up to the four carload mark for this season.

Albert Hanson has lately taken his place at the head of the local Wigwam, following the recent death of his father, C. Hanson. Mr. Hanson has outlined his plans for continuing the business as following directly in business getting and the business holding footsteps of the late manager.

The Kansas City M. C. and a large number of Kansas City, Mo., motorcyclists will head one of the largest business parades ever witnessed in Kansas City, Kan., Saturday next. The parade will be a dress affair and the local riders are planning some very unique decorations for their machines. It is expected that the riders will form a procession of more than a mile in length. The parade is under the auspices of the Knights of Pythias.

R. A. Weed, salesman for the Saufley Supply Co., is now enjoying his annual two-weeks vacation. Mr. Weed is somewhat missed from the local cycling fraternity, as he was one of the potent factors in the establishing of the Kansas City Bicycle Dealers' Association.

News has reached Kansas City that Frank Archer, foreman of the repair department at Hanson's Indian agency here, who is now at his home near Fort Scott, Kan., suffering from a broken ankle, is now rapidly recovering and is expecting to resume his work at the local Wigwam within a short while.

GENERAL SALES BUYS HUB CO. INTEREST

Boston Firm Purchases De Long Brothers' Business in Providence and Moves Stock to Own Stores

PROVIDENCE, R. I., Sept. 23.—An important deal in the motorcycle trade was put through here this week when the General Motorcycle Sales Co. took over the stock, fixtures and good will of the Hub Motorcycle Co., as well as the agency rights from De Long Bros.

Ben C. Straube, manager of the General Motorcycle Sales Co. of Boston, came here Thursday, and with W. F. Halliday, manager of the Providence Branch, took an inventory of the stock and moved it from the Providence branch of the Hub company on Empire street to the purchasers' branch on Broad street.

As a result of the General company taking over the agency for the Excelsior machine which was handled by the Hub, additional room will be taken on, as considerably more room will be required because of the company just becoming agents for the Reading-Standard.

Halliday announced that two floors in the building he is now occupying would be added, and these will be used as stockrooms. The first floor will be used for a showroom and repair shop.

KERRIGAN TAKES ON MOTOR BICYCLE

NEW YORK.—William Kerrigan, of 1133 Park avenue, this city, recently signed up to represent the Dayton Motor Bicycle at retail in Deal Beach, N. J., and also in the upper East Side of the metropolis. Kerrigan reports a most successful season at Deal Beach, having disposed of nine of the little front-wheel drive machines, several of which were ladies' models.

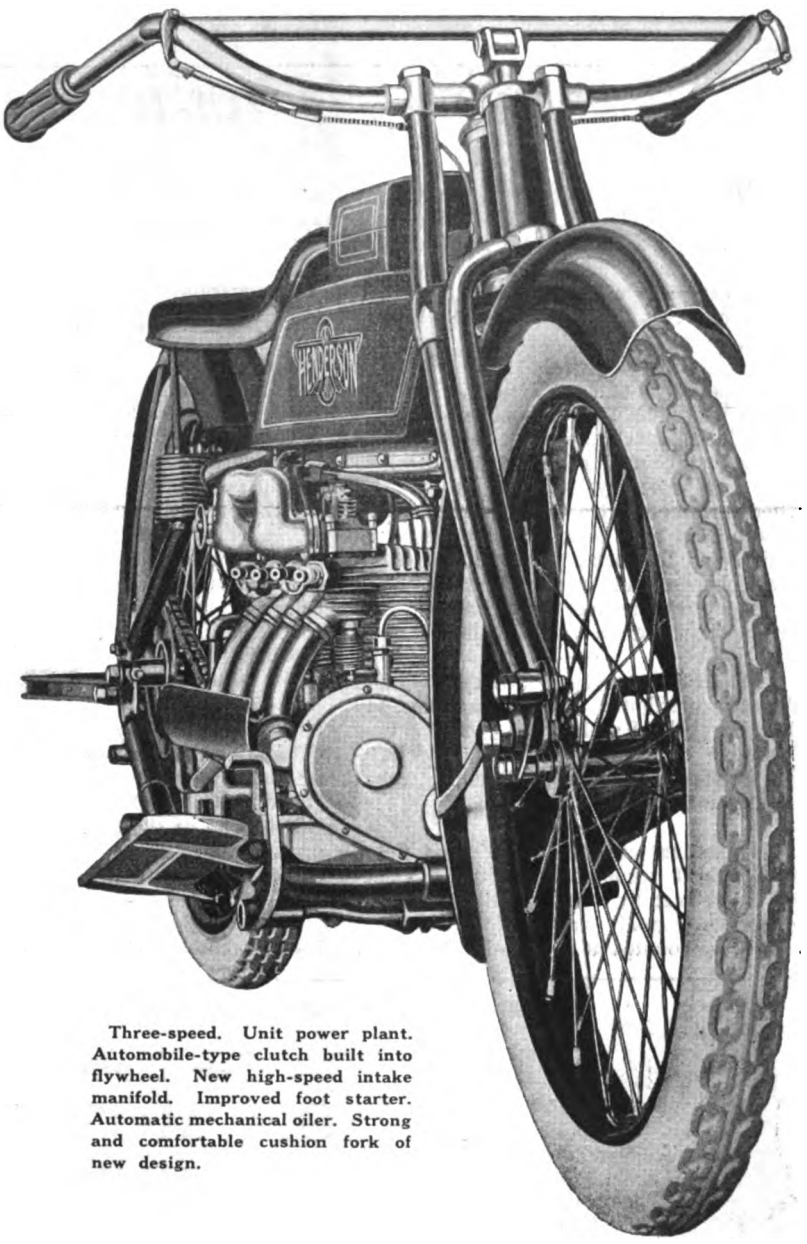
Kerrigan occupies the New Jersey quarters from May to November and spends the rest of the year in New York. His business card embodies the chief points of the Motor Bicycle on the reverse side, so that it acts as a catalog as well as an address medium.

TAKES HARLEY-DAVIDSON IN FORT WAYNE

FORT WAYNE, Ind.—Herman L. Daler has signed up to represent the Harley-Davidson in this section for 1917. He got the agency through Hap. Scherer, the factory traveller, on the latter's last trip through this section with his 1917 olive drab Harley-Davidson.

Daler will shortly locate in a modern store with well-equipped shop. His demonstrator is now on the way from Milwaukee, and he has obtained orders for five of the new models already.

Digitized by Google



Three-speed. Unit power plant. Automobile-type clutch built into flywheel. New high-speed intake manifold. Improved foot starter. Automatic mechanical oiler. Strong and comfortable cushion fork of new design.

The 1917 Henderson four-cylinder motorcycle is being chosen by the most critical and exacting buyers in all parts of the world. Its features of advanced construction naturally bring preference.

HENDERSON MOTORCYCLE COMPANY, Detroit

Digitized by Google

Denver Motorcycle Jottings

DENVER, Colo., Sept. 25.—Walter W. Whiting, of this city, and Western distributor for the Harley-Davidson motorcycle, narrowly escaped death or serious injury one evening last week while returning from a motorcycle trip to Northern Colorado with his wife. While riding on the road north of Fort Collins, Colo., an automobile made a careless attempt to pass the Whiting machine and as it did so the driver lost control of his machine which forced the motorcycle riders into a ditch where the motorcycle turned turtle.

Both Mr. and Mrs. Whiting sustained bruises and the machine was slightly damaged. No serious injuries were received by the motorcycle riders, however, and they consider themselves very fortunate.

The Mead Autocycle Co. of this city and Western distributors for the Excelsior, say that the 1917 Excelsior is creating very favorable comment here. They are looking forward to a very good selling season for this machine.

One day last week the Fort Collins, Colo., M. C. held its second annual picnic at Bellevue Park near that city. Five hundred motorcyclists from all parts of Northern Colorado were counted at the picnic. The Fort Collins club invited every motorcycle rider within a radius of 50 miles and the affair was a success in every way. The club at Fort Collins furnished the picnic dinner and also had the juvenile band of its city on the grounds to furnish music. In the afternoon a program of sports and fancy motorcycle riding was given. No accident marred the occasion and even repairs were out of the order of events.

The affair will have lasting effects as it will do a whole lot toward increasing the popularity of the motorcycle, and the dealers of Northern Colorado see in it a means whereby sales of their machines will be increased.

In connection with the Frontier Day celebration that is to be held at Grand Junction, Colo., Oct. 4-6, motorcycle races will be one of the chief attractions. Many of Colorado's fastest riders have already made known their intention of taking part.

County Clerk Francis Beckwith, of Boulder county, Colo., announces that he has already issued over 2,000 automobile and motorcycle licenses since the first of the year and he expects to issue 250 more before next January. He issued 1,200 licenses last year and ordered supplies for a 25 per cent. increase this year, but there has already been more than a 50 per cent. increase. This record speaks well for the motorcycle popularity in Boulder county, and the same is true in greater and lesser degrees in other parts of the State. Boulder County members are looking forward to an even greater increase in 1917.

EMBLEM QUARTERS IN INDIANAPOLIS

The Non-Acid, Steel Encased

EDISON MOTORCYCLE SPECIAL

ALKALINE STORAGE BATTERY

Built Like a Watch, but as Rugged as a Battleship

Positive and negative grids are stamped out of sheet steel and heavily nickel plated; the positive active material, nickel hydrate, is held in tubes; the negative active material, iron oxide, is held in pockets—each made of perforated, cold-rolled carbon-steel ribbon, nickel plated. The container is made of nickel plated sheet steel, with side seam, bottom and cover all welded by the oxy-acetylene process, making it practically one piece of steel.

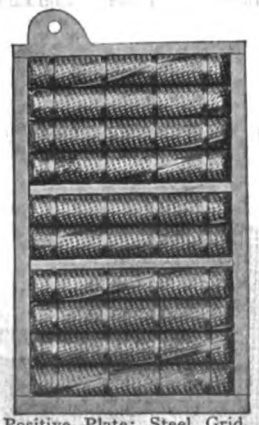
Nothing can bend, buckle, crack or jar loose, no matter how rough the going, and no amount of vibration or concussion can cause the active material to "shed" and form sediment.

The solution is non-acid—does not dissolve the active materials, is not corrosive, cannot cause sulphation, deterioration or attack the parts of the cell in any way.

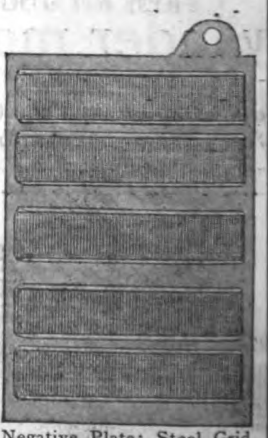
The top of the cell is specially constructed to prevent spilling.

The safe, efficient, long-lived, economical, always reliable storage battery is the Edison Nickel-Iron-Alkaline.

WRITE FOR BULLETIN 883.



Positive Plate: Steel Grid Holding Round Tubes of Nickel Hydrate There are Two Such Plates in the Motorcycle cell.



Negative Plate: Steel Grid Holding Flat Pockets of Iron Oxide. There are Three Such Plates in the Motorcycle cell.

DUNNVILLE RACES STAGED IN SPITE OF TANGLE

C. M. A. Called Off Ontario Championships But Ten Speedsters Gathered at Annual Fair and Raced Without Formal Sanction; All Types of Machines Were Used on the Half-Mile Track

DUNNVILLE, Ontario.—What had been advertised as the Ontario Championships of Canada were held at Dunnville on Friday, September 15, but without the sanction or auspices of any recognized governing association. Ten speedsters from all parts of Ontario gathered for the competition and these riders went ahead with the races, although a notification had been sent out by the C. M. A. that the events had been called off. The races were held on the local half-mile dirt track on the occasion of the annual Dunnville Fall Fair, and the prizes were provided by Secretary Fry of the Fair Association.

The championship races here were first planned early last spring, and the Dunnville Fair Association and the Canada Motorcyclists' Association agreed to co-operate in making the arrangements. A tentative program was announced, and the motorcycle racers prepared to take part. Late on Thursday, September 14, the day before the meet, President F. A. O. Johnston of the C. M. A. notified the Toronto riders that the meet had been cancelled. The riders got into touch with the Dunnville promoters by long distance telephone, however, and agreed to put in an appearance regardless of the action of the C. M. A. No less than ten of them showed up at the track, and three very exciting races were held before an enthusiastic throng of over 5,000 persons. In view of the attitude of the governing association, nothing was said at the track regarding championship titles. The C. M. A. had not issued a sanction for the meet, it is declared, with the result that the Dunnville management has no comeback at the association. No word was spoken between the Dunnville Fair people and the C. M. A. regarding a license for the meet during all the weeks that the races were in contemplation.

Unfair Dealing Alleged

The reason given by President Johnston of the C. M. A. for the unfortunate situation is that the Dunnville Fair management was not dealing fairly with the motorcyclists in the matter of prizes. The riders themselves declare, however, that they were satisfied with arrangements, and they, therefore, ignored the C. M. A. Further, the riders announced that they had arranged to race at several other fall fairs in Ontario during the next two or three weeks, and that plans had been made for a race meet in Toronto on Thanksgiving Day, Monday, October 9. This will be the only racing that the speedsters will have this season, and the hope is expressed that the C. M. A. and the riders will get together before another meet is held. On account of the war the C. M. A. has made no attempt to secure members during the summer months, but the racing men still in Canada have wanted just a little track sport—for old time's sake.

In the meet at Dunnville all types of machines were used, although the track is only a half-mile affair. There were big-valve twins in the same races with ported singles, while touring machines clashed with stripped racing mounts. The track was very heavy, however, so that the competition was surprisingly close and the finishes were exciting. One accident happened when Woods was thrown over the outside fence in practice before the first race. He was crowded into a corner by a big-valve machine ridden by Cupola of Niagara Falls. Woods is one of Toronto's racing men. He sustained an injured arm as a result of the spill and could not take part in the contests.

The summary of the three races is as follows:

One mile—Macdonald, Toronto, Excelsior twin, first; Wilfrid Morrison, Toronto, Excelsior single, second; Joe Russell, Toronto, Excelsior twin, third. Time, 1:13.

Two-mile—Won by Morrison; second, Macdonald; third, Russell. Time, 2:21.

Five-mile—Won by Macdonald; second, Russell; third, Morrison. Time, 6:35.

No. 4 STANDARD RAT TRAP PEDAL

THESE STRONG SUBSTANTIAL MOTORCYCLE TYPE PEDALS

have that sturdy look that comes only from correct design and first class construction.

THE NO. 4 STANDARD is a new type of rat trap pedal added to our line this year, making it the most comprehensive line of rat trap pedals offered to the trade.

THE NO. 5 PIRATE has such big, soft, easy rubber cushions! It minimizes the jars and bumps. Try a pair and find out for yourself.

Our cycle parts and accessories appeal to the mechanical expert. They have been standard from the beginning, and mark the utmost in the industry.

Our products comprise: Diamond "E" trade mark brand, Spokes and Nipples for Bicycles, Motorcycles, Tricycles, Velocipedes, Invalid Chairs, Sulkies, Carriages, Cyclecars and Automobiles. Pedals for Bicycles, Tricycles, Velocipedes and Motorcycles. Toe Clips for Bicycle Pedals. Emergency Axles for Pedals.

DERLETT MADE RAPID PROGRESS FROM MODEST START

MADISON, Wis.—Herman Derlett, of the East End Cycle Company, is building a new garage and salesroom at 604 Atwood avenue, and when the work is completed he will have one of the most up-to-date establishments of the kind in Wisconsin. Derlett started in a small salesroom near his present location two years ago, and has since enlarged his store steadily. He handled the Excelsior during the past season and has delivered 32 twins and three lightweights.

Derlett recently added a bicycle department to his store and has taken on the Miami and Excelsior lines. For 1917 he will cover the whole of Dane county and the southern half of Columbia county for the the Excelsior.

PECKS DISSOLVE PARTNERSHIP

ELGIN, Ill.—Peck Brothers, Indian dealers at this place, have dissolved partnership. Earl Peck is now in charge of the motorcycle agency, while his brother has gone into the taxicab business. Peck has just delivered a sidecar outfit to Carl Austin, who will use it for milk delivery.

HOUSE EMPLOYES' MOTORCYCLES

DENVER, Colo., Sept. 18.—The Colorado Fuel & Iron Company has just finished building sheds at its steel plant in Pueblo, Colo., in which motorcycles can be parked and be protected from bad weather. A large number of the employes of the company at the plant ride motorcycles to and from work and it is their machines that will be housed in the sheds.

ALLIANCE INCREASES STOCK

ALLIANCE, O.—The Alliance Tire Co. has decided to increase its capital stock $500,000, for the purpose of taking care of improvements designed to give it a 200 per cent increase in capacity. A three-story addition will be built, which will double the size of the present plant, and give room for 300 more men. The company's capital stock is now $150,000.

OKLAHOMA HAS 1,629 RIDERS

OKLAHOMA CITY, Okla.—The report of State Highway Commissioner A. N. Leecraft shows that there are now 1,629 motorcycles in Oklahoma, as shown by the number that have taken out state licenses and have been issued an annual tag by the state highway commissioner. Under the recently enacted law all motor-driven vehicles in this state must take out a state license by payment of a tax to the state highway department.

TWO MORE STATES RECIPROCATE

OTTAWA, Ont.—Two more States of the American Republic have agreed to recognize the licenses of Ontario motorcyclists in return for similar action by the Ontario Government. The two States are West Virginia and Kentucky. The period of the free touring privilege in each instance is twenty-one days.

BURNETT HAS CARD INDEX SYSTEM NOW

PROVIDENCE, R. I., Sept. 19.—William N. Burnett, manager of the Harley-Davidson Sales Company, West Friendship street, is busily engaged installing a card index system in his plant. Since securing the services of Lewis J. Knight, as head of the repair department, a plan has been started to formulate a system such as is used in one of the big machine shops here for the handling of parts.

While not yet complete, Burnett said yesterday: "When I get this system complete, we will do away with invoicing. We will take one last invoice before we transfer the bookkeeping department to the card index system. Then we will be able to tell at a glance what we have in stock, at any time, when we ordered last, with data pertaining to the parts we carry."

FISKE ADDS HUDSON BICYCLES

BELOIT, Wis.—L. C. Fiske, Indian dealer at Beloit, has just added the Hudson line to his stock of bicycles. Fiske handled Indian bicycles during the past season and will continue with them, in addition to the Hudson line, for 1917.

FREESE TAKES AGENCY

ELGIN, Ill.—Henry Freeze has taken on the Harley-Davidson at Elgin and has already delivered a number of machines. He has opened a repair shop in the rear of his home at 1201 Larkin street, and reports a lively business.

THE
CORBIN-BROWN SPEEDOMETER

This instrument professes to be no more than a thoroughly reliable and durable mileage recorder. It is accurate as far as engineering skill can attain mechanical accuracy. Its principle is correct, its construction sound. Thousands upon thousands of them are now in use and, without exception, they are returning highly efficient and satisfactory service.

Those that have had experience with speedometers in general, equip, the Corbin-Brown—among them being the U. S. Government.

You could make no better choice. Investigate for yourself. Catalog on request.

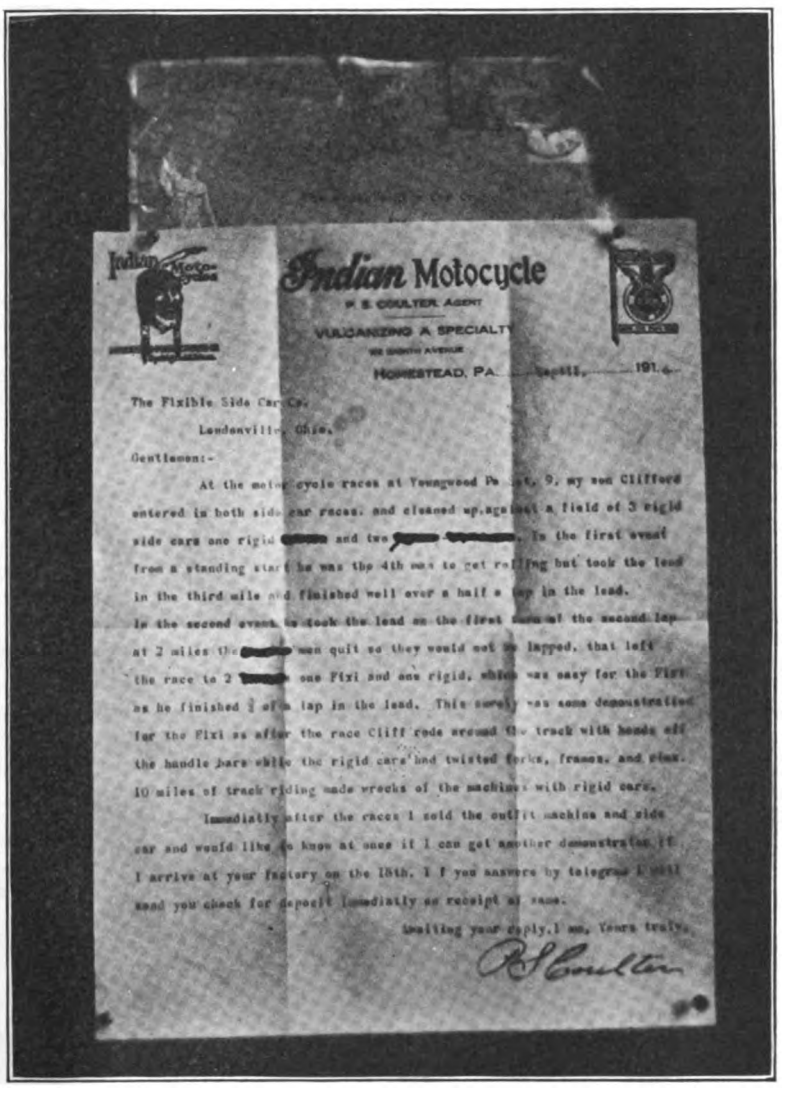
A WINNER

The New 1917



Indian Motocycle
H. S. COULTER, AGENT
VULCANIZING A SPECIALTY
HOMESTEAD, PA.
The Flexible Side Car Co.
Loudonville, Ohio.
Gentlemen:-
At the motor cycle races at Youngwood Pa ...t. 9, my son Clifford entered in both side car races, and cleaned up against a field of 3 rigid side cars one rigid [redacted] and two [redacted]. In the first event from a standing start he was the 4th man to get rolling but took the lead in the third mile and finished well over a half a lap in the lead.
In the second event he took the lead on the first turn at the second lap at 2 miles the [redacted] men quit so they would not be lapped, that left the race to 2 [redacted] one Flxi and one rigid, which was easy for the Flxi as he finished 3 of a lap in the lead. This surely was some demonstration for the Flxi as after the race Cliff rode around the track with hands off the handle bars while the rigid cars had twisted forks, frames, and rims. 10 miles of track riding made wrecks of the machines with rigid cars.
Immediately after the races I sold the outfit machine and side car and would like to know at once if I can get another demonstration if I arrive at your factory on the 18th. I f you answere by telegram I will send you check for deposit immediatly on receipt of same.
Awaiting your reply, I am, Yours truly,
R S Coulter

FLXICAR

The Side Car that tilts and turns and doesn't upset

DEALERS VISIT DAYTON PLANT FOR BICYCLES

DAYTON, O.—H. B. Retz, representing the Dayton in Muncie, Ind., was at the Davis Sewing Machine Co.'s plant this week arranging for a large order of bicycles. Retz reports that the Dayton is the standard make in his city.

OTTO RICHTER, head of the Washington Cycle & Repair Co., of Tacoma, Wash., spent part of the week at the Dayton plant. Richter placed a big order for 1917 as a preliminary to a trip through the factory. He has sent out travelling salesmen through Montana, Idaho, Colorado and Washington in preparation for a big season in bicycles.

BUSINESS-BRINGING BULLETIN

PROVIDENCE, R. I.—The General Motorcycle Sales Co., Boston, with a branch in this city, W. F. Halliday, manager, issues each week an attractive weekly bulletin. The paper is devoted largely to giving prospective customers an idea at all times what the company has in stock in the way of rebuilt and used motorcycles and used motorcycles with sidecars. The circular gives a description of each machine, with its price. The bulletin also tells how to order.

HAYNES SHOWING NEW VAN

COLUMBUS, O.—The P. I. Haynes Co., North Fourth street, central Ohio, distributor for the Harley-Davidson, is showing a new delivery van, which is attracting attention. The van is constructed to be used for all light delivery work. C. E. Roth, a salesman for the concern, has been demonstrating the van on the streets of Columbus.

FRISCO BOYS' BAND VISITS INDIAN FACTORY

SPRINGFIELD, Mass.—The Columbia Park Boys' Club Band, of San Francisco, Cal., which has been playing in Riverside Park, near this city, for a short time, paid a visit to the big plant of the Hendee Manufacturing Company on September 19. The full strength, 37, came to the works and all went through the various factories. They were keenly interested in each step of the process and asked many questions of the guides who took them through the plant.

The boys range from 11 to 20 years of age and are making a tour of the east, paying their own way with money earned at fairs, parks and other entertainments. The band is managed by Sidney Piexotto, who is accompanying the boys.

MAEDEL TAKES ON DAYTON MOTOR BICYCLE

DENVER, Colo.—L. A. Maedel, of 1754 California street, this city, has taken the agency for the Dayton Motor Bicycle. The arrangements were made through W. H. Jackson, of W. E. & W. H. Jackson, of the San Francisco office of the Davis Sewing Machine Co., on his return from Dayton.

TEN BROECK ISSUES NOVEL FOLDER AND SAMPLE

LOUISVILLE, Ky.—The Ten Broeck Tyre Co., of this city, is sending out an attractive folder to users of motorcycle and automobile tires. With the folder is a sample of the firm's tread stock. The folder says: "Our new tread stock combined the necessary qualities of resiliency, toughness and wearability. Try to break it. Pull it. Jerk it. Give it every conceivable test, as on a grindstone or emory wheel, and you will find it the acme of tread material."

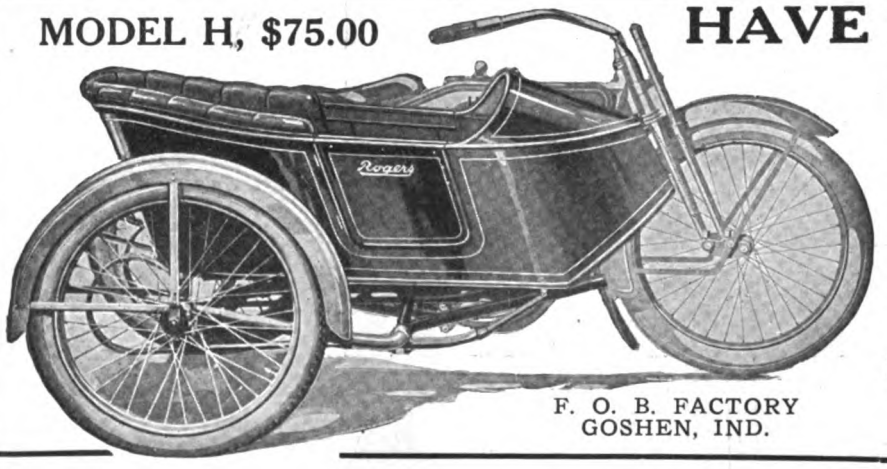
MOTOR WHEEL SHIPMENT TO PHILIPPINE AGENT

MILWAUKEE, Wis., Sept. 25.—The A. O. Smith Company has just made a large shipment of motor wheels to F. H. Thompson & Co., Manila, P. I. Dealers in the Philippines have a rainy season to contend with which puts a damper on riding of all sorts for two months. The rainy season is nearly over and the A. O. Smith Company has a standing order from F. H. Thompson & Co. for motor wheels each month.

FLUKE PAYS ALTOONA A VISIT

ALTOONA, Pa.—Clyde Fluke of the recent firm of Fluke & Davis, local agents for the Excelsior and Henderson, has just returned to this city for a short visit. Mr. Flufle is widely known in Pennsylvania as a motorcyclist, having earned considerable prestige as a mechanical expert.

MODEL H, $75.00



F. O. B. FACTORY
GOSHEN, IND.

HAVE YOU NOTICED

that on practically all of the 1917 model motorcycles, special attention has been given to sidecar attachment?

It is an open acceptance of the sidecar as a part of the complete motorcycle.

ROGERS Sidecars have always fitted all standard motorcycles.

Now, motorcycle manufacturers are fitting their machines to ROGERS Sidecars.

THERE IS A REASON.

Think it over and send for catalog.

Cut Price Talk Aimed at Buyer

Assistant Sales Manager Mueller of the Harley-Davidson Motor Company Points Out That the Cut-Rate Purchaser Is Really a Poor Business Man and Hardly Worth Catering to

MILWAUKEE, Wis., Sept. 25.—While, of course, the last word to the dealer on the subject of price cutting still remains to be said, according to E. J. Mueller, assistant sales manager of the Harley-Davidson Motor Co., the dealer who cuts prices is, in the last analysis, hardly more open to criticism as a poor business man than the fellow who buys at the cut rate. And tackling the subject from that angle, Mr. Mueller has this to say to the fellow who is looking for "bargain prices" on new motorcycles, or bicycles either, for the matter of that, although with characteristic modesty he admits that not all of the discourse is his own:

"What is a 'Cut Price?' Of course you think you know, but do you? It sounds like buying something for less than you were supposed to pay for it—but it isn't. It is simply making you believe that it is. It is trying to make you think you are getting something for nothing, but as a business man you know this is neither logical nor possible.

"Strip this 'Cut Price' proposition of all its veneer and finery and it simmers down just to two things; two reasons for its existence. One is that the article is not worth the price at which it is catalogued or listed, and the other is that the seller needs the business so badly that he is willing to sacrifice his profit in order to get rid of his product.

"Let us analyze the first reason. If a motorcycle is falsely listed in order that the dealer may cut off part of the price and still get all that it is worth, are you justified in doing business on that basis? Can you afford to own a machine on which the seller is forced to resort to such means to get you to buy it, and even if you should buy such a motorcycle at the 'confidential inside' price, are you quite sure that you got all the cut that was obtainable? If you buy that machine, can you eliminate from your mind the ever-recurring question: 'I wonder if Smith got his for less than I got mine,' or 'I wonder if I could not have got more off if I had waited another day?'

The Second Reason

"Then analyze the second reason: If the dealer needs the business so badly that he is willing to concede his profit, what is his reason? Is there not sufficient demand for his machine to create business at a legitimate profit? If, through some mental sidestepping, you can overcome those two questions, there still is this to think of: Can that dealer afford to sell you a motorcycle and concede any or all his profit and remain very long in business?

"It is a law of commerce that continuance in business depends on a fair profit. If he gives you the profit he must get out of business sooner or later. Then you own a machine without a home, and to whom are you going for service?

"There is only one kind of a dealer from whom you can afford to buy a motorcycle, and that is the dealer with the permanent investment in his business; a large enough volume of business to insure the profitable maintenance of that investment by the return of sufficient interest on it; the most modern facilities and equipment for giving you service and an organization of able, efficient men to see that business and service are properly handled.

"Such a dealer with a business of that character cannot and will not cut price to you or any other man; and the buyer who is deceived into the belief that his 'influence' or his 'shrewd buying ability' has obtained for him a 'concession,' has failed to apply to the buying of his machine the common judgment necessary in any business transaction in which an amount of money equal to the price of the motorcycle is involved.

"When you buy a motorcycle you are buying a commodity from which you must expect certain things—satisfactory service, comfort, quality and resalability—and the

CUT PRICE TALK AIMED AT BUYER

(Continued from page 50)

only way in which you can be sure of getting all of these things is by making the same careful investigation you would before undertaking any other financial investment.

"Here is one more point: It is not what you 'get off' that makes the difference, it is what you 'pay out' that interests you. It should not make any difference to you whether you get a 5 per cent. or 55 per cent. cut. It is what you have to give for the machine and what you get for your money.

"And here is still another point: Is it a good buy if your motorcycle depreciates 10 per cent. before you get it? The fact that you can get a cut on a machine—that should not have depreciated one cent—that its rate of depreciation thereafter will be proportionately more than the machine which is always sold for list price.

"Think it over!"

CANADIAN ROAD CONGRESS AT WINNIPEG

WINNIPEG, Man.—The annual congress of the Dominion Good Roads Association will be held in Winnipeg next February, according to an announcement made by the association recently. Great interest will be taken in this convention, it is expected, because of the government and municipal proposals throughout Canada to arrange for highway projects immediately after the war in order to provide employment for the tens of thousands of soldiers who will be returning after the termination of hostilities.

If all the plans are carried out, Canada will have not only a trunk road extending from coast to coast, but a network of improved highways will be found in every corner of the country.

CHILD TRAFFIC POLICE AT SCHOOL CROSSINGS

TORONTO, Ont.—For the first time the Toronto authorities have resorted to juvenile assistance for the maintenance of law and order. Through the adoption of a recent plan, one hundred and forty school children of an apparently responsible type have been chosen as traffic policemen for the regulation of traffic in the vicinity of schools. These young traffic cops ride bicycles. They are on duty at certain posts before and after school hours and their work includes the handling of school mates in crossing streets and the reporting of dangerous conditions as well as accidents. The juvenile patrol system has been adopted for fourteen schools.

MANY ENTRIES FOR DUNLOP TEAM HANDICAP

TORONTO, Ont.—Although the date has not been set for the annual Dunlop bicycle team handicap road race, scores of entries have been received for the Canadian classic. The MacDonald Bicycle Club of Toronto has turned in about forty entries, while ten members of the 180th Overseas Battalion have also signed entry forms. Many young cyclists are in training for the event, while a number of old-timers have decided to turn out once more in order to swell the number of starters.

The race will be a sixteen-mile affair and will be staged on the Markham road, one of the main highways leading out from Toronto. The only American rider who has won this race is Hans Ohrt, who captured the time prize last year. The race has been an annual fixture for Canada for more than twenty years. The competition will probably be staged on a Saturday early in October.

MILES IN KHAKI

CAMP BORDEN, Ont.—Fred Miles, one of Toronto's veteran motorcycle racers, has exchanged civilian clothes for the uniform of a Canadian soldier. He has enlisted with the Mechanical Transport branch of the Army Service Corps, in which he will continue to straddle a two-wheeler. Miles was one of the real champions in the exciting track days before the war.

NEW SVENSGAARD QUARTERS

DETROIT, Mich.—The Flint, Michigan, business of the Harry Swensgard Corp. is now located in its new building, directly across the street from its former store. The new establishment is of brick, two stories high and 25x150 feet in size.

The Purpose of this advertisement is to help us locate a few energetic dealers, or men not now dealers who know that the retail motorcycle business offers an opportunity for a very profitable investment of time and money, for *those who get started right.*

FOUR times as many early season Harley-Davidson shipments have been made to date as were made a year ago. This is one indication of the reception the 1917 Harley-Davidson has had at the hands of motorcycle dealers and riders.

We have open about 15 splendid towns where opportunities exist for an excellent business. We are looking for the right men for the places.

The Harley-Davidson contract is a money maker for those who are out for big business. If you are interested, it will pay you to get our proposition—and get it at once.

STREAKS

Holding the Tire Market

IT is quite true, as you have probably suspected, that big profits are offered you on high price bicycle tires in order to make tire sales possible.

You have even figured—and correctly—that these big profits were offered you in order to gain your tire business.

Goodyear Blue Streak Tires have demonstrated that they are their own best salesmen and therefore do not require the inducement of a large profit in order to stock the dealer.

The Goodyear dealer is satisfied with a lower profit on the $2.50 Blue Streak Tire because he believes in a small margin on a bigger volume of business and a quicker turn-over.

Goodyear Blue Streaks have held their market by giving the longest mileage at the lowest mileage cost.

And because the Blue Streak is the only bicycle tire Goodyear makes, it is made better and yet is sold for a lower price.

You can profitably accept the judgment of over 10,000 dealers, who are now enjoying the larger sales that Goodyear Blue Streak Bicycle Tires have brought them.

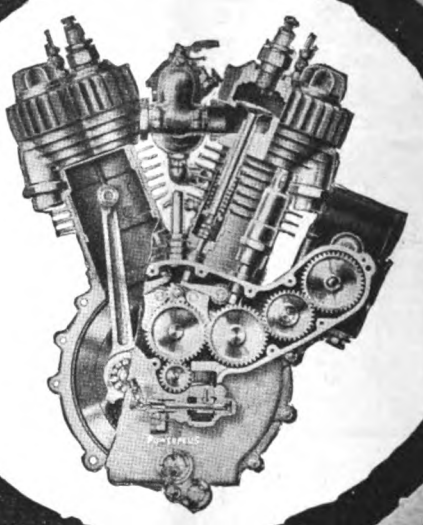
The 1917 *Indian* and the DEALER



One Hundred Per cent Perfect!

That is the sum total of the 1917 Indian line and the 1917 Indian Dealer Plan.

With the greatest string of two-wheeled thoroughbreds ever brought together under a single nameplate, the 1917 dealer is equipped to round up a volume of sales that will make previous records comparatively insignificant.

That's a pretty sweeping statement when you consider the vast numbers of Indians sold in past seasons.

But it's warranted by facts—by the Big Twin with the big refined Powerplus Motor—the great powerplant that, in 1916, annexed every endurance contest worthy of the classification.

And that's not all. There's the Indian Lightwin with its vibrationless Indian Four Cycle Opposed Motor—the only motor of its type in this country.

Here, at last, is what a multitude of riders have waited for—mechanical simplicity, low first cost, light upkeep, and modified power and speed.

Then, finally, the commanding line of Indian Bicycles, with its flexible range of prices and the snappy motorcycle-style Indian Motobike with Electrical Equipment.

With a line like that—Indian all the way through, mind you!—there isn't a man or boy in your territory who can't be induced to become Indian enthused.

And you can sell him practically on his own terms—we've arranged for that. That's a part of the 1917 Selling Plan, particulars of which we want to hustle to you the minute you make up your mind you need them. If your territory's open, why not ask us all about the Big Drive Plan TODAY and start the ball a-rolling?

MOTORCYCLE TIRES

Predictions Proved Profitable

We told you last January that to be a Goodyear Service Station Dealer meant to have public opinion on your side.

We told you that it meant a nation-wide state of mind friendly and favorable to Goodyear Blue Streaks.

We told you that it meant pulling with the stream instead of pulling against it.

We told you to be a Goodyear Dealer because it meant the swifter and easier selling which is the shortest road to permanent profit.

Goodyear Blue Streak sales so far this year have broken last year's record for the same period many times over.

Blue Streaks have been the tire choice on 75 per cent of the new motorcycles sold this year.

Blue Streaks have been the tire choice of the U. S. Government—over 50 per cent of the machines on the Border being Goodyear-equipped.

Blue Streaks hold the vast majority of race track and endurance run records.

In the face of this nation-wide preference for one tire, don't you agree that you can get a larger volume of sales, quicker turnovers, and more permanent satisfied customers in selling Goodyear Blue Streaks?

We can ship you a stock immediately.

ANOTHER CALL ISSUED FOR ARMY MOTORCYCLES

Bids to Be Opened October 10 Call for Ten Motorcycles, One Forecar, One Rear Car and Two Sidecars—Are for Service at Fort Bliss on Mexican Border—Quartermaster Official Just Back from Mexico Calls Motorcycle Indispensable.

NEW YORK, N. Y., Oct. 3.—Confirmation of the motorcycle's indispensability to the U. S. Army in the shape of a call for bids for more machines; and confirmation also of the power-driven two-wheeler's real worth by an official high up in the Quarter Master's Department to a **Motor Cycle Illustrated** representative, accompanied by at least a hint of more orders to come, mark the rapid strides the motorcycle is making in wending its way into the good graces of U. S. Army officials.

In speaking of the latest call for bids on motorcycles, which calls for an even ten machines for Battery C 25th Field Artillery, Camp Fort Bliss, Texas., the official in question, who, because of departmental reasons, asked that his name be withheld, states that the utility of the motorcycle where roads of any sort whatever are prevalent, is unlimited. Where roads are lacking, however, he is frank to state that the usefulness of the vehicle practically ceases.

First-Hand Experience

When it is added that the official in question returned only yesterday from a sojourn of many months in Mexico, where he had active charge of provisioning the punitive expedition of the U. S. Army located there for the purpose of capturing the bandit Villa, it will readily be appreciated that his words of praise for the motorcycle carry great weight.

The latest call for bids for motorcycles issued today, calls for six twin, three-speed machines fitted with tandem attachments for carrying two passengers, the machines to be fitted with kick starter and to be complete with saddle, mudguards, tools and tool boxes, the color to be olive drab.

One motorcycle answering the above description but fitted with a "pusher" car or forecar; one with a rearcar; and two with sidecars are also required. The order calls for ten motorcycles in all.

Each machine must be equipped with a Prest-O-Lite tank, head lamp, tail lamp and the necessary tubing; a Seiss mechanical horn or other make of warning signal of equal quality; an oil lamp of Neverout quality but not necessarily that make, and a Corbin-Brown speedometer or another make of Corbin-Brown equal. Bids will be opened October 10.

SCHACK SEES GREAT BICYCLE POSSIBILITIES

Head of Emblem Mfg. Co. in New York at Completion of Coast to Coast Trip Is Greatly Enthused

NEW YORK, Oct. 3.—Greatly enthused by business prospects as revealed by a very extensive trip which has carried him to the Pacific Coast and back through the New England States, W. G. Schack of the Emblem Mfg. Co. arrived in New York today.

Mr. Schack laid great stress on the bicycle possibilities for the coming year, which he characterized as unbounded. Coming from a trade man of Mr. Schack's standing, who is known to lean toward conservatism, this view of the situation is one to carry a message of good cheer and enthusiasm to cycle dealers the country over.

Mr. Schack will go south as far as Richmond before he again heads for Angola, and after a few days spent at the factory getting things lined up for the new season will again head out toward Atlanta and other points south.

There's a Sales Punch in This Box for You, Mr. Dealer

ON pages 18 and 19 of this issue will be found a striking cartoon dealing with the Long Arm of Motorcycle Service, with some equally interesting text, but just by way of breaking into the subject let us introduce D. J. Haynes, Excelsior agent in Kansas City, Mo., who reports that a Special Delivery postman to whom he sold a machine a week or ten days ago is now able to deliver from 75 to 115 letters and packages a day.

¶When you consider that Uncle Sam pays eight cents apiece for the delivery of these letters, and that a postman on foot cannot hope to distribute more than 40 letters per day, even when all his trips are short, it will be seen that the Excelsior motorcycle used by the Kansas City postman is giving the Missouri city a fine demonstration of the Long Arm of Motorcycle Service.

¶Incidentally, it will be noted that the Special Delivery carrier is enabled, through the use of his Excelsior, to earn from $6 to $9 a day, as compared with the $3 a day that a foot postman considers himself lucky to earn. Multiply the Kansas City carrier's average income per day by six and you will see what the motorcycle is doing each week for his bank account. His work is pleasant, and he is also gathering the simoleons.

FREED HANDLES INDIAN FOR ALL CALIFORNIA

Pacific Motor Supply Company, Which Became Northern California Distributor for Hendee Lines in 1915, Now Takes Over Southern District Also, and Is Perfecting State-Wide Sales Organization—Freed Predicts Unprecedented Activity.

LOS ANGELES, Cal., Oct. 2.—President A. Freed, of the Pacific Motor Supply Co., announced today, in connection with the formal opening of the Los Angeles store, that his company is now in charge of Indian distribution for the entire State of California. The Pacific Motor Supply Co. became Northern California distributor for the Indian in 1915 and immediately launched a sales campaign which has had far-reaching results. It was hinted at that time that the company might ultimately arrange to handle the Hendee lines on a State-wide basis, but definite indications confirming this development did not come until recently and the official announcement of the change was held off for various and sundry reasons until today.

Heretofore the Indian lines have been handled in southern California by C. Will Risden, of Los Angeles, who also is distributor for the Cleveland lightweight. Risden retains the Cleveland representation in the large territory he has been covering for several years past.

President Freed has been at work with Manager Lebell in Los Angeles for the past week or ten days on plans for a rapid-fire agency campaign throughout southern California, and arrangements have been made to carry in Los Angeles a large stock of Indian motorcycles, bicycles and parts so that the service to Indian dealers in this section can be placed on a par with the excellent service system now operative in northern California.

It is expected that it will be possible to announce the full list of Indian agents for southern California in two weeks. It is understood that quite a few of the present sales representatives will be retained, but that a number of new ones will be signed up at strategic sales points.

In an interview with the correspondent of **Motor Cycle Illustrated,** President Freed stated today that in his opinion 1917 will be the best year California has ever known for motorcycle business.

"Big crops, good prices for all products and the State's wonderful system of roads combine to offer opportunities that are without precedent," said Mr. Freed, "and our company has left nothing undone to make the most of the situation. We now feel that we have a first-class sales organization, one in which everyone fully appreciates his responsibilities, and as we also feel that the Indian line for 1917 is the most attractive ever offered by the company, it is easy to understand why we confidently expect to break sales records during the coming twelve months."

OGDEN MAKES A NEAR RECORD RUN

Drives His Indian Cygnet Combination from Buffalo to New York in 16½ Hours—Averages 28.7 M. P. H.

NEW YORK, Oct. 1.—Leadley Ogden of the Cygnet Rear Car Co. arrived in Gotham at 5.30 this evening after an impressive, if not actually a record-breaking run from Buffalo on an Indian Powerplus motorcycle fitted with Cygnet rearcar. Ogden made the distance, which totaled 473 miles with the detours made necessary by road repairs, in 16 hours and 30 minutes, not including time out for taking on gasoline and oil and other short stops.

He left Buffalo at 7.30 a. m. yesterday morning, and striking fine roads, "opened her up" and maintained a steady pace throughout the forenoon and afternoon, reaching Utica that afternoon. He stopped over at Utica last night and took to the road again this morning. He encountered fine roads all the way to Albany, but from that point down to New York detour after detour retarded his progress. Despite this forced slowing up of pace, however, Ogden averaged 28.7 miles an hour for the actual time he was on the road, which is a remarkable showing.

As to the consumption, and Ogden took accurate account of both his gas and oil, he made an average of 43 miles to the gallon of the fuel, covering the distance on just 11 gallons, while three quarts of lubricant sufficed for the trip. He came through without the slightest trouble and claims to have made a full 60 miles an hour at one point, but he is frank to admit that he was going down hill at the time.

GETS ONLY PERFECT SCORE IN AUSTRALIAN TRIAL

READING, Pa.—The Reading Standard Company, maker of R-S motorcycles, has received word from Sydney, N. S. W., that W. E. McCarthy, riding a 10 h. p. Reading Standard twin was the only sidecar competitor to get a perfect score in the recent New South Wales M. C. reliability trial.

The route of the trial was over Spit Pass, through French's Forest, Rocklily and Narabeen and return, a distance of 28 miles. The circuit had to be made several times and there were many entrants on British solo and sidecar combinations, as well as the brown American rig. This was the first time that a Reading Standard entered in a contest in New South Wales and its performance aroused a lot of interest.

INTEREST RUNS HIGH IN NEW YORK SHOW

Manager Coffman Tells How It Will Be Made to Dovetail with the Chicago Exhibition—Expect Big Returns

NEW YORK, Oct. 4.—Supplementing his recent announcement to the trade concerning the Chicago Show, Manager A. B. Coffman is now rushing out literature which calls the attention of prospective exhibitors to the equal importance of the New York exhibition. As has already been stated in these columns, the Chicago Show dates are November 13-18, and the New York Show will be staged December 4-9.

Last year's excellent showing at the independent show in New York proved beyond question the demand of the trade for the big Eastern exhibition, in the opinion of Manager Coffman and his coworkers, and they look forward confidently to even bigger business returns from the coming display program. The outstanding feature of New York's 1915 show was the bed-rock business basis on which it was conducted, the order and contract books of all exhibitors being pretty well filled before the doors closed at the end of the show week.

As in the Chicago Show, the display spaces at New York will average 12 square feet, although some of the booths will be 10 by 12. The rental will be the same as at Chicago, 75 cents per square foot.

At the close of the Chicago Show all the exhibits to appear at New York will be loaded on special cars and rushed through by fast freight. This cuts out excessive express charges and assures the exhibitor that his goods will be in New York in perfect condition for the opening of the big exhibition on December 4.

Manager Coffman reports much interest in both shows, and calls attention again to the advisability of making applications for space without delay.

LONG TEST PROVES STURDINESS OF R-S

READING, Pa.—The 1917 demonstrating machine with electrical equipment and sidecar sent out by the Reading Standard factory recently returned to the Water street plant after a test covering approximately 14,000 miles. The outfit was in operation in all kinds of weather, and the driver took care to travel over the roughest roads possible during the test. Although the motorcycle was drenched several times, there was no difficulty experienced with the Bosch G1EV generator and the Exide battery which was its equipment.

Particular care was taken to check the performance of the electric outfit, continuous readings being taken for rate of discharge and charge. The report was excellent for the entire distance. On tearing down the motor and other parts it was seen that the 1917 changes were most satisfactory. The R-S with electric equipment has a horn, headlight and tail light in addition to the Bosch generator and the battery.

BARNARD JUMPS TO EXCELSIOR STAFF

Well-Known Metropolitan Salesman Leaves New York Sporting Goods Co. to Travel for Chicago Co.

NEW YORK, Oct. 2.—Irving W. Barnard,, well known as salesman, road and track racer, has severed his connection with the New York Sporting Goods Company, of this city, and is traveling for the Excelsior Motor Manufacturing & Supply Company in Eastern territory. Barnard takes up the work of Arthur Rochow, who left the Excelsior forces to go with a motor truck firm recently.

Barnard entered the motorcycle business in 1910, with the old metropolitan firm of F. A. Baker & Co., handling the Indian at 10 Warren street and 2104 Broadway, and was also with the Bidwell-Conklin Company, uptown Indian agents at a later date. He returned to the Baker firm later and continued with the New York Sporting Goods Company when the Baker company merged with that house.

Barnard has competed in all the big Eastern endurance runs during the last three years, and has won a number of medals and prizes in these contests. He was recently active in promoting races.

McBRIDE CANADA SALES HEAD FOR HENDERSON

Well-Known Toronto Agent Contracts to Cover the Whole Dominion for the Four-Cylinder Machine and Is Ready for Coast-to-Coast Tour to Confer with Dealers and Line Up New Ones—Will Make Strong Western Circuit of Agents.

TORONTO, Ont.—Percy A. McBride, a captain of the motorcycle industry in Canada, has made an important territorial gain as a result of a recent trade move. For the past several years McBride has been the Eastern Canadian distributor for the Henderson. As a result of a conference with the Henderson people, McBride has been appointed the Canadian sales representative for the Detroit-made motorcycle.

He has already made arrangements for a coast-to-coast tour for the purpose of appointing agents to serve all communities in every Canadian Province. The first leg of the trip will be an inspection of the trade in all cities and towns between Toronto and Quebec. These places include Kingston, Belleville, Brockville, Ottawa, Prescott, Trois Rivieres, Sherbrooke, St. Hyacinthe and Valley field. McBride announces that it is his intention to place a Henderson agency in every important centre in the Dominion. He intends to spend considerable time, he declares, in selecting representation for the Henderson in Western Canada, which he will probably visit immediately after the New York motorcycle show.

McBride also reports that he has already placed orders for frames and parts for 2,500 bicycles which will be assembled on his Toronto premises before spring. Considerable of this material is being imported from the United States, the frames, for instance, being purchased from the Excelsior Cycle Co., Michigan City. The McBride wheels will have Hercules brakes, made by the Canada Cycle & Motor Co., while the tires will be Goodyear or Dunlop. McBride could not get enough bicycles from the factories last summer, and he intends to protect himself next season by the establishment of an assembling plant.

If present negotiations are carried through to a successful termination McBride will also be the direct representative in Canada for the Excelsior Motor & Mfg. Co.

McBride reports that in both motorcycle and bicycle lines his business for 1916 was 75 per cent. greater than in 1915, and three times as great as in 1914, which was a poor year for almost everybody in the Canadian trade. He has in mind an increase in his staff of employes, and expects to secure the services of a salesman who will travel on the road continuously. McBride himself expects to be much on the road during the coming winter months. Next year's business will eclipse the volume of trade in any previous season to a considerable degree, he expects. 1917 will be a great year for everybody.

MOTORCYCLE EXPORTS SLACK OFF IN JULY

Commerce Bureau Figures Show Decline of 21 Per Cent. Over Exports of July 1915—Bicycle Exports Soar as Well as Imports of Cycle Parts—Figures Show Average Price of Exported Motorcycles on the Increase.

WASHINGTON, D. C., Oct. 3.—That our motorcycle export business for July of the present year was not so good, by 21 per cent., considering value, as it was for the seventh month of 1915, is revealed by the latest issue of the monthly summary of commerce and labor gotten out by the Bureau of Foreign and Domestic Commerce. Considering the number of machines shipped during the respective months, the falling off was even greater, amounting to a full 36 per cent.

During July of the present year there were shipped 1,157 motorcycles, valued at $228,813, as against a total of 1,806 machines of an aggregate value of $304,801, the figures for July of 1915. This falling off in exports during the month of July, however, is somewhat offset by the fact that our motorcycle exports for the seven-month period terminating with July, 1916, were better by 23 per cent., as to value, than for the seven-month period ending with July, 1915. Considering the number of machines shipped for the respective periods the increase was just 19 per cent.

During the seven-month period terminating with July of this year we shipped 10,437 motorcycles, valued at $1,976,433, across the "pond" as against only 8,432 machines, valued at $1,506,597, for the seven-month period ending with July, 1915.

An interesting feature of the export figures is revealed by the fact that the average price of the motorcycles exported during the month of July, 1915, was only $168, as against an average price of $197 for the machines exported during July just past.

Bicycle Exports Jump

As for the bicycle export situation, the increase in the past twelvemonth has been phenomenal, reaching 79 per cent. in valuation. During July of 1915 we exported bicycles and parts to the valuation of $43,735, as against $78,573, the valuation of the bicycles and parts shipped during last July. None the less impressive are the figures dealing with the seven-month period terminating with July, which shows that for that period the increase in valuation of bicycles and parts exported amounts to an even 100 per cent. The valuation of the bicycles and parts exported during that period ending with July, 1915, was $281,028, as against $571,038, for the same period ending with the month of July of the present year.

The very healthy state of our domestic bicycle trade is reflected in the figures bearing on the imports of motorcycles, bicycles and parts; these figures are not separated by the commerce department, but it is a fact that the motorcycle imports are next to negligible so the figures therefore bear almost "in toto" on bicycles and bicycle parts.

Sixty Per Cent. Increase

They show that during July of 1915 our cycle imports amounted to only $2,712 in value, as against $4,316, an increase of 60 per cent., for July of 1916. Almost as great a percentage increase is represented in the figures bearing on the seven-month period ending with July of the respective years. For the period ending with July, 1915, we imported bicycles and parts to the amount of $27,060, while for this year the imports were valued at $42,417, an increase of 59 per cent.

Hawaii took motorcycles and bicycles and parts from the States to the value of $10,343 during July last year, as against only $3,507 for the same month of the present year.

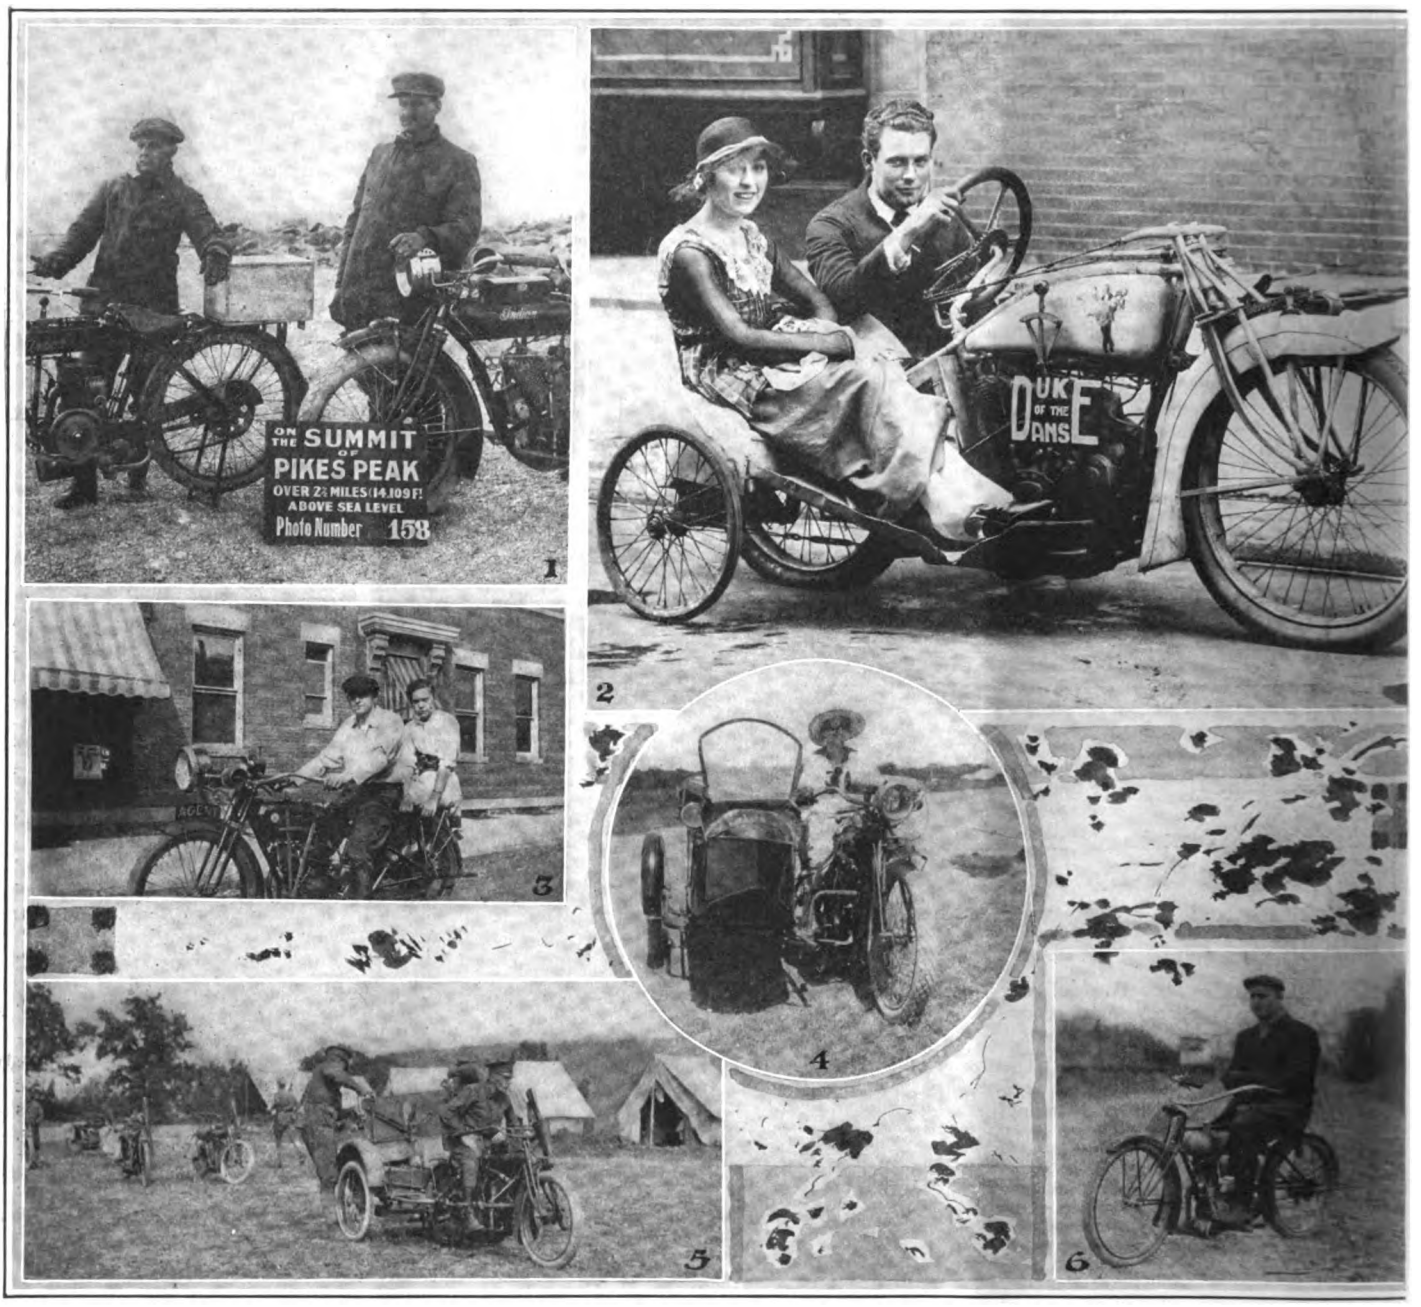
The Weekly

NEWSY EXPLOITS OF THE CAMERAMAN



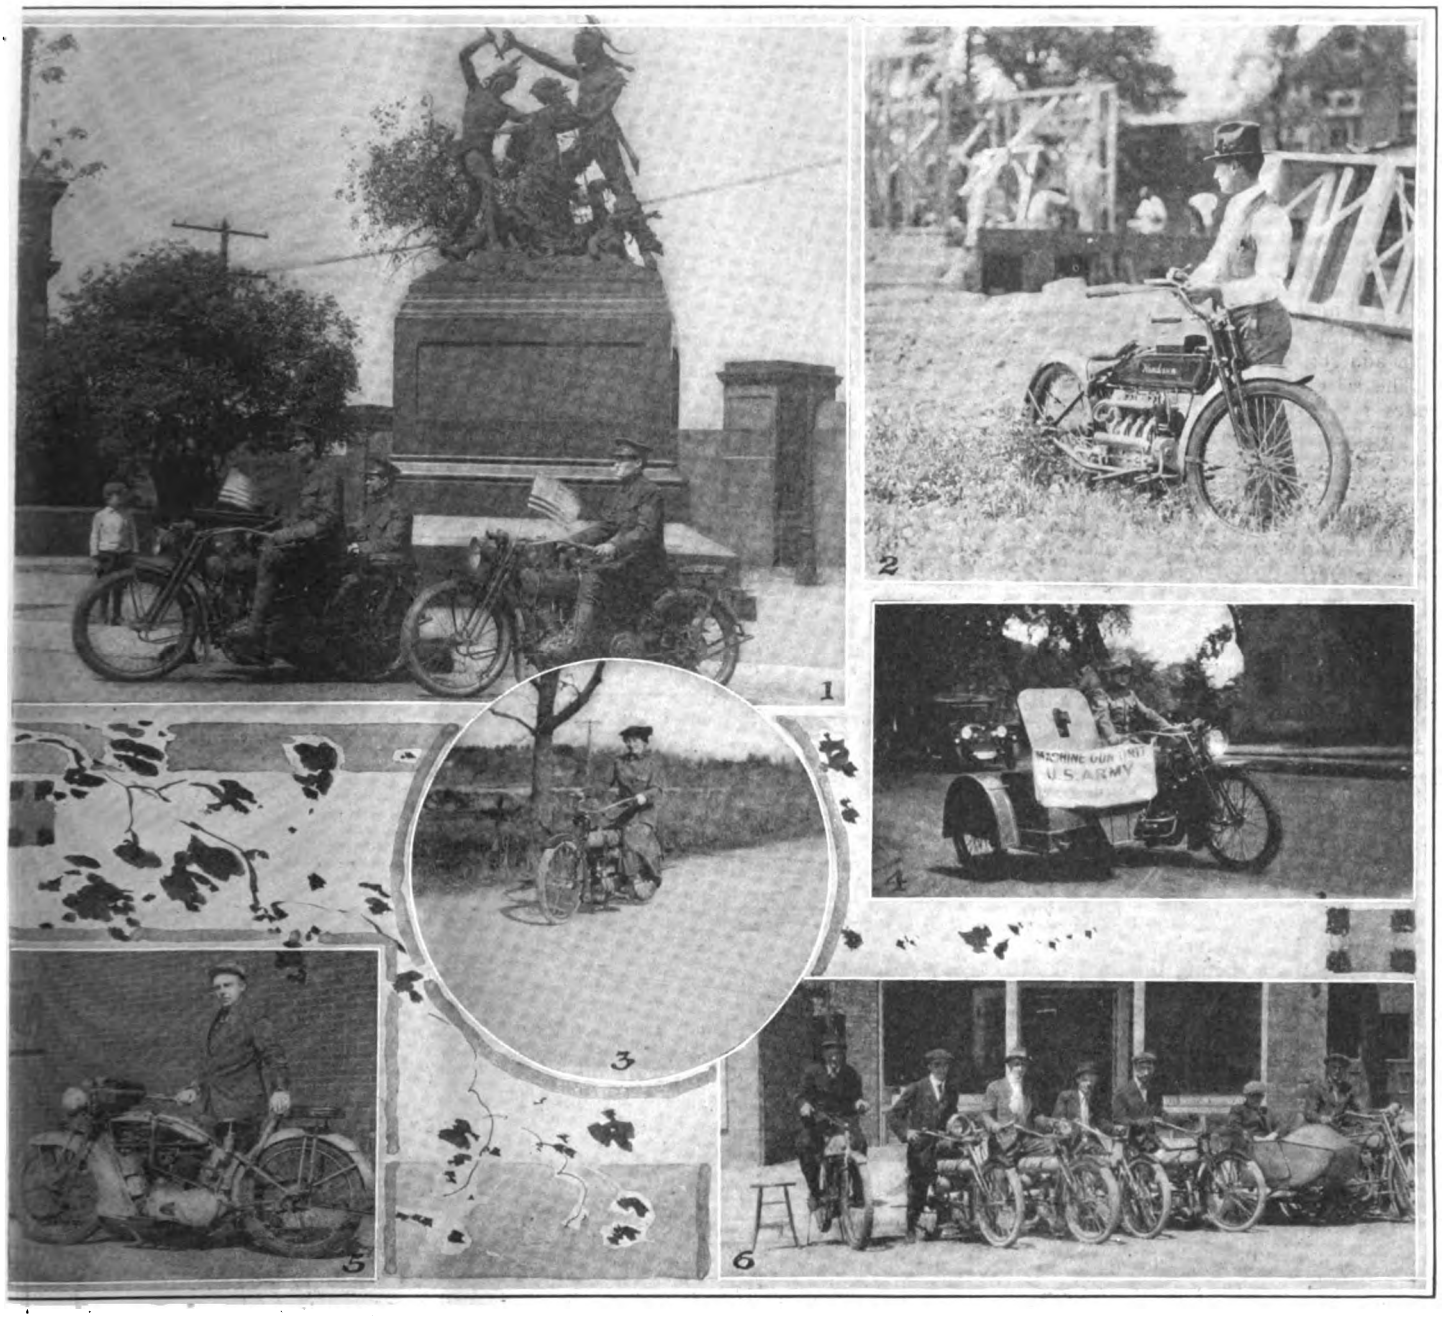
THE curtain rises on a mountain setting, the first scene depicting Lloyd Mayer and Charles Swacker, a pair of intrepid motorcyclists of Colorado Springs, Colo., at the finish of a little Indian trip to the summit of Pikes peak. With the second scene, the setting shifts from Colorado's rugged mountain peaks to Gotham's stately skyscrapers, the camera man doing his best to catch the smile which illuminates the face of the "Duke of the Danse"—also the Duchess—of cabaret fame, who gathers both utility and publicity from his oddly modified Excelsior. Just across the river from New York lies Gutenberg, N. J., a former home of exciting track racing and road contests, where the third scene gives us a glimpse of the sort of sport that brightens up the dull moments in the life of Charles Freund, Reading Standard agent.

Here comes the movie star in the fourth scene which is laid way down in Texas. She is Miss Mary Davidson of San Antonio, and her mount is not a broncho but a Powerplus Indian sidecar combination. No moving picture plot is complete without a battle scene, so the fifth scene in the first reel discloses the "rookie" encampment at Plattsburg, N. Y., where the First Artillery Motor Battery is learning the ins and outs of the Cygnet Rear Car machine gun outfit. You might think that the sombre-looking gentleman astride the Cleveland in the sixth scene is the villain—but you are wrong. Before the operator changes the reels let's inform you that he is W. J. Schmitz of Madison, Wis., secretary of the Madison Motorcycle Racing Association, and an all-round booster in behalf of the power two-wheeler, particularly the lightweight.

Digitized by Google

Motograph

PRESENTED IN TWO REELS ~ ~



SCENE 1 in the second reel also has a military aspect, although taken far away from either Europe or the Mexican border. It shows J. F. Bright, manager for C. H. Lang, Chicago Harley-Davidson dealer, with Sergeant S. B. Gibson of the U. S. Army, and W. J. Bowen parading before the Fort Dearborn statue in the Windy City. The machines are fitted with auxiliary oil and fuel tanks and are olive drab finish.

Scene 2 discloses a hard-working Detroit carpenter and contractor who finds his Henderson of the greatest aid in his work. Back to Madison, Wis., the third scene carries us where the fair damsel occupying the center of the screen is Mrs. W. J. Schmitz, a Cleveland enthusiast. Once more we are reminded, in the fourth scene, that these are war times, the scene depicting the exploits of W. N. Burnett of the Harley-Davidson agency in Washington, D. C., on a machine gun outfit.

Back in Brooklyn, N. Y., just across the East River from Gotham we are brought, in the fifth scene, face to face with J. O. E. Dietrich, an Excelsior booster, and local F. A. M. commissioner. Again the scene changes and the last episode is enacted in Madison, Wis., once again. The scene discloses the store of the Capitol Cycle Co., Harley-Davidson and Cleveland dealers with a few customers lined up in front of the establishment just to give a touch of local color.

The proprietors of the Capitol Cycle Company report unusual interest in the lightweight machines and state that the standard Harley-Davidson line, with the Cleveland lightweight to supplement it, has kept the store busy throughout the past season. The company continues with both these lines for the coming season.

NEW JERSEY M. C. TO HOLD 200 MILE JAUNT

Newark Organization Announces First Goodfellowship Run Over Good Roads on October 8

NEWARK, N. J., Oct. 2.—The first annual Jersey Jaunt of the New Jersey M. C. will be held on October 8, starting from the clubhouse on Broad street, this city. It will be over a 200-mile course, covering the best roads in the State. The object of the run is to promote goodfellowship and sport.

The schedule of the Jersey Jaunt is 22 miles per hour, and all entrants must be F. A. M. members. The run will, of course, be a sanctioned one. The route will be from Newark to Asbury Park (56 miles) via Perth Amboy and Red Bank; thence across the State via Freehold and Hightstown to Trenton (101 miles). Trenton will be the dinner stop.

Leaving Trenton, the route goes via Flemington and Clinton to Washington (145 miles) where the return to Newark will be made through Morristown. Riders will be allowed 15 minutes' leeway at check stations, after which they are automatically eliminated. Departure may be made from Newark between 7 and 7:30 A. M. Bronze medals will be awarded all riders who check at all stations according to the rules laid out. Entry fee is $1.50, the closing time being October 5. Post entries are charged $2 each.

CANADIAN CHIEFTAINS VISIT THE WIGWAM

TORONTO, Ont.—Representatives of the Hendee Manufacturing Company in Canada have been visiting the Indian factory at Springfield, Mass., during the past few weeks. These visitors from the Dominion include Ed. Buffum, manager of the Hendee factory in Toronto, Herb. Kipp, the traveling representative and H. M. Kipp, the Toronto agent.

There will be practically no changes in the personnel at the Hendee plant at Toronto, it is announced, and the expectations are that another fine year will be experienced. The 1916 season for the Indian in the Dominion was exceptionally prosperous and the prospects are very satisfactory. The first of the new models will be placed on display in Canada about October 15, it is declared.

Herb. Kipp, the veteran roadman and track flier, will again take to the rails in a few days for the purpose of calling on the entire trade of the Western Provinces—right out to Vancouver. Kipp came off this route only last April after which he shot down to the Eastern centres by motorcycle. As a technical expert, Kipp has much to say regarding the new light opposed-engine model of the Indian family. This will, he believes, arouse considerable interest among the mechanical cranks of English origin.

The Canadian Hendee Company have supplied a great number of "war horses" to the Government for fighting purposes. The size of the several contracts or orders is veiled for obvious reasons.

SIDECAR STORAGE SPACE

WHEN storage space in the sidecar becomes too congested a little more room may be found by utilizing the space directly under the lower extremities of the passenger and close to the seat. By screwing straps to the floor and under the seat the ponchos and rain-shirts may be carried with no inconvenience to the passenger, for they may be securely strapped there well out of the way.

RIGANTI WINS HOUR ARGENTINA CLASSIC

Harley-Davidson Rider Victor in Buenos Aires Race—Second and Third Men on Similar Machines

NEW YORK, Oct. 2.—Cable advices from Buenos Aires, Argentina, give the victory in One-Hour Championship of Argentina to Raul Riganti, one of the Harley-Davidson entrants from the Club Motociclista Nacional. Angelo Traverso, also on a Harley-Davidson, took second place, while H. Comino, also of the same club, came third. Comino rode a similar machine to that of Riganti.

The Hour Championship is one of the six classics run off by the Club Motociclista Nacional, of Buenos Aires, an organization composed of the leading motorcycle bodies of Argentina and Paraguay.

CANAL ZONE LICENSE FEE REDUCED TO $2

Zone Commission Passes New Ordinance Cutting Costs From $13—Feather in F. A. M.'s Cap

CHICAGO, October 1.—Here's good news for Panama Canal Zone riders! The Canal Zone Commission having been empowered by Congress to do that little thing, has framed a new motor vehicle ordinance which goes into effect today and cuts the license fee and other costs to the rider from $13 annually to $2.

As was told in the last issue of **Motor Cycle Illustrated,** through the efforts of Former Legal Action Chairman Johnson of the F. A. M. bills were put through both houses of Congress at the last session as a means of bringing about this result. The former license fee was $10 a year; besides which it cost the Canal Zone rider another dollar for a tag and $2 for a license to ride in the Republic of Panama.

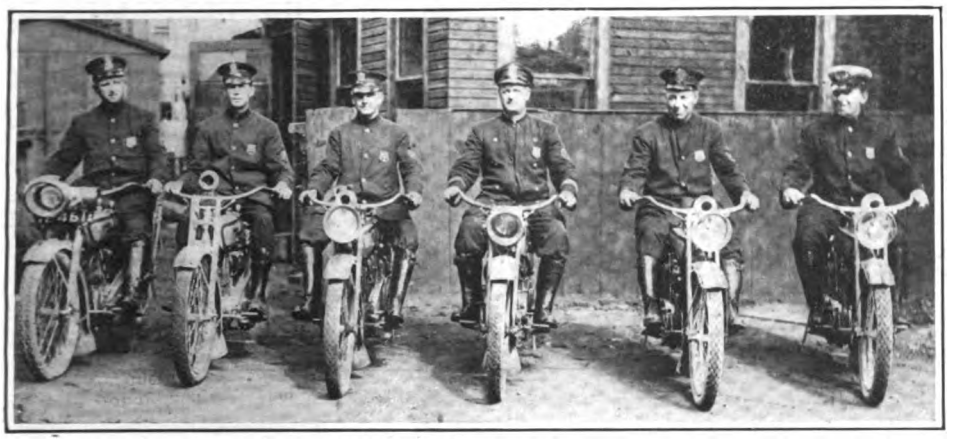
Provision is made for reciprocity with Panama under the new ordinance and the dollar charge for a license tag is done away with.

The new ordinance also provides for less stringent speed rules, a speed of 25 miles an hour now being permitted in the country and 12 miles an hour in the more congested districts. The former speed rules permitted only 15 miles in the country and 8 in the cities.

The principal provisions of the new ordinance are:

Digitized by Google

TERROR OF LAW-BREAKERS IN BRIDGEPORT, CONN.



Mounted on Their New Harley-Davidsons, This Sextet of Hard Riding Policemen Directs Traffic and Rides Patrol Daily

The licenses expire annually. Motor Cycle license $2.00. The Governor may issue short term licenses in special cases. Reciprocity with Panama is provided.

Flare lights are prohibited in city, town or village.

Speed. In the country on straight roads the rate is twenty-five miles per hour. Traversing curves, forks or cross roads, or within a city, town or village rate twelve miles per hour.

SAVANNAH M. C. SETS NEW MEETING RECORD

Georgia Organization Holds Three in One Month with Full Attendance — Thanksgiving Race Planned

SAVANNAH, Ga.—Three meetings in one month is the record just passed by the Savannah M. C., and at each meeting the attendance was 100 per cent. At the last meeting it was voted to hold a race meet here on Thanksgiving Day, with three events, a five, ten and fifteen-mile constituting the program.

Harry Glenn, Edward Wilcox, of Atlanta, and Demontmollin, of Macon, will engage on that date, as well as Castle, of Columbia, S. C. A field day and Dutch lunch will be held the first part of next month. The program for this affair is being gotten up by the entertainment committee. This field day is an annual affair and has been held during the past three years.

The Savannah M. C. is the oldest and probably the most progressive motorcycle organization in the South and its members take pride in its organization. It has pulled off one of the biggest annual classics in several past seasons—the 300-mile Savannah race, which was held each Thanksgiving Day.

McCHOM WINS TEN-MILE

OKMULGEE, Okla.—MeChom of Cleburne, Tex., a well-known motorcycle race rider, won the 10-mile motorcycle race here during the Okmulgee County Fair over Bowling of Tulsa, Okla. MeChom, riding a twin Indian, took the lead on the first lap and held it throughout the race.

FLAGG LEAVES THE STANDARD WELDING CO.

Veteran Sales Manager Is Succeeded by P. W. Gilbert— C. E. Miller Also Out— Quayle Is Promoted

CLEVELAND, O.—H. A. Flagg, sales manager for the Standard Welding Company, and Charles E. Miller, manager for the Detroit office of the same firm, have resigned. P. W. Gilbert, who has been assistant manager of sales for the Stanweld interests, succeeds Mr. Flagg, while Walter C. Voss, formerly in charge of the Cleveland district, will handle the firm's Detroit affairs in connection with Ted Palmer. Messrs. Flagg and Miller have not yet announced their plans for the future.

Bert Quayle has been promoted from the Chicago district to the position of general factory representative. Willis Stutson comes from Indianapolis to succeed Quayle. H. A. Brandt will assist Stutson and will handle Indianapolis still. The Cleveland district has been placed in the hands of Otto Miller, formerly of the order department of the Standard Welding firm. Benton L. Dodge, who has had charge of the company's advertising and publicity for more than five years, is now manager of sales promotion.

Bert Quayle, the Link That Binds the Standard Welding Co. to the Motorcycle Trade

EASING UP ON PUMPING

WHEN pumping up a tire you can save yourself much labor and language if you give the pump a few preliminary strokes before attaching it to the valve stem. Often a small particle of dirt jamming in the valve seat means a lot of additional pushing of air into the tire. Get into the habit of pushing the plunger in the valve stem down as well.

LA GRANDE CLUB PLANS FOR 1917 "SPEED 'EM UP"

Boosters, 500 Strong, Attend Pendleton Round-up to Advertise Next Year's Far West Motorcycle Classic

LA GRANDE, Ore., Sept. 25.—There is no use denying that the La Grande "Speed 'Em Up" Club, sponsor for the annual far-western championship motorcycle races at La Grande, does things on a big scale. Last Saturday was the closing day of the Pendleton Round-up — mecca for thousands and thousands of people. To be exact, there were 30,000 present that day.

On such an occasion, the club felt, was a good day to advertise the 1917 races. Bedecked with yellow ribbons bearing the "Speed 'Em Up" slogan, 525 La Grande people went to Pendleton on a special train.

It was a grand showing, and when the special pulled into Pendleton the thousands visiting there, and those who live there, realized to a marked degree that the motorcycle fellows at La Grande do big things. At last year's races Pendleton sent 100 people to the races here, and the club members were determined that the compliment should be repaid, and they repaid it fivefold. In between jumps of the bad horses and bucking bulls, the "Speed 'Em Upers" put in some good licks advertising the show in La Grande in 1917.

IMP CARBON CHASER ENTERS EXPORT FIELD

NEW YORK.—The Imp Carbon Chaser Corporation, of 1465 Broadway, this city, is broadening its field of activity and is now planning to distribute its product in Europe in addition to this country. "The high price of fuel in all of the warring countries," says an official of the Imp Corporation, "has placed it beyond reach of many users, and since our product reduces the consumption of fuel at least 25 per cent. we see a fine foreign market ahead of us."

The maker states that in addition to reducing the consumption of gasoline, the Imp Carbon Chaser also eliminates carbon deposit and gives greater power and speed to a motor.

FIRST LOS ANGELES CLEVELAND OUTING BRINGS 100 PARTICIPANTS

Lineup of Lightweights in Front of Risden's Place Ready to Start on Run to Seal Beach—The Procession Attracted Widespread Attention

LOS ANGELES, Cal.—C. Will Risden, western distributor of the Cleveland, gave the first outing for Cleveland riders at Seal Beach on September 24. Over 100 machines were ridden in a big procession over the 30 miles from Los Angeles through Wilmington and Long Beach to Seal Beach, where the management treated the crowd to swimming tickets and bathing suits.

Tommy Butler pretty near "blew his cork" swimming out to the big raft against the incoming tide. There was a lively time on the shore indulging in jumping and running contests in bathing suits. George Corum, head mechanic of the Cleveland service, won the 75-yard dash and Freddie Ludlow got the standing broad jump, with a distance of better than 10 feet to his credit. The whole Cleveland contingent, in their bathing suits, got together in a lockstep parade that amused the crowd. Every so often they would line up in company front and salute the pretty girls on the beach. The last stunt of the day was an elimination motorcycle race in which Freddie Ludlow was again the winner. The Seal Beach Co. was so pleased with the motorcycle guests that it proposes to invite them for another outing and turn the beach over to them and put up a gold cup for the fastest Cleveland.

ARTLEY PLANS ANOTHER RECORD TRIAL

LOS ANGELES, Cal.—Ray Artley is planning another speed dash to San Diego on his Henderson. The Orange County speed squad is reported to be especially active just now and fines for speeding are making the district unpopular with automobile and motorcycle tourists. If they adopt a lenient attitude Artley will make the dash within the next few days. Artley is also planning to go up to the hill climb of San Jose Motorcycle Club on October 8.

Trade Doings in Los Angeles

HOLLAND IN NEW STORE

Lincoln Holland, the veteran of Motorcycle Row, has moved from the location he has occupied for eight years on South Main street, below Eleventh. He is now to be found one block east and north, at 1011 South Los Angeles street.

WHOOPING FOR DEMONSTRATORS

H. A. Lillie, the Harley-Davidson missionary, keeps busy these days on city work, and dodges all his old agent friends. There's a reason. Everyone in the Appeal organization is being led off into a corner three times a day and buttonholed and begged for "just one to deliver" out of the first carload. Nearly every agent has machines sold "sight unseen." Each is to have a demonstrator out of the first carload, and that is as far as the car will stretch.

SHEPPARD HAS MANY PROSPECTS

C. A. Sheppard, the Henderson agent at San Diego, is full of "pep" and enthusiasm and preparing a big sales campaign for the 1917 model. He says inquiries are the best he has ever known.

GOUDY MOVES TO LOS ANGELES

C. F. Goudy moves to Los Angeles this week to take up actively his duties of handling the Excelsior as a partner in the Goudy-Hoffer Co., southwestern distributors. Carl leaves the San Diego branch in the capable hands of Ray Smith, as branch manager. Smith was one of the two winners on the Excelsior in the Los Angeles endurance run of over 900 miles through mountains and deserts.

FOUND CREDIT SALES O. K.

Playing safe on credits has been a good policy for the Henderson Motorcycle Sales Corporation. Secretary F. A. Sutphen has been going over his records of the past year's business and finds that only three sales, considerably less than one per cent. of the year's business, broke down so they had to take the machine back.

COOK TIES THE BIG CAN

Traffic Officer Cook, who has the hardest corner in Los Angeles, Ninth and Main, chased a rider into one of the stores last week, said those three sad words: "Nine o'clock tomorrow," and remarked that this was the second fellow he had

Digitized by Google

got with "one of these big cans, and he was watching for two more." Someone got the notion that riders want to make a noise, and got up a muffler horn that chatters like an Australian Dihookikatchinkum. Result: Officer Cook gets into the silent riding promotion society.

VAN ORDER'S LIST IS GROWING

A. F. Van Order, of the Harley-Davidson local store, is rolling up a list of orders for the 1917 model "when delivered." Climbing boards placed against the wall and climbing the curb are two stunts which Van works fo get a crowd together.

ANOTHER NEW MODEL

L. E. Reed, of the Excelsior agency, blew in with an excited look on the morning of September 26. Another little side car passenger arrived at his home that morning. Reed already had one youngster, a boy, who is stepping along toward the tandem seat age.

MOTOR-COP A VISITOR

Ray Weigle, the Ventura motorcycle officer, has been visiting in Los Angeles for the past four days. Wells Bennett, of the Excelsior agency, entertained him with tours to most of the important points of interest.

NEW CALIFORNIA ROAD MAPS

LOS ANGELES, Cal.—C. J. Gray, 580 Twenty-third street, Oakland, Cal., has got out a map showing the principal roads in California with mileages between cities. Copies of this map are being distributed by the Henderson Motor Sales Corporation in Los Angeles and are finding high favor with the touring crowd.

RISDEN TRANSFERS LUDLOW

LOS ANGELES, Cal.—Fred Ludlow has been transferred by C. Will Risden from his Indian to Cleveland division.

HOW BERRY TOLD PUBLIC OF NEW THOR'S ARRIVAL

The Huge Sign Over T. E. Berry's Door Brought Prospects in Right Away. Trio in the Picture Are Starting Off on Run Into Hills to Try Out the Twins

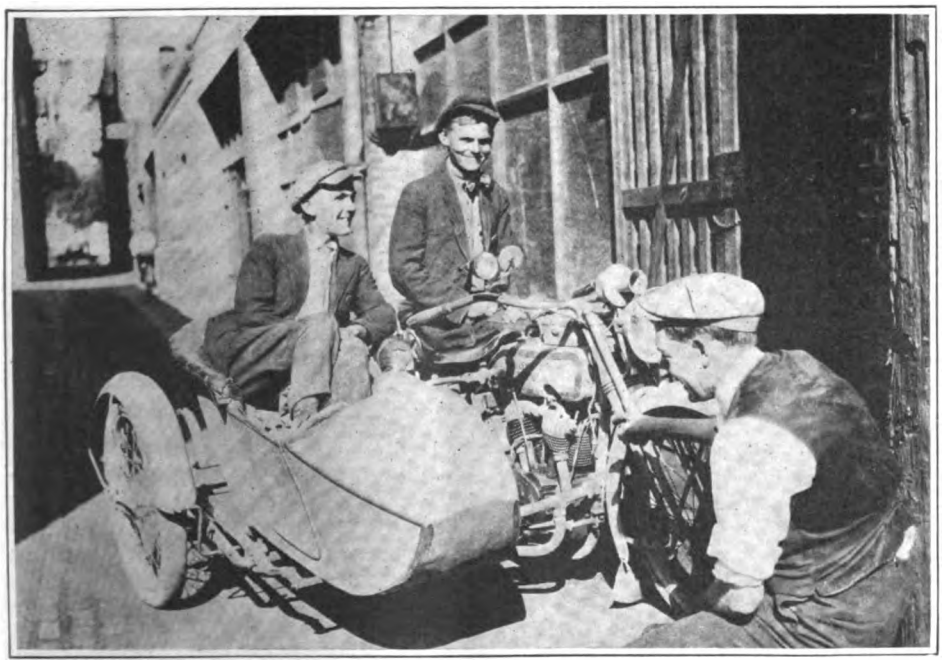
SHACKS MAKE COAST TRIP FROM CHICAGO

LOS ANGELES, Cal.—Vincent J. Shack and his brother, Allo Shack, two lightly built young fellows, have just made the trip from Chicago to Los Angeles on their Harley-Davidson 1916, three-speed, with side car. Before making their tour across the mountains and desert, their longest motorcycle jaunt had been a 600-mile trip to Ohio.

They followed the Lincoln Highway to Denver, then the Old Trails route into Southern California via Kingman and Needles, Ariz. Vincent says they were not scared when they struck the desert, but if they had been in an automobile the skeletons of the old four-wheelers they passed would have thrown a fright into them. They made the tour leisurely, camping out all the way, and since August 17 covered 2,849 miles.

Their tire equipment was Goodyear for the front tire and side car and the rear tire of the motorcycle was a Firestone. The worst experience they met on the road was when they had to push five miles after some scalawag had sold them kerosene instead of gasoline. Vincent says that they got tired in places, but they expected the tour would be a whole lot worse to make than it was.

AT FINISH OF THE SHACKS' TOUR FROM CHICAGO



Chicago Boys with Harley-Davidson Outfit on Which They Rode from Windy City to Los Angeles. Photo Taken in Latter City. Item Above

GOUDY-HOFFER SELLING CARBON REMOVER

LOS ANGELES, Cal.—The Goudy-Hoffer Company is building up a fine business with a new carbon remover which comes in the form of pellets, 100 to a can. The can sells for $1, and will reduce the accumulation of carbon to the mimimum for 5,000 miles of running, it is stated. The tablets are used one to a gallon of gasoline.

Several riders who have tried the tablets assert that, unlike some previous chemicals used for the same purpose, they do not interfere with the oiling, but seem to assist in the lubricating system. Uniformly good reports have been received from a half dozen experimental cans of the tablets which were distributed among experienced riders. The tablets are made by Fred M. Giddings, Galesburg, Ill., and are sold under the trade name of "Gidz."

WHEN THE BATTERY SPILLS

SOMETIMES your battery will slop over and the spilled acid begin corroding the metal in the case. A layer of bicarbonate of soda in the bottom of the battery-box will neutralize the action of the acid. Ordinary baking soda, the kind that mother uses, will turn the trick.

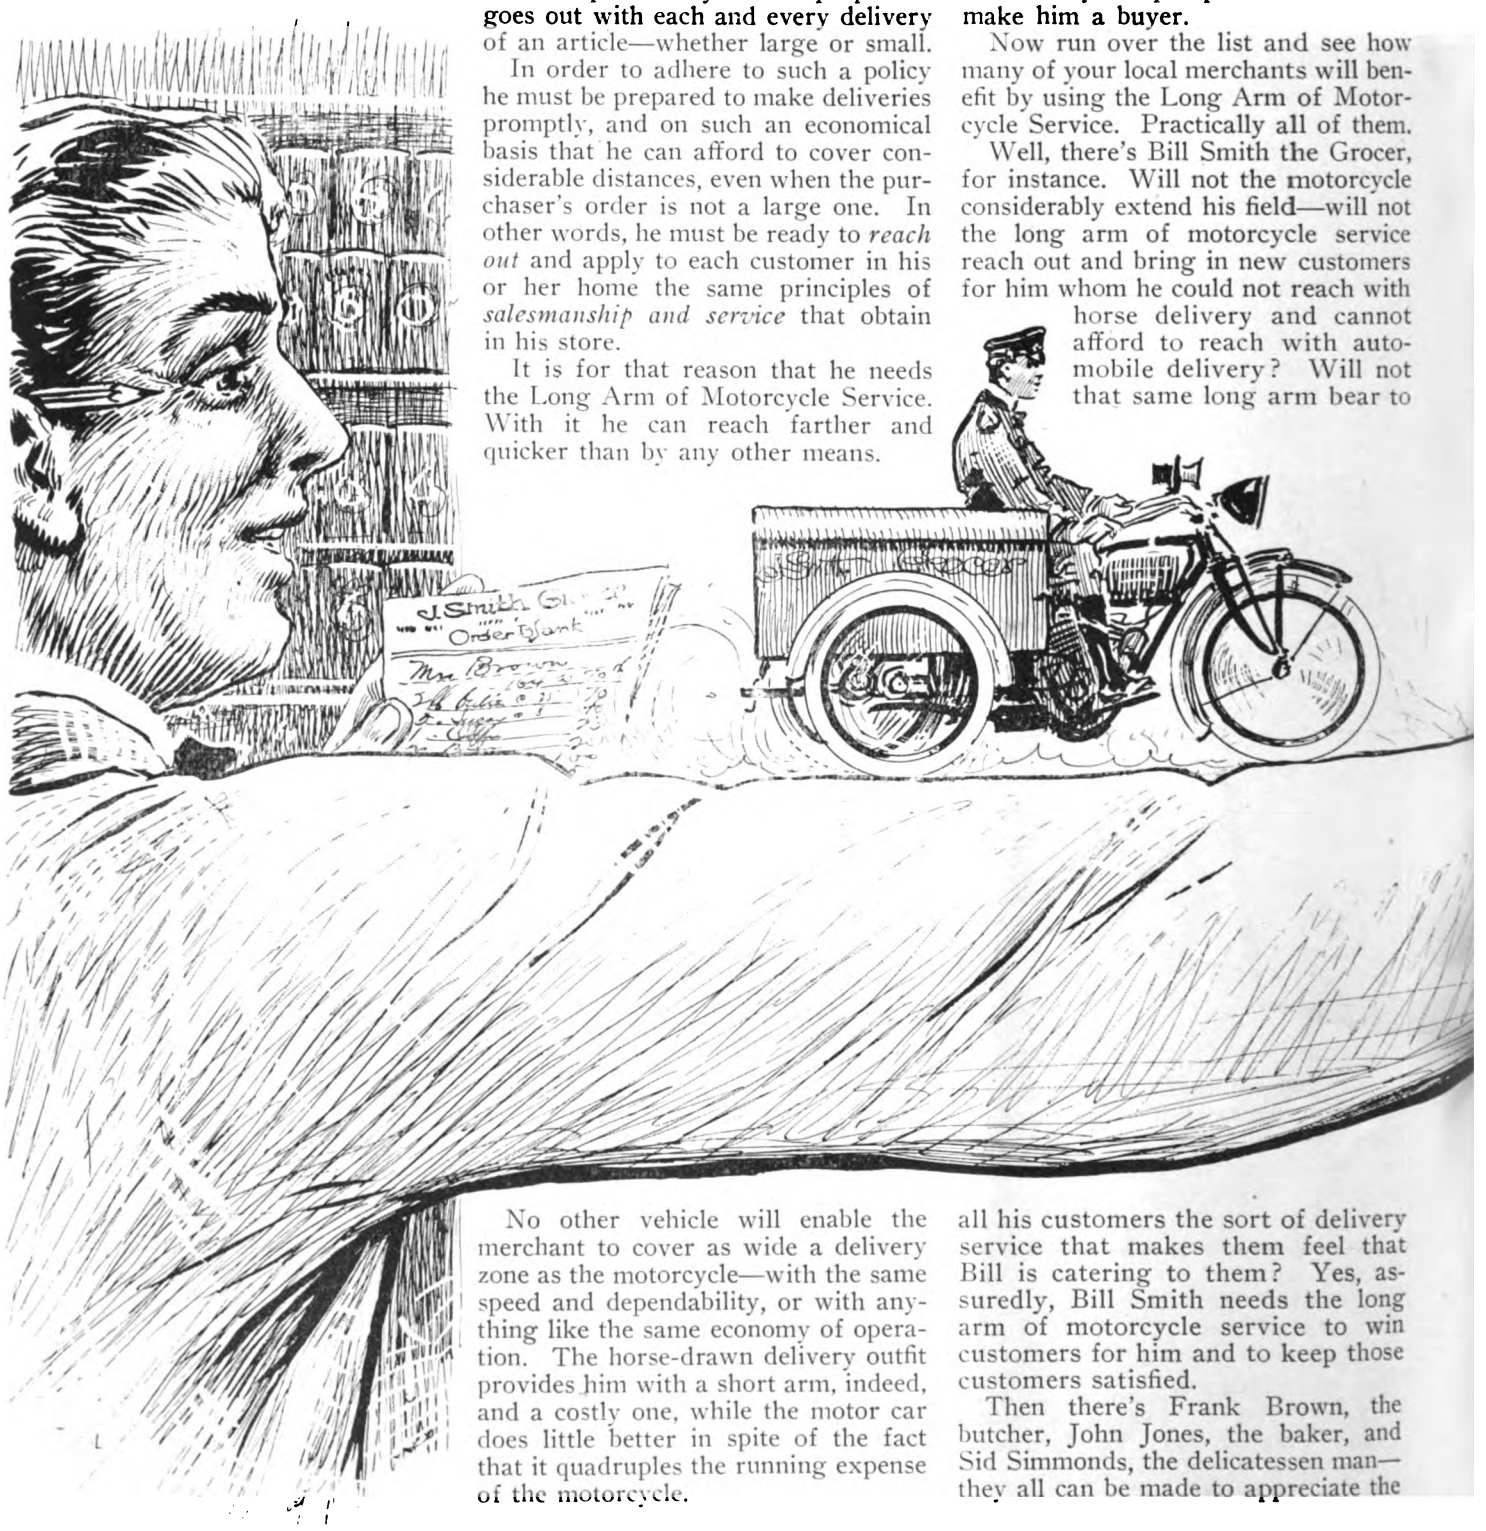
THE LONG ARM OF MOTORCYCL

It Enables the Merchant to Reach Out and Extend His Personality and His Policy o
Why the Motorcycle Van Is an Essential of the Modern Retail Store—A Few Sugge
Dealer) Concerning Those Who Need "the Long Arm."

THERE is no gainsaying the fact that the biggest problem of retail merchants, and of many wholesalers, is the application of the personal service idea to every transaction with a customer. It is the aim of the successful merchant to maintain a feeling of intimacy between his store and its patrons; to convince the latter that there is a dependable service bond holding them close to the store at all times—that the personality of the proprietor goes out with each and every delivery of an article—whether large or small.

In order to adhere to such a policy he must be prepared to make deliveries promptly, and on such an economical basis that he can afford to cover considerable distances, even when the purchaser's order is not a large one. In other words, he must be ready to *reach out* and apply to each customer in his or her home the same principles of *salesmanship and service* that obtain in his store.

It is for that reason that he needs the Long Arm of Motorcycle Service. With it he can reach farther and quicker than by any other means.



No other vehicle will enable the merchant to cover as wide a delivery zone as the motorcycle—with the same speed and dependability, or with anything like the same economy of operation. The horse-drawn delivery outfit provides him with a short arm, indeed, and a costly one, while the motor car does little better in spite of the fact that it quadruples the running expense of the motorcycle.

The Long Arm of Motorcycle Service!

Those are talismanic words, Friend Dealer. They express a big idea—the only idea, in fact, that you need drive home to your prospect in order to make him a buyer.

Now run over the list and see how many of your local merchants will benefit by using the Long Arm of Motorcycle Service. Practically all of them.

Well, there's Bill Smith the Grocer, for instance. Will not the motorcycle considerably extend his field—will not the long arm of motorcycle service reach out and bring in new customers for him whom he could not reach with horse delivery and cannot afford to reach with automobile delivery? Will not that same long arm bear to all his customers the sort of delivery service that makes them feel that Bill is catering to them? Yes, assuredly, Bill Smith needs the long arm of motorcycle service to win customers for him and to keep those customers satisfied.

Then there's Frank Brown, the butcher, John Jones, the baker, and Sid Simmonds, the delicatessen man—they all can be made to appreciate the

Digitized by Google

SERVICE

ion to Every Patron—
k 'Em Over, Friend

strength of that arm for each and everyone of them needs the long arm of motorcycle service even as Bill Smith needs it.

And there's the Parisienne Millinery Shop on Main street, the Model Department Store, the Rex Shoe Company, Fred Meed, the haberdasher, and his brother George, the tailor. Their cases are a little different. They need practically special delivery service for each package delivered; that is the way for them to extend the long arm of motorcycle service to their customers and reap profits for themselves therefrom.

Gosh, when you come to think of it, how many merchants and how many customers this long arm does embrace. When you get right down to brass tacks, there probably is not a person in town, man, woman or child, beyond

the scope of the long arm of motorcycle service.

Think of the tire service stations, the automobile service stations, the confectioners, florists, hardware and sporting goods dealers, all within its scope and ready to profit through its use. Messengers, collectors and local salesmen, film exchanges, picture framers, piano roll dealers and a half a hundred other merchants rise to reap profits from the extended arm of motorcycle service.

Each and everyone of them needs the motorcycle and can be made to appreciate its far-reaching usefulness; carry home to them the long arm of motorcycle service idea. They are business folk, sensible to every opportunity to create new business and hold the old; susceptible to plain every-day business logic, which is the logic of dollars and cents.

And be sure that in carrying home the story of the long arm of motorcycle service you avail yourself of that service—ride around and make your calls on the motorcycle. And don't be backward in telling folks of how many calls you can make in a day.

HERE ARE TWO COMMERCIAL SALES OF NOTE

NEW YORK.—Two sales of commercial Cygnet outfits of more than ordinary interest have been consummated by the New York Sporting Goods Co., during the past week.

Perhaps the most significant of the two was completed with the wholesale drug concern of Lehn & Fink, of William street, which intends to use the outfit primarily for carrying special orders out to druggists in every part of the Greater City. Lehn & Fink have been using automobiles for this service in the past, but have found the cost of operation prohibitive. But it is pointed out that if the Cygnet with motorcycle makes good, more of the machines will be put into service in the near future.

The second commercial sale was made to Anthony Rossi, an Italian grocer of Brooklyn. Rossi pointed out that he preferred the Cygnet rear car to any other vehicle, not alone because of its low upkeep cost and wide circle of activity, but because its novelty made it an advertising asset and drew customers to his store.

HUMANE SOCIETY'S VAN SERVICE

TORONTO, Ont.—Secretary R. C. Craven, of the Toronto Humane Society, has been deeply impressed by the dependability and time-saving features of an Indian motorcycle and Parcel Car attachment which has been in use by the Society for some time past. He calls attention to the fact that the Society is obliged to use the outfit in all kinds of weather, and over all kinds of roads, and states that perfect service has been obtained.

BLISS PLANS MOTORCYCLE SIGNAL CORPS

LOS ANGELES, Cal.—Ralph Bliss, of the South Main street Risden store, is trying to get up a signal company under the new army reserve act. At a recent meeting of the Los Angeles M. C. he talked to the boys about the proposition and interested a number of them. He plans to get 100 people to sign a petition which will obtain equipment for a National Guard Signal squad in which opportunities for enrollment will be afforded.

COSTUMERS FIND VAN O. K.

ST. JOSEPH, Mo.—One of the most enthusiastic users of the motorcycle van in this part of the country is the firm of Miller & Berkley, costumers, of this city. This company reports that it has obtained unfailing efficiency and economy from the Indian motorcycle van outfit which it is using, although the combination is driven in all weathers.

SIMPLE MEANS OF LOCKING NUT

IT is not always possible, for want of sufficient room, to put an ordinary lockwasher under a bolt. In such a case, if a locking device is really essential or desirable, a coat of quick drying paint applied thickly to the bolt or nut will prove efficacious; an alternative method is to moisten the nut or bolt with salt water so that the parts will rust together.

Digitized by Google

WELLS VISITS WIGWAM; NEW HENDEE TRAVELER

Left, William H. Wells, London Indian Man; Right, L. C. Wilson

SPRINGFIELD, Mass.—W. H. Wells, manager of the London branch of the Hendee Manufacturing Company, is now in Springfield, looking over the new Indian models and discussing plans for next year.

While owing to war conditions the motorcycle industry in the British Isles is absolutely at a standstill, Mr. Wells and his organization are doing their utmost to keep motorcycle interest alive. Mr. Wells states that present motorcycle regulations require all motorcyclists to obtain permits to buy petrol which at present are limited to two gallons per month per machine. Moreover, no petrol permits may be issued to owners of motorcycles who have purchased their machines since August 1.

Mr. Wells has expressed great satisfaction with the new 1917 models, and is pleased to find the opposed motor in the Indian family. The new Indian Lightwin, while of a type not familiar to American motorcycles in England. Knowing the smoothness and flexibility of this type of machine, Mr. Wells predicts a wide sale of the Lightwin here in America as soon as riders become familiar with its principles and see a Lightwin in action.

L. C. WILSON JOINS THE HENDEE SALES FORCE

L. C. WILSON of Asheville, North Carolina, recently with J. M. Hearn & Co., Indian dealers in Asheville, has joined the Hendee Sales Department, and will begin his duties next week as traveler for the Indian. His territory will be that of his home state and Virginia.

Mr. Wilson is thoroughly experienced in the motorcycle game, and his many acquaintances throughout the South Atlantic states will be glad to learn of his recent appointment. Mr. Wilson was formerly a traveler for the Harley-Davidson Motor Company.

BUSINESS OPENINGS FOR MANUFACTURERS AND JOBBERS

MAYVILLE, N. Y.—The I. L. Davis hardware firm has purchased the hardware department of the Mayville Hardware & Garage Company. Catalogs are requested on automobile accessories, bicycles, small tools, oils and enamels.

FOREMAN, Ark.—The Foreman Hardware Co., Inc., has just been incorporated. The firm will handle automobile accessories, bicycles, small tools and oils.

CHICAGO, Ill.—The W. H. Grimm Hardware Co. has just been incorporated with a capital of $5,000. Catalogs on automobile accessories, lubricating oils and small tools are desired.

HENDERSON, N. C.—The Watkins Hardware Co. has opened a new store on Breckenridge street. Catalogs and quotations on small tools and lubricating oils are desired.

BARABOO, Wis.—O. G. Wheeler has become the owner of the Blachly Hardware Store at 143 Third avenue. Catalogs on small tools, oils and lubricants are desired. Wheeler will continue business under his own name.

BEATTIE, Kan.—Naaf & Bachoritch are the new owners of the hardware stock of Max Adamson. Catalogs are requested on bicycles, automobile accessories, small tools and oils.

CAINSVILLE, Mo.—J. A. Bebee requests catalogs on bicycles, lubricating oils and small tools.

OPHEIM, Mont.—H. Ben Thoreson desires catalogs on bicycles, small tools, lubricating oils and colors. He has just opened a store in this city.

WESTFIELD, N. Y.—Bell & Crandall have opened a hardware store here to deal in small tools, oils and colors, etc.

TO HOLD RECEPTION

READING, Pa.—The Reading M. C. of this city elected two new members and made arrangements for a reception on October 8 at the last meeting. The reception will be given to the Motorcycle Club of Philadelphia. The latter club will make a run to Tamaqua on that date and will stop in Reading a while en route.

HERE ARE SEVERAL EXPORT OPPORTUNITIES

Folks Across the Water Are in the Market for Our Motorcycles, Bicycles and Accessories

NEW YORK, Oct. 1.—Indicating clearly the shortage of motorcycles and bicycles in foreign lands as a result of the war, which has cut short the British, French and German supplies, and pointing out to the American manufacturer the possibilities of this field, are the following calls for American cycle goods which have come in in the past week from across the Atlantic:

Chr. Gottschalck, Frederiksholms, Kanal 4, Copenhagen, Denmark—Old established dealers in automobiles, etc., said to have a good business and to be well regarded, are interested in securing agencies for Denmark of American motorcycles not now represented in that country. English is understood.

Hermann Raffel, 2 Kejsergade, Copenhagen, Denmark — Danish concern, well spoken of and said to do a large business, is in the market for auxiliary motor wheels for transforming bicycles into motorcycles. English is understood.

G. & C. Fratelli Picena, Corso Pincipe Oddone 17, Turin, Italy—Italian house corresponding in the French language, well established and reputed in first-class standing, representative for Italy of one of the best known French manufacturers, would like to hear from American motorcycle and accessory makers.

F. Xavier Martins & Cia., 7 Rue da Padaria 2 D., Lisbon Portugal — Portuguese importers, said to do a considerable trade in Africa, are desirous of hearing, in the Portuguese language, from makers of motorcycles and bicycles, as well as accessories.

George M. Smith, 451 Eglinton St., Glasgow, Scotland—Agent and dealer in motor accessories in Great Britain wishes to hear from manufacturers of high tension magnetos.

Schiller Lighting Co., P. O. Box 4972, Johannesburg, South Africa—Firm in South Africa is interested in hearing from makers of portable and garage vulcanizers with proposition for exclusive agency control.

The Service Idea Is Carried All Through MotorCycle Illustrated; This Page Is a Fair Sample

WINQUIST PAYS VISIT TO AMERICAN S. K. F.

Swedish Inventor and President of Parent Ball Bearing Co. Drops In On New Hartford Establishment

HARTFORD, October 1.—On Saturday September 23, 1916, Sven Winquist of Gothenburg, Sweden, inventor of the S. K. F. Ball Bearing, visited the new American factory of the S. K. F. Ball Bearing Company at Hartford, Conn.

Winquist is president of the Swedish Company and a trustee of the Connecticut Company. After inspecting the factory Winquist expressed himself as very much pleased with the splendid start made. The American factory is already producing more bearings than its rated capacity and Winquist stated that large additions to the present buildings would soon be necessary.

Winquist was very much gratified to see that the product of the American factory is of the same high quality for which S. K. F. Ball Bearings have always been justly famous. The raw material for the bearings—Swedish crucible steel—is imported and the same manufacturing methods are used at Hartford as in Sweden.

As soon as Winquist and his party had finished their inspection of the factory Winquist posted a notice stating that in appreciation of the excellent work done by the Hartford factory during the past few months, Saturday, September 30 would be a holiday with full pay.

BOSCH SCHOOL IN SESSION IN NEW YORK

NEW YORK, N. Y.—The second section of the fall class of the Bosch Magneto Company, which is being conducted to perfect Bosch representatives in service and repair work, as described in the September 28 issue of **Motor Cycle Illustrated,** is now receiving instructions in New York. This section of the class is made up of eleven representatives of companies handling the Bosch products, and the visitors come from Atlanta, Ga.; Baltimore, Md.; Richmond, Ky.; Chattanooga, Tenn.; Allentown, Pa.; Pittsburgh, Pa.; Long Branch, N. J.; New Haven, Conn.; New Bedford, Mass.; Toledo, O., and Reading, Pa.

KENNINGTON LEAVES REMY

DETROIT, Mich.—W. O. Kennington, chief engineer of the Remy Electric Co., has resigned and will shortly sail for England where he will enter in business for himself. He recently returned from a European trip in the interests of the company.

RENEWS WITH GOODRICH

CHICAGO, Ill.—William Rankin, president of the Mahin Advertising Agency, of this city, has just signed a renewal of the advertising contract with the B. F. Goodrich Company, of Akron, O. The same policy regarding the issuing of Goodrich copy will be followed as in the 1916 season.

Wouldn't This Outfit Catch Your Eye? You Bet! Well, It's Only One of Many Advertising Stunts for the Motorcycle Van

COMPARATIVELY little has been said or written about the advertising possibilities of the motorcycle delivery van, but there is no doubt that as a consistent eye-getter the clean-cut and capable-looking van outfit has both the motor car and the horse-drawn vehicle beaten to a Rooseveltian frazzle. Many keen merchants throughout the country have already discovered that fact. Others are wising up to it daily. It's a point worth remembering when you are talking commercial motorcycle sales, Friend Dealer. Tell your prospect how it works out. He'll be interested.

When he asks for actual proof of your advertising argument, tell him about Emanuel Blout, the New York dealer in musical instruments, for example. The Blout firm uses the Henderson van outfit shown in the above photo (with several similar ones), and take it from Mr. Blout—the advertising value of that motorcycle van with the little tableau, His Master's Voice, depicted on top cannot be too highly estimated.

Experience has shown that one trip through the streets with the motorcycle van outfit wins more attention for the name of Blout and the talking machine than could be obtained in any other way at fifty times the cost.

All merchants haven't musically inclined canines and talking machines to set on top of a motorcycle van—you're right, you're right; but there's not a business in the length and breadth of the land that cannot be hooked up in some way with the motorcycle van so as to deliver a real advertising punch. And wherever the van goes, that punch goes with it.

DRIVES SIDECAR UP MOUNT WASHINGTON

Orrie Steele, of Paterson, N. J., Ascends Noted White Mountain Peak with Indian Combination

PATERSON, N. J., Oct. 1.—Orrie Steele, the young Indian rider, son of Agent John Steele, of this city, has added another scalp to his belt. The latest is a sidecar ascent of Mount Washington, the famous White Mountain peak in New Hampshire. Natives state that Steele was the first to drive a sidecar combination to the summit, and Orrie is naturally very proud of the fact.

Steele, with Charles Versele as passenger, was on his vacation in Vermont and New Hampshire, and on arriving at Bretton Woods ,decided to try out Mount Washington on his stock 1916 Powerplus outfit. He covered the eight miles of the climb to the summit in two hours and ten minutes. Orrie judges that the average grade was between 25 and 30 per cent. and that the height was 1,900 feet from the base.

Orrie Steele's 1916 winnings include the Sidecar Cup in the Crotona M. C. run, the Lightweight Trophy in the New Brunswick, N. J., elimination run and a silver medal in the New Jersey M. C. run.

BARCLAY TAKES THREE AT LEBANON MEET

LEBANON, Pa.—Bob Barclay, riding the Indian used by Shorty Mathews on Decoration Day, captured the 10 and 25 mile pro. events and one of the five mile races at the Keystone M. C. meet on September 30. Charles Sellers, of Harrisburg, Indian, took the five mile sidecar event. Barclay cleaned up about $135 as his winnings for the day. Riders from nearly a dozen cities witnessed the races.

MAKING PREPARATIONS FOR 1917 SHOW

MILWAUKEE, Wis.—Local dealers are already making preparations for the 1917 Motorcycle and Allied Industries show for this city. It is probable that the latter part of February will be selected and that the exhibition will be run under the auspices of the Milwaukee M. C. again. The success of the last two annual shows has brought promises of exhibits from numerous national producers, so the show will be well supported aside from the local exhibitors. It will be a two-day show, as before.

POPE USES WICO BATTERY

WESTFIELD, Mass.—The Westfield Manufacturing Company, maker of Pope motorcycles, will use the Wico storage battery as standard equipment on the 1917 electric models of Pope machines. The contract with the Witherbee Igniter Company, making the Wico battery, was signed a few days ago.

MOTOR CYCLE ILLUSTRATED

Volume 12 Oct. 5, 1916 Number 14

Published weekly on Thursday by the TRADE JOURNAL CORPORATION
18 *Park Row, New York, N. Y.*

J. Leo Sauer, *President and Treasurer*
H. N. Condict, *Secretary*
J. H. Donehue, *Editor*
E. F. Hallock, *Associate Editor*
D. R. Hobart, *Technical Editor*

Harry G. Jacobs, Western Representative, 1535 First National Bank Bldg., Chicago.

Subscriptions—Domestic, $2.00 a year; Canadian and foreign, $3.00 a year. Ten cents a copy.
Entered at the New York post-office as second-class matter under act of Congress, March 3, 1879.

ALL THE NEWS—

The doings of American motorcycledom, treated with pep and punch and stripped of palaver—and pictorialized in the manner that has made Motor Cycle Illustrated the accepted pacemaker of the publications in its field.

PLUS SERVICE

Constructive articles by the highest paid writers on motorcycle subjects; timely hints for the rider, the salesman and the repairman; personal co-operation of our Technical Editor on all motor matters; photos and sketches that put across valuable sales ideas; suggestions for window displays; data on both domestic and foreign business openings for manufacturers and jobbers, and dozens of other helpful features from week to week.

FAREWELL DINNER TO RUHLE AND KOCH

Harley-Davidson Men Desert the Traveling Ranks to Take Long Island Territory—Missed at Milwaukee

MILWAUKEE, Wis., Oct. 5.—Willard J. Ruhle and Walter N. Koch, who are leaving the Harley-Davidson sales force to become the Harley-Davidson dealers in Long Island, N. Y., under the name of the Koch-Ruhle Company, were honored by some of the fellow workers in the Harley-Davidson organization at an informal banquet in the Maryland hotel Saturday night.

The press of business attendant on getting the new concern started in Long Island made it necesasry for Koch to be there in the spirit only, and Ruhle carried away the best wishes of his friends in Milwaukee for himself and Koch. E. J. Mueller, assistant sales manager of the company, in a happy little speech as toastmaster, expressed the regrets of the firm over losing two of its best salesmen, but stated that the feeling of sorrow was more than compensated for by the fact that Messrs. Ruhle and Koch were taking up a rich territory for the retail sales of motorcycles, and, no doubt, would make themselves felt in eastern motorcycle sales circles as a pair of progressive merchants.

In attendance at the Koch-Ruhle farewell banquet were Arthur Davidson, sales manager; F. B. Rodger, publicity manager; T. A. Miller, eastern correspondent; Frank Egloff, Wisconsin traveling representative; Arthur Herrington, commercial correspondent; Dan Dresser, New York; E. J. Mueller and W. J. Ruhle.

SCHNEE BECOMES LEGAL ACTION CHAIRMAN

AKRON, O., Oct. 1.—C. F. Schnee, of this city, has been appointed chairman of the Legal Action Committee of the F. A. M. to fill the vacancy created when Wm. M. Johnson resigned last month.

Schnee is one of the rising young attorneys here and is thirty years old. He has been practicing law for about seven years and is specializing on organization work. He is highly thought of in this community and should, and no doubt will, be of valuable assistance to this organization.

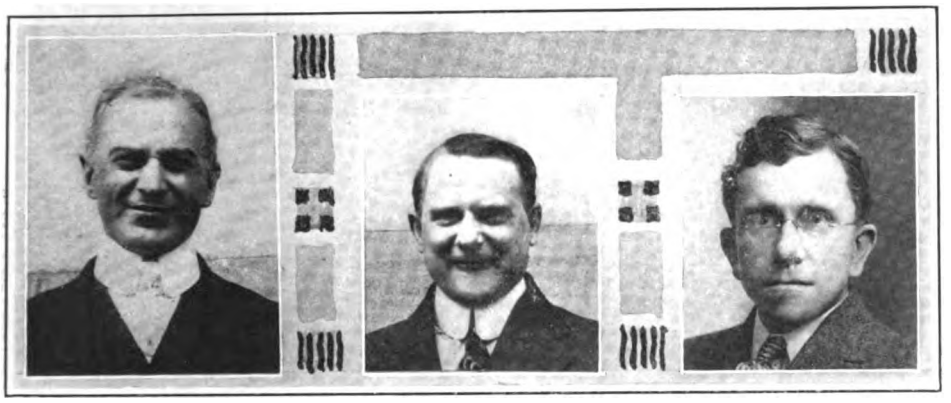
Schnee will assume his duties at once. His address is 607-8 First Second National Building, Akron, O.

STARTS NEW SEASON WITH ORDERS FOR 15

DETROIT, Mich.—W. E. Wandersee Company has closed its 1917 contract with the Harley-Davidson Motor Company and already has orders for 15 of the new olive drab machines. Mr. Wandersee speaks in enthusiastic terms of his 1916 business, and counts upon placing 500 Harley-Davidsons in Detroit during the coming year.

Digitized by Google

HUSTLER SYKES AND HIS TWO LIVE-WIRE MANAGERS



Left to Right, John Sykes, Jr., C. H. Beebe and John P. Hooper

TRENTON, N. J.—John Eykes, Jr., local agent for the Indian, who recently purchased the business of the Belt Motor Company in Columbus, Ohio, announces that his manager for the Columbus agency will be C. H. Beebe, Mr. Sykes, accompanied by Mr. Beebe, is now in Columbus arranging for the opening of the new store. The Sykes establishment in Trenton will hereafter be under the management of John P. Hooper, who has been with the store for the last twelve years.

Sykes has been very successful in Trenton and the same progressive policies that have made the store in this city a prosperous one will be applied to the operations of the Columbus headquarters. The Indian will of course be handled.

PRIMING SPARK PLUG IN NEW STYLE

TOLEDO, Ohio.—Jacob J. Bottlander has invented and patented a spark plug which is novel in the extreme. It combines in the one device both a spark plug and a priming cup and is said to facilitate starting to a marked degree.

The arrangement comprises a porcelain insulated plug of the orthodox chamber type with a hollow central electrode which opens into a diminutive priming cock positioned just above the plug terminal. The central electrode is extended somewhat past the grounded electrode and the duct extends all the way down to the end, as is plainly shown by the accompanying sectional view, the end, however, being sealed.

Provision for the injection of the gasoline into the cylinder is made by the use of a small orifice placed adjacent the grounded electrode. It will be seen that this arrangement results in the formation of a reservoir in the end of the central electrode, which not only makes provision for firing the cylinder a second time on a single priming charge, but materially aids in keeping the "business parts" of the plug clean and in working condition.

The illustration shows the automobile type of plug, but it is stated that when the device is placed on the market it will be made in motorcycle size as well. The patent is No. 1,194,703.

WESTON BACK WITH UNITED STATES TIRE

NEW YORK.—Joseph C. Weston, who recently resigned as general sales manager for the United States Tire Company to enter the automobile field, has reconsidered his resignation and will remain with the organization with which he has been identified for so long a time.

In line with the policy of increasing sales efficiency in the organization, certain changes which have been contemplated for some time are now being put into effect, whereby the post of sales manager is done away with, Mr. Weston assuming the newly-created position of director of sales.

O. S. Tweedy is now general branch sales manager, having direct charge of all branches of the United States Tire firm.

WITHERBEE IGNITER IN NEW BUILDING

SPRINGFIELD, Mass.—The Witherbee Igniter Company, maker of Wico storage batteries, is now installed in its new headquarters on Liberty street, this city. The building, combining office and factory, is within one block of the New Haven railroad station and but a short distance from New street, so that it is most conveniently located for business purposes.

Both outside and in, the building is of the most modern type of construction and affords the maximum of lighting and ventilation. The Witherbee folks extend a cordial invitation to all motorcyclists to visit them.

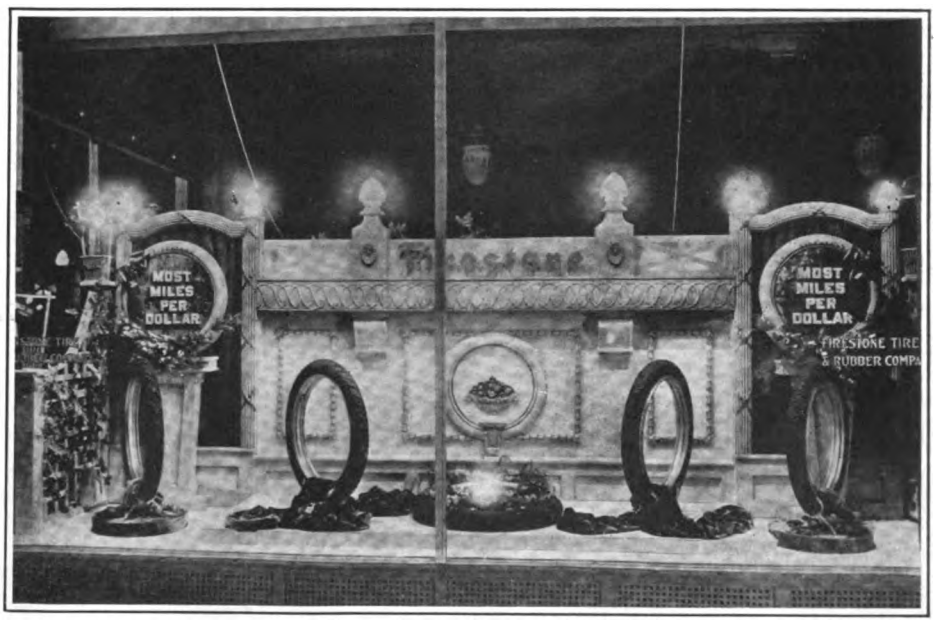
WANTS MOTORCYCLE TIRES IN LARGE QUANTITIES

NEW YORK, N. Y.—A representative of one of the best known European motor and accessory companies is now in this country with a view of obtaining large quantities of motorcycle tires to be sold under the company's own brand. This representative is desirous of obtaining quotations without delay, and is prepared to close contracts as soon as his requirements are met. Manufacturers who are interested in this announcement can obtain further details by communicating with the Export Bureau of **Motor Cycle Illustrated.**

HAS R-S IN SAN DIEGO

SAN DIEGO, Cal.—C. M. Worsham, of 1225 Market street, has signed up with Hopkins & Alzina, of San Francisco, to handle the Reading Standard in San Diego for the 1917 season.

UNUSUAL WINDOW DISPLAY AT FIRESTONE BRANCH



KANSAS CITY, Mo.—Some idea of the scale on which Firestone boosters of this city assisted in celebrating the formal opening of the Firestone Tire & Rubber Company's new branch on September 14 will be gained from the accompanying photo which shows the striking display in the main window of the branch. Other window displays, not quite so elaborate but still very impressive, were arranged by many of the motor and tire dealers throughout the city.

As has already been stated, the new Firestone branch is an eight-story building of imposing architecture and fitted out with every modern facility for handling the vast business which the company will direct from this center.

MORE MOTORCYCLE COPS FOR SAN ANTONIO

SAN ANTONIO, Tex.—The police force of San Antonio is to have more motorcycle patrolmen, according to Commissioner of Fire and Police, R. F. Uhr. He intends to dismount one horseman from each sub-station and give him a motorcycle, holding him for emergency duty in preventing speeding.

The motorcycle officers will work in addition to the motorcycle squad of seven members who are on patrol service on the streets, watching for speeders, etc.

BROWN OPENS OWN STORE AT DETROIT

DETROIT, Mich.—R. D. Brown, formerly with the Harley-Davidson Motor Company, and more recently with the W. E. Wandersee Company, has opened an up-to-date motorcycle and bicycle store at 220 Gratiot avenue and is preparing for lively 1917 business. Brown has many friends in Detroit and vicinity and is already well equipped by experience to make a success of his new undertaking. He reports that his machine sales are already satisfactory, and that his shop is busy with repair work.

NEW INCORPORATION

NEW YORK, N. Y.—The Dayton Tire Sales Company has just been incorporated to handle tires and motor accessories; capital, $10,000; incorporators, B. C. Elliott, J. A. Pontolillio and E. R. Detable. The headquarters are at 1764 Broadway.

PORTLAND, ME., INCORPORATION

The General Motorcycle Sales Company of Maine, with headquarters in Portland, Me., has just been incorporated to deal in motorcycles and accessories. The capital is $10,000. One of the incorporators is W. H. Wetsell, of Portland.

FINDS HIS CLEVELAND A BUSINESS-BUILDER

J. H. Hinckley, 250-Pound Los Angeles Real Estate Agent, Covers Most of Southern California on His Lightweight and Says It Widens His Sales Scope

CYCLE AFFAIRS ARE BOOMING IN WESTFIELD

WESTFIELD, Mass., September 27.—Interest in motorcycle and bicycle affairs is on the increase locally and one local dealer, F. P. Rouette, of Church street, has sold more than 100 bicycles this season and fully a score of motorcycles.

The headquarters of the Westfield Motorcycle Club are over his store and he generously gives the club the use of the room. About 35 members are now connected with the club, but next season it is hoped to boost the membership up to more than 50.

There are now nearly 90 motorcycles owned and ridden in Westfield against 63 owned a year ago. September 17 the club had a run over the famous Mohawk Trail through Berkshire, Franklin and Hampden counties, a distance of nearly 160 miles. October 8 the club is planning to have a run to Albany, N. Y., a total of 180 miles.

BURNETT ORGANIZES FIRST HARLEY-DAVIDSON RUN

PROVIDENCE, R. I.—The first motorcycle run ever arranged by the Harley-Davidson agency in this city was held Sunday, there being over 50 participants. The ride, a pleasure trip, was arranged by William N. Burnett, the local agent, on West Friendship street.

The party left this city at 10 o'clock and went to Plymouth for dinner. Here a considerable stop was made to give the riders an opportunity to look the city over.

From Plymouth the party went to the Cape Cod Canal and Buzzard's Bay and then returned to this city by the way of Onset, Taunton and Middleboro, arriving here at 7 o'clock after covering about 130 miles.

INJURED RIDER SUES FOR $3,000

Westfield, Mass.—Clifford Belden, of Dresden Station, N. Y., who broke his leg two weeks ago when run into on Elm street by an automobile owned by a West Springfield man named Dana Moore, is still in Noble Hospital and the local boys are looking after his needs. He has brought suit against Mr. Moore for $3,000 and the case will be tried in the Superior Court, Springfield, if a settlement is not effected outside of Court.

21,572 MACHINES IN OHIO

COLUMBUS, Ohio.—W. H. Walker, Ohio Registrar of Automobile in a report covering the year up to Sept. 29 reports the registration of 21,572 motorcycles. That number includes both owners and dealers and manufacturers, as there is no provision in the Ohio law dividing dealers from owners. Next year licenses will be issued to dealers and manufacturers containing the letter "D" in addition to the number.

FLAHERTY IN DETROIT

DETROIT, Mich.—T. A. Flaherty, manager of the Seattle, Wash., branch of the Prest-O-Lite Company, is now in charge of the firm's branch in this city. W. E. Darden succeeds Flaherty in Seattle.

FIFTH WEEK SEES A SLUMP IN 'MOTORCYCLE EXPERTS'

Last Week's Picture Proved a Stumbling Block for Many of the Contenders—Scores to Date Show There Are Only Three Perfect Men and a Dozen with 800 Per Cent.

WELL, sir! That little Schickel picture which we ran last lived up to our predictions. Had 'em all guessing, from the Atlantic to the Pacific—some of 'em are still guessing, according to the returns. Anyway, there were only 20 who came through with the correct answer before press-time this week, as against 75 perfect on the Pope at this time last week.

Even our old friends Wansleben, of Washington, who always gets his beautifully-lettered postal in on Tuesday morning, failed to come through with an answer this week, and Elwin Safford, of Corry, Pa., has also dropped from grace among the "Motorcycle Experts." And that Newark bunch—if you don't think we had them worried, just read Holton's letter here which explains itself:

"Newarkers" Had Trouble

"Ye gods and little fishes, Mr. Contest Editor, where in the hotel-bill did you dig the picture of that one up, that seat-post cluster that we pore experts must identify this week.

"First glance and we Newarkers knew it wasn't a Pope or a Harley, they have split-tanks that cover the frame; it didn't show a side-car lug, so we eliminated the R-S Thor and the Ex; it wasn't the Emblem or the Henderson, nor was it the Indian, either spring or rigid frame model, or the Cleveland, either; they are structurally different under the saddle.

"What's left? Let's see. Oh-h-h, yes; how about the Dayton. Where is the Dayton agent? No one knew. Look for a cut in the trade papers. No luck. The Dayton ad could not be found. Link then recalled the Dayton has a spring seat post and that bolt thru the post in the photo worked against it. That's all. No it ain't.

WHAT DO YOU KNOW ABOUT MOTORCYCLES ?

WHAT MAKE OF MOTORCYCLE IS THIS TAKEN FROM?

There is the Schickel lightweight left. Who has one? Silence reigns supreme. Bill Spear has catalogs of all the makes on the market. All down to his store.

"Bill gets out his precious store. There's the identical layout as is in **Illustrated's** photo—there on the Schickel. So here we go, Mr. Editor; it goes down in black and white that we Newarkers say 'Schickel' for our answer to the past week's photo.

"And on the level, if we're wrong, do you know what it is yourself?

"E. B. HOLTON."

But at that, not all the Newarkers who answered the last two weeks dared to vouchsafe that it was a Schickel, preferring to stay out rather than to risk a wrong answer.

We promised full box scores this week; it was some job to "dope 'em out," but the Contest Editor did his worst. There are only three perfect score men—fellows with a batting average of 1,000 per cent for five weeks. They are T. E. Campbell, Mammoth Springs, Ark.; Grant R. Moore, Monticello, N. Y., and Charles Williams, Pittsfield, Mass.

Dozen "Near Experts"

There are an even dozen "near-experts" with batting averages of 800, their names appearing in the score box below, while there are scores of fellows who have managed to win for themselves an average of 600 per cent.

Several more correct Pope answers came in before the "dead line" was drawn this week and one reached us from Ernest Anderson, of Westport, Conn., who thought it was an Excelsior.

Indicating clearly that the last picture was a "hum dinger," and all the rest of it is the number of incorrect answers. Five bad ones have come in to date. They are from J. C. Armentraut, Washington, who mislabeled it a Miami; Harry Buchanan, of Newark, who thought it was an Emblem; A. F. Dexheimer, of Philmont, N. Y., and E. S. Gulesian, Dorchester, Mass., both of whom credited the section to a Harley-Davidson, and Hermann Henssler, Jr., of Philadelphia, who was certain that it was an Emblem.

MOTORCYCLE CIRCUS DELIGHTS SEATTLE

Combination of Sprints on Old Machines, Pie Race and Other Events Affords Much Amusement and Advertising

SEATTLE, Wash.—Ted White, a dealer of this city, claims the credit of introducing the "Motorcycle Circus" into the United States. The circus, which was a combination of sport and fun, made its debut at Madison Park, Seattle, on August 17, and was witnessed by a crowd of more than 900 people.

The gymkhana or circus was opened by a bicycle race for one-half a mile on the three-mile oval at the Park. This race was followed by a contest on high-wheeled bicycles. In this event, only those who were able to maintain their balance finished, while the contortions of all contestants furnished much amusement to all hands. A pony race followed and then came the motorcycle events.

The first motorcycle event was a time trial for machines of model prior to 1910. Next came a lightweight race, with machines of 1916 model as participants. The third feature was a pie race, each competitor having to mount and ride a half mile at full speed; then stop and eat half a pie.. After having finished the pie, he had to ride another half mile at speed, then stop and eat five dry crackers. A third half mile spurt followed and at the end of this the riders had to drink a bottle of pop. The final leg of the race was a speed run to the finish.

A jumping contest was next held, a take-off being built on the track and the riders hitting it at 55 miles per hour. As much as 35 feet was made in this event. After the show was over, complimentary tickets for a bottle of pop and frankfurters were passed around. The affair was a huge success and dealers all around the Northwest believe that it was one of the best advertising stunts ever pulled off.

"MUCH VALUABLE INFORMATION"

Enclosed find express money order for two dollars to renew my subscription for Motor Cycle Illustrated.

Yours truly,

G. W. Gabriel.

Milwaukee, Wis.

P. S.—I have been riding a motorcycle two years before subscribing to your paper, and did not know what real enjoyment there was in the sport until after reading Motor Cycle Illustrated, from which I gained much valuable information.

SHEID GETS MEMBERSHIP PRIZE FOR SEPT. 25

SECRETARY G. B. GIBSON, of the F. A. M., announces that H. D. Sheid, of Detroit, Mich., is the winner of the Federation membership prize for the week of Sept. 25. Mr. Sheid sent in seven applications, and is, therefore, entitled to select one of the articles which the national body is awarding to those who help to swell its roster.

Another winner of a membership prize is H. E. Sechrist, of Harrisburg, Pa., who forwarded the names of ten new club members.

FIRST MOTORCYCLE ELOPEMENT FROM WOOSTER, O.

WOOSTER, O.—The first couple in this city to make a motorcycle elopement are Lloyd Braden and his wife, née Ethel Bruce. Miss Bruce, who is the daughter of John R. Bruce, local Harley-Davidson agent, was engaged to Braden, and relatives were looking forward to the wedding, when the news appeared in a Covington, Ky., paper that a marriage license had been issued to both the young folks. The Bradens then owned up to their marriage.

Miss Bruce and Lloyd Braden left with Braden's sidecar on Wednesday for a visit to relatives in Marion, O., but evidently went to Covington en route and got married.

DRESSER SAYS BORDER LIFE IS NO CINCH

MILWAUKEE, Wis., Oct. 5.—"Some club you fellows got in this town." said Dan Dresser, who is on his way home for a thirty-day furlough from Fort McAllen, headquarters of the New York divisional companies on the border, as he stood in the club rooms of the Milwaukee M. C.

From what could be gleaned, life with the soldier boys in Texas is far from being a picnic. "You should see me dig trenches. I can qualify as the best 100 per cent. efficiency ditch digger you ever saw in action." Dan says the motorcycle contingent was far from being exempt from any of the duties attendant on the regular routine of camp life. "All we did was break camp all the time. We would barely get settled when the orders would come to break camp. Oh, it's great stuff, though; I will be glad to go back."

GOVERNMENT MAY REGULATE GASOLINE PRICE

WASHINGTON, D. C., October 3.—Announcement is made that the price of gasoline may be regulated by the Federal Government in the near future, as a result of an investigation being made by the Department of Commerce.

S. W. Stratton, director of the Bureau of Standards, is gathering data for the purpose of ascertaining the precise scientific ingredients of gasoline so that the Bureau will be enabled to handle intelligently the problem of fixing prices if that step is finally decided upon.

The Geological Survey announced a day or so ago that 65,364,665 gallons of raw gasoline were extracted and sold during the last year. That was a gain of 22,712,033 gallons, or 53 per cent. over 1914. An average price of 7.9 cents per gallon for the unblended product was received at sources of production, and the entire market value of the year's output was $5,150,823.

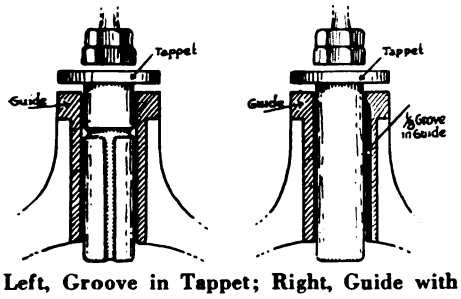
Repair Kinks and Shop Wrinkles

Correcting Leakage at Tappets

By Grooving Either the Guide or the Tappet, Overflowing of Oil Will Be Done Away With and Motor Will Be Kept Clean

By JOHN O'BANNON

NEATNESS is one of the main things to be desired in a rider these days, and one of the first things to be done in this direction is to prevent oil leakage from the motor. Such leakage will soil the shoes and leggings of the rider, no matter how careful he may be otherwise and thus spoil the general neat effect in addition to making him uncomfortable.



Left, Groove in Tappet; Right, Guide with Groove to Return Oil to Case

The usual places for leakage on many motors in their second season—and some in their first, too—is at the valve tappets. The oil, forced from the crankcase into the gearcase, seeks an outlet and this is usually through the tappet guide. You can see this on motors with effective breather-pipes as well as on those without, but in a lesser degree. The first thing to do is to see that the breather-pipe is working properly and then get at the tappets. The trick is to form a channel in the tappet guide or on the tappet itself to let the oil drain back into the gearcase.

Grooving the Tappet

Take out the tappet and fix it in a lathe chuck. At a point slightly above the center turn a groove about ⅛ inch deep all around the tappet. Remove the tappet from the chuck and fix it in the vise. File or mill a similar groove from the first groove all the way to the lower end of the tappet, being careful to remove any burrs set up by the filing or milling. On replacing the tappet it will be found that the oil leakage is done away with, provided that the breather is working properly. The surplus oil alongside the tappet will rise to the groove and descend through it to the gearcase once more.

If the tappet is too hard to touch with the file or cutter, a lengthwise groove of about ⅛ inch depth and width can be formed in the guide. This groove should not reach to the upper part of the guide when in place, but should reach the lower end. This will give the same action as the groove in the tappet itself.

Much can also be done to prevent leakage by forming the upper part of the guide with a countersunk or tapered opening, to form a puddle for collecting the oil and carrying it to the groove or channel referred to.

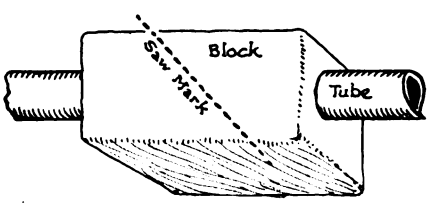
PRACTICAL VULCANIZING SUGGESTIONS

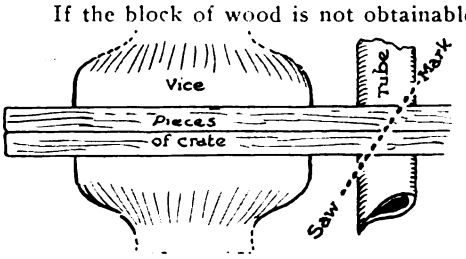
SAVE your scrap gums. You can return them to the factory for credit. The value of this material when returned depends largely upon its condition. The gums should be kept separate and free from foreign material.

When unrolling gums or fabrics for cutting, unroll them so the holland is on top, then roll the holland back. Do not destroy the holland, as it comes in handy to cover a tube plate, etc. Always cut gum along length of the roll.

Quick-cure vulcanizing cement is excellently adapted for repairing molded goods and other rubber articles which would not stand prolonged exposure to the heat of vulcanization. Hot water bottles, rubber boots, bands on date stamps, etc., are examples of articles that can be repaired with this 5-minute-cure cement.

Bulky-looking repairs are often caused by the overlapping of the new plies of fabric on the old. When a piece of fabric is inserted it should lap just one-eigth of an inch all around. During vulcanization the air pressure and the expansion of the tire will draw the fabric down so that it joins exactly with the old fabric without overlapping.





Left, Tube in Block Ready for Sawing; Right, Using Crate Pieces; Note Saw Marks

Much has been said about the lifted-tread method of making a sectional repair, but many vulcanizers are still following the wasteful practice of cutting off the old rubber and throwing it away. Cut across the tread well to one side of the injury and peel it back. After the section has been built in, you cement the tread and lay it back in place.

Why waste a big patch on a little nail-hole puncture? You can get just as good results in a much more economical way. Pick out the hole until you have a nice clean perforation; roughen with sand paper; apply cement, allowing it to dry 25 or 30 minutes; then roll up a small plug of tube stock just large enough to fill the hole. Cure five minutes on the flat plate. The pressure will form the rubber plug into a sort of rivet on the inside and the repair will hold just as well as a large bulky patch. This can be readily performed in much less time than when patching.

Trouble is often experienced in getting the tread to stick on small repairs. This might be due to any one of several reasons, the most common of which is applying cement over wet fabric. The moisture in the fabric, even if very slight, will blow the tread loose from the fabric. Another common cause for loose treads is the failure to roughen up the old carcass sufficiently. In this case the cement will not hold properly and after a few miles of running the repair will separate. It is also well to make sure that proper pressure is being applied to the repair when it is curing.

SAWING TUBES ACCURATELY WITHOUT BURRING

IN sawing tubing at an angle, say of 30 or 45 degrees, difficulty will often be found, even when the tube is held in a vise. However, the following method will permit of accurate sawing at any angle and will at the same time ensure a clean and neat job.

Procure a block of wood, longer than three inches. Bore the long way of the block a hole which will be a snug fit for the tube. Insert the tube and lay off the angle desired on the block. Saw along the line laid off, cutting through the block and tube. The saw-cut through the tube will then be accurate.

If the block of wood is not obtainable, take two sections of crate, and saw them to equal length. Clamp in the vise with ends flush and bore both to fit the tube. Place them over the tube close together, mark off the angle, and saw.

It is obvious that the same pieces of crate can be used for subsequent work of this nature, after boring holes anew and otherwise repeating the process.

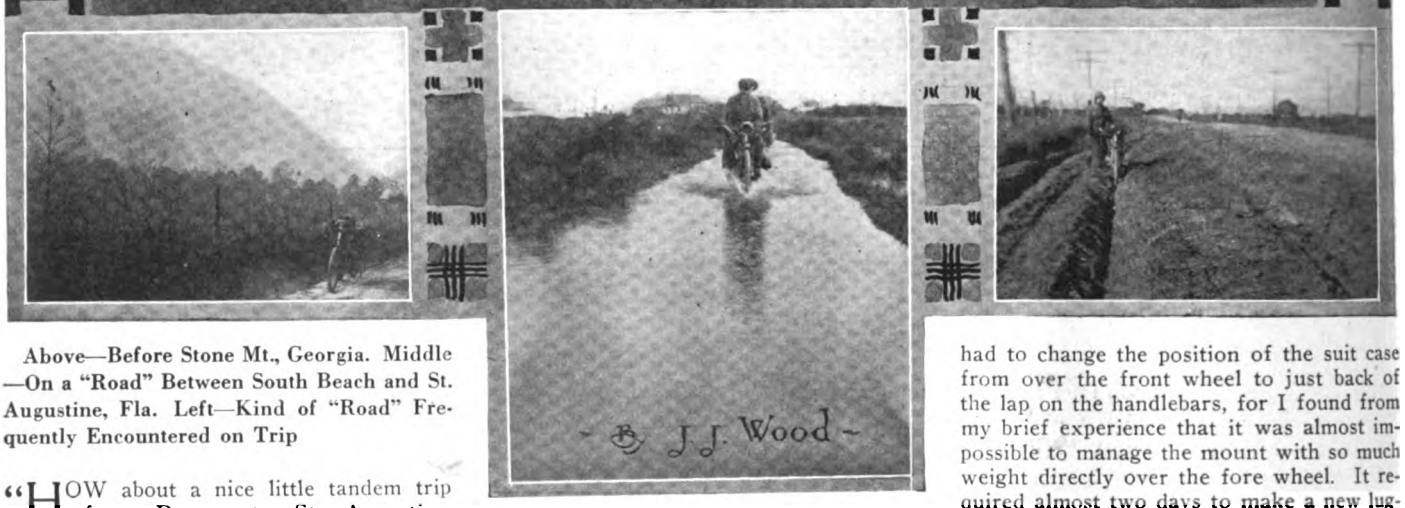
A Tandem Trip from Denver to St. Augustine



Above—Before Stone Mt., Georgia. Middle—On a "Road" Between South Beach and St. Augustine, Fla. Left—Kind of "Road" Frequently Encountered on Trip

"HOW about a nice little tandem trip from Denver to St. Augustine, Florida, hubby?" asked Mrs. Wood one morning last fall at the breakfast table.

I thought it was a corking fine idea. Both my wife and I had been out to California, but neither of us knew much about the "Sunny South," except for what we had read in books and stories. My business was slow during the fall, and I had promised myself a real vacation. What could be better than knocking about the South on a tandem trip? Well, we decided to go on the journey.

Laying Out Plans

The first thing I did was to get my motor into shape and to lay out the route. Accordingly all my spare time for nearly a month was devoted to these preliminaries. Mrs. Wood helped to dope out the route, and together we got up a list of the necessary equipment which we were to carry. We finally found that all our equipment could be gotten into an eleven by fourteen suit case, and decided to take along a small khaki bag in which to pack our raincoats and an extra inner tube.

It may prove interesting to the reader to know that my motor is a two-cylinder, two-cycle affair of 40 cubic inch displacement, which was designed and constructed by myself. Gas is supplied by an Amac carbureter, and a Mea magneto furnishes the ignition. The motor is geared 3 7-10 to 1 to a Harley-Davidson two-speed rear hub, giving a ratio of 7 4-10 on the low gear. An Eclipse clutch is mounted on the countershaft.

Off on the Trip

All preparations being completed, we started out on the morning of October 4. Chicago was to be our first objective, and we were to travel over the Sante Fe trail, through Kansas City and St. Louis. Leaving Chicago we determined to visit Cincinnati, then to Lexington, Ky., and on to Louisville, over the Nashville Pike to Nashville, Tenn. From the last named city our route lay through Chattanooga and Chickamauga Parks and on to Savannah, Ga., where we were to stop to witness the Thanksgiving Day races, and then down to Florida.

When the morning for our departure arrived we found a light drizzling rain that showed no signs of letting up. We started in spite of the drizzle and were out of the rain after an hour's riding. And as usual we found the jinx had joined our party just after we had gone out fifty miles; a sprocket came loose which could not be fixed on the road. Fortunate for Mrs. Wood and myself two friends happened along, each of whom was mounted on a machine. One of the fellows kindly consented to take Mrs. Wood on his tandem to Colorado Springs, while the other lad towed me along with the aid of a very short rope.

An Accommodating Dealer

Coming into the Springs we found the Cascade Auto Company, whose very accommodating proprietor, Ben Clow, offered the use of his shop and lathe to do the necessary repairing to the sprocket. I also had to change the position of the suit case from over the front wheel to just back of the lap on the handlebars, for I found from my brief experience that it was almost impossible to manage the mount with so much weight directly over the fore wheel. It required almost two days to make a new luggage carrier for the suit case and to fix up the sprocket, and it was nearly night when we were finally on the road once more. We got into Pueblo late that night.

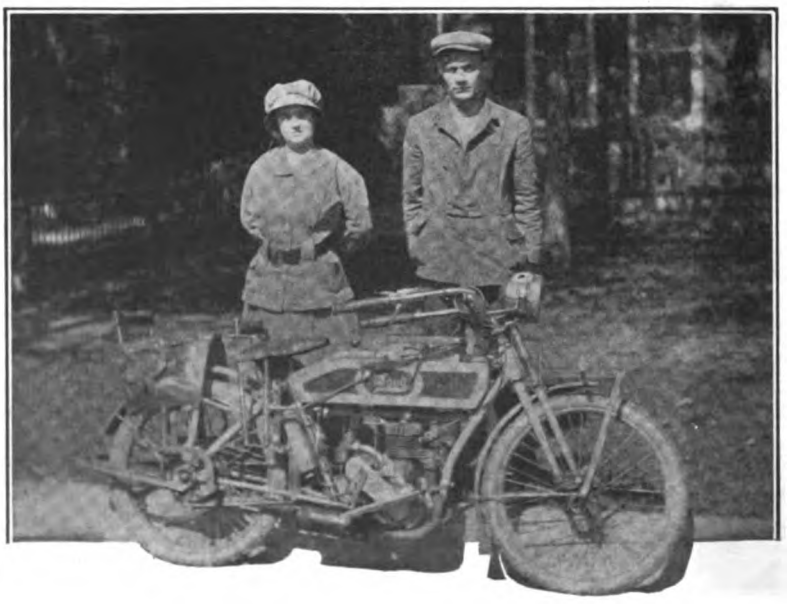
Re-Tiring at Las Animas

Leaving Pueblo the following morning, the progress was slow, for the roads had been badly cut up by heavy wagons. In the last sixty miles of the day's run we repaired the rear tire six times, or once every ten miles. But we managed to get into Las Animas, and bought a new tire, sending the old one home for repairs, to be forwarded to us later in the trip. The next day near Lyons, Kans., our real trouble began, for the rain came down in dead earnest and turned good roads into long streaks of deep mud. We started through the mire with more or less (rather less) success, when we were caught in what seemed an almost bottomless mud hole and the counter shaft broke off just at the edge of the clutch.

This mishap occurred just in front of a good natured farmer's house, and he asked us to make ourselves at home. Leaving Mrs. Woods there I took the broken parts to Lyons, where the best I could get was a patched job.

We succeeded in riding to within a short distance of a place known as Little Rivere, when the shaft snapped off again. I walked two miles into Little River and tried to find someone to help me out, but the only person in town who was willing to assist me was Mr. Moore, the owner of the local Excelsior agency. It was up to us to get to McPherson, and the Excelsior agent volunteered to tow me and carry Mrs. Woods on his tandem. That "Ex" certainly did some splendid work, carrying us over hills, through mud and sandy roads. We overtook one of the accommodation trains, the conductor of which was a friend of Mr. Moore, so

Mr. and Mrs. Wood and the Machine on Which They Made Their Trip



Digitized by Google

that it was an easy matter to persuade him to carry us and the machine to McPherson. When we finally reached the town we were certainly a tired lot and turned in early for a good night's rest.

Out for Kansas City

The mud was so bad after leaving McPherson that we decided to quit the trail, go north to Topeka, and then over the gold belt route to Kansas City. From Topeka out we had hopes of finding better going, but just as Mrs. Woods and I were speaking over the matter the rain came down and we could hear its incessant patter on the roof of the hotel at which we were stopping. The next morning our chances of getting into Kansas City appeared very slim, for it was still pouring. We loafed around until late in the afternoon and then, with four gallons of gas in our tank, we took to the mud again.

The distance into Kansas City was about 75 miles, and we made 55 miles on low gear plouging through the mire, the rest of the going being over macadam. Just before reaching the paved stretch, we ran out of gasoline, but were lucky in finding a Ford booster who gave us enough fuel to ride into the city. Leaving the machine at a local Indian agency, we stopped with friends for a week. The first leg of the journey had consumed nine days, and the cyclometer showed 825 miles.

Out of Kansas City we sailed on the 19th of October, and found a fine stretch of rock road which lasted for 33 miles and after that it was alternate patches of fresh and dry mud—real Missouri clay, which, when soft, sticks to your machine like glue. We made Dover in the afternoon and put up there for the night. Leaving Dover, our brake rod broke off at the clevis and we made a temporary rod with a baling wire, which lasted until we had it permanently fixed by a blacksmith at Waverly. Late in the afternoon we crossed the Missouri River at Boonville.

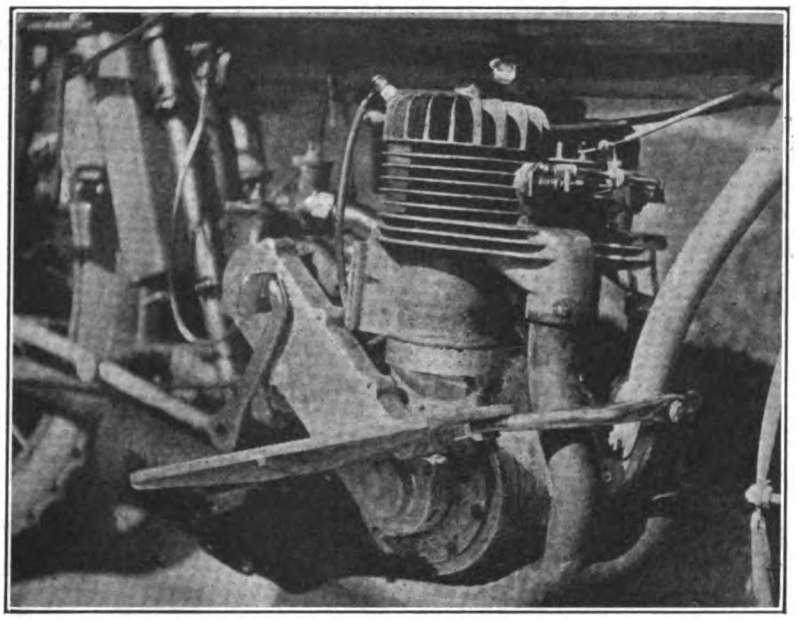
Asking City Prices

While at Williamsburg, Mo., a hotel keeper tried to hold us up, by asking two dollars for a night's lodging in a tumble down old shack. We refused to stand for anything like that and scouted around for a comfortable looking farm house. The farmer was glad to give us shelter and served a meal that would have done justice to a city banquet. When after breakfast the following morning, we asked what the bill was, he replied that one dollar would amply compensate him for his trouble. This instance goes to show that one need not put up with the "highway robbery," which some tanktown hotels try to practice on unsuspecting tourists. St. Louis was about one hundred miles off, and we reached the Missouri metropolis at three o'clock in the afternoon.

We started from here to Chicago, but found the roads in such bad condition that we turned back to St. Louis and spend a week in that city, waiting for the roads to dry up sufficiently to cross Illinois into Vincennes, Ind. Quitting St. Louis late in the afternoon of October 29, we crossed into Illinois and reached the town of Breeze. The roads were all dry by now, but some of them were deeply rutted, which made the going everything but pleasant.

Repairing by Candle Light

We had ridden about 97 miles the following day, when without apparent cause the back tire, which we had not even pumped up since Las Animas, came off the rim with a loud report. It happened just in front of a farm house and brought the "boss" to see what was amiss. He quickly saw our predicament (the inner tube being almost cut in two) and asked us to stay with him over night. I put in a spare tube by candle light and had everything in shape for an early start the following morning.



Two-Cylinder, Two-Cycle Motor Designed and Made by Mr. Wood

West Baden, Ind., was our next objective, after passing through Vincennes and encountering the roughest riding of the entire trip. A sharp piece of rock cut our tire very badly while we were traveling toward New Albany, but by using patches we were able to strike the Ohio River and ferried across to Louisville, Ky.

We stopped the following night at a place called New Haven. Here we met two gentlemen who were automobiling to Florida, and little did we think at the time that these fellow tourists would be of assistance to us later on in the journey.

Over Bottomless Sand

Roads were fair the next morning to Sand Hollow, which, by the way, is certainly rightly named, for there are always teams on the lookout for the unwary motorist who drops off from the hard road and into the bottomless sand. If the autoist gets in low gear soon enough and doesn't stop, all is well; but just as soon as he stops, it means a job for the man with the team, for the more the wheels turn after stopping the deeper into the sand they bury themselves. We were told just what to expect and were therefore prepared. We got through in good shape, and when we came to a point where the road branches off to Mammoth Cave, we overtook the autoists whom we had met at New Haven and were invited to lunch with them.

On Century Old Highway

It was our intention to turn off from the main road and go to the cave, but as the thoroughfare leading to the cave was in bad condition and might be impassable should it rain we decided to continue our journey. We were traveling on a road built by the government about one hundred years ago, and were having trouble galore without looking for any more. At some forks in the road there were no signs and we had to trust to luck to pick out the right direction; and rocks from the size of an egg to the siz of a man's head stuck out of the road, spic and span, having been washed clean by the recent rains. We took the little ones as they came, and by adroit steering managed to run clear of the big boulders.

At Stone River Battlefield

On the following afternoon we passed through the Stone River battlefield, out from Nashville. Mrs. Wood, who was thoroughly enjoying the trip despite occasional hardships, and I were informed that one one side of the road which we were following were 22,082 Union headstones and on the other side more than 9,852 Rebels had fallen in the battle fought there during the Civil War. Between the battlefield and Murfreesboro we had to pay toll three times at short distances.

And again the next morning while riding toward Beach Grove, we were held up four times by the toll gate keepers. Though these fees are collected for the purpose of maintaining the highways, the roads certainly showed no signs of improvements, for most of them were poorly kept trails.

The Climb of the Cumberland

From Wonder Cave on the climb of the Cumberland began. Two roads run up into the mountain, but inquiry revealed the fact that the state thoroughfare, though steeper than the toll road, was in better condition for motorists. We were confident that we could pull up the steep grade, but the big problem was to stay in the saddle or at least on top of the motor. It was necessary to maintain as much speed as possible in order to pull up the short steep pitches. After a mile and a half of this sort of riding, we were obliged to stop and rest, and allow the motor to cool off. I was real curious to find out whether the two-speed was still there, and was glad to see that it was yet in good condition.

I told my "partner" that I never expected to see the top of the mountain "all whole." But we reached the summit and made

Digitized by Google

twelve more miles in addition when the expected happened; the lower frame tube broke off right below the head forging, bending the top tube until the motor rested on the sand road. We had just left Tracy City, and being unable to find any wire with which to patch the frame up, we decided to wait patiently until our friends the auto tourists came along.

But when they did come, our friends informed us that they hadn't a scrap of wire, so we held up a farmer who unwound about six feet of good heavy wire which he had used up to keep his seat down on the wagon. By putting a large rock under the motor and bearing down on the front end, the broken parts of the frame were brought together and securely wired. That held the weight, all right, but forced the top tube to stand all the strain. The wheels were then eight inches out of line. I felt safe to ride alone, but did not like the idea of having Mrs. Wood risk her life on the tandem. The autoists came to the rescue when they volunteered to carry her to Chattanooga, where we could have repairs made.

I started out ahead and kept my lead. Steering in the sand was difficult, but after eight miles the going was good again, and I got such a great lead over the automobile that I waited for the party to catch up, for I did not consider it wise to ride forward in the dark. We wanted to make Chattanooga by night, but inky darkness overtook us 12 miles out of town. The autoists carried a very complete camping outfit, consisting of tent, stove, provisions, etc., which enabled us to spend the night in camp with them.

Most of the following day was spent in Chattanooga, where our four wheeler enthusiasts stopped to get a new spring for their car. Having gone thus far without any further damage to the broken frame, I thought that I would take a chance on continuing to Atlanta, before having the frame fixed. On leaving Chattanooga, we passed through Chickamauga Park, the scene of the famous battle of Chickamauga. All the field guns are still placed just as they stood when the battle was raging, and large stone monuments and tablets commemorate the important actions which occurred during the fight. Our party spent an hour in visiting the park. That night we pitched the tent three miles from Dalton, Ga.

Fording Many Streams

Except for having to ford numerous streams that were in some cases a foot deep, we had smooth traveling up to noon the next day. But after one o'clock a drizzling rain started and we were obliged to seek shelter under trees. However, being anxious to make a steep clay hill a short way off before nightfall, we continued the journey as soon as the rain showed a sign of letting up. The road was highly crowned and I found difficulty in keeping to the center. I didn't have any chains and the rear tire was worn smooth, but between alternate riding and walking I finally reached the top of the hill. The autoists being equipped with chains had an easy time of it. Again we pitched the tent at night, this time near Gassville, Ga., and when we got under cover the rain came pouring down in torrents and the wind whistled through the trees like mad.

A Sleepless Night

To keep the tent from blowing away, we placed rocks on the edges of the canvas. But every now and then the wind would blow with extra force and pull the tent wall from under the bowlders. We dried some wood on the oil stove and managed to keep warm by making a fire. Of course, it created lots of smoke in the tent, but it also radiated a lot of heat and kept us warm. Having a good supply of provisions, we made a good supper with the aid of the oil burner. There was mighty little sleeping done that night.

By daylight the storm was over, but the air was cool and damp. We took to the mud, hoping to make Atlanta before night. I reached Cartersville considerably behind the auto party, and when I arrived they were replacing another broken spring. We left the town at noon, and immediately encountered ten miles through the Altoona hills where red clay roads made the going difficult; but after that we had things easy by following the piked highway to the Chattahoochee River and the well paved road into Atlanta. Arriving there we bade farwell to the genial four wheeler party, who continued on to Tampa, Florida.

Woods and Some Friends at Lookout Tower on Ft. Marion, Ind.

Twelve days were consumed in seeing the sights of the "New York of the South," and waiting for the repairman to finish his work on our broken frame. Mrs. Wood and I spent one day in visiting the United States Federal Prison, and saw how Uncle Sam's convicts live. Except for the fact that they had to stay there, it did not seem to be a bad boarding house. Unlike state convicts they were permitted to carry on conversations with each other, even at the tables; and from the size of the piece of pie each man had, I do not doubt that they get enough to eat.

We left Atlanta on November 21 on a cold, raw morning. Our next stop was to visit Stone Mountain. The roads to Shadyville were in fine condition, and we spent the night in that little town. Two days later we rode into Savannah, where we spent the three days,

Having been informed by a competent authority that it was almost impossible to ride by motorcycle to Jacksonville, Florida, for the roads, we were told, were in very bad shape and the ferry charges were quite large, we decided to extend our experience by an ocean trip, and so embarked on the steamer "Suwannee."

Mrs. Wood and I landed in Jacksonville on November 28, and spent several days riding over the bumpy brick roads of that city. Of course, all of the streets were not in that condition, for this thriving town boasts some very fine residential drives. After visiting all the interesting points of the city, we were escorted by a party of Jacksonville motorists to St. Augustine, the end of our journey. We had traveled in all 2,800 miles; though the distance certainly seemed shorter than that.

SLAYBAUGH SINGLES TO SEE NEW HARLEY-DAVIDSON

SANTA BARBARA, Cal.—James Slaybaugh, Santa Barbara agent for the Harley-Davidson, was so anxious to see the 1917 model, of which the only samples in southern California are now at Passmore & Sayre's, Los Angeles agency, that he plugged over Conejos and Cahuenga passes on an old 1911 single. Slaybaugh's business in Santa Barbara has been so good that he was completely cleaned out of machines back to this old crock. He had quite a time tuning it up for the journey over the grades, but when it was ready it had the stuff for the passes. One look at the olive drab machine satisfied Slaybaugh that it was worth the trip. Other out-of-town dealers who have made the pilgrimage this week are Billy Gurr, of San Bernardino; Al. Rix, of San Pedro; F. W. Parsons, of Orange, and Buck, of Santa Ana.

130 ADDED, 104 RENEW FOR SEPTEMBER, 1916

THE membership report of Secretary G. B. Gibson, of the F. A. M., for the month of September shows that 100 affiliated riders were brought into the ranks during that period, while 30 unaffiliated motorcyclists were signed up. Renewals during the month totaled 104. Secretary Gibson's books show that the last card issued in September was number 38,059. Among recent applications for membership in the F. A. M. were two from Petrograd, Russia.

FIRST ONE IN PROVIDENCE

PROVIDENCE, R. I.—The first 1917 model of any motorcycle to reach Providence is the Harley-Davidson. William N. Burnett, manager of the company, unboxed the new style last Wednesday.

POPES FOR BOMBAY

WESTFIELD, Mass., Sept. 29.—The Westfield Manufacturing Company today made a shipment of three Pope three-speed singles to Bombay, India, where the Pope motorcycle is becoming very popular. This shipment was made to Dodge & Seymour, the Pope distributors in the Far East.

BESIDE THE TRENCHES IN EASTERN THEATER OF EUROPEAN WAR

Russian Motorcycle Riders Scouting Under Severe Difficulties in Territory from Which the Enemy Retreated in the Recent Drive Toward Lemberg. Field Officers Use Light Cars for This Service

Septuagenarian Is Sidecar Enthusiast

William Edwards, of Providence, R. I., Considers Riding Great Old Age Reducer and Fine Exerciser—Makes Regular Short Trips with Wife

BY WILLIAM M. STRONG

PROVIDENCE, R. I., Sept. 8.—William Edwards, aged 78, is the oldest motorcycle fan in this city and in New England, for that matter. He says so himself and he has a good wife to whom he has been married 48 years to back him up in it.

The couple has been riding motorcycles for four years and they state that it is the greatest old age reducer ever invented. Not only is it health-giving but it is also a great means of exercise.

Mr. Edwards tells his story as follows: "The time came when I had a respite from daily work and there was before me the choice of two things—to sit idly by and see myself grown old or to go out and enjoy nature with my wife. If I did the former I believe I would have died long ago of dry rot, while if I got out and about, my days would be longer.

A Bicycle Rider

"In bicycle days I had owned one of the low-wheeled kind known as safeties and had ridden it a good deal, and toward the latter part of my riding I had entertained the thought that I would like to own a motorcycle. The more I thought it over, the more convinced did I become that I could make excellent use of one of the sidecar variety, so in 1913 I bought one and since then my wife and I have done a good deal of riding about the country.

"We have never been away from home over night, always timing our trips so that we could get back early in the evening. As we ride for pleasure we are content to jog along at a pace no faster than 22 miles per hour, and we are not worried because others spurt by us and leave their dust for us to drive through. Most of our travelling, though, is done at a pace much slower than 22 miles per hour.

Mr. and Mrs. Edwards

"Under these conditions, riding sanely, as we do and as all should who wish to get real pleasure out of their afternoon on the road we return home, and sleep well. We both have been benefited by our ride in the open and have visited parts of the country and looked over scenery which, without the use of the car, would have been inaccessible and denied to us.

How Youth Is Renewed

"Riding about the country as I do makes a man forget his years, renews his youth in a way, so that he begins to say how many years young he is, rather than bewail the years to which he has attained.

"Mrs. Edwards, too, is greatly benefitted by the outings," he continued, "enjoying them to the limit, but most of all she revels in the beauties of nature. At first she was not disposed to favor the purchase of a sidecar, expressing a preference for a motorcar, but I rather guess that she is more pleased now with our outfit—a good old Indian—than with the automobile.

"By all means I would advise any man of my years, or older, for that matter, if he can do so, to get a motorcycle, with a sidecar, take his wife out on the road and make life worth living, rather than sit down and burn out like a candle."

MADE 950-MILE TRIP

LAMOTT, Pa.—Philip Stilz and Noah Englemeyer, of this city, returned a few days ago after making a motorcycle trip to Portland, Me. The trip covered about 950 miles.

Chatter, Chin, Comment

By E. F. HALLOCK

Just a Few Words on the High Cost of Kerosene

I HAVE been experiencing during the past few weeks some of the trials which are besetting the British rider. In Great Britain, in order to economize on motor fuel, only folks licensed by a fuel commission can buy gasoline, or "petrol," as it is termed across the pond. And even the license does not entitle the bearer to purchase more than a fixed quantity in the course of a month; and most motorcyclists complain that the commission has fixed the allowance at a point far below their actual requirements.

As a consequence, the British rider has, since the first of September, been eking out his meagre gasoline supply by burning kerosene, using gasoline for starting only, or, what amounts to the same thing, has been diluting the gasoline with the heavier fuel to a point where starting from cold can be accomplished, although it is rather a difficult feat.

That is the condition I have been experiencing for the past few weeks. I found a place where gas cost me only 23 cents instead of the customary 25, and I have been endeavoring to find out why my motor is so hard to start. I hit upon the cause when I "cleaned up" last. The gasoline took so long to evaporate that I began to realize that it had been "doped" with kerosene to the limit.

I have since gone back to the 25 cent gas and have had no occasion to kick my head off to get the motor running, nor need I wait five minutes for the motor to heat up before going.

When the time comes for us to economize on our motor fuel we, no doubt, like our British cousins, will be glad enough to run on kerosene. But until that time I, for one, prefer to keep off the heavier fuel; or if I do want to use it had rather buy it under its own name at 11 cents a gallon than pay 23 cents a gallon for the same stuff plus a trace of the lighter gasoline under the latter name.

Do You Know Who's Your Local F. A. M. Attorney?

A YOUNG fellow dropped in on me at the office this week, much perturbed, and also disturbed, and exceedingly anxious to get in touch without delay with the local F. A. M. attorney. And I am sorry to say that I was unable to help him and, in fact, quite unable to tell him definitely, even, whether there was an attorney appointed for either New York or Brooklyn.

The case simply emphasized the laxity of all of us on matters of the greatest importance to ourselves as riders and to the F. A. M. Those in charge of the legal action work have gone to great pains to appoint attorneys in practically every important motorcycle center throughout the United States, and we riders who should be interested for our own selfish selves, if nothing more, don't even take the trouble to make a note of the lawyer's name and preserve it for future reference. Yet when we are in trouble we need the lawyer's name and address badly.

It strikes me that it would be a dandy idea for every dealer to have posted up in his establishment the name of the local F. A. M. attorney; it would help to visualize to the average rider that he is getting something for his dollar.

Some Improvements We Have Long Awaited

TWO improvements that have been recently announced appeal strongly to me. The first is the front wheel stand which is to be fitted regularly to a couple of the 1917 machines; and the other is a little boon for the sidecar rider in the shape of a jack to fit any make of sidecar, which has been developed by the Pope folk.

While front and sidecar tires do not seem to fall under the influence of the tire jinx quite as often as the rear tire, due of course to the harder usage the rear shoe gets, when aught does befall them the task is made much harder by the necessity of finding some sort of prop to keep the wheel off the ground.

Both of these devices will fill a long felt want, and in the case of the front wheel stand, I trust that the Chicago show will uncover a device of this sort on other models besides the pair alluded to above.

Something More About Control Standardization

WHEN I wrote that note about control standardization last week I had been driving a side car outfit throughout the whole of the season. I had become so used to the spring-operated foot clutch lever which brings the clutch into engagement when pressure on the pedal is released that I used the supplementary hand lever only to attain the proper clutch tension for smooth running.

The system of control is as nearly identical with the control of the automobile as it is possible to make it, and appealed to me so strongly that I suggested that perhaps it would be the ideal system if we ever do reach a stage in motorcycle development in this country where standardized controls will be realized.

Since writing that note, however, I have removed the side car and been riding solo, and I must confess that I am not so favorably impressed with the arrangement. It is ideal on the country road or where you can speed along without traffic interference. But in traffic the automatically engaged clutch, in my opinion, leaves something to be desired.

Of course, there is no occasion for me to use the foot clutch control under these conditions for the hand lever is readily accessible; but the foot control comes more natural, and it is only when I am forced to take my feet off the running boards in order to balance myself that I realize that I should be using the hand clutch lever. On several occasions I have thought of it too late and had narrow escapes or else have stalled my motor.

Undoubtedly, if I had always ridden solo on this mount I would have not the slightest trouble in this respect, but the sidecar work, involving no necessity for maintaining balance, has undoubtedly spoiled me for solo riding.

The point I want to bring out is that the subject is a many-angled one, and one that needs a deal of speculation before any set decision is arrived at, provided the motorcycle manufacturers ever do get together on the matter. And I still think that the matter is of the greatest importance. It was consequential enough in the case of the automobile, for the car manufacturers to standardize controls. And in the case of the British motorcycle it is considered of enough importance for the British manufacturers' association to hold the matter under advisement for consideration as soon as the re-establishment of peace clears the decks for the discussion of motorcycle matters.

If the many motorcycle manufacturers of Great Britain can get together and work out an improvement of this nature, how much easier it should be for our dozen of motorcyle makers to come to a decision and get things started.

Can't the Cleanup Process Be Simplified?

TO descend from the towering heights of the optimist to the deep dark vale of the pessimist, I wish to register right here the fact that I find it a mighty hard job to keep my machine clean. For the fellow who does not have to hold down a job and who can devote several hours a week to keeping things shipshape, I presume, it is a simple matter. But for me, every minute I put on cleaning my machine comes out of my riding time, and I begrudge it so much that I must confess I do not "clean up" more than once every six weeks and the appearance of my machine, generally, is such as to drive fellows out rather than pull them into the ranks of the motorcyclists.

I know there are others, and a fund of them, in the same boat. What little attention we give our machines comes under the category of adjustment rather than cleanup; we bought the machines to ride, not to practice janitor service on as we have to do with present-day mounts.

Is there not at least the hint of a valuable suggestion in this confession for the far-sighted manufacturer? Is it not possible, for instance, to eliminate many of the little corners and pockets which act as dirt collectors on the modern machine, to smooth out the crankcases and make the motors perfectly oiltight so that a quick rub over with a rag will make the machine presentable? It strikes me that there is considerable room for improvement along these lines and that the manufacturer who first offers a readily cleanable motorcycle, other things being equal, will steal a big march on the other factories.

STENZEL BREAKS HIS MILWAUKEE RECORD

Captures Second Honors and Shaves Over a Minute From Own Record for Course—Old-Timers Turn Out and Officiate at the Race

MILWAUKEE, Wis., Oct. 2.—Braving a very brisk southwest wind that at times might well be called a young storm, especially on the home stretch, Henry O. Stenzel, president of the Milwaukee Tire & Supply Co., finished second in the ten-mile road race of the North Side Cycle Club that was run over the famous Silver Springs Triangle course, and, incidentally, clipped a minute and six seconds from his own record for the course.

Stenzel started from scratch and he went through the thirty odd entrants, with the exception of Joe Dietz, a one-minute man, who finished a short distance ahead of the record-breaking Stenzel. It was noted that the old-time riders easily copped most of the awards in the race, they showing the youngsters, despite their years, how to ride a bicycle.

Crowds Came Early

Long before the big event was due to start, the crowds started to congregate at the starting point and along the route of the contest. By the time that the starter sent the first riders away, the streets in the neighborhood of the starting point were packed with people, showing that the old game is again in popular favor. The police and officials had their hands full in trying to keep the people back so that the riders could finish, and to Emil Schueppert, the clerk of course, and Referee C. A. Rusch, much credit is due for the manner in which the event was handled and their checking system could hardly be improved upon.

All of the old-time bicycle riders and old officials, ones that officiated at race meets hereabouts twenty years back, answered the "call of the wild" and performed in the capacity of judges, checkers, timers and otherwise made themselves handy and useful. Harry Messier, who claims to have built the first saucer track in Minneapolis over 30 years ago, was on hand and officiated along with the others.

Course a Famous One

As said before, the race was held over the famous Silver Springs Triangle course, which, in the old heydays of cycling, was the rendezvous for the speedy boys on the bicycles. Starting from Sharp's Corners, the route carried the racing brigade north on the Green Tree road. Turning to their left on Green Bay avenue, the riders returned to the starting point.

The race was an open handicap affair and the local dealers gave the affair plenty of boosting and encouragement by donating a number of fine prizes. The first three riders to finish the 10-mile course were awarded gold medals by the Green Bay Avenue Advancement Association, which is made up of dealers near where the race was started and along the route.

Getting back to the race, the finish was a stirring one, with the crowds around and the police busy as beavers, when Joe Dietz flashed across the line in 27:54, followed by Henry O. Stenzel, who covered the course in 27:06, as against his former mark of 28:12. William Willison, 1 min., finished third in 28:10. The other finishers, with their handicaps and times, are as follows: Fourth, G. Hertting, 1 min., 28:33; fifth, Art Summers, 5 min., 32:42; sixth, George Schmidt, 1 min. 28:52; seventh, J. A. Barkdoll, 6 min., 35:07; eighth, Fred W. Schmitz, 4 min., 33:28; ninth, John Dietz, scr., 30:02; tenth, Louis Pierronn, 1 min., 31:03.

HERE'S A LIVE CANUCK

A. E. Bregent, of Montreal, Mounted on a Pope-Made Bicycle at Westfield, Mass.

Selke Is Eleventh

Eleventh, Walter Selke, 7 min., 37:06; twelfth, Jacob Berlin, scr., 31:07; thirteenth, Frank Johnson, 4 min., 35:24; fourteenth, Frank Gaffrey, 4 min., 35:31; fifteenth, E. H. Ramin, 5 min., 36:36; sixteenth, William Krupp, 4 min., 35:36 1/5; seventeenth, Roy Schmidt, 4 min., 36:28; eighteenth, Art Amundson, 5 min., 38:44; nineteenth, Art Joers, 6 min., 38:45; twentieth, George Willison, 5 min., 37:47; twenty-first, Norval Barkdall, 5 min., 41:02; twenty-second, George P. Schmitt, 4 min., 40:35; twenty-third, William Scharhag, Jr., 4 min., 44:01; twentyfourth, Art Bouch, 4 min., 48.01. The time prize winners were: Henry O. Stenzel, 27:06; Joe Dietz, 27:54; William Willison, 28:10.

"Brownie" Is Referee

Walter W. Rowland, popularly known as "Brownie," sporting editor of the Milwaukee *Journal,* officiated as starter. Chris Rusch was referee, and the other officials were: Handicapper, Albert C. Runkel; judges, F. Terry Andrae, William D. Harper, Phil A. Roth, P. J. Koehler, Edwin J. Kraus; timers, Edward Rusch, Charles C. Maas, Gust Kellner, W. C. Sanger, Frank M. Harbach; clerk of course, E. A. Schueppert; assistant clerks of course, Otto J. Tank, Roy Bender, P. O. De Nise; checkers, J. William Warnken, George Rosse and Fred Kohl.

President Pierron, of the North Side Cycle Club, is making plans to present to the city for the laying of a concrete bicycle track inside of the horse track in Washington Park, and for the raising of enough money to help pay for the project, which will insure the bike club being given absolute jurisdiction over the running off of any events on what will be a municipal bicycle race course. The plans call for a quarter-mile oval so situated as to get the greatest benefit from the permanent concrete grandstand, which is used for the horse races and athletic events taking place inside the track.

BALTIMOREANS WILL HANDLE GT. WESTERN LINE

LA PORTE, Ind., Oct. 2.—The Great Western Mfg. Co., this city, announces that it has closed a contract with Holland-Baden-Ramsey Co., Baltimore, Md., to distribute the Crown, America and Adlake bicycles. The territory to be covered by this concern includes Maryland, North Carolina, Virginia, Delaware and the District of Columbia. Though organized hardly a year ago, the Holland-Baden-Ramsey people have met with marked success.

GREAT WESTERN TO OPEN OFFICE IN NEW YORK

LA PORTE, Ind., Sept. 30.—To take care of its rapidly expanding business in New York and vicinity the Great Western Mfg. Co., maker of the Crown, America and Adlake bicycles, will open headquarters in New York City at 221 4th avenue, corner 18th street. E. H. Leng, eastern representative, will be in charge. The entire building above the street level will be occupied, affording 1,800 square feet for showroom and storage.

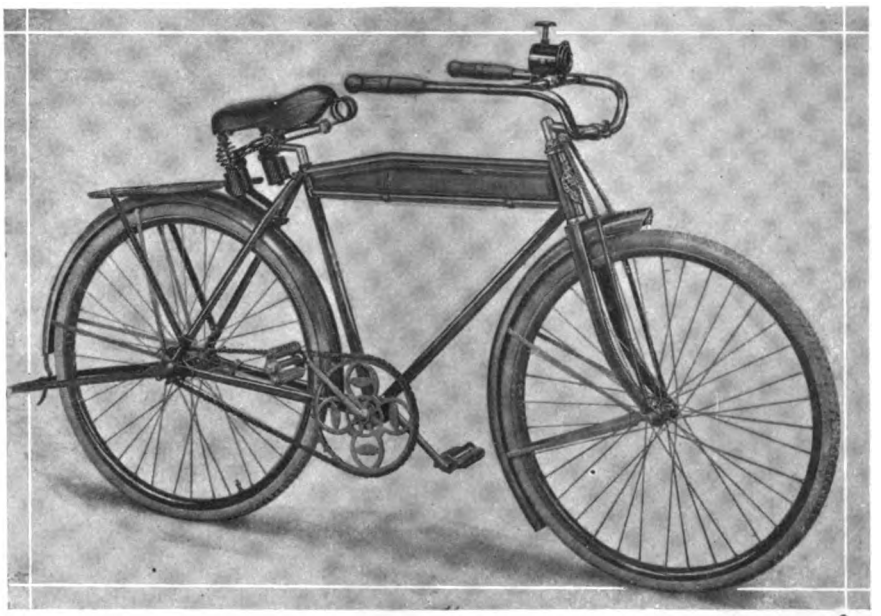
EIGHT MODELS IN THE NEW ROLLFAST LINE

Latest Addition to the Trade Ranges from Road Racer to Juvenile Rollfast Equipment Prevails—Distinctive Features in Latest Harris Offering

NEW YORK, N. Y., Oct. 3.—Enter the Rollfast bicycles into the trade as being splendid and efficient. The D. P. Harris Hardware Co., of this city, made their debut last week with eight models, models that will take care of any cyclist, be they of the fair or sterner sex, on pleasure bent or for commercial purposes.

The eight new additions to the field range from the Rollfast Road Racer, which lists at $45, to the excellent and jaunty juvenile models for boys and girls, the latter models selling at $32.50.



Rollfast Motorbike Model

Model 117 is the Road Racer, which is finished in glistening black with highly nickeled head and front forks. This model is fitted with large sprocket, arched truss top bar, Rollfast handle bar, which is convertible to 25 different positions, with three points of adjustment, Rollfast road racing saddle and Rollfast black tread tires.

Model 217 in Delft

The Rollfast Pacer, Model 217, is finished in a handsome delft and robin's-egg blue. This model is fitted with heavy motorcycle style drop-side mudguards, with steel rear stand and the New Departure coaster brake, Rollfast convertible handle bars, Rollfast pacer saddle with shock-absorbing action, Rollfast non-skid, chain-cup, white tread, motorcycle type tires and heavy leather tool bag. The price is $50.

The Endurance, Model 317, is finished in cherry red, with ivory head and seat-post mast. Fitted with Rollfast three-point, one-piece, drop-forged sprocket, while the saddle, handlebars, mudguards and tires are the same as the Rollfast Pacer. Equipped with New Departure coaster brake this model lists at $50.

Model 417, the Rollfast Motobike, also lists at $50. The color scheme is Indian red with black trimmings. An imitation mudguards, steel rear stand, Rollfast convertible handlebar, Roadster saddle, New Departure coaster brake, Rollfast disc-cup tires and Rollfast tool bag make up the lowest-priced adult Rollfast model. As is characteristic of all Rollfast bicycles, even the juvenile models, the archtruss is included in this bicycle.

The ladies are well taken care of in the Rollfast De Luxe, Model 617, which is priced at $40. This wheel is tastefully trimmed in black and gold and is fitted with heavy drop-center front and rear mudguards, rear steel stand, Rollfast disc-cup tires, Rollfast De Lux saddle and the New Departure coaster brake.

Two Juvenile Models

For the boys and girls there are two juvenile models, each in three different sizes, retailing at $32.50. These models are enameled in delft blue and head of cherry red. Dropped-center front and rear mudguards characterize these juvenile models, as well as steel rear stand and Rollfast bar. The Rollfast suspension top saddle is used on this model, together with Rollfast studded tire, with gray sides and tread.

The Outstanding Features

Outstanding features of the Rollfast line of bicycles are the one-piece hanger, the effective method of hardening cups and cones, and the thorough reinforcing at all joints. The dip method of brazing employed by the makers insures perfect amalgamation throughout the joint and along the entire length of the reinforcement.

The jobbers are already signing up for the Rollfast line. Jesse Edwards, of the Edwards-Crist Co., Chicago, came to New York as soon as he heard of the new line and went back with a good portion of the mid-western territory allotted to him. Others are following suit and the new addition to the trade will be well handled.

Rollfast Ladies' De Luxe Model

GRENKE ANNEXES A RACE

NEWARK, N. J., Oct. 2.—A 20-mile "cork" race, run through the streets of Irvington, Union, Elizabeth and this city yesterday by the Darcy Wheelmen was won by Hans Grenke, who had a five-minute handicap. Peter Holler, 6 minutes, finished second; Al Weigel, 10 minutes, third, and Harry Maulbeck, 3 minutes, fourth. The time was 1 hour and 4 minutes.

SPEARS IS NOW THE VELODROME CHAMPION

"Long Bob," the Antipodean, Accounts for the Newark Feature, Which Was Marred by Team Work—Egg Avenges Last Week's Defeat

NEWARK, N. J., Oct. 2.—"Long Bob" Spears was the big winner at Velodrome yesterday afternoon. Spears accounted for the Velodrome championship, receiving $125 and a medal emblematic of the title, and later took Marcel Dupuy, the Frenchman, into camp in the weekly running of the Velodrome Brassard, the weekly meal-ticket race.

The Velodrome championship was advertised as the big feature of the program. The management meant well when they advertised the titular race as the feature, but the race as run turned out to be almost a bloomer on account of the actions of the riders and the non-activity of the referee.

The race was run in eight heats, the winners going into the semi-final. Frank Kramer, Reggie McNamara, Alfred Grenda, Spears, Alfred Goullet, Jake Magin, Eddie Madden and Marcel Dupuy qualified for the semi-finals. The winner of the repechage, Hans Ohrt, also qualified for the semi-finals. The winners of the three semi-finals met in the final, which called for the winner to take two heats.

Magin Jumped Away

McNamara, Kramer and Magin met in the first semi-final. Magin jumped away for a big lead and Kramer chased him, but when he caught up near Magin, McNamara went out shortly after for his sprint home, with Kramer on. Magin then sewed Kramer in and the best the champion could do was to finish third. Magin and McNamara apparently having an understanding. In the second, Madden, Spears and Grenda met. When Madden almost got by Spears in the sprint, he swung up out of the way and interfered with Grenda, who started to go by on the outside. Spears won the heat easily. Hans Ohrt, Goullet and Dupuy then met and Ohrt made a steal, Dupuy almost refusing to go after him, while Goullet did try to close the gap, but it was too much and Ohrt won. The work in all three semi-finals was raw, but the referee took no action.

Spears Finishes Job

As the winner only needed to take two heats, Spears made short work of the job in hand and won the first and second trials. McNamara finished second and Ohrt third in each heat. The crowd failed to enthuse over the race on account of the way the semi-finals were run. There was no doubt that Spears would have won anyway, as he was the fastest man at the track, but the apparent open team work did not set very well with the public.

Spears had as his opponent in the Brassard race, Marcel Dupuy, the latter being substituted for Arthur Spencer, the Toronto rider, who was injured in training a few days previous. Dupuy jumped away for a big lead in the last lap, but Spears caught and passed him in the last hundred yards. In a match called the "Sleighriders' Championship," a two-thirds-mile, between Jake Magin and John Bedell, Magin won two straight heats.

John Bedell, despite the fact that Magin had trimmed him, won the "miss and out" race for the professionals. Alfred Goullet ran second; Charles Piercey, third, and Lloyd Thomas, fourth. It was a peculiar coincidence that Magin was the first rider to be called off the track, he finishing last on the very first lap.

Alfred Grenda, the tall Australian, accounted for the two-mile handicap for the professionals from scratch. Menus Bedell

RECORD-BREAKING CYCLIST

Vito Cestone, C. R. C. A. Rider Who Shaved the New York-Boston Record

finished second and Jake Magin fourth. Grenda covered the distance in 3:40 and the record is 3:38 1/5 and is held by Jackie Clark, and was made in Salt Lake City, Aug. 2, 1910.

The "What-Is-It"

George A. Phillips, the real old timer, who is trying to prove that they do "come back," gave a half-mile exhibition on his freak bicycle, on which he lies flat and pedals backward, instead of pedaling in the old manner, and he covered the distance in 59 2/5 seconds, but came near passing away on the last lap. Phillips was well received by the crowd and he was given a good hand.

One of the most exciting finishes of the day and one that had the crowd on its feet for the last half of the race, was the termination of the revenge match between Oscar Egg, the Swiss, and Reggie McNamara. McNamara had beaten Egg a week previous, but the latter claimed he would have won had he had better pace. For yesterday's race Frank Kramer and Alfred Goullet made up one of the pacing teams for Egg and it was largely through their pacing that the Swiss won in such a sensational style, his victory being by about a foot or so.

Tom Bello, the Brooklyn Italian, accounted for the amateur handicap at two-thirds-mile from the 25-yard mark. Chris Dotterweich, the local rider, and Ed. Carroll, the San Francisco sprinter, finished second and third, respectively. In the amateur "miss and out," Fred Taylor, the local favorite, finished first, Amateur Champion John Staehle being among those who were called out. Summaries:

Two-third-mile handicap, amateur—Won by Tom Bello, U. S. I., 25 yards; second, Chris Dotterweich, National Turn Verein, 20 yards; third, Ed Carroll, San Francisco, 20 yards; fourth, Ben O'Sicky, Cleveland, 60 yards. Time, 1:16.

"Miss and out," amateur—Won by Fred Taylor, Newark; second, Tom Fitzsimmons, Bay View Wheelmen; third, Harry Hoffman, San Francisco; fourth, Ed Byron, Australia. Time, 4:15⅗. Distance, 2 miles.

Two-third-mile match—John Bedell, Long Island, vs. Jake Magin, Newark. Won by Magin in straight heats. Times for last eighth miles, 13 and 13⅗ seconds.

One-mile Velodrome championship, professional—Won by Bob Spears, Australia; second, Reggie McNamara, Australia; third, Hans Ohrt, San Francisco. Times, 2:39⅕ in first heat, 2:35 in second.

One-mile Brassard, professional—Bob Spears, Australia, vs. Marcel Dupuy, France. Won by Spears. Time for last eighth mile, 12 seconds.

"Miss and out," professional—Won by John Bedell, Long Island; second, Alfred Goullet, Newark; third, Charles Piercey, Australia; fourth, Lloyd Thomas, San Francisco. Time, 6:40⅗. Distance, 3⅕ miles.

Two-mile handicap, professional—Won by Alfred Grenda, Australia, scratch; second, Menus Bedell, Long Island, 70 yards; third, Jake Magin, Newark, 60 yards; fourth, Alfred Goullet, Newark, scratch. Time, 3:40.

Ten-mile tandem-paced race, professional—Oscar Egg, Switzerland, vs. Reggie McNamara, Australia. Won by Egg. Time, 20:58⅗.

CESTONE SHATTERS BOSTON-NEW YORK RECORD

BOSTON, Mass., Oct. 2.—Vito Cestone, a member of the Century Road Club Association of New York, arrived here on his bicycle from the neighborhood of Old Broadway at 6:01 p. m. on September 29, having covered the distance of 247 miles by road between the two cities in 18 hours even, bettering the record of Alvin Loftes, the Providence rider by 36 minutes.

Cestone left the City Hall in New York at 12:01 a. m. and reached Stamford at 2:20. He passed through New Haven at 5:05; North Wilbraham, Mass., at 10:34; Worcester at 1:46 p. m. and arrived here at 6:01. The record of Loftes was established in 1909 and it has withstood the various attacks of riders until Cestone's attempt.

COCHRAN CAPTURES ST. LOUIS 14-MILE RACE

ST. LOUIS, Mo., Oct. 1.—The St. Louis Cycling Club held its Annual Bicycle Road Race on Sept. 17. The distance was 14 miles over the hilly roads of St. Louis County. It was won by A. R. Cochran on a Columbia bicycle, with the time of 35 minutes and 7 seconds.

The best time of this race was 34 minutes, 31 seconds, which was considered quite fast, in view of the hilly roads and the stiff wind that the riders had to buck most of the way.

B. M. A. TO ADVERTISE BICYCLES NATIONALLY

Big Booster Campaign Decided on at Manufacturers' Meeting in Dayton—Endorse New Cycle Trades Directorate

DAYTON, Ohio, Sept. 30.—A joint national advertising campaign was decided upon at the meeting of the Bicycle Manufacturers' Association, which opened in this city on Sept. 26. Along what lines the campaign would be conducted and the time when it would be launched were not disclosed, but it is known definitely that the bicycle makers will boost the bicycle on a broader scale than has ever been essayed by them at any previous time.

Favors New Directorate

Another news feature of interest connected with the meeting was the unanimous approval of the recently formed Cycle Trades Directorate, which will in the future pilot the "Million Bicycles" movement. The association also put itself on record as strongly favoring the drive for bicycle sales during the Christmas season.

While in Dayton the bicycle manufacturers were the guests of the Davis Sewing Machine Company, maker of the Dayton and Yale line, at the Dayton Country Club. After the business session, they made an inspection of the Davis factory, and wound up a busy day by golfing and motoring. On the following day the members present took an auto ride to Middletown, where they were royally entertained by the Miami Cycle & Mfg. Co. A visit was paid to the Miami plant.

Those Who Attended

Present at the meeting were: Col. F. T. Huffman, H. M. Huffman and S. H. Ankeny, of the Davis Sewing Machine Co., Dayton, Ohio; A. H. Walburg, H. S. Wise and Charles R. Miller, of the Miami Cycle & Mfg. Co., Middletown, Ohio; Keyser Fry, of the Reading Cycle Mfg. Co., Reading, Pa.; J. P. Fogarty, Westfield Mfg. Co., Westfield, Mass.; Ignatz Schwinn, Arnold-Schwinn & Co., Chicago, Ill.; W. G. Schack, Emblem Mfg. Co., Angola, N. Y.; E. J. Lonn, Great Western Mfg. Co., La Porte, Ind.; Percy P. Pierce, Pierce Cycle Co., Buffalo, N. Y.; Pete O'Horo, Excelsior Cycle Co., Michigan City, Ind., and Colonel George Pope, of New York, who is secretary of the Bicycle Manufacturers' Association.

GOOD RACING AND ENTHUSIASM AT SALT LAKE MEET

SALT LAKE CITY, Utah, Sept. 28.—There was plenty of good racing and a fine turnout at the second set of races of the Wright Cycle Club at the Liberty Park track, Sunday, Sept. 24. A ten-mile open-point race was run and Clarence Samuelson, a son of the old timer, won with 42 points to his credit. Gerald Thatcher finished second with 28 points, and William Phister finished third with 25 points.

A one-mile handicap for non-winners in the big race was won by A. Ashby, from the 100-yard mark. T. Thatcher, 250 yards, finished second, and Russell Erickson, scratch, finished third. It is planned to stage some professional events at a near date and Iver Lawson, who lately announced his Madame Patti, Albert Crebs and other pros. will be seen in action.

BAY VIEW WHEELMEN HONOR CHAMPION STAEHLE

NEWARK, N. J., Oct. 3.—Honors were heaped upon Amateur Champion John L. Staehle by fellow members of the Bay View Wheelmen, Saturday night, Sept. 3. After an interesting entertainment, at which home trainer races and athletic feats, a light luncheon was served and the guest of honor was presented with a traveling bag and large photograph of himself. The Bamberger cup, which Staehle won in addition to the title for 1916, was on exhibition at the club rooms on Sixth street.

NEW YORK FIRM IS BUSY

NEW YORK, N. Y., Oct. 3.—"Business is very good," said George Polacsy, of the Terminal Cycle & Sporting Goods Co., 42 Cortlandt street, when approached the other day. Polacsy states that in addition to a fine line of sporting goods, among them being racing shoes and other paraphernalia for the racing men, a good business is done in bicycles.

PYE TO TRY "COME BACK"

NEWARK, N. J., Oct. 2.—Ernie Pye, the inventor of the Pye-Musselman cord tires, and former manager of the Salt Lake City track, will work in harmony with John M. Chapman, the local Velodrome manager, in running the Chicago six-day race. Although no date has been set as yet, it is figured that the race will be run in February.

SUTER SAILED FOR FRANCE

NEW YORK, N. Y., Oct. 3.—Paul Suter, the Swiss racing cyclist, who has been racing in this country this season, confining most of his riding to the Revere Beach track, Boston, sailed for Bordeaux, France, on the French line steamer *Rochambeau*, Saturday, September 30.

CHAMP. STAEHLE LEADS IN INTER-CLUB TITLES

Newarker Scores 13 Points in Three Races Run—Close Contest in Three-Mile Race Nets Protest

NEW YORK, N. Y., Oct. 2.—Amateur Champion John Staehle, the Newarker, accounted for two of the three events that marked the opening of the series of races to decide the championship of the Inter-Club Amateur Road-Racing League, which were held on the Eastern Boulevard, in the Bronx section.

Three heats were run in the quarter-mile event and in the final Staehle defeated John J. Marquart, of the Century Road Club Association, and W. J. Lock, a member of the Century Road Club of America, New York division. No time was taken.

Marquart defeated Staehle and Fred Woisin in that order in the one-mile event, which was run in one heat. The time was 2:26 2/5. The finish in the three-mile, which was also run in one heat, was very close, but Staehle was given the verdict over Marquart, while Eugene Aickelin and W. J. Lock finished third and fourth, respectively. The time was 8:10 2/5.

After the finish of the three-mile race Marquart entered a protest, saying that the race was a dead heat. President McIntyre, of the league, has taken the matter under advisement and in case he decides that the race was a dead-heat one he will divide the points, five for first and three for second, equally.

At the finish of the three races yesterday the standing in the league was as follows: Staehle, 13 points; Marquart, 11; Lock, Woisin and Aickelin, 1 each.

ROSSY COPS A BRASSARD

NEWARK, N. J., Oct. 2.—William Rossy accounted for the first running of the Brassard race of the American Wheelmen, recently formed, in a race of a mile and a half against John Rooney, yesterday.

GEORGE PHILLIPS' "WHAT-IS-IT?"

The "creator" of this freak wheel, George A. Phillips, of Chicago, rode a half mile unpaced in 59 2/5 seconds at the Newark Velodrome, Sunday, October 1. The ride and the machine created quite a bit of comment among the fans of the famous New Jersey track, and while the rider negotiated the distance in fast time he was "all in" at the finish, showing that the old method is the best after all.

British Sport and Trade

By OLD RAMBLER

QUITE a number of British motorcyclists have been putting in a bit of time recently doing some overhauling and trimming things for the late autumn. In club circles, one hears men confess that they spent so many nights and week-ends on a "thorough inspection," and I wonder what some of them would think of the time-trial figures that were recorded by one of the Rudge-Whitworth employees, who, unassisted, was deputed to dismount and replace certain parts.

The object of this time-trial was to see how long a man really needed to devote to certain jobs. Here are the results; the times include the removal and replacement in each case:

Dome complete with carbureter and gasoline pipe, 2:26⅘; inlet valve (after dome was removed from cylinder), 25⅘; cylinder from crankcase, including replacement of set-screw to exhaust pipe and resetting foot-rests, 4:12⅕; exhaust valve, including removal and refixing of sparkplug (inlet dome removed from cylinder), 36⅕; piston from connecting rod, 1:02; piston rings, 50⅘; rear wheel, including unfastening and refastening of hinged rear mudguard and belt, 2:21. Total, 11 minutes 54⅕ seconds.

Another Man's Times

These times were achieved by a man not long experienced in motorcycle work, and another Rudge repair man tried to better the figures. These were his times: Dome complete, 1:45; inlet valve, 18 seconds; cylinder from crankcase, 3:55; exhaust valve, 40 seconds; piston from rod, 45 seconds; piston rings, 20 seconds; rear wheel, 1:20. Total, 9 minutes and 3 seconds.

The biggest share of attention at present is being devoted to the provision of detachable rear wheels. This is, of course, next to springing of frames. The movement toward the detachable wheel only shows what a mighty long way off perfection we still are in motorcycle design. Of all curses under the sun, it is for a man to be badly stranded in dirty weather or in darkness with trouble that compels the removal of the rear wheel.

I don't mean for such comparatively straightforward troubles as a punctured or seriously-gashed tire. Even such an irksome thing as that can be minimized by the use of a butt-ended tube or special gaiters that cover a big gash in the casing. There are more serious hitches than these tire troubles, and ofttimes it is imperative to get the rear wheel out completely. But what with belts or chains and chain cases, mudguards, sidecar couplings, rear lamps and a few other things, a man has generally a multitpude of objects to hamper him in the extraction of the wheel. Why should there not be easier methods of taking it out? The B. S. A. and Sunbeam, among British machines, have been provided with the media for easy removal of the rear wheel, and there is a likelihood that the subject will have widespread attention in motorcycle circles.

Interested in Lightweights

As in the States, some of the factories over here (bar their not being busy on munitions) are determined to cater for the lightweight market. One of the newcomers and a feature of the 1917 market is a Rudge lightweight two-stroke, known as the Crescent. This name is also applied to the cheaper grade of Rudge cycles. There will be both ladies' and gents' models and, generally speaking, they will be similar. In the former model, however, the top tube will be curved to meet the saddle pillar tube some inches below the saddle lug and a dress shield will also be fitted.

The power unit is a Villiers two-stroke engine. 70 x 70 (2¾ inches "square"), rated at 2½ horsepower and having a capacity of 269 cubic centimetres. This engine has been successfully run for a long time in other frames, and is a reliable fitment. The neat cylinder casting and the special attention bestowed on silencing and the exhaust, are features of note. The tank holds about a gallon of gasoline and three pints of oil. The prices for both the men's and women's models are identical: $150, or with two-speed gear, $185.

One of the most distinctive of motorcycle designs, either in Britain or abroad, is that of the Scott. I might add, it is one of the best, also. Results in the Tourist Trophy races have proved that. The Scott people had a mighty fine job in the early days to overcome prejudice, especially in regard to transmission by chain. We have lived, however, to see an enormous swing in the pendulum of popular opinion and of makers' opinion, for belt drive is not so dominant as of yore. The Scott makers had a great deal to do with *forcing* the market to realize chain virtues.

Simple Change-Speed

The seat pillar on the Scott passes through the gasoline tank, which is vertical, or rather inclined to the vertical, instead of being horizontal. Roller bearings are fitted throughout the Scott engine and lubrication is mechanical. The control of the gear is simple, the changes being operated by the foot. There are two chains to take the drive from engine to countershaft and different sizes of countershaft sprocket, mounted on expanding ring clutches represent high and low gear, respectively. Final drive is by ½-inch pitch chain.

The legs shields have the dual virtue of being graceful and useful. They are of elegant design and save the legs from mud and icy blasts of wind at high speed. These shields, like the footboards, are easily removed.

Low Center of Gravity

A glance at the Scott in the photos below shows what a low center of gravity it has. The whole model is very strong, and it needs to be. Scott riders want to hustle some. A lot of them—men and Scotts—are on war duty and a rickety motorcycle wouldn't be worth a cent.

Two other virtues ought to be noted. Most mechanics will tell you that a straight tube is preferable to a bent one, being stronger. In the Scott and its sidecar there are no bent tubes. The sidecar springing is made adjustable to meet variations in the weight of the passenger and luggage.

TAKES CYGNET AGENCY

PROVIDENCE, R. I.—William N. Burnett, agent for the Harley-Davidson in this city, has taken the agency for the Cygnet rear car. Mr. McKay, assistant sales manager from the company's plant in Buffalo has been here during the past week, giving a demonstration of the vehicle.

Varied Activities of the Dealers

WRIGHT, OF BALLOU & WRIGHT, COMES EAST

Making Extensive Trip Through Eastern Accessory Factories—Will Visit Indian Plant—Western Prospects Bright

PORTLAND, Ore., Sept. 29.—Charles F. Wright, of Ballou & Wright, Indian distributors for Oregon, Wash., and the greater portion of Idaho, is now on a trip East which will take him through the principal cities of the United States. He will visit all the different factories that the Ballou & Wright firm represent, and is scheduled to visit the Hendee Mfg. Co., of Springfield, Mass., about Oct. 19, at which time he expects to place orders for immediate delivery of several carloads of Indian machines and Indian bicycles for the Portland and Seattle stores.

Wright is an authority on the motorcycle business of the Pacific Coast, having been active in the handling of Indian motorcycles ever since the first Indian was manufactured, and he certainly is very optimistic as to the motorcycle business of the coming season.

Dealers in this part of the country are clamoring for demonstrators since the announcement is out, and every indication is that with the prospects of early delivery of demonstrating machines this year will be fulfilled. The Indian announcement received through the **Motor Cycle Illustrated** on the Coast yesterday has already started the Indian riders and dealers to boosting for the new machine. In fact, dealers are inquiring of Ballou & Wright as to just when they will be able to get a demonstrator, as they all seem to feel confident that 1917 is going to be the biggest year in motorcycle history, and the live Oregon dealers are certainly going after their share of this business.

WHITING GETS HIS FIRST 1917 SHIPMENT

DENVER, Colo., Oct. 2.—Walter W. Whiting, western distributor for the Harley-Davidson, recently received quite a large shipment of 1917 models of his machine and they have attracted quite a good deal of attention at his store in this city.

A large sign in the window of the Whiting store, and one that can be read for some distance, announces the fact that the 1917 model of the Harley-Davidson is now on sale. A good fall business in this line of machines is expected here.

TOOK FOUR ORDERS WHEN 1917 HENDERSON CAME

NEW YORK.—The 1917 Henderson three-speed arrived in this city on Saturday last and Manager Felix Lewin, of the local Henderson branch, has been busy showing off its paces. Incidentally, he took orders for four of them on Saturday and Sunday morning. These orders bring the total of 1917 orders at the branch to 27.

Gene Coughlin, the Bronx Henderson man, has 14 orders for the new model to date, and as soon as he gets his demonstrator expects to double this number. Coughlin's headquarters are at 922 Washington avenue.

"GIANT 17" IN PATERSON

PATERSON, N. J.—Elmer G. Havenstrite, local Harley-Davidson man, has received his first "Giant 17" machine and is now busy giving demonstrations.

Nubs of News From Newark

NEWARK, N. J., Oct. 1.—Walter Goerke, Indian man, on Washington street, is keeping the wires hot between this town and Springfield, Mass., for his 1917 demonstrator is en route and he has not heard of it for four days. Walter has had a late season rush on sidecars, disposing of six Indian Maids within the past ten days.

Judging from inquiries regarding the Lightwin announcement already, the Indian folks have struck a popular chord with motorcyclists and would-be riders in this section.

WATSON KLUCZEK, Reading Standard agent, has sold three of the big brown'uns of the 1917 crop before ever a one of them came to town for demonstration purposes. All of the three waiting riders want the Bosch electric outfit on their new machines.

Kluczek will take a big delegation of his local riders up to the factory at Reading, Pa., to see how the R-S is made some week-end this month.

WITH eleven orders for '17 Harley-Davidson motorcycles on their books and only one machine delivered outside of the demonstrator, the Carl W. Bush Co., is in a quandary as to the best way to keep harmony among the waiting. They turned the new one that came today over to the first of the expectant ones who came in, then locked up and went home over the back-fence.

They report a heavy sale on winter gloves, blankets and mackinaws the past week, indicating the growing tendency of motorcyclists to stick to specialty stores for their supplies of all sorts.

W. R. SPEAR, Thor agent, has his 1917 model working overtime these days and is sure that there will be a heavy before-winter season of sales this year.

SELLS INDIAN FOR WEST AFRICAN USE

Louisville Wigwam Man Ships 1916 Model to Lagos for Missionary—Other Trade Doings

LOUISVILLE, Ky., Sept. 30.—Frank Marshall, manager of the Century Cycle Co., local Indian agents, reports an interesting sale of a 1916 Indian to E. G. McLean, to be shipped from the factory to Lagos, West Africa. McLean was spending a vacation in Louisville at the time, and placed the order through the local agents. Mr. Marshall reports that he has sold out on 1916 models, having made a total of eighty-seven sales. The new model is expected about October 15.

N. Sandmann, head of the local Excelsior agency, has placed William Kempf, formerly a partner in the old Southern Motorcycle Repair Co., in charge of the Excelsior store, and is holding down a position as motorcycle trouble man for the Louisville Gas & Electric Co. during the quiet months. In the spring, when business opens up, he will again give his time to the sale of two-wheelers.

Pete Kline, of Kline Brothers, Harley-Davidson agents, is at Milwaukee, Wis., spending a vacation with his family, and also visiting the Harley-Davidson factory. The company disposed of sixty machines this season, and has received the first of its 1917 models, which is now on display in the window. The company will celebrate its first year in the new building at Center and Broadway on January 11. The location has proven better than the old one on Third street.

R. L. Davis, who for several years has been handling the Reading-Standard and Pope motorcycles in Louisville, is contemplating the erection of a garage next year, figuring to give riders a chance to ride straight into the building. Repairs will be made, a service station maintained, and a special motorcycle sales room partitioned off, if present plans are carried out.

The Indian Motorcycle & Bicycle Co. is preparing to secure new quarters, the Heiser building having been rented over its head by a large grocery concern.

FOX GETS DEMONSTRATOR

DENVER, Colo., Oct. 2.—Peter Fox, 321 Main street, Grand Junction, Colo., received his first 1917 model Indian yesterday. A large number of motorcycle enthusiasts gathered at his store to see it unpacked. Fox is Indian agent for his territory and is expecting to sell a large number of motorcycles this fall.

Service a Factor in Hammar's Success

Combined With Intelligent Advertising It Built Up This Madison, Wis., Dealer's Business to Goodly Proportions—Effective Bicycle Guarantee

By JOHN QUINCY

MADISON, Wis.—Since his start in the motorcycle business three years ago, George Hammar, proprietor of the Capitol Cycle Co., has lived up to his slogan—"Service to the rider at all times." As a result of this and consistent advertising in newspapers and motion picture theaters, his business has increased by leaps and bounds, so that today he is one of the leading dealers in the State of Wisconsin.

In 1913 Hammar decided that Madison was a good place to get into the motorcycle and bicycle business, and, so, in July of that year he opened a store at 113 State street. This was a rather small establishment, but he put his service idea into practice, and soon his trade grew to the point that he needed a partner. In December, 1913, he took M. J. Morrisey into partnership, and soon after signed up for the Yale line.

Took on Excelsior

Business in 1914 proved excellent, so the Hammar-Morrisey pair added the Excelsior, and built another wing to their store. Bicycles were added to the stock, and when the Smith Motor Wheel was put on the market, this was taken on for the Madison territory. In 1915 the Yale was given up, and in December of that year Morrisey sold out to his partner. Hammar, as the Capitol Cycle Company, signed up for the Harley-Davidson for the county and extended his store through to Mifflin avenue, giving his garage a separate entrance. Hammar also took the agency for the Cleveland lightweight for Dane County at this time.

Hammar believes in publicity of all kinds, but particularly in that of the daily and weekly newspapers and in slides to be shown at motion picture theaters. He has taken the agency for the Cleveland and Harley-Davidson for the 1917 season and has received his Harley-Davidson demonstrator, on which he is now busy giving demonstrations and booking orders.

Year's Guarantee

One of the best schemes he has used in bicycle sales is the guarantee given to each purchaser of a wheel. This guarantee states that Hammar will replace all defective parts during the first year of service free of cost. It is broad enough to give the rider the maximum of service, such as free repair of punctures and other common repairs, but, at the same time, protects the company against accidents, neglect or abuse of the wheels by the riders. The guarantee has proved a fine trade card and has resulted in many satisfied customers.

Hammar attributes his success in the motorcycle and bicycle business to living up to his service idea—"Service to the rider at all times." He backs up this idea with intelligent and persistent advertising. He is constantly devising new ideas to help increase his business. The deferred payment plan has proved successful in his hands for all kinds of cycles.

TROSSELL TO MOVE TO A LARGER BUILDING

DETROIT, Mich.—John D. Trossell, for twenty years a motorcycle and bicycle dealer on Michigan avenue, this city, will move to his new store on January 1. The new building, which is large and modern in every respect, is directly opposite the store which Trossell now occupies.

Sales of Thor and Reading Standard motorcycles have been very satisfactory during the past season, Trossell reports, and his bicycle business has already been considerably above the average for preceding years.

SWENSON BACK FROM VACATION TRIP

PROVIDENCE, R. I.—B. A. Swenson, the Indian agent in this city, has returned from a two weeks' motorcycle vacation spent in a 1,000 mile tour through the mountains of New Hampshire, Vermont, Massachusetts and Canada. He has been kept busy telling of his experiences in crossing the Canadian border and incidents of his fishing jaunts.

3 Strong Leaders –

a complete quality line that meets every demand

ANY DEALER with a stock of these three tires is completely equipped to supply the demand of *every* customer that comes into his store—from the one who wants the *best regardless of price* to the one who wants a *good* tire at a *popular price*.

THE VITALIC

is built throughout of the best tire materials obtainable,—two plies of genuine *motorcycle* fabric frictioned with pure rubber, an inner tube of pure Para rubber so heavy as to eliminate any possibility of leak, an extra heavy non-skid tread of finest quality pure rubber. Will outwear any ordinary bicycle tire *more than two to one*. Once introduced it easily brings a higher price than other tires and always sells over and over again to the same trade because it *never* disappoints.

THE BRIGADIER

The best popular priced tire ever put on the market, far excelling others anywhere near its price. It is a four-ply tire, built with two plies of best Egyptian fabric all around the tire and two extra plies on the tread. A very high grade friction is used.

The extra heavy inner tube is made of a very high quality rubber. The Brigadier is made with gray side walls and a heavy large white studded tread as shown in the illustration.

THE ENDURO

Another excellent popular priced tire that fills a long felt need for a tire of lower price that has genuine quality. It is built with two plies of high grade Egyptian fabric with a very high grade friction, has a heavy inner tube of very good quality and a good substantial diamond studded white tread.

Write us today for sample sections of these three tires and attractive display material and dealer helps.

Your jobber will show you the tires.

MESSER HAS HILL-CLIMB AND SERVES CHICKEN

CORNING, N. Y.—T. E. Messer, Harley-Davidson agent, located at 83 East Market street, recently obtained some excellent publicity by conducting a hill-climb at Woodcock Hill, near Coopers Plains.

Messer himself scored the best time, using a 1917 Harley-Davidson. He made the ascent in 56 seconds. H. Ramazetter, of Corning, also on a Harley-Davidson, went up in 57 seconds; Seth Prince, of Corning, made the ascent in 70 seconds on a 1916 Harley-Davidson; C. Button, using a 1916 Harley-Davidson, was clocked at 71 seconds; E. E. Graham, of Hammondsport, astride an Indian, climbed the grade in 74 seconds, and J. French, of Pittsburgh, with a Harley-Davidson, was timed at 75 seconds.

After the hill-climb Messer escorted the contestants to his home where they were served with a jim-dandy chicken dinner. Later there were impromptu athletic contests, and in the evening the bunch rode back to Corning, all hands assuring Messer that they had enjoyed themselves thoroughly.

SOLD WITH EXPENSE GUARANTEE

PROVIDENCE, R. I.—William N. Burnett has sold a Harley-Davidson to Frank J. Bannon, a clerk in the special delivery service at the local postoffice. An interesting detail in the deal was that Bannon would not incur an expense of over $25 for the ordinary upkeep of the machine for one year. Bannon and Burnett both say that they can keep it down to that sum.

MERKEL LEASES FINE THREE-STORY BUILDING

ROCHESTER, N. Y.—Charles A. Merkel, who handles Excelsior and Henderson motorcycles in Rochester, has leased a fine three-story building to which he will extend his rapidly growing business about February 1, 1917. Merkel is now located at 183 Clinton avenue, N.

The building just leased is nearly opposite Merkel's present stand and has the advantage of entrances on two streets. Merkel will occupy the three floors and will have one of the largest establishments of its kind in Rochester.

In addition to occupying the new place, Merkel will keep his present store open during the rush season, probably until May 1.

$2 WHEEL TAX FOR CLEVELAND VEHICLES

CLEVELAND, O.—A wheel tax of $2 per year for all vehicles using the city streets has just been approved by the city council committee. One of the provisions of the ordinance on traffic requiring that rubber tires must be at least ¼ inch thick at the wheel flange was also approved. The date at which the tax becomes effective is not yet announced.

CYGNETS TO PLATTSBURG AND BACK

SOUTH OZONE, L. I.—H. A. Smith has just completed a trip to the Plattsburg military training camp and return, using an Indian Powerplus and Cygnet rear car. Mr. Smith made a total mileage of 2,500 miles. The route was New York, Tuxedo, Chester, Newburgh, Kingston, through Catskill Mountains to Oneonta and Binghamton. From Binghamton to Albany, Lake Luzerne, Elizabethtown to Plattsburg Camp. While at the camp side trips to Montreal and Burlington were made. The entire distance was covered without a puncture or mishap.

The Cygnet was the centre of interest at the camp, being the first outfit of the kind to appear there. While there Hal Noyes, of the Indian sales staff, had his first experience driving a Cygnet rear car, and Miss Elizabeth DeCraft also drove the outfit. One passenger and 150 lbs. of baggage were carried the entire distance.

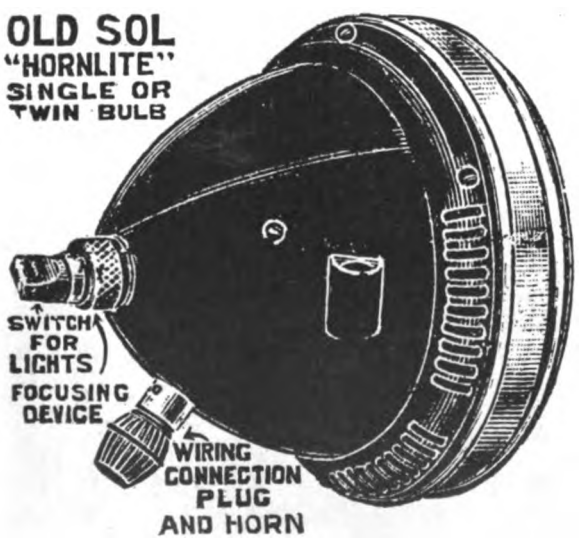
RANKIN TAKES HENDERSON

BROOKLYN, N. Y. — The Rankin Motorcycle Shop at 270 Chauncey street, of which Wilbur A. Rankin is the moving spirit, has taken the Henderson agency for the coming season as sub-agent under the Central Motorcycle Supply Co., Brooklyn distributor.

Rankin, who has in times past handled both the Harley-Davidson and the Reading Standard, has taken deposits on two of the four-cylinder machines already and claims to have several other riders lined up to purchase Hendersons in the spring.

Indian HENDERSON Dayton

These three "big-timers" will use the most advanced, the best looking, and the most effective warning and lighting system on the market—



Old Sol "Hornlite"

They do this because they have found that the HORNLITE gives the utmost in lighting power, with its two-bulb headlight, its specially built, highly silvered reflector, its focusing device, its 21 candlepower special Nitrogen Bulb, and, finally, its deep, far-reaching, harsh-toned horn, concealed in the lamp, the body of which forms the "bell" or sound-box for the warning signal. Consider the compact, efficient trim appearance of this combination outfit —then write us for prices.

Remember—three of the world's greatest motorcycle manufacturers are using HORNLITE *exclusively* in 1917.

"*True* Strength Is Power Properly Applied"

It's the lean, lithe, wiry men that win. Those great, husky, musclebound giants may look impressive, but when it comes to a final test, it's a ten-to-one shot that the little fellow is the stronger. Why?

It's all in the *application* of power. The power of steam was always there—Watt applied it. Electricity has been with us since the crack of creation, yet Franklin demonstrated its presence, by applying it.

The inherent strength of steel is tremendous—yet when that strength is not properly applied, or misused, steel becomes wax. All of which is a prelude to the statement that the texture, the molecular strength, of the steel entering into MORROW Coaster Brakes has been tested, re-tested and triple-tested before being used.

Then, after final proof of the goodness of the steel, it is so applied as to utilize its every ounce of power to the advantage of the rider. The mechanical make-up of the MORROW is such that every inch of its large braking surface gets the most service out of the steel from which it is made—every one of the 24-quarter-inch balls is so distributed as to give the utmost smoothness to every part of the brake—in short, the proper application of the power present in the MORROW makes it the strongest brake on the market.

"Test it—then Trust it."

Questions and Answers

NEW DISCS NEEDED

I FIND that the clutch will not hold on my 1915 twin machine. I have tightened the nuts until they will hardly go any further and still the clutch slips.
Chicago, Ill. A. V. SMITH.

YOU need new friction fabric discs, which you can get at any dealer for your make of machine. See the directions in your instruction book or have the dealer put them in. In re-adjusting the clutch with the new discs, do not tighten the nuts more than is necessary to just take the drive without slipping.

WRITE THE MAKERS

I AM anxious to get the fastest machine possible as I do not want to be passed on the road by anyone. Which would you recommend?
New York. C. K. BUTLER.

WE do not recommend any machine as being faster than another, nor one make in preference to another, and we have not done this since our first entrance into the motorcycle field. We are by no means in favor of speeding on the road, as such a practice is reprehensible and does no good to the sport in general. Your best method of obtaining the information you desire is to write to the various factories and then select the machine you think is the speediest.

WORN BIG END THE CAUSE

ON my 1914 twin motor there is a clicking sound which appears to come from the pin bearing on the crank. I have put in two new bearings, but the click still continues. Please give the remedy.
Dayton, O. C. J. K.

THE chances are that the big end on the forward connecting rod is worn so that it is too large for the outside of the bearing. It will be necessary to put in shims or liners to make the outside of the bearing a snug fit. When doing this, the surface of the bearing must be dressed to fit the shaft. If you cannot do this, have it done at a good shop. *The Motorcycle Manual* gives directions for dressing bearings.

CAUSE OF TIRE WEAR

I DO considerable riding in this part of the country (mountainous for the most part) and find that my rear tire is badly worn in spots. Twice when coming down grade my front chain has snapped and I have had some narrow escapes. The machine is a 1915 twin and is otherwise all right.
Easton, Pa. D. M. HARRIS.

THE fault is either in locking your brake when descending or too hasty an engagement of the clutch when finishing a coast. Both will cause the rear wheel to slide, scraping pieces out of the tire. If the first, do not be so hasty in setting the brake; utilize the motor in gear with spark shut off when descending steep grades. To properly start the motor at the end of a coast, lift the valves and gently engage the clutch. When the motor is turning over pretty fast, drop the valves slowly. Use high gear for this work. The hasty engagement of the clutch may account for the chain breakages. Engage the clutch gently at all times and avoid this.

Another record for Splitdorf Spark Plugs

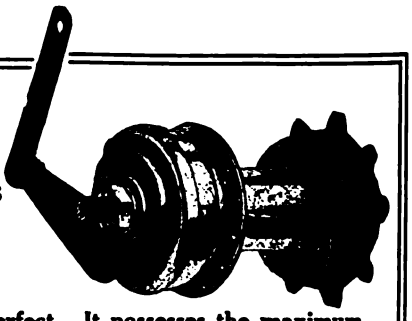
Splitdorf Electrical Co.
Newark, N. J.
Roy Artley using Splitdorf plugs today established phenomenal motorcycle road record San Fran to Los Angeles four hundred sixty three miles ten hours thirty nine minutes. Best train time thirteen forty five. Artley says never touched plugs. Gave perfect service.

A Size and Type for Every Engine

Splitdorf Plugs are made in all sizes and in types to suit every motor cycle, motor car, motor boat, tractor and aeroplane. Upon request we will send you a complete directory, which specifies the correct type to use with each make of engine.

SPLITDORF ELECTRICAL CO.
Newark, N. J.

This Brake Has Every Point In Its Favor



It is mechanically perfect. It possesses the maximum of brake surface which insures a powerful grip. It has unusually large ball bearings which reduce friction to a minimum and thus increase the life of the brake. It is easy to operate, sure of response and smooth of action.
When you buy a

CORBIN

DUPLEX COASTER BRAKE

you know exactly what you are getting. If you don't just ask any man who has ever ridden a bicycle. And that is another point in favor of the Corbin Duplex. It has been tried and tested by thousands upon thousands of bicyclists and never found wanting. Its record is an open book. All can read it. And any bicyclist who has ever had any experience with the Corbin Duplex knows that it is good, that it is an absolutely sound, staunch, reliable brake. Specify it.

HAMILTON HIGHWAY IS SPEEDERS PLAYGROUND

HAMILTON, Ont.—Although the Hamilton-Toronto model highway, extending a distance of slightly more than forty miles, has not yet been formally opened, the inter-city boulevard has become a speedway over which motorists and motorcyclists travel without regard to gasoline economy. To check the already popular flights the commission which controls the roadway has placed four private motorcycle cops along the route. These are also enjoying the speed, as they are qualified to give chase and overhaul everything that exceeds the limit. This form of prosecution has been adopted by the commission in preference to the watchful waiting method of establishing traps along the road. The pursuit game is considered more aboveboard and, withal, more of a sporting nature.

One motorcycle cop rounded up 152 speedsters during the course of his first week's work. Fifty cases were heard at Hamilton; fifty-two at Oakville, forty at Burlington and ten at Port Credit. The fines collected in forty-three convictions at the Oakville Police Court netted the commission $661.85. The fines, in each instance, were not less than $10 and costs. With the exception of salaries for traffic constables, all money collected in this way will be devoted to the maintenance of the model highway.

CANADIANS GET 30-DAY CONCESSION FROM STATES

OTTAWA, Ont.—Once again has the subject of International License Reciprocity been brought before the footlights as the result of an additional concession granted by a Government. The latest privilege extended to motorcycle tourists who desire to cross the imaginary line dividing the United States and Canada has been allowed by the authorities at Washington, D. C., and consists of an extension to the time during which a Canadian rider may use American roads without the necessity of a bond to cover tariff.

Advice has been received from the Treasury Department of the United States Government that customs officials at all points on the border have been instructed to allow Canadian tourists to enter the States for a period of thirty days without bond. A previous order, issued two months ago, provided for a period of twenty-one days but it was found that the Canadian Government had established a time-limit for American visitors of thirty days.

ONTARIO AFTER COUNTIES WITH POOR ROADS

TORONTO, Ont.—The Ontario Government is shoving the farmers out of their ruts, literally speaking. Starting October 1, the officials of the Public Highways branch of the Public Works Department started out after the yeomen who had failed to see the advantages of a good highway out in front of their homes by sending out 100,000 circular letters to residents of counties which had not yet adopted a so-called good-roads program. Twenty-six counties in the Province have decided to take a fall out of Old Man Gumbo and will receive financial assistance from the Government in the matter. Eleven counties are still laboring in the ruck and muck—hence the Government push.

The letters sent out to the good road delinquents form the first feature of an educational compaign. It is hoped to have highway constructional work under way in every community of the Province.

BABB TAKES THE COLUMBIA

THIS MUCH IS CERTAIN

Electric Lamps and an "Exide" Battery furnish the most efficient and reliable light for motor cycle use

"Exide" Battery, Type 3-ZA-5 with cable type terminals

You no doubt realize the numerous advantages of electric light for motor cycle use.

The reliability of an electric lighting system is of course dependent upon the storage battery which furnishes the current.

The "Exide" Battery, type Z, especially designed for this service, is a quality-product, manufactured and backed by the oldest and largest battery maker in the country.

The battery is contained in a one piece, three compartment vulcanite case, having heavy walls and substantially re-enforced.

It is fitted with a one piece cover, having a flange which fits around all sides of each compartment.

The "Exide" Battery is equipped with a flood proof filling plug which overcomes slopping and spilling, and also limits the amount of water that can be poured into a cell to the exact amount needed to replace that lost by evaporation. The result is a clean, dry, and attractive battery.

Motor cycle dealers and users should write us at once and secure the name of the "Exide" Distributor nearest them.

READING STANDARD BOOTH DRAWS THE CROWD

READING, Pa., Sept. 29.—The new 1917 electrically-equipped Reading Standard proved to be one of the chief attractions of the visitors of the Berks County Fair recently held in this city. The exhibit was in charge of the Penn Cycle Company, Reading Standard distributors in the city of Reading and vicinity, who reports having closed numerous sub-agents in his territory.

The booth was attractively arranged showing the various articles entering into the construction of the machine, and although the machine was only put there for display purposes, it resulted in twenty-two sales.

FORT WORTH COMMISSIONER SEES THE LIGHT

FORT WORTH, Tex.—Police Commissioner Jamieson is coming to a realization of the value of motorcycles to the police department and has taken steps to provide more motorcycle men. Some time ago Commissioner Jamieson conceived the idea that patrolmen, horse men and a bicycle squad was all he needed to protect the city, and he organized his department on this basis. Now he says he needs patrolmen, horse men, a bicycle squad and a motorcycle squad. All have work to do that the others can not easily accomplish.

Commissioner Jamieson, in order to provide funds for his motorcycle squad, has curtailed expenses in other departments. One of the first things he did was abolish the office of night chief, and take the $1,800 a year paid to this official and apply it toward the employment to two more motorcycle men. Other useless expenditures have been cut out and the funds thus saved applied on the motorcycle squad, until Commissioner Jamieson now has six motorcycle mounted officers who patrol the streets or keep themselves in readiness at the police stations ready to answer any summons to chase speeders or any other hurry call where the horsemen of the bicycle mounted men could not get there as quick.

REPORTS UNUSUAL DEMAND FOR HIGH GRADE WHEELS

LOS ANGELES, Cal.—The Henderson Motorcycle Sales Corporation, which also carries the Pope motorcycle and bicycle lines, opened the week of Sept. 26 by selling two Pope lightweight motorcycles and a number of bicycles. The company reports an unusual demand for high-grade bicycles, those priced at $35 and upwards. Many of the bicycles sold are being used in commercial service. In fact, 99 out of every 100 sales of bicycles by this company are for business purposes. Two $50 bicycles have recently been purchased by patrolmen who use them on their beats at night.

THE Cycle & Supply Company, L. S. Crawford, proprietor, of 30 Arch street, Uniontown, Pa., has just registered its repair shop with the F. A. M., and received number 1250.

DEALERS AWAIT CARLOAD OF DEMONSTATORS

LOS ANGELES, Cal.—The new Harley-Davidson motorcycles are expected to arrive in Southern California some time between the eighth and twelfth of October. Most of the agents will come to the Appeal Manufacturing & Jobbing Co.'s store to get their machines, as they did last season, and there will be some quick work getting the demonstrators unloaded, uncrated and back to the respective home towns of the agents.

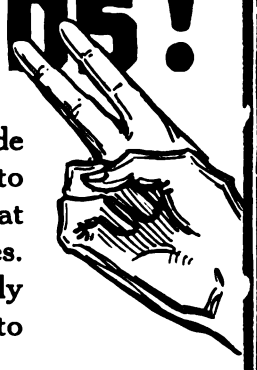
The car will have a demonstrator for every Harley-Davidson agent in Southern California.

PETERIK RETURNS FROM HIS VACATION

MILWAUKEE, Wis.—Louis Peterik, manager of the Mueller Cycle & Supply Company, handling the Harley-Davidson at retail, has just returned from a month's vacation. He is determined to make the 1917 season even better than the one just passed, which will be going some, in view of the firm's excellent record for 1916. In fact, 1916 was the best that the home town Harley-Davidson dealer had, and much of the success can be attributed to Peterik, who took charge at the beginning of the season.

Peterik introduced many sales wrinkles that brought in the business and was strong for window displays. He established a first-class service department as his first step in the managership and enlarged the shop 50 per cent.

SECONDS!



It's not often that the trade gets such an opportunity to stock up on standard tires at such "rock-bottom" prices. Look this list over carefully—it will pay you well to do so.

Firestone Corrugated, 28 x 2½, for BB Rims	$5.50
Federal Studded, 28 x 2½, for BB Rims	5.50
Firestone Non-Skid, 28 x 3, for CC Rims	8.50

WEBBER'S SIDECAR MAKES 100 MILES AN HOUR!

NEW YORK, Oct. 1.—Calvin Webber, who is the mainstay of the motorcycle department of the New York Sporting Goods Co., distributors of the Indian, held a vast crowd of motorcycle enthusiasts intensely interested as he told how his sidecar has achieved the remarkable record-breaking speed of 100 miles an hour today.

There were doubters in the crowd, of course; even some of the fellows who are wont to swear by the Powerplus Indian as capable of performing almost any speed miracle, looked at the speaker askance.

But each of the listeners was forced to admit that the feat was altogether possible when Webber explained that the trip was made down the elevator shaft of the new headquarters of the Indian when someone carelessly rolled a machine through the elevator gate on the fifth floor.

More Bicycle News

NOVEL RACE WILL FEATURE CELEBRATION

SAN FRANCISCO, Sept. 30.—Preparations are under way to stage a bicycle race on Market street on the evening of Oct. 5, under the joint auspices of the California Associated Cycling Clubs and the Downtown Aassociation, the latter being an organization of business men. The race will be a scratch affair, with prizes for riders first crossing certain points in the course. This event will feature the celebration of the recently installed Ryan system of street lighting.

GARDEN CITY MEETS

SAN JOSE, Cal., Sept. 30.—Seventy-five members and guests participated in the rejuvenation meeting of the Garden City Wheelmen, held at their headquarters in Belloli Hall, on the evening of Sept. 27. An exciting roller race was held, each rider going against time. W. Plummer won, turning the mile in 1:15½. George Semondo rode an exhibition mile in 1:17.

GETTING EXTRA LEVERAGE ON A WRENCH

IT is frequently desirable to put a little more power on a nut than the ordinary wrench handle will permit and there are several ways in which this can be done. The leverage can be increased by putting a piece of pipe on the end of the wrench, for one thing, but this usually can only be done with a steel handled wrench.

For either the steel or knife handle wrench, however, the extra leverage can be got by lashing the wrench to a wood beam by strong wire, using three to five wrappings of the wire. The wrench should be placed with its back against the beam and the wire lashings put on between the fixed and movable jaws and close to the end of the handle.

Just a word with regard to this. Don't use a cheap, cast wrench for this purpose, as it will not stand the extra leverage. Only the best forged wrenches can be depended upon.

CHANGES MADE IN SCORE OF N. E. W. ROAD RACE

NEW YORK, N. Y., Oct. 2.—M. Kursdorfer, a member of the Acme Wheelmen, claimed to have finished in eighth place in the recent 10-mile road race of the New England Wheelmen, and a photograph of the finish showed him near the front. At a recent meeting of the Inter-Club Amateur Road Racing League, the governing body of road races around this section, the protest was acted upon.

He was awarded tenth place and the new finish changed the standing of the clubs in the contest for the B. F. Goodrich trophy considerably. According to the new ruling, the Acme Wheelmen carried off the team honors with the low score of 44 points, as against 72 before the change.

C. R. C. A. MILEAGE STANDING

NEW YORK, N. Y., Oct. 2.—George Steppello leads in the September mileage returns of the C. R. C. A. Fall competition for the Jacobson medals, which will extend through the months of October and November. Only riders who failed to take one of the Mitchell trophies in the Spring mileage competition are eligible to try for the Jacobson medals. In the national mileage contest of the C. R. C. A., Fred M. Sanborn leads, with W. Winquist second and S. Segal third.

BLUE STREAKS

One Standard Tire Price

The one standard Goodyear Blue Streak Bicycle Tire price—$2.50 everywhere—is desirable for the public for several reasons.

1st. The one Blue Streak Tire, one quality at one price, means a tire easily identified everywhere at any time. Future purchases of Blue Streaks are simplified, and the time and energy of the rider and dealer are saved.

2nd. The rider is assured of the quality he is getting without examining before purchasing. The dealer is saved the time trying to explain and push the unknown, unstandardized tire.

3rd. The standard Blue Streak Tire serves as a basis of comparison. When the dealer substitutes another tire and tells the rider "This is just as good," the rider can compare these claims with the known Blue Streak quality and thereby hold the dealer strictly to his statements.

4th. The standard Blue Streak price is from $1.00 to $3.00 lower than other tires of equal quality. Because it is the only bicycle tire Goodyear makes, it can be made better and still sold at a smaller margin in order to make large sales possible and a quicker turnover.

You will agree that this is the best business practice and should enjoy its economies by ordering a stock of Goodyear Blue Streak Tires at once.

ARMY RIDER TO MAKE 2700-MILE DASH AS TEST

With Approval of Major General O'Ryan, Motorcycle Courier Will Carry Message from Camp McAllen, Texas, to Governor Whitman in Albany, N. Y., Using Sidecar Combination—To Travel Under Military Field Conditions.

NEW YORK, Oct. 11.—The most significant and spectacular test ever given a motorcycle outfit under direct auspices of United States military officials is now being planned, with the enthusiastic backing of Major General John F. O'Ryan, of the New York National Guard, in the form of a dash from McAllen, Texas, to Albany, N. Y. It is the intention to use a Harley-Davidson sidecar combination on which the couriers will carry a message from Major General O'Ryan, now at the Mexican Border, to Governor Charles Whitman, of New York. The machine will be piloted by Dan Dresser, a former member of the First Motor Battery, N. Y. N. G., and more recently in motorcycle dispatch service and on special details for Major General O'Ryan and McAllen.

As the matter now stands, it simply remains for the proper military officials to decide when the test shall be made, and there are indications that it will be put through in about two weeks. The route of approximately 2,700 miles from McAllen to Albany has already been mapped, and practically all the details for the arduous journey have been worked out.

Dresser will have as his passenger Harvey Edwards, another seasoned dispatch rider, and throughout the test the two couriers will operate strictly under military field conditions. Each will carry a full kit, possibly excepting the rifle, and the travelers will pitch camp and sleep wherever they happen to be when their mileage for the day is completed. Each kit will weight 55 pounds; Dresser weighs 174 pounds and Edwards 175, so it will be seen that the outfit will carry an actual load of at least 469 pounds on the trip.

It is understood that the idea of making such a severe test of the motorcycle under military field conditions originated with Major General O'Ryan some time ago, and that his selection of Dresser as the pilot followed a series of remarkable performances by that rider both in mobilization dispatch work in New York State and at Camp McAllen. Dresser is possessed of the skill and daring to carry his message through in the face of all obstacles, and years of actual experience with motorcycles have fitted him admirably to keep his mount in tune under the most severe conditions of travel.

32 MACHINES COVER ANNUAL TRIANGLE RUN

Outing of Providence Riders Over Three-Leg Course Proves a Real Pleasure Jaunt; All to Receive Medals

PROVIDENCE, R. I., Oct. 10.—Thirty-two motorcycles figured in the annual Triangle Run held under the auspices of B. A. Swenson, Sunday, Oct. 8, and the party covered the 132-mile course with no trouble worthy of the name. There was a fair sprinkling of sidecar outfits among the solo machines, and they experienced no difficulty in maintaining the running schedule. The actual running time for the trip was five hours and 45 minutes.

The start was made from Exchange Place, Providence, at 7 a. m., and the first leg, to Boston, was 45 miles long. The first machines arrived in Park Square, Boston, at 8:45. From that point the route led to Worcester, a jump of 44 miles, where the party arrived at noon. The last leg of the trip, from Worcester back to Providence, a distance of 43 miles, was made in two hours.

For the most part good roads were found. From Providence to Boston and on to Worcester the ride was over State highway, and with the exception of a few miles, this section was of good macadam.

HERE'S A SIMPLE AND INEXPENSIVE MEANS OF GINGERING UP ACCESSORY SALES

THIS is the season when every thoughtful dealer in motorcycles is concentrating his energies upon the broadening of his sales scope for the coming year, and while his business in the new models is naturally his chief concern, he is giving considerable thought to his possible income from accessories and supplies.

¶ In addition to making sure that the instruction book and the price list of parts are placed in the toolbox of every motorcycle that leaves his store, the dealer should enclose also a form letter listing the accessories he handles and which he has found best adapted to the motorcycle, or motorcycles, he is selling. It is possible, in addition, to inclose a circular calling attention to the added comfort and service obtained from the motorcycle through having it equipped with the necessary accessories.

¶ It is obvious that this accessory sales booster would reach the rider at the best possible time—for in a week or two after he receives his mount every real enthusiast is desirous of fitting it out to the limit. If he finds the accessory list, and the interest-stimulating circular letter, in his toolbox, it is quite likely that he will return to the dealer who sold him the machine and open negotiations at once for the additional equipment. In other words, the accessory literature acts as a legitimate business hook in the patronage of the machine buyer.

SEVENTY-ONE JAUNTERS ON NEW JERSEY RUN

Novel Road Contest, Combining Social Features with Mild Competition, Brings Out Twenty-five Sidecar Combinations, Fourteen Solo Mounts and Two Tandem Outfits—Bronze Medals for Those Finishing on Schedule Time.

NEWARK, N. J., Oct. 10.—Seventy-one enthusiasts "jaunted" through the Garden State with the New Jersey Motorcycle Club on Sunday. They rambled over 204 miles of the best and second-best roads of the State, mounted on 41 motorcycles, there being 25 sidecars, 14 solo machines and two tandem outfits in the field.

Just enough competition was injected into the program to make it interesting. The riders were held to a 22-mile an hour schedule, but there were no secret checkers to worry them. The roads were almost uniformly good, and it simply remained for the contestants to keep in the running and check at four different towns. They were allowed a leeway of 15 minutes beyond the scheduled time.

The outcome of this somewhat novel arrangement was that everybody had a little excitement, and a lot of satisfaction resulted from the fact that many of the finishers were somewhat ahead of time at the various checking points. In other words, the social side of the affair was blended neatly with mild competition, and all hands voted the event a success.

The trade men were out in force. Among those in the line-up were: Carl W. Bush, P. W. Stevens and Lincoln Holland, Jr., of the C. W. Bush Company, Harley-Davidson representatives in Newark; Walter Goerke, of Newark, Indian dealer, and John Steele, the Wigwam man from Paterson; Calvin R. Webber and Wallace Stuart, of the New York Sporting Goods Co., New York City; Watson Kluzek, who represents the Reading-Standard in Newark; J. R. Neis and H. M. Scholl, of the Splitdorf Electrical Company; R. S. Woods, Harley-Davidson dealer in Trenton. Neis and Scholl passed out Splitdorf watch-fobs and, needless to say, were very popular with the riders. Woods joined the party at Trenton and finished the run from that point.

Hatch Did Well

One of the best performances was made by William Hatch, who piloted a Reading Standard with tandem attachment and Rogers sidecar. Mrs. Hatch occupied the tandem seat and three youngsters were carried in the sidecar. In spite of this unusual line-up of passengers, Hatch maintained the 22 mile an hour running schedule throughout.

Among the riders who did not seem able to shake the jinx was Calvin R. Webber, of the New York Sporting Goods Co. Webber was "somewhere in New Jersey" at last accounts, having had a number of encounters with nails. He repaired several punctures in record time, but was unable to keep up with the schedule because of the time lost.

To Get Medals

Bronze medals will be presented to all finishers who complied with the conditions of the jaunt. So much favorable comment has resulted from the program that the New Jersey M. C. has practically decided to make it an annual affair. The New Jersey club and contestants in the run express appreciation of the co-operation given by the B. F. Goodrich Company, which presented each one of the jaunters with a road map of the State on which the course was plainly marked.

The Strong Sidecar Lineup

Following is the list of sidecar entrants, with their machines and chief points of equipment:

Wilbur M. Walden and Harry LeMoine, Harley-Davidson; Bosch magneto, Firestone tires and Troxel saddle.

Lincoln Holland, Jr. and O. W. Stevens, Harley-Davidson; same equipment.

J. R. Neis and H. N. Scholl, Indian;

(Continued on page 38)

KENYON IS RAMBLING AROUND THE U. S. A.

Indian Rider in Northwest Aims to Make Canal Zone Soon—Eight Thousand Miles Since March

LA GRANDE, Ore., Oct. 6.—Cecil T. Kenyon, an Indian rider of Huntington, Pa., is now in this city for a short time, after traveling for 8,000 miles since March 1. Kenyon is "perambulating," to use his own expression, about the United States, going here and there as the fancy takes him. He will leave in a day or two for Portland, and then go south through California and head for the Canal Zone. If he can get through to Panama, he will then ride back to New York, he states.

Kenyon left Huntington on March 1 with a new machine shod with Goodyear Blue Streak tires. For three days he steered for Akron, O., and after resting there rode to Cheyenne, Wyo., over the Lincoln Highway. He then went to Colorado Springs, and Denver, spending considerable time at both places. Yellowstone Park, Billings, Mont., Spokane, Walla Walla and Elgin were also visited and the Blue Mountains crossed over the Toll Gate road. Kenyon is visiting relatives in this city.

After 8,000 miles his tires are in first class condition. He says that Wyoming holds the palm for rough roads, the surfaces in that State being worse than in any part of the U. S. A. he has ever traveled. He is breaking no records, but is "Seeing America First" by motorcycle.

FINE CYCLE OUTLOOK IN SOUTH AMERICA

Experienced Trade Traveler Says Latin-American Motorcycle Business Can Be Held Permanently

NEW YORK, Oct. 10.—Luis B. Cintron, manager of the Latin-American department of the Harley-Davidson Motor Company, dropped in at the office of **Motor Cycle Illustrated** a day or two ago preparatory to sailing for South America, where he will spend six months in travel in the interest of the Milwaukee factory.

Mr. Cintron is highly optimistic over the outlook in South American countries, and states that the credit bugaboo, which has bothered some United States manufacturers, is not interfering in the least with Harley-Davidson sales. He reports that South America is already pretty well covered by Harley-Davidson agents, and that his work is to be largely along educational lines. Every other Harley-Davidson motorcycle now sold in South America is now equipped with a sidecar, according to Mr. Cintron's records.

"How about England, Germany and France cutting into our business with low-priced motorcycles after the war?" the traveler was asked.

"Nothing to it," he replied, "if we take care of our present opportunities. If we deliver the goods and make real friends of our representatives in South America, we can go on selling them United States motorcycles indefinitely. Now is the time to cement our relations with them."

ELLIS JOINS N. Y. SPORTING GOODS STAFF

NEW YORK, Oct. 10.—George A. Ellis, the New York State F. A. M. commissioner and all around motorcycle booster, has joined the sales force of the New York Sporting Goods Co. Ellis is attached to the accessories and parts department of the New York Indian distributor, where he undoubtedly will be given ample opportunity for a full display of his talents and experience along motorcycle lines.

OUTLAW RACES WIN RIDERS A YEAR SUSPENSION

CHICAGO, Oct. 9.—As a means of putting a stop once and for all to outlaw motorcycle racing, Chairman John L. Donovan, of the F. A. M. Competition Committee has inaugurated the plan of suspending every rider who participated in an unsanctioned meet for a full year. And to make it emphatic that he means to live up to his word, Donovan has suspended no less a personage than Floyd Clymer, who hung up a new mark for the 100-mile distance at Dodge City this year and who more recently won the Pike's Peak hill climb.

Clymer took part in an outlaw meet at Douglas, Wyoming, a week ago. Frank Kunce, who has made no mean name for himself in racing circles this year, also drew a suspension along with Clarence Johnson and a dozen lesser lights.

TAYLOR JOINS THE INDIAN ADV. STAFF

Newspaper Man, with Broad Editorial and Reportorial Experience, Succeeds A. R. Metcalf

SPRINGFIELD, Mass.—John M. Taylor, formerly connected with the reportorial and editorial staffs of various newspapers, has joined the advertising staff of the Hendee Manufacturing Company, at the company's home office in Springfield, Mass., where he succeeds A. R. Metcalfe, who has become one of the advertising experts of the Fisk Rubber Company.

Mr. Taylor broke in with the Springfield Republican in 1910, after leaving De

John M. Taylor

Pauw University. He was later with the New Bedford Standard, The Page Company, book publishers; editor of the Twentieth Century Home and Farm; associate editor of Up-To-Date Farming; assistant city editor of The Rochester Herald, and editorial writer of the Brockton Times.

CRIST ON COMMERCIAL SALES POSSIBILITIES

CHICAGO, Oct. 10.—That commercial motorcycle sales possibilities are practically unlimited and that the dealer who does not take full advantage of the opportunity offered by this big and ever increasing field is passing up a real big opportunity, is the sum and substance of R. C. Crist's view of the situation as it exists today. Crist handles the Excelsior in Chicago and Cook county and has recently taken on the Henderson for the Windy City.

Backing up his assertions with concrete evidence of the possibilities, Crist pointed to some of the sales he has made recently. There were five machines sold to the Public Service Co. of Illinois; an even half dozen with sidevan equipment to the Fisk Rubber Co. for tire service work; and single machines to each, the Studebaker Corp., Brazil Tire & Repair Co., Coop Advertising Co., Mitchell Automobile Co., Winton Automobile Co., Maxwell Automobile Co., and several machines to Louis Geyler Co.

The R. C. Crist Co. is planning to open up several new branches in various parts of the city so as to give Excelsior and Henderson riders the maximum of service.

MATTHEWS HURT AT MEMPHIS MEET

Chicago Veteran Hits Wilcox's Machine and Fractures Skull —Stokes and Wolter Also Fall on Bad Track

MEMPHIS, Tenn., Oct. 5.—"Shorty" Matthews, one of the best known motorcycle racers in the country and an old hand at the game, was so badly injured when his machine struck the disabled motorcycle of another rider at the Tri-State Fair meet here yesterday that he will never race again. Matthews sustained a fractured skull and a triple fracture of his leg; his injury was so bad that it was found necessary to remove his left eye. Every hope, however, is held out by the surgeons for his recovery, provided complications do not set in.

Glen Stokes, the speedy Excelsior racing man, also was injured when his machine skidded on the turn; his hurts, however, proved slight.

Matthews' accident is just another case in point against the use of high powered machines on mile tracks. He was astride an Indian riding for all he was worth in the 25-mile free-for-all when he struck Edward Wilcox's machine which had just been wrecked. Wilcox escaped unscatched when his machine went bad, but had not time to remove it from the track before the speeding Matthews crashed into it. Matthews was thrown high in the air and fell in a crumbled heap. The other riders were flagged off the track to prevent their running down the injured rider.

Stokes' accident occured in the 20-mile free-for-all. It came near to being a repetition of Matthews' accident, for Joe Wolter struck Stokes' machine a glancing blow but managed to keep to his saddle.

CROCKER TAKES OVER HANSON BUSINESS

KANSAS CITY, Mo., Oct. 9.—Al Crocker, district manager for the Hendee Manufacturing Co. today took charge of the affairs of the Indian Motorcycle Sales Co., succeeding to the business of the late Charles Hanson who was killed in a motor accident a little over a month ago.

The move means that the Hanson Wigwam will act as a distributing station out of which Missouri and Kansas territory will be served with Crocker as the directing head. The personnel of the local Indian wigwam will remain unchanged, it is understood.

TWO BIDS ENTERED FOR WAR MACHINES

Harley-Davidson and Indian Only Offer to Supply Machines for Fort Bliss Use—Indian Bid the Lower

NEW YORK, Oct. 10.—That just two bids were entered for the latest order for military motorcycles and motorcycle equipment to be given out by the United States Army was disclosed when the bids were opened at 11 o'clock this morning at the Quartermaster's office in the Army Building this morning. The bids were entered by the Harley-Davidson Motor Co., of Milwaukee, and the Hendee Mfg. Co., of Springfield, which was lowest.

The bids called for ten three-speed twin-cylinder machines in all for use at Fort Bliss. Six of the machines were to be fitted with tandem attachments, one was to be equipped with a forecar, another with a rearcar and the remaining two with sidecars. The equipment called for Prest-O-Lite tanks, head and tail lamp, warning signal, an oil lamp, and a speedometer.

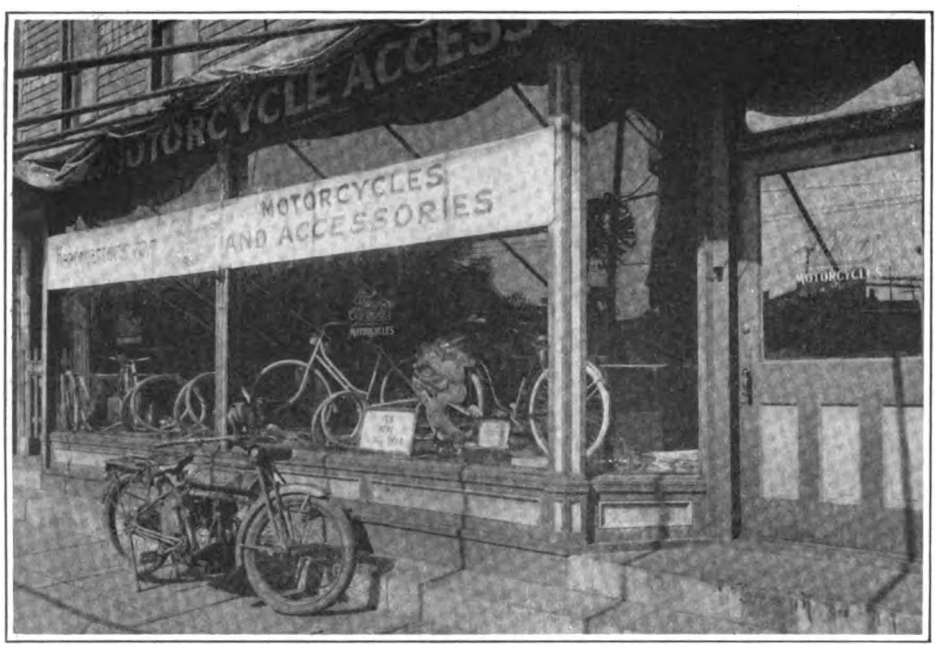
NEW THOR DISTRIBUTORS FOR NORTHERN OHIO



Extensive Front of Moritz Motorcycle Garage, at 4506 Detroit Avenue, Cleveland

CLEVELAND, O., Oct. 10.—Announcement has just been made that the new representative of the Aurora Automatic Machinery Co. in Cleveland is the Moritz Motorcycle Garage, 4506-8 Detroit avenue, the up-to-date agency shown in the accompanying photograph. This company, which has long ranked as one of the most prosperous and progressive in the Middle West, has made arrangements to conduct an extensive sales campaign and is confident that the Thor models for 1917 will pave the way for big business. The Moritz company will act as distributor for the Thor in ten counties in the Northern part of the State.

Sales Manager O'Hare, of the Thor, recently spent several days in Cleveland and is much elated over the outlook for the coming season. Ten Model 17-U Thors have already been shipped to Cleveland, and Mr. Moritz, who is one of the veteran dealers of the State, is confident that this shipment will be only a "drop in the bucket," so to speak, when Thor sales in his territory strike their gait for the new season.

FISK INCREASES ITS CAPITAL BY $24,500,000

CHICOPEE FALLS, Mass., Oct. 9.—By action taken by the stockholders of the Fisk Rubber Company at a special meeting called for that purpose, the capital stock of the company has been increased by $24,500,000. Of the total increase in stock, only $7,500,000 is to be issued at once, the rest to remain in the treasury. Of the new stock $7,500,000 is to be convertable first preferred, of which $5,000,000 will be issued, and $5,000,000 preferred, of which half will be issued. There will be $12,000,000 in common stock which will remain in the treasury for the time being.

Holders of the present outstanding stock will be offered the privilege of subscribing to the new second preferred at the ration of one share of new stock for every four shares common and second preferred owned in the aggregate. The new first preferred stock is to be offered to the public.

Cash raised by the sale of the new issues will be used in the normal operations of the business which has grown so that additional capital is necessary.

NEW DEPARTURE FEST DRAWS A GREAT CROWD

Magnificent Spread Attended by 2,700 Employees of Coaster Brake Makers—Eighty Lambs Are Roasted

BRISTOL, Conn., Oct. 12.—Records were broken at the big New Departure barbecue, held here Saturday, Sept. 30, when 2,700 employees of the New Departure Mfg. Co. sat down to an old-fashioned barbecue dinner of grilled lamb and all the trimmings from soup to the delicious dessert. A competent committee recruited from the company officials and department heads was in charge of affairs.

Eighty spring lambs were stretched on skewers and placed over a 328-foot trench which was filled with burning charcoal. Nine thousand ears of corn were cooked and served in addition to 2,000 of the canned variety. Thirty bushels of potatoes were boiled in big vats, and the bakers in this locality were busy making a thousand or more New England pumpkin pies—and what pies they were!

A miniature ice house was erected on the grounds and the beverages were kept to a nice, cool temperature. The company furnished everything for the day and the 2,700 present were loud in their praises of the spread, which was authorized by President DeWitt Page. Following the gigantic spread a program of athletic sports was provided.

INDIAN CHIEFS POW WOW AT HEDSTROM ESTATE

Left to Right, J. H. O'Brien, F. J. Weschler, J. A. Priest, E. M. Jackson and Oscar Hedstrom

SPRINGFIELD, Mass.—Last week-end Oscar Hedstrom, the Indian Wizard, gave a small party to his fellow chiefs of the "big wigwam" at his beautiful country estate in Portland, Conn.

Those present were F. J. Weschler, W. H. Wells, J. A. Priest, J. H. O'Brien and E. M. Jackson. A trip of inspection over Hedstrom's large modern farm was the first event on the program, followed by a dinner party in the big white house on the hill.

The party returned to Springfield by auto, bearing testimony of the liberal hospitality and with praise for the beautiful estate that Mr. Hedstrom has established.

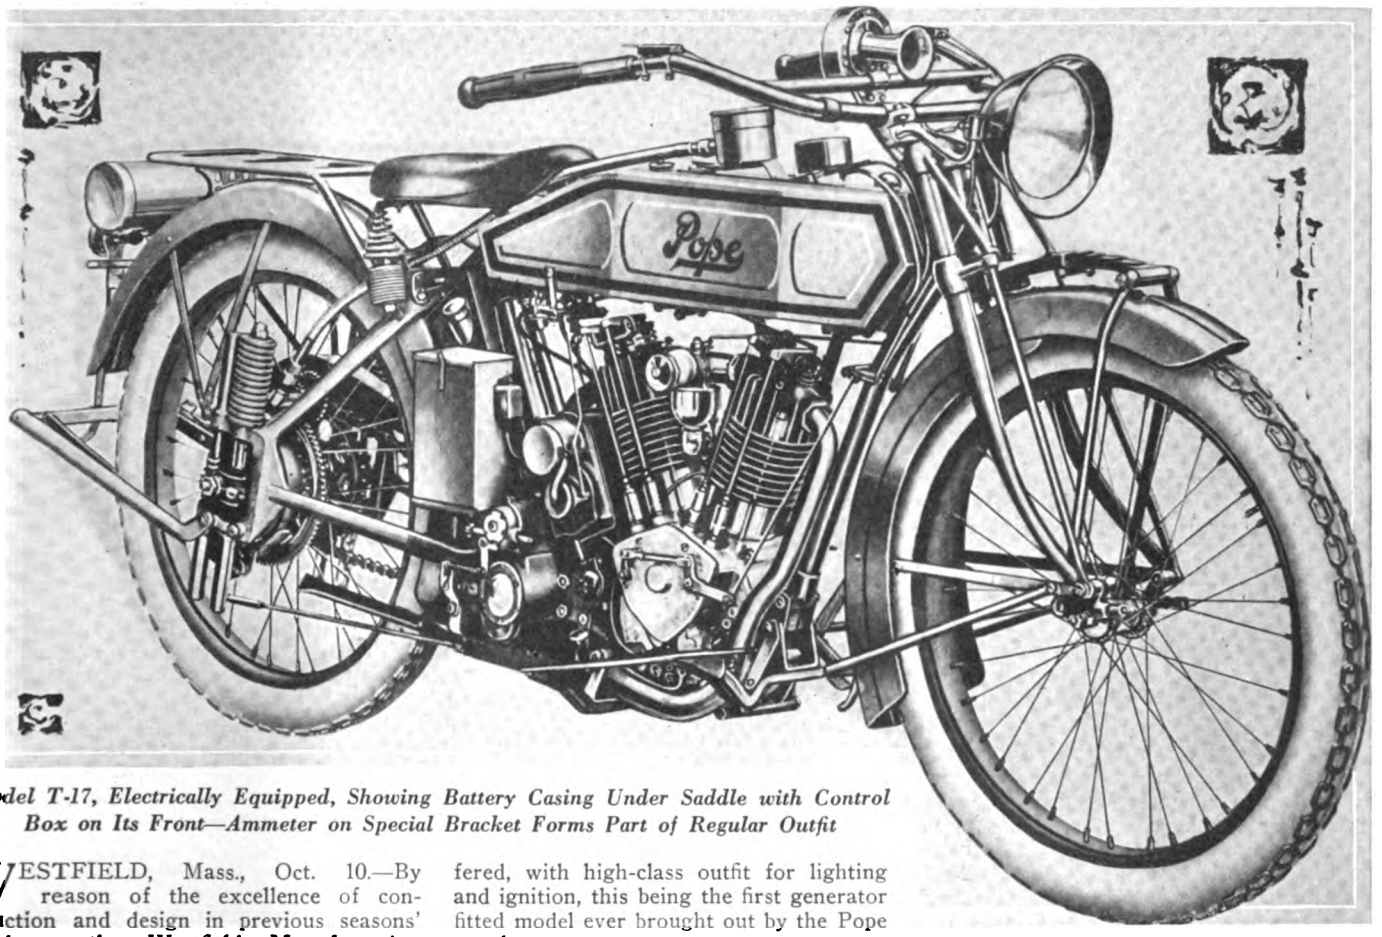
POPE OFFERS ELECTRICALLY-EQUIPPED MODEL

Westfield Factory Announces Three-Speed Twin with High-Class Lighting and Ignition Equipment —Improved Gear Shift, Cut-out and a Front Wheel Stand on Model T-17—Direct Acting Starter on Single-Geared Twin—Footrests and Detachable Oil Pump on Lightweight



Model T-17, Electrically Equipped, Showing Battery Casing Under Saddle with Control Box on Its Front—Ammeter on Special Bracket Forms Part of Regular Outfit

WESTFIELD, Mass., Oct. 10.—By reason of the excellence of construction and design in previous seasons' products, the Westfield Manufacturing Company has made but few radical changes in the Pope line of motorcycles for the coming season. However, an electrically-equipped three-speed twin, is offered, with high-class outfit for lighting and ignition, this being the first generator fitted model ever brought out by the Pope people.

In the three-speed twin, Model T-17, there is an improvement in the gear shift, a new type of muffler cut-out, a front wheel stand and reinforced footboards.

WHAT POPE DESIGNERS ARE OFFERING FOR THE NEW SEASON

Model T-17, three-speed twin	**$275**
Model T-17, electrically equipped	**320**
Model TM-17, three-speed single	**240**
Model L-17, single-geared twin	**240**
Model L-17, Special	**250**
Model M-17, single-geared single	**210**
Model H-17, Lightweight	**140**

EQUIPMENT

GENERATOR—On T-17, Electrically Equipped, Splitdorf, Splitdorf Electrical Company, Newark, N. J.
BATTERY—Wico, Witherbee Igniter Co., Springfield, Mass.
LAMPS—Solar, Badger Brass Mfg. Co., Kenosha, Wis.
HORN—Benjamin Electric, Benjamin Electric Co., Adrian, Mich.
AMMETER—Splitdorf, Splitdorf Electrical Co., Newark, N. J.
CARBURETER—Schebler, Wheeler & Schebler, Indianapolis, Ind.
CHAINS—Duckworth, Duckworth Chain & Mfg. Co., Springfield, Mass.
SADDLE—Troxel, Troxel Mfg. Co., Elyria, O.
SPARK PLUG—Splitdorf, Splitdorf Electrical Co., Newark, N. J.
SPOKES AND PEDALS—Diamond E, Standard Company, Torrington, Conn.
RIMS—Mott, Mott Wheel Works, Utica, N. Y.
BEARINGS—S. K. F., S. K. F. Ball Bearing Co., New York.
HUBS AND BRAKE—Corbin on larger models, Corbin Screw Corporation, New Britain, Conn.
TOOLS—Mossberg, Frank Mossberg Company, Attleboro, Mass.
BELT—Spartan, Graton & Knight Mfg. Co., Worcester, Mass.

On the Model L-17, the single-geared twin, a new type of segmental starter is used, while on the Lightweight, Model H-17, footrests are provided and an oil pump detachable from the tank is fitted. On all models, the color scheme for 1917 is Pope gray with a dark slate stripe, bordered with red.

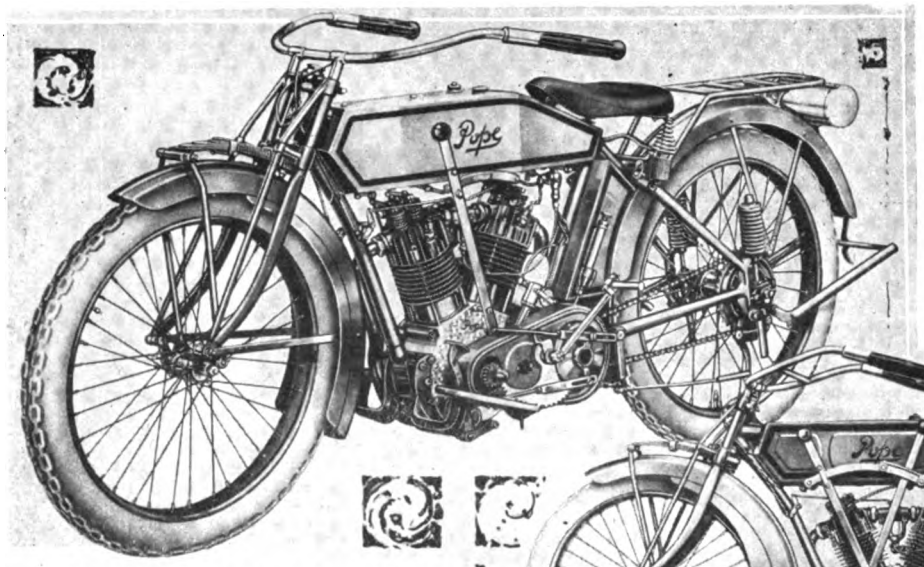
The following are the models for the new season: Model T-17, three-speed twin, $275; T-17, electrically equipped, three-speed twin, $320; TM-17, three-speed single cylinder, $240; L-17 single-geared twin, $240; L-17 Special, single-geared twin, $250; M.17, single-geared single cylinder, $210; H-17, single-geared, single cylinder with V-belt drive, $140.

Three-Speed Twin

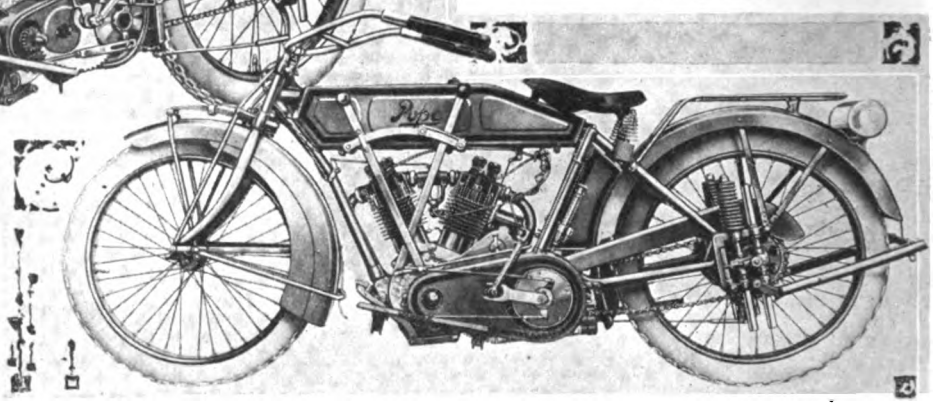
On Model T-17, the twin and three-speed gear, the chief change has been made in the gear shift. The position of the shift lever has been changed and the construction of the control has been altered. The hand lever is brought back nearer the saddle, so as to be within easy reach of the driver, thus making shifting more convenient and rapid than ever. All intermediate rods and levers have been eliminated, resulting in a direct and positive shift from the hand lever to the gearset.

The muffler cut-out on this model has been so modified as to be operated by a

Digitized by Google



Above, Pope Model L-17 Single-Geared Twin Which Has New Segmental Starter and Spring Frame



Below, Clutch Side of Three-Speed Twin Showing New Shift Lever Position and Classy Lines

lever which extends toward the footboard, instead of by a push-button as heretofore. This construction not only gives greater leverage for compressing the cut-out spring, but the lever is so situated that it can be held down by the heel without lifting the foot from the footboard. When the slight pressure is released the cut-out automatically closes, thus tending to minimize the indiscriminate use of the cut-out.

New Stand Construction

It has been the Pope policy to make improvements at any time during the year that opportunity presents, and one mid-season improvement which will be continued for 1917 is the Jack-stand. This easily operated stand has a secondary member which is dropped when the machine is ready to be put on the stand; foot-pressure then applied to the stand proper lifts the rear wheel from the ground, and the machine goes into position with a slight backward pull. In addition to this Jack-stand, a front wheel stand is fitted.

The long and comfortable footboards which were a feature of the 1916 twin model with three speeds are continued for 1917, but with an additional stiffening rib which adds greatly to their strength and solidity.

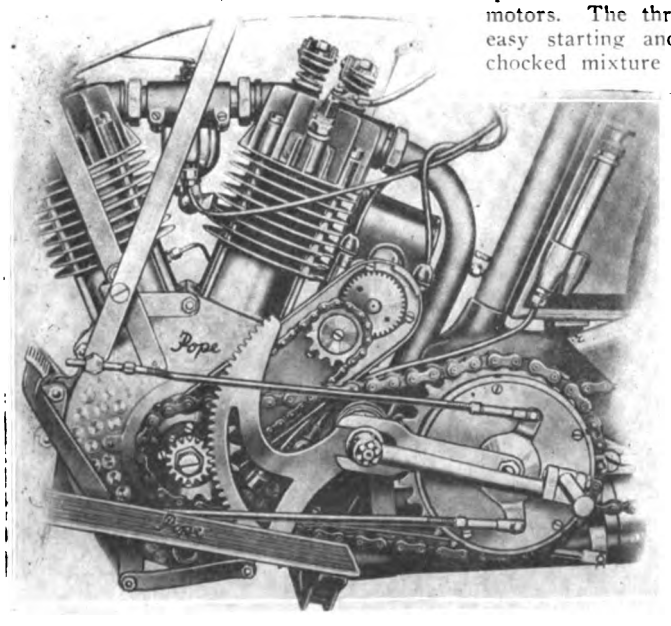
Carbureter Changes

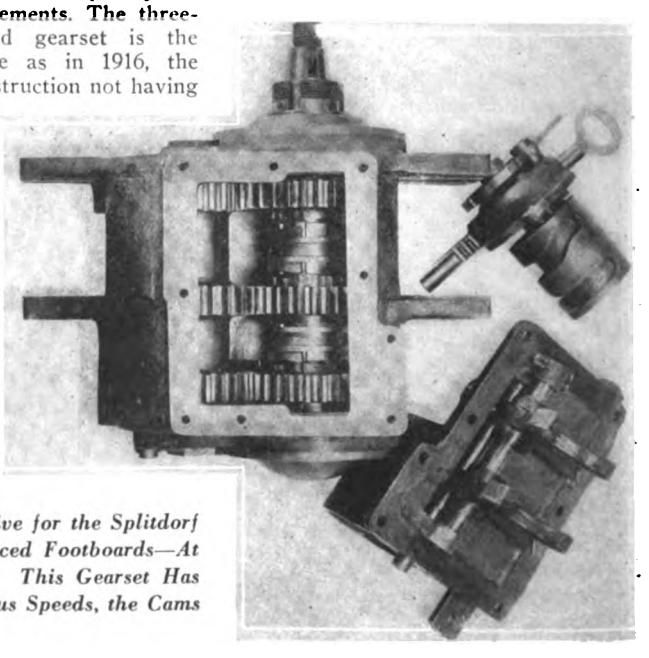
The motor on Model T-17, needless to say, is of the overhead valve type with characteristic Pope lines and high efficiency. This type of motor, from which 18 horsepower has been obtained, is even more carefully constructed than before. A new type of Schebler carbureter is fitted, having a three-point air-valve stop and a special form of fuel-valve cam for Pope motors. The three-point stop permits of easy starting and the use of a partly-chocked mixture with a cold motor, also for changes in mixture to meet temporary requirements. The three-speed gearset is the same as in 1916, the construction not having needed alteration. However, greater strength and long life have been obtained by a new process of heat treatment.

The typical Pope spring frame construction, which has proved so satisfactory each season since its introduction, is, of course, retained for the new season. The construction incorporates helical springs mounted upon guide rods fastened to the axle yokes and traveling up and down between the jaws of the frame brackets. These guide rods, together with an extra pair which prevent sidesway, run through long bushings, which not only keep them constantly lubricated, but are so sealed with packing that dirt or other foreign matter cannot work its way into the bushings. A particularly important eccentric adjustment with anti-friction rollers makes it possible to keep the rods running true at all times.

Features Retained

The usual Pope provisions of knockout front and rear axles with cones that lock on a sleeve independent of axle connection; chrome vanadium steel spring fork with reinforced sides of the same alloy; combination hand and foot control of clutch-brake and gear-lock, with automatic hand-lever brake lock permitting the driver to hold a sidecar outfit when dismounting on a steep hill; ¾-inch pitch chains; double tanks; gasoline strainer; special saddle hanger construction and front mudguards





Directly Above, the Powerplant of Model T-17 with Chain and Gear Drive for the Splitdorf Generator, Direct-Acting Starter, Dual Clutch Control and Reinforced Footboards—At Right, Three-Speed Gearset, Cam Mechanism and Shifting Forks. *This Gearset Has Pinions in Constant Mesh and Employs Dog-Clutches for the Various Speeds, the Cams Moving the Shifting Forks Progressively.*

Below, Model M-17, Overhead Valve Single with Clutch and Pedal Starting Gear. It Develops 10 Horsepower

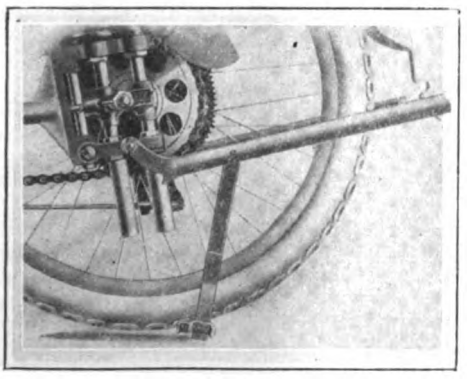
with splasher panel are continued for the new season.

At a time when an increase in prices has become an accepted fact, the Westfield Manufacturing Company offers Model T-17 at the same price as last year—$275.

Electric Model

In offering an electrically-equipped Pope motorcycle for 1917, it has been the object of the company to select for each item of equipment one that will be in keeping with the high standard of excellency and performance of the machine itself. On the Model T-17, electrically equipped, accordingly, the Splitdorf combination ignition and generator unit, Wico storage battery, Solar electric head and tail lights with Pope headlight bracket, Splitdorf ammeter, Benjamin electric horn and a special wiring set from Splitdorf for the Pope motorcycle have been provided. The ammeter, it should be noted, is included in the regular electric equipment.

Model T-17, with electric equipment as



Pope Jack Stand

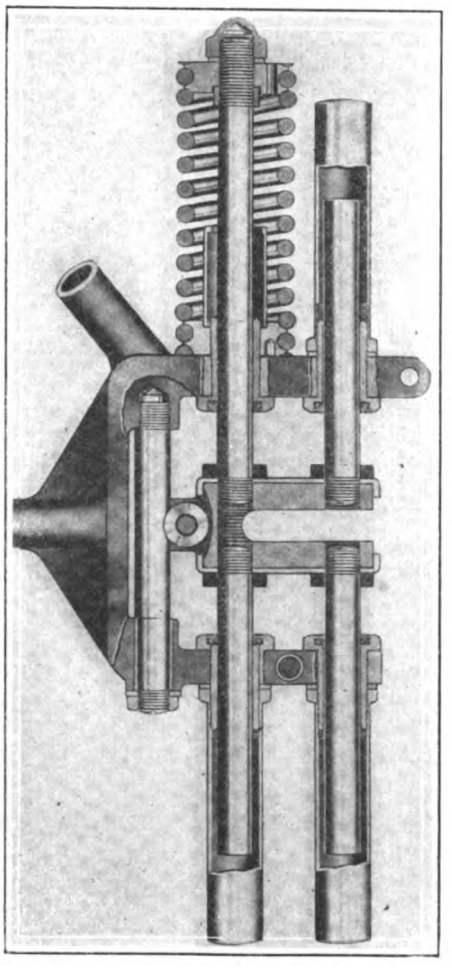
above, lists as $320. As extra equipment, the Corbin-Brown speedometer with special Pope rear drive is supplied when desired.

Three-Speed Single

All that has been said of the features and refinements of Model T-17 may be applied to the single cylinder Model TM-17, fitted with a three-speed gearset and other features of the multi-speed twin model, but with the change in powerplant mentioned.

This Pope three-speed single cylinder mount makes a remarkably efficient and satisfactory machine, the motor developing close to 10 horsepower. The TM-17 lists at $240, which is exactly the same price as that of the corresponding 1916 model.

The single-geared twin Pope for the new year, Model L-17, in general is similar to that of the season just passed, the changes made being in the nature of small refinements which add materially to the length of life and higher power output. A sector type of starter, acting directly on the motor is the chief improvement for 1917, this starter following the principles which worked out so well on last year's three-speed twin. It should be noted that this direct starter can be fitted to any of the past models of the L series. The forksides are now of vanadium steel reinforced and there are side splashers fitted to the front mudguard. The Pope spring frame and spring fork is naturally continued on this model. The list price is $240.



Section of Pope Spring Frame

Model L-17 Special bears the same relation to the L-17 as the mid-season L-16 Special bore to Model L-16, in surplus of power, speed and hill-climbing ability. It has a new segment starter and there have been made such changes in the cylinder head and carbureter construction as to bring the power output to between 17 and 18 horsepower on the average motor at about 2,900 revolutions per minute. The price of Model L-17 Special is $250.

Model L-17 Special

Vanadium steel reinforced forksides, a front mudguard with side splashers, new cam and valve spring design mark the Model M-17 changes from its preceding model. The average motor for this machine shows by actual test over 10 horsepower, at close to 2,600 revolutions per minute. It has the characteristic Pope spring fork, overhead valve motor, Pope rear suspension and control. It is offered as an all-around machine for the solo rider, at $210.

Model H-17, the success of many successful models of Pope in the H series, has needed practically no change in construction, but a refinement in the shape of aluminum footrests has been added. The oil tank has been so modified as to permit the use of a detachable pump, eliminating any possibility of leakage at the point of attachment. This pump is the same as fitted to all the higher-priced twin cylinder models.

Pope Lightweight, Model H-17, with V-Belt Drive, Footboards and ***Detachable Oil Pump***

Model H-17, the Pope Lightweight as it is called, has a four-stroke, single-cylinder motor, with bore of 3 inches and stroke of 3-11/16 inches, Eclipse clutch with lever control, 1-inch Spartan V-belt for drive, Eclipse internal expanding brake, United States tires, 1½-gallons gasoline and 2 quarts oil capacity, 26-inch wheels, wheelbase 51 inches. There is a spring seat post fitted, as in previous seasons, a large Troxel saddle, double post handlebars and chrome vanadium steel springs in the fork. It has a speed up to 45 miles per hour and a mileage of from 75 to 100 per gallon.

Priced at $140

The Westfield Manufacturing Company has this year listed the Model H-17 at $140, which is $10 less than ever before. The intention is to make this the most extensively used motorcycle in its individual class of any on the market.

The engineers of the company have devoted much of their efforts to perfecting manufacturing processes so that every part of the Pope motorcycle will be as perfect as human skill can make it. New equipment has been installed in the factory, greater facilities have been provided, and every detail of construction has been standardized to an even greater extent than heretofore. The extent of these increased facilities may be indicated by a single item—the new heat treating plant. Six big oil burning furnaces have recently been installed, each one connected with a separate pyrometer, and controlling a master graphic pyrometer located in the superintendent's office, where it can be continually watched by those in charge. This system assures an absolute uniformity of heat, which is of the greatest possible importance in the treatment of various parts, and to which many of these units owe their greater efficiency. In connection with this department, the company's engineers are continually making tests to assure the most perfect results obtainable with every piece of material treated. All this work has resulted in a greater refinement of detail, and the smoothing off of any of the slightly rough spots of construction that might tend to cause difficulty or inconvenience to the rider.

Cutaway View of Pope Muffler

VITALIC CLUB ELECTS AND PLANS WINTER PROGRAM

ERIE, Pa., Oct. 9.—The semi-annual election of officers of the Vitalic Club was held on the evening of Oct. 5, in the office of the Continental Rubber Works, with the results as follows: R. W. Hall, advertising manager of the company, was elected president; R. E. Sisson, vice-president; Miss C. M. Holmberg, secretary; Miss M. Ford, treasurer.

Plans are under way for a series of social events to be held throughout the fall and winter months. Interest in the organization has proven beyond all doubt the value of organized effort in promoting social affairs among the office employees of the company, and the program now being prepared promises to set a new mark for such activities among the Continental live-wires.

PRUETT ON ROAD AGAIN

OTTAWA, Ill.—H. G. Pruett, who for a number of seasons has been with Excelsior and Thor, has signed up to travel Iowa and Illinois with bicycle and motorcycle accessories for the Edwards-Crist Co.

CLUTCH COMPANY INCORPORATED

CLEVELAND, Ohio.—The Cleveland Clutch Company has been incorporated with a capital of $10,000 to manufacture clutches for automobiles and motorcycles. The incorporators are: C. A. McMorris, Harold T. Clark, C. C. Owens, Ernest Angell and Sterling Newell.

CONGRESS IS MECCA FOR MIDWINTER MEET

Cycle Parts Committee Arranges For Meetings to Take Place There During Chicago Show; Luncheon on Thursday

ERIE, Pa., Oct. 9.—As chairman for the arrangement committee for the Cycle Parts and Accessories Association, W. J. Surre comes through with the information that the Congress Hotel, Chicago, has been selected for the headquarters for the meetings of the various cycle trades associations during the midwinter convention of the trade to occur this year, while the Chicago show is in session, Nov. 12 to 19.

The luncheon and joint meeting of the Cycle Parts and Accessories Association, the Motorcycle and Allied Trades Association, the Cycle Jobbers Association of American and the Bicycle Manufacturers Association will be held in the ball room of the Congress on the afternoon of Thursday, Nov. 16. On the morning preceding the luncheon, separate meetings of the parts makers, bicycle makers and jobbers associations will be held at various meeting rooms in the Congress, while the Motorcycle and Allied Trades Association, which has grown out of the old Motorcycle Manufacturers Association, will meet at the same place on Wednesday morning. Nov. 15.

The arrangement committee points out that the Miners' Convention will be on in Chicago during the same week, with headquarters at the La Salle. For this reason cycle trades men are urged to reserve hotel accommodations early, for it is altogether likely that the Windy City hotels will be crowded throughout the better part of the week.

INDIAN CLUB OPENS SEASON IN NEW HOME

CHICAGO, Ill.—The Indian M. C. of Chicago has taken large clubrooms at 235 South Racine avenue and opened for the season with a Dutch lunch and smoker last Friday. A big dinner is being planned for the near future to celebrate the fourth anniversary of the club. President Jesse Wilbourne has appointed a committee to look after this affair, this body being headed by M. W. Johnson, the vice-president.

The club has almost 100 members in good standing. The officers are: Jesse Wilbourne, president; M. W. Johnson, vice-president; A. P. Gassman, recording secretary; Arthur Hertzler, secretary. and J. W. Collins, treasurer.

TO PAY EIGHT PER CENT.

AKRON, O.—Notwithstanding a recent stock dividend of two-thirds of the outstanding common stock, the Miller Rubber Co. will pay an eight per cent. dividend on all of its stock, including the new. The new eight-story building now under construction is nearing completion, and will give the company all of the space it needs, with a total of 21 acres.

HOOD SPRINGS LOGIC ON SHOW MATTERS

Walthour & Hood Man Compares Show Attendant to Famished Man; Manufacturers Should Fill Show Cupboard.

TOLEDO, Ohio, Oct. 9.—Show Manager A. B. Coffman, who is handling all the details incidental to staging the Chicago and New York motorcycle, bicycle and accessory shows, in an endeavor to bring home to manufacturers the reasons why they should exhibit, quotes the logic of L. H. Hood, of Walthour & Hood, the Atlanta jobbers.

Hood compares the dealer, jobber and other trade men who visit the annual cycle exhibits with a starving man set before a well laden table; as the starving man is literally ready to gobble up the entire food supply at one gulp, so is the cycle trade man anxious at show time to drink in every bit of information pertaining to his business; he wants all the advance dope on the season's new models and the season's new accessories that the makers can give him. And he spends his time and money traveling to the show to gather this information.

Hood winds up with the assertion that the manufacturer who does not take space is not only handicapped himself but is handicapping every one of the jobbers and dealers who handle his line. He trusts and expects that at the coming shows the makers of machines and parts will vie with each other to make their booths unsurpassable and feels that in this way a great deal of enthusiasm will be engendered which cannot fail to prove helpful.

OLIVE DRAB ROGERS ON WAY TO NEW YORK

NEW YORK, Oct. 7.—Irving Beck, of the Rogers Sidecar Sales Company, 1691 Park avenue, this city, announces that there is en route from the factory at Chicago, Ill., a carload of Rogers sidecars to match in color and striping the olive drab of the 1917 Harley-Davidsons. This is the first shipment made in this color, and Beck does not expect to have the contents long, as quite a number have already been ordered.

1,228 IN RHODE ISLAND

PROVIDENCE, R. I., Oct. 10.—George R. Remington, secretary to the State Board of Public Roads, has just compiled figures which show that there are 1,228 motorcycles in use throughout Rhode Island. There were 1,421 motorcycles in the state in 1915; 1,199 in 1914; 1,017 in 1913, and 792 in 1912.

CALL FOR MOTORCYCLISTS

TORONTO, Ont.—The Great North Western Telegraph Company, which is closely associated with the A. D. T. in the States, has decided to make use of motorcycle riders in the Toronto delivery service. In advertising for riders, the company declares that it will use motorcyclists for whole or part time. It will accept the services of a rider for evenings, Sundays and holidays.

Selling Sidecars? If so, Uncle Tommy Paine, 100 Years Old Next Month, Has Something to Say to You Along Boosting Lines.

THERE are arguments galore in behalf of the safety, comfort and general fascination of the motorcycle sidecar, but the most forceful one we have ever found is seated in the third-wheel attachment shown above,—said argument being Uncle Tommy Paine, of Belvidere, N. J., who will be 100 years old November 4.

When the riding qualities of the sidecar are up for discussion again in your salesroom, Friend Dealer, give a thought to Uncle Tommy Paine and inform your prospect that the Belvidere centenarian prefers the Excelsior outfit in the picture to a big touring car driven by his daughter. The old gentleman can make a trip in the motor car at any time, but when left to his own inclinations, he invariably passes up the automobile and snuggles down in the motorcycle sidecar for his outing.

The combination illustrated is owned and driven by William J. Rush, of Pen Argyl, Pa., who has been one of Mr. Paine's close friends for years past. Writing of the veteran's enthusiasm for the sidecar, Mr. Rush says: "He goes out with me every time he gets a chance, and is never in a hurry to return home; nor does he care how far I go. His daughter owns a motor car, but Uncle Tommy takes the motorcycle sidecar by preference."

When a man is within reaching distance of the century mark he knows just about what he wants. He can't be cajoled, bluffed or bamboozled into thinking that he is enjoying himself if he isn't. He's either comfortable, or he's not. And it's safe to wager that when Uncle Tommy Paine says he enjoys his sidecar outings to the utmost he means precisely what he says.

There may be a more convincing argument in behalf of the sidecar than Uncle Tommy Paine's advocacy of it,—but we don't think so. May he be with us as a sidecarist for many a day!

GOODYEAR BUSINESS FOR YEAR TOTALS $62,000,000

Reports Submitted at Annual Sales Conference in Akron Show Even Greater Progress Than Was Predicted; District and Branch Managers Hear Plans for 1917

AKRON, O., Oct. 9.—The most successful sales conference in the history of The Goodyear Tire & Rubber Company has just been held, when the district and branch managers from all over the country assembled at Akron, as the company's guests, to discuss Goodyear policies and prospects for 1917. The wonderful record for the present year was reviewed and plans formulated for the reaping of Goodyear's share of the 1917 harvest.

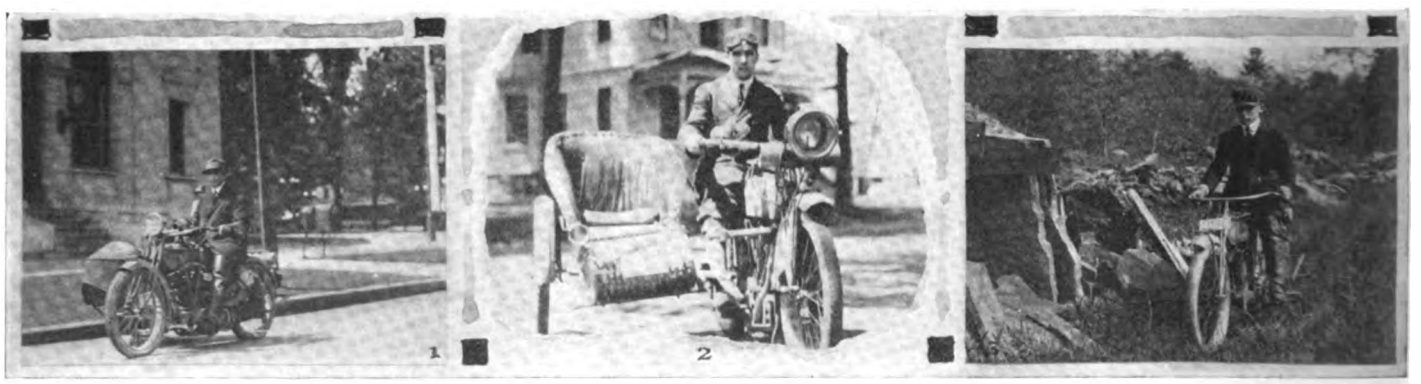
There was much enthusiasm and congratulation over the fact that, despite the innumerable and almost insurmountable production problems encountered, the $50,000,000 production mark set for the year had been reached and exceeded, and that the year's business would reach a total of $62,000,000.

It was generally agreed that the company's policy had been well adapted to meet competitive conditions, and that Goodyear had never stood so high in the estimation of a great rubber using world.

During the past year there has been a constant race between the demand for Goodyear products and factory production, with the demand for products always leading, so that the factory has been running the entire year, 24 hours a day, to keep production in line with sales.

The conference developed that in all departments Goodyear has made a most wonderful growth during the past year. Automobile tires still represent the company's largest line and are meeting with prodigious sales. It is expected that 6,000,000 tires will represent the 1917 production. In mechanical goods, the rapid increase in sales has necessitated the erection of a new mechanical goods factory, fully as large as the entire Goodyear factory three years ago. In motorcycle tires three-fourths of the country's 1917 business is being planned for; in bicycle tires, business has more than doubled and in 1917 will easily triple; in Neolin soles a production of 25,000,000 pairs is confidently expected.

THE SORT OF FAITH THAT WINS NUMEROUS POPE ADHERENTS



1, Chief Engineer W. L. McGrath with Pope Sidecar Combination in Front of Westfield Post Office; 2, Export Manager H. A. Stillman Starting Morning Run to Work; 3, Publicity Manager W. K. Porzer Out to See the Country

THE surest expression of a man's faith in the product he makes or sells, is found in the way he uses it himself.

There can be little question of the faith that the Westfield folk have in their product, because not only does practically everyone in the office ride either a motorcycle or bicycle, but the cycle shed in the factory yard is always crowded with hundreds of two-wheelers.

The illustrations shown herewith bring out some of the interesting peculiarities regarding each individual mount.

For instance, the sidecar outfit ridden by W. L. McGrath, chief engineer, is always way ahead of the season, and in fact is always somewhat freakish. Each improvement that is considered for use on the Pope is found on McGrath's machine many months before it is given formal consideration. He tries it out in every conceivable way. In order to determine the wearing qualities of various parts, Mr. McGrath will leave them exposed to the dust and weather for months at a time. He puts his machine to every test that it will need on the road, and after covering 18,000 miles, it still carries him merrily to and from work every day, winter and summer.

C. P. Gorman, controller of the company, is usually in a hurry, so he jumps upon a Pope lightweight.

In the same way, H. A. Stillman, the export manager, clings to his wicker sidecar, because he has become so accustomed to handling this light outfit under all conditions. It is a usual thing to see him riding to and from the business section of the town with his wife and family on the outfit.

Ad man Porzer has a continual problem on his hands trying to keep his machine clean and attractive enough to be an advertisement. For at every chance, he is off on the Berkshire trails, ploughing through mud and dust along routes that were never intended for motor vehicles.

CONTINENTAL-ERIE ISSUES TWO BOOKLETS

TWO interesting and well-gotten-up booklets on goods produced by the Continental Rubber Works, of Erie, Pa., have just been issued by the factory for the benefit of both rider and dealer. The more important booklet, which deals with the Vitalic line of motorcycle and bicycle goods, has attractive covers depicting a beautiful summer scene on the road, with lady and man cyclist awaiting the arrival of others further down the highway. The second booklet, referring to automobile sundries, has its covers occupied by an automobile runabout on a country lane.

Both are comprehensive in their respective lines, each article being well illustrated in addition to being described clearly. The booklets are the work of Advertising Manager R. W. Hall and should be in the hands of everyone interested.

PETTIS-STOREY MOTOR CO. FORMED IN ATLANTA

ATLANTA, Ga.—Ross Pettis and Guy Storey, both of this city, have formed a partnership and will open up a fully-equipped Harley-Davidson store store here in a few days. They have obtained an excellent location aa 90 Edgewood avenue. The firm name is to be The Storey-Pettis Motor Company.

Mr. Pettis has been with the Harley-Davidson southern branch ever since it was established in Atlanta, and is therefore acquainted with every detail of the sales work. Mr. Storey has had charge of the service department at the branch for the past two years. Arrangements have been made to stock a full line of Harley-Davidson motorcycles, bicycles of the same make, and accessories for both power and pedal machines.

NEW TIME PAYMENT PLANS IN KANSAS CITY

KANSAS CITY, Mo., Oct. 9.—Motorcycle dealers in this city have made changes in their deferred payment plans since the announcement of the 1917 models from the various factories. Acting as a body, the agents now state that a larger deposit will be required than heretofore, with shorter time allowed to complete the payment, and only gilt-edged securities will be accepted.

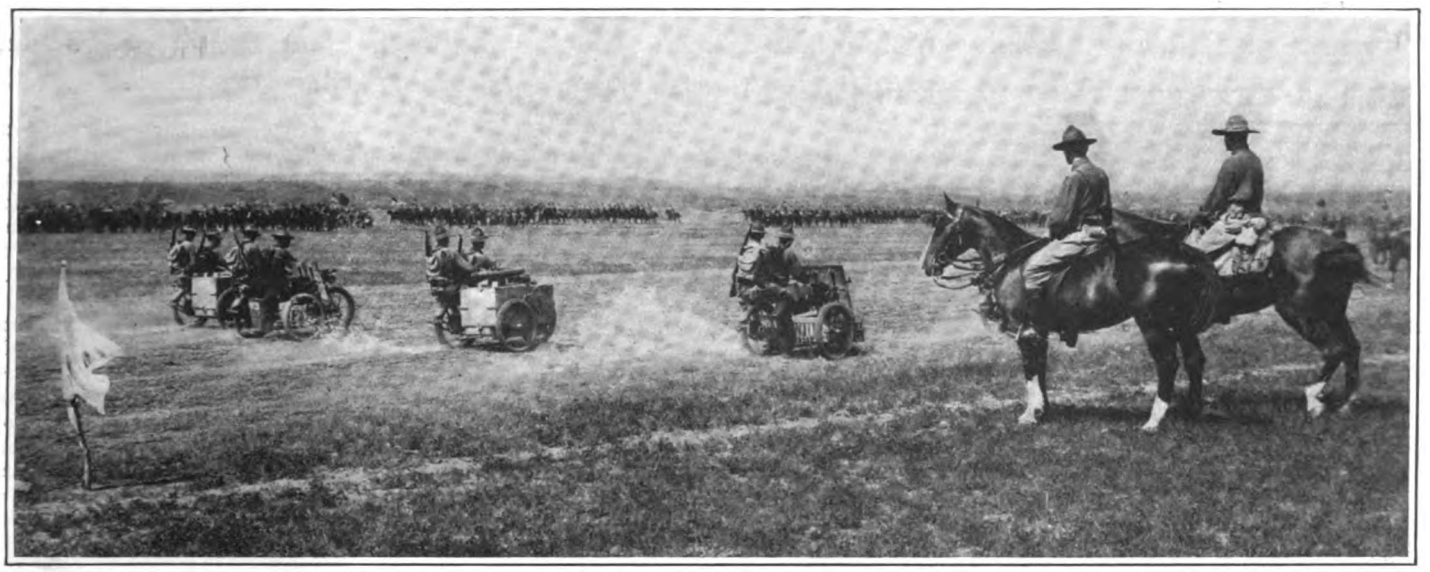
HERE'S A SIGHT TO INSPIRE PATRIOTISM AND MOTORCYCLE ENTHUSIASM



General Pershing Reviewing the United States Troops at Valle, Mexico. The Motorcycle Machine Guns Are Attached to the 16th Infantry and Have Proven Themselves of Greatest Value to the Punitive Expedition

GILBERT TAKES UP THE CLEVELAND SALES REINS

United States Rubber Man Goes to Lightweight Concern as General Sales Manager—N. Y. Distributor Named

CLEVELAND, Ohio, Oct. 9.—C. A. Gilbert, who has been successively branch manager in the central territory and assistant district manager for the United States Tire Co. and later general sales manager for the United States Tire and Rubber Company of California, has

C. A. Gilbert

been made general manager of sales of the Cleveland Motorcycle Manufacturing Co.

Gilbert is nationally acquainted with the motorcycle and accessory field, and takes up his new duties because of his belief in the wonderful future of the light weight motorcycle. He leaves this week for the Pacific Coast to organize the distribution and sales for the 1917 season.

Before leaving New York, Gilbert closed a contract with the Audubon Motorcycle Garage, 4192 Broadway, giving them the distribution for the districts of Long Island, Greater New York and the southeastern part of New York State. This company handled the Cleveland motorcycle in the same territory in the present year. It is interesting to note that their initial order on the new basis of carload shipments is larger than their entire sales for the past year.

C. W. Waughop, the Cleveland traveler, will make his headquarters with the Audubon Motorcycle Garage.

The Lees Company has been appointed to take charge of the advertising.

WENIGE SOLD 500 WHEELS DURING 1916 SEASON

NEW YORK, Oct. 10.—George Wenige, manager of the Bicycle & Motor Sales Company, of 425 Wellington street, London, Canada, is now in New York on a business trip. He motored down from his home through New England, and while in the metropolis, dropped in on **Motor Cycle Illustrated** for a chat about affairs.

"My motorcycle sales have numbered 75," said Manager Wenige. "I handle the Indian and Pope lines, and find that both give great satisfaction. While the figure mentioned may seem small for a city with 30,000 population, as London has, it must be remembered that a huge majority of the motorcycle riders and prospects are with the colors, either in the big training areas or abroad. Hence, I feel that I have done pretty well under the circumstances.

"But in the bicycle line, I sold 500 of the Brantford wheels," continued the hustler from London, "and for 1917 I expect to do much better than that." Wenige is a firm believer in liberal advertising, and takes large space in the local papers.

ELLIS BREWS PLANS FOR SOCIABLE RUN

Yonkers to Poughkeepsie and Return the Course, October 29 the Date—Perfect Men to Draw for Prizes

YONKERS, Oct. 9.—George A. Ellis, formerly the moving spirit in the Yonkers Motorcycle Touring Club and New York State F. A. M. Commissioner, is brewing plans for a get-together run for which a tentative date, Oct. 29, has been set.

Following is the general plan: Each entrant will be charged a 50-cent fee, which will cover the cost of the prizes. The first prize will be a gold watch; second prize, gold cuff links, and third, a gold stick pin. The run will be from Yonkers to Poughkeepsie and return. The rider will check out of Yonkers and check in again at Poughkeepsie. Fifteen minutes leeway will be allowed each way—for instance, if a rider is due at Poughkeepsie at 12 noon, he can get there at 11:45 or 12:15 and still have a perfect score. One hour will be allowed for lunch at Poughkeepsie. Returning to Yonkers at 5 p. m., the rider will also be allowed 15 minutes here.

After the time limit is up, all cards will be gone over. Those having perfect scores will have their slips placed in a hat and drawn. The first name drawn will be entitled to first prize, etc. The prizes will be awarded at the finish of the run.

COVERS MORE TERRITORY

QUINCY, Ill.—William Gibbs, who operates a facsimile letter writing agency in this city, uses a motorcycle for rapid delivery of his work. He reports that he is able to cover three times the territory he did when depending upon ordinary means of transportation and would not be without the machine.

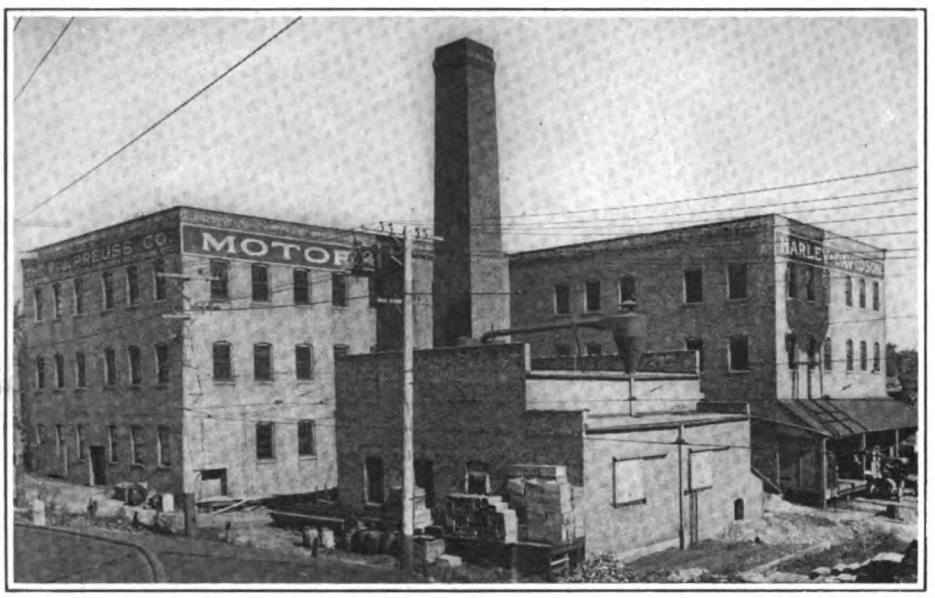
HARLEY-DAVIDSON EXTENSIONS INCREASE EFFICIENCY

Purchase of Building Adjoining Main Plant and an Addition to South Plant Permit of Greater Specialization in Service Branch and Afford Needed Room in Other Departments



New Factory Addition (at Left) to Main Plant Which Will Be Home of Service Department. It Is Across Tracks from Main Structures

MILWAUKEE, Wis.—Production and service have been entirely separated by the Harley-Davidson Motor Co. through obtaining a new factory addition across the railroad tracks from its main plant in Milwaukee.

With this announcement comes word that the Harley-Davidson Motor Co. has also made an addition to its South plant, so that the total additional space is 43,572 square feet, of which 36,072 square feet is added to the main plant. The addition to the South plant, with the exception of 2,500 square feet used for the storage of steel stock, is devoted exclusively to automatic screw machinery.

Negotiations for the addition to the main plant had been pending for a long time, and were brought to a successful conclusion so that the additional space was available for use at the beginning of the 1917 season. The building belonged to the R. J. Preuss Co., manufacturers of bed springs, cots, metallic couches and bedsteads. All who have been through the Harley-Davidson plant within the past two or three years can appreciate the necessity for the additional floor area. Dealers especially can appreciate what this additional space will mean in the Harley-Davidson organization.

To Be Service Building

"Service Building" is what the new factory addition could well be designated. The main plant and the South plant are now being devoted entirely to production. Until the obtaining of this additional space there was a considerable amount of work for the service department done in the various departments under the supervision of the production men.

Now both production and service can be highly specialized. The engineering department remains in the same plant with the headquarters of the production department, but everything pertaining to service will be handled in what was formerly the Preuss factory.

Sidecar manufacturing operations are now concentrated in one department. This, too, has been made possible by the acquirement of the additional floor area. Formerly the work on sidecars was done in several different departments, but now the Harley-Davidson Motor Co. has one man vested with the entire responsibility of sidecar production. The sidecars not only will be carried through to completion in this one department, but will also be crated in the sidecar department instead of by the motorcycle crating department.

Finely-Organized Departments

The spare parts and accessories divisions of the company are now worth going many miles to see. Modern in every respect are the new stock rooms, the spare parts and accessories being entirely separated as to storage but with one man in charge and vested with full responsibility. This department has its own shipping force.

The packing department is housed in the main stock room. Formerly that department adjoined the motorcycle crating department, and while they had little in common, except that they were packing for shipment while the craters were crating for shipment, there was no need for them being together except that no other space was available.

The transferring of the packers of spare parts and accessories and the craters of sidecars and sidevans to the new factory addition gives the motorcycle crating department the much needed additional space. All of the crating lumber, and the blocks used for holding the new machines firmly in place when in transit, reach the Harley-Davidson factory cut exactly to size. But in spite of this, visitors have marveled at the results attained with the small space available. Under the new arrangement the motorcycle crating department, the sidecar crating department and the packing and crating departments in the service division have ample space to meet their requirements.

The relieving of congestion in some of the most crowded departments of the main plant will mean much for the increased efficiency of those departments, and will make possible the handling of material on a much larger scale of production. The space on the first floor formerly occupied by the repair department has been turned over to the pressed steel department and already several new presses of good size have been installed. The space formerly occupied for the storage of spare parts and accessories under the supervision of the service department is now devoted exclusively to stock for the production department.

Handling Repair Jobs

Dealers will be interested in knowing that machines shipped to the factory for overhauling will be handled complete in the new factory addition (which already has come to be known as the Service Building), even to the extent of enameling. In carrying out the idea of a complete unit for the service department it has even been provided with its own test building. Formerly repair jobs were necessarily tested by the testers in the production department. But now the repair department is to have its own force of testers working under immediate jurisdiction of the service department. When a machine is shipped to Milwaukee it will be received at the service building, all the work on it will be done in that one building and when re-assembled it will be tested there, crated there and shipped from there, too.

The divorcing of the production and service departments is one of the biggest things accomplished by the Harley-Davidson Motor Co. This is the declaration of President Walter Davidson, and a trip through the Milwaukee factory at this time quickly shows that he is right.

WEED PREPARING FOR TRIP THROUGH KANSAS

KANSAS CITY, Mo., Oct. 2.—R. A. Weed, salesman for the Saufley Supply Company, who recently returned to the house after a two weeks' vacation, is now preparing for a 10 days' trip through Kansas. Weed is expecting to make from 10 to 15 towns on his trip and intends to boom the interest of the dealers as a preliminary to bringing the new model Excelsior machines on the local market. Weed, who is also a member of the Kansas City Bicycle Dealers' Association, will boost bicycles on his trip as well as motorcycles and predicts a big season in both pedal and power two-wheelers.

CONTEST GROWS HOTTER AS WEEKS ROLL BY

Sixth Picture, Which Was Taken From Miami Power Bicycle, Proved Difficult for Many—Schickel Picture Spelled Waterloo for All the Girl Contestants—New Picture Offers Hard Test

WELL, fellows, last week's picture seemed to stump a good many of the experts, judging by the number of returns. At that it was not a hard picture, for it was absolutely distinctive and individual and scarcely could be confounded with any other make of machine. Of course it was a little view of the cylinder of the Miami power bicycle, and to date there have been 31 correct answers and one bad one. The latter came from Newark, N. J., from Wm. Bouchelle, Jr., who thought he saw some Thor characteristics in the photo.

The Schickel picture, which was run the week before last, proved far and away the hardest of the half-dozen views that have been run to date. When such good contestants as L. H. Coddington, Peekamose, N. Y.; George Hill, of Long Branch, N. J., and A. Carlisle, of David City, Neb., come through with wrong answers it's a "cinch," so to speak, that the picture was a real "poser" and no mistake.

A Bas Go Female Hopes!

And what that picture did do to those suffragette motorcycle experts! Sister Jennie Forrie over here in Port Jervis, N. Y., who has been quite consistent to date, thought she recognized a bit of Emblem style in the cut of that Schickel seat post cluster. And Millie Mulliner, who, judging by her standing in the contest, knows more about motorcycles than any other Windy City girlie, also went bad when she labeled the part as a section of a Pope. Never mind, Jennie, it did look something like an Emblem at that; and, Millie, it certainly did have strong Pope characteristics, but it was a Schickel nevertheless.

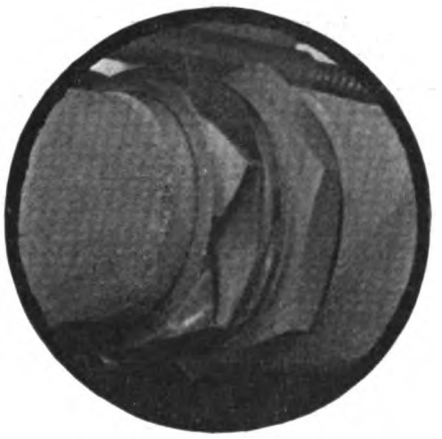
And just because the Contest Editor, having had a broad experience, knows how keenly the fair ladies feel a mistake of this sort, and by way of stimulating them to further efforts—well, Jennie and Millie, there's a box of Huyler's coming to either one of you, or both, if you send in the right "dope" on the picture published in the little circle this week

Did the Schickel Picture Do It?

The Contest Editor does not know whether worry over that Schickel picture did it or not, but at any rate Frank S. Archer writes that he is in the hospital at Fort Scott, Kan., trying to figure out the contest pictures. Frank also thought that the Schickel picture bore a resemblance to the Emblem. Well, Frank, here's hoping that you will be out of the hospital when this copy reaches you, for if we are any kind of "predictor" you will need to be up and around and very much alive to get the right answer.

Just give that little "wart" of a picture a careful "once over," fellows! It certainly does look like a piece of a ———, does it not? Nix! It must be an ———; don't you see how the bamboozler is arranged? That's the stuff, boys. Go to it. We are hoping that this picture will do to that Newark bunch just what the German U-boats are doing to the British merchantmen off Nantucket lightship.

WHAT DO YOU KNOW ABOUT MOTORCYCLES ?



WHAT MAKE OF MOTORCYCLE IS THIS TAKEN FROM?

Just one little word more. All the pictures that have appeared in this contest so far have been taken from 1916 American motorcycles; and all the pictures to come until further notice will be from 1916 models. No machines not now on the market, nor machines of foreign make will be used.

By the way, correct Schickel answers came in from Glen E. Carlson, Elwin Safford, T. O. Wansleben and Laurie Yonge, all of whom were listed as 800 per cent. men last week. This makes them perfect score men on the first five pictures. By the same token, Donald Ball and August Yakie moved up from the 600 per cent. column to the 800 per cent. column.

As for perfect scores, including last week's picture, they are confined to Glen E. Carlson, Grant R. Moore and Charles B. Williams. T. E. Campbell, who was in the perfect score class last week, has not yet come through with his Miami answer. Did that puzzle you, Charlie?

SOLD 7 BEFORE MODELS WERE ANNOUNCED

DAYTON, O.—That W. J. Teubner is out after the prospect hot-foot is proved by his record up to September 25. "Billy" sold seven of the 1917 Powerplus models, all electrically-equipped and with sidecars. The announcement had not even appeared in the trade papers when Teubner closed his sixth sale.

Two of the purchasers of the seven machines were motorcyclists who got the automobile bug, then repented and became motorcyclists once more. "They get the craze every now and then—some of them—" said one of the Teubner firm, "and buy a car at about the same price as they do a side-car outfit. It doesn't take them long to find out the difference to their pocketbooks, and they come in for an Indian combination once more."

Teubner also sold two of the Indian Light-twins through the announcement which appeared in **Motor Cycle Illustrated** on September 21.

SHORT NOTES FROM THE HAWAIIAN ISLANDS

HONOLULU, H. I.—During the month since securing the Thor agency, the Okahiro Bicycle Shop, of this city, has sent in seven new orders both by cable and mail.

P. C. Beamer, of Hilo, has taken the agency for Indian motorcycles and bicycles. He recently placed orders for a carload shipment of bicycles.

NEW MOTOR WHEEL AGENTS

MILWAUKEE, Wis., Oct. 16.—The latest additions to the large list of dealers who handle the Smith Motor Wheel are: Lawrence Tessier, Clifton, Arizona; W. G. Barkell, Scottsdale, Pa.; Ross, Cowgill & Hart, Central City, Neb.; Theron Bauman, Mendon, Mo.; A. G. Lunsford, Quincy, Fla.

Sounding the Trade Trends in California

MORE SPACE TAKEN BY APPEAL IN FRISCO

Harley - Davidson Distributors Add 1,250 Square Feet to Care for Expanding Business

SAN FRANCISCO, Cal.—The local branch of the Appeal Manufacturing & Jobbing Company, distributing the Harley-Davidson, finds business growing to such proportions as to make it necessary to lease the store adjoining, thus adding 1,250 square feet to its establishment. The basement of that store had already been pressed into service for the storage of stock, and the new store will make it possible to further increase the stock, besides making a more attractive display and more convenience in the premises.

An arch will be cut through from the present salesroom to the new one. The offices will be moved from the front balcony to the central part of the ground floor, leaving the balcony for a bicycle show room. The side counters will be removed, and one will be placed across the front, where someone will be always on hand to look after customers. This company will have the Miami bicycle line for the next year, and has arranged for some very attractive styles and finishes in its jobbing lines.

Jack Fraser, San Francisco manager for the Appeal company, says the H-D dealers all over the country show the greatest enthusiasm, and there is an unusual demand for demonstrators of the '17 model. A few months ago dealers felt some apprehension over the latest cut in the price of cheap automobiles; but Fraser says the majority of the dealers with whom he has talked lately believe, after studying the situation carefully, that they have nothing to fear.

MORE TERRITORY TAKEN BY FREED FOR INDIAN

SAN FRANCISCO, Cal.—Following the announcement first made by A. Freed, of the Pacific Motorcycle Supply Compony, to **Motor Cycle Illustrated** of his taking the Indian representation for California, Freed states that he has arrangements to cover not only California, but Arizona and Nevada and the Hawaiian Islands.

Freed is now in Los Angeles looking after the changes in his Southern branch, made necessary by the increased requirements. The company expects its first carload of new Indians in a few weeks.

HOW CALIFORNIA SPENT $18,000,000 ON ROADS

SAN FRANCISCO, Cal.—Some 1.490 miles of new highway have been constructed, 13,327 acres of right of way secured for 1,705 miles of new road, and 2,280 miles surveyed by the State Highway Commission by the expenditure of the $18,000.000 fund which was appropriated for that purpose at the last meeting of the legislature; the figures have just been issued by the California State Automobile Association which has been investigating the matter.

Of the 1,490 miles of new highway, 129 miles is oiled macadam, 933 is concrete pavement, 33 miles is asphalt, and the remaining 395 miles are graded dirt road that can be paved when more funds are available.

MANY RUNS ON FRISCO CLUB'S OCTOBER LIST

SAN FRANCISCO, Cal.—With the rainy season beginning, club schedules for outside runs may be expected to suffer some interference from the weather hereafter. A run to Pescadero, on the ocean shore in San Mateo county, had been planned for Oct. 1, but was called off owing to heavy rain the night before and continued threatening weather. On Oct. 5 the club will have a social night, and on the 8th a special social run to Alum Rock. On the 15th, there will be a run to Calistoga, taking the boat for Vallejo. This should be a very pleasant run, as the ride is not long, roads are good, and the country, in the midst of the vintage season, will be especially pretty. On the 29th is planned another run to Alum Rock, with a free club feed.

A social run was held Sept. 24 up Niles Canyon to Sunol, where the San Francisco members were the guests of the Oakland crowd at a basket lunch. About 25 were present, including four side-car outfits, and the outing was greatly enjoyed.

DEALERS VISIT APPEAL CO. HEADQUARTERS

AMONG the visitors last week at the San Francisco office of the Appeal Manufacturing & Jobbing Company were: R. W. Sayre, general manager of the company, from Los Angeles; Mr. Meginness, of Griffin & Meginness, of Hollister, with his bride on a wedding trip; Art Swanson, of Swanson Bros., of Turlock; A. H. Roos, of Chico, and Bill Harrison, of Sacramento.

The Pacific Motorcycle Supply Company, distributors; House & Showalter, of San Jose, and I. H. Weilheimer, of Fresno, all expect to get their '17 Indian demonstrators this week, and will immediately start an active selling campaign.

CHELINI MOVES INTO BIGGER QUARTERS

SAN FRANCISCO, Cal.—A. Chelini, of 1010 Golden Gate avenue, who is regarded as the most expert motorcycle repairman in this city, has leased two stores at 1022 and 1024 and is now moving into them. The new place gives Chelini three times his floor space at 1010 and nearly three times the frontage.

MERRY RETURNS FROM MOUNT LASSEN TRIP

Excelsior Distributor Is Back From Journey With Jess Brown to Active Volcano

LOS ANGELES, Cal.—Edwin F. Merry, the California bicycle jobber and Excelsior distributor for the northern half of the state, has just returned from a trip to Mt. Lassen, California's and the country's one active volcano. Jess Brown, secretary of the Western Rubber Supply Co., went in with Merry. They had to pack in about 9 miles from the end of the trail, where they left their motors, and found very hard traveling over the lava rock.

Merry and Brown went down into the crater of an extinct volcano near Lassen which was the last one in California to throw out melted lava.. Lassen contented itself with emitting smoke and steam, although there were plenty of evidences of its activity in the shape of rock and ashes thrown out in earlier eruptions. Merry says the country is so rough that probably not a thousand people in the state have been in there, but it is a marvelous sight, and hunting and fishing help to make the trip a winner for men who can stand rough traveling.

SIGNS UP BERRY FOR THOR IN LOS ANGELES

SAN FRANCISCO, Cal.—Manager Z. Barton, of the Thor branch has just returned from Los Angeles after signing up T. E. Berry to represent the Thor in that city. The deal between Berry and Barton is the culmination of much negotiation and is highly satisfactory to both parties. A 1917 demonstrator has been sent to Berry at his place on 918 South Main street.

Trade Doings in Los Angeles

LILLIE DISPLAYS MILITARY OUTFIT

H. A. Lillie rode to San Diego a few days ago on a 1917 Harley-Davidson. hooked to a machine gun oufit. As San Diego is on the border, and is an army and navy headquarters, there was much interest in Lillie's combination.

1917 INDIANS IN LOS ANGELES

The Pacific Motor Supply Company featured the first 1917 Indians in Southern California at their headquarters on Oct. 4. George Rubsch put in a special

Digitized by Google

window display which scored a hit, and sign painters fixed up a striking announcement outside. Reports from the company state that the season's campaign opened with a rush.

GOUDY ON THE JOB

Carl Goudy has moved up from San Diego. He dropped into the office of Goudy-Hoffer Co., hung up his hat and told the boys he was there to get into harness and sell motorcycles. With Carl and Fred Hoffer running the place and a bunch of hostlers like Bennett, Reed and Otto Kupfer and Harold Frank boosting for the Excelsior, there are liable to be things doing about all the time.

GLOYSTEIN TO RETURN

O. F. Gloystein is reported to be back in Twin Falls, Idaho, fully recovered from his spill while doing some speed stuff up in Oregon. The rumor is in circulation, which apparently has a pretty good foundation, that Gloystein will soon be in Los Angeles again. What his next stunt will be, however, is not known.

BACK FROM VACATION

C. Will Risden and Tommy Girton have just returned from a vacation in Big Bear Valley. Since their return rumors have been circulated that Girton was to become associated with Risden in the Cleveland agency, but Girton denies that there is any foundation for the report.

FIRST 1917 HENDERSON APPEARS

The first 1917 Henderson to be shown in Los Angeles appeared Oct. 2. It was a center of interest while in the city, but was shipped back to San Francisco the same day. Later in the week another of the new Henderson models arrived in Los Angeles for demonstration purposes.

NEW ONE FOR GAS COMPANY

Passmore & Sayre delivered the first 1917 Harley-Davidson on Oct. 4, to the Southern Counties Gas Company. This company has ordered another machine of the same make for their Long Beach Branch.

KUHN BECOMES CLUB DIRECTOR

Bill Kuhn was elected a director of the Los Angeles Motorcycle Club a few days ago to fill the vacancy left by the resignation of Ray Menegay. A. F. Van Order was one of the nominees, but withdrew when a large number of the members called attention to the fact that the club had an unwritten law prohibiting any men in the trade from holding office. The next outing of the club will be held at Seal Beach.

TWO CAR LOADS COMING

A carload of Harley-Davidson 1917 models is due at the headquarters of the Appeal Manufacturing & Jobbing Company, Los Angeles, Oct. 14. There will be enough machines in the first carload to provide most of the Southern dealers with a demonstrator, but none for delivery. The first carload for the Northern district is due in San Francisco, Oct. 23.

WESCHLER REVIEWS SHOW POSSIBILITIES

Indian General Manager and Show Committee Member Sees Coming Exhibits in Favorable Light

"IN my opinion," says F. J. Weschler, general manager of the Hendee Mfg. Co., "the two shows this fall will be the best business producers ever staged.

"In the first place, general business is good and has been all year. The motorcycle and bicycle jobber and dealer have had their share of this prosperity and with the scarcity of goods, have cleaned up nicely, and are ready for new goods and lots of them.

"The shows are held this year at a time when the business season is practically over and you will see the progressive jobber and dealer at the shows getting lined up and placing orders for next year.

"Then too, the shows come at a time when the dealer can pick up quick orders for his holiday trade and select from the entire offerings of the industry.

"With these late dates, many dealers will place their spring orders during the show, for there they can see a full line of everything they need.

"For this reason, I believe the jobber who makes a nice display and is on the job will land a nice collection of orders. We expect to do a large business at both shows on our full line of motorcycles and bicycles.

"By the way, we think the bicycle business is a big proposition and in 1917 expect a very heavy increase over the past year, which I can tell you was no slouch.

"Aside from this, the shows afford a fine opportunity to meet all your customers face to face and have an exchange of ideas. Under no other conditions could this occur for they are widely scattered and the factory heads cannot be spared from their duties to make the various trips necessary to accomplish this, but at the shows, there is what you might term a reunion.

"You see them all, get their ideas and learn conditions existing in their various localities. All in the one week at each show."

DANISH DEALER DELIGHTED WITH LIGHTWIN

SPRINGFIELD, Mass.—Ove Bendixen, of the firm of L. Bendixen A/S, in Copenhagen, Denmark, visited the Indian factory last week, to inspect the 1917 models and discuss sales plans for the new season. Mr. Bendixen took his first ride on the new Lightwin while at the factory and found it entirely to his liking, especially as regards its flexibility and smoothness of operation.

Being familiar with the opposed type of motor, which is very popular in Europe,

Mr. Bendixen on Indian Lightwin

Mr. Bendixen predicted a great popularity for the new model. His present trip is one which combined pleasure with business.

BROOKLYN FLXIBLE AGENT STARTS SEASON WELL

BROOKLYN, N. Y.—Edward J. Brennan, New York State representative for the Flxible sidecar, has just disposed of 26 of the 1917 models. Brennan has appointed the following agents in New York: F. A. Tears, Middletown; Sorenson Company, Beacon; G. Hanna, Fordham; M Ryan, Poughkeepsie. Sidecars were also sold to the Carl Bush Company, of Newark, N. J., and the estate of F. C. Cornish of the same city.

Walter M. Fay, a dealer from Chicopee Falls, Mass., recently rode in to Brennan's place to get his 1917 demonstrator, not wanting to wait for its delivery at his store. He left an order for another before starting homeward.

KUNCE WINS AT DENVER

DENVER, COLO., Oct. 9.—Frank Kunce, well-known rider from Loveland, Colo., won the 25-mile race, which was one of the chief events as well as the closing one of the state fair at Helena, Mont., last week. Kunce rode his Harley-Davidson and covered the distance in 28:52½. Curtis, also riding a Harley-Davidson, took second place.

MAIN BUYS OUT NICKUM

WAUKEGAN, Ill.—M. T. Main has purchased the business of Carl Nickum at 131 South Genesee street and will continue to handle the Harley-Davidson for 1917. He will also sell bicycles, and accordingly has closed with the Excelsior folks to handle their wheels. Main sells on time, asking one-half down and the balance at the rate of $1 per week.

BAD LUCK FOR ALL THREE

CHATHAM, Ont.—Three motorcyclists with a yearning for speed decided to try their luck in a five-mile feature on the Chatham Fair track on the occasion of the recent fall fair here. Two came from afar to do so. They were Holden, of Detroit, and S. Ball from London, Ontario. Holden went through the fence and Ball skidded into oblivion. The third speedster, Murray of Chatham, managed to finish the race but was disqualified. Rotten luck.

Walter N. Koch

Trade Bits from Brooklyn

BROOKLYN, N. Y.—Bob Brazenor, the Harley-Davidson man in this city, has taken 28 orders for 1917 models of the Milwaukee-made twins. Among these are seven sidecar outfits. Brazenor is more than satisfied at these orders and states that his sales to date are 50 per cent. greater than the corresponding time last season.

A. H. PATTERSON, Excelsior and Cleveland representative in this city, has sold 30 of the Series 17 Big Ex machines to date. Manager Gormeley sold two machines during the past three days.

"From present indications," says Gormeley, "1917 will be a big season for us. Iver Johnson bicycles, which are our leaders, are going well."

FRANK BAKER, Indian man in Brooklyn, has given orders for five new models already. Needless to say they are all Powerplus, but he expects a number of orders for the Lightwin as soon as his demonstrator arrives. Indian bicycle sales were first class during 1916, and there is every indication that there will be an increase of 50 per cent. for 1917, according to Baker.

GEORGE A. ASHLEY, the veteran bicycle and motorcycle man, is now selling Pierce and Miami wheels at his store at 1213 Bedford avenue. "Bicycles seem to be hitting it up this year," says George, "even more so than in 1916. I am putting in the Great Western line of bikes in addition to my present representation." Ashley has also been appointed agent for Kokomo tires.

BEN RUDERMAN, who takes care of Thor interests here, has got rid of his 1916 allotment and has orders for 12 of the 1917 Thors to date. The orders are all for twin models.

CONFIDENCE FORMED THE KOCH-RUHLE CO.

Experience Gathered by Pair of Harley-Davidson Travelers on Routes Led Them to Enter the Retail Field

MILWAUKEE, Wis., Oct. 9.—Indicative of the sort of confidence that folks in a position to be "well in the know" place in the future of the motorcycle business is the action taken by Willard J. Ruhle and Walter N. Koch, who have left the Harley-Davidson sales staff to enter the retail motorcycle sales field.

Under the style Koch-Ruhle Co. they have opened at 18 N. Washington street, Jamaica, L. I., from which headquarters they will distribute the Harley-Davidson machine throughout the Long Island territory, exclusive of Brooklyn.

With "Bob" Brazenor handling Brooklyn and G. F. Wood of the Harley-Davidson Sales Co. handling New York City, the Milwaukee-made motorcycle assuredly is well represented in Greater New York.

Both Koch and Ruhle are veteran motorcyclists, Koch having the longer experience as a rider and Ruhle the greater experience as a salesman. It was in 1906 that Walter Koch bought his first Harley-Davidson. He was employed in a Milwaukee bank at that time and after nine years as a bank clerk awoke to the future of the motorcycle and entered the employ of the Harley-Davidson Motor Co., where he became acquainted with "Bill" Ruhle.

Covered Much Territory

Between the two of them they have covered practically half of the states in the union. During the five years that Ruhle has been connected with the Harley-Davidson company and the three years that Koch has been on the road as a Harley-Davidson salesman, these two have visited every place of importance in New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Tennessee, Kentucky, Illinois, Indiana, Oklahoma, Arkansas, Iowa, Kansas and Missouri. It was merely chance that Missouri was mentioned last but the opportunity cannot be overlooked for saying that the "show me" state has nothing on the Koch-Ruhle combination. They have had the opportunity to see first hand the successes attained by motorcycle dealers in all of the states mentioned and thoroughly appreciate the big future of the motorcycle.

BOLLER BROS. ARE ACTIVE IN UNION HILL

UNION HILL, N. J.—Boller Bros., who handle the Indian motorcycle, together with Indian and Pierce bicycles here, are busy booking orders for the 1917 motorcycle models, although they are not yet in position to promise definite delivery dates. The concern has taken deposits on six of the new Powerplus models so far.

Taking their cue from the missionary work being done by the Cycle Trades Directorate, Boller Bros. are preparing to push strong for a big Christmas trade.

Willard J. Ruhle

Items from the Northwest

SPOKANE, Wash.—"We are looking forward to a season of greater activity in the motorcycle and bicycle business than we have enjoyed since 1913," said C. W. Miller, of the Falls City Cycle Company of Spokane, distributors of Harley-Davidson motorcycles and Flying Merkel bicycles.

"We have made delivery on seven new machines to date, three of which went to the Spokane Gas Company, despite the fact that the regular selling season is yet two months off.

"People are beginning to appreciate the possibilities of the motorcycle as a means of rapid and economical transportation."

W. S. PINE, a prominent contractor of Tacoma, has used an Indian for the past three years in connection with his business and considers it of the greatest importance in connection with his various jobs in different parts of the city.

MISS FLORENCE HAGEDORN, attending Lincoln High School in Tacoma, uses a Miami Power Bicycle in riding back and forth to school. Not only is she an adept rider, but is equally at home when it comes to making repairs on the machine.

ELMER J. BERGSTROM, the popular Merkel dealer in Tacoma, is building up a nice business in the south end of the city, opposite the Lincoln High School, on both the Flying Merkel and the Miami Power Bicycle. His business has grown steadily during the past year, and his place is now headquarters for hundreds of the students who have purchased bicycles and motorcycles from him which are used in carrying the students from their homes to school and back.

Tabs on Motorcycle's Saving

What One Rider Who Held a Pad and Pencil on His Mounts Has Adduced in the Way of Running Costs

By MURRAY FAHNESTOCK

WHILE motorcycle riding is undoubtedly one of the finest sports in the world, perhaps even more important is its practical utility. If the motorcycle saves the time and money of its owner, it has earned its right to be called a real utility. When the motorcycle is used to save time and car fare, it is just as truly an economic necessity as when it is used for making light deliveries.

Most Useful Service

In the quick and economical transportation of passengers, the motorcycle has its greatest utility, and the dealer who can prove that the motorcycle is cheaper than car fare, with the time saved as clear gain, should make many sales. In this respect, a little practical experience may prove of value. The figures are taken from a little notebook in which I kept record of my first three motorcycles. My first motorcycle was of the vintage of 1908 and I would advise intending purchasers to buy a later model. As there was considerable experience included with my 1908 motorcycle, the cost per mile was rather high, but the big single and the twin that I purchased later were remarkably low in running costs. So low were these running costs, that it was never necessary to consider the cost when considering a ride of any reasonable distance.

From my home, to the steel mill where I worked, is 6 miles by trolley and requires about 75 minutes for the trip. As it is necessary to take two street cars, the cost is 20 cents a day. The motorcycle can travel on any streets and pick the shortest and most direct way, so that distance via motorcycle to the mill is less than 3 miles and I generally made the trip in less than 15 minutes, which is at the rate of 12 miles per hour.

Saves Two Hours

Thus the motorcycle saves two hours a day, and riding a motorcycle takes one to work refreshed, rather than tired out from the deadly monotony of strap hanging and the breathing of germ laden air and dust.

My twin cylinder machine was bought for $275 and sold three years later for $125, so that the depreciation was $50 a year. As I rode over 10,000 miles each year, the depreciation amounted to less than one-half cent per mile. As good twins can now be purchased for about $225 and sold for at least a $100 at the end of three years, the depreciation on a big twin is only about $40 a year, and on a single cylinder or light weight motorcycle, the depreciation would be far less.

Three Cents the Cost

As the motorcycle averaged 50 miles per gallon of 15 cent gasoline, the cost of fuel and oil for the round trip was about three cents. Tires averaged about 5,000 miles, counting both front and rear, so the tires cost say two-fifths of a cent per mile, or three cents for the six mile round trip.

Counting repairs, the total cost of the six-mile round trip was less than 10 cents as compared with 20 cents carfare. This includes paying for the ownership of the motorcycle, while one cannot buy a street car by paying carfare.

A low valuation of a man's time is half a cent per minute, so that the two hours saved per day are worth 60 cents. Including the 10 cents saved from carfare, the motorcycle saves 70 cents a day, and in a year of 300 working days amounts to $210, to say nothing of the health and happiness gained from the regular riding of a motorcycle in the great outdoors. That is why I am a motorcycle enthusiast.

A LIVE JERSEY CLUB AND THREE MILITARY RIDERS

Top, the Washington M. C. at Their Headquarters; Below, E. Johns, Sergeant-Instructor National Guard; Chas. H. Pierce and Max F. Moritz, U. S. A., at Trenton, N. J.

STANDARD WELDING AND PERFECTION MERGED

CLEVELAND, O., Oct. 9.—The Standard Welding Company, maker of steel tubing and bent parts for motorcycles, and the Perfection Spring Company, maker of automobile springs, have been merged under the Standard name. The merger consolidates two of the largest producers of motor vehicle parts in the United States. Only a small portion of the stock of the merged companies will be offered to the public.

BENSON DUE BACK AFTER EXTENSIVE EASTERN TRIP

MILWAUKEE, Wis., Oct. 10.—J. A. Benson, Smith Motor Wheel representative, has completed his New England trip, having visited some 50 dealers and is expected back at the factory by the end of this week.

He will drop down to Baltimore and Washington and make but one or two other stops on the return trip. New England dealers, says Mr. Benson, had a splendid season and all are looking forward to even better bicycle and Smith Motor Wheel business for next year.

HUDSON COUNTY CLUB RUN

UNION HILL, N. J.—The Hudson County M. C., which makes its headquarters in Boller Bros.' Indian Wigwam, will hold its regular Sunday run on Oct. 15th to Lake Hopatcong. The start will be made at 7 A. M., and it is expected that some 50 riders will participate. Luncheon will be taken at the lake, after which the return journey will start.

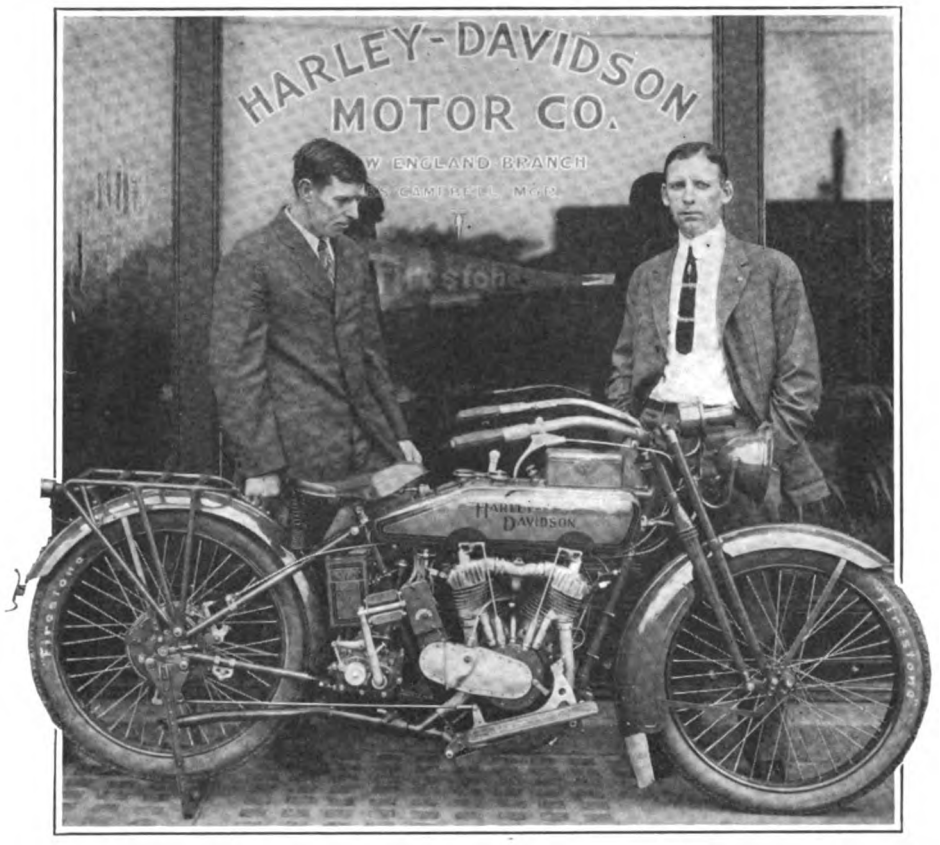
TWO POPULAR NEW ENGLAND RESULT-GETTERS



W. J. Walker (at Left), Boston Dealer, and Jos. Campbell, Harley-Davidson District Manager, with First of 1917 Output in Massachusetts Capital

THE FIRESTONE PUTS ACROSS A PUNCH AS USUAL

THE FIRESTONE for October is well up with that snappy house organ's past performances. Several pages are devoted to text and photos concerning the annual outing of the Firestone Tire & Rubber Company's forces; a quartet of unusually interesting photos of scenes in the accessories department is another feature; considerable space is given up to pictures and text relative to the opening of the company's big branch building in Kansas City, Mo.; a series of photos of prosperous Firestone agencies brightens another section of the book, while glimpses of factory scenes and operations throughout the country by the company's extensive sales organization add to the general newsiness and artistic effect of the publication.

PATERSON SMOKER PROVES ALL-AROUND SUCCESS

PATERSON, N. J.—The smoker given by the Paterson M. C., at Ortie Manson's Hall recently, proved to be a financial success as well as a most enjoyable affair. The committee in charge procured the best boxing and wrestling talent to be obtained locally, and the members were delighted with two 20-minute rounds of wrestling and three 5-pound boxing matches. The refreshments were by no means the least attractive events of the evening.

CHELSEA FIRM ADDS TO LINE

CHELSEA, Mass., Sept. 18.—Mudguards and braces for bicycles have been added to the line manufactured by the Market Forge Co., makers of cycle carriers, baskets and stands.

VARIETY IN THESE OUTFITS

QUINCY, Ill.—Mr. and Mrs. Carl Childers, Edgar Hartzell, Roy Delabar and Arthur Weisenburger recently rode to Montrose, Ia., and back on their motorcycles. Mr. and Mrs. Childers had a sidecar outfit, Hartzell and Delabar had a tandem machine and Weisenburger straddled a light-weight. The party passed through Ursa, Lima, Marcelline and Keokuk on the out trip and returned via Quincy, Tioga and Menden, covering about 175 miles.

A NEW ONE FOR CANTON

CANTON, O.—Safety Director Kunkel recently purchased a new motorcycle for the local police department. The machine is a 1917 Harley-Davidson.

EASTERN STATE CAMP MEET FOR BELMONT

PHILADELPHIA, Pa.—Saturday next, Oct. 14, is the date of the Eastern State Championship Motorcycle race meet, which is to be staged on the Belmont track here under the auspices of the Belmont M. C.

The program includes a 50-mile and a 10-mile professional championship, as well as a 10-mile and a 15-mile amateur event. Adding zest to the meet are two sidecar events at five and seven miles.

Entry blanks and full information concerning the meet can be had from John Empfield, 20 North 52d street, this city.

OUTING FOR PROVIDENCE RIDERS OCTOBER 15

PROVIDENCE, R. I., Oct. 9.—The first pleasure run conducted Oct. 1 by W. N. Burnett, the Harley-Davidson agent in this city, proved so popular that he is now arranging a series of Sunday runs. The next one will be held Oct. 15. The run will cover about 100 miles and the trip will probably be to Narragansett Pier.

To advertise the event, Mr. Burnett is sending out circulars to all his customers calling attention to the run and offering suggestions as to what to wear and what to carry in the outfit, with an admonition to wear warm clothing.

About 30 sidecar owners have already agreed to go on the trip, and a large number of solo owners also will enter.

MANY ENTHUSIASTS VISIT HARLEY-DAVIDSON

MILWAUKEE, Wis.—Among the many Harley-Davidson boosters who have paid visits to the factory on Chestnut street, this city, are Dan Leroy Dresser, of McAllen, Tex.; Charles E. Moulden and H. D. Glacken, of Pittsburgh, Pa.; J. E. and C. V. Codner, of Denver, Colo.; E. E. Holtman and H. A. Oakes, of Minneapolis, Minn., and G. E. Anderson, of Des Moines, Ia. Dresser is returning to New York on a 30-day furlough from the New York Divisional Headquarters in Texas.

The list includes in addition: Harold Greenlee and Ralph Herman, of Freemont and Nickerson, Neb.; Leo Chessel, Edwin Holmes, Edwin Molander and Harry Molander, all of Rockford; Alex McCullough and K. G. Sweger, of Davenport, Ia.; A. R. Crouch and wife, Harley-Davidson dealer at Bloomington, Ill.; Harry Wills, Phillipsburg, Mo.; C. J. Cooper and Fred W. Winter, motorcycle policeman of Winnetka, Ill.; Frank Curran, Harley-Davidson dealer, and Alfred Hild, of Sault Ste. Marie.

REMOVING TROUBLESOME VALVES

VALVES which have been in service for some time often stick in the guides and give a little trouble to the repairman when he desires to remove them. As a rule they can be pried up for a short distance, and if a loop of wire or strong twine is then put round the stem close to the head and pulled upward, the valve will generally come out nicely. This does away with any chance of injuring the stem or guide through forcing the valve up with a screwdriver or chisel.

PLANS PROGRESSING FOR DETROIT ENDURANCE

DETROIT, Mich.—The F. A. M. Club of Detroit stages its annual endurance, run on Sunday, Oct. 15. By the way entries are coming in to E. W. Herrmann, 289 Woodward avenue, who is handling the details of the run, the endurance bids fair to be a record breaker.

An impressive prize list has been hung up for the run, and the prizes are now on view at the Detroit branch of the Haverford Cycle Company. Motorcyclists of Detroit and nearby towns are invited to participate in the run; entry blanks and full details can be had at the Haverford branch.

TO HOLD ENDURANCE RUN FOR MEMBERS ONLY

PATERSON, N. J., Oct. 6.—A special endurance run, open to members only, will shortly be staged by the Paterson M. C. The course of the run will be from the clubhouse through Arcola, Ridgewood, Oakland, Suffern (check), Tuxedo, Greenwood Lake (check), Warwick, Vernon, Hamburg to Stockholm. At the latter place, one hour will be allowed for dinner.

The route in the afternoon will lead through Berkshire, Dover, Rockaway (check), Hibernia, Marcella, Newfoundland (check), Charlottesburg, Upper Macopin, Butler, Pompton Plains, Singac and Little Falls to Paterson. The total distance is 143 miles, of which 82 are ridden in the morning. Start will be made at 8:30 a. m. and the whole run must be finished in 7 hours, 39 minutes. Already 35 of the 80 members have paid entrance fees.

The object of the run is to obtain funds for the basket-ball team of the club and also to train the members in endurance run riding. The course takes in mostly poor roads, so that the training obtained from the run will stand the members in good stead in the major endurance runs which they may enter.

FLAXOAP FOR REMOVING ROAD TAR

ONE of the best road-tar removers, and the least harmful to the finish, is Flaxoap. It is one of the automobile soaps and if dissolved in water and applied liberally all tar spots come off readily with but little rubbing and the best part of it is, the varnish actually looks better when the enamel is dry again. A rub-off with one of the wax finishes on the market and the car or motor looks as though it just came from the factory.

HAS PROVEN INVALUABLE, SAYS Y. M. C. A. DIRECTOR

BROOKLYN, N. Y.—Louis J. T. Lahrs, the physical director of the Prospect Park branch of the Y. M. C. A., of Brooklyn, expresses himself as highly satisfied with the service rendered him by his Harley-Davidson in camp service. Mr. Lahrs was supervisor of Camp Weona, conducted for boys by the Buffalo Y. M. C. A. on Lake Ontario this summer.

"This is the second year I have had the Harley-Davidson at the camp," says Mr. Lahrs, "and it has proven invaluable. The roads are almost impassable at times, but the machine always gets through."

WORCESTER'S ONLY LADY RIDER

WORCESTER, Mass.—Mrs. E. W. Davis, of 34 Crystal street, is the only woman pilot of a motorcycle in this city, although approximately 650 machines, including sidecar combinations, are operated here. Mrs. Davis favors the sidecar outfit for the woman rider, but is not averse to making a trip solo now and then. She has made some long journeys without trouble, and is a believer in consistent roadwork rather than speed. Mrs. Davis became an enthusiast while riding tandem with her husband, who has been a motorcyclist for about eight years.

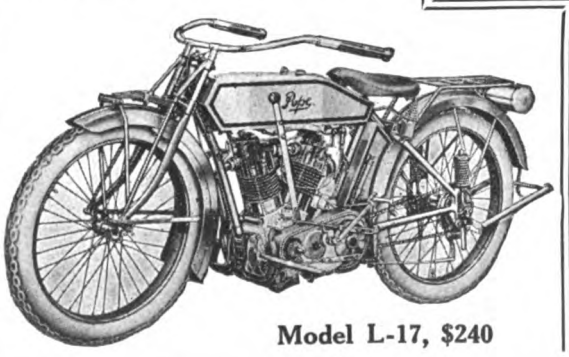
Model L-17

The big Pope features—overhead-valve quick-cooling motor, symmetrical cylinders, spring fork and spring suspension—that have made Pope reputation in the single speed class, have not been altered in producing Model L-17, the Big Twin.

But, the new model is equipped with a sector type direct starter—like that on the three speed model—which turns the motor over easily and quickly.

Its motor has been so refined and improved as to develop well over 15 H.P. at 2700 R.P.M.

It has vanadium steel reinforced forksides, front guard splashers, and the numerous other small improvements that make Model L-17 a de luxe edition of all the Big Twins that have gone before.



Model L-17, $240

1917

UPON a foundation of unequalled power and speed, the Pope motorcycle has, in less than six short years, been built up into a finished product that gives place to no motorcycle made. Each step in its development has been based on sound mechanical principles — principles that have made good under the severest test of road service.

So, for 1917 no radical changes were required —no necessity existed for experimenting upon the public with heretofore untried theories of construction.

5.

1917

ALL effort was concentrated upon those refinements and improvements of detail that resulted in increased power, economy and smoothness of operation—that still further added to the well-known Pope qualities of flexibility, silence, comfort and absolute dependability.

The 1917 Pope motorcycle is offered in models to suit every purse and purpose; from the electrically equipped Three-speed Twin that proudly maintains the title of "Champion of the Hills" to the unbeatable Lightweight.

Model H-17

First in the American field, the Pope Lightweight has made and maintained a reputation for sturdy dependability that is unmatched.

For 1917 it continues to incorporate the same high grade material, workmanship and equipment as before; while it benefits by the improved manufacturing methods and facilities.

It incorporates numerous minor refinements; a modified oil tank with detachable pump like on the higher priced models, aluminum foot rests, and the like.

And, despite the advance in the cost of materials and labor, its price is reduced ten dollars, bringing it within the means of more people than ever before.

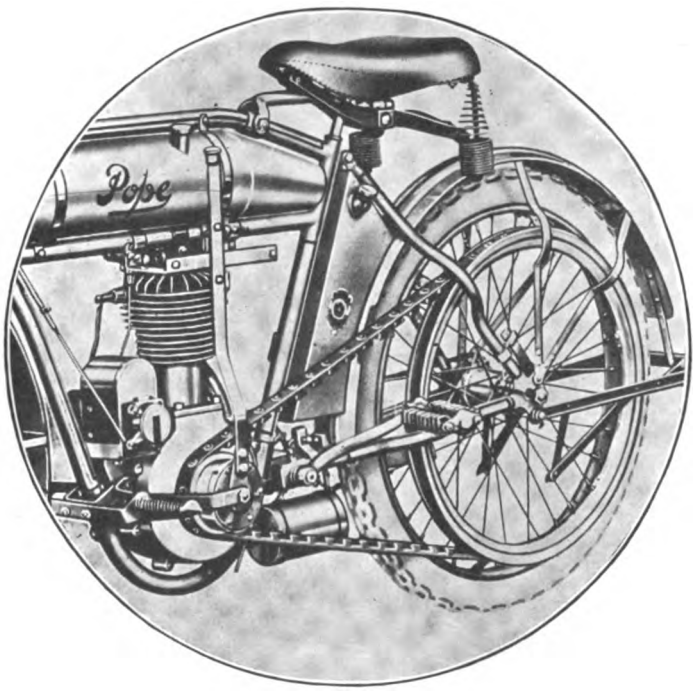
THE BEST DRIVE SPARTAN FOR LIGHTWEIGHTS



The Pope Lightweight Uses Spartan Belt

THE Pope Lightweight Model H has been blazing the way for more than six years. It is America's pioneer Lightweight.

's unusual for the pioneer of an industry to maintain the lead for years, but the Pope has accomplished the unusual—it has remained in front because it was designed correctly from the beginning.

From the start the makers of the Pope recognized one big requirement of a Lightweight—to be a success, it must be simple.

But to be a big seller, it must not only be simple and readily understandable, but it must APPEAR simple, because the novice must not question his ability to understand the vehicle—that's sound logic.

To get that necessary simplicity, it must be belt drive. For more than six years the Pope has used belt drive, and for 1917 it will again use belt drive.

Why? Because belt drive is just the drive for Lightweights. The Pope Lightweight has been a remarkable success because of its efficiency and its simplicity. The form of transmission has helped this success.

Belt drive is right, and because the belt used is the best belt to be had, the Pope Lightweight has been recognized as one of the best sellers a dealer could take on.

Naturally, the Pope Lightweight used the

Chatter, Chin, Comment

By E. F. HALLOCK

How Much Did We Contribute Toward That $32,000,000?

HOW many of us read the first-page stories in the dailies this week, telling of the phenomenal rise in Standard Oil stock which netted our mutual friend, John D., the tidy little sum of $8,000,000, or thereabouts, in a single day? I wonder how many of us connected the incident with the "Socony—26 Cents a Gallon" signs which have greeted us all this summer, whereas the 15 cents, 16 cents and 18 cents signs were in evidence the year before. I know that I, for one, feel by no means certain that I have not been contributing all summer to that $8,000,000 fund for the worthy John and $24,000,000 remainder which went to the other Standard Oil stockholders.

But the thing that gets me most with regard to the gasoline situation is the fact that we are paying on the average of 25 cents a gallon, in New York and other eastern points, for passably good gasoline, whereas in Milwaukee and Detroit the price has never once increased above 18 cents a gallon. I could account for a difference of a couple of cents a gallon on the score of differing transportation rates, but that transportation charges would make a difference of 7 or 8 cents a gallon is, to me, unbelievable. It strikes me that the S. O., like most folk, realize that Gothamites" have the money, and they believe in soaking it to them on general principles.

Have You Met Up With the "Codfish Aristocrat"?

DID you ever ask a fellow, some friend or acquaintance of yours, why he did not ride a motorcycle and have him sneer that he would not be seen on one? Further talk on the subject reveals the fact that he really has nothing against the machine; in fact down deep in his heart he would take the greatest pleasure in riding a machine but he is afraid of "losing caste"; he's afraid the fellows and girls of his "social set" may look down on him.

Fellows, that's the typical "codfish aristocrat." He's the fellow who is nothing, who has nothing. He imagines he is a social whirlwind, but as a matter of fact is nothing more than a feeble false alarm; his talk is society or near-society, morning, noon and night, and if he is not a full fledged bore, he is but one degree removed from that point. He takes his every cue from the wealthy set; he worships the very ground the wealthy society idol walks on, and spends every penny of his salary that he can spare in an endeavor to create a false impression.

Gosh, boys, but there are a great many good fellows doing that sort of thing and believing they are having a good time. But there is only one way of getting them into the ranks of the motorcyclists—you have to induce their rich prototypes to take to the motorcycle first; if motorcycling were to be taken up as a hobby by the 400, there is not a doubt in the world but what some 400,000 of those who ape them would fall immediately into line and become motorcycle prospects.

If I were a dealer, I would do my best to land a few sales among wealthy young men; the motorcycle can be made to appeal to them as a sporting proposition pure and simple and the very fact that they are riding will go a great way toward bringing the other fellows into line.

Is Motorcycle Dirt Different from That of Other Sports?

THERE are those who call motorcycling "dirty," fellows who will not ride because they cannot come back just as clean as when they started out.

Do they plan tennis? Did they ever come off the courts looking as clean and feeling as chipper as when they went on? You bet not.

Are they baseball enthusiasts? Can they go through nine innings and still feel clean? Not on your tintype. Nor can anyone else.

The same holds true of football, of fishing, hunting and motorboating. Every worth-while sport carries with it the necessity of getting the hands soiled and the clothes mussed.

But we dress properly for our other sports. We would not think, for instance, of playing tennis in our ordinary clothes; nor baseball nor football. So also with motorcycling. There is a certain amount of dirt attaching to the sport, even as there is to other sports, and we should dress so that the dirt will be no more noticeable than we can possibly help.

If motorcycling is a dirtier sport than some others, I here register my opinion that the sport is well worth the additional price in soiled hands and soiled clothes which its enjoyment entails.

On "Oil-in-the-Gas" Lubrication and Its Faults.

SPEAKING of lightweights, a word on the subject of two-stroke lubrication is in order. Every one of the two-cycle motorcycles which have been turnd out by American manufacturers has been lubricated by the "oil-in-the-gas" method.

By mixing the oil in proper proportions with the gasoline, all of the paraphernalia incidental to a separate lubricating system is done away with, and, save when filling his tanks, the rider never need worry about his lubrication. Obviously, that is a big advantage, especially from the manufacturing standpoint; but that there are certain drawbacks to lubrication of this sort cannot be gainsaid.

It is a fact, for instance, that oil mixed with gasoline has a tendency to "creep"; that is, to spread over the machine. The lighter gasoline, evaporating readily, leaves a most excellent dirt collector on the surfaces of the machine in the shape of a tacky film of oil. Thus, it is hard to keep that part of the tank around the filler opening clean, for if the tank is filled a trifle too full, some of the gas is sure to spatter out through the vent, despite the preventive baffle.

And again, every time the carbureter is flooded, the dripping gasoline leaves a dirt-collecting trail of oil which keeps the outside of the motor constantly dirty.

Aside, however, from the simple consideration of neatness, is it not a fact that the addition of the heavy lubricant makes starting somewhat difficult? We know that the addition of kerosene has this effect, and in these days of low-gravity "gas" it does not take a great deal of the heavier oil to do the trick. It would seem that the lubricating oil would have precisely the same effect.

There's just another point in connection with the "oil-in-the-gas" system which does not appeal to me. That is the fact that you cannot use the oil-treated gasoline for tube patching with the success attending the use of the pure fuel.

Playing Fair With the Lightweight Motorcycle

WE FELLOWS who have been riding heavyweight twins for years past, and who have become accustomed to feeling our mounts jump from under us with every slightest throttle urging, are apt to judge the lightweight machines by their performance in competition with the bigger mounts. To do so, obviously, is quite unfair to the lightweight.

This fact was brought home to me very forcibly this week by the salesmanager for a concern making a bicycle motor attachment which has proven itself the be "right there" when it comes to getting over the roads at a nominal pace.

In my enthusiasm over the little vehicle, I urged upon the factory man a plan to enter a couple of the little machines in the 200-mile jaunt of the New Jersey M. C. on Sunday, pointing out that if the little machine were to come through the run alongside the big fellows, the publicity accruing could not fail of benefiting the manufacturer in question.

To pull through that semi-endurance run at an average pace of 22 miles an hour, however, would necessitate holding the little fellow "all out" for the greater part of the distance, and while the salesmanager never doubted the vehicle's ability to stand the strain and come through the ordeal with flying colors, he feared that the publicity accruing would lead riders the country over to put their machines to the same sort of test.

Not only would this result in the machines being overtaxed and unfairly treated, since they are not designed for continuous "all out" work of this sort, but it would lead to disappointment on the part of some of the riders whose overtaxed machines might, perchance, fail to come through the test in perfect shape.

This business of expecting the lightweight to measure up to our standard of heavyweight performance is all wrong.

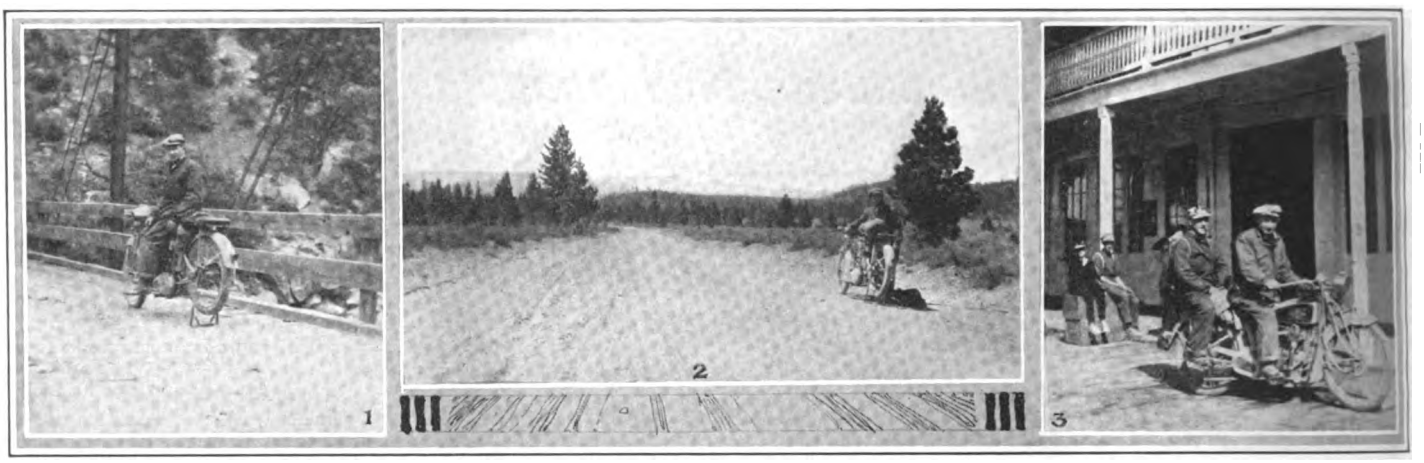
Deep Dust on Downieville Trip

San Mateo Tourists Explore Rugged Country Where Motorcycle Is Rara Avis, But Excelsior Three-Speed, Carrying Tandem, Never Balks; Mountain Climbing Alternates With Sand-Plugging



1, Sherman Resting on Bridge Between Nevada City and San Juan; 2, Sherman Snapped Between Hobart Mills and Truckee, Best Piece of Road Found Off the State Highway; 3, Sherman and Hinker Ready to Start for Their Trip to Downieville

SAN MATEO, Cal.—A. Sherman of San Mateo has just returned from a trip to Lake Tahoe via Downieville—a ride that has probably never before been made by motorcycle. According to old residents of Downieville, which is one of the pioneer mining camps in the heart of the Sierras, others have attempted the run, and have ridden into that town, but have invariably shipped out. Indeed, Sherman himself says he had very cold feet, but he gamely stuck to the run and came through in fine shape.

The mount was a 1917 three-speed Excelsior, with tandem attachment, the latter ridden by A. Hinker, both he and Sherman being operators for the Peninsula Rapid Transit Company, operating a bus line in San Mateo county. Hinker had never even ridden a bike before, which of course added to the joy of the trip. The only luggage was a little fishing tackle and spare clothing carried in knapsacks. The pair put up at hotels at night.

The first day's ride went through Sacramento and Auburn to Grass Valley, which is pretty well up in the foothills. As far as Auburn the road was in good shape, but there the State Highway was left behind, and the country roads Sherman believes are the worst in the state, full of sand and dust. The tourists spilled time after time, but were making so little headway that no damage was suffered. In places the dust was hub-deep.

Steep Grades and Bad Roads

The second day's ride was over tremendous grades, and roads almost as bad as those just described, with Downieville as the destination. Passing through Nevada City, the next settlement reached was San Juan, after a climb that made the famous grade at San Juan on the Coast road seem child's play. The photo shows Sherman on his mount on a bridge between two big grades on this part of the route. A heavy toll used to be charged for crossing this bridge, but the State recently took it over and abolished the toll.

A hard ride through very rough country brought the couple to Camptonville, and they kept on up the ridge to Mountain House, on the summit. On this part of the route they started on the wrong road, and were two miles off when their error was made known. They were shown a trail by which the road could be reached in a quarter-mile climb. The trail was an ordinary dirt path, not over wide, up a 37 per cent grade. They thought twice about tackling it, but decided to try. Hinker slid off halfway up, but Sherman didn't discover it until a minute later, when he reached the main road and found himself alone; Hinker arrived in good order a few minutes later.

Downgrade for Six Miles

From a point near Mountain House they looked straight down nearly one mile on the roofs of Downieville, which was to be reached by a six-mile road. Sherman says they started on the descent with some trepidation, and reached the bottom with their brake lining pretty well burnt up. However, they made it without mishap, reaching Downieville, 46 miles from a railroad, late in the afternoon and arousing great interest among the natives, many of whom had never seen a motorcycle.

Many pessimistic comments were made as to the continuance of the journey, but the machine was found to be in first-class shape, and they started out soon after breakfast. The start of this, the third day's ride, is shown in the photo. The first part of the day was easy going, compared with the previous day's ride; the road up the North Fork of the Yuba to Sierra City being an easy grade, and very good as roads go in that vicinity, with magnificent mountain scenery all the way. From Sierra City they went over another great ridge, with more deep dust, reaching Sierraville early in the evening.

An early start was made up another ridge, beyond which they struck Hobart Mills. For the eight-mile run from there to Truckee they spun along the best bit of road encountered since they left Sacramento, only oiled dust, but comfortable riding, and running through pretty rolling country of open woods and meadows, with snow-clad mountains in the distance. Between Truckee and Lake Tahoe they found very hard going; the road was well graded, but was covered with loose river gravel, having apparently no firm bottom, and it was very hard either to steer or to get traction. After reaching the lake, eight miles more of the same kind of road brought them to McKinney's. On the way there they ran out of gas, but were lucky enough to find an autoist encamped with a whole drum, from which they filled their tank.

At McKinney's they remained a day and a half. Leaving McKinney's at 9:15 a. m., they arrived at Sacramento at 6:45 p. m., a distance of 134 miles, following the Lincoln Highway to Placerville and the State Highway the rest of the way.

Out for Six Days

Sherman figures the total distance traveled in the tour as 560 miles. They were away six days, and the entire expense while on the trip was $6.60 each. As for tires, they had a pair of Firestones, which came through without a scratch, looking as good as new. Sherman forgot to take his pump, and didn't miss it until he reached McKinney's, after the worst of the trip was past. Notwithstanding the dust and bad roads, they hardly walked a hundred yards of the whole trip; and they did not meet a motorcycle from the time they left Auburn until well on the way home from the lake.

NEW EXCELSIOR AGENCY

PITTSBURGH, Pa.—The firm of Payne & Paulson, at 5712 Penn avenue, this city, has signed up to handle the Excelsior for 1917, and will hereafter be known as the Excelsior Motorcycle Agency. Its was previously known as the Pope Motorcycle Agency.

SPECTACULAR SPILL MARS NEWARK VELODROME RACE

Rough Race Marked by Terrific Spill—Six Riders Go Down in One Crash and Two Are Thrown Into Grand Stand—Goullet and Grenda Win From Big Field

NEWARK, N. J., Oct. 9.—Alfred Goullet and Alfred Grenda, the strong Australian pair, the former now an American citizen, accounted for the 25-mile team race at the Velodrome yesterday afternoon. Nineteen teams started, but the race had not gone far when two of the star pairs, Frank Kramer and Oscar Egg and Marcel Dupuy and Francesco Verri, were eliminated in what was one of the most spectacular spills seen at the local track in years.

Berlin Finish Employed

The conditions of the race called for the so-called Berlin finish, a sprint being staged at each two and a half-mile mark. The teams scored in the sprints as follows: Winners, 1 point; second, 5 points; third, 6 points; fourth, 7 points; fifth, 8 points; sixth, 9 points and seventh, 10 points. All other teams in the sprints finishing outside of seventh place were credited with 11 points each. In addition to the seven places for the victors lap money was also included and that kept the field active all the way.

Alfred Grenda, Who With Alfred Goullet, Won Newark Team Race

Grenda Wins First Dash

In the first sprint Grenda won over Tommy Smith, Jake Magin, Willie Hanley, Oscar Egg, Gordon Walker and Bob Spears. Menus Bedell fell at the tape. In the second, which was somewhat mixed up by the officials, the riders sprinted twice, and in the second time Goullet crossed the tape first, Madden finishing second, Thomas third, Ryan fourth and Kopsky fifth. John Bedell ran sixth, while Fred Hill landed in seventh place.

It was at the termination of the third sprint that the spectacular spill happened. Coming into the home stretch McNamara was leading with Magin, Thomas and Cameron in his wake with Grenda trying to get around on the outside. A switch by one of the riders brought Grenda, Magin, Thomas and John Bedell down in a heap on the flat of the track. Riding high and trying to avoid the fallen riders Verri and Egg, the Italian and Swiss riders were catapulated over the rail and into the grand stand.

Excitement Runs High

Excitement ran high and flying forms and bicycles filled the air, so to speak, the referee, who was sitting near the scene of the fall, having a bicycle hung over his neck. Egg and Verri, who many thought were seriously injured, were helped to the training quarters, where it was found that outside of a bad shaking up, which they will feel for some time, they escaped luckily with a few bruises. Grenda was cut about the arms and legs, as was Magin, Bedell and Thomas.

Race End in an Uproar

From the time of the big spill until the finish the people were keyed up to their utmost, and, what will go down as about the roughtest race run here, ended in almost an uproar. In the 10 sprints staged Grenda and Goullet, winners of four of the sprints, scored 45 points. McNamara and Spears, although the winners of five sprints, finished second with 49 points; Hanley and Madden finished third with 72 points; Magin and Corey ran fourth with 79 points; Hill and Cameron, with 85 points, scored fifth; Kopsky and Smith, 89 points, were placed sixth, and the Bedell brothers finished seventh with a total of 93 points. The time of the race was 52:45.

Spears Beats Kramer

Bob Spears had another match race with Frank Kramer and the long Australian defeated the American champion in the first and third heats. Australia again came to the front in the half-mile handicap for the professionals, which was won by Charles Piercey, who had 40 yards. Frank Corry, 40 yards; Jake Magin, 20 yards; Floyd Krebs, 60 yards, finished as named in 52 4-5.

Tom Bello, the Brooklyn Italian, accounted for the one-mile open for the amateurs, beating Harry Hoffman, Fred Taylor and Thomas Fitzsimmons in that order. A two-mile invitation, which was marked by rough riding and the disqualification of one of the contestants, was won by Anthony Attardi, the Brooklynite.

Alfred Goullet, Grenda's Partner in Strenuous Team Race

NEW MOTOR WHEEL CLUB

JAMESTOWN, N. Y., Oct. 16.—Smith Motor Wheel riders here met at the store of Louis W. Collins recently and formed a motor wheel club for the purpose of taking trips, conducting races and promoting social affairs among the members.

The new organization, which is to be called the Jamestown Motor Wheel Club, elected the following officers: President, Ivan Wright; vice-president, B. C. Kellogg; secretary-treasurer, Kenneth Brown.

HOLDS BICYCLE THIEF

EAST ORANGE, N. J., Nov. 10.—Efforts are being made by the local police to put an end to the thefts of bicycles in this city. On Monday last Recorder Nott held William Abrams for the Court of Special Sessions on the charge of stealing the bicycle of Francis Purcell of 154 Park Ave.

CHAMPION JOHN STAEHLE TAKES INTER-CLUB TITLE

Scores 18 Points in the Four Races Run—Team Honors Go to Century Road Club Association

NEW YORK, N. Y., Oct. 9.—John L. Staehle, American amateur champion cyclist and member of the Bay View Wheelman, Newark, added further honors to his collection yesterday morning on the Pelham Parkway. Staehle won the half-mile Inter-Club Amateur Cycle Road-Racing League championship, and by so doing made his total in the four races run, three of which were staged Sunday, Oct. 1, 18 points.

Staehle Beats Aickelin

Staehle defeated Eugene Aickelin, the New England Wheelmen's star; Fred Woisin, Acme Wheelmen and William Lock, of the New York Division, Century Road Club of America, in the final of the lone individual titular race. No time was taken. The final standing in the 1916 series is as follows: Staehle, 18 points; John J. Marquart, Century Road Club Association, 11 points; Eugene Aickelin, New England Wheelmen, 4 points; Fred Woisin, Acme Wheelmen, 2 points, and William J. Lock, New York Division, Century Road Club of America, 1 point.

C. R. C. A. in Team Honors

Seven teams of four men each started in the 10-mile team championship. The Century Road Club Association carried off first honors, their time being 25:53 4-5. The Bay View Wheelmen, of Newark, N. J., finished second in 25:54 3-5, while third honors were captured by the New England Wheelmen, who were timed in 26:38 1-5. The Acme Wheelmen finished in 27:12 3-5 and took fourth honors. The Hudson County Wheelmen, the Century Road Club of America, New York Division, and the New Jersey Division of the same organization finished sixth and seventh, respectively.

Two clubs that failed to have representation in the races were the Unione Sportiva Italiana, of New York City, and the Brooklyn Wheelmen. The former club lost the services of Nelson Johnson, their champion, through an accident, and Jerry Nunziate, through sickness, and with these two riders out they withdrew the team. Johnson, who lost his thumb when he got it caught in the chain and the gear sprocket while he was repairing his wheel, could not ride.

A BOON TO THE HIGHLAND CYCLIST

MILWAUKEE, Wis., Oct. 16.—That the Smith Motor Wheel is proving a real boon to cyclists in hilly sections of the country, where the tiresome pumping up hill doesn't nearly compensate for the fun of free wheeling down on the other side, is evidenced by the following letter from Carl Halbach, Paterson, N. J., who is a motor wheel enthusiast:

"Motor is running fine and made all the hills without any trouble. I took an 84 mile ride a week ago Sunday and the greater part of the ride was hills, one being steady climb for about seven miles. I guess if my motor can make that hill without any strain on it I will not have to be afraid to face any hills. When you get on top of that hill (it's not a hill, as I stated; it's really a big mountain) you can see for miles around.

"It is no place for a bicycle without a motor as it would be impossible to push up that mountain. I was well equipped with a Smith motor wheel, lunch and a pair of opera glasses. Have carbureter adjusted so I can run the motor as slow as the average person walks and also make over 30 miles per hour and get good mileage out of my gasoline. Have never tested the mileage on a gallon of gas, but I know it must be a high average, as I have quite some gas left after taking that eighty-four mile ride."

BICYCLE MARKET ACTIVE

DENVER, Colo., Oct. 7.—A circuit of the motorcycle and bicycle dealers in Denver, by the correspondent of **Motor Cycle Illustrated,** brought out the fact that business is very satisfactory. Special emphasis is placed upon the activity of the bicycle market, and it is also stated that there is an unusual demand for used motorcycles. All the agents look forward confidently to considerably increased business for 1917.

HARTFORD REUNION OF BICYCLE VETERANS

Many of the Old-Timers Gather for Sheep-Bake Staged by Hartford Wheel Club on October 7

HARTFORD, Conn., Oct. 10.—Over 75 veteran cycling folks and their friends attended the sheep-bake of the Hartford Wheel Club, which was held at Lake Compounce, Saturday, Oct. 7. Strange as it may seem, the party rode out to the rendezvous in automobiles, but that did not stop them from swapping yarns of the days gone by.

Among those present were: President C. F. Gorman, of the Hartford Wheel Club; George M. Hendee, former cycle racing champion of America, who recently retired from the Hendee Mfg. Co.; Joe Goodman, former owner of the *Bicycling World;* Col. George Pope, formerly of the company bearing his name; Louis Elmer, the old race promoter; Dave Post, of Veeder cyclometer fame; Congressman P. D. Oakey, who acted as toastmaster, and other well-known figures of the old industry days.

The tales told of the days of yore brought back fond memories of the racing game of a score of years ago. Jack Prince, Tom Eck, Eddie "Cannon" Bald Tom Cooper, Arthur Zimmerman, Billy Rowe, Earl Kaiser and other knights of the speed models were subjects that brought forth many a good story. A history of the Hartford Wheel Club was read by "Lou" Middlebrook.

ON LONG CYCLE TOUR

PHILADELPHIA, Oct. 8.—William Yorke, of the Century Road Club of America, made a three-day tour to Providence, R. I., the last three days of September. The Lincoln Highway was followed to New York and from that city the old Boston Post Road. The night stops were New Rochelle, N. Y.; Madison, Conn., and Providence. The mileage was 309 miles. At Providence F. I. Perreault of the C. R. C. A. and L. Winslow met Yorke and after a few hours' stop the return was made by train to this city.

JONES & NOYES TO MAKE BICYCLE FRAMES

CHICAGO, Ill., Oct. 9.—It was announced by Jones & Noyes, manufacturers of Commercial and Silver King bicycles, that they will manufacture frames and forks for bicycles. The new line, which will be sold to dealers and jobbers, will be complete with seat posts, head sets, hangers and chain adjusters, and will be finished in gray, black, blue and red, with fancy or plain heads and seat post masts. They will also be supplied with or without mud guards.

FOOTBALL TEAM FOR BUTLER COUNTY C. C.

HAMILTON, O.—Indications are that a first class football team will be turned out by the Butler County Cycle Club for the current season. At a meeting called by President William Glauch last week there was a large attendance and much enthusiasm, and it is hoped that an eleven may be formed which will be well up to the standards established by former teams of the club.

RIDDER TO HAVE OWN NAME PLATE MACHINE

QUINCY, Ill.—John C. Ridder, the Indian man in Quincy, has put out his own nameplate bicycle for the coming season, under the title of the "Standard." With the Indian line he figures that he will have a very complete stock for the 1917 season. A carload is now on its way to Quincy.

Ridder will shortly erect a building at Tenth street and Broadway, one block east of his present location.

WORDEN'S MOTOR WHEEL SHOWS PLENTY OF PEP

DALLAS, Tex., Oct. 10.—Joe Worden, of this city, wanted to demonstrate that his motor wheel, one of the first wheels turned out by the A. O. Smith Co., still had lots of "pep" in it.

Joe took a little trip last Sunday to White Wright, 63 miles away. The roads were heavy and 18 miles of the way was over fresh laid gravel. Joe started at 9:30 and arrived at 2:30 with time out for dinner. "Guess my wheel is still in the running," he writes.

SOLD 25 PIERCE MODELS

MILWAUKEE, Wis.—Simon Goerke, at 3217 North avenue, has sold 25 Pierce bicycles during the past season in addition to a number of used mounts. He has taken the Century and Great Western lines on for 1917.

EFFICIENT BIKE SIDEVAN

QUINCY, Ill.—Albert Disseler, a delivery boy for the O. H. Kathman Company, has ridden his bicycle sidevan over 2,000 miles without a cent of repairs. The machine is of Musselman make, with United States tires, New Departure brake and Stevens sidevan.

THREE BROTHERS—THREE STORES

NEWTON, Mass., Oct 12.—Three stores located in Newton Centre, Newtonville and in this city, run by the Skelton brothers, Bert, John and William, agents for the Pierce and Emblem bicycles and the Cyclemotor, report excellent business this season. Bert handles the local store, John the one at Newtonville, and William that at Newton Centre.

SALEM DEALER IS BUSY

SALEM, Mass., Oct. 12.—J. M. Wilson, a local bicycle dealer, who has been in the business since its infancy, is well pleased with the business prospects. Mr. Wilson carries a large stock of new and second hand bicycles, in addition to a large stock of tires and accessories.

PIONEER HANDLE PARTS

NEWBURYPORT, Mass., Oct. 12.—J. J. and H. J. Chase Co., one of the pioneer bicycle stores in the state and one of the most complete, report one of the best years in their history. They are well supplied with old bicycle parts and could satisfy almost any customer's demands.

TAKE ON EXCELSIOR

MILWAUKEE, Wis.—The Standard Cycle Company, of 513 East Water street, has taken the agency for the Excelsior line of bicycles.

BEDELL SIZZLES PHOENIX-FLAGSTAFF TRAIL

Veteran Motorcyclist Covers the 250-Mile Distance in Eight Hours and 54 Minutes—His Own Vivid Account of the Various Stages of His Wonderful Trip

FLAGSTAFF, Ariz.—A. T. Bedell, a veteran motorcyclist of Flagstaff, has just made one of the most remarkable trips ever recorded in this section of the country. In an effort to establish a new mark for the trip between Phoenix and Flagstaff, he covered the route of 250 miles in 8 hours, 54 minutes. The trip out from Flagstaff to Phoenix was a leisurely one, three days being devoted to it, but for the homeward run Bedell opened up and startled the natives. He tells his story as follows:

Three Days' Riding

"On the trip down we took our time, and spent three days on the road. I was to make the return run alone, and casually remarked to the boys at the agency that I expected to complete the journey in about 10 hours. They laughed at me, and a heated argument followed, with the result that I determined to cover the route from Phoenix to Flagstaff in the shortest time possible for a human being.

"At 7:15 a. m., on September 18, I crossed the Arizona Canal, at the city limits, and started out to whoop things up. The first 7.6 miles I reeled off in just eight minutes, 30 seconds. The old machine was running like a top. How good it sounded to hear the motor singing away beneath me just as though it enjoyed the game and was determined to push the miles behind it at top speed! The sensation is one I shall not forget.

"Then something happened. The road followed along an irrigation canal, and as there had been hard rains during the preceding week, the canal had cut through the road at one point and had left a drop of 10 feet to the bottom of the washout. I was riding directly against the sun, and was therefore hampered in keeping on the road. Suddenly there appeared to be a black shadow across the road. The next instant I was upon it—and it proved to be not a shadow but the washout referred to. With all my strength I jammed on the brake, locking the rear wheel. The machine executed a beautiful skid, turning completely around and landing on its side, with the rear wheel overhanging the washout. Two feet more!—well, let's not talk about that.

Unharmed by Spill

"It took me but a minute to pick up the machine and kick her over; she was none the worse for the spill, and with the motor humming again I took to the road on the other side of the washout. It was desert road, and offered fine opportunities for rough riding. You city fellows cannot know what it means to ride over such a route as this. I traversed long level plains where the road winds about, just out of sheer playfulness, dipping over a shallow wash, up the other side in a cloud of sand and dust, hanging to the curves till the tires crept and just kept to the road.

"And then came the mountains—up and up and up! The famous Antelope Hill was conquered, and a short time later I left Black Canyon behind. Rough? Oh, yes! Rocks and ruts—and then some more. The muffler was knocked in, the footboards were torn loose, the front exhaust pipe was nearly closed—but what did it matter? I was still on the move.

For Gas and Water

"I stopped two minutes for gas and a drink of water, the first stop in 90 miles, and then once more I hit the trail. The sun was red hot, about 110 in the shade—and no shade in sight. Well, never mind—wait till we get up in the mountains.

"Prescott was reached in just four hours, 35 minutes, and at this point the worst road was behind. There was practically clear sailing ahead. Then came that awful feeling of uncertainty that accompanies a rear wheel puncture. The machine was stripped for speed and I had no stand. I was therefore obliged to lean it against a stock fence while I took the old tube out and inserted a butt-end in its place. And then out with a dinky little handpump and pump, pump, pump!

Seventy-one Jaunters in New Jersey M. C. Run

(Continued from page 8)

Splitdorf Mag-Generator, United States tires and Mesinger saddle.

William Hatch, wife and three children, Reading-Standard with Rogers sidecar; Bosch magneto, United States tires and Persons saddle.

Frank Bagwell and Charles Busch, Harley-Davidson; Remy magneto, Firestone tires and Troxel saddle.

P. W. Stevens and Carl W. Bush, Harley-Davidson 1917; same equipment.

John Steele and Harvey Snyder, Indian; Splitdorf Mag-Generator, Goodyear tires and Mesinger saddle.

Joseph B. Werner and Fred Cuneo, Harley-Davidson; Bosch magneto, Empire tires and Troxel saddle.

Lawrence Cuneo and L. P. Cuneo, Harley-Davidson; same equipment.

Otto Weil and Amos Kaune, Harley-Davidson; Bosch magneto, Firestone tires and Troxel saddle.

Karl Segelbach and George Mack, Indian; Dixie magneto, Goodyear tires and Troxel saddle.

Frank Gross and H. Mergl, Harley-Davidson; Bosch magneto, Firestone tires and Troxel saddle.

Grover Parker and Richard Roberts, Harley-Davidson; same equipment.

Douglas Austin and L. W. Wintsch, Indian; Splitdorf Mag-Generator, Goodyear tires and Mesinger saddle.

Martin Netzler and George Peterson, Excelsior with Rogers sidecar; Midco ignition and lighting, Firestone tires and Mesinger saddle.

C. L. Eckhardt and M. T. Dove, Harley-Davidson; Bosch magneto, Firestone tires and Troxel saddle.

A. R. Mackey and Mrs. Mackey, Harley-Davidson with Rogers sidecar; Remy ignition, Firestone tires and Troxel saddle.

E. B. Holton and Mrs. Holton, Indian; Dixie magneto, Goodyear tires and Mesinger saddle.

Walter Goerke and Mrs. Goerke, Indian; Indian generator, United States tires and Mesinger saddle.

E. C. MacDonald and Miss Elsie Hudson, Indian; Dixie magneto, Goodyear tires and Troxel saddle.

Two Tandem Outfits

The two tandem crews were made up as follows: Jewett D. Bird and H. N. Pember, Harley-Davidson with F-N tandem; Remy magneto, Firestone tires and Troxel saddle.

Watson Kluczek and Harry Buchanan, Reading-Standard with F-N tandem; Bosch magneto, United States tires and Persons saddle.

The Solo Finishers

Following is the line-up of the solo riders who qualified for medals:

Frank R. Doyle, Harley-Davidson; Bosch magneto, Firestone tires and Troxel saddle.

Orrie Steele, Indian; Splitdorf Mag-Generator, Goodyear tires and Mesinger saddle.

John Walton, Indian; Dixie magneto, Goodyear tires and Mesigner saddle.

William Von Lehn, Indian; same equipment.

H. E. Hill, Indian; Dixie magneto, Michelin tires, Mesinger saddle.

L. B. Thebaud, Indian; Splitdorf Mag-Generator, Goodyear tires and Mesinger saddle.

E. P. Thebaud, Harley-Davidson; Bosch magneto, Firestone tires, Troxel saddle.

Wallace Stuart, Indian; Dixie magneto, Goodyear tires, Mesinger saddle.

E. Frank Grimm, Indian; Dixie magneto, Goodyear tires, Troxel saddle.

Chester A. Charles, 1917 Indian; same equipment.

The Jinx Captured These

Those who failed, for various good and sufficient reasons, to complete the course and qualify for medals were as follows:

Charles Versele and Paul Pester, Indian combination; out at Hightstown after losing route and sustaining punctures.

Fred S. Hoffman and Edward McGovern, Harley-Davidson combination; sustained punctures and were one hour late at Trenton.

C. W. Waughop, Cleveland lightweight; sustained several punctures and was 45 minutes late.

Arthur Wintsch, Indian solo; out at Matawan.

Charles G. Seaman and Raymond Case, Harley-Davidson combination; delayed by punctures near Flemington.

Joseph Applegate, solo Harley-Davidson; lost on way to Asbury Park.

Calvin R. Webber and Miss Elda Peterson, Indian combination; delayed by punctures and late at Trenton and Washington.

John F. Carroll, solo Indian; out at Trenton with dry gasoline tank.

NEW AKRON CYCLE CONCERN

AKRON, O., Oct. 9.—Under the style, Akron Cycle Supply Company, a new company has been incorporated to enter the retail motorcycle and bicycle business in this city. The authorized capitalization is $10,000, and the incorporators are: Robert Raymond, Alice Raymond, A. L. Bertelle, Guy McMillin and Joseph J. Bertelle.

SWISS-ELKHART MERGER IS CONSUMMATED

CHICAGO, Oct. 9.—The Swiss Magneto Co. of Chicago and the Elkhart Mfg. Co. of Monroe, Mich., the merger of which has been hanging fire for some time, formerly completed their consolidation last week.

The plans call for the removal of the Chicago offices of the Swiss Magneto Co. to Monroe where the entire production of the combined companies will be carried out. The service station at 3027 S. Wabash avenue will be continued.

THIRTY-TWO MACHINES IN ANNUAL TRIANGLE RUN

(Continued from page 7)

From Worcester to Woonsocket, R. I., there was more macadam, but Woonsocket back to Providence there were occasional stretches of cobblestone and sand, with some macadam.

Those who finished on time, and who are thus eligible for prizes, are as follows: Edwin A. Lutz, Caesar Litterio, D. W. and Mrs. Gravel, F. C. Wilbur, Jr.; J. G. Edwards, Axel Anderson, George M. Ellis, C. H. Andrews, S. P. Andrews and wife, E. LeBlanc, Leon Burlingame, Herbert Lillebridge and wife, Edward A. Swenson and Mrs. B. A. Swenson, B. A. Swenson, Mr. and Mrs. J. F. Wilke and daughter, Elmer Stone, C. W. Peterson, H. V. Berklander, F. McMaugh, Ronald Knox, E. Paquette, W. Duggan, William Swanland, Alfred Beauvais, Arthur Didsbury, C. B. Johnson, William H. Thompson, Benny Simone, Tony Cozzone, W. Pelliman, F. Home. All these entrants used Indian outfits. The only other make entered was a Harley-Davidson, ridden by Sidney Colburn, who also finished on time, and will receive a prize.

ACTIVE IN TWO LINES

CHICAGO, Ill.—Whipple, the Motorcycle Man, at 1227 West Jackson Boulevard, has just delivered three motorcycles to special delivery men at the Chicago postoffice. Whipple has been appointed campaign-manager for Judge Newcomber, who is running for re-election to the municipal bench and "Whip" is mighty busy between selling machines and boosting for the judge.

BURCHART TO REMODEL STORE

MADISON, Wis.—C. L. Burchart, of the Indian Motorcycle Agency in this city, is planning to remodel his salesroom this Fall. He closed his first season at 446 West Gillian street, with 16 sales in his motorcycle department. He has the agency for the Iver Johnson line of bicycles for the new season.

TAKES ON MOTOR WHEEL

DENVER, Colo., Oct. 9.—The Pansy Motor & Cycle Works, 1715 Lawrence street, this city, has just taken the agency for the Smith Motor Wheel, and the first demonstrations have lined up quite a few prospects. The company also handles the Racycle, Miami, and Indian bicycles, in addition to operating a repair shop.

A Tandem Vacation in Picturesque New England

Detailing the Experiences of Two New Jersey Enthusiasts During a Five-Days Summer Outing—They Covered 797 Miles With No Motor Trouble and Only One Puncture

By J. E. PUGSLEY

IT was about 5:30 on a fine July morning when my cousin Jack Lovatt and I woke, and prepared to start off on a five days' vacation trip on my Excelsior twin. We put in a good breakfast and then made the machine ready for the journey.

I wore an F. A. M. suit with leggings, while Jack utilized his Boy Scout trousers and a light hunting coat. Both of us carried knapsacks on our backs, but we strapped our extra trousers and shoes on the handlebars. I had a small pack of khaki cloth strapped on my seat for cushion. After seeing everything in order we started from Irving Centre, N. J., at 7 a. m., and passed through Newark on the way to New Haven, Conn., the dinner stop.

It was easy and picturesque going over the Boston Post Road from New York through the suburban cities and the Connecticut towns, but we had three detours—all mud—before reaching our dinner stop. We took in the Yale University buildings after eating, and also various historic spots in the city, and then started off for Boston, the night stop.

A Human Lamp Bracket

Our plans here received a jolt, for shortly before reaching Providence, R. I., the lamp bracket broke from the weight of the bundle on the handlebars. As it was getting dark, some way of carrying the light had to be improvised, so Jack became the "bracket." Jack had his hands full—carrying the lamp in one hand and the "Blue Book" under his arm, but we kept on going at a smart clip. Presently we hit a stretch of poor road, about nine miles long, but as it was pinewoods we did not care much, as the sunset and the pine breeze were very pleasing.

We neared the outskirts of Providence about 8:15 that evening and I then took my large flashlight and ran through the city with it. I was not interfered with, so it must have been all right. After putting the machine in a garage we went to the Y. M. C. A. and got rooms for the night.

Right here I might say that for any motorcyclist the Y. M. C. A. is the best place for a night stop-over. One has the free use of the shower baths and after a hard day's ride a hot shower followed by a cold one takes all weariness away for good. Next morning, being a stranger in Providence, I inquired for the Excelsior agency, but no one seemed to know its location, but at 10 o'clock I found it and got a new lamp bracket. Off we then went over fair roads until just before getting into Boston, where some very bad streets were encountered.

Top left, at Revere Beach; right, Connecticut Valley and River Below Bellows Falls, Vt.; second row, the Tourist with His Mount in Front of One of the Yale Buildings, New Haven, Conn.; center, a Tobacco Field Near Hartford, Conn.; right, the Shore at Rye, N. H.; below, Beach Scene at Portsmouth, N. H.; next row, at left, House at West Barrington, Where the Tourists Remained Overnight; below, Charles River and Old Boston in the Distance; at bottom, Bungalow at Alstead, Where the Tourists Stayed Two Days. This House Is 1525 Feet Above Sea Level.

Seeing Boston

Upon entering Boston proper one has a good view of the whole city and it is very imposing. On one side of the main road entering is the Museum of Fine Arts and several other large buildings and on the other side is the Y. M. C. A., which is the finest one in the Eastern States. Arriving about 3 p. m. we decided to stay overnight, so we started to ride around to Old Boston Town, but after crossing the old Charles River bridge we met with an accident in the nature of a spill on the wet cobbles. This bent my control handle and also footboards and brackets. But not only that, I suffered a bad cut and sprained knee, and my cousin the same, also a bruised elbow.

After pushing the machine ten or twelve blocks we found a lunchroom and had our dinner (at 3:55 p. m.); then feeling better, but lame, we pushed a few more blocks and found a garage. Here they were ready to accommodate us with tools.

Obtaining a heavy hammer, I took off all of the bent part, and, using the sidewalk for an anvil, I straightened them out. When I finished putting the machine in order, we put up for the night, saw some more of the town and went to bed.

Chain Breakage

Rising early the next morning, we had a real old Down East breakfast and started on our way, to go as far as possible before dark. The way out of Boston is much prettier than the approach from the direction of Providence, as the road runs along the coast close to the water, all the way to Portland, Me. We rode on through Revere Beach and after passing this beautiful shore resort by about 16 miles my

Varied Activities of the Dealers

PROV. CYCLE DEALERS REPORT FINE BUSINESS

Window Displays Featured by Swenson—Sales of Bicycles Reported Heavy by All Local Firms

PROVIDENCE, R. I.—The bicycle trade in this city, according to many dealers, was never better than during the past season and at the present time. It has been the kind of business that comes voluntarily, they say, and not the sort that takes continual drumming.

B. A. Swenson, Indian agent at 522 Broad street, who carries an extensive line of Indian bicycles, is making special window displays, and he asserts it is bringing forth a great amount of business. This is a line that Mr. Swenson does not "push," but he says the results he has attained to date are most satisfactory, and prove in a large degree that the bicycle has come into its own again.

William N. Burnett, manager of the Harley-Davidson Co., carries a large line of bicycles, and says he is getting a good business this year without going after it. As a matter of fact, he says prospects are coming to him this year without solicitation.

F. McCarthy, manager of the Goodby-Rankin Wholesale Co., says that his company has put out 2,500 bicycles this summer. At the start of the season the company had considerable trouble in getting machines, but he says when this was overcome the salesmen, of which the company has four on the road, had no difficulty in pushing sales of the Oxford, the feature the company handles.

Manager Murray, of the Hayden Sporting Goods Co., says he has sold more bicycles this year than ever before. Just previous to May 1, he says, he sold more wheels in six weeks than he sold in any other season in years. He says he has 119 installment accounts and that he finds this is a very satisfactory way of putting out the goods. This, he says, means many other customers. Dawson & Co. also reports that they have been doing a tremendous business, and that they believe it will continue.

ROTHOLZ SPECIALIZING ON SIDECAR STORAGE

NEW YORK, Oct. 6.—Gus Rotholz, the veteran motorcycle man, at 1691 Park avenue, is making a specialty of sidecar storage. To date, he has 31 combinations in his place, all being privately owned, and two commercial outfits in addition. The new quarters, which are thoroughly fireproof, will accommodate 40-odd outfits and as many solo machines, and as the situation stands now, there isn't much more space to be taken up.

Gus has just installed a nice set of lockers on the mezzanine floor for his customers. "The locker room should always be separate from the storage floor," says Gus. "It not only saves space, but it keeps the contents of the lockers cleaner. A man going to a floor locker interferes with others who may desire to work on their machines. I always have insisted on locker spaces distinct from the main body of the garage ever since I entered the cycle business."

Gus' patrons are well pleased over the provision of a gasoline system as well as an oil storage outfit in the new quarters.

Trade Notes from the Northwest

TACOMA, Wash.—On account of the success obtained from motorcycle delivery used by its competitors, the Woolen Cleaners, of this city, is now using a Harley-Davidson outfit to call for and deliver suits.

THE TRADERS Tire & Supply Co., of Spokane, has recently opened a handsome salesroom at 1209 Sprague Ave. Tires and accessories are handled.

SINCE Tom Paulsen, the Tacoma Thor representative, has received the new Thor announcements he has been besieged with inquiries regarding the new models. He says that prospects are beginning to loom up, and that he is getting a huge quantity of repair work.

THE Motor Vehicle Protectice Association was successfully launched in Seattle during the past week by V. O. Hanna and K. G. Knappen. The plan and scope of the association is unique, providing its own motorcycle patrol to watch all highways, small towns and big cities and important points in the scheme of thief apprehension.

FORD TAKES HENDERSON FOR WHITE PLAINS

NEW YORK, Oct. 6.—Felix Lewin, manager for the Henderson Motorcycle Company at New York, announces that William A. Ford, of White Plains, N. Y., has contracted to represent the Henderson for that portion of Westchester County for the 1917 season.

Ford has been in the motorcycle line for several seasons in Westchester County.

NEW POWERPLUS IN PROVIDENCE

PROVIDENCE, R. I., Oct. 9.—B. A. Swenson, local Indian agent, went to Springfield Friday and returned with a new 1917 Powerplus machine. It was given its initial tryout here yesterday when Mr. Swenson rode it in the Triangle run to Boston and Worcester.

WOULD GIVE COUPONS FOR REPAIR SERVICE

Halliday of New England Dealers' Association Offers Co-operative Suggestion of Novel Type

PROVIDENCE, R. I., Oct. 10.—W. F. Halliday, local manager of the General Motorcycle Sales Co., and an enthusiastic believer in the formation of a New England Motorcycle Dealers' Association, to include every dealer in the six states, has just submitted to the Bay State Motorcycle Dealers' Association a proposition which he aptly calls "A Boosting Service Plan."

One of the outstanding features of Mr. Halliday's service system would be a uniform schedule of prices for repair work. "I am a firm believer in a coupon system for repairs," says Mr. Halliday. "Through a systematic arrangement, adhered to by all the dealers, the rider of a motorcycle would be able to obtain repairs on his machine in any town, and at any shop, for a uniform price. In order to assure the patron that he is receiving an absolutely square deal arrangements could be made to have him pay by a coupon, which would be redeemable through a central headquarters.

"A service coupon book would be given to each purchaser of a motorcycle at the time that he received his machine. Each coupon would be good for a quarter of an hour's work, and they would be so dated that the book must be used up within a year from the date of issuance, and for the same machine in connection with which it was given out. To sum up, the idea simply means that every purchaser of a motorcycle would receive from his dealer one of these little coupon books, and through it would be entitled to a certain amount of free repair service at the shop of any agent who was a member of the same association. It will be seen that such a scheme as this would enable one dealer to help another, and that it would foster the general idea of co-operation. At the same time, it should have a helpful effect in doing away with price cutting."

The coupons would be considered as cash by the dealer, and he in turn would receive his payment by mailing the coupon to the secretary of the association. It is taken for granted that the same coupons could be used for the purchase of supplies and accessories.

LINNELL GOING TO BOSTON

PROVIDENCE, R. I., Oct. 9.—R. N. Linnell, local manager of the Hub Motorcycle Company, is clearing up his affairs here preparatory to going to Boston to associate himself with the main office, the company having sold out their local plant to the General Motorcycle Sales Company.

News Highlights from Mile High Town

HELP FOR THE MOTION PICTURE EXHIBITOR

DENVER, Colo., Oct. 6.—The Triangle Film Co., of this city, states that the motorcycle comes in very handy in getting motion picture films to different exhibitors in the state. When an order comes into the film company for a certain reel that is wanted right away and there is not time to send it by train, one of the employes of the company jumps on his motorcycle and makes the delivery.

Thus the motorcycle gives the Triangle people much better service than they formerly had. If a picture sent by train does not get to its destination in time to be shown the crowd that gathers to see that picture is disappointed, and up in arms against the theatre man who has advertised the picture. Now, however, the motorcycle has come to his rescue and the picture arrives in time for the performance at which it is booked to be shown.

AGITATING FOR MOTORING DURING WINTER

DENVER, Colo., Oct. 6.—The Denver automobile dealers are at the present time making ready to conduct a big winter motoring advertising campaign. Of course, the campaign is going to help the motorcycle dealers, too, for it will create a desire for all kinds of motor vehicles in the minds of the people. In this connection E. A. Mead, head of the Mead Autocycle Co. and Western distributor for the Excelsior, says: "We will push the motorcycle this winter as we have always done in the past, and advocate winter motoring just as hard as the automobile people do. We expect results, too."

The Automobile Trades Association members are sending out winter motoring stickers on every piece of mail and it is estimated that at least 100,000 of these stickers will be sent out in the next few months. Posters will also be placed in business houses throughout the state calling people's attention to the values of winter motoring.

PENN CYCLE COMPANY ADDS TO ITS QUARTERS

READING, Pa.—The Penn Cycle & Motor Company, of which William G. Schaeffer is proprietor, has leased the storeroom adjoining its present quarters The new room, which will be occupied in a short time, is larger than the present quarters and will afford better accommodations for Schaeffer's growing business.

Schaeffer is specializing on the Excelsior motorcycle and has a large repair and accessories business in addition.

STERNS TO SELL HENDERSON

NEW YORK, Oct. 6.—Stern Brothers, of 1519 Second avenue, have signed up to handle the Henderson for the eastern section of this city during the 1917 season.

SELLS 18 HENDERSONS IN BRONX COUNTY

BRONX, N. Y., Oct. 7.—Gene Coughlin, of Gene Coughlin & Co., at 922 Washington avenue, has taken orders for 18 Hendersons of 1917 model to date. "The Bronx riders are enthusiastic over the new model," says Gene, "and it will be only a question of time after I get my demonstrator when I will double the number of sales I made up to the present."

Coughlin & Co. took the Bronx representation for the four-cylinder machine a little over a month ago.

ROOS IN NEW STORE

OMAHA, Neb.—Victor H. Roos, Harley-Davidson dealer in this city, opened his new headquarters at 37th and Leavenworth streets a few days ago. The new salesrooms adjoin the old motorcycle store, and have been completely remodeled with new front and floor. The office is in the rear. Roos carries a complete stock of parts, tires and accessories.

OUTDISTANCED AN OSTRICH

A Goodyear Tire & Rubber Company representative tells of a novel race reported recently by a dispatch rider in one of the Eastern campaigns, in which a motorcycle and an ostrich competed for supremacy—a variation of the old time county fair horse and ostrich race. While riding along one day the soldier came up with a stray ostrich that undoubtedly had never spied a motorcycle before, and decided to give the thing the "once over." He kept pace for a while, but gave up the chase when the rider opened up.

TRADE <E> MARK

DIAMOND "E" SPOKES AND NIPPLES

We have been making spokes and nipples for the cycle trades for many years. Wherever and whenever spokes and nipples are needed DIAMOND "E" are always first specified. Every spoke and nipple bears the trade mark "Diamond E" and is guaranteed for exact fit, measurement, quality and finish.

THE STANDARD COMPANY, TORRINGTON, CONN.

MANUFACTURERS OF

Diamond "E" Spokes and Nipples for bicycles, motorcycles, tricycles, velocipedes, invalid chairs, sulkies, carriages, cyclecars and automobiles. Pedals for bicycles, tricycles, velocipedes and motorcycles. Toe clips for bicycle pedals. Emergency axles for pedals.

We are boosters for "One Millon Bicycles in 1916"

PROGRESS

The Goal of Yesterday will be the Starting Point of Tomorrow

Carlyle

To stand still is to go back—that is the universal law, and with a keen knowledge of the truth of this law the makers of the MORROW have never ceased—nor shall they ever cease—their constant efforts to improve the MORROW Coaster Brake.

Never-ending tests, both laboratory and road trials, are the rule in the MORROW plant. Careful analyses of steel, experiments with different formulae in an effort to make *still* harder, still tougher, the materials that make up the MORROW; these are the things that constantly keep the MORROW to the front.

The MORROWs to come will be built on the MORROWs that have passed, the lesson taught by each preceding MORROW will be profited by in the making of the next.

Thus the dealer and the rider are both protected and safe in the knowledge that MORROW superiority will be consistently maintained.

Let us tell you something about the MORROW—how we help the dealer in more than one way to boost his bike sales.

Saving Time and Labor in Removing Carbon

Demonstrating the Value of the Chain Dish Rag as a Potent Loosener of Sooty Deposit in the Cylinder—Particularly Adapted to Non-Removable Head Motors and Has No Harmful Effects

By D. B. PANGBURN

SINCE probably half or more of this year's models have non-removable cylinder heads, the job of scraping out carbon deposits becomes considerably greater than it used to be, as the whole cylinder has to be removed, and the head is also harder to get at. The method here described saves a lot of labor in taking down the machine, and seems to do a very good job. It is particularly applicable to the Powerplus and Harley-Davidson types of motor.

On Powerplus Motors

With the Powerplus, remove on one cylinder the cover over the exhaust valve, beside the spark plug, or with the Harley take off one of the intake valve domes. Plug the inlet pipe or port with a rag. Through the opening insert in the cylinder two or three loops of chain from one of those small chain dish rags, woven of little loops of iron wire rings, such as can be bought at any 5c and 10c store for a nickel. Now start the motor up slowly under its own power, running on the other half of the engine. This can be done because it has not been necessary to disconnect or remove the carburetor, as has to be done when taking off the cylinder or heads in the ordinary way.

If the engine was cold to start with it can be run slowly for half a minute or more without any danger of overheating; longer in cold weather. Then bring the piston of the cylinder, on which the operation is being performed, up to the top position, fish out the chains with a hooked wire, and then, with a cloth swab on another wire, wipe all the dust and dirt out of the cylinder, finishing by flushing it out with kerosene. If one application of the chains is not sufficient, another may be given, it being only necessary to be careful not to overheat the working cylinder while running on the stand.

At first glance, it may seem strange to put any metal object into the cylinder, but bear in mind that the chain dish rag recommended is very light and flexible, and is made of soft iron wire, and that the engine should be run slowly. Furthermore, remember to only put in one or two loops of chain, so that it can not make a large enough wad to do any harm, even if it were packed tight in one lump.

A Knocking Effect

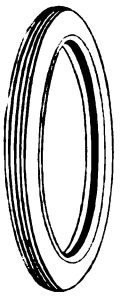
Of course, the piston, when moving down, goes a great deal faster than the chain does in merely falling, so that the piston runs away from the chain, and when it comes back up again it meets the chain half way down and shoots it against the cylinder head, thus, in one operation, loosening the carbon deposit and knocking it off from both the top of the piston and the head of the cylinder, while the flexibility of the chain allows it to thoroughly reach all points. Then, the motor being in action, most of the dislodged carbon is blown out.

The method is a great time saver, being much practiced on automobiles, and I know several cases where it has been used for a number of years with entire satisfaction and success, and apparently with no harmful effects of any kind.

DENVER JURY CONSIDERS HIGH COST OF "GAS"

DENVER, Colo., Oct. 6.—A jury of prominent business and professional men of this city are at the present time investigating the high price of gasoline in Colorado. A committee from the Denver Motor Club is also working in co-operation with a committee from the Civic and Commercial Association in an effort to find out if it is possible to cut gasoline prices, and if so, why it isn't done. Motorcycle riders are hoping that the price of gasoline will be lowered here in Denver, as Colorado is now paying a much higher price than are people of the East.

SECONDS!



It's not often that the trade gets such an opportunity to stock up on standard tires at such "rock-bottom" prices. Look this list over carefully—it will pay you well to do so.

Mr. Dealer, You Can Say "NO!"

IF the salesman offers you the agency for a motorcycle that has not the name Bosch on its ignition system, you will protect yourself only by saying "NO."

"A magneto" and "the Bosch Magneto" are very different as means of producing that very vital requirement, Ignition. Bosch Products are all marked with the name Bosch. If you are offered a motorcycle with an unnamed magneto claimed to be made by Bosch, the claim is an untruth; if a magneto "as good as Bosch" is offered you, a wrongful trade on the Bosch Reputation is being attempted. The ignition of the motorcycle is vital to your success as well as to the motorcycle's—don't chance it when it comes to ignition, for there are plenty of good motorcycles that use Bosch Magnetos—they are sure winners.

Be Satisfied **Specify Bosch**

WAR HAS LITTLE EFFECT ON MOTOR WHEEL SALES

MILWAUKEE, Wis., Oct., 10.—The "Palais de l'Automobile," Smith Motor Wheel representative in Paris, France, has been selling a large number of the little red devils in spite of war-time business depression.

There, as here, the commercial possibilities of the Motor Wheel are quickly seen. M. Latourisqui, of Charente, is using his motor wheel for delivering parcels and says he can cut both the time of delivery and also the cost in half.

Another motor wheel owner is Jean Wahl-See, First Assistant Industrial Commissioner of Taneuse, who uses his wheel daily in his duties which correspond to those of a commissioner of Public Works in this country.

HERE'S A MOTORCYCLE OPENING IN INDIA

NEW YORK.—Naraindas & Co., of Karachi (Sind), India, a firm of motorcycle and motor car engineers, are open to take the agency for an American motorcycle for certain parts of India. They desire catalogs covering motorcycles, bicycles and accessories and also trade terms.

CAPS TICKLE THE KIDS

LOS ANGELES, Cal.—Tom Girton, of the Girton-Hoffer Company, Excelsior distributors, is some popular man with the youngsters these days. Tom got a lot of Excelsior skull caps and now you see them everywhere, as over 200 kids are sporting them. It is one of the best advertising stunts that Girton has run across, he says.

SAUFLEY AT SEDALIA FAIR WITH ROTARIANS

KANSAS CITY, Mo., Oct. 2.—E. B. Saufley, of the Saufley Supply Company, representative of the Excelsior motorcycle, Smith motor wheels, Peirce and Excelsior bicycles, and representing the motorcycle and cycle industry of Kansas City in the Rotary Club, visited the State fair at Sedalia, Mo., last week with the club. Saufley, while in Sedalia, also visited his dealer, J. O. Love, there, and reports that Love certainly has done a thriving business during the summer season in and around Sedalia.

Saufley vehemently expressed his surprise and pleasure at the number of motorcyclists that visited the State fair during the week. Sedalia is but a nice day's ride from Kansas City on roads of excellent character, and many tandem and sidecars were in evidence.

HAGERMAN TAKES BRIDE

KANSAS CITY, Mo., Oct. 2.—Ray Hagerman, master mechanic at the wigwam of Albert Hanson, was married to Miss Gertrude Adams, of Lansing, Kans., Thursday, Sept. 28. Hagerman is a popular rider in Kansas City, and the event of his life was properly celebrated by a large number of local riders upon his arrival in Kansas City.

BERKS-DAUPHIN PIKE TO BE IMPROVED

READING, Pa.—Motorcyclists in these parts, as well as the many visiting riders in this section of the State, will welcome the announcement that the Berks and Dauphin Turnpike, the 34 miles of which from Wernersville to Hummeltown via Lebanon is to be improved by order of the State. The road is owned by a private company and two tolls are collected on it. It is one of the worst in the State.

Although toll roads are a relic of the dark ages, the average motorcyclist is willing to pay if he gets good surfaces to travel on. Wernersville is nine miles west of Reading and Hummelstown is eight miles east of Harrisburg.

SOLD OVER 100 POPES

MILWAUKEE, Wis.—The North Side Repair Shop, at 804 Teutonia avenue, of which Harry Ward is manager, has sold over 100 Pope bicycles during the past season. The North Side C. C. makes its headquarters in this store and gives runs in the country each Sunday. The boys are strong for the club and Ward has profited thereby in sales and repairs.

HALLIDAY AND BURNETT IN BOSTON

PROVIDENCE, R. I., Oct. 9.—W. F. Halliday, manager of the General Motorcycle Sales Company, and William N. Burnett, manager of the Harley-Davidson Sales Company, were in Boston last week to attend a meeting of the Bay State Dealers' Association.

BEDELL SIZZLES PHOENIX-FLAGSTAFF TRAIL

(Continued from page 37)

"At that stage of the game I would have given all I own to be able to stretch out on my back for five minutes—for even one minute—to rest. But the pumping was limbering me up a bit. Already the cramp had gone from my wrists and my fingers began to feel alive once more. During this stop I lost just 20 minutes, and I was determined to make it up. My speedometer shot to 50—55—and then to 60! Could the machine stand the pace? I was sure that it would. I had nearly reached Ash Forks now, and was beginning to feel quite confident of my ability to maintain the gait for some time.

Fork Spring Cracks

"Bang! A broken fork spring. Would the others hold? I could only hope for the best. I reached Ash Forks without further difficulty, and after a three-minute stop for gas and to test the tires, I was off on my way again.

"Now for the long pull up to Williams. Hardly had I started when it began to rain. It was a cold, hard, fine, driving rain. It made the road sleek and filmed over my goggles so that it was almost impossible to see ahead. Still I reached Williams without a spil and hummed on my way. Everything ahead was now dim and gray, and sheets of blinding rain beat upon me. Once I went down on this stretch, but no harm was done. In an instant I was up and at it again. Could I beat the 10-hour time? I began to have my doubts. Once I started to get out my watch, but my fingers were numb. It must have been ages since I left Phoenix! The road seemed to get grayer and dimmer as I went on and the wind set up a melancholy howl. Still the motor throbbed evenly, and I continued to plunge on through the storm.

"If I could only reach Flagstaff at my present gait I would have a chance of making the 10-hour time—and besides, I could have pork chops, hamburger steak, chicken pie, six cups of coffee, and divers other things that I thought I needed.

Rear Tire Goes Again

"Then came a slip—slip—slip, and finally a bump, a jar, and another bump. My rear tire was flat again! But not for the world would I have stopped to fix that tire. I decided to take my chances with it flat. A short distance farther and I passed the old mill, then the station, and almost before I knew it I was in Flagstaff. I surely was tickled to be there.

"I ran the machine into the warm garage, swung stiffly out of the saddle, and with a sinking heart felt for my watch. It showed just 4:09 p. m.! I rubbed my eyes and stared. It seemed almost impossible to me, but I had covered the 250 miles between Phoenix and Flagstaff in just 8 hours and 54 minutes.

"Then I went after the pork chops with brown gravy, coffee and ham and eggs, and following that I topped off with chicken pot pie, beans, hamburger steak, and other fixings.

"But, Gee, it was worth it!"

FOLLOWING TRADE AND SPORT IN SAVANNAH

SAVANNAH, Ga.—The Balfour Hard ware Company has signed for 191 with the Harley-Davidson Motor Co., t again represent that machine.

R. R. Oakman, Indian man, has con tracted again for the lines from the Wig wam, and anticipates a brisk season fo 1917.

George J. Cleary continues his repre sentation for the Thor, having renewed h contract with the Aurora Automatic Ma chinery Company recently.

J. L. Hetzel will handle the Excelsio during 1917 on a larger scale than in 191 and previous seasons, according to an an nouncement he recently made after renew ing his contract for the new season wit the Chicago factory.

All Savannah dealers are enthusiast over the outlook for the new year, and ar going strong after commercial sales. Mo of the 1916 sales were for business pur poses.

INDIAN VANS SHOW VALU IN TIRE DELIVERY

COLUMBUS, O.—The Harris-Llewell Co., retailers of automobile tires, h been using two Indian delivery vans in i service department with marked succes The vans are in use for over two yea and have proven economical and most d pendable during the entire period. Th firm is thinking of putting on addition vans in a short time.

A TANDEM TRIP THROUGH NEW ENGLAND

(Continued from page 39)

chain snapped just as we were crossing a bridge.

This was my first experience fixing it and I had plenty of trouble. An Indian rider stopped and took me to town for the links and then back again, after which everything was O. K. We made Portsmouth, N. H., at 4:30 in the afternoon. Here we had lunch.

Beach Racing

Leaving Portsmouth we crossed the long toll bridge at Kittery into Maine and rode on to York village. Arriving at the latter place we saw a pair of small objects about a mile up the beach going around and up and down at what appeared to be a smart clip. They were motorcyclists racing on the sand and we tried it ourselves. We could go as fast as 45 miles per hour and take the turns at the speed without spilling. We could have gone faster, but 45 was enough for us. Coming back on the road we turned toward Portsmouth again and from there went on our way toward Concord, N. H., through the deepest sand I ever struck.

The road was hub deep in most places and there was apparently no bottom to it in others. It took us five hours to do 26 miles and at 10 o'clock we saw a light and decided to try to get shelter in the farmhouse where the light was. We succeeded beautifully, getting a fine room, good supper and an excellent breakfast the next morning. All the folks would take was 50 cents apiece. We certainly got full measure for our half-dollar.

Off for Alstead, we started the next morning to spend a few days with friends. We passed Lake Sunapee on the way, riding for a half hour to get around it. This lake is one of the finest I ever saw and its shore line is one of beauty and nature combined. Soon we entered Newport and it began to look like rain, so we decided to find the shortest route to Alstead. We got on the wrong road and ran into a storm and then out again. This was an odd experience for both of us—seeing it rain away off and then getting the rain, and later getting out of it into the sunshine. We soon reached our destination and were royally welcomed.

For two days we enjoyed ourselves in Alstead. During this time I changed tires, cleaned all the bearings and generally looked over the machine. Then we bade farewell to the folks and started down the Connecticut valley through Bellows Falls, Vt. It is a regular roller coaster of a tour from Bretton Woods to Holyoke, Mass., and afterward it is fairly level. We made Springfield, Mass., at 6 p. m., and after locating some friends of my cousin's we stored the machine and were then shown the town, also took a ride to Riverside Park, Springfield's Coney Island.

Toward Home

After spending an enjoyable evening there we started back to the house for a good night's rest. The next day it rained from dawn till midnight, so we lost a day and had to cut out some of the trip. Leaving Springfield the following morning in a fine drizzle we went to Hartford, Conn., and from there we cut across country through the Berkshires to Lake Mahopac, N. Y. From there we went to Nyack, where Jack lives. Here we parted company and I rode to Newark and home alone.

The trip was very enjoyable all through and decidedly healthful. It was instructive, as we passed through plenty of historical country. Whenever you ask questions in New England you not only get what you ask for, but also full particulars about the whole countryside in the neighborhood. We covered 797 miles in five days of actual riding; we averaged a trifle less than 50 miles per gallon of gasoline. For one gallon of oil our average was 398 miles.

Outside of the breakage of the lamp bracket and chain we had only one trouble during the trip, this being a puncture.

BOOMING GOOD ROADS

TORONTO, Ont.—In order to awaken interest in good roads, the Ontario Government has decided to send out 100,000 circulars to the residents of rural districts so that everybody would know of the advantages to be gained by improved highways. The province has decided to pay 40 per cent. of the initial cost of a good road and 20 per cent. of the upkeep. It is hoped to start highway operations in every county of Ontario at the termination of the war so that employment will be provided for soldiers and others who would otherwise be idle.

When better Motorcycles are made, it's a safe bet the R-S will make them

STEELE SELLS 5 INDIANS; ORDERS CAR OF BIKES

PATERSON, N. J.—John Steele, the Indian man at 91 Broadway, has made his fifth sale of a 1917 Powerplus, and coincident with the closing of this deal has received his demonstrator for the Wigwam at Springfield, Mass. The five machines are to be delivered as soon as the first shipment arrives.

Steele recently returned from the Hendee plant, where he put in an order for a carload of Indian bicycles. Delivery on the wheels is expected within a few days.

BUSINESS STARTS AT SYKES' COLUMBUS STORE

COLUMBUS, O., Oct. 9.—The Sykes Motor Company, Columbus distributing agency for the Indian, is now settling down to business in its new location, 37 East Long street. John Sykes, of Clifton, N. J., is proprietor, and C. H. Beebe is manager of the establishment, which has for its territory five counties in the central part of the Buckeye State.

J. Howard O'Brien, manager of the parts department of the Hendee Manufacturing Company, visited Columbus to supervise the listing and ordering of parts. It is the plan of the Sykes Motor Company to carry such a full line of Indian parts that perfect service can be given to riders at all times. An up-to-date repair shop will be one of the features.

Several of the 1917 Indian models have already been received, and a carload shipment is expected in a week or ten days.

I. F. Jacobs, Indian traveler in Ohio and West Virginia, has also been in Columbus looking after factory interests and assisting the Sykes Company in making its start.

CANADIAN BUSINESS BOOMING, SAYS TRAVIS

MILWAUKEE, Wis.—E. A. Travis, foreign correspondent for the Harley-Davidson Motor Company, has just returned from a trip through Eastern Canada, and has expressed himself as being gratified with business conditions as he found them there. "Business is great," he says, "the war serving as a boom in industrial circles in Canada, especially so far as Eastern Canadian factories are concerned. All shops are working day and night, and there is plenty of money in circulation. Especially noticeable is the amount of construction work being done on roads, bridges, harbors and buildings. Factories are spreading, and the general conditions on my last trip were very favorably changed in comparison with those found on my trip of a year ago.

"The wide-spread roadway improvements, of course, are giving the sport of motorcycling a wonderful boost," Travis continued. "The one particularly commendable highway that I traveled over is between Toronto and Hamilton. By the way, this is policed by a 1917 electrically equipped Harley-Davidson and sidecar.

"Harley-Davidson dealers all along the line, without exception, doubled their contracts over 1916. We took on a number of new distributors, among them the Palace Hill Garage, A. E. Faucher, proprietor, at Quebec City; the New Brunswick Motor Car Company, at St. John, N. B., and the Eastern Bicycle & Motorcycle Company, at Halifax, N. S."

WISCONSIN FIGURES SHOW 8,865 MOTORCYCLES

MILWAUKEE, Wis., Oct. 10.—The state of Wisconsin showed an increase of 315 motorcycle registrations for the season up to October 1. On that date in 1915 there were 8,550 licenses issued. This year's figure shows 8,865, according to a report received from J. S. Donald, secretary of state.

While the cold figures do not represent an enormous gain in registrations, they, nevertheless, indicate a healthy state of affairs in motorcycle sales when it is considered that each year there are riders dropping out of the sport whose ranks are being filled up with new riders.

The registrations from Milwaukee county alone hit the 3,000 mark. With the improvement in highways made more extensive in the strictly rural sections of the State there is no doubt that Wisconsin will show a big increase in motorcycle registrations beginning next year.

LAST MAN TO WIN

DENVER, Colo., Oct. 9.—At the Frontier celebration that is to be held at Grand Junction, Colo., this month a novel motorcycle race is to be held. The rider that will be declared the winner of the race will be the one that gets to the end of the course last.

Benton Service

You can't get blood out of a stone—likewise, it's impossible to get more out of a spark plug than is put into it by the manufacturer.

That's why you should specify Benton spark plugs. No spark plug made contains the high quality materials that go into the BENTON. The case-hardened construction of this plug is a guarantee of unflinching service for the life of your motor.

L. F. BENTON COMPANY
Vergennes, Vt.

CHAINS!

The value of a motorcycle fitment is fixed by its indispensability. Next to the motor, the chain is the most important part of the motorcycle.

"The Coventry"
"The Motor's True Mate"

is well fitted to carry out its important duties. It is designed for super-service, strongest in the world. Price $1 a foot to the rider.

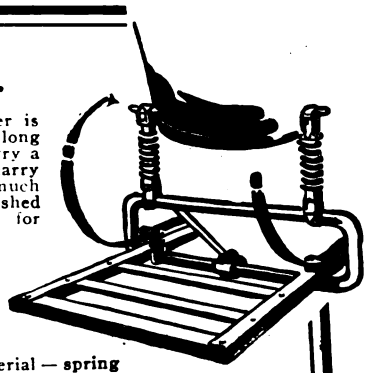
A Real Luggage Carrier



This B. R. T. Luggage Carrier is the one that motorcyclists have long wanted—it is secure and can carry a real load. The B. R. T. will carry 150 pounds, which is about as much as a sidecar should carry. Finished in black Japan—with fittings for attaching. **Price $2.75**

Safety Shock Absorbers prevent all the side swing—and lift you over holes and bumps. They make riding in a sidecar a real pleasure. Easily attached.

Made from best quality material — spring guaranteed against breakage.

Price per set, $1.00

The 1917 *Indian* and the DEALER

Just study this New Indian Triple Stem Fork for a moment.

Note its sturdiness of limb. Bear in mind the tubing is of Vanadium steel with internal reinforcements, giving it the greatest possible strength.

Notice the crade spring suspension—for seven years the standard of front fork comfort construction—is retained. That cuts out the jolts and jars in rough road riding and puts zest into Indian motorcycling.

Then glance at the stalwart fork side braces that give double anchorage for the handlebars and make positive steering without the possibility of twisting.

And then, consider this big feature: The handlebars are instantly adjustable to any angle to suit the rider. You can't find this convenience on any other fork of this type.

That's just one of the big talking points of the 1917 Indian. There are a heap more—practical, sound, indispensable to the prospective rider who want the pace-maker of the motorcycle arena.

The 1917 Indian line is a strong line for broad-gauge dealers. It's a profit-producing proposition for men who glory in business expansion and do their part in making rapid growth a gratifying certainty.

We've got a Seling Plan this year that generously promotes the closest cooperation. It's loaded to the muzzle with profit liberality. Aggressive dealers are hustling to couple up with it. How about your territory?

STREAKS

Keep Down Tire Selling Costs

THE cost of selling bicycle tires has increased for many dealers because of *competition*, constantly varying tread styles, the necessity for carrying big, fancy *stocks* and *prices* that are always changing.

Goodyear Blue Streak Bicycle Tires have cut out the *guessing* in these tire selling costs.

Goodyear Bicycle Tire Dealers are therefore enjoying a lower yearly selling cost, because:

1. The one standard Blue Streak price and the one standard Blue Streak guarantee have ended the haggling and bargaining that goes with trying to sell an unknown tire of unknown price and guarantee.

2. The one standard Blue Streak quality, style and size enable dealers to carry a smaller tire stock and yet satisfy all buyers—thereby leaving capital for other lines.

3. The Blue Streak price competes with mail order prices and yet gives the quality of a $5.00 or $6.00 tire.

4. The volume of Blue Streak sales is very much larger and therefore brings quicker turnovers and a larger yearly net profit on your investment.

If you consider the good business sense in such a policy, you will arrive at only one conclusion—that you can make more money selling Goodyear Blue Streak Bicycle Tires.

Gears of the three-speed Henderson transmission, showing their large size and husky proportions. Gears 8-10 pitch, stub-tooth. Sliding central gear has corners of teeth smoothly rounded to facilitate engagement. Size and strength equal to the gears of many automobile transmissions. Bearings unusually large and capped so that wear can be taken up from the outside after several seasons' hard use.

The critical, hard-to-please veterans, who will be satisfied with nothing less than the very best, are enthusiastic in their appreciation of the new three-speed Henderson "four."

You will understand after reading the new Catalog.

BLUE STREAKS

THE national preference for Goodyear Blue Streak Motorcycle Tires is not due entirely to their sturdy, rugged, handsome appearance. Of first importance was the longer mileage, the lower mileage cost and the greater comfort which these tires have brought to riders. Because of the complete satisfaction that Blue Streaks bring, practically every big motorcycle dealer is supplying his customers with these superior tires.

DIRECTORATE EXHIBIT FOR CHICAGO SHOW

United Cycle Trades Body Will Bring Home to Visiting Dealers the True Significance of Cooperation —Twenty-One Newcomers Take Space for Chicago and 17 Join the New York Show Exhibitors—Total of 74 Signed Up for Coliseum and 59 for Garden Affair

TOLEDO, O., Oct. 17.—One of the big features of the coming Chicago show, scheduled for the Coliseum the week of Nov. 13-18, is to be an exhibit by the United Cycle Trades Directorate.

The display, which will be comprehensive in the full meaning of the word, will embrace the work accomplished by the Million Bicycles Committee together with full plans and work already accomplished in the matter of giving the new bicycle models a startoff that spells even greater bicycle sales for the coming bicycle season.

The booth, which will have an aisle front of 22 feet and will be 12 feet in depth, will be in charge of C. F. Olin, Louis Schwab and D. F. Printz, all members of the Directorate. It will be elaborately decorated with charts, posters and placard bearing on the work accomplished and planned by the cycle boosters.

Some 21 "added starters" have signed up for show space in the Chicago exhibit since Show Manager Coffman issued his preliminary list bringing the total number of exhibitors to date up to 74. The New York show list has also been increased by 17 names of trade firms who have signed up, there being scheduled a total of 59 exhibitors at the Gotham affair to date.

The latest additions to the Chicago show list are:

American Motor Vehicle Co., Lafayette, Ind.
Askew Saddlery Co., Kansas City, Mo.
Bean Tool & Sales Co., Berea, Ohio.
Buffalo Metal Goods Co., Buffalo, N. Y.
Buffalo Specialty Co., Buffalo, N. Y.
Cycle Mfg. & Supply Co., Chicago, Ill.
Diamond Chain & Mfg. Co., Indianapolis, Ind.
Flxible Side Car Co., Loudonville, Ohio.
International Stamping Co., Chicago, Ill.
Pacific Motorcyclist and Western Wheelman, Los Angeles, Cal.
Persons Mfg. Co., Worcester, Mass.
Standard Welding Co., Cleveland, O.
Harry Svensgaard Sales Corp'n, Detroit, Mich.
Trade Journal Corp'n, New York City (Bicycling World).
United Cycle Trades Ass'n, New York City.
Vim Cycle Hardware Co., Buffalo, N. Y.
Stoll Mfg. Co., Denver, Colo.
Hastings & Anderson, Chicago, Ill.
Peter A. Frasse & Co., New York City.
Delta Electric Co., Marion, Ind.
Duckworth Chain & Mfg. Co., Springfield, Mass.

The 17 "added starters" for the Gotham cycle event are:

(Continued on page 17)

McKINNEY IS 1000-POINTER IN PATERSON RUN

Keeps Both Regular and Consistency Scores O. K. Over 143-Mile New Jersey Course; John Walton and Orrie Steele Lose One Consistency Point Each; Havenstrite Is High Man in Single-Geared Class, While LeDore Leads in the Sidecar Division

PATERSON, N. J., Oct. 15.—Ralph McKinney, and his '15 Harley-Davidson motorcycle, turned in a lily-white score of 1,000 points in the Paterson M. C. closed fall run today, thereby copping highest honors. He won over a field of 19 starters, comprising 12 solo riders, five sidecar outfits and two tandem pairs.

Elmer Havenstrite, local Harley-Davidson dealer, took highest honors in the single-geared class, having a perfect regular score, but losing four points in consistency rating of "absolute time."

Al Edmunds, '14 Indian, battled with Bert Fielding on his Thor, of the same vintage, for second place in this class and emerged a couple of points to the good.

Wm. LeDore took highest standing in the sidecar class with his Harley-Davidson outfit.

John Walton and Orrie Steele, Indian solo riders, both had the misfortune to disagree with the checker's time one minute or they would have been mentioned up there with McKinney.

Six entries faltered along the 143-mile course, most of them going "hay-wire" in the morning.

Four of the eliminations came through minor troubles and lack of heart on the part of the riders to "beat it" and try to make up lost time.

Part of the course took in that winding road through Sterling Forest made famous by the Invincible and Crotona runs, and it was this stretch of Rocky Mountain stuff that "bushed" Holt and his crew on the Dayton.

Stockholm was the noon stop, and after a hearty chicken dinner at Lewis's, the riders pointed their front wheels towards Dover, riding down the Longwood Valley through the loose sand and rocks. Along here was where Pester got tangled up with a rock due to Orrie Steele raising such a dust, and Pester, just as natural as could be, made a quick trip to old Mother Earth.

Rockaway was the first check in the afternoon, and then came that well-known Irish grade Hibernia Hill, that goat-getter for the inexperienced with its loose top dressing and bad turn to the right.

It maintained its reputation today for there were seven late at Newfoundland, 12 miles away, while two contestants blew the whistle, put on their coats and called it a day's work right there and then went home to the Silk City.

Fielding and Edmunds were neck and neck in a mad race—on foot—up this hill, the latter winning by a gasp.

McBRIDE SOLE AGENT FOR "X" IN CANADA

Will Handle Excelsior in Dominion From Coast to Coast; Has Rogers Sidecar on Same Basis; Now on Long Tour

TORONTO, Ont.—Formal announcement has been made here of the appointment of Percy A. McBride, the well-known Toronto dealer, as the sole Canadian sales representative and distributor for the Excelsior Motor Mfg. & Supply Company, Chicago. McBride formerly represented the Excelsior in the whole of Eastern Canada, but his territory has been extended to the Pacific Coast. Up to the present the Excelsior Company has had three distributors in Canada—one at Toronto, one at Winnipeg and another at Vancouver.

McBride was recently appointed exclusive Canadian distributor for the Henderson, while he has also secured the Canadian sales rights for the Rogers sidecar, made by the Rogers Mfg. Company, Chicago.

McBride returned to Toronto on Monday, Oct. 16, after a business tour over the rails to Montreal, Quebec and other Eastern centers. Almost immediately he headed in the direction of the Rocky Mountains for a transcontinental trade trip in the interests of all motorcycle and bicycle lines which he represents. The period of absence from his Toronto headquarters will be determined only from the state of the retail markets in the West and the length of time required to make suitable agency arrangements throughout the Western territory.

TRIANGULAR RUN FOR READING M. C. ON OCT. 22

READING, Pa.—An endurance run, to cover nearly 200 miles, is being arranged for by the Reading M. C. for Oct. 22. The course, which will be a triangular one, will cover several counties in Pennsylvania. The participants will cover the course in three sections, according to latest announcements.

GOODRICH TO HANDLE F. A. M. TOURING REQUESTS

AKRON, O.—President Shelby A. Falor, of the F. A. M., announces that arrangements have been made with the Touring Bureau Department of the B. F. Goodrich Company, to handle the F. A. M. touring bureau. All touring requests from members should be sent direct to the Goodrich address hereafter.

ROGERS CARS FOR 1917 HENDERSON REACH BECK

NEW YORK, Oct. 14.—Irving Beck, of the Rogers Sidecar Sales Co., 1691 Park avenue, has just received a carload of Rogers sidecars containing a number to fit the 1917 Henderson. On these cars, by reason of the Henderson having the drive chain on the right side, a new type of fitting has been provided, as the former Henderson fitting on the axle is not suitable.

Beck has fitted one of these Rogers sidecars on a 1917 Henderson in New York. Immediate delivery on this model in quantity can be given, as a second carload will soon be on the way.

The remainder of the first carload is divided up into Rogers cars for Indian spring frame, Excelsior, Reading Standard and Pope models. While no announcements have as yet been made, it is rumored that there will be a number of minor refinements in this product for the new season.

R-S FACTORY BUSY WITH 1917 ORDERS

Reading Factory Resumes After Taking Inventory on Increased Scale—Agents Sign Early

READING, Pa., Oct. 16.—After a week's suspension to take inventory and overhaul plant and machinery, the Reading Standard Company has again resumed production work on an increased scale. All final plans for the 1917 season have been completed and the factory is now devoted to turning out the new models.

The first carload for the San Francisco branch is nearly ready for routing, and its departure is just a matter of hours. Orders for 1917 have come in from all parts of the country, and in spite of the new equipment recently installed, the factory is being tested to its utmost to keep abreast of things.

The Reading Standard Company reports that it has closed more contracts to date this year than in any other previous season. R-S agents are signing up early so that they may be assured of prompt execution of their orders.

FIRST SHIPMENT OF HENDERSONS ALREADY SOLD OUT

SAN FRANCISCO.—The Motorcycle Sales Company, local Henderson agents, attracted many enthusiasts during the past week by displaying a 1917 three-speed Henderson model. Tennant Lee, State distributor, now has the machine out for the purpose of demonstrating it to dealers throughout northern California.

The Motorcycle Sales Company reports that it has already sold out its forthcoming shipment of new Hendersons, which it expects to have on hand by Nov. 1. A second shipment will arrive later in the month.

LEBELL SAW THE LEATHER FAMINE COMING

LOS ANGELES.—The Pacific Motor Supply Co. has stocked up strong on gloves and leggings. They anticipated present conditions in the leather market and ordered very far in advance. Now they could not buy at anywhere near the prices at which they obtained the goods when the contracts were placed. Manager Lebell says the leather situation is a little worse than anything else, and he does not expect it will improve any for a couple of years. As the gloves and leggings are necessities for riders, Lebell's foresight in stocking up places his company in a good position to handle the big demand which it is experiencing.

HARRIMAN AD. MAN FOR N. Y. SPORTING

Former Head of the Hendee Advertising Staff Takes Up Post with Greater New York Indian Distributor

NEW YORK, Oct. 17.—R. L. Harriman, formerly advertising manager for the Hendee Mfg. Company, maker of the Indian has assumed the post of head of the advertising department of the New York Sporting Goods Company, Greater New York distributors for the Indian.

Harriman came into the motorcycle trade a little over two years ago after a long and varied career in both the editorial and advertising fields. He started in on the staff of the Worcester (Mass.) *Gazette* finally reaching the post of advertising manager only to be drafted by the Butterick interests as editor of the *Delineator*.

In his new berth Harriman will undertake the exploitation of all of the various lines handled by the New York Sporting Goods Company, a task for which his previous experience has ideally fitted him.

YOUNG IS SALES MANAGER FOR ANGSTEN-KOCH

CHICAGO, Ill., Oct. 15.—N. A. Young, formerly assistant sales manager of the Metal Specialties Mfg. Co., will become sales manager of the Angsten-Koch Co., which handles hand-operated bicycle horns, bicycle locks and luggage carriers. The change will become effective Nov. 1.

RAY CO. TAKES ON KOKOMO TIRE LINE

LOUISVILLE, Ky.—The bicycle and supply house of the A. L. Ray Co., 1st and Market streets, which does a retail and wholesale business, reports that it has taken on the line of tires made by the Kokomo Rubber Co., of Kokomo, Ind. A. L. Ray, head of the company, recently left the city for a jobbing trip to points in the South, mostly in Tennessee and Alabama.

ROCHOW IS NOW WITH MOTOR TRUCK CONCERN

ARTHUR J. ROCHOW, who formerly covered the states of New York, Pennsylvania, Ohio and West Virginia in the interests of the Excelsior, has severed his connection with the motorcycle trade to take up sales promotion work in the states of Indiana and Illinois for the Vim Motor Truck Co. of Philadelphia.

VITALIC CYCLE TIRES FEATURED IN HOUSE ORGAN

VITALIC activities in five States occupy a goodly part of the October issue of *The Tire Merchant*, the house organ of the Continental Rubber Works, of Erie, Pa. The first page is devoted to illustrations of the Vitalic, Brigadier and Enduro bicycle tires, with facsimiles of orders received for these goods from many dealers.

MIAMI SALESMEN IN MOTOR CAR CRASH

Quartet of Travelers for Middletown Company Figure in Serious Collision, but Escape With Bruises

MIDDLETOWN, O., Oct. 16.—Harry A. Gliesman, of New York, Eastern District Manager for the Miami Cycle & Mfg. Co.; C. A. Van Doren, of Baltimore; F. P. Lee, of St. Joseph, Mo., and J. E. Ruby, of Indianapolis, all traveling salesmen for the Miami Company, had narrow escapes from death when an automobile in which they were riding today collided with another motor car. The men are still unable to explain how they managed to get clear of the wrecked car.

The four Miami salesmen were on their way out to the factory when Van Doren suggested that they hire an automobile for the trip.

This was done, and they were bowling along at a fair pace when the crash came at a corner. John Faucett, the driver of the touring car, could not avoid a two-passenger car which came out of a cross street. The small car was thrown about fifteen feet, and its driver, Harry Marshal, was injured so seriously that he may not recover.

The four Miami representatives were thrown out and sustained bruises, but were able to continue on their way.

POPE MACHINISTS' STRIKE IS SETTLED

WESTFIELD, Mass., Oct. 16.—The machinists' strike, which has been in progress at the plant of the Westfield Mfg. Co., maker of Pope motorcycles and bicycles, has been settled, and the men have gone back to work.

The strike grew out of a slight dissatisfaction on the part of the union men and was immediately confounded with other issues just at the time when the company's agreement with the men terminated.

It is pointed out that the strike affected only a minor portion of the Westfield employees and has not affected the output in the slightest.

TIRE MEN DELIVER ADDRESSES

AKRON, O.—H. S. Quine, of the Goodyear Tire & Rubber Co.; E. S. Babcox, advertising manager of the Firestone Company, and W. A. Johnson, of the B. F. Goodrich staff, were among the speakers at the social session of the Ohio Building Association League in this city. The tire men experienced no difficulty in proving that the rubber industry had put Akron on the industrial map.

MARSHALL HOST AT LOUISVILLE

LOUISVILLE, Ky.—Indian riders and their friends made merry on Sunday, Oct. 7, at the annual Indian Picnic, given by Frank Marshall, of the Century Cycle Co., Louisville Indian representative. The picnic was held at Black Bridge, near Harrods Creek, and over two hundred visitors were present.

Starting at nine o'clock in the morning from the store at 4th street and Broadway, the majority of the crowd paraded to the picnic grounds, where a big feast was spread. The outing lasted all day, and was marked by athletic contests, riding stunts, etc.

ADMIRALTY SHIPPING STAY HALTS EXPORTS

Order Issued as Result of German Submarine Activity Takes British Bottoms Out of Trade

NEW YORK.—With the curtailment of British shipping activities from American ports following the Admiralty order issued on Wednesday of last week following closely on the heels of German submarine activity along the Atlantic coast, motorcycle shipments abroad will no doubt be seriously hampered.

Just how long the order will remain in effect, of course, is a matter for conjecture; there are those who believe that the urgent call for munitions will act to lift the embargo within the next few weeks. But while that will open the way for the shipment of arms and munitions to Europe in British bottoms, it is doubtful if there will be room available for other shipments in any quantities for some time to come as a result of the piling up of the munitions on the piers of practically all the Atlantic ports while the order is effective.

Exports in bottoms other than British proceed of course without interruption, but the demand for freight space is far and away in excess of the supply.

WRIGHT DROPS IN ON INDIAN

SPRINGFIELD, Mass., Oct. 17.—Charles F. Wright, of the firm of Ballou & Wright, Indian distributors for Oregon, Washington, and the greater portion of Idaho, has arrived on his annual visit at the Indian plant. Wright, who is making an extensive trip through the East in the interests of his firm, is greatly impressed with the new models and freely predicts a large increase in business in his territory the coming season.

ADAMS-BAGNALL IN NEW YORK

NEW YORK.—The Adams-Bagnall Electric Company has located its New York office in the Engineering Building, at 114 Liberty street. The office is under the direction of F. C. Perkins, Eastern representative. The general headquarters for the company are at Cleveland, O.

FRY HITS NEW YORK TOWN

NEW YORK, Oct. 17.—Keyser Fry, who when in Reading portions his time between the Reading Cycle Co. and his big jobbing interests, dropped in on Gotham today to line up Reading Standard bicycle dealers for next season; incidentally Fry will wait over for the meeting of the United Cycle directorate, scheduled for the Hotel Astor tomorrow. "Business fine, outlook finer," was the way Fry summarized the results of his trip.

U. S. TRADE CAPTAINS VISIT IN TORONTO

Messrs. Rogers, Henderson and Lonn Confer With Dealers on 1917 Sales Campaigns; Indian Branch Factory Busy

TORONTO, Ont.—Recent industry captains to call upon Toronto dealers have been T. W. Henderson, President of the Henderson company, Detroit; R. F. Rogers, President of the Rogers Mfg. Company, and Mr. Lonn, of the Great Western Mfg. Company, LaPorte, Ind. While in Toronto Mr. Law called upon A. E. Humphrey, President of the Humphrey Bicycle & Motor Company, Limited. The latter concern will again be the sole distributor in Canada for the Great Western bicycle line for 1917.

In discussing arrangements for 1917, Humphrey told **Motor Cycle Illustrated** that he would sell all the bicycles that the Great Western people would and could ship to him as he expected that the Canadian demand for wheels during the coming year would be greatly in excess of the supply. Mr. Humphrey also pointed out that he had been receiving fairly large shipments of bicycle and motorcycle accessories from England, although no English bicycles could yet be obtained. The delivery of accessories from the Old Country has become fairly prompt and regular and even better results are looked forward to along this line.

Complete facilities are in operation at the Canadian branch factory of the Hendee Mfg. Company for the production of bicycles. The volume of the output will be quite heavy and a wide demand for Indian bicycles in 1917 is anticipated.

CHICAGO SIDECARISTS ON RUN TO GARY

CHICAGO, Ill., Oct. 16.—The run of the Chicago Sidecar Club yesterday brought out 20 members with their outfits and passengers. The destination was Gary, where luncheon was eaten. A program of athletic events followed, after which the homeward route was taken.

As in other runs of the club, non-members were welcomed on this occasion. A feature event by the club is scheduled for Hallowe'en.

BIG GOODYEAR INCREASE IN KENTUCKY

LOUISVILLE, Ky.—A. W. Ellis, Louisville manager for the Goodyear Tire & Rubber Co., returned last week from a trip to Cincinnati. He reports that the company's motorcycle and bicycle tire business in the Kentucky district has shown a big increase in volume this year, denoting that more riders are out, and that the trade is generally active. Mr. Ellis stated that the tire business was sure to show steady increases in these departments, due to the fact that manufacturers of bicycles and motorcycles are placing quantities of new two-wheelers on the market this season, and that it would mean a still larger demand for tires next year.

JONES SETS RECORD AT SPRINGFIELD

Indian Rider Covers Mile in 47 Seconds at Illinois Meet—Korn Captures Club Championship

SPRINGFIELD, Ill., Oct. 16.—Covering the mile in 47 seconds and setting a new record for the track, Don Jones, on his Indian, furnished the big thrill for the crowd of 3,000 which covered the rails and stands at the meet of the Springfield M. C. on Saturday. He cut six seconds from the former time of McCrea, which stood for some time. Jones hails from Boston.

Korn, riding an Indian, was victor in the club championship event for ten miles. His time was 8:39. Phelman, astride a Harley-Davidson, was second in this event, while Childs, similarly mounted to Phelman, came third. Korn entered in the time trial also, but was unable to better Jones' figure.

The last race of the meet, for five miles, was won by Phelman in 6:47. In this race the Harley-Davidson man outdistanced his rival, a speedy motorcar.

BEATS AUTO TIME TO WICHITA BY THREE HOURS

MILWAUKEE, Wis.—The Harley-Davidson Motor Company has just received word from F. H. Simon, Kansas traveler, that he piloted his Remy-equipped Harley-Davidson sidecar combination from Fowler to Wichita, a distance of 202 miles in 6 hours. This time betters that made by automobile by three hours. The course, which led through Dodge City, is very rough and sandy and the firm is naturally elated with Simon's performance.

READING CLUB STARTS MEMBERSHIP CAMPAIGN

READING, Pa.—The Reading M. C. has decided to open its charter and start a membership campaign. Three new members have already been accepted, and there are four on the eligible list in addition.

Whitney B. Sanders and Raymond Carver were elected to active membership, while another new member was George Beaver, who takes an associateship.

HERE'S ANOTHER OPENING FOR FOREIGN TRADE

NEW YORK, Oct. 14.—The International Resident Buyers, of 33 Union Square, New York, are desirous of obtaining additional selling agencies for lines of motorcycles, accessories and the like. The Buyers have branch offices in the West Indies and Central and South America.

The company is in a position to promote foreign trade with staple selling lines and can give a large volume of business to manufacturers.

SOUTHERN STATES OFFER BIG FIELD

Rush of Prosperity Induced by Big Crops and Munitions Exports Reflected in Motorcycle and Bicycle Trade

NEW YORK, N. Y.—From various trade sources comes the tip that the present is the time to strike and strike hard for business in the southern states. It is pointed out that the southern states are more than ordinarily prosperous at the present time and that greatly increased sales augur a great stimulation of business.

Texas is viewed as a particularly fertile field, its prosperity resulting from the top notch price of 16 cents for cotton and superabundant corn, rice and produce yields.

The Carolinas are said to be in fine shape for business stimulation while Georgia, especially in the manufacturing districts where the munitions business has created prosperity, is none the less ripe for present selling activity.

Northern Florida and Northern Alabama are enjoying most prosperous periods, and both Louisiana and Missouri are holding their own.

Barring unexpected business disturbance, the south is entering into a period that will make the motorcycle and bicycle business there a lively one.

$400,000 CLUBHOUSE FOR FIRESTONE MEN

Fine New Structure, For Use of 9,000 Employes, Is Dedicated by President Firestone; Res-Restaurant Will Seat 600

AKRON, O.—The new $400,000 clubhouse for the employes of the Firestone Tire & Rubber Co. was dedicated Saturday, Oct. 14, with appropriate ceremony. In his dedication speech President Firestone referred to the early history of the company, and stated that the act of turning the new building over to the 9,000 workers of the Firestone organization was one of the happiest of his life.

Bowling alleys, pool and billiard tables, shower baths and various athletic paraphernalia are installed in the home, and the chief feature is the factory restaurant which can accommodate 600 people at one time. One of the upper floors is devoted to a large auditorium in which meetings and conventions will be held.

HARE AND HOUNDS CHASE FOR NEW JERSEY M. C.

NEWARK, N. J.—Now that the Jersey Jaunt has been run off successfully, the New Jersey M. C. is turning its attention to a Fall Hare and Hounds Chase, which will be run off on October 22. The chase will be for club members only.

The course will approximate 35 miles and includes the city dumping grounds, Hackensack Meadows and some of the canal towpath. Wilbur Walden, the club president, works for the Mosquito Commission and in his daily duties of chasing these Jersey Larks has to motor over the course. He will therefore lay the trail. His duty is to mark the turns with lime and designate by a circle where he hides the three checks of different colored papers with numbers on. The hound who turns up at the clubhouse with three papers having the lowest total on them wins a year's subscription to the favorite motorcycle publication, the second man getting a tube.

The next item on the sports program following the chase is a run to Seidler's Beach, in which the Indian M. C. of New Brunswick and the Paterson club will join with the New Jersey members.

MANY DEALERS' HELPS IN GOODYEAR NEWS

HELPS for the dealer in the line of increasing sales, fixing tires and figuring profits are features par excellence of the September issue of the *Goodyear Tire News*, published by the Goodyear Tire & Rubber Company, of Akron, O. Among the aids to sales-making are lantern slides for movie houses, these being supplied free to dealers by the company.

HENRY SPLITDORF HAD USEFUL CAREER

Father of C. F. Splitdorf, Dead at 82, Was Veteran Worker in Telegraphy and Inventor of Many Devices

NEWARK, N. J., Oct. 17.—Henry Splitdorf, father of Charles F. Splitdorf, head of the Splitdorf Electrical Company, of this city, died yesterday at his home, 433 East 87th street, Manhattan. He was 82 years old.

Henry Splitdorf was among the pioneer makers of telegraph instruments, having made them for Professor Morse, the father of telegraphy. On his own part he invented the liquid insulation of the magnetic wire, a method now in universal use. It was Henry Splitdorf, too, who introduced asbestos as an insulating material, but in the motor vehicle field he is naturally best known through the Splitdorf magneto, another one of the numerous devices born of his ingenuity. Mr. Splitdorf was an associate of Clark, inventor of the Clark repeater, which made it possible for Edison to invent the quadruple system of telegraphy, and throughout his long life his contributions in one way or another to the field of electrical research have been listed by the score. His loss is widely regretted in the motor vehicle trades.

WEISHAAR NOT SCARED BY THE 13TH HOODOO

Wichita Speedster on Harley-Davidson Makes Clean-Up with Johnson as Team-Mate; Warner Captures One

WICHITA, Kans. Oct. 13.—Friday, the thirteenth, had nothing in it resembling a hoodoo for the Harley-Davidson riders participating in the motorcycle races on the half-mile track here. And to bring complete happiness to the local speed fans every one of the races was won by a Wichita rider.

Ray Weishaar, on a Harley-Davidson, captured most of the prize money, winning the one-mile, two-mile, ten-mile and twenty-five-mile, and taking second honors in the three-mile and five-mile events. Clarence Johnston, Harley-Davidson, won the three-mile, finished second in the two-mile and ten-mile, and took third honors in the five-mile and twenty-five-mile races.

"Speck" Warner, on an Indian, won the five-mile race and took third place in the sidecar race.

The three-mile sidecar event was one of the feature events of the program because it was the first appearance of the 1917 models in sidecar track competition. Walter Cunningham, with a 1917 Harley-Davidson, won first place, with Daniel Boon, also of Witchita and riding a 1917 Harley-Davidson, second.

The track was in poor condition as a result of the holes that had been gouged out of it by the automobile races preceding the motorcycle races. Johnston fell in the twenty-five-mile race, but rose uninjured and finished in the money. The entries were: Warner, Hepburn and Green, Indian; Sears and Jones, Excelsior; Weishaar and Johnston, Harley-Davidson.

DRISCOLL & JEANROY GET INCREASED TERRITORY

NEW YORK, Oct. 17.—Driscoll & Jeanroy, Dayton agents at 219 West 126th street, have taken the following territory for 1917: New York, Brooklyn, Long Island, Westchester and Rockland Counties. The firm's repair business is far above that of last year, and as a result the shop is working overtime much of the week. Storage facilities have also been increased.

The Dayton demonstrator is expected within two weeks now, and following its arrival, Jeanroy will go out after new agents. Total Dayton sales for the 1916 season were 58 Dayton Motor Bicycles and 28 Dayton big twins.

OGDEN PLANS EUROPEAN TRIP

NEW YORK, Oct. 17.—Leadly Ogden, of the Cygnet Rear Car, again favored New York with a visit today. Between sentences chock full of Cygnet and general motorcycle enthusiasm, Ogden let drop the fact that he is planning at present a European trip in the Cygnet interests; he intends to embark within the next few weeks.

Ogden has not yet completed his itinerary for the trip.

McKINLEY IS 1,000- POINTER IN PATERSON RUN

(Continued from page 9)

Havenstrite, the younger, saw a black dog just over the top that jinxed him, so he says, for right after that he lost the course and wandered round in the hills long enough to be several minutes late at the next check.

From Newfoundland the route lay through Macopin and Singac to the clubhouse, and had it not been for Bill LeDore crashing into an automobile, or maybe it was a Ford, there wouldn't have been a bit of excitement the rest of the day.

Oh yes, Reidel's passenger, one of the fair and warmer sex, carelessly threw her sweater across her knees, the wind swung it into the hind-wheel and then—ah, then—they both did what is known in acrobatic circles as a front somersault, only they did not complete it; they landed on their heads. No damage to maid, man or machine.

The finishers with their scores and chief points of equipment, are as follows:

Ralph McKinney, 1916 Harley-Davidson solo 3-speed—1,000 points in both regular and consistency scores; Firestone tires, Bosch magneto, Troxel saddle.

John Walton, 1916 Indian solo 3-speed—Regular score, 1,000; consistency, 999; Goodyear tires, Splitdorf mag-generator, Mesinger saddle.

Orrie Steele, 1916 Indian solo 3-speed—Regular score, 1,000; consistency, 999; Firestone tires, Splitdorf mag-generator, Mesinger cushion saddles.

Al Crocker, 1915 Indian solo 2-speed—Regular score, 1,000; consistency, 998; Goodyear tires, Dixie magneto, Troxel saddle.

E. Havenstrite, 1915 Harley-Davidson single-speed—Regular score, 1,000; consistency, 996; Goodyear tires, Bosch magneto, Troxel saddle.

William LeDore, 1916 Harley-Davidson with sidecar—Regular score, 1,000; consistency, 996; Firestone tires, Remy generator, Troxel saddle.

Miller Newman, 1916 Indian solo 3-speed—Regular score, 999; consistency, 990; Goodyear tires, Dixie magneto, Troxel saddle.

Paul Pester, Indian solo 3-speed—Regular score, 998; consistency, 998; Goodyear tires, Dixie magneto, Troxel saddle.

Paul Reidel, Excelsior tandem 3-speed—Regular score, 997; consistency, 988; Goodyear tires, Splitdorf magneto, Mesinger saddle.

R. Havenstrite, Harley-Davidson solo 3-speed—Regular score, 996; consistency, 990; Goodyear tires, Bosch magneto, Troxel saddle.

Nick Tenk, Indian sidecar 3-speed—Regular score, 996; consistency, 986; Goodyear tires, Splitdorf mag-generator, Troxel saddle.

Al Edmunds, Indian solo single-geared—Regular score, 996; consistency, 990; Goodyear tires, Splitdorf magneto, Mesinger saddle.

Bert Fielding, Thor solo single-geared—Regular score, 983; consistency, 973; Braender tires, Bosch magneto, Persons saddle.

Non-finishers were: Edward Newkirk, Harley-Davidson sidecar, out at Marcella with tire trouble; R. Vaneiderstein, Indian solo, out at Hibernia with broken mudguard stays; Frank Bailey, Harley-Davidson sidecar, out at Greenwood Lake with blowout; L. Holt, Dayton tandem, out at Greenwood Lake from physical exhaustion; John Lyons, Harley-Davidson sidecar, out at Suffern from minor troubles; L. J. Meyers, Indian solo, out at Arcola with slipping clutch.

CHASE TO ATHERTON FROM MOSSBERG CO.

Former Sales and Advertising Manager of the Attleboro Tool Maker Goes to Buffalo Metal Goods

BUFFALO, N. Y., Oct. 17.—Frank T. Chase, who was formerly head of the sales and advertising departments of the Frank Mossberg Co., maker of Mossberg tools, at Attleboro, Mass., has resigned that post to assume a position with the Buffalo Metal Goods Company, makers of the Atherton coaster brake.

Frank T. Chase

Chase has been with the Mossberg company for nearly ten years and knows the "ins and outs" of the cycle trade from A to Z. No man in the trade is better fitted to take up the duties of Atherton sales promotion than the former Mossberg man, for, like W. F. Emerson himself, Chase has a distinct leaning towards the sort of dealer co-operative work which the Atherton people distinctly favor.

Chase has already assumed his new duties at the Buffalo Metal Goods plant.

1917 HENDERSON GETS WARM WELCOME IN LOS ANGELES

LOS ANGELES, Cal.—The 1917 Henderson demonstrator arrived at the headquarters of the Henderson Motorcycle Sales Corporation and was promptly placed in the window on Oct. 10. Secretary F. A. Sutphen, of the firm, says that he never saw so much enthusiasm over a machine in his life as was made by the crowds over the new four-cylinder mount.

Interest in the Henderson has been thoroughly aroused by the activity in demonstrating the machine throughout the State.

Roy Artley has returned from San Jose where he took second place in the hill climb on his Henderson. Artley's mount was just out of the crate and was strictly stock, no change of gear or motor having been made.

ALFRED LEROY BACK HOME

LOS ANGELES, Cal.—Alfred LeRoy has returned to this city. The boy who astonished the country by making his second transcontinental tour, though deprived of both legs, came back as far as Colorado under his own power. About 160 miles southwest of Denver he was badly bumped by a speeding automobile, so shipped his outfit and came in by train.

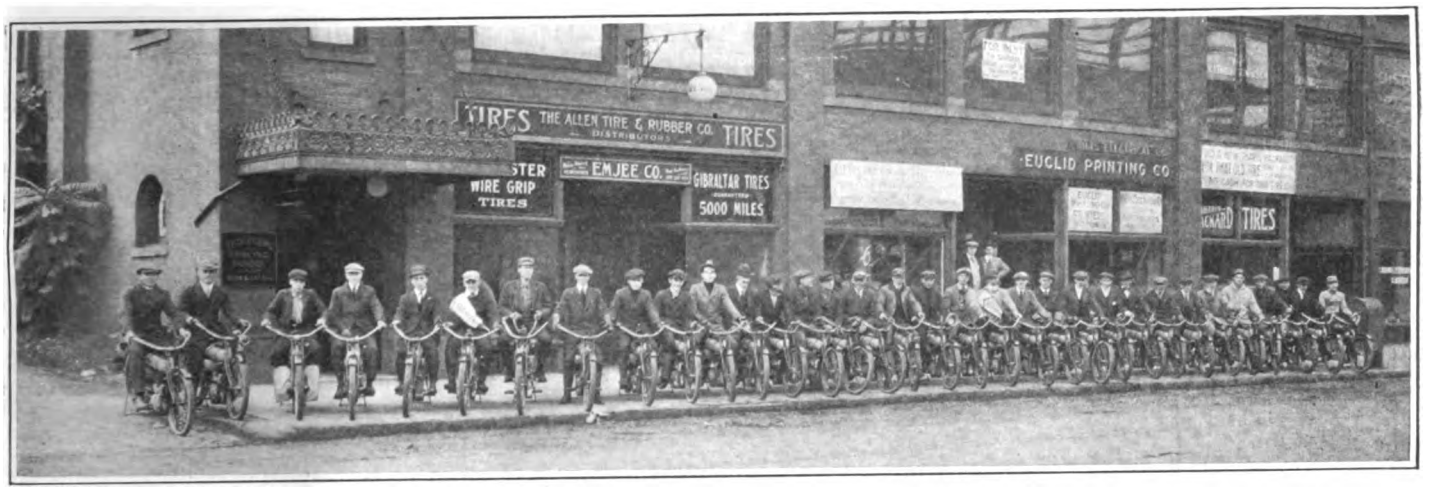
HOST OF CLEVELAND RIDERS FROM THE LIGHTWEIGHT'S HOME CITY



The Picture Was Snapped Just Before the Start of a Road Contest in Front of the Cleveland Motorcycle Sales Co.'s Store

DANISH PRINCE IS A MOTORCYCLIST

Prince Axel Purchases Harley-Davidson From Copenhagen Agents and Is an Enthusiastic Rider

COPENHAGEN, Denmark.—His Royal Highness Prince Axel has just raised himself another notch in the estimation of European sportsmen by becoming a motorcyclist. The motorcycle, an electric-lighted, three-speed Harley-Davidson, was purchased Sept. 8 from C. Friss-Hansen & Co., Harley-Davidson representatives in Copenhagen.

For some time past Prince Axel has been interested in motorcycles and he has experimented with several European makes. Last year he rode an A. J. S. and often made trips of considerable length through the country districts alone. Several months back he became interested in the Harley-Davidson and after trials, both in solo and sidecar service, he placed the order which gladdened the hearts of the local agents.

PAULSEN AND DAY CLIMB STEEP TACOMA HILL

TACOMA, Wash.—After a number of automobile men had tried with some success to climb the steep South K street hill, Tom Paulsen on a Thor made a sensational climb of the grade and Ray Day, on an Indian, did the same thing.

Day, who distributes the Indian in this city, took the machine from a spectator for the climb. Motion picture cameramen who were present filmed the motorcyclist as he passed over the crest of the South K street grade.

MOTORCYCLE CORPS IS WELL ORGANIZED

Preparedness Section of Pittsburgh Harley-Davidson Club Has Camp and Complete Military Equipment

PITTSBURGH, Pa., Oct. 17.—The Harley-Davidson motorcycle preparedness corps, organized in the early part of the summer and composed of members of the Harley-Davidson M. C. has reached that stage of development where it is attracting public attention. A camp on the old Ross farm is being used for drilling and training new recruits. One of the features of the camp is the 1,000 yard rifle range, which has been set up at considerable expense to improve the club's marksmanship.

The riders are equipped with carbines and the color of the uniforms is olive drab. The corps has been asked to take part in the big parade which will be held during Pittsburgh's Sesqui-centennial celebration in the early part of November.

Plans are being made for next years camp and it is very probable that an aeroplane will be added to the already extensive equipment and the riders given instructions in aeronautics by an experienced aviator. The corps is receiving the enthusiastic support of the Young Men's Business Club of Pittsburgh.

HENDERSON LEAVES FOR COAST TRIP

President of Henderson Motorcycle Co. Hits Westward on Annual Coast Visit—Ten Day in Los Angeles

DETROIT, Mich., Oct. 15.—T. W. Henderson, president and sales manager of the Henderson Motorcycle Co., left tonight for his annual trip to the Pacific Coast.

Henderson will first visit Portland and Seattle, and then work his way down the coast to San Francisco, finally reaching Los Angeles, where he will be the guest of the Henderson Motorcycle Sales Co. from Oct. 28 to Nov. 6.

Henderson will remain on the coast calling on the "four-cylinder" distributors and dealers until it is time to hustle back to the Chicago show.

His visit a year ago netted the formation of the Henderson Motorcycle Sales Co. in Los Angeles, which has been a "winner" in every sense of the word, and the length of his stay on the present trip no doubt augurs a further stimulation of the Henderson coast business.

INTERESTING EXHIBITS AT GOODYEAR CONFERENCE

AKRON, O.—Among a number of interesting exhibits at the district and branch managers' conference held last week at the factory of the Goodyear Tire & Rubber Co., was one which traced the firm's rubber products from the tropical jungles to the finished article.

On the same floor with the conference room was a comprehensive layout of the entire Goodyear line in a series of ten individual exhibits. Seven of these were given over to tires of all kinds, aeronautical supplies and mechanical goods. The other three displayed special features of the chemical and other departments.

Such an unusual reception was accorded the exhibit by the Goodyear men that at the termination of the conference the firm threw it open to the general public.

DERKUM PREDICTS BIG 1917 CYCLE SEASON

Southern California Indian Traveler States Coming Year Will Be Best Dealers Have Ever Experienced

LOS ANGELES, Cal.—Paul J. C. Derkum, who has just returned from covering Southern California for the Indian factory, says that 1917 will be the best season that Indian dealers have yet experienced. In a talk with the representative of **Motor Cycle Illustrated**, he stated that, although there has been a steady improvement in both the bicycle and motorcycle trades, this was the first time that he had felt warranted in predicting business that would really spell good times to the trade.

"Dealers are getting cash deposits on new machines," says Derkum, "even before they have seen them themselves. Riders are coming in and going over the announcements in **Motor Cycle Illustrated** with the dealers and planking down the cash. This is something the dealers have not had occur since 1913, and it is instilling in them a big enthusiasm that means a whirlwind campaign when they get their demonstrators and are able to make deliveries."

Derkum says that the only worry the average agency has this Fall is whether or not it can get machines quick enough to supply the demand they can create by active work.

LOS ANGELES JOBBERS ARE OUT TO HELP DEALERS

LOS ANGELES, Cal., Oct. 10.—Bert Louis, of C. L. Smith, bicycle jobber, and H. A. Lillie, of the Appeal Manufacturing & Jobbing Company, are chairman and secretary, respectively, of the informal organization of Los Angeles bicycle jobbers' salesmen. These are a live bunch of fellows who are getting together once in two weeks to discuss ways and means of helping the retailer increase his business in bicycles and accessories.

The social features of the gathering help take off the rough edges of the strenuous competition which exists in the trade in Los Angeles and Southern California. It is planned to have representatives of Eastern factories who are in town on the nights of the meetings join with the boys and give them talks on trade conditions from time to time.

SMITH ORDERS 400 GREAT WESTERN BICYCLES

LOS ANGELES, Cal., Oct. 14.—C. L. Smith, local jobber, ordered another car load of Great Western bicycles a few days ago and before the close of the week had to wire to send it extra full, making close to 400 bicycles in the shipment. Many were sold in advance, so fast did new business eat into Smith's stock. He says that although the price is going up right along it doesn't seem to stop the sale of bicycles. Country trade is showing up very strong.

MARYSVILLE CLUB PICNIC

MARYSVILLE, Cal.—The Marysville M. C. held a picnic on Oct. 8, when riders from nearby places were guests of the club. The Marysville squad left Rock & Youngs store in a body at 10:30 a. m., and returned late in the evening. One of the features of the outing was an inspection of the gold fields, where the largest dredges in the world are in operation.

THE HENDERSON IN BAKERSFIELD

BAKERSFIELD.—Jules Burgess, of Burgess's motorcycle shop, Bakersfield, an old-timer and big dealer here, has signed up for the Henderson agency for 1917.

FINDS SAILORS GOOD MOTORCYCLE PROSPECTS

Pacific Motor Supply Co. Interests Jackies on Warships and Merchantmen; Orange Co. Dealers Visits

LOS ANGELES.—The Pacific Motor Supply Co. now has a complete line of new Indians. This week they were visited by the Orange County dealers, A. H. Small, of Santa Ana; Carriker & Crowl, of Orange, and M. G. Anlauf, of Anaheim. The boys were so enthusiastic that when they went away they kidnapped a 1917 big machine from Manager Lebell and took it down. Each of the dealers will have it as a demonstrator and exhibition machine for three days and then return it.

The first delivery of Indians to Southern California will come about the end of this month. Manager Lebell says that he has orders on hand right now that would take care of two carloads. He is tapping a new field for sales in the men aboard war vessels and merchant ships at San Pedro harbor.

George Rubsch took a trip down there on Saturday and showed what the machine could do. That the demonstration was effective was evident by the visit of several sailor men to the store that very night. Lebell thinks that sailors are among the best natural prospects for motorcycles, as when they have shore leave they like to get around and see things.

CLUB TO HOLD HILL-CLIMB

LOS ANGELES.—The Los Angeles Motorcycle Club, at its meeting this week, determined to hold a hill-climb about Nov. 1, which will give the 1917 models a good chance to show their power. The committee in charge: Lester Miles, George Rubsch, Lester Reed and A. F. Van Order. The committee is going out this week on a scouting trip and will look for a hill accessible to a car line so as to bring out a good crowd, not only of motorcyclists but of nonriders.

L. A. M. C. ON BEACH RUN

LOS ANGELES.—About 30 riders went out on the L. A. M. C. beach run last Sunday. Their destination was Seal Beach, but on the way they dropped in at Hermosa, Manhattan and Long Beach. These runs create a lot of interest in the motorcycle in the out-of-town communities visited. Their next run will be to San Dimas canyon, and there is a masked dance planned for Hallowe'en.

HOFFER IN SANTA BARBARA

LOS ANGELES.—Fred Hoffer, of the Goudy-Hoffer Co., Excelsior distributors, is making a trip to Santa Barbara, to close a new contract for an agency there. Frank Low, who formerly had the Excelsior there, has closed out his motorcycle business.

ACTIVITY IN SAN DIEGO

LOS ANGELES.—Ray Smith, manager of the San Diego branch of the Goudy-Hoffer Co., is selling new Excelsiors fast

Digitized by Google

and is enthusiastic over fall trade conditions. He took two more machines from headquarters the first of the week.

MANUFACTURING STREET SWEEPERS

LOS ANGELES.—The Motorcycle Sweeper Co., in which officers of the Excelsior distributing agency are interested, has moved all its machinery to its new factory at 16th and Tennessee streets, Los Angeles, and is actively manufacturing the new street-cleaner.

WHITE BUYS OUT WILD

VISILIA, Cal.—W. E. Wild, who for 50 years conducted a motorcycle, bicycle and general sporting goods store in Visilia, sold out recently to Henry N. White of this city. Mr. Wild's establishment was one of the oldest on the Pacific Coast. He has many friends throughout the coast trade, especially in San Francisco.

REPAIR DEPARTMENT FOR TIP

RICHMOND, Cal.—Tip's Motorcycle Shop has opened a repair department at 327 MacDonald avenue, and business is reported brisk. T. D. Blume is the proprietor of the shop, and Al Desoto is manager. In addition to handling repair work of all kinds, the shop will carry a complete stock of accessories and parts.

ACTIVE RESULTS FROM RACE MEET

LOS ANGELES, Cal., Oct. 14.—John T. Bill, the Pierce distributor, is still getting fine results from the North Los Angeles race meet. It has stimulated the demand for racing wheels and every new sale seems to start two or three more. For this reason Bill's city dealers seem to be having even better business than those in the country. Bill says there is nothing like getting out and stirring things up to make business good.

LOS ANGELES TRADE BITS

J. T. WILLIAMS, of Johnson's Cyclery, in Modesto, is in San Francisco on business. He reports cycle sales conditions around Modesto as very good and is looking forward to a highly prosperous season.

GEORGE W. SHERMAN, the Indian traveling representative who left the coast recently for a visit to the factory and an eastern trip, is expected back in San Francisco in a few days.

EDWARD F. MERRY, distributor for the Excelsior lines, is on a business trip to Los Angeles.

THE Thor branch in San Francisco received a shipment of 1917 models a few days ago, all of which were spoken for before they arrived. A second shipment of Thors is expected in a week or two.

MAGGINI & PERKINS, who now have a 1917 Harley-Davidson demonstrator on their floor, are looking forward to a big shipment of the Olive-drab machines about Oct. 25.

ALUM PARK HILL-CLIMB DRAWS MANY VISITORS

Clubs From Nearby Places Attend Interesting Contests Near San Jose; Dudley Perkins Makes the Best Time

SAN FRANCISCO.—Rainy weather on Sunday, Oct. 8, did not dampen the ardor of the motorcyclist enthusiasts who gathered at Alum Rock Park, near San Jose, for the hill climbing program held under the auspices of the San Jose Motorcycle Club. There was a representative turnout and some good competition. Dudley Perkins, riding a 1917 Harley-Davidson three-speed, captured the first prize by making the ascent of the hill in 13 seconds, averaging 30 feet per second. Roy Artley, mounted on a 1917 three-speed Henderson, was in second place with 14 seconds.

The hill is 390 feet long, and has a 60 per cent grade. Each contestant was given three trials, and 20 riders tackled the climb. Visitors were present from many nearby places, including San Francisco, Oakland, Merced, Modesto, Sacramento and Madera.

TWO MEMBERSHIP TEAMS IN BOOSTING CONTEST

SAN FRANCISCO.—From now until November 2 things are going to hum around the quarters of the San Francisco M. C. The club has been divided into two teams for the purpose of conducting a membership campaign. The teams are designated as the "Reds" and "Blues," and the winning team is to be the guest of the losing squad at a big feed. At the present writing the "Reds" are leading by 31 to 10.

At a social held in the clubrooms, Oct. 5, eight new members signed up, and initiations were held on Oct. 12, at which time ten names were added to the club roster.

Fifteen members of the San Francisco M. C. made the run to San Jose on Oct. 8 to attend the hill climbing program.

BARTON AND HELPERS BUSY AT THOR BRANCH

SAN FRANCISCO, Cal.—The Thor branch in San Francisco is a busy place these days, particularly in the parts department, where more help had to be taken on, so great has been the rush. Coast Manager Z. Barton has been taking advantage of a few days of unsettled weather to clean up an accumulation of work at the office.

Barton has just returned from Los Angeles, where he placed the Thor agency with T. E. Berry, at 918 South Main street, one of the livest dealers in Southern California. The deal comes as the result of considerable negotiations, and is highly satisfactory to both parties. Berry has just received the first 1917 Thor on the Coast and has also put in a large stock of parts, putting his store in a position to meet all requirements promptly.

A stock of the new machines for the local branch is expected within a few weeks.

BAUMGARDNER HAS A NEW ONE

SAN FRANCISCO, Cal.—The first 1917 Indian model to appear in this city has been on display for the past week at the headquarters of John H. Baumgardner, local wigwam representative. The first shipment of Indians for general distribution is due to arrive about Nov. 1.

PROTEST DAZZLING CAR LIGHTS

SAN FRANCISCO.—Motorcyclists of this city have filed a protest with the City Commission, through The Capitol City M. C., against the use of brilliant headlights on trolley cars. The riders claim that the glaring lights endanger them, and it is their intention to seek legislation which will provide a remedy.

110 INDIANS SUBMARINED!

NEW YORK, Oct. 17.—That the cycle trade, or at least a part of it, was deeply affected when the German submarine U-53 torpedoed the Dutch steamer Bloomersdyjk, of the Holland American lines, came to light today.

The steamer, which cleared from New York for Rotterdam with a miscellaneous cargo, carried, besides a couple of hundred automobiles, a consignment of 110 motorcycles to the Netherlands Indian agent. Along with a quantity of motorcycle and bicycle fitments these 110 machines are now at the bottom of the sea somewhere off Nantucket Light.

PROMINENT FEATURE IN OMAHA INDUSTRIAL PARADE

Float and Machines Fitted Out By Harley-Davidson Agent, Victor Roos, for the Ak-Sar-Ben Celebration in That City, Commemorating 50 Years of Its Progress

WINSHIP TAKES 25 MILE AT WAKEFIELD

Local Indian Pro. Captures Feature Race at Columbus Day Meet on Fast Massachusetts Track

READING, Mass.—Leslie Winship, riding a stock 1915 Indian, came in first in the 25 mile feature race at the Wakefield track on Columbus Day. His time was 31:20. One lap and a half behind was H. Smith, whose time was 32:35. Winship overhauled Smith in the seventh mile and from thence on led. Holbrook, who had been going strong and well up among the leaders, had a blowout and retired in the 24th mile.

Walter Tucker, of Reading, won the 10 mile amateur in 12:14 2-5. Tucker rode a stock Indian. The 10-mile pro. event went to L. W. Holbrook, Harley-Davidson, in 11:14. W. Willst, Thor, was second in this event.

The five mile amateur race, which opened the meet, was won by Charles Doherty, Indian, in 6:29. J. Ducette, also on an Indian, was second. Holbrook got second place in the 10 mile amateur also.

A crowd of 1,500 witnessed the card of four events. This meet was the last of the season and was considered on all sides the most successful one of the year. The promoters were George W. Davis, Indian agent, and Charles J. Martin, Harley-Davidson dealer.

YOUNG TO MANAGE ANGSTEN-KOCH SALES

CHICAGO, Ill., Oct. 13.—N. A. Young will take over the office of sales manager for the Angsten-Koch Company, maker of A-K horns, tandems and carriers, at 215 Englewood avenue, on November 1. Mr. Young was previously assistant sales manager for the Metal Specialties Mfg. Company.

The Angsten-Koch business for the year 1916 has trebled that of 1915, and plans are now being drawn up for the erection of a new factory with complete metal specialty manufacturing facilities in addition to its own plant.

INDIAN VANS FOR DRUG DELIVERY

WASHINGTON, D. C.—Osborn & Leishear, Indian agents have made a sale of an Indian with delivery van to the People's Drug Company, which operates a chain of drug stores in this city. So efficient has the vehicle proved itself in special delivery work for the store to which it was assigned that the People's Drug Company has entered specifications with the local Indian dealer for a similar outfit for each of its stores.

MOTORCYCLE FOR LOVELAND COP

DENVER, Colo., Oct. 13.—The city of Loveland, Colo., recently purchased a motorcycle for its chief of police. This was done in order that he might do more effective work in bringing speeding motorists into police court and so far he has succeeded remarkably well.

ANOTHER SERVICE FEATURE

ELSEWHERE in this number appears a complete and authoritative article describing the construction of a motor-sled—with detail drawings. It represents painstaking work and considerable research by an engineer who knows the possibilities of a motorcycle power plant from A to Z; it is typical of the service which Motor Cycle Illustrated is consistently giving its readers.

For weeks past letters have been coming in with requests for motor-sled plans. The article referred to is the answer. It is published now because those who are interested in motor-sleds—and there are hundreds of them—want it now. They wish to lay their plans in advance, to be ready for the fun of skimming snowy roads.

"Service" is something more than a word to the staff of Motor Cycle Illustrated; It is a pledge of co-operation and a bond of friendliness. It stands for action. You have a pal, no doubt, who is always ready to roll up his sleeves and help you with a roadside repair, while others stand around and merely make conversation.

Well, Motor Cycle Illustrated is the pal that rolls up its sleeves whenever it's necessary. That's all.

SAVE $2 PER DAY BY USING MOTORCYCLE

Providence Travelers Cut Road Expenses by That Amount With Power Driven Two-Wheeler

PROVIDENCE, R. I., Oct. 13.—That the motorcycle may revolutionize travelling salesmen's lives is the opinion of C. H. Gardiner and E. W. Meehan, both of this city, who are the only two men in Rhode Island who ride a motorcycle to cover their territories. Both men declare that the motorcycle is a money saver, time saver, business getter and a means of sport all in one. They use Harley-Davidson machines of 1915 model, but expect to get 1917 models before long.

Gardiner represents George M. Griffin & Company, dealers in butter, eggs, beans, etc. Five years ago his company decided to cut down salesmen's expenses and considered the motorcycle and the automobile. It was found that the motorcycle would be the cheaper, hence Gardiner hit upon the Harley-Davidson. He has been riding one ever since.

Asked to give some idea of the expense of maintaining the machine, Gardiner said that during the time he has been riding, he has covered thousands of miles. On the last machine he has made about 50,000 miles. It is still in good running condition and his expenses are kept down to such an extent that he is saving about $2 a day over what expenses used to be when he travelled by rail.

He says that he can get 59 miles out of a gallon of gasoline on country roads, while in the city this is cut down to 39 owing to traffic conditions. Gardiner could not say just how much he had laid out in repairs, but he did not replace a part on the machine until last week, when he was forced to put on new sprockets and a new chain. The machine has never been overhauled.

Meehan verifies practically everything Gardiner says about the machine. He states that his daily saving is over $2 a day. He has had his machine overhauled once and says he has run it 3,000 miles since and it is in as fine condition as when new. Meehan represents a general merchandise distributing house here and states that since he has been riding the motorcycle he has much more time to himself.

He says that it is possible to go into a town and cover it and get away from an hour to two hours sooner than he could if he travelled by rail.

RIDING TO FLORIDA

DIXON, Ill.—Otto Osterman left a few days ago on a motorcycle trip to Palm Beach, Fla. Osterman will stop at St. Louis for a few days where he will meet James Whitford. The two will then start on the trip to Florida where both expect to spend the winter. The return trip will be made to N. Y. and across the eastern states home by the Lincoln Highway. Osterman rides a Harley-Davidson, and will take a complete camping outfit with him.

CARROLL IS NEW F. A. M. VICE-PRESIDENT

Frisco Goodyear Official Appointed to Succeed Pixley in Western Section—Risden a Director

AKRON, O.—President Shelby A. Falor, of the F. A. M., announces that F. C. Carroll, who is connected with the Goodyear Tire & Rubber Company in San Francisco, Cal., has been elected second vice-president of the Federation to fill the vacancy left by the resignation of C. F. Pixley. Mr. Pixley has been on duty along the Mexican border with his company for some time past, and is therefore out of touch with motorcycle affairs. He was retained in office at the F. A. M. Convention in Providence pending a definite report from him as to whether he would be able to take any further interest in F. A. M. matters. He has since informed Federation officers that he has no means of knowing when it will be possible for him to give direct attention to the motorcycle field, and it is for this reason that his successor has been appointed.

C. W. Risden, of Los Angeles, Cal., has been elected director of the F. A. M. in place of Edwin F. Merry. Merry was elected at the Providence Convention, but found it necessary to resign on Aug. 22, owing to the pressure of other duties.

ENGRAVER USES SIDECAR TO INSURE DELIVERIES

NEW YORK, N. Y., Oct. 13.—The Scientific Engraving Company, of this city, has purchased an Indian Powerplus and sidevan for use in delivering work to various publications in this city. The firm has found that the only way in which cuts could be delivered to the customers in time was by means of the three-wheeler outfit, hence the purchase. The combination was sold by the New York Sporting Goods Company, Indian representatives, at 10 Warren street.

SPANISH FIRM WANTS MOTORCYCLES AND BICYCLES

WASHINGTON, D. C.—A late announcement by the Bureau of Foreign and Domestic Commerce states that a well-known firm in Spain is desirous of obtaining agencies for standard motorcycles and bicycles. It is stated that the correspondence may be conducted in English, and that the firm is able to give references. Details concerning this announcement may be obtained by addressing the Bureau of Foreign and Domestic Commerce, Department of Commerce, Washington, D. C.

NEOLIN SOLES FOR NAVYMEN

AKRON, O.—Uncle Sam's sea fighters cannot ride the decks of a battleship on Goodyear tires, but they are to come as near to it as possible. The latest United States Government contract for navy shoes specified Neolin soles—Neolin being a new product of the Goodyear Tire & Rubber Company

How Seven Motorcycle Carriers Put the Special Delivery Service of Providence, R. I., on an Efficiency Basis.

One of the Providence Carriers

EFFICIENCY in the handling of Special Delivery letters and parcels is one of the hobbies of Postmaster Kilton, of Providence, R. I. He decided two years ago that Providence should have 100 per cent. service in this postal department, and that at the same time expense should be cut to the minimum.

So he employed several carriers who owned motorcycles. They made good, and he took on several others. He now has seven motorcycles in service, four Hendersons, two Harley-Davidsons and an Indian, and over 700,000 pieces of Special Delivery mail were delivered by them in the year ending June 1.

That's pretty strong proof of the motorcycle's serviceability in postal work, isn't it? Postmaster Kilton thinks so, and the people of Providence agree with him.

The motorcycle carriers make from $150 to $200 a month and naturally like the work. They buy their own khaki costume and wear a distinctive cap and a badge.

It is safe to say that there are hundreds of postmasters who are confronted by the same problems that Postmaster Kilton tackled, Friend Dealer, and they can be interested in the motorcycle if properly approached. Why not pay one of your riders to give your local postmaster a week's demonstration of the motorcycle's adaptability to Special Delivery service? That ought to start something. At any rate, it's worth trying. When you visit your postmaster to talk about the trial, take this copy of **Motor Cycle Illustrated** with you and show him what Postmaster Kilton has done.

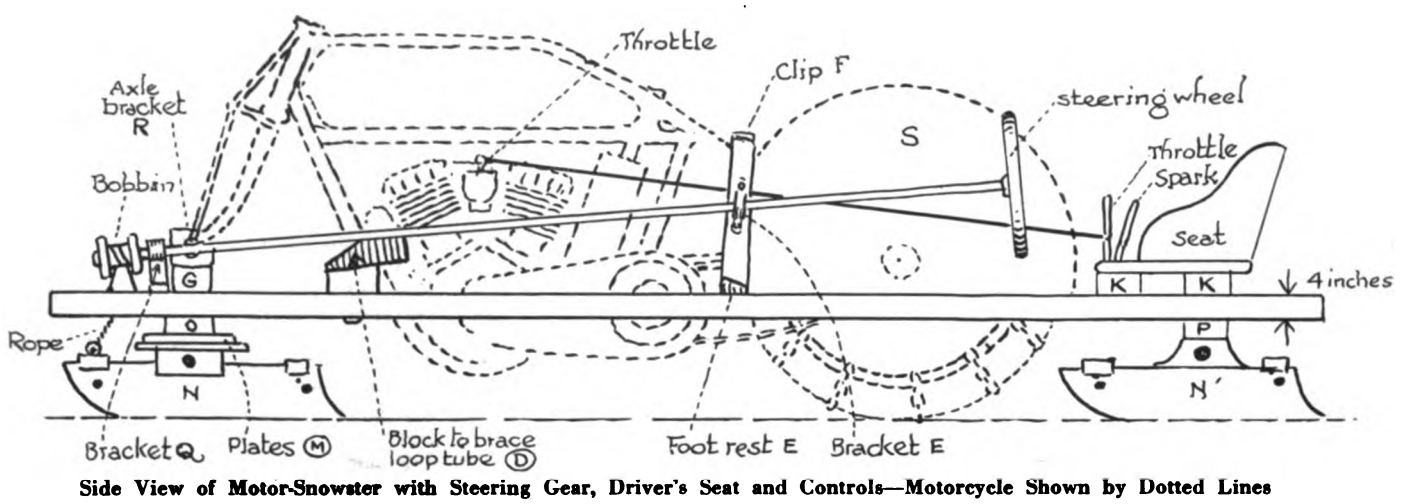
Your Motor-Snowster; Here's A Power-Sled That Combines Simplicity and Low Cost with Efficiency

Complete Descriptive Details and Working Drawings for a Comfortable and Speedy Outfit Which Can Be Built Around Any Make of Motorcycle—Use of Stock Lumber and Steel Reduces Cost and Trouble to Minimum

By D. R. Hobart



Side View of Motor-Snowster with Steering Gear, Driver's Seat and Controls—Motorcycle Shown by Dotted Lines

ANOTHER practical service feature, characteristic of the broad-gauge policy which has made Motor Cycle Illustrated the essential journal in its field for the rider, as well as the tradesman, is presented in the accompanying article. Our Technical Department has been at work for some time past on drawings and descriptive material covering the complete construction of a motor-sled, and the details furnished are based upon the transfer of a motorcycle power plant to a sled with the least possible trouble and expense. We feel that the comprehensive information herewith given will be highly valued as a service feature by motorcyclists who wish to continue their outdoor recreation when the snow begins to pile up; and that time is not far distant.

By all means, keep your motorcycle rolling over the roads as long as Jack Frost and his gusty cohorts will permit; then when ice and deep snow make it impossible to use your mount longer in the conventional way, you can follow the plans here outlined and quickly transform your two-wheeler into a comfortable and dependable snow-skimmer.

The fact that no less than a score of readers have already applied for data on the construction of a motor-sled is sufficient proof of the interest in these novel vehicles and of the timeliness of this article.

If there is any point upon which further information is desired, address an inquiry to the Technical Department of Motor Cycle Illustrated, and the additional details will be supplied promptly.—THE EDITOR.

DO you get up in time to see the hoar-frost on the fields, these crisp mornings? Do you realize that here it is well nigh the middle of October and that presently—in a few short weeks at least—the snow will be flying, and the lakes will be freezing, and unless you are prepared, the motorcycle season for you is over, or practically over, until the early spring thaws rid the roads of ice and sleet?

The Preparedness Idea

Prepared? Oh that's just another way of saying that you have spent these crisp days, when a fellow feels like getting out and doing things, making for yourself a bob-sled, or motor-sled in which you can install your two-wheeler the instant the snow has fallen deep enough for the sled runners to hold—a motor bob which converts your motorcycle into an all-year-round vehicle.

How? Oh, just get out the brace and bit, the wrenches and the other tools and follow the simple directions set forth below. They cover practically any make of motorcycle on the market and the beauty of it is that you can use your two-wheeler right up to the last minute, and then a few minutes' work will be sufficient to convert it into a winter vehicle.

In constructing this motor-sled, only standard sizes of timber and steel have been given, as far as possible. The same is true as regards bolts and nuts. The timber can be obtained ready planed, so that carpentering by the rider is practically limited to sawing to length, taking off burrs and like work. For cutting the steel pieces, a metal saw should be used.

The power plant of this sled is a complete motorcycle, minus the front wheel and the movable portion of the spring fork. The chassis consists of two ash or oak side members, 2 x 4 x 108 inches. These are connected at the top by four cross-members, of oak, and below by two cross-members. Referring to the side view of the sled and also to the top view of the chassis, members G, J, O, and P are 2 x 4 x 36 inches, while K and K¹ measure 2 x 2 x 36 inches. The cross-members are fastened to the longitudinals or side members by ½-inch through bolts, washered on both sides.

In addition to the six cross-members and the longitudinals, the chassis requires two oak blocks, 2 x 4 x 6½ inches, two steel plates about 7 inches in diameter and ⅜-inch thick, four pieces of steel, two of 2 x ⅜ x 42, another 2 x ⅜ x 9¼ inches, and the fourth of the same dimensions but 6½ inches long. Finally, there is to be on hand a piece 2 x ⅜ x 88 inches of steel, and the sleds, details of which latter follow.

Details of Sleds

The sleds N and N¹ consist of two side members each, cut as in the illustration. The length is 18 inches and the height except at the center 8 inches. At the central section the height is an additional 6 inches, making a total of 14 in all. The lug at the center is 6 inches long. The oak used is planed to ½-inch thickness.

Digitized by Google

Each sled has two cross-members, of oak, 32 x ¾ x 4 inches. The first of these is fastened close to the nose of the sled sides and the rear one with its end flush with that of the sled sides. The sides should be mortised to take the cross-members and attachment should be made by means of ¼-inch steel stock 1½ inches wide and 4 inches long. This stock should be bent at right angles in the center and drilled for two ¼-inch holes. For each sled provide two ¼-inch bolts 33 inches long and two other ¼-inch bolts 1 inch long. Runners are of half-round stock, ½ inch wide by ⅛ inch thick. Flat stock of the same width could, of course, be used instead of the half-round.

Assembling the Sled

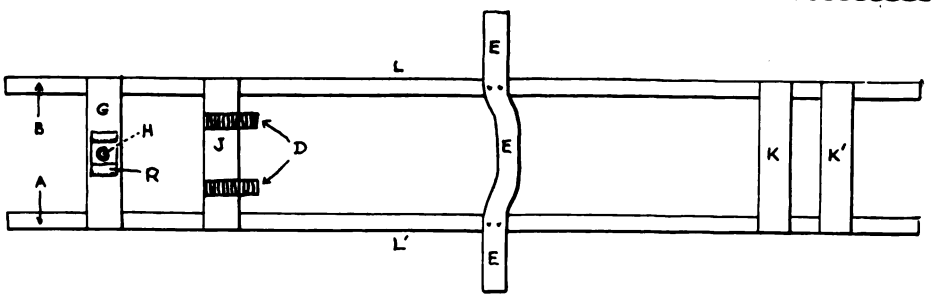
Having fitted the runners on the sled sides, cut the mortises for the cross-members, and put the latter in place without drilling. Turn the sled upside down and place the ¼-inch stock bent at right angles and drilled as mentioned above in position; then drill holes to correspond through the wood pieces. Put the shorter ¼-inch bolts through the upper holes and the 33-inch bolts through the lower holes from side to side. Put lockwashers and nuts on, and be sure to washer each bolt-head.

Take the steel pieces 2 x ⅜ x 42 inches and bend the ends down so that the pieces assume a U-form and fit within the lugs on the sled sides. Drill the sides for 1-inch bolt and the center of the long section for a 1¼-inch bolt. Also drill two ½-inch bolt holes 4 inches apart from the central hole. Next take one of the steel plates and drill to correspond with the steel piece just operated upon, with the 1¼-inch bolt hole in the center. Countersink the holes for the ½-inch bolts. Attach the steel plate to the U-piece by means of ½-inch bolts with flat heads. Attach the U-piece to the lugs on one sled by a 1-inch bolt, passing through from side to side. This construction will allow the sled to rock up and down.

Fit U-piece Next

For the rear sled, fit the second U-piece to the lugs with a second through bolt of 1-inch diameter, but do not attach the plate. The plate is to allow the front sled to move from side to side in steering. Turn next to the chassis.

Lay the longitudinals, with their front ends even and their outside edges 36 inches apart. Place them with the 4-inch sides vertical in doing this. At a point 14 inches from the front edges place the cross-member G. Mark its location, and also that for O on the lower side of the frame. These two members must be directly in line with each other and with the 4-inch dimension horizontal. Two inches from the rear edge of each longitudinal, mark off the position for cross-member K¹ and its mate P on the lower side of the frame. Mark G and K¹ for two ⅜-inch bolts, drill through G and K¹, the side members and the cross-members O and P, bolting them up tightly. Next place cross-member K about 9 inches forward of K¹, and drill as before, bolting through the side members. Turn the chassis over.



Top View of Chassis with Brackets and Cross Members in Position

Drilling for Pivot

Mark the center of cross-member O and drill through it and member G for a 1¼-inch bolt at the center. Drill the other steel plate for the central 1¼-inch bolt and also for two ½-inch bolts, 4 inches apart along the center line of the member O. Countersink the smaller bolt holes. Place the plate on member O and insert two ½-inch bolts long enough to pass through O and G and project one inch beyond. Set on the nuts temporarily. Next drill P at the center for a 1¼-inch bolt, driving the drill through K¹ also. Insert a bolt of this size from the upper part of K¹, reverse the rear sled and attach it by means of this bolt. The nut will be on the lower side when the sled is upright.

Drill the member P to correspond with the holes in the U-piece and insert coach screws, or bolts, as desired. In the latter case, drive the drill through K¹ also. It may be advisable to use a plate about ¾-inch thick between the U-piece and the member P to bring the chassis at the same level front and back. In such a case the plate will be drilled to correspond with the U-piece. The rear sled is now in place.

Fixing Axle Bracket

Place the front sled on the plate attached to O and put in the long 1¼-inch bolt. Now turn the chassis right side up. We are ready for the machine-carrying members of the sled. Take the steel piece 2 x ⅜ x 9¾ inches and drill a hole to take the 1¼-inch bolt at the center. Drill also two holes for ½-inch bolts 4 inches apart along the center line. Bend up the ends 2⅛ inches from the center, to right angles and drill holes in the upturned pieces to take the front axle of the motorcycle. The upturned ends must fit in between the fork ends of the motorcycle and the holes therein should be drilled to match with those of the fork ends. Place the piece, referred to as R, on the cross-member G, and over a long 1¼-inch bolt, and the two ½-inch bolts which project from below. Put on lockwashers and nuts and tighten. We are now ready to fit the motorcycle.

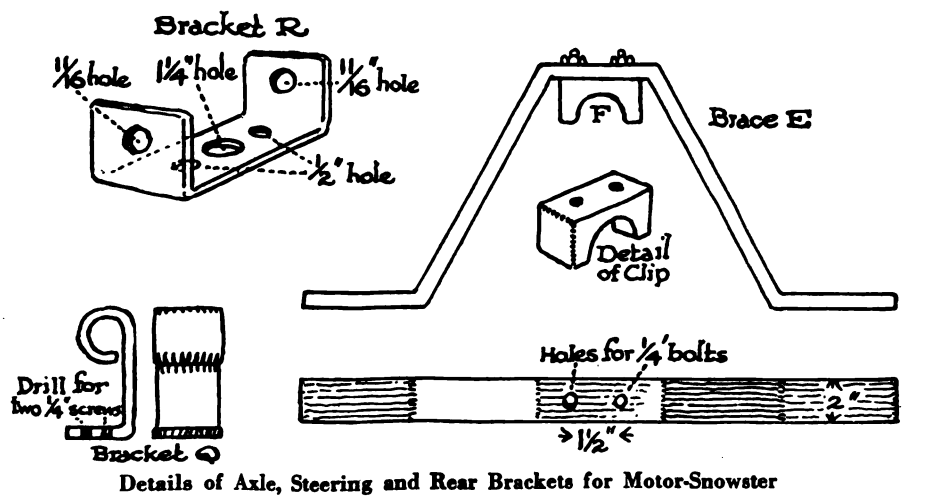
Fitting the Machine

Having removed the front wheel of the machine and the movable portion of the forks, place the machine within the chassis of the sled, so that it can be attached to R by means of the front axle. Keeping the motorcycle upright, take the remaining 2 x 4 cross-member and place across the frame close to loop or inclined tube as at J in the top view of the chassis. Take the two wood blocks and place them on J so that they fit against the loop tube, one on each side snugly. The rear wheel must be resting on the floor when this is being done. Mark the position of J on the side members and of the blocks on J and drill for ½-inch bolts. Attach J to frame and blocks to the cross-member J.

This forms a sort of cradle for the motorcycle, but a brace at the rear is also desirable. This is made from the steel stock 2 x ⅜ x 88 inches. At the center, drill two holes, 2 inches apart, center to center, for ¼-inch bolts. Take a wooden block 2 x 3 x 3 inches and cut a groove 1½ inches deep in one of the long faces. Drill the opposite face to correspond with the holes in the steel piece. Bolt the block to the piece.

The Rear Brace

Place this block over the tubing just in rear of the seatpost lug and bend the ends to reach the side members. See sketch of E. Part of the end will be found to project beyond the top of the side mem-



Details of Axle, Steering and Rear Brackets for Motor-Snowster

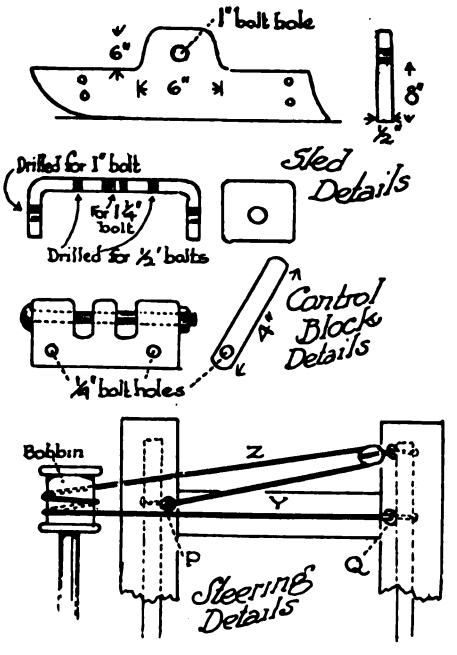
Digitized by Google

ber on each side and this portion will be used as a foot-rest. Drill that part of the piece which covers the side members, to take ½-inch bolts, insert bolts and set up nuts.

It may be desirable to fill in the groove in block or clip F with rubber, but this should not be necessary if care is taken in the fitting of E to the frame and the rear portion of the motorcycle. As different motorcycles vary in the height from the ground at this point, the fitting of brace E will have to be done to accommodate the motorcycle which the builder desires to use for his powerplant.

Steering Apparatus

The seats for rider and passenger are fitted to a plank attached to members K and K¹. The seats used in a side-by-side seat attachment can be fitted with a little ingenuity on the builder's part. For the steering tube, use ⅝-inch iron pipe, long enough to reach from the hands of the driver (when seated) at the level of the chest, to the extreme forward end of the chassis. This will be about 82 inches. Turn a wooden bobbin or spool with a flange on each end, 4 to 5 inches in diameter at the center. Bore this for the ⅝-inch pipe. Obtain a piece of steel or iron 1¼ inches wide and ¼ inch thick, with a length of 10 inches. Bend this as in the sketch Q to form a bearing for the forward end of the steering tube and attach to the side member. Next attach a steering wheel to the end of the tube and insert the tube through the bracket Q. Mark off



Sled, Control and Steering Parts

on bracket E where the steering tube is to be attached and drill E for a bolt to pass from the right hand side, around the steering tube and through the lower hole, where a nut affixes it in place.

Put on the wooden bobbin and pin it in place. Put a strong eye-bolt in the cross-member at the front of the front sled on each side. Get a pulley to take ½-inch rope and fasten this to the inside of the right side member of the frame. Attach one end of a ½-inch rope to the right hand eye-bolt, take two turns around the bobbin and pass the other end through the pulley, leading it to the other eye-bolt. Anchor the rope to the bobbin at the center of the turns. The rope from the right hand eye-bolt must pass over the bobbin from the top in order that the steering may be like that of a car.

Arranging Controls

Much of the details of throttle, spark and clutch control will have to be left to the ingenuity of the builder, owing to the variation in different models of machines. In the sketch, two levers, each 4 inches long, of ¼-inch stock, are used for throttle and spark, connection for the former being by rod, bent to suit, direct to the carbureter throttle lever. These two levers are mounted in slots in a wood block bolted to the seat board close to the right hand of the driver. For the clutch, a long rod with a D-handle connected direct to the operating lever is recommended, although no illustration of it is given.

A metal guard S is shown fitted over the rear wheel to prevent splash. This can be fastened to the rear stays and forks. It will be noticed that the saddle and spring seat are removed before putting the bracket E in place. Use a chain on rear wheel to get traction.

Efficient Lights Ensure Against Accident

With Proper Illumination Both Front and Rear the Rider and Machine Will Be Protected from Collision and Much Trouble Will Be Avoided Under All Circumstances—Pointers on Lamp Maintenance

By DWIGHT HAVENS

NOW that days are growing so short that darkness comes before the end of working hours, to have the lighting system in good order becomes essential. The tail light is just as important as the front one. Riders have been run down from behind because the tail light was out of commission; perhaps it had jarred out; perhaps the burner was clogged, but the undertaker's bill had to be paid just the same. Better be safe than sorry.

If the machine is to be left standing in the street very much after dark it will pay to put a cock between the tank and the head light so the rear one can be left burning while the front is off. This may save the machine from injury by being run into from behind.

It Won't Jar Out

Here is a good hunch for a tail light. Though it's a good plan with any machine, it is most useful with all the cradle spring Indians, where every time the machine takes a bad bump the mud-guard snaps back and forth a distance of three or four inches. Carry the lamp on the luggage carrier, *not* on the mud-guard.

There are several serious objections to having the light on the guard. In the first place the flame is likely to snap out when the rider doesn't know it and leave him unprotected; second, the added weight of the lamp, the bracket and the number plate —which must be near the lamp—are often enough to make the guard crack and finally break off, on account of the crystallization from the jarring, or the light itself may shake off and be lost; third, there are more difficulties in making a safe gas connection to the mud-guard position because of the motion of the guard, which requires more rubber tubing. Sometimes holes are punched in the guard to permit the passage of gas tubes. These weaken the guard materially.

Bracket Construction

A pair of brackets can easily be made from stock about one-eighth by one inch, to fasten the number plate at the back end of the carrier, and one of three can be extended a couple of inches to carry the lamp. In this position there is much less vibration and danger of the flame jarring out; also, there is no extra weight on the guard to break it off—and new ones aren't given away free, as a rule—while a single piece of copper tubing can be used, reaching from the gas supply all the way to the nipple of the tail light.

If copper is used wherever possible most of the chances for leaks will be eliminated, as rubber will only have to be used in small pieces for connections—probably not over a foot and a half all told. But since rubber must be used to some extent, by all means get a good quality; you can afford to pay a high price if you are only using eighteen inches of it; it's real economy. I have some that is still in use and that I bought four years ago, and it has never given me any trouble, while, on the other hand, the stuff that only costs a few cents a foot is worth no more than you pay for it, and usually fails to last a season.

Clean the Burner

The burner of the rear light seems more inclined to get stopped up than the front. Don't throw the burner away if only one side is working. Insert a very fine needle in the hole in the closed side to push the dirt out and it will usually be as good as ever. Better keep a needle for this and stick it in a small piece of wood for a handle. This makes it easier to use, and you can recover it when dropped instead of losing the thing merely to pick it up later in one of your tires. A grand way to stop the burner up by sooting it is to turn the flame low and leave it going while the machine is standing. Always leave it well on or entirely off.

Many riders don't seem to know that a gas light can be focused for near or far work. If you have a lamp which is any good at all, you will find a slot in the lower side of it where the stem of the burner

(Continued on page 44)

HARLEY-DAVIDSON DEALERS COMBINE

Ten, Covering the Metropolitan District, Form a Cooperative Association — Action Taken on Cut Price

NEW YORK, Oct. 17.—With the formation of the Harley-Davidson Dealers' Trade Association, which was consummated at a meeting of ten of the dealers in and around the Metropolitan district held at the office of the Harley-Davidson Sales Co., 533 West 110th street, comes to light a movement that is full of significance for the local trade, if indeed it does not hold promise of even bigger things.

At this get-together meeting, which was held on Tuesday evening last, Walter Koch of the newly formed Koch-Ruhle Co., Long Island Harley-Davidson distributor, was installed as temporary secretary, the election of officers being postponed to a later date.

The chief accomplishment of the gathering was a distinct outline of the things that can be done by a co-operative body of this sort, the net results being a decision to draw up an agreement covering all members cutting short their dealings with cut-price motorcycle supply houses which enter the retail field; a thorough threshing out of the traded-in machine situation and a decision as to the maximum prices to be allowed on various makes and models.

The dealers represented at the meeting were: G. E. Wood, New York distributor; Koch-Ruhle Co., Long Island distributor; Bob Brazenor, Brooklyn distributor; Carl Bush, Newark distributor; W. Ed. McDougall Co., Newark; R. S. Woods, Trenton; M. D. Lautz, Jersey City; Jack Horner, Plainfield; J. W. Terhune, Hackensack.

The new association, for the time being, will hold meetings weekly on Tuesday evenings at Wood's agency.

CYCLE BOOKLET FROM INDIANA RUBBER

JONESBORO, Ind., Oct. 17.—The Indiana Rubber and Insulated Wire Company, makers of Pye-Musselman cord tires for bicycles, have gotten out a neat little booklet which should be in the hands of every one interested in the cycle. It is entitled The Bicycle Racing Year Book and gives among other things a complete list of American and international bicycle records, sketches covering most of the bicycle riders now appearing on American tracks, cycle racing rules and regulations, the whole being mixed with just enough Pye-Musselman information to add zest to the booklet.

Copies can be had for the asking.

BROWN DROPS IN ON GOTHAM

NEW YORK, Oct. 17.—Fred L. Brown, vice-president and sales manager of the Pierce Cycle Co., of Buffalo, dropped in on the New York Sporting Goods Co. yesterday on a hurried trip to settle some moot points, chief among which was the matter of deliveries.

The sporting goods company, which is the local agent for the Pierce bicycle, is clamoring for deliveries, but with the materials market in the present state Brown states that the Pierce factory cannot turn out machines at half the desired rate.

Among the things which pleased the Pierce sales manager most was the continued exclusive use of Pierce bicycles by the New York police department through the efforts of the New York dealer.

NEW MACHINERY AND PLANT FOR FLXIBLE

Sidecar Firm Installs $40,000 Worth of Tools and Apparatus — Occupy Building November 1

LOUDONVILLE, O.—About $40,000 worth of machinery is being installed in the new plant of the Flxible Sidecar Co., which is now nearing completion, and when the factory is in full swing it will be fully capable of meeting the increasing demands for the company's products. From present indications the factory will be ready for occupancy about Nov. 1.

The new building is 225 feet deep and 80 feet wide and is constructed of brick, steel and glass. It will be devoted exclusively to the manufacture of Flxible sidecars.

In discussing the outlook for 1917, Hugo H. Young, secretary-treasurer of the company, states that arrangements have been made to market an all-steel sidecar body, which in all probability will make its debut at the Chicago Show. The company will start to make regular deliveries about March 1. Mr. Young also announced that the company will advance the price of its 1917 sidecar from $75 to $80.

As was announced in these columns some time ago, the Flxible Sidecar Co. now has the backing of C. F. Ketterling, the well-known inventor who recently received $7,000,000 for his interest in the Delco starter, and it goes without saying that the Flxible manufacturers are financially equipped to do their product full justice in the national sales campaign which is being planned.

OKAY INQUIRY FROM WAR FRONT IN FRANCE

BROOKLYN, Oct. 17.—Lee S. Woodruff, who is head and shoulders of the Okay Motor Mfg. Co., maker of Okay attachment motors for bicycles, is pointing with pride to an inquiry he has received from "somewheres" in France; incidently the letter bears evidence of the far-reaching influence of **Motor Cycle Illustrated** for it was from this paper that T. A. Morice, the inquirer, read of the little bicycle power plant.

The letter, censored of course, brings a story of the care used to prevent the "enemy" from obtaining direct locations in the shape of a most intricate code address given by the writer. It also brings to light the deep seated interest in cycling and anything that pertains to the sport that is part and parcel of the British temperment.

ONLY THREE FINISH HARRISBURG TWO-DAY

Heagy and Ritchie, on Harley-Davidsons, Get Perfect Scores, While Uhler, Thor, Loses Ten Points

HARRISBURG, Pa.—Ray Heagy and Russell Ritchie, riding Harley-Davidson machines with electrical equipment, and C. H. Uhler, on a 1917 Thor, were the only ones to finish the recent 408-mile two-day endurance run of the Keystone M. C., to Scranton and return. Heagy, who rode solo, obtained a perfect score, while Ritchie, who piloted a sidecar combination, also got 1,000 points. Uhler had two blowouts and was arrested for speeding in Wilkesbarre, all of which affected his score. He was credited with 990 points.

The route led through the mountains and was over the worst roads in this part of Pennsylvania. The outward trip was through Williamsport and Benton to Scranton, while the return was made via Allentown and Reading. The showing made by Ritchie was considered excellent, with respect to the nature of the roads traversed in the mining section of the State, among others.

F. R. Senseman, one of the starters, rode through to Williamsport, the first control, but suffered a tumble and withdrew with a broken collarbone. Heagy, who is one of the firm of Heagy Brothers, local Harley-Davidson dealers, used Remy electrical equipment on his mount, with Firestone tires. Ritchie had the Remy system on his Harley-Davidson and Goodyear tires. Uhler had a Bosch magneto on his Thor and Paragon tires. All three used Wright sparkplugs.

MADDEN SIGNS APPEAL CO. FOR VACUUM CUPS

LOS ANGELES, Cal., Oct. 10.—James Madden, manager of the Pennsylvania Rubber Company, with office at San Francisco, handling California and Arizona territory, has just returned from a trip to Los Angeles. During his visit he again signed up with the Appeal Manufacturing & Jobbing Company, giving them exclusive distributing agency for their bicycle tire line, Pennsylvania Vacuum Cup and 3 star brands.

CROTONA CLUB PLANS BALL

Plans are all but completed for the annual ball of the Crotona M. C. which is slated for Thanksgiving evening, November 29, at McKinley Casino, 169th street and Boston Road, the Bronx, New York. Some 400 members and guests attended the ball last year and it was such a huge success that an even greater attendance is predicted for the coming event.

U. S. RUBBER DIVIDEND

NEW YORK.—The United States Rubber company, "parent" of the United States Tire Company, has declared a quarterly dividend of 2 per cent on its first preferred stock and 1½ per cent on its second preferred.

GIVES CYCLE DATA FROM AUSTRALIA

Canada Cycle Traveler Tells of Antipodean Situation on Return From 25,000 Mile World Trip

TORONTO, Ont.—After traveling practically around the world in quest of new business, F. W. Dunn, assistant manager of the Canada Cycle & Motor Company, Limited, returned to the headquarters of his company here with considerable information regarding cycling matters in distant fields. Dunn declares that he found American-made motorcycles wherever he went, but that English and Canadian bicycles held the predominance in far foreign lands.

Dunn covered 25,000 miles during his long journey, and his principal objective point was the Antipodes.

Much of the data obtained by Dunn is of timely interest to American manufacturers. The Australian and New Zealand governments have set a preferential tariff in favor of English bicycles and accessories, but the English wheels are now difficult to obtain, of course. There is a 30 per cent. import duty on bicycle imports from all other countries, including Canada, but Dunn believes that this arrangement will soon be changed to permit of the cheaper importation of bicycles from Canada.

Although the duty on bicycle imports from all countries except England is 30 per cent., the import charges on bicycle parts is only 5 per cent. The result has been that the Canada Cycle Company has been shipping wheels to the lands of the Southern Cross in a knockdown form. They are assembled, brazed and finished after receipt at destination. As reported a week or two ago, the Australian Government has decided to take up the manufacture of bicycles for post office and telegraph purposes. To a certain extent, Canadian parts will enter into the composition of the government-made cycles.

The distances between cities in Australia are great and the motorcycle is a popular form of transportation over the rough roads and paths. There is considerable ranching in the Commonwealth, and most everybody on the big ranches owns or uses a motorcycle. Automobiles are available, and the four-wheeled vehicles are employed by large parties of people in traveling from ranch to ranch or to the cities, but for everyday work the motorcycle has been found to be the most appropriate and convenient motor vehicle. The motorcycle is used for a great variety of purposes on these farms, and a great many of the machines were produced in the States.

FROST STOPS BAKER'S 24-HOUR ATTEMPT

CHICAGO, Ill.—A combination of frost and minor power-plant troubles cut short the attempt of Erwin G. Baker to set a new 24-hour motorcycle record on the Maywood Speedway on Oct. 8. As it was, "Cannonball," on his Powerplus, covered 248 miles in 2:25:00 before giving up the ride.

Although it had been decided to start in the afternoon, the fitting of a valve guide to "Bake's" machine delayed matters, so that he was not able to start until 7:10 p. m. During the first hour he made 67 miles, covering the first 50 miles in 44:10, and the 100 in 1:35, five minutes of which was used in filling up. The falling of night brought on cold and frost, but in spite of slippery track conditions Baker kept on.

At 126 miles a spark plug gave out, but it was quickly replaced and the lanky rider went right on. On the next lap he broke two valve springs, but the Indian men figured that by the time new ones were put in the track would become dangerous.

MILWAUKEE CLUBMEN TALK ON MEMBERSHIP

At Enthusiastic Meeting Members Plan Campaign to Increase Strength — Prominent Speakers Heard

MILWAUKEE, Wis., Oct. 15.—At one of the most enthusiastic meetings ever held by the Milwaukee Motorcycle Club, plans were made for unusual activity this winter for the purpose of knitting closer together the local fraternity and also for the start of a membership campaign to increase the roll sufficiently so that a decided reduction can be made in the dues.

Former Assemblyman Winfield R. Gaylord, an enthusiastic motorcycle rider, expressed pride at being associated with as clean a sport as motorcycling, and told of an extended trip taken with his daughter on a political stumping campaign. "We found the motorcycle invaluable," he said, "the work of the sidecar in the Ozark Mountains was truly marvelous."

Mr. Gaylord urged the members to greater activity in club life so that the local organization could better carry on its work of placing the motorcycle in Milwaukee and vicinity on a higher standard. His speech was well applauded.

E. J. Mueller, assistant sales manager of the Harley-Davidson Motor Company, told of the workings of other clubs which he

had visited on his tours around the country, and particularly praised the Rockford, Ill., organization. He referred to it as a model club and stated that its success was due in a large part by interest aroused by bowling leagues, baseball clubs, and summer cottage and other features, all of which worked in nicely with the motorcycle game. Other speakers at the meeting were Frank B. Rogers, Frank J. Strachota and Louis Peterik.

One of the features of the evening was a humorous monologue by Ike Schaatz. Hugh Sharp presided and expressed satisfaction over the fact that six new members were added during the meeting. Frank Swayne, Pope traveler for Wisconsin, was among the guests.

ELECTION AND SMOKER FOR HARLEY-DAVIDSON M. C.

PITTSBURGH, Pa.—The Harley-Davidson M. C. of this city held a meeting on Tuesday evening, Oct. 17 to elect new officers. J. G. (Pop) Bishop was elected president, Lawrence Keys, vice president, and A. J. Gloeckler was re-elected secretary-treasurer.

A large and enthusiastic crowd of members was present, and a smoker followed the election. The "eats" and amusements furnished by several of the members were features of the evening and Samuel Kerr was the star amusement attraction.

The house committee is planning for the improvement of the club and the rooms are soon to be redecorated. New furniture is being bought and many more conveniences for the members will be added. A player piano was purchased recently.

The entertainment committee is planning several dances for the coming winter, the first one to be held will be in the near future.

BERRY'S BIKE BUSINESS ACTIVE

LOUISVILLE, Ky.—Clyde Berry, head of the O. K. Cycle Co., which recently moved from 3rd street to 415 West Green street, reports that his new location is proving even better than the old one, and that he is more than pleased with the change. Bicycle repairs have been especially active.

SCHEDULE REVISED FOR ELLIS'S JAUNT

Yonkers to Poughkeepsie and Return Affair Slated for October 29 To Be Made at 28 M. P. H. Rate

YONKERS, N. Y., Oct. 17.—Because he intends making the event which he is promoting for Oct. 29 more of a pleasure jaunt than anything else, George A. Ellis has revised the running schedule allowing the competitors another hour for the trip from Yonkers to Poughkeepsie and return.

As he has it figured out now, the riders will leave Yonkers in a body at 10 A. M. and arrive at Poughkeepsie at 12:30 P. M. One hour will be allowed for luncheon at Poughkeepsie, the return start being set for 1:30. The riders will check in at Getty Square, Yonkers, at 4 o'clock.

The total distance, according to Ellis's schedule is 140 miles to be covered in five hours of running time, or at a rate of 28 miles an hour.

Entries for the event, for which a gold watch and gold cuff links are offered as prizes, are coming in in fine shape; the prizes are on display this week in the show window of the New York Sporting Goods Co., 10 Warren street, New York, where further information can be had from Ellis concerning his pleasure jaunt.

SPECIAL FILM OUT TO AID COMMERCIAL SALES

MILWAUKEE, WIS.—In line with other effective endeavors to aid dealers in making commercial and municipal sales, the Harley-Davidson Motor Company, working in collaboration with the Paramount Pictures Corporation, has brought out a film entitled "Queer Uses for the Motorcycle." This film, whose length is several hundred feet, represents the power two-wheeler in diversified commercial uses. It was released in the Paramount Pictograph on October 8.

The first two scenes were taken on a farm and show the Harley-Davidson machine operating, while the second shows the farmer at night with sidecar rig waiting for his wife and son to come out and drive home. A Harley-Davidson-Pyrene apparatus putting out a fire is the subject of the next picture. This is followed by the resuscitation of a drowned swimmer by Pulmotor outfit brought to the scene by a sidecar and the transportation of the patient to the hospital by the same means. Military uses of the motorcycle complete the film. The film is now being shown in nearly 3,500 motion picture houses and the Harley-Davidson folks have notified every dealer of its booking at his particular town.

Newsy New Items From Tacoma

TACOMA, WASH.—Frank P. Fentress, formerly of the Fentress-Newton Company, in Indianapolis, Ind., is again in this city. He has not announced his plans for the new season, but it is expected that he will engage in the retail accessories line.

W. P. Glasgow, distributing the Harley-Davidson in Tacoma, sold 13 of the olive drab 1917 models up to October 12. Glasgow and his aides are out with demonstrators covering Pierce County these days, and all are figuring on a big selling season.

K. Knappen, manager of the Tacoma branch of the Motor Vehicle Protective Association has opened at 750 Broadway ready for business. The association is formed to prevent motorcycle and motor car thefts and restore stolen machines and apprehend the thieves.

Motorcyclists who purpose riding across the Canadian line are advised to stop at the American customs office, then cross the international boundary and enter Canadian customs. The Dominion authorities will then issue a 30-day free touring permit. The following description of the motorcycle is required: Make of motorcycle, value in dollars, manufactured by, place of manufacture, manufacturer's number, licensed in, number of cylinders, make of speedometer, tire number.

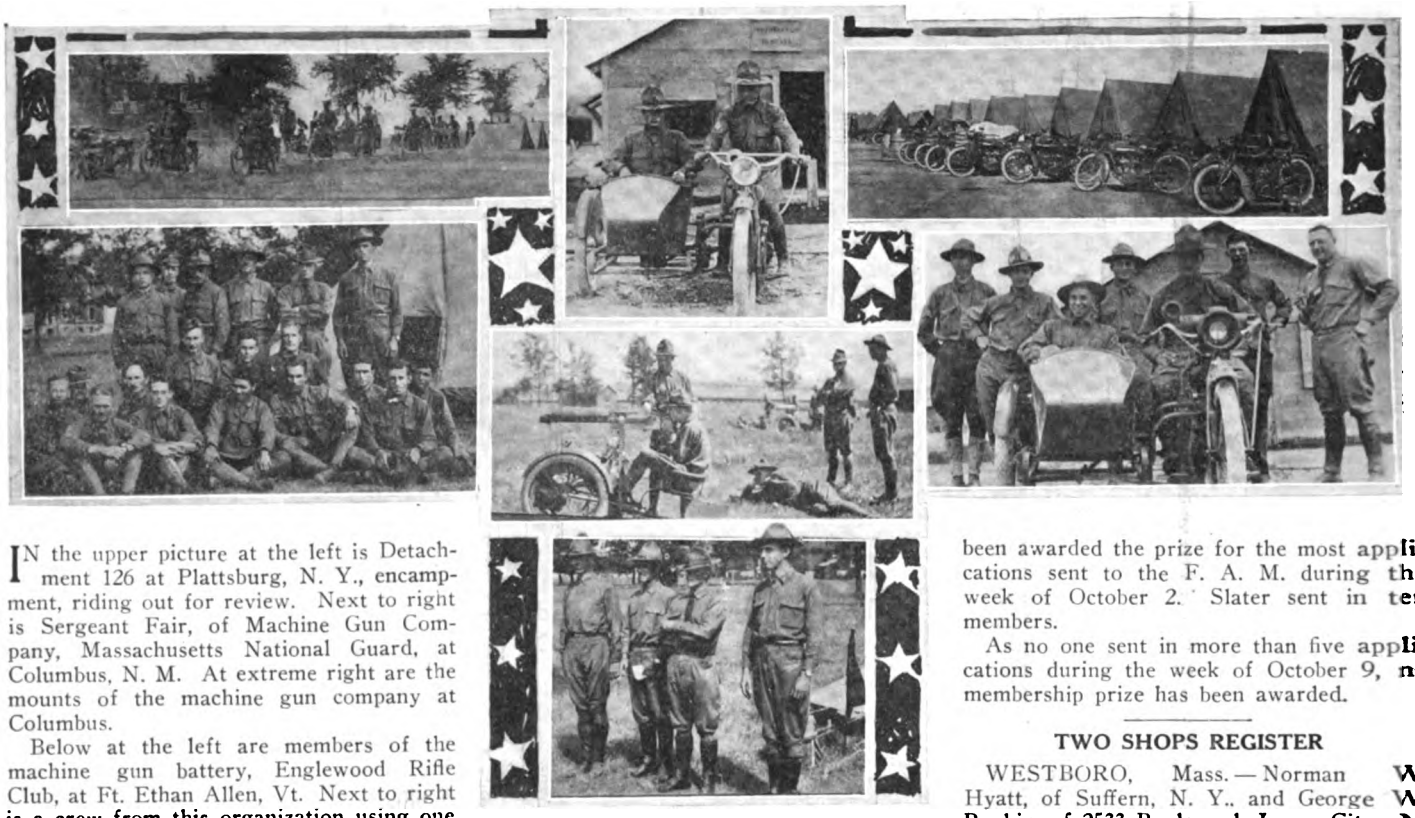
DEPICTING MILITARY MOTORCYCLING IN SEVEN SCENES



IN the upper picture at the left is Detachment 126 at Plattsburg, N. Y., encampment, riding out for review. Next to right is Sergeant Fair, of Machine Gun Company, Massachusetts National Guard, at Columbus, N. M. At extreme right are the mounts of the machine gun company at Columbus.

Below at the left are members of the machine gun battery, Englewood Rifle Club, at Ft. Ethan Allen, Vt. Next to right is a crew from this organization using one of their guns. Then comes a graduating class in motorcycle riding at McAllen, Texas. The last picture shows a group of officers watching practice by the Englewood squad at the Vermont training fortress.

JOHNSON WINS TWO AT GRAND JUNCTION MEET

DENVER, Colo., Oct. 14.—At the Frontier Day celebration held in Grand Junction, Colo., last week freak motorcycle races were on the program. The races were not ordinary speed contests, however, but were held on the main business street of the city where they were witnessed by a large number of people.

The first race was a slow one—that is, the rider that took the longest time in traveling the distance of one block was declared the winner. The winner was Merlin Johnson, riding a Harley-Davidson, while second place went to Felix Carson on an Excelsior; and Peter Fox on an Indian, the man who sells those machines in Grand Junction, came in third.

The one block stop-to-stop motorcycle dash was won by Merlin Johnson, with Peter Fox taking second place. The third race was the chief event of the day and called forth more excitement than all the other events put together. It consisted of a race between Peter Fox on his Indian and a boy on roller skates pulled by a bull dog. It is said that the only thing that saved Fox from losing the race was the fact that the bull dog after leading for half the distance turned and went the other way.

The events were arranged by the motorcycle dealers of Grand Junction. By giving the races interest was created in the motorcycle and thus the machines and their dealers were advertised.

SLATER WINS MEMBERSHIP PRIZE FOR OCTOBER 2

WESTBORO, Mass.—Secretary-Treasurer G. B. Gibson announces that Gordon B. Slater, of Bakersfield, Cal., has been awarded the prize for the most applications sent to the F. A. M. during the week of October 2. Slater sent in ten members.

As no one sent in more than five applications during the week of October 9, no membership prize has been awarded.

TWO SHOPS REGISTER

WESTBORO, Mass.—Norman W. Hyatt, of Suffern, N. Y., and George W. Rankin, of 2533 Boulevard, Jersey City, N. J., have registered their shops with the F. A. M.

DIXIE CLUB AFFILIATES

MEMPHIS, Tenn.—The Dixie M. C. of this city has received its notice of affiliation with the F. A. M. from Secretary G. B. Gibson. The club has 12 members at present, but a campaign is on to increase the strength. The secretary is F. L. Mackenney, 1161 Central street.

WEALTHY PLANTER USES SIDECAR

LEXINGTON, Ky.—Although Kenneth Alexander, of Spring Station, Lexington, has an income of $60,000 per year from his fields and owns several big automobiles, he uses a Harley-Davidson sidecar combination to travel over his plantation. Mr. Alexander has found that the three-wheeler outfit is the only satisfactory means of transportation for this purpose, hence his purchase of a combination.

THREE RACES IN BAYONNE

BAYONNE, N. J., Oct. 17.—Three races were held on the Hudson County Boulevard, Sunday afternoon, by the Hudson County Wheelmen. H. Keats, 1 minute, defeated the field in the five-mile handicap in 14:26 1/5. H. Klotz, 1 minute; Louis Mahieu, 40 seconds, and James Flanagan, scratch, finished as named. J. Fargo led J. Flanagan and John Carey, Jr., across the tape in that order in the two-mile open, while Flanagan beat R. H. Olsen in the race for the Brassard.

ENJOY CHESTNUT PICKING

PROVIDENCE, R. I., Oct. 15.—About 50 members of the Providence Motorcycle Club enjoyed a run into the country today, the occasion being a "chestnut picking run," conducted by B. A. Swenson.

Practical Aids to Chain Efficiency

How to Reduce the Danger of Breakage to the Minimum; Something About the "Offset" Connecting Link; Pointers on Thorough Lubrication; Proper Tension of Chains Is Important

By GEORGE M. JOHNSON

THE word efficiency, as applied to any part of a motorcycle, means the delivery of the goods with the minimum of trouble; and of course a high degree of efficiency requires that the satisfactor service continues for a reasonable period of time. Just as soon as trouble appears the efficiency percentage drops with a dull thud.

Take chains for example. If, after say 1,500 miles, a rider finds rollers breaking, as was my experience early this season, there is something wrong; he isn't getting efficient service from that chain. One of the meanest kinds of trouble a rider can experience on the road is chain trouble. Repairing a chain is a dirty, messy job at the best, and after dark is a mighty difficult job too. What can a motorcyclist do to insure himself, within a reasonable degree, against such misfortune?

Select Reliable Make

Well, in the first place he can be sure that the chains are good to start with. There are chains and chains, and while most chains on the market are good, some are better than others. It is a good plan to insist on the make you are satisfied with when having new chains fitted. That will pay, for there will be no chance of a second-class chain being substituted. An experience of mine with broken rollers recently came because the shop chanced to be short that day—they carried a reliable make of chain—and had to send out to another place for the required article, which was not of the make I wanted.

The kind of chains reliable manufacturers put out today will run for long distances with little attention and less care. But that doesn't mean that the degree of efficiency cannot be increased by the rider. I am now in my fourth season of chain experience, previous to which I tried out belts, both flat and V.

Chains Rarely Break

In all my four seasons I have actually *broken* a chain but once, and that was when I was starting a sidecar outfit by the laborious process of running it along on the ground, the cranking mechanism being temporarily out of whack. The clutch was in tight, the throttle open too wide, the chain was old and weak, and when the motor fired—a regular volley it was, too—the long chain conked off completely. It actually broke in two different places at once.

That is the only time a chain has really broken for me, though on several occasions practically the same result has occurred through the failure of a connecting link. Well made modern roller chains are nearly perfection itself; the one weakness in the chain drive is, in my opinion, the connecting link. The connection must be one that can be quickly put on or taken off without the use of complicated tools, and at the same time it has to stand as much of a strain as any part of the transmission. But a chain is no stronger than its weakest link, and, therefore, in nine cases out of ten, when a good chain lets go the failure is due to the device used for connection.

What can a rider do to prevent this?

To begin with he can see to it that his chain is not connected by one of the half links or so-called "offset links." It is often very convenient to use one of these in order to get the right adjustment easily, and it is quite possible that some riders use them with no trouble resulting. Such has not been my experience, however, and I have heard the offset links characterized as "no good" in at least one agency. In the case of a *new* chain on unworn sprockets, where everything fits perfectly, the offset link is much less likely to fail; but when used with worn chains and sprockets, the chances are too big against it to make experimenting worth while. The last two offset links I used gave a combined mileage of twenty-two miles before snapping; one ran fifteen, the other seven. That followed other experiences of the same kind, whereupon I solemnly swore "never again." In the last two cases, when results with the offset links were so discouraging, both chains and sprockets were badly worn.

Where the Trouble Lies

The trouble with this style of connecting link seems to lie in the sharp angle of the side plates—the offset place. Possibly this is unavoidable—I don't think so—but anyway it so weakens the link as to render it practically worthless. The threaded bolt and the cotterpin fastening through this are other questionable features. It would seem that the chain manufacturers ought to take a tip here and change the type of half link; as I see it, the present style is worse than useless. The point then to bear in mind is this: when you have new chains fitted to the "boat," insist that the repair chappie avoid the deadly offset link; if your machine has one on now, you will probably be the gainer in the long run if you replace it by the other kind of connection.

Even the better style of union is not absolutely dependable. Its weakness lies in the thin spring clip that holds the side plate in position. As a simple matter of precaution every rider would do well to replace this clip with a new one at least once every thousand miles or less. In any

"ISN'T THAT CALF A *DEAR* LITTLE THING !" SHE SAID.

"Sure!" he replied. "Veal's Thirty-Two Cents a Pound."—*A Honeymoon Incident*

Digitized by Google

case, he should pry it off with a knife blade or small screwdriver at reasonable periods of time and note how badly it is worn. These little springs last wonderfully, but they *wear,* and in time—sometimes sooner, sometimes later—drop off. Then, of course, there is nothing to prevent the side plate from dropping off, and presently the chain parts company with itself. This very thing happened once to me during the present season and once to a riding companion. In the latter case the episode occurred after dark, which complicated the otherwise easy repair job. We put my machine in position so that its headlight pointed in just the right spot, and by its help and the sense of feeling did the trick.

Much has been said from time to time about cleaning and oiling chains, though this is a job that hardly appeals to the average motorcycle rider. There is no doubt, however, that chains will give longer and more efficient service if this is done. It is more necessary with the long chain, as the short one is more thoroughly protected from dust and often gets oil from the crankcase breather, as well as a small amount which works out along the main shaft.

Proper Cleaning

To be properly cleaned the chain should be removed and given a good bath in kerosene, all the accumulation of oil and gummy dust being scrubbed off. A ten cent tooth brush is an ideal implement for this purpose. The chain should then be transferred to a clean bath, as the first one will be pretty well loaded with grit. When entirely clean, let it hang up and drain, and then soak it in lubricant. I ordinarily use engine oil for this, though a mixture of oil and graphite might be better. The trouble with the prepared graphite chain lubricant is that under ordinary conditions the stuff is too stiff to get in under the rollers, rivets, etc., where it is really needed. If the graphite preparation is melted, however, this difficulty is overcome.

Lubricating a chain while on the machine by means of an oil can is of doubtful value. This does oil it to a certain extent, but the oil must carry a good deal of road grit into the working parts, if it is light enough to be of any good. I have heard chain authorities quoted to the effect that if the oiling is not done properly, it is better not done at all. It is possible, by aid of a stiff brush and gasoline or kerosene, to give a chain a fairly thorough cleaning on the machine, but it cannot be compared with the results secured by the method suggested above.

Chain Adjustment

Another point to be kept in mind by the rider who wishes to minimize the chances of chain trouble is proper adjustment. A motorcycle chain should not be notably tight, nor should there be any slack. Now and then you hear a machine pass on which the chain constantly hits against the mudguard. That is bad for the guard and bad for the chain, besides which the clattering, clinking noise cannot fail to make an unfavorable impression on all who hear it. It makes the motorcycle sound like shaking up a tin can full of shingle nails. If the chain is connected by an offset link with the cotter pin on the *inside* or by the other type with the spring clip on the *inside,* this battering against the guard will soon be fatal, for the links cannot long withstand such treatment. In several cases I have known a rear wheel to be locked by reason of a projecting rivet head catching the edge of the chain and bending it back until it pressed so tightly against the chain that no further movement of the latter was possible. If the guard is too close to the chain, bend it away by putting the edge of a cold chisel or similar instrument against it and pounding it in.

There is a much better chance of a very loose chain breaking than if it is kept up to the proper tension. A loose chain has a sort of snap or whip under the pulsations of the motor, and this is quite likely to bring out any weakness there is. Furthermore, a very loose chain, particularly if it is also a poorly fitting chain, will constantly try to climb the sprocket; if it succeeds the probable result will be a break, and even if the chain gets over the sprocket without damage to itself, it is likely to mess things up in an ugly way before the machine can be brought to a stop.

When Sprockets Are Worn

When chains and sprockets are badly worn, getting the right adjustment is a less simple task. In the former case the chain may have developed what repairmen sometimes call "loose and tight places." That is, in one position of the rear wheel the chain may be very tight, while in another it is too loose. This condition is due to badly worn sprockets more than anything else, and is not likely to appear on the wide sprockets which came out on 1915 models. In adjusting such a chain the wheel should be turned until it is seen that the adjustment made does not have a place where the tension is too tight. Find the tightest spot, and get that just loose enough; the loose places will have to take care of themselves.

In conclusion, it might be said that the same thing is true of chains as of various other parts of a motorcycle. Not a great deal of care or attention is required, but a little will be well repaid by increased efficiency and decreased trouble.

CONSTABLES "IN BAD" FOR BREAKING SPEED RULES

HAMILTON, Ont.—Practically the first use of motorcycle constables for the catching of motor speedsters on Ontario roads has been blocked by a ruling by Magistrate Jelfs of the Hamilton Police Court that motorcycle cops who exceed the speed limit in chasing miscreants are themselves guilty of an infraction of the code and are liable to punishment. This ruling came as a result of hearing of cases of speeding on the new Hamilton-Toronto model concrete highway. The constables admitted that the method of ascertaining offenses against traffic laws was to watch the speedometers on their own motorcycles.

As a result of the decision of the Hamilton judge, a piece of hurry-up legislation is to be enacted, it is understood, to enable qualified constables to break the law in order to secure speed evidence.

The case stands as a precedent in the prosecution of officials for law breaking of this sort and undoubtedly will have a bearing on future speed cases.

STORMS AND FALLS MARK INTERESTING TRIP

TACOMA, Wash.—Plenty of rain and spills were notable features of the round trip made by Dudley Agassiz and Robert Jackson, local Indian riders, between this city and Vancouver, B. C. The chief rainstorm of the tour was experienced at 10 p. m. when near Mount Vernon, and as a result of the downpour and cold the pair were obliged to camp in the wet underbrush at the side of the road. The spills were had on the bad stretches coming and going and fortunately did not involve more than a bent crank or two.

WHAT DON'T YOU KNOW ABOUT MOTORCYCLES?

Last Week's Picture Taken From a Harley-Davidson Brings Forth 121 Answers—Seems Almost Impossible to "Stump" the Contestants—Present Picture Looks Passably Difficult

GOSH! The Contest Editor is feeling like a British merchantman anchored about 30 miles from Nantucket Lightship! Thought that when we displayed only the intake manifold union nut of a Harley-Davidson last week that we had shot a torpedo that would put all the contestants out of the running; was so sure of it that we made bold to promise Millie Mulliner and Jennie Forrie a box of Huyler's apiece if they survived.

And here come 121 answers—more coming in every mail—and of the number 119 of them are labeled HARLEY-DAVIDSON big as life; judging by the 119 correct ones the other two must have been asleep or something. Got to give you credit, boys, you certainly have the fine points of the 1916 motorcycles down to a science.

Yeah, and Millie came through with the right answer, too; and she also vouchsafed the fact that she has a sweet tooth; and that Huyler's looked good to her. But say, Girlie, you forgot all about sending the street address and you know "Chi's" a big place; used to Contest Edit out there myself a couple of years ago. Supply the missing data, Millie, and we'll have the candy man around to your door next Wednesday evening, sure; a sort of "hint" to make the steady come through with a box every week—you know the system.

But what happened to Jennie Forrie? No answer yet. Better put on your thinking cap, Miss Port Jervis, if you want to walk off with that prize.

WHAT DO YOU KNOW ABOUT MOTORCYCLES ?

WHAT MAKE OF MOTORCYCLE IS THIS TAKEN FROM?

But, thank goodness, we did not promise that Newark bunch a box of candy apiece; would have had to burn up some midnight oil doping out "copy" to recuperate from the financial calamity that would have overtaken us. Say, how many of you fellows want to ring in on one postage stamp, anyway. Have a heart, the postman wants to make a living.

But look what's doing this week—made the picture smaller just to rattle you fellows. And here's a hint—there's no rule against repeating in this contest, so go carefully; watch your step!

The fellows who failed on last week's picture were R. W. Krotzer of Sandpoint, Ida., who made it out to be an Emblem, and Walter D. Jones of Morrisville, R. I., who recognized Thor features in the picture. Never mind, fellows, try again.

Gerald Alling, of New Haven, wants to start a little contest all of his own. Says he may be bad on identifying motorcycles but he guesses he knows New Haven buildings when he sees them. He's just taking a fall out of Tourist J. E. Pugsley, who slid into New Haven and took a picture of the post office thinking it was one of the Yale buildings—Pugsley's little travel tale appeared last week. Thank's for the correction, Gerald.

If all the fellows who have guessed every picture right from the beginning but have not bothered to send in the answers had only taken the trouble, gosh what a raft of perfect scores we would have. As a matter of fact, however, there are not more than half a dozen with clean slates. Will publish scores again next week.

WHAT THE WEEK BROUGHT FORTH IN THE WAY OF CONTEST MAIL

A Few Spare Links

By E. B. HOLTON

ONE of our local riders came home from a tour this summer with a tale of a "bawling out" that he and we too, felt was unjustified.

Up in New York State a "constabule" stopped him and told him how he had defied the "willage" ordinance that called for sounding the horn at each and every street crossing. Now, in our town, we'd get the law on us if we did that same little thing, for it would be classed as unnecessary. Our local rider said something to this effect and the minion of the law let him go—but oh, so regretfully!

Ever run up against something like that when in a strange town or state?

Best thing to do is to act gentlemanly and firmly insist on your rights. Acknowledge you were wrong but that you want to do the right thing.

Some day we are going to have a set of Federal Traffic Laws that will be the same from Tacoma, Wash., to Jacksonville, Fla., and all points intermediate. Speed the day!

Just because the Van Buren sisters crossed the continent solo is no indication that the rest of their sex are accomplished drivers. Not at all. *I know*, for Friend Wife drove me today—that is, until she hit a water-pipe with the sidecar wheel and turned the outfit turtle. No one hurt, but the machine needs ole Doc Drummond, for she shore is bent up a bit. The bill will be about what I get for 10 feet of this stuff. We sure will have to keep pounding on the old typewriter now. Boys, take heed! The ladies make much better passengers than drivers. Keep them in the sidecar or on the tandem.

If you are at all amused by human nature stand in the background and listen to the talk when a group of riders get their first peep at the new models. Some are all praise and gaze at the bright enameled motorcycle with a rapt smile of awe; others coldly critical with a keen searching eye looking for something to criticize. It is worth while to hear the comments, so hang round and listen to the next batch that flock in the agency. I'll bet you get a quiet laugh.

I'm looking for an oil-can that I will be able to clip to the frame à lá pump. An oiler about the diameter and shape of the pump and about three inches long. The idea is to clip it to the frame, where it will be out of the way, yet handy when the "crickets" start chirping in the rockers, etc. No matter how well you lubricate, a ride of 75 miles or more starts the squeaks going in the fork-rockers. Searched through the stock of two hardware stores, but all they had was the usual spherical oil-can. Why can't some enterprising jobber fill in this hiatus?

Did you ever notice when you are riding along, and the forks start to squeak, or the chains slap against the guards, how you promise yourself that you will attend to the matter at the next stop—then forget until you get underway again and the noise brings it to your attention once more? Gee, but I wish that I could bring myself to stop at the time, go to the seat of the noise and eliminate it, but I go on and on with the chains slapping or the crickets chirping, until I do happen to think of the matter while standing round. Yes, and I'll bet I'm not alone in my bad habits either.

REVENGE RACES AT THE NEWARK TRACK

Races Between Former Rivals Net Only One a Victory—Arthur Spencer Beats Goullet; Spears Triumphs Over Kramer and McNamara Bests Egg

NEWARK, N. J., Oct. 16.—Three match races were staged at the Velodrome yesterday and each one of them might well be termed grudge or revenge affairs, and in but one of them did a defeated rider in the last match in which they met administer a beating and get ample revenge.

Quite some time ago Alfred Goullet, the Newark rider, met Arthur Spencer, the Toronto rider, in a match for the Brassard and was beaten. Goullet met Spencer in a best-two-out-of-three heat match race yesterday and the Canadian won in two straight heats. Frank Kramer, the American sprint champion, who has been defeated pretty regularly in match races by Bob Spears, the elongated Australian, met Spears again yesterday, this time in the race for the Brassard, and the Australian won again. Reggie McNamara, the "Iron Man" of the cycling game, who was defeated by Oscar Egg, the Swiss, in a tandem-paced race a fortnight previous, reversed the order of things and won by over a lap. The time was 20:04 3/5.

Spencer Outjumps Goullet

In the Spencer-Goullet match the former went by Goullet at the bell in the first heat and was never headed. On the last lap of the second heat Goullet elected to trail the Toronto rider and try and beat him in the last stretch. Spencer, however, showed just enough speed to lead the former Australian home by a length.

Kramer rode the Brassard just to the liking of Spears. Kramer was leading coming into the bell lap, but Spears, who had been riding lengths back of the East Orange man, got the jump on Frank and passed him in the first turn. Kramer got on almost even terms in the last turn, but the Australian put all the speed that he had in him into the last few kicks and held the American off, winning by almost a length. This marked the seventh time that Spears has defeated Kramer in match races this season, a record that no other rider has ever put up.

Egg In No Condition

The tandem-paced race between Egg and McNamara failed to come up to expectations. Egg, who was still suffering from the fall of the Sunday previous, when he took a "Brodie" into the grand stand in the long team race, had fine pace, but he was unable to hang on the latter part of the race and McNamara soon had a lap on him and he could have put an extra one onto the Swiss had he desired. In the last lap Egg, although hopelessly beaten, tried to beat out McNamara in the sprint, but the Australian led him home by a length.

Although beaten in the match with Spencer earlier in the day Alfred Goullet annexed first place in the mile open. Alfred Grenda finished second in this race, while Arthur Spencer finished third and Charles Piercey fourth. Frank Kramer was shut out of the final of this race as was Reggie McNamara and Bob Spears, but

RACING MEN ON A TOUR

William and Arthur Spencer, Pro. Cyclists, Who Are Riding to Toronto

there was plenty of team work in connection with the elimination of this trio that must have been overlooked by the referee.

Carman Is Some Sprinter

Clarence Carman, the motor-paced champion for the year, turned sprinter yesterday and annexed first place in the one-mile handicap for the professionals from the 115-yard mark, leading Lloyd Thomas, 85 yards; Ray Eaton, 130 yards, and Floyd Krebs, 125 yards, home in the order named in 1:51 3/5. The handicaps proved to be too much for the back-mark men and they failed to show in the finish.

Tom Bello, the strong Brooklyn rider, accounted for the one-mile open for the amateurs by taking a long chance and a long sprint. Second honors went to Fred Taylor, the local rider, while Tom Fitzsimmons, East Orange, and Edward Byron, Australia, finished third and fourth, respectively. Marcel Perger, the San Francisco amateur, copped the third-mile handicap for that class from 40 yards. Buddy Dunn, Newark, 60 yards; Harry Hoffman, San Francisco, 35 yards, and Albert Krushel, Buffalo, 35 yards, finished as named in 37 1/5 seconds.

B. V. W. ROAD RACE WON BY BENWELL

NEWARK, N. J., Oct. 16.—Twenty-four riders started in a ten-mile handicap road race run by the Bay View Wheelmen yesterday morning. First honors in the race was accounted for by Robert Benwell, who covered the course in 26:14 2/5. The others finished in this order: William Keller, William Weimer, Nick Howarth, Larry Smith, Eugene O'Mara, Gus Klingel and John Martin. The time was excellent considering the hilly nature of the course and the head winds. The weekly Brassard race was won by George Brindle, who defeated Larry Seyfarth. Brindle has won the race three weeks in succession.

THREE RACES AT TAUNTON

TAUNTON, Mass., Oct. 17.—Three bicycle races were held here Columbus Day, Oct. 12, and they created quite a bit of comment. The one-mile state championship was taken by T. P. Hendricks, of Brocton, in 2:38. R. M. Torrey, of Revere, finished second and Roy Oman, of South Easton, third. J. J. Flynn, starting from scratch, accounted for the five-mile handicap from A. Sousa, of Taunton; R. M. Torrey and T. P. Hendricks, the time being 14:21 3/5. The half-mile city championship was won by Manuel Sousa in 1:17 3/5.

SPENCER BROTHERS CYCLE HOME

NEWARK, N. J., Oct. 17.—Arthur and William Spencer, two of the local stars at the Velodrome, left this morning for a trip awheel to their home in Toronto. They are going via Suffern, Newburg, Albany and the northern route to Buffalo. William Purdue, a local amateur, will accompany them as far as Toronto and then continue on to Detroit, Mich.

ST. YVES GOES HOME

NEW YORK, N. Y., Oct. 15.—Henry St. Yves, the old Marathon runner, who has been acting in the capacity of a pacemaker at the Philadelphia track, sailed for France on the French line steamer Espagne yesterday. St. Yves expects to join the French army upon his arrival in France.

KEYSTONE STATE CYCLISTS EN TOUR

LEBANON, Pa., Oct. 16.—Members of the Fifth Ward Bicycle Club recently toured to Myerstown, Richland, Tulpehocken and Newmanstown. Another interesting trip is being mapped out by Robert Christ, the president.

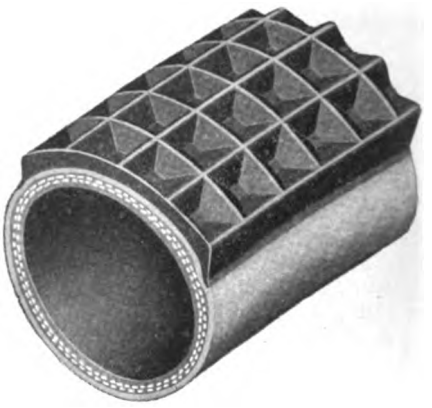
EIGHT SINGLE TUBE TYPES IN KOKOMO LINE

Offerings From Kokomo Rubber Company Include Three New Tires, Two in New Dress, and Three Continued From Former Seasons—Double and Single Clincher Types Also—Increase in Advertising Campaign

The Kokomo Cord Tire

The Splendid Pioneer



The Anti-Skid Defender

KOKOMO, Ind., Oct. 16.—Keeping pace with the increasing interest in bicycling, the Kokomo Rubber Company, of this city, has improved and added to its line of Kokomo tires and will be in the front rank of exhibitors at both the Chicago and New York shows.

In the single tube line, Kokomo tires come in eight types, varying in price from $2 to $5 each. Of these three are new, the Sticktight, Pioneer and Utility; two are "rejuvenated," the Defender and Oxford, and the other three, Everlaster, Kokomo Kord and No. 13 Special, remain unchanged. In the clincher line the Kokomo Clincher and Everlaster Clincher are offered for 1917. The prices range from $3 to $5 each.

With the line as it stands, the Kokomo factory feels that it is now offering a tire to fit every need and every pocketbook. Each Kokomo tire is built up to the same high standard of workmanship, the prices varying with the quantity of material used, the weight and character of fabrics, the style of construction and compound.

The Sticktight, the first of the three new members of the Kokomo family, will have a strong appeal for those partial to a suction tread. It has a blue tread with white walls, the heavy O's on the tread providing real anti-skid efficiency. It is attractive in appearance and strongly built, with two layers of medium-weight motorcycle fabric. It sells for $3.75.

Pioneer and Utility Types

The Kokomo Pioneer, selling at $2.25 each, has gray walls and red studded tread. Two layers of fabric are used in the carcase. It is strong and well built. The Utility, selling at $2 and vouched for by the factory as a splendid tire at the price, measures well up to Kokomo standards of appearance and service. It has gray walls and a red dotted tread, with two layers of bicycle fabric all around.

Kokomo Everlaster and Kokomo Kord have led the line during the past season and continue to do so for 1917. They sell for $5 each, being "aristocrats" of tiredom. The Everlaster was brought forth in the summer of 1912 and has since gained a wide reputation as one of the sturdiest and most serviceable tires ever built. It is preeminently a general-purpose tire. It is pure white with heavy studded tread.

The Everlaster contains the strongest fabric ever built into a bicycle tire—motorcycle weight Sea Island cotton. The tire wall is generously thick and is supported by two layers of heavy fabric, with a topping in the form of a heavy non-skid tread. The resultant tire is easy riding and yet hardy under the severest service, no matter what the road or weather conditions.

The Kokomo Kord tire is as sturdily built as the Everlaster but is a trifle more resilient, being more adapted to service a little less rough. It is an ideal boulevard or racing tire. It has white sidewalls and a black tread, showing three raised ribs. Cord construction is used in this tire—the fabric being actually as heavy as in some automobile tires. Kokomo Kord was first introduced at the Chicago Show in 1915, where it met with great favor. And its popularity has been growing every day since. Kokomo Kords sell at $5 each.

Here is the Utility

The Sticktight Brand

In the Summer of 1913 the Kokomo factory brought out the well-known No. 13 Special, selling at $4.25 each. No change has been made in this tire. It has a heavy studded red tread and white walls. Motorcycle-weight fabric is used in its construction, and in every way it is up to the Kokomo standard.

Both Kokomo Defender and Kokomo Oxford are old friends with new faces. Each of these tires has had a long and honorable career and is widely popular in all sections. Changes have been made in the appearance of these two tires merely to meet new trade conditions and tastes. Both tires, however, retain their constructive individuality and will give the same service that has distinguished them for more than 20 years.

Defender in New Dress

The Defender was formerly all gray, but it appears with a black tread and white walls for 1917. The present tread is heavier than in past seasons, but its character is much the same. This tread is known as the "air spring." and gives unusual resiliency and an anti-skid surface to the tire. The Kokomo Defender sells at $3.25 each.

The Oxford also makes its bow in a new dress. Instead of being all gray as formerly, it now wears a black tread and shows white walls. The tread is now "gridiron," while formerly it carried 13 light longitudinal corrugations. Four-ply, thick-tread construction is used. There are two layers of heavy fabric all around, and two extra layers in the tread. At $2.50 each, the Kokomo factory believes it is offering a wonderful value in Kokomo Oxfords.

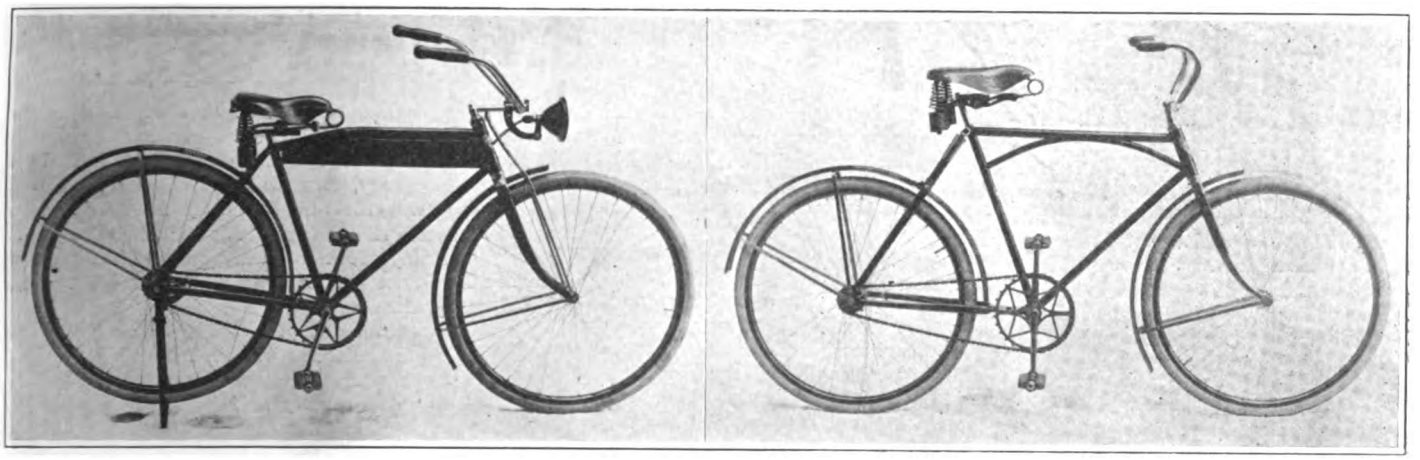
SEVENTEEN MODELS IN 1917 IVER JOHNSON LINE

Few Changes Made in Bicycle Line of the Fitchburg Manufacturer—Prices on Three Models Only Raised as Result of Increased Manufacturing Costs



The New Iver Johnson Mobicycle and the Cushion Frame Roadster

FITCHBURG, Mass.—Of the 17 different models which comprise the Iver Johnson line of bicycles for the coming season, none with the exception of the "Mobicycle" model, which as the name would imply, is a bicycle with certain characteristic motorcycle features, has been changed to any appreciable degree.

But what is even more significant than a continuation of the line practically without change is the fact that despite increased manufacturing costs, the prices on only three of the 17 models have been increased.

The models affected by the price increase are the Truss Frame Roadster which has been increased from $30 to $35; the Mobicycle, from $35 to $40, and the Ladies Roadster from $30 to $35.

In offering the line practically without change from the machines sold under the 1916 nameplate the Iver Johnson Arms & Cycle Works lays emphasis on the fact that mechanical changes or improvements were found necessary since the 1916 line represented the "ne plus ultra" in bicycle construction and fully satisfied both the trade and the rider.

The changes affecting the Mobicycle model are by no means radical. A combination battery and tool case has been fitted between the double bars bringing the model even closer in appearance to its prototype than it was last year, while to the same end an electric headlight, patterned after the motorcycle headlight, has been fitted.

The combination case has separate compartments for the battery which supplies the headlight and the tools; the case is formed of pressed steel and neatly enameled to match the bicycle. Adding still further to the effect is the fitment of a detachable front fork truss.

As was the case last year, the all black weather proof finish will again be features on the racer, cushion frame, heavy service and high grade roadster models.

The "Full Grown Bicycle for the Boy" is again prominent in the season's offerings. This is an adult bicycle with the exception of the 18-inch frame.

It has the truss reenforcement, 22-inch handlebar, and absolutely the same material and equipment as the adult wheel. It is designed for use by the boy who has outgrown the juvenile bicycle but is still not large enough for the full size adult wheel.

Tires and saddles for 1917 are noteworthy, with the exception of the racing models, every bicycle carries fancy tread tires and the list includes Fisk Motorcycle Non-Skid, Fisk Cord Non-Skid, Goodrich White Safety Tread, Fisk Premier Tough Tread, besides many others in the list of options.

The list of saddles embraces Troxel Eagle Climax, Eagle Eazy and Motorbike with a wide range of options allowing the rider a liberal choice between the suspension and the wood base types. Diamond chain is used as regular equipment on all of the roadster models.

THE IVER JOHNSON BICYCLE LINE AT A GLANCE

	Price
Track Racer	$55.00
Chater Lea Racer	60.00
Road Racer	50.00
Cushion Frame Roadster	50.00

Camp Fire Girls'	25.00
Boy Scout Junior	22.50
Camp Fire Girls' Junior	22.50
Girl's Midget	20.00
Boy's Midget	20.00

EIGHT SINGLE TUBE TYPES IN KOKOMO LINE FOR 1917 SEASON

(Continued from page 34)

The Kokomo line of clincher tires is also a representative line, and is built with an eye to beauty as well as service. Everlaster Clincher double or single is pure white, with studded tread, and like its single-tube brother, sells at $5 each. It is built with the same materials and the same workmanship that have established the name Everlaster in the front rank of bicycle tires.

Kokomo Clincher (double or single) has gray walls and gridiron tread. The double clinch sells at $3.75 each; single clinch, road weight, at $3 each, and single clinch, thick tread, at $3.25 each.

Kokomo inner tubes are also offered in ample variety to meet all needs and tastes. They come in both endless and butt-end types and in black, white, gray and red. They are generously tough, heavy and durable.

In speaking of the Kokomo line of tires, D. L. Spraker, now actively managing the affairs of the company, says:

"It is our purpose, in adding to our line, to have a variety of styles and treads—as well as a range of prices. No rider need look further than the Kokomo line to find exactly what he wants—and at the price he wants to pay. Peoples' tastes differ. One tire cannot possibly suit everybody. And various people desire to pay various prices—just as one man wants an $18 suit of clothes—and another a $28 suit. Each is entitled to his choice—and should expect and receive full value in return.

"That is exactly what may be expected of each and every Kokomo tire, for each is built to give a maximum return in service, convenience and comfort, for the price paid."

The Kokomo Rubber Co. has also taken a forward step in its advertising policies and, in addition to the regular space used in trade journals, has become prominent among the manufacturers who are extending their market through the use of national advertising. It is worth noting that the Kokomo Rubber Co.'s current advertisements in the big national publications, beginning in June and continuing through November, are devoted in part, to the ad-advantages and pleasure of bicycling—and contain the slogan "Ride a Bicycle."

PROVIDENCE THE SCENE OF THRILLING RACES

Two Contingents, One From Boston and the Other From Fall River, Indulge in Race to Crescent Park

PROVIDENCE, R. I., Oct. 17.—The greatest bicycle races conducted in this State in years was run off here last Thursday (Columbus Day) in connection with the Tri-State fair. Thirty entrants from Fall River and about a dozen from Boston participated.

Mounted on a low-geared ladies' wheel, Lorimer Winslow, of Providence, won for the Fall River contingent while Fred McKenzie, of Revere, won for the Boston starters. Other winners were: Boston—R. N. Torrey, Beachmont; William Cupid, Waltham; Mike Barber, Brighton and Reubin Dahl, Dorchester.

Eleven Fall River Finishers

Other Fall Riverites finished as follows: Second, Angelo Delsant, Nayatt; third, Samuel Trimback, Pawtucket, R. I.; fourth, John A. Rock, Fall River; fifth, Alfred Greenwood, Fall River; sixth, George Clarkson, Fall River; seventh, Edward Carter, Fall River; eighth, Edward Byrant, Fall River; ninth, John Folster, Fall River; tenth, John J. Marland, Fall River; eleventh, Lucien Manderville, Fall River.

The Boston end of the race was unique because of the fact the contingent was paced by a motorcycle. B. A. Swenson, of this city, set the pace for the crowd as they left Park Square, making about 20 miles an hour. The winner finished at Crescent Park, in 2 hours and 42 minutes, the distance being 45 miles. The race was said to be the finest event ever held in this section and all along the line there was a large number of enthusiasts waiting for the lads to come along. The roads were fairly good and uphill stretches were found in abundance. The distance from Fall River to the park is 15 miles and the winner, who is employed in the city engineer's office in this city, covered it in 42 minutes. As a reward for keeping the woman's low gear machine moving all the time he received a $40 Oxford bicycle. On good stretches it was figured he was making 25 miles an hour.

Delsant, the second man in from Fall River, was three minutes behind the winner at the finish, but about three feet ahead of Sam Trimback. There was a lapse of 18 minutes before the next rider, John A. Rock appeared. Marland was ahead for the most part with Winslow stringing out in the rear, as the starters left Fall River. He took the lead in Brayton, some five miles from Fall River, and was never headed. Some of the riders had their pace makers and others just plugged along.

The Boston Lineup

The Boston contingent came by way of Dedham, Norwood, Walpole, Wrentham, Plainville, North Attleboro and Pawtucket, with official checking places in nearly all the cities. The prizes for the Boston contingent included the following: Oxford truss frame bicycle, gold watch, sweater and three sets of $10 tires for the last three.

Fall River seemed to show much more interest in the race and offered eleven prizes. These were: $40 bicycle, given by the Fall River *Globe;* silver loving cup, by Frank Riley; set of $10 tires by W. D. Wilmot, North Main street; set of $6 tires by J. W. Newton, 1153 Plymouth avenue; choice of saddle in stock, F. C. Nichols, Bedford street; bicycle lamp, John Williams, Pleasant street; stand and rack, L. Madowsky & Brothers, South Main street; bicycle lamp, F. R. Motor Equipment Company, Second street; bicycle horn, Fontaine's auto supply, Purchase street; bicycle horn, Foster's, Pleasant street; bicycle lamp, J. B. Gaudreau, Pleasant street.

A YOUNG MOTOR WHEELIST

CHICAGO, Ill., Oct. 16.—A recent motor wheel purchaser is Tracy C. Drake, proprietor of the famous Blackstone Hotel. His 10-year-old son, Francis, rides the wheel, and the youngster is a splendid little rider. Most of his riding is done at Lake Geneva, Wis., where his father has a summer home in the exclusive millionaire colony.

The roads around Lake Geneva are among the finest in the State, and the scenery there attracts thousands of tourists every year.

EXCELLENT RALLY BY R. I. BOY SCOUTS

Northern Division Turns Out 40 Strong for Manoeuvres at Providence — Show Great Drilling Stunts

PROVIDENCE, R. I., Oct. 15.—The annual rally of the Northern Division of the Rhode Island Boy Scouts, held here yesterday, saw 40 bicyclists out in force. It was the first time that the two-wheeled machine has been brought before the public in boy scout work, although it has been an adjunct of the troop for the past eight months.

Scoutmaster J. Harold Williams directed the manoeuvres of the troop, which were along the same line as those used by the mounted cavalry in the regular army. He has been a "war correspondent" at Quonset Point, R. I., and at Plattsburgh, N. Y., during the summer and has trained the boys under him along strict military lines.

The Cycle Drill

The troop gave demonstrations in speed, formation drills, quick wheeling, dismounting and rapid mounting, the hauling of small supply wagons and the carrying of equipment. They executed some clever and fast riding and in forming from twos to fours and eights not a spill was registered against them.

Scoutmaster Williams' officers are: Assistant Scoutmaster, Thomas A. Roberts; first sergeant, Donald D. Armstrong; supply sergeant, J. Fenton Bellows, and sergeant, W. Chesley Worthington.

The bicycles used in the troop are owned by the individual members and it is doubtful if there are any two alike. The troop is kept up by wealthy East siders who have seen a great good in it.

Mr. Williams during the past summer has ordered the troop out on many a long hike, many times the riders carry along a full army equipment that they might readily come away from home during the night. It has aroused a great deal of enthusiasm among the members, while outside troops are beginning to realize the importance of the bicycle and other troops are likely to form their own brigade.

FOUR LIVE ONES OF THE WESTFIELD MFG. CO.'S STAFF

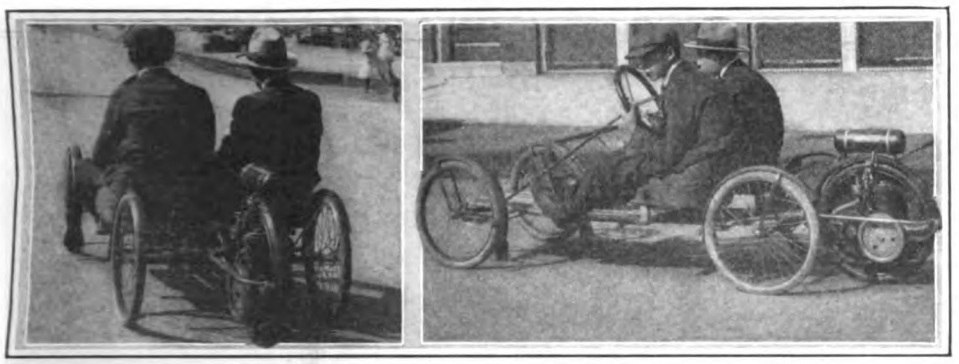
USING SMITH MOTOR WHEEL AS POWER PLANT



MILWAUKEE, Wis.—The A. O. Smith Company, maker of the Smith Motor Wheel, has just produced the Smith Flyer, a two-seater of the buckboard type of four-wheeler, whose general arrangement will be seen in the illustrations above. The power-plant is a Motor Wheel attached by special connections to the rear portion of the frame and its contact with the roadway is controlled by a lever close to the driver's seat. The typical wire control for the Motor Wheel leads to the steering wheel of the Flyer.

The Smith Flyer weighs 135 pounds and seats two passengers comfortably. It is stated to cover 80 to 90 miles per gallon of gasoline. The makers claim for it that it is the lightest and most economical motor vehicle ever built. The price is $215 f. o. b. Milwaukee, Wis., and for winter use, interchangeable sled runners can be had for an extra $15.

FOREIGN CYCLE NEWS

HENRY RHEINWALD, who recently won the professional championship of Switzerland, was arrested in Lyons, France, by the French military authorities. The charge against Rheinwald is that he was trading in rubber with the Germans. The offence is a serious one, and instead of riding bicycle races the Swiss may find himself in durance vile for a few years, if he is convicted.

Arnold Grandjean, the Swiss professional, won the 160-kilometer (about 100 miles) road race run between Berne and Geneva, Switzerland, last month. Grandjean defeated a big field and covered the course in 4 hours, 47 minutes and 19 2-5 seconds. In the amateur division Ernest Suter won, his time being an even second slower than Grandjean.

The 200-kilometer (125 miles) Danish road championship for 1916 was captured by Malingreens, who covered the route in 6 hours, 33 minutes and 19 seconds. Mortensen, Billgreen, Frisch and Andersen finished as named.

Eugene Stabe, the German sprinter, defeated Walter Rutt, Willie Lorenz and Willie Arend in a point race at the Halle, Germany, track Sept. 10. Stabe scored 8 points to 7½ for Rutt, 6½ for Lorenz and 5 for Arend. The half points are accounted for by Rutt and Lorenz having ridden a dead heat. At the same meeting Richard Weiss, the South African, who won the 1912 Olympic race around Lake Malar, Sweden, annexed the 50-kilometer (31.25 miles) paced race from Krupkat and Rosenblocher.

On Sunday, Oct. 1, Thorwald Ellegaard, the Danish cyclist, performed in great fashion at Lyons, France. Ellegaard defeated Rousseau and Simeoni in a match race, and then with Ali-Nefati, as his team-mate, won a 50-kilometer (31.25 miles) team race. Rosseau and Figuet finished second and Simeoni and Bertrand ran third.

EVERARD WINS AND LOSES

HOBOKEN, N. J., Oct. 16.—Three races were staged by the Century Road Club of America here yesterday. Champion Everard annexed the two-mile scratch from G. Schmidt, Harry Bell and F. Peterson. Peterson won the four-mile handicap from the minute and a half mark, beating G. Schmidt one minute; H. Bell, one minute, and Everard, scratch. The Brassard, which brought together Peterson and E. Fraysee, was won by the former.

CHAMPION STAEHLE ENTERTAINS

NEWARK, N. J., Oct. 17.—Amateur Champion John L. Staehle, acted as host to fellow members of the Bay View Wheelmen, at the clubhouse of that organization, Friday, Oct. 13. Staehle had as his guests in addition to the club mates the members of the Trainers' Union of the Velodrome. Staehle not only acted as host, but as one of the entertainers as well, supplying his part by giving a few selections on the piano.

TEN-MILE RACE FOR BALTIMORE

BALTIMORE, Md., Oct. 16.—A ten-mile handicap road race will be staged by the Crescent Bicycle Club, of this city, Sunday, Nov. 5. The course will be over the old Annapolis road, the start and finish being at Linthicum Heights.

C. R. OF A. RACE ASSURED

NEW YORK, N. Y., Oct. 17.—After several postponements which for awhile threatened to cause the abandonment of the race, the ten-mile handicap road race of the New York Division, Century Road Club of America, originally scheduled for June 4, will be run October 29. Entry blanks and other information may be obtained from William Muller, 1,212 Leland avenue, Bronx, New York City.

TWO CRESCENT RIDERS ADD TO MILEAGE

BALTIMORE, Md., Oct. 17.—Walter V. Ingelhart and Fred M. Sanborn, two members of the Crescent Bicycle Club, returned Sunday from a trip to Philadelphia. These two riders are battling hard for the mileage honors of the Crescent Club and through the trip each added 214 miles to their score.

They left Baltimore at 2:45 p. m. Saturday, and reached Philadelphia at 12:25 Sunday morning, the latter part of the journey being ridden in the moonlight. While in Philadelphia they were the guests of William Yorke, of the Century Road Club of America. The return journey was started from Philadelphia at 10 o'clock Sunday morning, Yorke accompanying them as far as Wilmington. The pair reached home at 9:15 that night.

The regular club run of the Crescents was held to Brookland, and a pleasant stop was made at the model farm of Isaac Emerson, of headache cure fame.

WENIGE BACK FROM TRIP TO EASTERN STATES

LONDON, Ont.—George A. Wenige, manager for the Bicycle & Motor Sales Company, Limited, London, has just returned from a business trip to New York and Springfield, Mass., where he made necessary arrangements for 1917. Wenige will again represent the Indian in Western Ontario while he will continue to act as a distributor for the Pope. His bicycle feature is the "Brantford" line.

Wenige had a large and attractive motorcycle and bicycle exhibit at the London Fair. This was the only display of two-wheelers on the grounds. George Hardy and W. England were in charge of the big booth. Jack Carr, formerly chief mechanic for the Bicycle & Motor Sales Company, has gone to Springfield, Mass., to join the Hendee factory staff.

SALT LAKE'S BIG DEMAND

SALT LAKE CITY, Utah., Oct. 12.—A. Brodbeck, former cycle and motorcycle racer, now manager of the Meredith Motor & Bicycle Co., states that 1,000 bicycles are now on the way for that company's trade.

ARCHIE ROOSEVELT BUYS A BICYCLE

OYSTER BAY, L. I., Oct. 16.—Archie Roosevelt, son of Theodore Roosevelt, former president and exponent of the outdoor life, has purchased a Pierce bicycle from the New York Sporting Goods Co.

VETERAN MAKER PASSES ON

PITTSBURGH, Pa., Oct. 17.—Robert S. Crawford, pioneer bicycle manufacturer, died here Saturday, Oct. 14, at the age of 70 years. Mr. Crawford, after his retirement from the bicycle field, founded the Crawford Automobile Co., of Hagerstown, Md.

CYCLE CLUB HEAD WEDS

HAVERHILL, Mass., Octo. 12.—George Edwin Smith, president of the Haverhill Cycle Club, was married here recently to Miss May Walker, or Merrimacport.

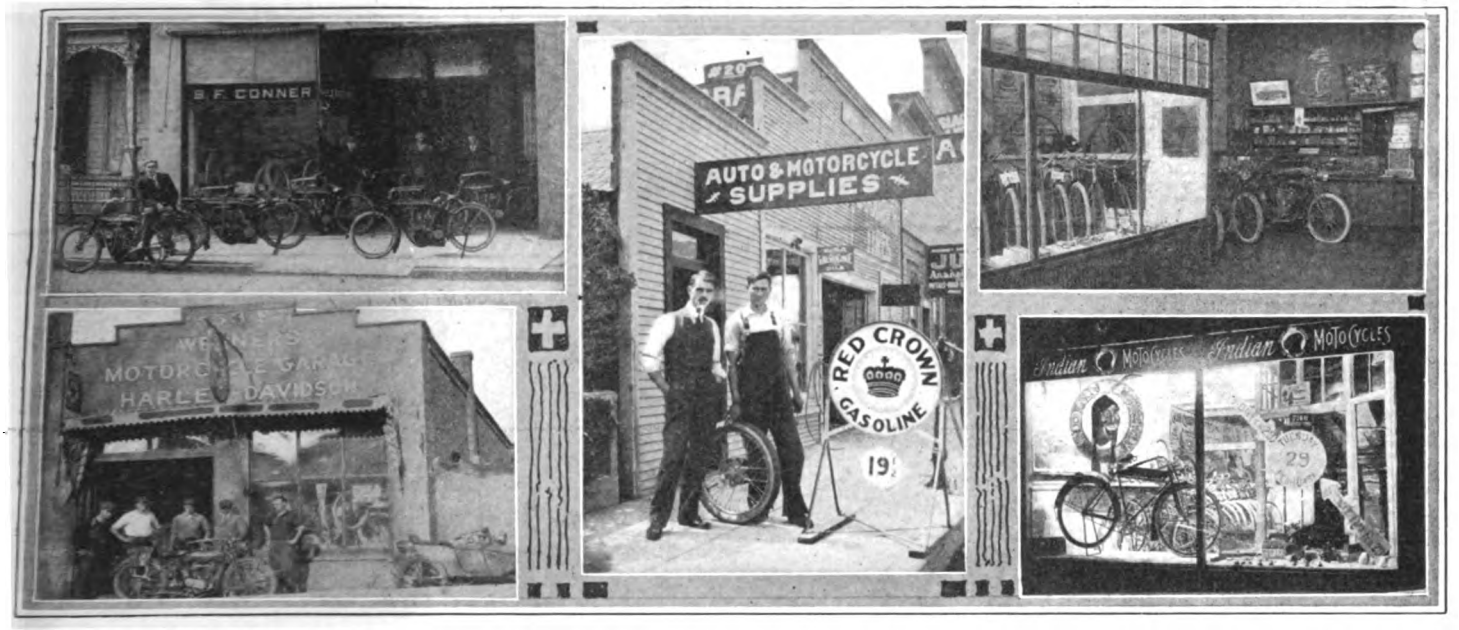
Varied Activities of the Dealers

A BATCH OF BRISK AGENTS AND SOME ATTRACTIVE QUARTERS



Upper Left, Headquarters of B. F. Conner, Handling Indian in Wilkesbarre, Pa.; Center, The Firm of Shiner & Minyard, Specialists in Accessories and Repairs at Anaheim, Cal.; Upper Right, Interior of Turlock Cyclery, at Turlock, Cal.—Note Novel Way of Keeping Cycles; Lower Left, J. B. Werner's Harley-Davidson Store at Passaic, N. J.; Right, Show Window of Turlock Cyclery

OLIVER BOOKING ORDERS; SIGNS TWO SUBS

BRONX, N. Y.—Oliver, Indian chieftain in this county, is busy answering questions on the 1917 Powerplus these days. While handicapped by not having a demonstrator as yet, he is booking orders for seven just the same, and states that he could use a carload of machines if he could get them.

Oliver has signed up two sub-agents for the city already and is out for others in the county. He sold 72 Indians in 1916, as well as 11 Cygnet rear cars and 10 side cars.

BURNETT MAKES FIRST 1917 SIDECAR SALE

PROVIDENCE, R. I., Oct. 15.—William N. Burnett, local manager of the Harley-Davidson Sales Company, has just received the first 1917 sidecar outfit. He has placed an order for a sidecar van with the Dime Messenger Company and expects to sell them two more.

SIDECARS MADE UP 75 PER CENT. OF LEWIS' SALES

STOCKHOLM, N. J.—George W. Lewis, who handles the Indian in this section of the State, has just closed a successful year. Seventy-five per cent of his sales were sidecar outfits, while the Prest-O equipped and electric lighting models sold were about equal in numbers.

Lewis has an order for one of the new Lightwin Indians, an electric and a gas-lighted Powerplus twin. These were all sold without catalog or demonstrator, which speaks well for Lewis and his line.

JANOSCHEK TAKES CLEVELAND AND R-S

BRONX, N. Y.—Joe Janoschek is handling the Reading Standard and the Cleveland lightweight for 1917. Joe is hard to find around the shop these days, as he is out most of the time on either the big brown twin or the little gray two-stroke, showing off their paces to prospects.

"My line will get them coming and going," says Janoschek. "If they don't want a light machine, there's the Reading all ready for them. If they don't favor a big twin, there's the Cleveland right at hand."

MANY SIDECARS IN RUN

PROVIDENCE, R. I., Oct. 15.—About 25 sidecar outfits and six solo machines were entered in a pleasure run conducted today by William N. Burnett, manager of the Harley-Davidson Company here. The run was to Newport and Seaconnet, a distance of 110 miles.

FIVE 1917 ORDERS FOR SYKES

TRENTON, N. J.—John Sykes, Jr., local Indian agent, has taken orders for five of the 1917 Powerplus models. Sykes' demonstrator is on the road now and prospects in plenty are being lined up.

A considerable demand for the Lightwin is also looked for.

SIXSMITH SELLS EIGHTEEN NEW EXCELSIORS

NEW YORK, N. Y., Oct. 14.—Thomas J. Sixsmith, the veteran dealer at 203 West 100th street, handling the Excelsior in the metropolis, has sold 18 of the three-speed Series 17 models to date. Ten of these were sidecar combinations. In addition to the Excelsiors, "Tom" has disposed of a number of Indian Powerplus models.

RAYMOND IS BUSY WITH THOR PROSPECTS

BRONX, N. Y.—Edward Raymond, handling the Thor, on 163d street, reports business as booming. Ever since the announcement of the 1917 Thor, Raymond says that he has been besieged by inquirers.

SELLS FOUR READING STANDARDS

TRENTON, N. J.—R. S. Woods, handling the Reading Standard for Trenton and vicinity, has just made his fourth sale of a 1917 R-S. He has already delivered one of the new brown twins and is awaiting a shipment from the factory this week.

FERRARO TAKES FIVE ORDERS

SLOATSBURG, N. Y.—Michael Ferraro, handling the Reading Standard, Thor and Flying Merkel in this city, has already taken orders for two R-S twins and three Thors. This beats his record at this time last season. "If things keep on this way," says Ferraro, "1917 will be a boomer, all right."

Give Your Demonstrations With a Sidecar

You Can Explain the Workings and Control of the Machine Better By So Doing—Value Confidence to Prospect of Mount's Ease of Operation.

By R. F. MUNDORFF

IN every city and town throughout the United States there is a large number of people who would be motorcycle prospects if it were not for the idea, long harbored, that they will never be able to learn the operation of a motorcycle. It is these people who should be gone after by the dealer; they need instruction, and need it in a systematic way, and it is up to the dealer or his men to give it to them. Otherwise, they will not become prospects except through the assistance of some rider, and not many riders will give such instruction to laymen, unless it is made worth their while.

These prospects—for most of them are really prospects, although they may not become such by the cut-and-dried methods used by too many dealers—are not to be blamed for this feeling of not being able to learn the motorcycle. Nearly every dealer has himself had the experience of trying to ride a horse, or at least watched others steeling themselves to make the attempt. Now, about everybody who gets near a horse would like to ride one and nearly everyone of them first found enjoyment in riding behind a horse before starting to mount one. They nearly all have a sort of fear, however, that makes the idea of riding a horse seem somewhat dangerous, and it is the same feeling that many people in each dealer's city or section have with regard to the motorcycle.

Give Prospect a Ride

This is the feeling that you have to overcome, Mr. Dealer, to make real prospects of such people. One of the best preliminary steps to do away with the feeling is the same as the first step in overcoming the feeling toward the horse—giving him or her a ride with the sidecar to replace the wagon. The first step is simple: Meet the prospect accidentally or arrange with him for a sidecar trip.

Any dealer can do this, if he has a sidecar outfit and every dealer should have one just for this purpose. The average person is inquisitive—perhaps it is better to say that all people are inquisitive—and if they do not already know they will, upon being taken into a sidecar, display interest in what power is sending that sidecar along. Then, too, there is to be considered that this man's distrust of riding a motorcycle will not be in any way advanced by the possibility of his accidentally bouncing from the tandem seat of a machine.

The prospect is in a position to talk with the sidecar driver, for one thing. He can carefully watch the driver's movements. He can also observe

a complete quality line that meets every demand

VITALIC BRIGA

ANY DEALER with a stock of these three tires is completely equipped to supply the demand of *every* customer that comes into his store—from the one who wants the *best regardless of price* to the one who wants a *good* tire at a *popular price*.

THE VITALIC

is built throughout of the best tire materials obtainable,—two plies of genuine *motorcycle* fabric frictioned with pure rubber, an inner tube of pure Para rubber so heavy as to eliminate any possibility of leak, an extra heavy non-skid tread of finest quality pure rubber. Will outwear any ordinary bicycle tire *more than two to one*. Once introduced it easily brings a higher price than other tires and always sells over and over again to the same trade because it *never* disappoints.

THE BRIGADIER

The best popular priced tire ever put on the market, far excelling others anywhere near its price. It is a four-ply tire, built with two plies of best Egyptian fabric all around the tire and two extra plies on the tread. A very high grade friction is used.

The extra heavy inner tube is made of a very high quality rubber. The Brigadier is made with gray side walls and a heavy large white studded tread as shown in the illustration.

THE ENDURO

Another excellent popular priced tire that fills a long felt need for a tire of lower price that has genuine quality. It is built with two plies of high grade Egyptian fabric with a very high grade friction, has a heavy inner tube of very good quality and a good substantial diamond studded white tread.

Write us today for sample sections of these three tires and attractive display material and dealer helps.

Your jobber will show you the tires.

GIVE YOUR DEMONSTRATIONS WITH A SIDECAR

(Continued from page 40)

impresses the person in the right way, it is almost always possible to sell that person a sidecar combination hooked to the motorcycle and the dealer must remember that here is a double sale and an extra profit. He should make a studied effort to make this profit.

Gives Him Confidence

The sidecar ride can be made so impressive that the new prospect will be almost saturated with admiration for the advantages which it offers. If the prospect sets his mind on a motorcycle without a sidecar, by demonstrating to him from a sidecar you have instilled confidence in him. He will have no qualms when you place him upon the solo machine and send him forth.

The sidecar combination does not lose sales for you through demonstrating with one. It will, in almost every case, make a sale for you and in most cases, will bring the extra profit from the sidecar sales.

It is up to you to go forth and convert these people, Mr. Dealer. Make them riders and sidecar drivers. Educate them, and in due time you will secure their proportion of business.

FIND READING TABLE AN ASSET TO BUSINESS

DENVER, Colo., Oct. 14.—Boyd and Williams, Western distributors for the Indian motorcycle, have one corner of their salesroom taken up with a table around which is arranged chairs. On the table is placed all manner of reading matter that is of interest to motorcycle riders. The corner is not only attractive, but it serves as a drawing card in bringing people to the store and helps keep the motorcycle dealers in touch with riders.

MacGRAW IN NEW QUARTERS

SYRACUSE, N. Y.—A. H. MacGraw, Henderson and Excelsior dealer in this city, recently moved into new headquarters at 544 South Salina street. MacGraw states that the rapid increase of his business has made the change necessary. The new salesrooms are larger and are also of fireproof construction.

WHITING GETS A CARLOAD

DENVER, Colo., Oct. 14.—Walter W. Whiting, Western distributor for the Harley-Davidson motorcycle, in this city, has just received a carload shipment of the 1917 model of these machines.

ORANGE COUNTY HUSTLERS

ANAHEIM, Cal.—One of the most active and prosperous teams of motorcycle enthusiasts in this part of the country is composed of F. S. Shiner and Fred Minyard, who do practically all the repair work in Orange County. Minyard recently associated himself with Shiner in a new business, handling the automobile and motorcycle repairs. Minyard specializes on the repair work, while Shiner devotes most of his attention to sales and new business.

Henry Ford's Ambition

When Ford first put out his low-priced car, the entire automobile trade condemned him as something worse than a fool. They claimed he was disturbing, disintegrating values in motor cars, that he was a dreamer, a theorist of the worst calibre.

But the results speak for themselves. Ford's ambition was to be of some definite benefit to the public, to make motoring a pleasure to be enjoyed by the masses as well as the classes—and believing this and building to that belief in hitherto unheard-of quantities, yet rigidly maintaining the highest pitch of service-giving quality, he became —almost automatically—the most commanding, the most wealthy, motor-car builder in the world.

Morrow

The makers of the MORROW have the same goal—that of being of some definite service to the bicycle industry and rider. Everything else is subjugated to this high aim. Every second of time, every ounce of steel, every atom of brain-energy in our plant is concentrated upon this service-idea —and the result is that the MORROW Coaster Brake, in its eighteen years of existence, has been of really distinguished service in promoting bicycle sales, easing the work of the bicycle rider and forever guarding his absolute safety under all conditions. Our aim is a worthy one—the result is written for all to see.

EFFICIENT LIGHTS ENSURE AGAINST ACCIDENT

(Continued from page 24)

comes through the bottom of the lamp. It is there to permit focusing, and the burner can be moved back and forth in it. Take your machine out on an unlighted road somewhere, preferably in the woods where it is really dark. Now slack off the nut on the burner stem under the lamp, and move the burner. You will find that one extreme position will give a widely diffused light suitable for city riding, while with the burner at the other end of the slot the light will be projected far in front in a beam, making a good light for country or speed work.

You have probably noticed that the reflector makes the image of the flame appear upside down on the road or any object in front of you. Probably you have seen, too, that the top of the flame is its brightest part. To get the most satisfactory results with your outfit, adjust the burner in such a position that the brightest part of the image of the flame falls at the point where you want the road to be best lighted, whether it is far or near.

One thing which often causes trouble in focusing is removing the burner and not putting it back in the right place. When the lamp is lighted the center of the bright part of the flame should come exactly opposite the middle of the reflector, the front of the lamp being in a vertical position.

In conclusion, when cleaning up, don't merely polish the metal work and the glass in the door. Wipe off the reflector with a soft cloth; if covered with dust it will cut down your lighting efficiency by fifty per cent.

WERNER SOLD 26 DURING 1916 SEASON

PASSAIC, N. J.—Joseph B. Werner, Harley-Davidson dealer in this town, sold 26 motorcycles last season, 19 of which were sidecar outfits. His electrically equipped sales were 14 machines. This coming season looks good to him for he has eight orders on the books now for 1917 models. The local police department is investigating the possibilities of a motorcycle patrol to curb speeders, and is pleased with the demonstration Werner has given them. An early sale is anticipated by him.

Werner has been using a sidevan outfit for showing small merchants the economy of the motorcycle over the cheap auto, and expects a large van in this week for a local grocer as a result.

COLUMBUS DEALERS TO CELEBRATE ON OCTOBER 21

COLUMBUS, O.—Motorcycle and bicycle dealers, many of whom are located on East Long street, will take part in a celebration of the reopening of that street after repaving on October 21. Arrangements have been made for floats and the decoration of business houses along the thoroughfare.

Cycle firms interested in the celebration include the John Sykes Motor Company, Central Ohio Indian representative; Columbus Cycle Company, Pope dealer; L. P. Birkenbach & Company, bicycle dealers, and the Franklin Cycle & Supply Company, dealing in bicycles.

WESTERN SUPPLIES CLEAR USED MACHINES

DENVER, Colo., Oct. 16.—The Western Supplies Company, 923 Acoma street, this city, is at the present time conducting a sale of used motorcycles. The concern states that it has a large shipment of new machines on the way and they must have room on their salesroom floor for these, and so the second-hand ones must go.

The used machines are being sold from $35 up and are being disposed of for cash or on the time payment plan.

TO USE NOVEL SIDECAR AT WINTER GARDEN SHOW

NEW YORK.—The Shubert Theatrical Enterprise of this city has purchased a Rogers sidecar chassis which will be attached to a twin motorcycle and used in the next "Winter Garden" show. A bathtub will be mounted on the chassis of sufficient size to accommodate a show-girl. The nature of the act has not yet been announced.

No. 3 MOTORCYCLE PEDAL

No. 3 STANDARD MOTORCYCLE PEDALS

Our products comprise:

Diamond "E" trade mark brand Spokes and Nipples for Bicycles, Motorcycles, Tricycles, Velocipedes, Invalid Chairs, Sulkies, Carriages, Cyclecars and Automobiles. Pedals for Bicycles, Tricycles, Velocipedes and Motorcycles. Toe Clips for Bicycle Pedals. Emergency Axles for Pedals. Screw Machine Products.

When you buy a motorcycle, make sure that it is equipped with STANDARD PEDALS.

Most manufacturers have reasoned out that "STANDARD" EQUIPMENT means increased value on the machine.

STANDARD PEDALS are big, roomy, soft and minimize the shocks. Deeply corrugated to insure positive foot grip. Insist upon STANDARD EQUIPMENT.

The Cleveland Motorcycle the Universal Vehicle

The Motorcycle Market hasn't been scratched yet.

Thousands of people who never thought of owning motorcycles will buy motorcycles next year.

They won't be the kind of people who bought last year.

The Motorcycles won't be the kind that were sold last year.

The Cleveland lightweight has changed the entire situation.

For every speed fiend who wants a heavy machine, there are hundreds of genteel people who will buy Lightweights.

The future of the Motorcycle business is in the Lightweight. Everybody knows it.

And the only Lightweight that has made good in a year is the Cleveland.

We are now selecting the men who are going to make money on motorcycles. They are broad gauge salesmen who want a larger market, steadily increasing income and a permanent business.

If you are in this class, remember that the opportunity won't be so easy to get next year. Unless you are a comer, an A1 merchandiser and a man who can see things in a big way, you won't be interested in this.

I WAS asked recently for one of the Ero No. 32 tandem attachments, but have so far been unable to locate any firm who could supply me. Please give me the name of the maker. GEORGE A. STUMP.
Pine Grove, Pa.

The Ero line of tandems was made by the Ero Manufacturing Company, of 416 West Grand avenue, Chicago, Ill. We do not know whether they are still making these articles, and advise that you drop the firm a letter.

FITTING WARM AIR PIPE

FOR winter riding I propose fitting a warm air pipe to my carbureter and would like to have some information with regard to it. J. W. WALTER.
Chicago, Ill.

Measure across the long way of the air intake part at the bottom of the carbureter and obtain a thin copper tube of ⅛-inch less diameter. The length will be about 7 inches. Form one end to fit over the air intake part and the other in the form of a funnel to pass part way around the front cylinder. It may be necessary to cut this end to fit. Allow space between this funnel-shaped end and the cylinder to take in air. Pin or solder the other end to the carbureter air intake.

AT UNEVEN INTERVALS

TO settle an argument, please tell me whether the explosions in the cylinders of a V motor occur at even intervals.
JOHN MCINNIS.
Washington, Mich.

In a motor where the cylinders are 45 degrees apart, commencing with the rear or number 1 cylinder the crank passes through 360 plus 45 degrees or 405 degrees before number 2 cylinder fires. Following the ignition in number 2 cylinder there is an interval of 360 minus 45 degrees, or 315 degrees before number 1 fires again. A complete revolution is 360 degrees of crank-movement, hence the front cylinder fires after the crank has passed through 1⅛ revolutions, and the rear cylinder after the crank has passed through ⅞ of a revolution. The firing intervals are unequal in all V twins.

Prest-O-Lite for Motorcycles

Light that is Safe, Certain and Enduring

BECAUSE it is so simple, so sturdy, so sure, under all conditions of service, Prest-O-Lite is the choice of riders everywhere. No matter whether you take a short night spin on the boulevard or a long night ride over rough country roads, Prest-O-Lite never fails you.

Its steady, brilliant, white-light beam fully illuminates the road ahead at all times, regardless of bumps and jolts to your machine.

This simple and trouble-proof lighting system is used on more motorcycles than all other lighting systems combined.

YOU should enjoy its many advantages by having **your** mount equipped with Prest-O-Lite.

On any make of motorcycle

you buy, you can get Prest-O-Lite with a combination of "complete equipment." That means a **Prest-O-Lite lamp and a good mechanical horn,** which any dealer can supply if you ask. Thus equipped you are ready for the road—any road. Insist and see that you GET Prest-O-Lite. It's best and cheapest in the long run.

Valuable information on motorcycle lighting is contained in our booklet. Write for your copy today.

DEALERS—Satisfied customers are bound to be your biggest boosters. Satisfy them with Prest-O-Lite quality and service. There's more business in it for YOU. If you don't know all about it now, write for details.

NO AGENCY CHANGES IN TORONTO FOR 1917

Motorcycle Representatives in Ontario Metropolis to Continue Lines Held During the Past Season

TORONTO, Ont.—According to latest indications, the motorcycle dealers of Toronto will stand pat for the season of 1917. The four local houses will continue as in 1916 and prospects will have a range of eight different makes from which to make a choice. Seven of these productions are of American origin while the sole remainder is a British line, the Douglas. The American makes represented on the Toronto market include the Dayton, Excelsior, Indian, Henderson, Harley-Davidson, Miami Lightweight and the Reading Standard.

The four dealers will hold down their present premises, three of which are located within a short section of Yonge street, the main thoroughfare of the city. The dealers and the lines they are handling are as follows: Walter Andrews—Harley-Davidson; H. M. Kipp & Co.—Indian, Dayton and Douglas; Percy A. McBride—Excelsior, Henderson and Miami; William Porter—Reading Standard. McBride boasts of three stores in Toronto, one of which is devoted exclusively to the sale of sporting goods.

Toronto will probably continue to be the outstanding motorcycle centre of Canada. This city is the principal shipping and distributing point and the majority of all Canadian manufacturers and jobbers of both motorcycles and bicycles are located here. At the same time there are more motorcycles in use on local streets than in the whole of the rest of the Province with its population of over 2,500,000. The inhabitants of Toronto number 525,000 and approximately 2,500 motorcycles are owned here. About 2,000 motorcycles are in use in Ontario outside of Toronto. Another fact is that there are more motorcycles in Toronto than are registered in any Province of the Dominion, other than Ontario. This has been the situation for several years.

TWO MORE TRADE MEN ENLIST

WINNIPEG, Man.—A number of prominent motorcycle tradesmen of Winnipeg have enlisted in the Canadian overseas army during the past month or two. One is C. Gordon Cruikshank, head of the Consolidated Bicycle & Motor Co., who has become a lieutenant of the 197th Battalion. Another is Jack Crabtree, half-owner of the Dominion Cycle Co., who has enlisted as an officer with the 222d Battalion.

AUSTRALIA TO MAKE ITS OWN BICYCLES

Commonwealth Has Completed Arrangements to Build Bikes in Quantity for Varied State Services

OTTAWA, Ont.—According to D. H. Ross, Canadian trade commissioner, the government of the Commonwealth of Australia is going into the manufacture of bicycles on its own account. The government officials on the other side of the globe have completed arrangements for the establishment of the bicycle industry which will be government-owned in every respect, it is understood.

During the past decade the Australians have imported large quantities of bicycles from Canada. These shipments have been really heavy as many Antipodeans are ardent cyclists. There will be no drop in the wheel imports into Australia for some time, however, it is believed, because it is the intention of the Australian Government to manufacture bicycles for its own requirements first. It is planned, according to the official report received in Canada, to supply the post offices of the Commonwealth with

the Government-built wheels. This will be a big item because it is intended to provide each postman and telegraph messenger with a bicycle. A certain number will also be made for military purposes while other branches of the Government will also have machines to go wheeling on duty bent.

The Australian Government will import some of the parts for the State-made bicycles until such time as the factory facilities are perfected.

LADY MAUD CAVENDISH IS A CYCLING DEVOTEE

OTTAWA, Ont.—Bicycle dealers and enthusiasts of Canada are much interested in the statement that the eldest daughter of the next Governor-General of the Dominion is a thorough cycling devotee. The coming ruler of British North America is Lord Devonshire and his eldest daughter, who is in her twenties, is Lady Maud Louisa Emma Cavendish. She is an out-and-out cyclist and has spent much time on the English roads a-wheel. It is reported that she is bringing her stable of bicycles to Canada and that she intends to visit many places on bicycle. In this event she will undoubtedly lead numerous members of the Canadian "court" to cycling and, eventually, both sexes of the fashionable set all over the country will take up the pastime.

Another help to the situation will be the fact that the question of economy in war time will make it almost imperative for the smart set to accept the bicycle in place of the automobile to set the example for the "common peepul." The Government, incidentally, is preparing to launch an economy campaign about the same time this fall that their Excellencies will arrive in Canada to assume nominal charge of the nation.

TORONTO M. C. NO LONGER AN ACTIVE BODY

TORONTO, Ont.—The Toronto Motorcycle Club has become so lost from sight that practically no attempt is being made to re-awaken interest in the organization for the winter months. The club is a mere shadow of its former self, the membership having dropped from 595 to a bare dozen. The cause is attributable to the war as but a handful of the original motorcycle enthusiasts are remaining at home.

The club has not actually held one run or race all year with the exception of the midnight dash to Hamilton last January 1. Some sports were held at Exbridge early in August but these were conducted under the auspices of a local dealer. A general meeting of the club has not been held since last spring.

ANOTHER WELL-KNOWN CYCLIST KILLED IN ACTION

TORONTO, Ontario.—Once more the European war has brought sorrow straight to the bicycling fraternity of Toronto, owing to the death on the field of action of one of the stalwarts of the wheel sport. The latest cyclist to pay the price is Private Charles T. Hewlett, whose widow and children reside at 60 Seymour avenue, Toronto.

Hewlett enlisted with the 59th Overseas Battalion at Kingston, Ontario, and was the sergeant in charge of 300 Russians when he crossed the Atlantic. While completing his training in England, he gave up his stripes in order to reach the firing line quickly and was killed in action after a short period in the trenches. Hewlett was a prominent member of the Tecumseh Bicycle club and was a familiar figure at the Toronto board track and other racing plants before he enlisted.

SPENCERS PLAN TO RIDE BACK TO TORONTO ON BIKES

TORONTO, Ontario.—Arthur and William Spencer, the youthful professional cyclists at the Newark Velodrome, have written home to the effect that they intend to ride the 540 miles from New Jersey to Toronto on their bicycles. They have not yet fixed their starting date on account of engagements at the Newark saucer, but their getaway and progress will be chronicled in Toronto newspapers when the dash does occur.

The Spencers have also arranged to jump into vaudeville for the winter with a bicycle act. They are getting the necessary props. and will become "ectors" after the six-day bicycle race in Boston, during the first week of November. Bill Spencer will probably start in this grind.

The Spencer boys have made good use of their winnings this summer. The surplus over their expenses and pin money has gone into a grocery store in Toronto over which Pa Spencer now presides.

WE have a body construction in the Pullman that we defy any other manufacturer to equal. The frame is of Kiln Dried Second Growth Ash. Every joint is tennoned and reinforced with metal plates. The metal cover—though relieved of all strain—is made extra thick to insure against denting.

The finish is made equally durable because we use heavily lead-coated sheet steel. This is absolutely rust-proof. Neither are there seams. Excepting the hood, **the entire body cover is of one piece!**

These are a few of the facts given in our attractive circular. A post card with your name and address will bring it to you.

Riding Leggings As Heat Collectors

A Veteran Discusses the Discomfort Caused by the Absorbing Qualities of the Black Variety and the Superiority of the Tan or Khaki Article

By D. B. PANGBURN

TWO riders pulled up in front of the store one warm day. "Gosh," said one, 'my oil must be low or the oil line partly plugged up. My engine feels like a red-hot stove, and it's been running hot all summer."

But when the two machines were compared his engine wasn't a bit hotter than the other fellow's, who hadn't noticed anything unusual, and the oil line was all right. The explanation was really something quite simple.

Franklin's Proof

You all remember how old Ben Franklin tried the effects of colors in absorbing heat. He laid a black handkerchief and a white one in the open sunshine on the snow, and found that it melted out two or three times as fast under the black one as under the white. He was proving the well-known law of physics that dark substances absorb heat at a much greater rate than light ones.

The fellow who was suffering from the supposedly hot engine was wearing black leggings, while the comfortable chap had on tan ones, which did not suck up the heat from the motor. Furthermore, the black leggings were a dull black, while the tan ones were polished. It is also a known fact that a dull surface takes in heat, while a polished one throws it off by reflection. Another point in favor of the light colored apparel.

Tan Shoes in Summer

Ask any intelligent shoe clerk why so many folks wear tan shoes in summer and he'll tell you the habit began because they are cooler. It is largely the color that makes them so, but also there is no dye to stop up the pores of the leather and make it air tight as in blacks.

In the same way, the advantage is all with the tan or khaki-colored leggings for the greater part of the year. It is true that when you are not on the machine they do not radiate the warmth from inside quite so well as do the dark ones, but the bodily heat is mighty small compared with that from the sun, and from the cylinders at several hundred degrees temperature, only a few inches away, while of the heat from these latter the khaki-colored rejects a large part that the black picks joyfully up and passes on to the legs inside.

Tan Leggings Cleaner

Another thing about the tan leggings is that they show the dirt much less and are more easily cleaned and polished, and they hold the polish better; certainly also they look no worse than the black ones on the rider. In fact, the tan puttee type gives about the snappiest effect that can be produced with any kind of leather covering.

If black leggings are not kept clean and black they look like original sin; if they are kept clean they are uncomfortable in hot weather. The best way out of it seems to be to have a tan pair for summer use, and a black pair that comes well above the knees for winter riding service.

FOX GETS INDIAN SHIPMENT AT GRAND JUNCTION

GRAND JUNCTION, Colo., Oct. 16.—Peter Fox, Indian agent in this city, has just received a large shipment of Indian machines and has them on display at his headquarters, 321 Main street. Fox is one of Colorado's best hustlers and his expectations of selling a big bunch of Powerplus and Lightwins this Fall will no doubt be realized.

FIVE YEARS' RIDING COST MINISTER TEN CENTS

HARRISTON, Ont.—A parson of Harriston, Ontario, holds a bicycle record although he never took part in a race in his life. The performance consists of riding one wheel almost continuously for five years with a total repair bill of ten cents for an extra nut. The preacher has been pedalling around his parish a great deal and the remarkable fact is that the original tires are still in fair shape. Rev. H. H. Wilkinson is the name of the cycling wonder.

SIMPLEX FOOT RESTS

Equipped with a universal clamp, will fit any make of motorcycle without tinkering or injuring of tubing. *They are strong, but light*—made of steel, heavily nickeled. The cut shows the folding type. A high grade product in every respect.

Price—Per Pair, $1.25

Harley-Davidson Production Now Near Top Notch

The Harley-Davidson production schedule this coming week calls for 500 motorcycles and 250 sidecars. We will be able to increase this schedule later on in the winter, to take care of the early spring demand.

Within two weeks we expect to be caught up on present orders and making *immediate deliveries.*

To Dealers

If you have the Harley-Davidson selling proposition under consideration, our advice to you is to close up now—do not wait for the show.

We are fast closing up those towns where the Harley-Davidson has not been represented, and there are only a limited number of towns where changes will be made in our representation.

Bicycles

During the month of November we expect to actually ship 2,000 Harley-Davidson bicycles, and intend to maintain the bicycle production at this rate, or increase it, throughout the active selling season.

By November 10th we will be in a position to handle carload shipments of Harley-Davidson bicycles.

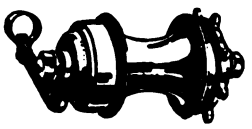
the Bicycle Dealer

who does the biggest business in any community is the one who stocks the goods his trade demand. Wherever a new Bicycle is bought, or an old one is repaired or rebuilt, it's a hundred to one your customer thinks first of the

NEW DEPARTURE COASTER BRAKE



It has been so almost since cycling began.

The demand this year has increased by leaps and bounds. It will be still greater during 1917.

It's more than likely your competitor is specifying New Departures in increasing number. Perhaps his sales have been larger than yours and you have asked yourself why.

Here is the answer:

The brake that has helped him build a successful business, is the brake his customers know best, the brake they ask for and expect to get.

What the New Departure has done for him it has done for thousands of other dealers.

It will do as much for you.

Just as soon as we receive your letter we will tell you all about the Brake, the Guarantee behind it and the Sales Helps that every New Departure Dealer uses.

THE BEST DRIVE SPARTAN FOR LIGHTWEIGHTS

Coming Down to Brass Tacks

WE have been telling you for a long time that the coming motorcycle, the big seller, is the Lightweight, a Lightweight because of its simplicity and ease in handling—the Lightweight has come; it will be the big seller in 1917.

Simplicity is the strongest point in selling Lightweights. The simplicity argument is going to get you a big market, the new people, those who couldn't and wouldn't see motorcycles as they are known today.

Remember, simplicity has to stick out all over, so to speak, and you can't and won't get real simplicity until you have belt transmission.

Look at any motorcycle—imagine how it would look with a score of contraptions removed, all those things which belt drive doesn't require. Imagine it without the whole transmission scheme and just a pulley front and rear and a belt that is real simplicity; that is what you need to sell Lightweights.

Mr. Dealer, get busy. You are the man that has to do the selling—insist on simplicity; insist on belt drive with a good belt. Specify the only really good belt there is, the

BLUE STREAKS

One Standard Tire Price

The one standard Goodyear Blue Streak Bicycle Tire price—$2.50 everywhere—is desirable for the public for several reasons.

1st. The one Blue Streak Tire, one quality at one price, means a tire easily identified everywhere at any time. Future purchases of Blue Streaks are simplified, and the time and energy of the rider and dealer are saved.

2nd. The rider is assured of the quality he is getting without examining before purchasing. The dealer is saved the time trying to explain and push the unknown, unstandardized tire.

3rd. The standard Blue Streak Tire serves as a basis of comparison. When the dealer substitutes another tire and tells the rider "This is just as good," the rider can compare these claims with the known Blue Streak quality and thereby hold the dealer strictly to his statements.

4th. The standard Blue Streak price is from $1.00 to $3.00 lower than other tires of equal quality. Because it is the only bicycle tire Goodyear makes, it can be made better and still sold at a smaller margin in order to make large sales possible and a quicker turnover.

You will agree that this is the best business practice and should enjoy its economies by ordering a stock of Goodyear Blue Streak Tires at once.

"LOOKS LIKE BIGGEST THOR YEAR"—O'HARE

Aurora Automatic Machinery Salesmanager, Calling on Eastern Trade, Sees Coming Season Through Bright Glasses—Early Deliveries and Catalogs as Sales Stimulators—Thor Orders From the War Department Gratify the Factory

NEW YORK, Oct. 24.—That there is nothing quite so effectual in stimulating the motorcycle business as an early announcement followed by immediate shipment of the new machines to the dealers, is just a touch of the Thor enthusiasm vented by Salesmanager C. B. O'Hare who dropped in on Gotham yesterday in the course of a business trip covering the entire eastern trade.

O'Hare came to New York out of New England, having spent the last week in visiting the Yankee Thor dealers and distributors.

Everywhere he has found the Thor dealers not only highly gratified with the new models, demonstrators now being on the floors of most of their establishments, but keenly enthusiastic over the new Thor cooperative dealers' policy which is already having its effect in increased business.

One of the most largely felt factors in the general enthusiasm is the early issue of the Thor catalog covering the new models which reached the dealer at the same time as the demonstrating machines.

The Thor catalog is a 16-page booklet done in two colors, blue and black, with a complete description of the Thor line profusely illustrated with half tone engravings. The booklet is bound in a neat cover handsomely illuminated with an eyepleasing sketch printed in the characteristic Thor colors.

In speaking of the new Thor dealers' policy and the enthusiasm it has met with by dealers the country over, O'Hare pointed out that during the past two weeks some 120,000 sales letters have gone out from the factory to as many Thor prospects in every part of the United States. The letters were sent to prospects whose names were supplied to the factory by Thor dealers and to lists obtained through national advertising campaigns and other sources. This is the sort of dealers' help that is lining up the best of dealers for the Thor, says O'Hare.

Up until the present time, the greatest call has been for the Thor Model 17U twin, which is the 12-horsepower model, although the dealers along the line are booking a substantial number of orders for both the 15-horsepower Model 17A and the light twin Model 17V.

That the Supersingle model is filling a distinct want in the motorcycle field is evidenced, says O'Hare, by the increasing call for this single two-speed service model.

As evidence of the fact that the man who wants a motorcyle cares not a whit for cost, O'Hare points out that a considerable

HOW ANNUAL SHOWS GAUGE THE INDUSTRY

Chicago Exhibition, November 13-18, Will Demonstrate Anew the Magnitude and Progressiveness of the Cycle Trades; Greater Opportunities Than Ever for Manufacturers, Jobbers and Dealers to Reap Show Week Benefits

By A. B. COFFMAN
Manager, National Cycle Shows

TOLEDO, O.—Just stick your head inside the doors of the Chicago Coliseum November 13 to 18 and have a five-second glimpse of the fifth annual National Motorcycle, Bicycle and Accessory Show—and, if you are a manufacturer, jobber or dealer, you will have a new respect for the great industry of which you are a part!

For fifty weeks of the year this great industry throbs away all over the United States—separated into its many parts—the manufacturers, jobbers and dealers scattered everywhere in their respective cities, and each plugging away to beat the band, making, selling and distributing their products to the great American public. Everybody realizes that it is a great industry—but it is invisible as a whole.

Then come two weeks of the year,—one in Chicago and one in New York—when this great industry is gathered together, tangibly, dressed up in its best clothes and put on exhibition. For these two brief weeks you can actually see the machinery of the big organization and get inspiration enough to drive you through the rest of the year at full tilt.

And right ahead of us is the first of these big weeks—the week of the Chicago Show.

There's been a lot of progress since the last show. There will be a lot of new stuff to see. The Coliseum will be full of it; new models and all the new wrinkles in everything. Flags will be flying. Lights will be blinking. There'll be the hustle and bustle of good, solid business in and out of attractively decorated booths. There'll be a band or two—surely! And, if you half shut your eyes and look out over the great scene you'll think you're at the Automobile Show; for it *IS* a Show that in variety of display and interest,—as well as size and attendance—compares favorably with the annual exhibits of the motor car industry.

The more you think of your business the higher it rises in your esteem,—the better you will do at it.

And if there's one place in the world where you'll get a real, tangible idea of its magnitude and importance, it is at the big shows.

You can't afford to miss the Chicago Show. No manufacturer should be missing from the list of exhibitors. Jobbers find an equal opportunity. And dealers,—it's a

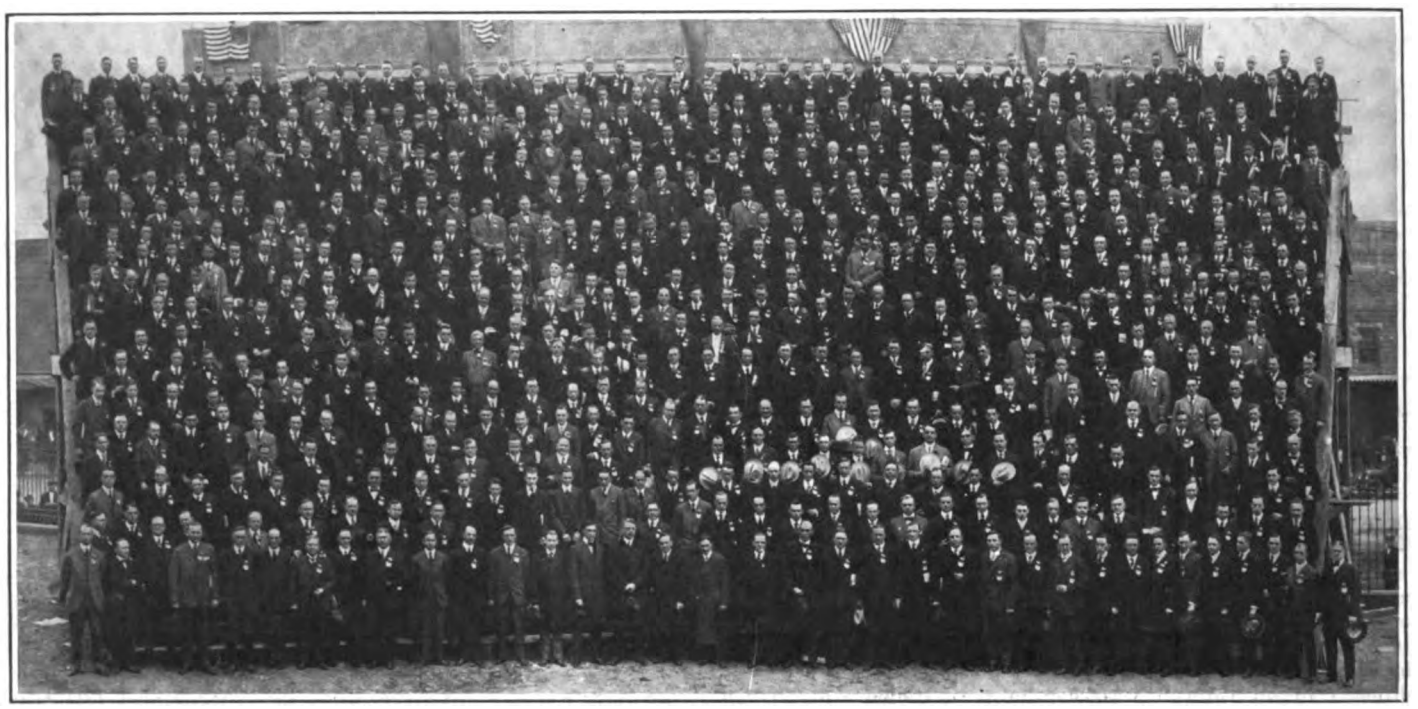
HOW THE FIRESTONE SALES ARMY LINED UP

Five-Day Convention at Headquarters in Akron Closes with 500 Attendants Keyed Up to High Pitch For Coming Campaign; Elaborate Business and Social Program a Complete Success



AKRON, O., Oct. 23.—Now that the 1916 annual convention of Firestone branch managers and salesmen is a matter of trade history—it closed Saturday with a final outburst of enthusiasm and good fellowship—the unanimous opinion of all concerned is that the program was by far the most successful of the kind ever arranged by the big tire-makers. The convention opened on Tuesday, Oct. 17, and throughout Tuesday, Wednesday, Thursday, Friday and part of Saturday there was never an idle moment for the 500 Firestone representatives who had gathered from all parts of the United States.

Inspiring reports were read by company officials, branch managers told of their rapid progress during 1916 and traveling salesmen contributed their share to the seemingly unlimited data concerning the popularity of Firestone products. Business and recreation were neatly blended, and when the men were not listening to spirited addresses or assisting in the working out of still broader campaign plans, their time was taken up by social activities. It was a busy week and a fruitful one for the salesmen.

The program opened on Tuesday with a reception in the company's executive offices, after which the men gathered in the auditorium of the new club-house, where Sales Manager R. J. Firestone opened the business of the day.

"We have never experienced a sales convention in which the whole-hearted cooperation of factory heads, branch managers and traveling salesmen was so clearly manifest," said Advertising Manager E. S. Babcox, at the close of the big program, "and under such conditions it is only fair to predict that the truly remarkable progress of the Firestone organization for the last year will be continued on a still broader basis for the coming season."

EIGHTEEN FINISH READING CLOVER LEAF RUN

Twenty-seven Participate in Three-Circuit Contest Out of Pennsylvania City, But Tire Trouble Jinx Disposes of Nine; Oue Single-Cylinder Mount Goes Through 200-Mile Event

READING, Pa., Oct. 24.—Out of the 27 entrants in the 200-mile Clover Leaf run of the Reading M. C., which was held Sunday, Oct. 22, 18 completed the rather severe route.

The finishers were as follows: Martin Hoffman, Harley-Davidson combination; Whitney B. Sanders, single-cylinder Indian; Raymond Fritz, Indian combination; William Buel, Harley-Davidson combination; Ezra Von Neida, Indian combination; Walter Shupp, Indian combination; Daniel Williams, Indian combination; Jacob Deisher, Indian combination; George L. Dengler, Thor combination; William G. Schaeffer, Reading Standard combination; Charles Cole, Excelsior combination; Earl Myers, Reading Standard combination; William Sweigert, Excelsior combination; Otis Hettinger, Dayton combination; Pierce Hettinger, Dayton combination; Alfred Eisenberg, Indian solo; Webb Slote, Henderson solo; Harry Somers, Harley-Davidson solo.

W. R. Sanders was the only one of the three riders mounted on single-cylinder machines to finish.

Tire trouble caused most of the delays along the route.

The detailed scores of the contestants will be announced at the meeting of the club to be held Thursday, Oct. 26, and the prizes will probably be awarded at that session.

The route was covered as follows:

First "leaf:" Fifth and Penn streets to Mt. Penn, Stony Creek, Yellow House, Douglassville and Pottstown. The first control was located at Pottstown. The route then led through Boyertown and Yellow House, back to Reading.

Second "leaf:" Fifth and Penn streets to Green Tree via Bingaman street bridge; to Morgantown, Elverson (control), to Joanna, to Birdsboro and back again to Reading.

Third "leaf:" Fifth and Penn streets to Glenside, Bernville, Rehrersburg, Harrisburg, Millersburg, Pinegrove, Schuylkill Haven, DeTurksville, Orwigsburg, Hamburg, Port Clinton, Shoemakersville, Leesport and back to Reading.

A 20-mile an hour schedule was maintained by the single-cylinder machines, and the twins with sidecars, while the solo twins traveled on a 22-mile an hour schedule.

ROUTE FOR McALLEN-ALBANY MILITARY DASH

Army Motorcycle Couriers Who Will Ride From Texas Camp to New York State Capital Under Strict Military Field Conditions With Message From Major General O'Ryan Have Completed Plans; Hope to Get Under Way Before November 1 With Sidecar Outfit

NEW YORK, Oct. 24.—Dan LeR. Dresser, the army motorcyclist, who is planning to make a sidecar dash from Camp McAllen, Tex., to Albany, N. Y., in company with Harvey Edwards, another military rider, left New York for the border on Sunday. Dresser and Edwards will make the trip under strict military field conditions, and will go fifty-fifty on the operating of the machine. In other words, they will take turns in the saddle. Edwards is now at Camp McAllen and as soon as Dresser gets back they will perfect their plans for the trial. Dresser is also stationed at the border, but has been north on furlough.

As to how soon the trip will be started depends upon the stand taken by Major-General O'Ryan. The General is enthusiastically in favor of the trial, but has hinted that he would like to hold it off until he has military information of some special significance to communicate to Governor Whitman at Albany.

Dresser and Edwards are hopeful, however, that Major-General O'Ryan will decide to send them off without delay, even though there may be no military information of special import to communicate to Governor Whitman.

Route Outlined

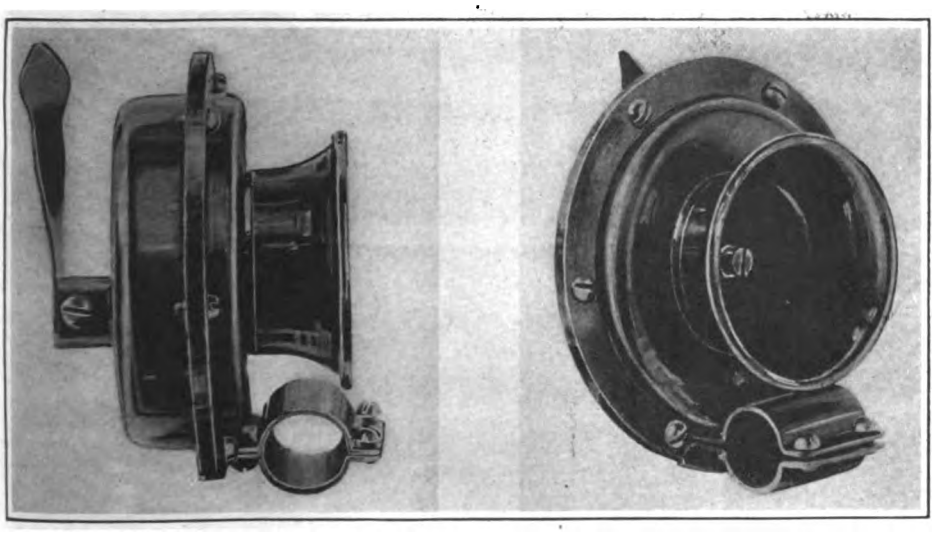
The route to be followed by the motorcycle couriers on the 2,700 mile dash will be as follows: From Camp McAllen to Rio Grande (a run of about 40 miles over uncharted trails), to Laredo, to Cactus, to Cotulla, to Pearsall, to Devine and thence to San Antonio, Tex. From San Antonio the route leads to Austin, to Waco, to Dallas, to McKinney, to Denison and to Oklahoma City, Okla. They will then strike through Guthrie and on northward to Wichita, Kan. At Florence, Kan., they will head eastward and proceed through Emporia, Kansas City, Higginsville, Mexico, Louisiana, Jacksonville and finally reach Springfield, Ill.

From Springfield the route leads through Decatur, Indianapolis, Cambridge and Richmond, Ind., to Springfield, Ohio, and through Columbus and Zanesville, Ohio, to Wheeling, W. Va. Striking into Pennsylvania the couriers will go through Washington, pass to the south of Pittsburg and then touch at Uniontown on the way to Cumberland, W. Va. They will then proceed through Hagerstown, Gettysburg, York, Lancaster and Philadelphia, en route to Trenton, N. J. From Trenton the route leads through New Brunswick, Elizabeth, Newark, New York, Poughkeepsie and Hudson to Albany, the final destination.

As has already been stated in these columns, Dresser and Edwards will use a 1917 Harley-Davidson and sidecar, of stock type throughout. They will carry 110 pounds of equipment between them and will be prepared to camp along the route, although they will not be barred from sleeping in a hotel when one happens to be handy.

MECHANICAL WARNING SIGNAL FROM INDIAN

"Motophon," Made Especially for the Indian, but Applicable to Other Machines, Latest Product of Hendee Plant — Simplicity and Low Price of $2 Its Outstanding Features



SPRINGFIELD, Mass., Oct. 24.—The Motophon, a mechanically-operated warning signal specially designed for use in connection with the Indian motorcycle, but applicable to others, marks the entrance of the Hendee Mfg. Co. into the realm of the accessory maker.

The newest Indian product is a small, light mechanical horn of the short-projector motorcycle type which lists at the record-breaking low price of $2.

In point of simplicity, it is doubtful if any construction capable of answering the requirements of a reliable and penetrating warning signal could be simpler. It comprises, in the main, a body of pressed steel in two sections; the front section is formed with a neat little projector, while the rear section is bellied out to form a receptacle for the operating mechanism.

The two sections are formed with flanges by means of which the sections are bolted together, a diaphragm of specially tempered steel being placed between the flanges; cork gaskets space the diaphragm from the respective flanges.

The mechanism comprises simply one large gear wheel directly connected to the operating lever which engages with a small spur gear formed integral with a specially heat-treated steel cam wheel.

The cam wheel contacts with an adjustable diaphragm screw positioned in the center of the diaghragm and causes the steel plate to vibrate at the requisite speed to emit a sharp clear penetrating signal when the lever is twirled by the operator.

A clock spring is so positioned in the gear train that it is wound up when the

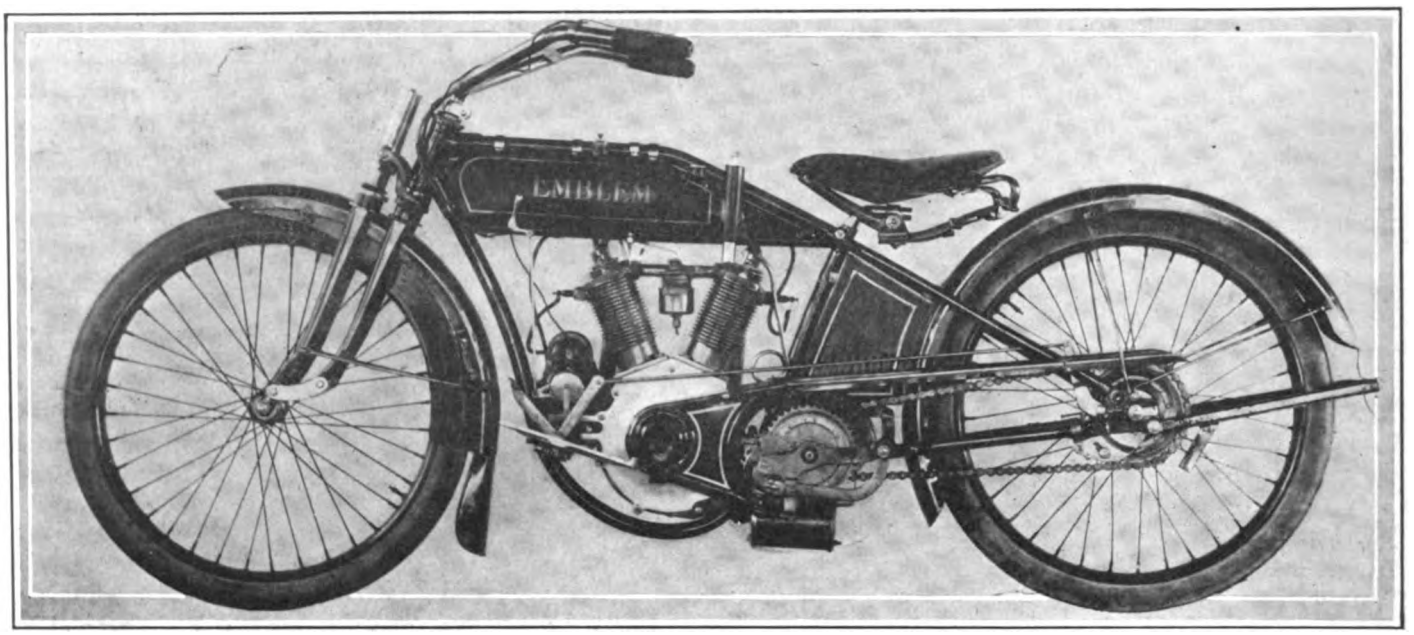
MEDIUM-WEIGHT TWIN FOR EMBLEM

Angola Factory Announces 5-7 Horsepower Two-Cylinder Model With New Kick-Starter and Cartridge Type Spring Fork in Either Single-Geared or Three-Speed Styles — Will Concentrate All Efforts on This Machine for 1917



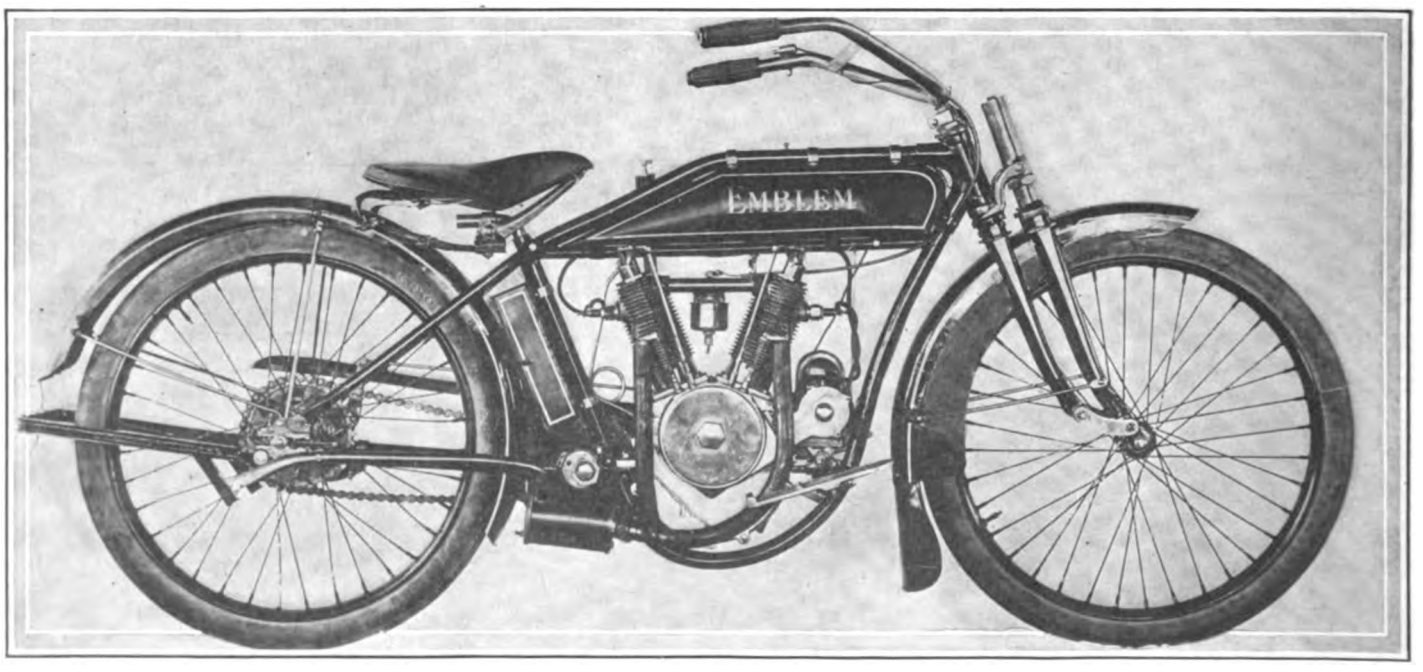
Left View of New Emblem with Three-Speed Gearset and New Type of Kick Starter; Note Low Saddle Position

ANGOLA, N. Y., Oct 24.—All the energy of the Emblem sales and manufacturing forces will be concentrated on one model of Emblem motorcycle for the 1917 season. This model is a medium-weight twin, single-geared with kick-starter, and lists at $175. It may also be had with three-speed sliding gearset for $210.

When Chief Engineer John Glass presented the designs for this model to General Manager W. G. Schack, of the Emblem Manufacturing Company, they met with instant approval. Mr. Schack stated that such a design would cover all requirements of the motorcyclist, and consequently all the firm's efforts would be devoted toward producing and marketing this model. In fact, the firm has commenced production on the 1917 twin and will be enabled to make deliveries in quantity in a short time.

"By confining our efforts to one model," says General Manager Schack, "we approach an ideal in standardization. There is but one set of parts to manufacture, stock and assemble; it is simpler for the dealer as well as for the manufacturer. It has been the aim of the Emblem Manufacturing Company to standardize all constructions, whether of motorcycle or bicycle, and we feel that we have done so thoroughly in our 1917 policy."

The powerplant of the 1917 Emblem is a twin motor, rated at 5-7 horsepower. The bore is 2⅝ inches and the stroke 3 inches, giving a piston displacement of 32.44 cubic inches. The inlet valves are arranged in a common valve chamber over the exhaust valves, while the cam gearing is characteristic of Emblem construction in



Right Side of Single-Geared Emblem Machine with Pocket Valve Motor, Stream Line Tank and Cartridge Spring Fork

Digitized by Google

previous seasons, in having all valve cams in one piece, etc.

The carbureter used is a Schebler, especially adapted for use with this motor. Ignition is by Berling magneto driven by gearing from the distribution train and located forward of the motor. Lubrication is by hand-pump, located near the rear of the oil compartment in the combined fuel and oil tank. Splash oiling takes care of the working surfaces of the motor.

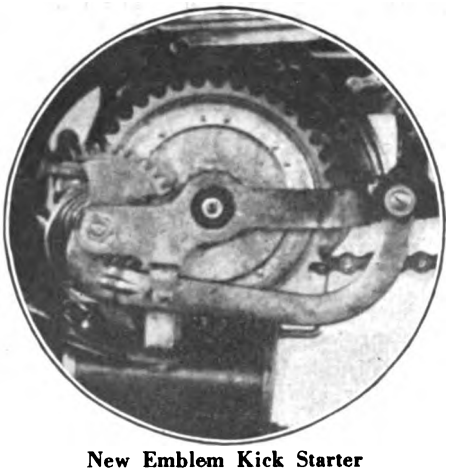
New Clutch Fitted

Transmission is by roller chain, the primary drive leading from a sprocket on the motor shaft to the body of a multiple disc clutch mounted on the countershaft. This clutch differs from previous types of clutch used by the Emblem folks in being of the dry-plate type, discs faced with friction fabric contacting with steel discs, interleaved. The clutch is controlled by a through-rod and worm-gear, the latter operated by a rocker on the right side of the countershaft or three-speed gearset as the case may be. The final drive is by chain to a sprocket on the left side of the rear hub, as in previous Emblem construction.

A new type of kick starter has been fitted for 1917. The former Emblem starter worked on a ratchet principle on the body of the countershaft clutch, but on the new machine the prolongation of the mainshaft of the gearset or countershaft carries a ratchet-pinion. This is acted upon by a sector carried on an arm of ample leverage, with folding pad. One full stroke of starter arm will rotate the motor shaft three times, ensuring quick and easy starting. This type of clutch and starter is fitted to the three-speed machine, while the former Emblem starter is fitted to the single geared model.

Three-Speed Gear

The three-speed gearset, which is listed at an advance of $35 over the regular price, is of the sliding-dog type, with direct drive on the high. The shifting is positive and there is an interlock provided between the clutch and shift control so that no move-



New Emblem Kick Starter

ment out of mesh can be made without prior withdrawal of the clutch. The gearset or countershaft device is mounted in a special bracket on the frame, which allows of taking up primary chain slack. The 1917 twin is the first Emblem to be fitted with three speeds.

Cartridge Type Fork

The front fork is of the Emblem cartridge type, carrying shock and recoil springs within the barrel. It is, in fact, an adaption of the spring fork used on the heavier Emblem twin and single cylinder models of previous seasons, the parts being lightened to take the difference in weight, etc., of the smaller machine. The frame is of the loop type, with tubing of 14 gauge and 1⅛ inches diameter. The top tube is sloped at the rear to give a low saddle position and there are ample reinforcements at all needed points. The handlebars are of the comfortable Emblem type, the grips being so positioned with relation to the rider that his hands fall into a natural position when taking hold. With this bar there is no such thing as riding fatigue to the hands and arms.

The fuel tank is seamless, the oil compartment being at the rear. The oil pump is recessed in the tank at the left, with vertically-operating plunger. A sight glass is provided to note the amount of oil taken into the barrel during the filling stroke.

Folding footboards of ample size and with spring attachment are fitted to the new Emblem. The throttle is controlled by the right grip and the spark by a short lever mounted on the frame directly above the magneto. Mudguards are of ample size and are fitted in front with valances to eliminate steering splash. The front chain has a guard which fully encloses it, while the final drive chain has an upper guard to prevent splash to rider and machine.

The wheels, 26 inches in diameter, are shod with 2¼-inch, Goodyear tires. The wheelbase is 52 inches on the single-geared or regular machine and slightly longer on the mount fitted with three-speed gearset. The weight of the new Emblem is 175 pounds. Standard finish is carmine, with black panel and gold striping. The price, single-geared, is $175, and with three-speed gear, $210, figures being f. o. b. factory at Angola, N. Y.

HERMOSILLO-PHOENIX ROAD RACE OFF

Two-Day Road Race from Springerville to Phoenix Will Take Place of International Affair Slated for November 9-10—Complications Feared in the International Event

PHOENIX, Ariz., Oct. 24.—Because of the strained relations existing between the Little Old U. S. A. and our southern neighbor, the Republic of Mexico, the two-day road race scheduled for Nov. 9 and 10 from Hermosillo in Mexico to Phoenix has been called off.

Springerville-Phoenix Instead

In its stead, a two-day road race from Springerville in this State has been substituted and prromises to fill even better than the international affair. The run will start from Springerville on the morning of the ninth and follow the Arizona trail to Flagstaff, which is designated as the night control.

On the morning of the tenth a fresh start will be made from Flagstaff, which will bring the riders into Phoenix somewhere toward evening.

The route from Springerville to Flagstaff surveys at about 185 miles, and these 185 miles are about the hardest riding that Arizona roads, or lack of roads, produces—and that's some hard roads.

The second day's run is neither so hard nor so long. It measures about 130 miles, and while considerably easier than the first day's go is calculated to eliminate the boulevard rider in fairly quick order.

Blaine Working Up Details

The details for the event are being worked out by James C. Blaine, the F. A. M. State Commissioner for Arizona, who has been appointed by the Arizona State Fair Association to take care of the speed end of the program for the coming State event.

The international event was abandoned only after the details of the affair had been worked out to a nicety on the tentative promise of the military authorities that arrangements could be made for crossing the international border at Nogales.

Funston Reconsiders

Further consideration of the matter on the part of Major General Frederick Funston after going into the details of the contest with Governor Hunt and Commissioner Blaine brought forth the fact that to grant the request of the race officials was to open up possible complications at a most inopportune time.

Most of the motorcycle mounted soldiers who had served notice of intent to enter the international contest are endeavoring to obtain furloughs in order to enter the revised affair and with the expected factory support and local talent galore the contest bids fair to be the most interesting Arizona motorcycling event of the season.

STEVENS PROVES BEST IN N. J. HARE CHASE

Trails the Hares to Their Lair Acquiring the Lowest Score by a Novel Checking Method in the Third Hare and Hound Run of the New Jersey M. C.—Cordes Takes Second Honors

NEWARK, N. J., Oct. 22.—P. W. Stevens, on his 1916 Remy equipped Harley-Davidson sidecar outfit, with Howard Misner as passenger, won the third Hare and Hounds Chase held by the New Jersey M. C. today, scoring 4 points.

Fred W. Cordes, driving a Powerplus Indian, with his wife in the sidecar, was second, with a total of 6 points, while Chester A. Charles, on another Powerplus Indian, was third with a 10-point score and was the first of the solo riders to finish. William Weinkop, Indian solo and Frank Grimm, similarly mounted, were the only other riders who caught the Hares.

The Wily Hares

The Hares, Wilbur M. Walden, driving a 1916 Harley-Davidson sidecar combination with George Cogswell, Douglas Austin, Indian, with Les. W. Wintsch in the sidecar and Art Wintsch, Indian solo, laid a torturous trail over 33 miles of the backroads, alleys, dumping grounds and meadows of Newark, a course that twisted and turned so often there was little chance for the Hounds to "loop-it." In fact after the majority of them had over-run the first turn, beating it at 40, the pace fell below 25 right there. The pack began to thin out as well, for the non-observant rode on past turns and soon found themselves bewildered while the keener Hounds tore along on the scent.

Signs were posted by the Hares at various spots along the course, such as "Take the Elevator" at the foot of Walker Road, a fairly bad ascent. Segelbach said it cost him a half-dollar to get up that hill; he reimbursed several youngsters who helped push his machine when the going took on a decided slant. Another sign read, "If you don't get the Hares soon you'll go home bald-headed." Other signs were equally amusing and instructive.

P. W. Stevens and Howard Misner on Harley-Davidson, and Fred W. Cordes and Mrs. Cordes, Indian, Best Scores in N. J. Hare Chase

The most fun came though when the factory district was entered. Here the trail led through alleys and across yards that seemed to end abruptly; a swing to the right and away you went up another street, with the bunch after you.

The Last Check

Out on the meadows the way led where the last check was located and the Hares found; then back to the club-house to hear the "alibis" of the lost Hounds.

Stevens' mount was Fisk "shod," Mesinger Air Cushion saddled and Coventry chained.

Cordes had Goodyear Blue-Streaks all round, Hendee generator, Troxel saddle and Duckworth chains.

How They Were Scored

The scoring system gave rise to a great deal of fun. Three pads of paper, numbered from 1 to 100, were hidden along the course, their whereabouts being shown by the marking of a large circle of flour in the road. When the Hounds came upon the ring, they dismounted and searched for the papers. This was done to keep the field in check, and it worked well. The scores were as follows:

Stevens, Harley-Davidson sidecar, 4; Cordes, Indian sidecar, 6; Charles, Indian solo, 10; Grimm, Indian solo, 16; Weinkop, Indian solo, 25.

BENSON STEPS INTO JACKSON'S SHOES

Motor Wheel General Manager Takes Up Other Smith Duties and Former Coast Representative Handles Sales

MILWAUKEE, Wis., Oct. 24.—J. A. Benson, who has been the California representative for the Smith Motor Wheel since its introduction a little over two years ago, has assumed the post of sales manager of the Motor Wheel Division of the A. O. Smith Co.; W. V. C. Jackson, formerly general manager of the Motor Wheel Division and who has heretofore been directly in charge of the sales, is taking up other duties for the Smith company.

Called Eastward

Benson is an oldtimer in the cycle trade in every sense of the word, his experience at selling the pedal driven two-wheeler dating back to the days of the old "ordinary." Perhaps there is not a trade man on the Pacific Coast as well known and as universally well liked as was Benson.

Several months ago he was called from his coast post to assume a broader one and since that time has been calling on the Motor Wheel trade in all four quarters of the United States; during the last couple of months his efforts have been chiefly directed to the eastern territory in which he has become intimately acquainted with the Motor Wheel dealers.

A "Back Door Salesman"

Even a brief sketch of Benson would be wholly lacking in completeness without the unique summarization of his qualities as expressed by General Manager Jackson at the Atlantic City convention. "Benson is a 'back door' salesman," said the Bicycle Booster's chief booster on that occasion. "He never gives up; if his prospect will not lend a listening ear when approached in the ordinary manner, Benson changes his angle—gets around by the back door, so to speak—and gains the confidence and finally the business of the man by meeting him on his own level."

FOR SIGNAL CORPS

Aviation Department Takes Ten Harley - Davidson Machines

AVIATION FIELD, Mineola, L. I.—Five Harley-Davidson three-speed twin motorcycles, three with sidecars, one with sidevan attachment, and one solo machine, arrived here this week for use in connection with the United States Signal Corps of the Aeronautical Department.

The machines were delivered through the agency of The Koch-Ruhle Co., of Jamaica, which will see to it that the machines are kept constantly in prime condition.

This order is but half of the full order for Harley-Davidson machines for the Aeronautical Department of the United States Army, a similar shipment having been made to the aviation field at Ashburn, Ill., just outside of Chicago. In the latter case delivery was made through C. H. Lang, Chicago Harley-Davidson dealer.

PROMPT ACTION NEEDED ON POSTCARD DATA

Manufacturers who have received return postals from Motor Cycle Illustrated with requests for data concerning their products are urged to send along the information at the earliest possible moment. Many manufacturers have supplied the desired details, but quite a few remain to be heard from.

It is the earnest desire of Motor Cycle Illustrated to co-operate impartially with the manufacturers, and to that end it is necessary that all the return cards be filled out and mailed to us before Nov. 1.

ELLIS REDUCES HIS RUNNING SCHEDULE

Sociability Run Will Be Made at 22-Mile Clip This Sunday to Let the Lightweights In —Entries Galore

YONKERS, N. Y., Oct. 24.—Because he has been swamped with letters from lightweight riders wishing to enter his sociability run to Poughkeepsie and return, which is slated for Sunday next, October 29, George A. Ellis, New York State F. A. M. commissioner, has altered the running schedule to provide a speed that is within the scope of the little fellows.

22-Mile Average

The revised schedule calls for an average speed of 22 miles an hour. The run will start from Getty Square at 9 a. m. and is due to arrive at Poughkeepsie, the noon stop and turning point at between 12 and 12.15 P. M. An hour will be allowed for luncheon at Poughkeepsie, the return start being made between 1 and 1.15; the riders are scheduled to check in at Getty Square again at between 4 and 4:15 p. m. The actual running time is 3¼ hours, both coming and going.

The bait, in the shape of a gold watch and a couple of pairs of gold cuff links, which Ellis has hung up for the event is enticing a phenomenal number of entries from every section of the Metropolitan district.

Classy Entry List

Among the riders who have signfied their intention of competing to date are Calvin Weber, Wallace Stuart and John Constant on Indians, E. McDonald on a Harley-Davidson with Cygnet rear car, Harry Raoul and C. W. Waughop on Clevelands, Ben Ruderman on a Thor and members of the Crotona M. C. and the Brooklyn motorcycle clubs.

There will be no extra post entry fee charged for the late comers.

MERKEL COMPLETES HIS ORGANIZATION

Forms New Empire State Corporation with Capital of $215,000 —Action Expected Soon on Latest Venture

NEW YORK, Oct. 24.—Following closely on the heels of incorporation, late in August, of the Merkel Motor Wheel Co., as was exclusively told in **Motor Cycle Illustrated,** comes the incorporation this week of a second New York company of the same name with an authorized capital of $215,000; of the amount 2,000 shares of a par value of $100 will be issued while 3,000 shares will be retained in the treasury of the company.

Just the Nucleus

When the original company was formed, Joseph F. Merkel, who for the present, at least, is head and shoulders of the new venture, let it be known that the company with a nominal capitalization of $10,000 was simply the nucleus out of which was to grow a well financed concern, which would take up actively the manufacture and sale of Merkel's latest invention; it was also disclosed that men of prominence in the motorcycle and bicycle trade were deeply interested in the venture.

This latest move gives evidence of the fact that Merkel has rounded out his organization plans and attests also the close approach of the date of denouement of his complete schedule. Not a hint of the real backers of the venture is to be gathered from the incorporation papers, the corporators in this latest instance, as in the first, being Merkel himself, Frederick R. Huntington and L. Schreiber, New York corporation attorneys with offices at 20 Broad street.

Merkel's address is given at 284 Washington Place, Flushing, L. I.

MECHANICAL WARNING SIGNAL FROM INDIAN

(Continued from page 11)

operating lever is turned and unwinds when the lever is released, prolonging the sound of the horn.

It is pointed out that the mechanism is so simple that there are but two bearing studs where wear can occur and both of these are made of heat-treated steel to stay the wearing process.

The Motophon is finished in durable black enamel, and is fitted with a screw clamp, fitting it for attachment to the crossbar of the handlebar.

It is guarantted by the maker in every respect, including the replacement of the horn at any time when found to be defective in either materials or workmanship.

MANILA RIDER COMING BACK

MANILA, P. I.—E. L. Watson, a well-known motorcyclist of Manila, is laying plans to visit the United States with his machine in the near future and will land at Seattle or San Francisco and ride across the country to Boston, Mass.

Bulletins from California

All Ready for 1917 Season—Window of Pacific Motor Supply Co., Los Angeles, Announcing Advent of New Indians—Manager Ed. Lebell at Right

PLAN INDIAN DAY

To Open Wigwam Sales Campaign in Southern California

LOS ANGELES.—Manager E. Lebell, of the Pacific Motor Supply Company's Los Angeles house, is actively covering the southern part of California and assisting agents to get in on the big 1917 selling campaign on Indian motorcycles and bicycles. Roy Artley, speed rider and hill-climber of established fame, has joined the increased Indian organization President Freed and Manager Lebell are building up to aid in their campaign. Artley goes along with Lebell on the out-of-town trips to show the dealers the latest kinks in demonstrating. Lebell has already placed new Indian bicycle agencies with the Anakin Bicycle Supply Co., and Jimmy Urquhart, the Indian motorcycle agent at San Diego, and with J. E. Livesey, at Santa Ana.

A big opening of the Indian outdoor campaign is scheduled to come off about the middle of November. At the meeting of the Los Angeles Motorcycle Club on Oct. 17 the matter was discussed at length with a view of linking up the Indian day with the club's hill-climb to be held soon. Indian day will be extensively advertised, special stunts and entertainments will be featured for liberal prizes donated by the Pacific Motor Supply Co. and refreshments will be served to all riders attending.

GILBERT IN LOS ANGELES

LOS ANGELES.—C. A. Gilbert, sales manager of the Cleveland factory, is in Los Angeles. He has been investigating the whole western situation and getting ready to outline plans for a big increase in Cleveland sales in this territory in 1917.

C. Will Risden, western distributor for the Cleveland, has made sales in Los Angeles during the past year that total a formidable number, in view of the conditions of dull business in this section, and established Cleveland agencies all through the West.

JOINS HARLEY-DAVIDSON FORCES

LOS ANGELES.—A. F. Herold, formerly owner of a motorcycle agency at Santa Ana, and more recently in Riverside, has yielded to the lure of the bright lights of the metropolis of the Southwest and the attractions of the new Harley-Davidson. On October 17 he became a salesman with Passmore & Sayre, Los Angeles Harley-Davidson agents.

THE DEALERS GRABBED THEM

LOS ANGELES.—The first carload of Harley-Davidsons to arrive here is now scattered all over Southern California. Dealers were on hand when they arrived and grabbed the whole lot for demonstrators. Nearly every dealer had deposits on 1917 machines before he had ridden one himself. Now, with a demonstrator in hand, each figures he is well started on the biggest season in his history, and is crowding for early deliveries to fill orders.

HENDERSON INTEREST RUNS HIGH

LOS ANGELES.—The Henderson is getting big advance notices in the northern part of California. Mr. T. Lee, of the Henderson Motorcycle Sales Corporation, of Los Angeles, State distributors, writes that in a recent trip of 60 miles, just after the Henderson 1917 stock won second in the San Jose climb, he was stopped just 58 times by men who wanted to look at the machine. He says the Steam Vulcanizing works, Vallejo agent, "is spearing deposits right and left."

HENDERSON CARLOAD BOOKED

LOS ANGELES.—The Henderson Motorcycle Sales Corporation cleaned up sales on its first carload of the 1917 model nearly two weeks ahead of its arrival. This is the first year that the Henderson faces the season with agencies in many important cities outside of Los Angeles. All the first carload goes to these agents. C. A. Sheppard of San Diego is keeping in daily touch with headquarters and has secured the one machine now in Southern California for three days to demonstrate to a big list of prospects.

BRIGHT WINDOWS HELP BUSINESS

ANAHEIM, Cal.—W. H. Boon, Anaheim agent for the Cleveland, is a convert to the idea of using window decorations to bring in the coin. Last week J. Barney Maurath went over, and Boon asked him if he would fix up the window like the one that is a big attraction at Risden's Los Angeles store. Maurath took off his coat after hours and fixed up the window with a Cleveland and a lot of accessories, and the next day Boon had better business than he had seen for weeks.

MAIL ORDERS WERE TIMELY

LOS ANGELES.—Early rains dampened the ardor of Los Angeles dealers somewhat this week. Motorcyclists hate to talk business here when the sun is hidden. On the dullest day of the week Claude Short, at the Cleveland agency, found two letters with checks for machines from Arizona buyers. An inquiry was also received this week from a man in Armorel, Ark., which should have gone direct to the factory, but is considered by the local agency to have been directed here as a result of stories of Cleveland doings in Los Angeles which have recently appeared in **Motor Cycle Illustrated.**

Trade Doings in Busy Frisco

SAN FRANCISCO.—The official run of the San Francisco M. C. to Calistoga on October 15 was a most enjoyable affair as well as successful from the point of view of attendance. Twenty-five machines, mostly with tandems occupied, took the Vallejo boat from this city and were met by a delegation from the Vallejo M. C. which joined them in the run. The route was through Napa, St. Helena, to Calistoga, about forty-five miles out of 'Frisco.

The participants arrived at Calistoga to witness the spouting of the geyser, which occurs every two hours. After a good dinner and a swim in the warm mineral baths all left for home, catching the 6 o'clock boat at Vallejo.

THE MOTORCYCLE SALES CO. expects its 1917 sample Henderson in a few days. Last week the firm was showing a 1917 model used by Tennant Lee, the California distributor, in a trip through Pacific Coast territory.

Digitized by Google

FOLLOWING the recent opening of the duck-hunting season, many riders went out with their shotguns. Mike Linn, with Hopkins & Alzina, bagged eighteen ducks at Halfmoon Bay, while John Baumgardner got fourteen ducks and one rabbit. Other riders did as well.

ZIMMERLIN BROTHERS, handling the Thor, expect their 1917 model in a few days. They have already placed many machines and made many sales of parts.

L. R. ALZINA, of Hopkins & Alzina, has received a letter from "Red" Armstrong, of the Hendee Mfg. Co., now on duty at the Mexican border. "Red" says that big rattlers are numerous, that the grub is good and riding is full of all kinds of incidents.

E. K. GUISON, Harley-Davidson dealer at Willits, stopped in town on business a few days ago. He reports a number of advance sales in his section.

L. E. DRAPER, of Santa Cruz, has been in San Francisco on a combined pleasure and business trip.

A. MAGGINI, of Maggini & Perkins, is the proud father of a healthy boy. The young Maggini came on Columbus Day.

Newsy New Items From Tacoma

TACOMA, Wash.—The Broadway Tire Shop has opened in this city at 762 Broadway. A full line of motorcycle and bicycle tires is stocked. H. A. White is the manager.

E. A. THOMAS, a pioneer bicycle dealer in the Sixth Avenue district, has just rounded out his seventh year in that location. He specializes in Hudson and Dayton bicycles and reports the sale of thirty-six wheels so far for the season.

THE MILLER GROCERY, on St. Helens avenue, has been using a Harley-Davidson twin to deliver groceries for the past season. The firm states that the machine has given every satisfaction.

MOTORCYCLE licenses to date in Tacoma and surrounding territory number 987, according to the records in the Pierce County auditor's office. In 1915 the total number of licenses issued was 735. At the opening of the season many persons declared that 1916 would be a poor motorcycle year because of the large number of low-priced autos, but the auditor's office figures prove that the prediction was wrong.

ALAN CONRAD, electrical contractor, finds his Indian machine absolutely indispensable in connection with his business in Tacoma. Not only is he able to supervise the various jobs in much shorter time, but he can carry a good-sized load of material on the machine, which saves express hire.

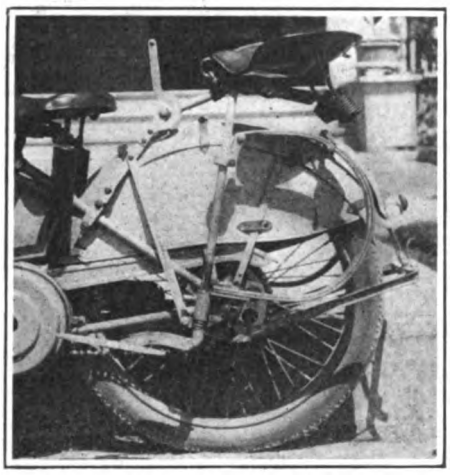
JACK McCONAGHY, Tacoma machinist, recently joined the Indian ranks, purchasing a Powerplus from Ray Day, Tacoma dealer, which will be used in connection with his work as well as for pleasure.

GEORGE W. CHILBERG, Pierce county speed artist, has ridden 500,000 miles on his Indian machine. He has been riding a motorbike for 11 years now and during that time has overhauled more than 7,000 speeders.

A NOVEL TANDEM

California Rider Obtains Patent on Leaf-Spring Design

LOS ANGELES, Cal.—Clark Shelton, of Huntington Beach, Cal., is the owner of the novel tandem attachment which is shown in the accompanying illustration. The principle of springing applied to this fitment is original with Shelton, and he has just taken out a patent to cover it. It will be noted that leaf springs are employed, and that the whole arrangement is such as to afford an ideal combination of strength and flexibility. About two months ago the correspondent for **Motor Cycle Illustrated** was one of the first to ride on the tandem, and wherever it was shown it attracted much attention among dealers and riders.



Shelton's Leaf Spring Tandem

Since the accompanying picture was taken, Shelton's Harley-Davidson has been stolen, and he now has the police on the lookout for it. The machine disappeared at Seal Beach on October 15.

RENEWS FOR THOR

W. R. Spear to Handle This Make Again in 1917 Season

NEWARK, N. J., Oct. 23.—William R. Spear, of 379 Washington St., this city, has just renewed his contract with the Aurora Automatic Machinery Co., of Chicago, Ill., to handle the Thor for 1917. Spear will distribute this machine in Passaic, Bergen, Essex, Union and Hudson counties.

"Bill" Spear is one of Newark's best known and liveliest motorcycle men. He has represented the Thor for the past two seasons in this section.

WAUGHOP SIGNS UP NINETEEN DEALERS

Eastern Cleveland Representative Makes Marked Headway in Preparation for Next Season's Lightweight Business

NEW YORK, N. Y., Oct. 24.—C. W. Waughop, eastern representative for Cleveland, with headquarters at 4192 Broadway, in sizing up the Cleveland situation for the coming season, brings to light the fact that he has signed up some 19 dealers and distributors to handle the little lightweight for the coming year.

Waughop's list of dealers in his territory includes the following:

Carl W. Bush Co., Newark, N. J.; J. W. Terhune Co., Hackensack, N. J.; Morton D. Lantz, Jersey City, N. J.; W. Edw. MacDougal Co., Paterson, N. J.; Anthony Manzo, Elizabeth, N. J.; J. LeRoi Wilding, Peekskill, N. Y.; Engle Bros., Hicksville, Long Island; S. Masi and Son Co., Port Chester, N. Y.; Crown Motor Company, Bay Shore, Long Island; Plaza Motorcycle Exchange, Long Island City, L. I.; Ralph Mann, Kingston, N. Y.; W. & V. Beecroft, Ossining, N. Y.; Geo. E. Woods, Bronx, N. Y.; Joseph Genoscheck, Bronx, N. Y.; Mitchell & Romaine, Yonkers, N. Y.; M. J. Goldman, 115 Greenwich ave, New York City; Myron Affron, Newburg, N. Y.; Ben Ruderman, Brooklyn, N. Y.; J. R. Nelson Motor Co., S. Brooklyn, N. Y.

As evidence of the sort of co-operation which the factory is extending, the Cleveland dealer brings to light the fact that the Audubon Motorcycle Garage, which has the distribution for practically all of New York State, including Long Island and a bit of other territory, has received its first carload of 1917 Clevelands this week and is at present sending out demonstrators to the dealers in this territory who have been signed up to date.

RUDERMAN SELLS 12

Brooklyn Thor Man Disposes of Dozen 1917 Models

BROOKLYN, N. Y., Oct. 21.—Ben Ruderman, of 1013 Bedford Ave., has received his 1917 Thor demonstrator. His sales of the new models to date number 12 Giant Twins.

Ruderman took on the Cleveland lightweight agency a few days ago, and shortly after getting his 1917 two-stroker demonstrator made his first sale. This was for two machines to the same party, a finger-print expert. When Ben asked him why he desired two machines at once the expert stated that one was for his girl, so that both could enjoy the Cleveland on the road together. He said the Cleveland was the ideal machine for lady riders.

TAKES ON INDIAN

JAMAICA, N. Y., Oct. 23.—Ned Morris, Excelsior dealer, at 465 Fulton street, has taken the Indian for 1917. Morris has Jamaica and adjacent territory for the machine. His 1917 demonstrator has arrived and he is lining up prospects.

NO SUNDAY RACING

Church Workers in Wichita Sidetrack Bill Ash's Plans

WICHITA, Kan., Oct. 16.—Kansas cities will not allow Sunday motorcycle races. This was proven here during the Wheat Show, the big fall festival, when W. J. ("Bill") Ash, the well-known booster, promoted events to be held Sunday, October 8. He carried big advertisements in all the newspapers.

Saturday night Mayor O. H. Bentley was visited by a delegation of church people and he called the events off, causing Ash to lose money. The events were held Friday, October 13, before a good-sized crowd. No other city has ever tried to run raçes on Sunday in this State.

GASOLINE LEGISLATION

Calls for National Statute Backed Up by State Laws

WASHINGTON, D. C.—The United States Bureau of Standards has suggested that national legislation, supported by State laws, be resorted to in the campaign to standardize the country's gasoline output. A system of inspection, either national or State, is also proposed by the Bureau as necessary to safeguard the consumers' interest.

A statement just issued by the Bureau tells of systematic efforts by government experts to arrive at a special standardization test, and warns State legislative bodies to use great care in adopting gasoline tests without the advice of technical experts. It is admitted that satisfactory specifications are hard to find, in view of the various grades of gasoline sold and the widely different conditions under which it is distributed.

SAVANNAH M. C. PROGRAM

THE Savannah M. C. has appointed a committee to lay out plans for a field day and Dutch lunch to be held on Oct. 29. New rooms are being sought by the club, as the present quarters are rather too small. J. H. Hetzel, C. B. Taylor and Martin Schroder are a committee to select the new headquarters.

ENCOURAGING GOODYEAR ATHLETES

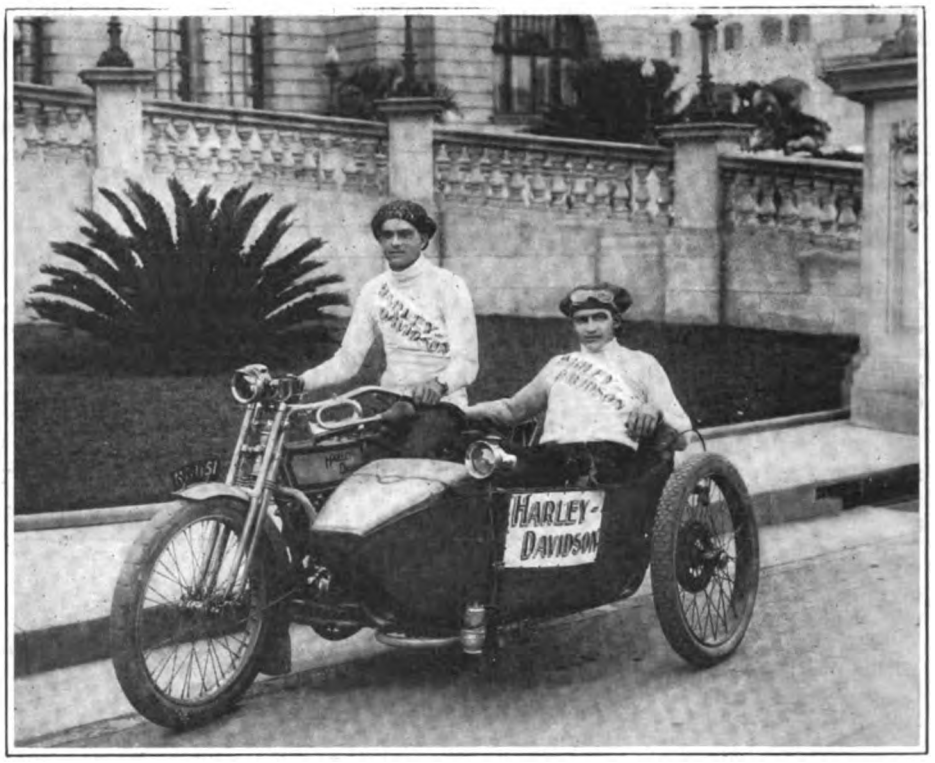
AKRON, O.—The Goodyear Tire & Rubber Company encourages athletics of all kinds among its employes and has recently employed an athletic director who is at the service of all Goodyear athletic organizations in the capacity of business manager, coach, trainer or mediator, as his services may require. Goodyear has a magnificent athletic field and park of more than 40 acres.

TIME PAYMENTS SUCCESSFUL

MILWAUKEE, Wis.—The Lippow Cycle Co., at 801-803 7th street, is selling many bicycles on the time payment basis, and that the plan is a successful one with this company is indicated by the fact that no less than 300 bicycles have been delivered during the past season. The company states that trouble over collections is seldom experienced.

TAYLOR'S NEW TIME FOR DURBAN-MARITZBURG ROUTE

Cuts Five and a Half Minutes from Former Sidecar Record



DURBAN, South Africa.—George Taylor, who occupies the saddle in the accompanying photo, has just clipped five and a half minutes from the best previous time for the sidecar run between Durban and Maritzburg. He made the trip in one hour, twenty-four and a half minutes, or an average of 39 miles per hour. The roads were rough, but Taylor was not delayed.

T. H. Spargo was Taylor's sidecar passenger on the trip. As there are many seasoned riders in this section of the country, the feat of Taylor and Spargo has won them considerable distinction. A regular Harley-Davidson rig was used.

A CYGNET HUSTLER

Traveler MacDonald Spreads His Activities Over a Wide Field

NEW YORK—E. W. MacDonald, traveler for the Cygnet Rearcar Co., is making his headquarters with the New York Sporting Goods Co. during a sales boosting campaign throughout eastern territory.

E. W. MacDonald

MacDonald has been one of the busiest salesmen at work in the Metropolitan District for some time past, combining his general educational work with special sales expeditions and with varied activities in the military field.

Not long ago "Mac" spent several weeks with the First Motor Battery, at Camp Whitman, while Cygnet rearcar machine gun carriages were being tested. He helped demonstrate to the army officials that the latest Cygnet equipment for machine gun service is capable of meeting the most severe road conditions, and under his direction the Cygnet outfits went through all kinds of cross-country tests and frequently surprised the military authorities by their ease of handling and their ability to take punishment.

When his work in the Metropolitan District is cleaned up, MacDonald will be found at the Cygnet booth in both the Chicago and New York shows, and later on he plans to make a trip with a Cygnet outfit throughout the southern states.

ENGLAND MODIFIES REGULATIONS

WASHINGTON, D. C., Oct. 20.—Finding that its restrictions on imports of rubber have somewhat hampered its war plans, Great Britain has modified its import regulations, and all goods now on the prohibited list may be taken into England provided they are made wholly or mainly of rubber. This information has reached Washington through Consul General Skinner.

HOW ANNUAL SHOWS GAUGE THE INDUSTRY

(Continued from page 9)

crime for them to stay at home when, in a few short days, they could look over the goods of the entire trade and meet the manufacturers and jobbers face to face.

The 1916 Show is going to be the greatest of them all. They've been pretty fine in the past,—as you know. They have grown bigger and better every year,—and now we come to the best.

If you were only to walk in and spend five seconds, it would be worth your time and money, no matter what it cost you. For in one glance you would see a picture that would give you a thrill from your belt to your collar, and you could go back home with new energy and enthusiasm. The motorcycle, bicycle and accessory show represents a *great* industry, and even a glance at it will make you proud that you are a part of it.

That's one of the big benefits to the trade —only one of the many good things the Show offers. Also you'll find a chance to renew old frieidships—and make new ones, as well. That helps your business.

And then there's the opportunity for actual buying and selling—an opportunity that is not being neglected. The exhibitors do business,—and that's what they want. The dealers do business,—and they profit, too.

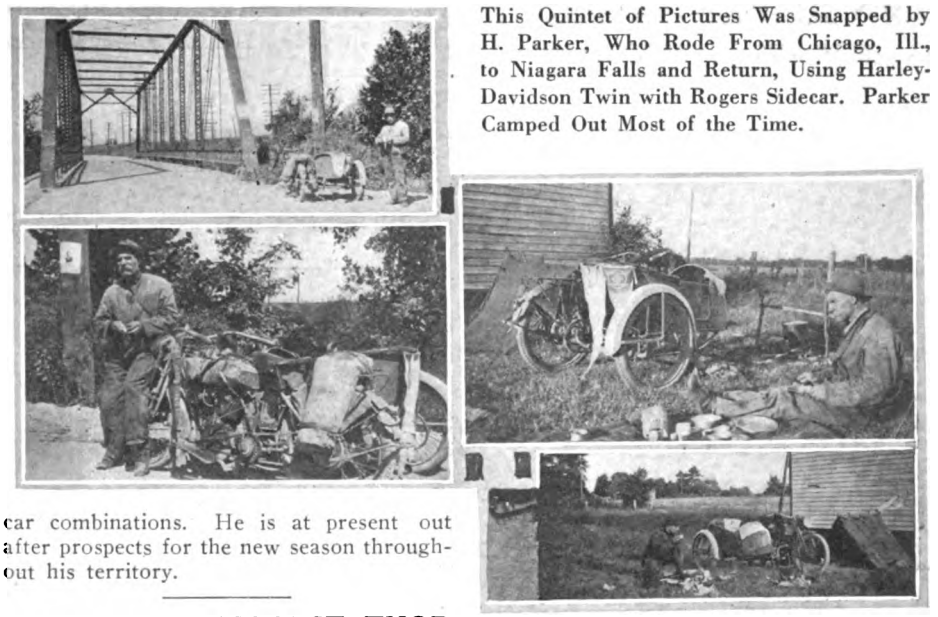
And the public—well, it's a great show for the public—and the public knows it. The public will be there! See that *YOU* are!

EIGHT ORDERS FOR RAOUL

NEW YORK, Oct. 23.—H. Raoul, Indian representative at 4192 Broadway, has orders for five of the 1917 Powerplus models, as well as three sidecars. He has been appointed uptown distributor for Indian bicycles also.

At the close of the 1916 season Raoul had sold 32 Powerplus solo models and 14 sidecar combinations. He is at present out after prospects for the new season throughout his territory.

TAKEN ON A VETERAN'S SIDECAR TRIP TO NIAGARA



This Quintet of Pictures Was Snapped by H. Parker, Who Rode From Chicago, Ill., to Niagara Falls and Return, Using Harley-Davidson Twin with Rogers Sidecar. Parker Camped Out Most of the Time.

LOOKS LIKE BIGGEST THOR YEAR, SAYS O'HARE

(Continued from page 9)

portion of the heavyweight twin business booked to date covers electrically equipped models.

One aspect of the business which has pleased the Thor folk quite as much as anything else is the ever increasing number of Thors being sold for United States military service. In this line, the Thor folk booked the most recent order for ten motorcycles for use at Fort Bliss and the machines are on their way to the border now.

That is the first military order that has come to the Thor folk direct from the United States Army, but O'Hare points with a deal of pride to the fact that for the past seven weeks orders for anywhere from three to five motorcycles at a clip have been coming in at the rate of at least three a week from the state militia detachments stationed on the Mexican border.

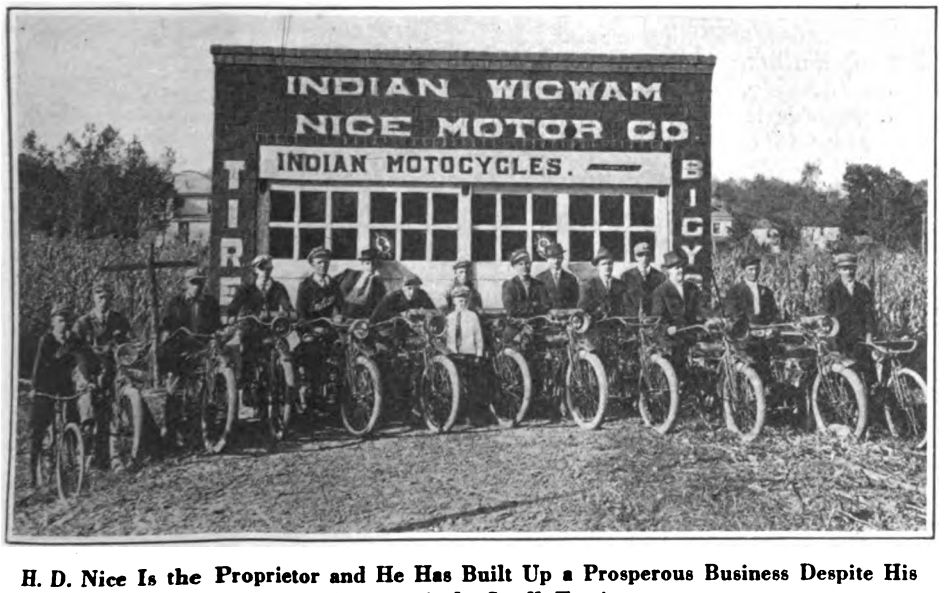
It is chiefly due to the fact that the Thor in this service has measured right up to the high standard of efficiency demanded by the military "powers that be" that the latest order for ten machines has been awarded to the Thor.

On his way east, O'Hare stopped off at Detroit and made arrangements for the distribution of the Thor line through H. B. Schied. Schied was formerly sales-manager for the Wandersee Co., which handles the Harley-Davidson in the Detroit territory and has had the experience necessary to swing the proposition on a scale which will do full justice to Thor prestige.

O'Hare jumped the train for Philadelphia tonight and will look in on the trade in Baltimore, Washington and Pittsburgh before he heads back for Chicago. "Looks like the best Thor year ever," were his parting words as he waved "au revoir" to the **Motor Cycle Illustrated** man.

TIDY TEPEE OF INDIAN BRAVES IN ATHENS, OHIO

A Small Agency but a Businesslike One



H. D. Nice Is the Proprietor and He Has Built Up a Prosperous Business Despite His Comparatively Small Territory

HELP FOR SPEEDERS

Hamilton Auto Club Employs Motorcycles to Warn Road Burners

HAMILTON, Ont.—The Hamilton Automobile Club has adopted the employment of motorcyclists to discourage speeding on the new Hamilton-Toronto concrete highway. The riders are not used to chase offenders against the Motor Vehicle Act but are detailed to co-operate with the motorcycle cops of the commission which controls the use and maintenance of the model road. The motorcycle representatives of the Hamilton Club bear large signs on which are painted the words "Go Slow." These riders also warn motor-tourists of the presence of speed traps and all road users are cautioned to temper enthusiasm with judgment.

There's a Helping Hand for You, Mr. Dealer, On Pages 26 and 27. Grasp It.

ARMY BUYS THORS

Ten Sidecar Outfits and a Trailer Go to Camp Bliss

CHICAGO, Ill.—Further evidence that United States military officers now have a full appreciation of the motorcycle's value is shown in an order just received by the Aurora Automatic Machinery Co. for ten Giant U-17 Thors, ten sidecars and one trailer. These machines have just been purchased by the War Department, and are to be sent to Ft. Worth, Texas, where they will be used at Camp Bliss by Battery C of the Fifth Field Artillery. It is stated that the equipment of the machines is standard, except for special demands made by the War Department for Prest-O-Lite, Corbin-Brown speedometer, and Seiss warning signals.

The Thor factory officials were particularly pleased over the fact that this order was placed by the Government so soon after the appearance of the 1917 models, and arrangements were made to meet Uncle Sam's demand for immediate delivery.

HARRIS ON TRIP

Rollfast Specialist Visiting Eastern and Central Trade

NEW YORK.—With plans laid for covering the eastern and central States as far west as Chicago, D. P. Harris, of the D. P. Harris Hardware Co., the Rollfast specialists, has just started on another of his business-building trips. Mr. Harris recently returned from a highly successful trip and after a short stay at his office, for the purpose of catching up with the business that had accumulated during his absence, at once made arrangements to strike the trail of the jobbers and dealers again.

Before leaving New York, Mr. Harris found time to state that shipments of Rollfast products so far for 1916 are five times as heavy as they were at this period last year.

PARK ROAD IMPROVED

DENVER, Colo., Oct. 23.—The Estes Park, Colo., road which runs from Loveland to the Rocky Mountain National Park is to be improved and will be ready for motorists this spring. The work of putting the mountain highway in first class condition will cost somewhere in the neighborhood of $12,000.

INJURED FIGHTING FIRE

DENVER, Colo., Oct. 23.—Karl Sahl, a well known Colorado motorcycle rider, was injured while fighting a fire in Grand Junction, Colo., one day last week. He suffered a serious gash across the back of his right hand and is at present fighting a case of blood poisoning.

BURGLAR LOST HIS NERVE

PUEBLO, Colo., Oct. 16.—A thief who broke into the Willis Cycle Shop, Roy Willis, proprietor, a few nights ago left without taking anything. The burglary is a mystery, as the place was full of new and second-hand motorcycles and bicycles, and considerable cash was in the cash drawer.

Entered at the New York post-office as second-class matter under act of Congress, March 3, 1879.

AD SUGGESTIONS FOR DEALERS

ONE of the service features in this number of Motor Cycle Illustrated is a series of four catchy little advertisements for the use of the dealer who wishes to let the prospects in his town know, through the local newspapers, that he is on the map. This is the logical time to jog the minds of potential buyers, for with his new demonstrator in hand every dealer is in position to put forward his strongest sales arguments.

The new demonstrator is something of an inspiration in itself, and no dealer can inspect a 1917 model, fresh from the crate and representing the best engineering standards that experience, conscientiousness and money can provide, without feeling a genuine thrill.

How to communicate that thrill to all the folks in his town who ought to ride motorcycles is the dealer's problem. Follow-up letters are important, personal visits more so,—and newspaper advertising is not to be underestimated.

At this "get-acquainted" period, when the dealer is striving to bring in new enthusiasts in addition to lining up the veterans, we believe the series of ads referred to will prove timely and helpful.

FACTORY VISITORS

Tell of High Regard for American Machines in Winnipeg

MILWAUKEE, Wis.—M. H. Stonson, proprietor of the West End Cycle Works, in Winnipeg, Man., and C. Moyer, another Harley-Davidson enthusiast of Winnipeg, were among the visitors to the factory of the Harley-Davidson Motor Co., last week, and both were moved to comment upon the bright outlook for American-made motorcycles in Canada.

"American motorcycles have shown themselves to be the best on the Canadian market," said Mr. Stonson, "and their growth in popularity, in contrast with the decreasing use of machines made in other countries, is evidence of the fact that American manufacturers have successfully gauged the demands of the Dominion riders. The growing demand for motorcycles from the States can be accounted for partly by the consistent efforts of the American manufacturers to back up their products with first-class service.

"The new bicycle line added by the Harley-Davidson Company looks very good to me," continued Mr. Stonson. "The models in this line are of greater merit, and in my opinion give the rider much more for his money than do any of the foreign makes."

Mr. Mayer seconded the remarks of Agent Stonson and added that winter riding is gaining in popularity in Winnipeg, even the ladies joining cold-weather parties in sidecars and on tandems.

PUEBLO RIFLEMEN FIND MOTORCYCLES HANDY

PUEBLO, Colo., Oct. 16.—Because they believe in military preparedness as well as the most effective method of rapid transit, seven motorcyclists of Pueblo have joined the newly-organized Pueblo Rifle Club, composed of citizens, and will try to exceed the highest marksmanship record in the world.

A movement is on foot locally to get all owners of motorcycles in the club, as the rifle range is several miles from the city limits and the road is just right for motorcycles. Those who have attached their names to the rolls so far are: Ebert Johnson, Olaf Johnson, Bernard Chasteen, William Brown, Damon Royce, Frank Campbell and Clarence Studzinski. Several types of machines are represented.

NEW LINES FOR SWENSON

PROVIDENCE, R. I., Oct. 24.—B. A. Swenson has announced that he will soon enlarge his business by adding a full line of all forms of sporting goods. His main line will continue to be motorcycles and bicycles. For a few years back he has carried fishing tackle and a line of motorcycle clothing.

BIG VAN FOR TAILORS

NEWARK, N. J.—The Carl Bush Company has on exhibition a motorcycle van that is probably the largest ever manufactured. The van was built for the John Durna Company, of Bloomfield and Montclair, which will use it in connection with a tailoring business.

TALKING F. A. M.

T. R. Thomas Is a Busy Federation Missionary These Days

CHICAGO, Ill.—One of the liveliest visitors to drop in at Chicago for some time was T. R. Thomas, the well known Goodyear booster, who is now doing special F. A. M. missionary work for President Shelby A. Falor. Thomas has recently visited Toledo, Lorraine and Sandusky, Ohio; Grand Rapids and Kalamazoo, Mich.; Buffalo, N. Y.; Springfield, Decatur and Peoria, Ill., and Davenport and Bloomington, Ia. He is still booked to visit Elgin, Joliet, Aurora and Rockford, Ill.

Mr. Thomas reports that he found the average rider somewhat at sea as to the aims and purposes of the F. A. M., but that when explanations were made it was usually possible to revive interest in the national body. He also states that dealers in general are looking forward to favorable results from the renewed activity of the Federation, and that they are willing to give their support to any movement which promises a stronger national organization.

RACES FOR PETALUMA

Local Dealers to Run Off Meet Oct. 22—Amateurs Welcomed

PETALUMA, Cal.—An afternoon of races, to take place Sunday, October 22, is now being planned by local tradesmen. An invitation is extended to all the northern counties, and no one will be barred unless he holds a world's record. Amateur riders will be given preference in this meet.

Many entrants are expected from Napa, Santa Rosa, St. Helena, Vallejo, Healdsburg, San Rafael and other nearby towns. The affair promises to be a lively one.

PLAN SIOUX CITY CLUB

SIOUX CITY, Ia.—Harley-Davidson motorcyclists had a dinner several days ago at the Jackson Hotel. This social event was a preliminary step towards a permanent organization which will be formed within a short time. They expect to have about 100 in the club.

PETERSON TAKES A PARTNER

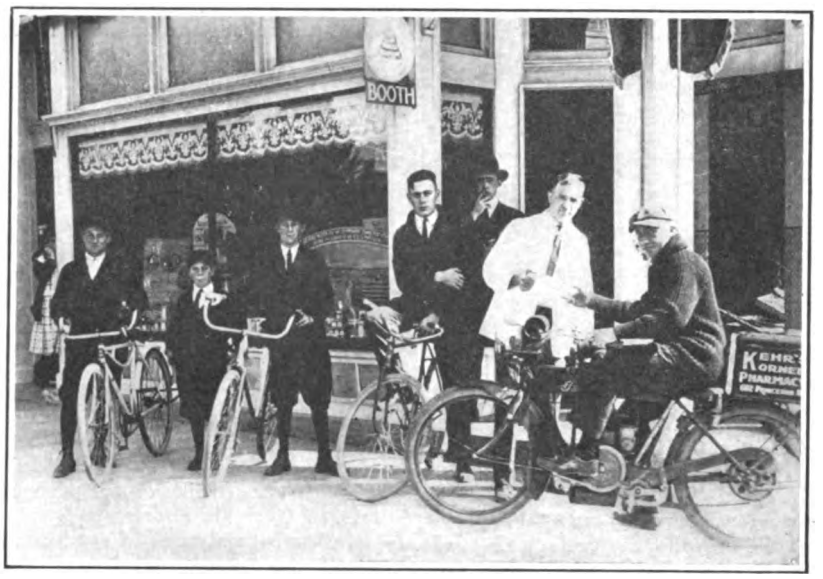
RACINE, Wis.—A. Peterson, located at 529 Jackson street, has entered into a partnership with H. C. Lawton, and the store will hereafter be operated under the name of the DeLux Cycle Company. Peterson reports having sold over 50 Excelsior bicycles this year, and has made five deliveries of Smith Motor Wheels.

The new firm has just delivered a Smith Motor Wheel to Ole Jackson, an 82-year-old rider of North Cape, a suburb of Racine. City Truant Officer Firks has also purchased a Smith Motor Wheel for use in connection with his duties.

FOX STOCKS MACKINAWS

DENVER, Colo., Oct. 23.—Peter Fox, Indian agent in Grand Junction, Colo., has taken on a side line in the shape of mackinaws. This stock Fox is offering to motorcycle and bicycle riders in his city, and expects to do a fairly good business in this line this winter.

Cycle Delivery Service Is Rapidly Increasing Trenton Druggist's Phone Orders and Rural Business



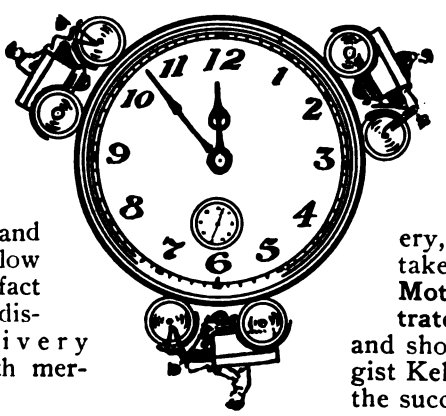
Druggist Kehr and His Quick Delivery Squad.

SOME retail merchants use motorcycles for quick delivery service, while others employ bicycles, but it has remained for Henry Kehr, a druggist of Trenton, N. J., to demonstrate that both types of the single-tracker can be utilized to save time and money in the same establishment.

As will be noted in the accompanying photograph, Druggist Kehr uses one motorcycle messenger and three mounted on bicycles. The bicycle trio covers the district within a comparatively limited radius of the store, while the motorcycle messenger dashes out on trips of almost any length.

The druggist reports that since installing the cycle delivery service he has about doubled his telephone orders, owing to the promptness with which he is able to fill and deliver them. He is also building up quite a business in Lawrenceville, a nearby college town, because of the quick service given by his motorcycle messenger. As proof that Kehr is a consistent believer in the motorcycle's utility, he has just placed an order for a new twin Indian with the Sykes Motor Co., of Trenton.

Cycle delivery service means all-around-the-clock satisfaction for both merchant and consumer, at low cost; drive that fact home when discussing the delivery problem with merchants.



When you visit your local druggists to talk cycle delivery, Mr. Dealer, take this copy of **Motor Cycle Illustrated** with you and show what Druggist Kehr is doing and the success he's met.

N. E. DEALERS' BODY GROWING RAPIDLY

Recently Organized Association of Tradesmen Numbers 140 Members and More Are Expected Soon

BOSTON, Mass., Oct. 18.—An association has been formed for the advancement of trade among the motorcycle dealers of New England. It is known as the New England Motorcycle Dealers' Association, and although only less than four weeks old has more than 140 dealers in this section of the country on its rolls. Meanwhile every effort is being made to get the 300-odd remaining dealers in the six New England States as members.

Following the preliminary steps in forming the association, the following resolutions were adopted: Universal allowances on machines traded in; uniform terms for installment sales; a reasonable profit on used machines; uniform service throughout the association; amicable assembling of the members to the end that the best business interests be served, and that the sport be fostered.

The plan was brought about by the efforts of the Boston motorcycle dealers who have had this working arrangement in effect for over a year. The Hub tradesmen, accordingly, determined that as the arrangement was such a success to spread the idea to include the entire New England retail trade, and an initial meeting to this end was planned for September. Dealers were then notified and about 40 responded to this first call. They all were in favor of the proposition, and plans were made to go ahead with the idea. At the second meeting, held recently, 50 more dealers attended, practically every large city and town in New England being represented.

At this meeting it was voted to take the by-laws of the Boston dealers' organization and fit them so as to cover the entire territory. The question will be considered and decided upon before the next meeting, which will be held early in November in this city.

The officers of the association are from among the most prominent men in the motorcycle trade in Boston. They are: President, Ben. C. Straube, of the General Motorcycle Sales Co.; George N. Holden, local Indian man, vice-president; George W. Campbell, of the General Motorcycle Sales Co., secretary; W. J. Walker, local Harley-Davidson agent, treasurer. Secretary G. W. Campbell's address is 145 Columbus Ave., Boston, Mass.

STUCK THE "STICKER"

Contest Editor Saw Indian Red for Harley-Davidson Gray

WOE is the lot of the Contest Editor! He's been slipping it over on the poor contestants for weeks past and enjoying fully their efforts to conjure up a full-fledged Excelsior out of a diminutive view of the spark plug terminal of a Miami lightweight, and such like other "posers," as he likes to label his efforts.

He has been accused of not being able to identify his own best "stickers" without a guide book—an allegation which he has not yet denied in print and now some one comes along and comes close to proving it, only——

Well, the fact of the matter is that the Contest Editor cast his eagle eye on that line-up of shriveled up automobiles which appeared in the Motorgraph Section, Reel 1, Scene 1, last week and, catching a glimpse of a motor through one of the little radiator passages, egotistically ups and shouts "Indian." And, by gosh, it was a Harley-Davidson; and the rest were, too.

THIRTY MORE INDIANS FOR PHILLY'S COPS

Police Officials Say Motorcycles Are Indispensable in Their Work and Place Another Order With Factory

PHILADELPHIA, Pa.—The Philadelphia Bureau of Police, which has made an extensive tryout of motorcycles for police work, has pronounced its opinion that the motorcycle is indispensable in police work by placing an order with the Hendee Manufacturing Co. for 30 more Indian motorcycles.

These machine, which will be delivered as called for by the Superintendent of Police, will be used in the extension of the strong motorcycle squad which Philadelphia has already equipped. At present the police of that city have in service a total of 50 Indian motorcycles. The squad was organized ten years ago.

Some time ago the department was supplemented by the development of the new riot-bus, a machine designed especially for Philadelphia. This machine, a product of the Hendee Manufacturing Co., is of the sidecar type, with seating capacity for two men and a driver. The latest ones are Powerplus models.

QUICK AID FOR BAD VALVE

A GOOD method to use in grinding in a badly burned valve is to cut a piece of fine emery-cloth and fit it over the valve-stem, cutting side toward the valve and twirl the screw-driver vigorously for a minute or two. This method should not be used except in extreme cases, as it gets through the carbon-glaze rapidly, and if continued too long wil score the metal too deeply.

CONTEST INTEREST INCREASES AS WEEKS PASS

Fair Number of Would-Be Motorcycle Experts Fall Down on Last Week's Picture Which Was Taken from a Dayton—Influx of Feminine Contestants Result of That Huyler's Offer

MY how easy it is to mislead a bunch of "motorcycle experts." Said last week that there was no rule against repeating from machines that have been run before, and Lordy how those "experts" did swallow it and come back with Harley-Davidson and Indian answers.

All wrong, Algernon! That particular little view was clipped from a picture of a 1916 Dayton, with Dayton motor, as some 17 of the wide-awake ones correctly answered.

Guess those Newarkers were none too sure of their footing on this occasion—else their feelings were hurt at what we said last week—for only a couple made an attempt to decipher the picture.

Huylers for Jennie

Glad to announce that Jennie Forrie got her Harley-Davidson answer in on time to lay claim to a box of Huyler's—on their way, Jennie. But Millie Mulliner still withholds her street address.

It's all right, girlie, send it along. The Contest Editor lives 942 miles from Chicago's loop district, and besides he's—well, what's the use of saying it out bluntly. Suffice it to say that he's getting bald, and you know what that comes from.

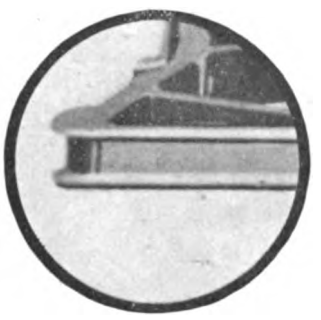
Sorry to note that Glen E. Carlson, of Saybrook, Pa., who has had a perfect score to date, went bad on the Dayton picture; he thought it was a Harley-Davidson. So did R. C. Darnell, of Detroit, and G. W. Silsby, of Littleton, N. H., both of whom have had fine scores to date. Silsby forgot to sign his card and ye C. E. had to go back through his files and dope out the contestant's name from the handwriting and address. Never mind, G. W., we got you.

Others Who Went Bad

The other contestants who saw Harley-Davidson features in that Dayton picture are: Henry J. Smith, Derby Line, Conn.; J. Harry Hill, Seaford, Del.; Al. Teporten, Superior, Wis.; while Frank Hedler, of Brooklyn, N. Y., and H. M. Smith, of Kenosha, Wis., both claimed it for an Indian.

Those Huylers—or maybe it was something else—attracted a couple of new lady

WHAT DO YOU KNOW ABOUT MOTORCYCLES ?



WHAT MAKE OF MOTORCYCLE IS THIS TAKEN FROM?

contestants into the lists. "Experts," allow me to present Miss "Tommee" Latterman, of Park Ridge, N. J., who, take it from her letter, "is a Tom Boy Girl—grown tall, that's all—with a sixteen-year-old heart that will never grow old." One time-table from New York to Park Ridge, please!

Another Female Expert

And here, boys, we have Miss Ethel Bowers, of Glens Falls, who has given every picture the "once over" and finally became expert enough to identify the Harley-Davidson picture which we ran a couple of weeks ago. Keep it up, Ethel, we'll have you in the "expert" class in another couple of weeks.

But to get around to real serious business, how does the little picture this week strike you? Looks like it might be easy at first glance, but when you give it another slant why it doesn't look quite so simple, does it? To tell you the truth, fellows, we had to keep it labeled ourselves in order not to get it mixed up with some other "stickers" we have ready to submit for your official approval.

So now, go on to it; examine all the machines that you see. And don't forget that there's no rule against repeating on machines that have already been used in this contest. The only thing the Contest Editor will vouchsafe is that all the pictures are taken from 1916 models.

BATTERY SERVICE CARD

Issued by Harley-Davidson Dealers for Battery Inspection

MILWAUKEE, Wis., Oct. 22.—A new service feature which will be appreciated by riders of Harley-Davidson electrically equipped models has been inaugurated by the Harley-Davidson Motor Co. in conjunction with the Electric Storage Battery Co., of Philadelphia.

Every Harley-Davidson dealer, according to this new policy, will upon request furnish the rider of the electrically equipped Harley-Davidson machine with an Exide Battery Service card. This card entitles the rider to free monthly inspection and test of the Exide battery, which is included as part of the equipment of the Milwaukee-made machine.

The name of the nearest Exide service station is printed on the card and the riders are urged to take advantage of the free inspection service.

APPOINTS DIETRICH

N. Y. State F. A. M. Commissioner Ellis Takes Brooklyn Aide

YONKERS, Oct. 24.—J. O. E. Dietrich, of Brooklyn, has been appointed Vice State F. A. M. Commissioner for the State of New York by State Commissioner George A. Ellis.

When appointing Dietrich to this high post in the State organization, Ellis says that he has always found him a hard worker for the interests and welfare of the F. A. M. and he believes that with Dietrich's help he will be able to put the F. A. M. of this state on its footing again.

Dealer's Name, Address and Phone Number

TOO RUSHED [illegible] THEN HER

Mr. Motorcycle Dealer, we [illegible] ute and have neither the tim preparation of newspaper a four suggestions and an offe

IT is a simple matter for well-meaning boosters in motorcycle circles to suggest at this season that the dealer should do some introductory advertising in his local newspapers, but few of those who advocate this course stop to consider that even an ambitious and progressive dealer might find it somewhat difficult to carry out the idea.

In the first place, every motorcycle dealer worthy the name has his time pretty well taken up at this period, and, secondly, the job of ad-writing is a little out of his line. A dealer may handle his repairwork with skill and celerity and make the most of his sales opportunities but when it comes to the painstaking preparation of an advertisement he is likely to decide that he can get along without the publicity.

Trained for Other Things

That's because all his training has been along other lines, and his disinclination to tackle ad-writing does not mean that he won't make a first-class publicity man once he gets the knack of the thing. Many a dealer who feels that he ought to do a little advertising, and who is willing and able to spend the money, has dodged the issue from day to day rather than buckle down to the rather tedious task of boiling all the things he wished to say down to fit the space he felt justified in paying for. As a matter of fact, that's quite a knotty problem sometimes, even for the experienced ad-writer.

With those points in mind, and following out its policy of giving the dealer the kind of co-operation he needs, when he needs it, the Service Department of Motor Cycle Illustrated has prepared the four terse and catchy advertisements which accompany this article. These little ads have been worked up with a view of creating a lasting impression without subjecting the dealer to heavy expense, and are designed to catch and hold the eye no matter where they may be placed in a newspaper.

Pleasure and Utility Ads

It will be noted that the two ads at the right are aimed at possible users of commercial motorcycles, or vans, while the two eye-catchers on this page deal with the purely pleasure value of the motorcycle and with the power two-wheeler as a vehicle for the man who ordinarily uses trolley service between his home and his work.

No attempt has been made to tell a long story or insert a mass of details in these little business-stimulators, for that can't be done. At least, it can't be done without spoiling the ad. The big object in an ad of this size is to put across one idea—

Digitized by Google

RITE AD COPY? GOOD PLAN

t you are hustling every min- experience necessary for the we are handing you herewith co-operation along these lines

and do it with a snap. Drive that one idea home and if a man is even remotely a motorcycle prospect he will watch for other ads., look the dealer's window over the next time he passes and then call for a sales talk.

In other words, the aim of the ad is to start the prospect's mind working along the desired lines. He'll do the rest when the idea has had time to sink in. But in most cases he must be given a start. That's what these little ads are for,—to head him in the right direction.

Supplement Factory Matter

Some manufacturers are already supplying copy or electrotypes for the use of dealers in local newspapers, and in such cases of course it is unnecessary for the dealer to seek other material,—at least until he has exhausted the factory supply. It is for the dealer who is not using advertisements furnished by any factory that the ad suggestions are offered.

In order to obtain the best effect it is desirable to use the illustration shown at the top of each ad. The smaller illustration at the bottom is intended to be a cut of the machine the dealer is handling.

Nearly always the local newspaper will attend to having cuts made of the illustrations shown,—working directly from these pages—although in small towns it will usually be necessary to send to a nearby city to have the work done. The cost of these cuts should not be more than 50 cents each anywhere in the country, and they can be used repeatedly.

We Supply Plates

Should a dealer find it difficult to obtain these plates in or near his home town, he need not give up the idea of using them. If he will take the matter up with the Service Department of **Motor Cycle Illustrated,** arrangements will be made to supply him with the cuts at cost price, plus postage.

While the illustrations are highly desirable, in view of the fact that they help to attract attention and drive home the idea, it is not absolutely necessary to use them.

These ads are certain to be attention-getters whether used with illustrations or without, and the dealer can exercise his discretion on that point.

Other ads along similar lines will be printed in an early issue, and dealers who wish to "hook up" their local advertising with any special occasion,—such as a carnival or a local show—are invited to tell the Service Department of this journal about their requirements. Arrangements will be made at once to give them active co-operation.

Dollar Saving Tips for Merchants

SUPPOSE you had two horses—one *ate* much and *did* little. The other *did* much and *ate* little. You'd sell or shoot the first and cling fast to the second, *wouldn't you?*

That's the *"Why"* of *Motorcycle* Delivery. The Motorcycle "eats" but little, but has a *big* capacity for work. Horse or automobile delivery represents the other extreme —*Big* appetite, *little* work.

Here's one reason why, if you operate a light delivery service, you should phone, mail or personally deliver a request for a demonstration and a talk on the several other "whys" of the

79 Indians for the Philadelphia Police!

30 new Powerplus machines have just been ordered for use by Philadelphia's crack flying squad, bringing the total of Indians that keep Philadelphia's "house in order" up to 79.

Indians have been doing traffic, patrol, and special service duties in Philadelphia for a good many years. They've stood up under the hardest kind of usage. That's why Philadelphia has ordered MORE Indians. And they're performing just as faithfully for the police departments of over a hundred other cities.

They'd do the same things for the minions of the law in YOUR city. Why not get the business? As an Indian dealer you could gather in far greater profits than any other motorcycle dealer. Indian supremacy and Indian prestige never were more certain. Clinch YOUR territory *right now*—TODAY.

The new Indian Police booklets tell of the highly efficient service rendered by Indian Powerpluses in hundreds of cities all over this country. There's one for you. Write for it today!

By E. F. HALLOCK

Are F. A. M. Membership Lists Exploited?

WHEN plans are broached for the rehabilitation of the F. A. M., the first suggestion offered is invariably that some means or other be taken to bring motorcycle dealers the country over into the F. A. M. ranks and make of them the real boosters for the organization. Undoubtedly if such a condition could be realized, the organization would go ahead in leaps and bounds.

Unfortunately, justly or unjustly, many motorcycle dealers are not only not F. A. M. members themselves, but even worse that that, are strongly inclined to discredit the organization to those of their customers who make inquiry regarding the national riders' body. And if their "wail" be a true one, and undoubtedly there is at least the proverbial grain of truth in it, none can say that they are not fully justified in the stand they are taking.

Their main claim is that immediately a man joins the F. A. M. he receives all sorts of mail matter from mail order houses and cut price motorcycle dealers and is lost forever as a customer for the dealer who recommended his action. However much impressed we are with the value of the F. A. M., none of us can blame a dealer if he refuses to turn over a good customer to be exploited by the meanest of his competitors.

If the F. A. M. membership lists are being sold for exploitation of this sort the practice should be stopped at once. The returns brought in by the sale of the names can never offset the harm done the organization by antagonizing the dealers who in the end should be the mainstay of the federation.

Here's a Call for a Weather-Proof Sparkplug

NOT many of us, of course, ride habitually in the rain; on the other hand the rider is a rare one indeed who has not been caught in a sudden downpour under conditions which made going on either desirable or necessary. Such being the case I think that every rider will agree with me that one of the things we need most on the modern motorcycle is fuller protection for the sparkplug against moisture.

On every machine I have ever ridden—and I have straddled practically every make—at least one of the plugs is so positioned that the collection of rain on the tank drains right down on the plug, and missing under these conditions is a foregone conclusion.

To change the sparkplug location, however, is quite a serious problem. As far as the motor operation under normal conditions is concerned it probably is in the best location possible, everything considered. It is placed where the heat is not excessive, for the cool incoming gases modify the temperature; where it is easily "getatable," a fact which contributes much to our happiness; and where it is not readily fouled by the splash of oil brought up by the piston.

In the face of these facts, all contributing toward efficient operation, it would be ill advised to suggest a change in sparkplug location, and we must, therefore look to the sparkplug maker for some sort of a hood or cover to protect the plug from the weather. It would seem that some sort of a device could be devised which would shield the terminal altogether from moisture, and yet would not cause the plug to heat unduly. It would be a great boon to the rider and I hope that some day in the not too distant future, such a device or such a plug will make its appearance.

Something More About Lightweight Competition

AGAIN, the fallacy of expecting too much from the lightweight in comparison with the heavyweight machine has been brought forcibly home to me; and it was that 200-mile Jersey jaunt of the N. J M. C. that is responsible.

The lone lightweight entrant was C. W. Waughop on a Cleveland, and he failed to finish with a perfect score. This fact, however, reflects neither on Waughop nor on the little machine; it is simply a case in which if everything had gone "according to Hoyle," the lightweight had as good a chance as any machine to pull home with a clean record. But things did not break as Waughop had reason to expect they would and the speed element being lacking, he was unable to get back to his schedule.

As Waughop explains it, the course measured some 20 miles longer according to his speedometer than the "dope" sheet called for; as a matter of fact quite a few of the contestants were agreed that the course was somewhat longer than the announced 202 miles, although none put it quite as high as Waughop.

At any rate that was a small matter for a heavyweight machine which is always, barring real serious accident, capable of running 15 minutes to half an hour ahead of a 22-mile schedule. But with the lightweight, not capable of "doing sixty" to make up for lost time, every added mile means much on a double century run at that high speed average.

Even at that Waughop no doubt would have come through with flying colors if he had not banged hard up against the "tire jinx"; and this time the said jinx ousted him.

He blew out a shoe; repaired it only to find his pump hose connection missing when he came to pump up. Finally he got the tire inflated after losing enough time to disqualify him at the next control, for he was over 15 minutes late.

But in its weakened condition the tire had not the proper staying qualities and gave trouble throughout the remainder of the trip, finally forcing him to finish on the rim.

But despite his troubles and the loss of perfect score, Waughop figures that he covered the 220 miles he rode at an average rate of 22 miles an hour; but it took him so long to make up his lost time that he was late at one of the controls; which, of course, let him out.

It's just a plain case of matching the lightweight against the heavyweight; a stunt which is obviously unfair to the little fellow.

A Plea for a Revival of the Economy Contest

WHEN all is said and done, in selling any article, whether it be a motorcycle, an automobile or a pound of beef, price is a prime consideration. In the case of the motor vehicle, there are two prices to be considered—the first cost and the after cost.

We can go ahead and "kid" ourselves to a fare you well, the fact remains that for the heavyweight machine the gap separating the first cost from the selling price of the cheap automobile is dangerously small.

But as to after costs, there is no comparison. Many things enter into the cost of upkeep, chief among which are fuel, oil, tire, repair and garage costs. I do not think that anyone who has had aught to do with the motorcycle will doubt for a moment that each and every one of these charges is far and away below the respective items in the case of even the lightest of automobiles.

But in the case of the fuel costs at least, and also in the case of the repair costs there is ample opportunity for a widening of the breach between the motorcycle and the automobile. It is quite evident, for instance, that at this time, with gasoline "skyhigh" as to price, and with automobile prices on the descendancy; when much should be done tending toward motorcycle economy, the subject is given very little thought.

What's become of the old time economy contest? Many hold the modern endurance run too strenuous and will not enter; others feel that the tour without competition of any sort is far too tame and entries are few. Why not revive the economy contest?

There is competition enough for the fellows with a leaning for the "sporty." There's glory enough for the winning machine. There's good fellowship combined with real instruction, for the rider certainly will learn more about tuning up his machine, and the manufacturer cannot fail of picking up points that make for greater efficiency even as from the speed meet he has learned the lesson of swiftness.

At the same time, the publicity accruing from the economy test is of the sort that is calculated to impress rather than disgust the reader while at least a few of the objectionable features which now turn the thoughts of the casual observer of the endurance run forever away from the motorcycle for his own use, will be done away with.

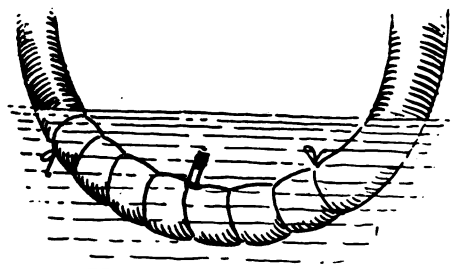
Repair Kinks and Shop Wrinkles

A Simple Method of Locating Small Punctures

ONE of the most troublesome things that the repairman has to contend with when it comes to patching tubes, is the location of a very small puncture which will not show up at all under the slight pressure that can be put on a tube when it is uncased.

Punctures of that sort are far from common and if the repairman attempts to locate the puncture by increasing the pressure to a point where the air will escape, the tube



Wrapped Tube Immersed

is sure to "balloon" at some point and threaten to burst.

The more usual way is to work with the low pressure and go through the laborious process of stretching the tube section by section until the extended puncture, by the escape of the air, gives evidence of its presence. This method, however, unless one is lucky enough to locate the puncture at the first couple of stretches, is apt to take a long time and is by no means certain of producing results.

The better plan is to wrap a string or a piece of wire around the slightly inflated tube, the string acting as a support for the tube so that the pressure can be increased to a point where the escape of the air will show up when the tube is immersed in a tub of water in the ordinary manner.

The Useful Box Spanner Can Easily Be Made.

IN shops where much general repair work is done, there are frequent instances where a box spanner or socket wrench is required to fit nuts or bolt heads of different dimensions from those ordinarily handled. There is no question of the value of a box spanner in restricted spaces and as such wrenches are easily made, they should be in every shop outfit.

In selecting the tube for the spanner, choose one of inside diameter about ⅛ of an inch smaller than the distance across the face of the nut. Rest the end of the tube on a flat surface and slightly flatten it on opposite sides. Insert the nut in the end top foremost and drive it into the tube until the lower surface is about ¼-inch from the end of the tube. This is to give a clearance for the nut when the spanner is in service.

The tube with the nut inside is then hammered until it conforms to the surface of the nut-sides. Hammering should be light, so as not to shape the tube too closely to the nut-sides. The nut should be driven in and out a few times, if needed, to make the spanner a sliding fit on it. The upper part of the tube, whose length should be at least 5 inches, can then be drilled with a ½-inch or ⅝-inch hole for the turning bar.

Here's a Tip You Should Pass to New Riders

THERE are several reasons why a machine should not be left with the motor running while on a hill or other incline, and the dealer would do well to point this out to the new rider. Outside of the danger of someone meddling with the levers and starting the machine inadvertently or purposely, the practice tends toward making the motor smoke and increase carbon deposit.

On the hill, the oil level is disarranged for the time being, the cylinder nearest the bottom having the oil in the crankcase nearer its base than the other, hence when the connecting rod splashes up the oil this cylinder gets more lubricant and the oil passes the ring and is burnt in the combustion chamber. If the hill is at all steep, the upper cylinder may get starved entirely of oil and the bearing surfaces be injured.

Practical Vulcanizing Hints for Repairmen

SOME vulcanizers have trouble with cure-back stock curling when making tube repairs. This cannot be avoided, as the action of the gasoline in which the patch is dipped will inevitably cause the cured stock to curl. The secret of this operation is speed. Thrust the patch quickly through the hole and press down with the fingers on the edges until the gasoline evaporates, after which there will be no trouble.

A good finishing or relining solution to be used on the insides of casings to prevent the tube sticking to the repaired section can be made from the following formula: Ten pounds high grade talc, one gallon Goodyear C-25 or C-35 cement, 1.4 gallons high test gasoline or benzol.

Put the gasoline in a container and gradually add the talc, stirring constantly. When the talc is all in continue stirring and gradually add the cement.

Plain powdered graphite is also good, but not so permanent.

In cementing tires before building, three coats should be applied. The first coat should be thin because it is a priming coat, just as in painting a building. The priming coat must get into the pores to form a foundation for the succeeding coats, and a thin application serves this purpose best.

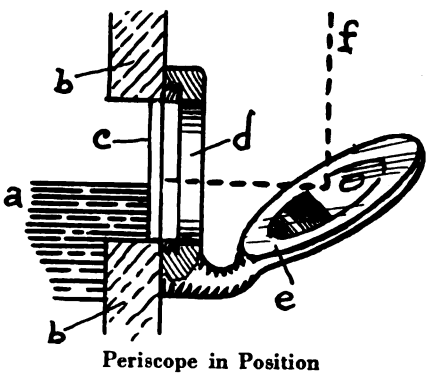
The first coat should be brushed in thoroughly and allowed thirty minutes to dry. The second coat should be 50 per cent heavier and given the same time to dry. The last coat is a light one and should dry in from three to five hours, according to atmospheric conditions.

"Periscope" for Verifying Level of Oil in Crankcase

THE rider, especially the new rider who is apt to be well primed with knowledge of the things he should not do, is sometimes quite anxious to keep his eye on the oil sight in the base of the motor in order to make sure that the motor is being properly oiled. While this is quite an easy matter in the case of the solo machine, unless the rider is careless enough to allow the sight to get so fouled up that all view of the oil level is lost, in the case of the sidecar machine such is not the case. As a matter of fact the rider of a sidecar has to be a contortionist in order to get a glimpse of the oil sight.

The dealer can inspire a greater degree of confidence in the rider who is "ticklish" on the score of proper lubrication by fitting a "periscope" to the oil sight so that the oil level can be seen from the saddle. The device is easily made and applied and the cost is but slight.

The principle of the periscope is clearly indicated in the accompanying sketch. It comprises simply a little hand mirror of the



Periscope in Position

type which milady is wont to tote around in her vanity case, fastened by means of a suitable bracket at an angle of 45 degrees in front of the oil sight; the reflection of the oil sight in the mirror can plainly be seen from the saddle.

The arrangement of the device will, of course, vary on different machines. On most machines, however, the arrangement indicated in the sketch will answer the purpose. The mirror (e) in this case is supported on a bracket of flat stock which is formed with a hole just large enough so that the flange of the bezel ring (d) will grip it firmly when the ring is screwed down in place. In the sketch (a) indicates the level of the oil, (bb) sections through the crankcase side, (c) the glass of the oil sight and (f) the line of sight to the saddle.

SPEEDY MOTOR-COPS

Give Denver People Fine Protection, Say Officials

DENVER, Colo., Oct. 21.—Recently Chief Armstrong, of the Denver police force, spent some time in investigating whether it was necessary to maintain the sub-stations in the residential sections of this city. It was pointed out that they were a good deal of expense to the city, and if they could be done away with that expense would be saved.

One of the points brought out was the fact that the motorcycle had now become just as much of a protector to the people in the resident parts of the city as the sub-stations. In the days before the motorcycle officers the sub-stations were needed, as transportation facilities were much slower. One instance was given to illustrate the point, as follows: A call for help was turned in to the Capitol Hill sub-station, and from there was relayed to headquarters. Before help arrived from the sub-station an officer riding a motorcycle reached the scene from headquarters.

COLORADO ROADS

To Be Improved by Next Legislature, Boosters Expect

DENVER, Colo., Oct. 21.—The "good road" fever has taken hold of the people of Colorado lately and many improvements in all sections of the State are being planned. The Colorado legislature that meets the first of the year is also expected to help the State by passing a number of laws that will aid in road improving and building.

Bettering of roads in Colorado is badly needed in many localities, and the fact that people are awakening to the fact means that action is not far off, and all motorcycle riders of this State are glad of the sentiment in favor of good roads. The news will also be welcome to riders from other states that are in the habit of coming to Colorado each year to spend their vacations.

A BRAZILIAN RECORD

Henderson Rider Covers 288 Kilometers in Ten Hours

METROPOLIS, Brazil.—Jose Lallet, mounting a 1916 Henderson motorcycle, recently hung up a new record for the ride from this city to Juiz de Fora and return, a distance of 288 kilometers. He covered the route in ten hours flat.

Another rider, Bento Caldas, had previously set a mark of 11 hours 55 minutes for the trip, and it was thought that this would stand as the motorcycle record for the distance for some time to come. Lallet, however, determined to cut down the time and was able to reduce it by an hour and 55 minutes.

He encountered considerable deep sand and much rutty and stony road on the trip, but his Henderson ran consistently throughout. The well-known Dr. Oscar Montiero, one of the most prominent figures in Brazilian motorcycle circles, acted as official and handled the event from the Petropolis end, while umpires were stationed at several other important points.

OFFICIALS WANT 'EM

N. Y. Water Supply, Police and Health Board Buy Indians

NEW YORK.—Under the live-wire direction of Calvin Webber, manager of the motorcycle department of the New York Sporting Goods Co., that company has closed several sales of Indian machines of late that are of more than ordinary interest.

Four solo Indians have been sold to the Board of Water Supply Police, who have charge of the protection of the water line from Ashokan Station down to the vicinity of New York City. The Water Supply Police bought one solo Indian some time ago, and, after giving it severe tests, put their O. K. on it and sent in an order for four more.

The Board of Health of New York City has recently placed with this company an order for three solo Indians, which makes 16 Indians sold to that board this year.

The company has also sold the Lehn & Fink, wholesale druggists, a 1916 Powerplus, electrically-equipped Indian, with Cygnet rearcar.

HOW McCARTHY WON THE DETROIT F. A. M. CLUB RUN

Lineup of Starters in the 156-Mile Endurance Run of the Detroit F. A. M. Club Just Before the "Go" Signal Was Given

DETROIT, Mich.—Official returns from the endurance run of the Detroit F. A. M. Club, show that K. McCarthy, riding a Harley-Davidson, was the only contestant to receive a perfect score. McCarthy checked in one time at Detroit, Royal Oak, Orion, Goodrich, Flint, (noon control), Waterford and Birmingham controls. He is awarded the first prixe. R. Burdick, also on a Harley-Davidson, lost 2 points at Goodrich, making his final score 998, while A. Sonnenberg, on an Excelsior, came third in score with 974 points. Sonnenberg was penalized 26 points at Goodrich, Orion and Flint. Fourth place was awarded to S. Green, Harley-Davidson, 965; fifth to L. Ochsinkel, Excelsior, 963, and sixth position to E. Stevens, Harley-Davidson 939.

In addition to these six B. Clippert, Henderson, finished with 899 score; R. Yohey, Harley-Davidson, with 748 points. These two did not finish within the prize awards.

Twenty-two riders were started in pairs on the morning of October 15 from the center of this city, each pair being sent off at one minute intervals. All contestants checked in at Royal Oak on time, but W. Finch, J. McQuire and C. Granger retired at Orion, the second check. Finch, the club president, went into the ditch to dodge a light automobile and bent his forks so badly that he retired. Clippert ran out of fuel near Flint and lost much time getting more and off again. F. Smith was out at Goodrich, as was also B. Schmuck, B. Duschang, Johnson and Krol. At Flint, W. Senrich retired, and A. Olsen withdrew. J. Campbell and C. Eberline were missing after Waterford. This left eight going, all of whom finished.

The 156 miles of the course were completed by 5:27 p. m. by the first man in. The running time was 6 hours, 15 minutes. Plenty of spills marked the affair.

The prizes were awarded at the regular meeting of the club by President Finch, and all hands voted the run a complete success. The club has quarters at 132 Michigan avenue and issues a standing invitation to all motorcyclists to attend at any Thursday night meeting.

PUTTING CLOCK AHEAD

Harley-Davidson Official Advocates Advancing Time

MILWAUKEE, Wis.—Ina recent address to the Salesmanship Club of Milwaukee, E. J. Mueller, assistant advertising manager for the Harley-Davidson Motor Company, advocated a compulsory advance of the clock 60 minutes in this city. He showed the assembled salesmen the benefits accruing to merchants and their employes in the increased time which would be allowed the worker for more motoring and shopping.

"While some complications arose in Cleveland owing to the difference between railroad and municipal time, the benefits of the added hour of sunshine in the afternoon were ample compensation for any confusion in time schedule" said Mr. Mueller. He spoke about the good effect of the extra hour to motorcyclists in particular and stated that Detroit, Kansas City and the District of Columbia, as well as Cleveland would soon have daylight-saving ordinances in effect.

GIVES EFFICIENT SERVICE TO TIRE COMPANY

Harley-Davidson with Special Sidecar Incorporating Steel Air Bottle Used by Shawnee Tire & Repair Co., of Topeka, Kan., in Answering Emergency Calls

MEET AT SPARTANBURG

SPARTANBURG, S. C.—The Spartanburg County Fair Association, of this city, is promoting a race meet in connection with the annual fair, the date being November 3. There will be four events: a 15-mile, five, 10 and 20 mile. Prizes in the long race are $50 for the first place, $30 for second and $20 for third place. All but one of the events are for professionals. Entries should be sent to T. E. Gibson, this city.

ELLIS PLANS GYMKHANA

NEW YORK, Oct. 23.—George A. Ellis, F. A. M. Commissioner for this section, is promoting a gymkhana and race meet for motorcyclists at the Empire City track on Thanksgiving Day, November 30. Among the gymkhana events, will be obstacle races, fancy riding, etc. The meet will end with a 25-mile race.

HOLD RUN TO GREAT BEND

HUTCHINSON, Kan., Oct. 23.—Riders of this city paid a visit to Great Bend yesterday, participating in the Harley-Davidson run. The course was over the new Santa Fe Trail via Sterling, Lyons, Chase and Ellinwood. Over 20 riders started from Hutchinson. An Indian ride will soon be made to Ellsworth, Kan., the home of "Speck" Warner.

OFFICERS ELECTED

New Departure Staff Named at Stockholders' Meeting

BRISTOL, Conn.—At the meeting of stockholders of the New Departure Mfg. Co., held at the plant here on October 17, highly satisfactory reports were received concerning the company's progress and its ability to meet the increased demands that will be made upon it for the coming season.

Officers were elected as follows: DeWitt Page, president and general manager; Frank P. Furlong, vice-president; Charles T. Treadway, treasurer; Arthur C. Hitchcock, secretary. The board of directors consists of the above named officers, with Townsend G. Treadway and Ernest R. Burwell.

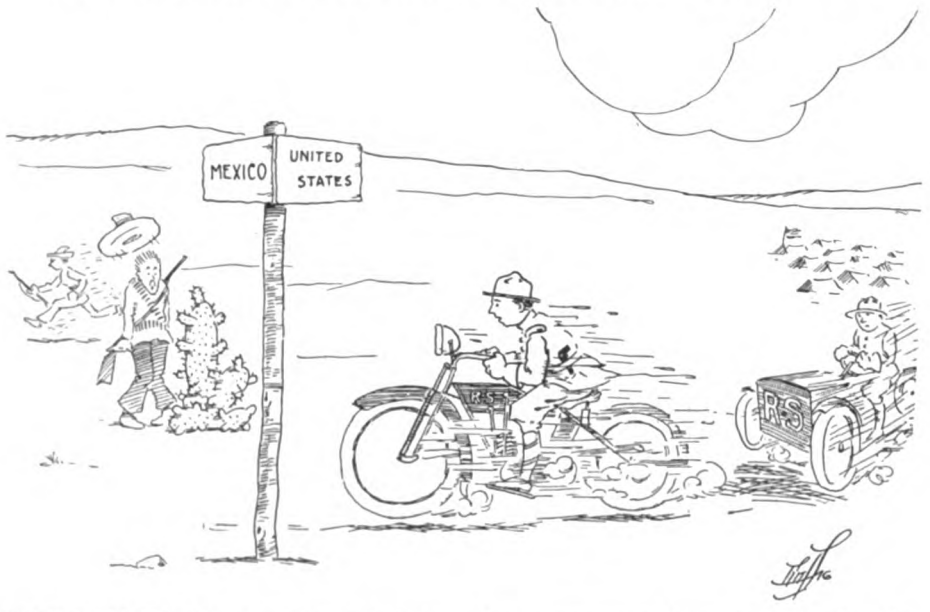
GOODYEAR "PEP"

Salesmen Gather at Local Meetings and Talk Sales-Boosting

NEW YORK.—Following the convention tion of district and branch managers of the Goodyear Tire & Rubber Co., at Akron, the Goodyear sales forces are being convened locally in a series of stimulative gatherings. During the past week one of these meetings was held at Hotel Astor, New York City, drawing a representative gathering from surrounding territory.

In discussing the astonishing growth of the Goodyear business during the past year emphasis was placed upon the cordial reception which the company's motorcycle and bicycle products have received throughout the country.

HOW MEXICANS VIEWED MOTORCYCLE GUARDSMEN



NEW YORK—Captain Ernest Schroeder, commanding the motorcycle machine gun company of the 71st Infantry, New York National Guard, is responsible for the drawing shown above, which he says is the manner in which the Northern Mexicans received his company, mounted on Reading Standard machines. Captain Schroeder worked up the cartoon during his term of duty at McAllen, Texas, with the company and sent it to Reading.

Officers connected with this organization report that the Reading Standard stood up finely under the gruelling conditions of border service, in which an extreme of heat would be followed by a downpour of rain and a quick drop in temperature, among other things. No matter what the weather, the Reading Standards were on the job at all times.

TO CURB VICIOUS DOGS

Attack on Excelsior Dealer in Pueblo, Colo., Starts Action

PUEBLO, Colo., Oct. 16.—O. N. Johnson, local Excelsior dealer, narrowly escaped serious injury when he was attacked by a huge dog on one of the residence streets, as he was riding to business on his motorcycle.

The dog sprang at the rider, and brought him to the ground. But for the fact that the motorcycle fell on top of the rider the animal would have seized Johnson by the throat. The front wheel acted as a screen, however, and spectators drove the dog away before it could inflict any damage.

By order of the police department, promulgated two hours after the accident, owners of all dogs which attack motorcycle or bicycle riders will be held liable.

MILITARY RIDER GIVES HIS MACHINE HARD USAGE

PLATTSBURG, N. Y.—The Indian motorcycle was given an unusual opportunity to demonstrate its ability to stand up under heavy usage during the past summer when used by First Lieutenant R. S. Ossman to transport himself to and from the Plattsburg camp.

Lieutenant Ossman, a member of the Coast Artillery Corps, is attached to the staff of Major General Wood, at Governors' Island, N. N., and his duties required frequent trips to Plattsburg, which he was accustomed to make on his Indian. A straight trip of from 200 to 250 miles was of frequent occurrence, and all of them were made over the rough, hilly roads of northern New York.

TO UPHOLD ANTI-TRUST LAWS

SAN FRANCISCO, Cal.—Uncle Sam is about to take action under the anti-trust laws to dissolve the alleged combination of a number of large oil companies for unlawfully fixing the price of gasoline. United States District Attorney, John W. Preston has the situation in hand, and is basing his action upon reports made by the Federal Trade Commission. The latter body has been making an inquiry into the conditions regulating the price of gasoline.

McNAMARA-SPEARS DUO WINS LONG RACE

Takes Final Sprints in 100-Kilometer Team Race at the Newark Velodrome—Spills Mar Long Race, Which Is Marked by Considerable Rough Riding

NEWARK, N. J., Oct. 23.—Another victory in a long team race was registered by the strong Australians, Reggie McNamara and Bob Spears, when in the last two sprints of the 100-kilometer (62½ miles) race at the Velodrome yesterday they overcame the lead of Alfred Goullet and Alfred Grenda and won out by seven points.

The race, the only one on the program, was run along the so-called Berlin system. A sprint was staged at each five-mile mark and another one at the finish of the race. Winners of the sprints were credited with one point, the winners of the other places being credited as follows: Second, 5 points; third, 6 points; fourth, 7 points; fifth, 8 points; sixth, 9 points, and seventh, 10 points. All other finishers in the sprints outside of the first seven were credited with eleven points, the team scoring the lowest number of points being declared the winners.

Lots of Rough Riding

The race was marked by considerable rough riding on the part of the majority of the riders. At 20 miles Frank Kramer, the champion, was forced into Tom Bello, the Brooklyn Italian, who made his professional debut yesterday, and both Kramer and Bello went down in a heap and they brought Tommy Smith down with them. In one sprint Fred Hill was fined $15 for sacrificing his chances, and in another sprint Jake Magin was taxed a like amount for foul riding.

McNamara and Spears, Grenda and Goullet and Kramer and his mate, Marcel Dupuy, were looked upon as the logical favorites and they finished one-two-three, with Spears and McNamara scoring 62 points to 69 for Goullet and Grenda and 92 for Kramer and Dupuy. The chances of the Kramer-Dupuy pair were spoiled when Kramer fell and Dupuy was forced to stay on the track until Kramer could get patched up.

Hanley-Madden Are Fourth

Fourth money in the race was won by Willie Hanley and Eddie Madden, who scored 97 points. Jake Magin and Frank Corry and the Bedell brothers, John and Menus, were tied with 109 points each and they divided fifth and sixth money. Seventh place was accounted for by Hans Ohrt and Percy Lawrence with 118 points. The time of the race was 2 hours, 16 minutes, 182-5 seconds.

The sprints resulted as follows: Five miles—Won by Dupuy; second, Eaton; third, Goullet; fourth, Spears; fifth, Corry; sixth, Hanley; seventh, Hill. Ten miles—Won by Kramer; second, McNamara; third, Grenda; fourth, Hill; fifth, J. Bedell; sixth, Piercey; seventh, Magin. Fifteen miles—Won by Hanley; second, Spears; third, Eaton; fourth, Lawrence; fifth, Cameron; sixth, Dupuy; seventh, Goullet. Twenty miles—Won by McNamara; second, Grenda; third, Magin; fourth, J. Bedell; fifth, Madden; sixth, Hill; seventh, Piercey.

Twenty-five miles—Won by Dupuy; second, H. Ohrt; third, Spears; fourth, Cameron; fifth, Corry; sixth, Hanley; seventh, Goullet. Thirty miles—Won by Grenda; second, Madden; third, J. Bedell; fourth, McNamara; fifth, Magin; sixth, Walker; seventh, Lawrence. Thirty-five miles—Won by Goullet; second, Corry; third, H. Ohrt; fourth, Madden; fifth, M. Bedell; sixth, Spears; seventh, Kramer. Forty miles—Won by McNamara; second, J. Bedell; third, Hanley; fourth, Piercey; fifth, Corry; sixth, Grenda; seventh, Lawrence.

Forty-five miles—Won by Goullet; second, Cameron; third, Spears; fourth, Hanley; fifth, H. Ohrt; sixth, M. Bedell; seventh, M. Bedell. Fifty miles—Won by Goullet; second, Corry; third, J. Bedell; fourth, McNamara; fifth, Madden; sixth, Piercey; seventh, Eaton. Fifty-five miles—Won by Kramer; second, Walker; third, Spears; fourth, Grenda; fifth, M. Bedell; sixth, Thomas; seventh, Madden. Sixty miles—Won by McNamara; second, Hanley; third, Goullet; fourth, Corry; fifth, Piercey; sixth, Dupuy; seventh, Lawrence. Sixty-two and a half miles—Won by Spears; second, Kramer; third, Goullet; fourth, H. Ohrt; fifth, J. Bedell; sixth, Madden; seventh, Thomas.

MAKES A WINNING START

Mark Hannan, Toronto, Who Won the 23d Dunlop Trophy Race

DARK HORSE CAPTURES DUNLOP CUP TROPHY

Mark Hannan, Riding His First Race, Takes the 23d Annual Toronto Classic—Webster Takes Time Honors

TORONTO, Ont., Oct. 22.—Mark Hannan, a clerk in a local drug store, made his debut into the cycle racing game here yesterday, and it was a most successful one. Although Hannan had been riding his bicycle a few miles every day, it was not until the twenty-third annual Dunlop trophy race was announced that he decided to try his luck at the speed end of the sport.

The annual Dunlop trophy race was run over a course measuring twenty miles, and that distance looked like a hundred to young Hannan. Hannan had a handicap of eight minutes, and he took good advantage of the handicapper's liberality. At the halfway mark he was in second place, but just before the finish he assumed the lead and won by about a minute.

The members of the Classic Club captured both the first place and the time prize; Norman Webster, the fastest amateur in Canada, starting from scratch, beat out the other scratch men, Fred. McCarthy, Herb MacDonald and Harry Martin, in the classic race, his time being 55:57. The other three scratch men followed Webster over the line inches apart. Owing to the crowd surging onto the course at the finish a bad spill, in which the scratch men figured, marred the race somewhat, but the riders escaped serious injury.

Ten thousand people turned out for the race. The entry list was the largest in recent years, and it would have been larger but for the fact that a number of the cyclists who had enlisted were called to go to Europe's war zone. In the Dunlop race last year Hans Ohrt, who has since turned professional, carried off first honors. No American riders competed in the classic this year. The first ten finished as follows:

	Hdcp.	Time.
1—Mark Hannan (Classics)	8:00	.59:42
2—Leo Leeson (H. M. B. C.)	9:00	1.00:56
3—S. Wicks (H. M. B. C.)	10:30	1.02:35
4—Frank May (Salem)	7:00	.59:35
5—M. Gerrold (Classics)	7:30	.60:00
6—H. Coleclough (Classics)	6:00	.59:05
7—Jas. Hall (Salem)	7:00	.59:35
8—J. Pidgeon (H. M. B. C.)	7:00	.59:38
9—R. Hendry (Salem)	4:30	.57:05
10—C. Woodcroft (Classics)	4:00	.57:30

NINE MODELS IN EMBLEM BICYCLE LINE

Extensive Offering of Veteran Cycle Works in Angola, N. Y., Includes Men's and Ladies' Fully Equipped Mounts, and Two Fine Juveniles—Racer Also Listed—Carmine or Black, With Suitable Striping, Optional Finishes

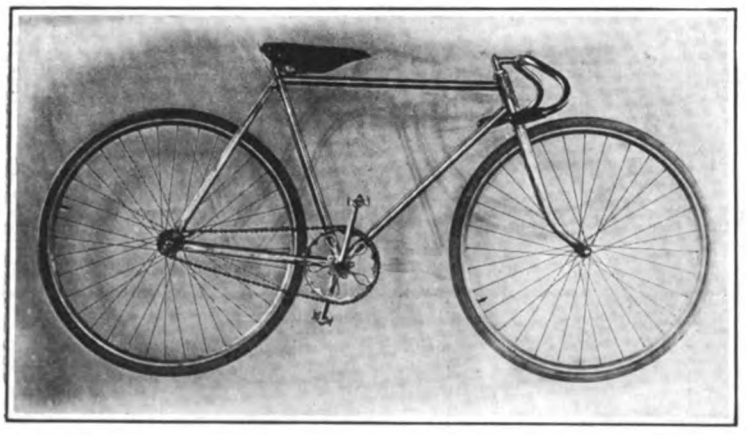
ANGOLA, N. Y., Oct. 24.—Nine models, covering the wants of all bicyclists, are produced by the Emblem Manufacturing Company for the 1917 season. These models range in price from the $50 racer through the roadsters for men and ladies, girl's and boy's juveniles, down to the $35 roadster with drop frame. All are of the high quality which has marked Emblem production in past seasons.

Following are the models offered, with their prices: Model 51, Emblem racer, $50; Model 43, fully-equipped roadster, $40; Model 45, ladies' fully-equipped roadster, $40; Model 32, roadster, $30; Model 35, ladies, $30; Model 72, juvenile, $25; Model 25, girls' juvenile, $25; Model 114, motorbike, $40, and Model 144, arch truss roadster, $40. On all except the racer, Model 51, coaster brakes are fitted for $5 additional.

Fully Equipped Roadster, Model 43, with Stand, Splasher on Mudguard and One-Piece Hanger

The Emblem Racer

The Model 51 racer, with 28-inch wheels front and rear, is the successor of the 1916 model of the same name. It is fitted with Thor racing hubs, Vitalic tires—1⅛ or 1¼ inches diameter; Lawson racing bars, Mesinger saddle, and Emblem two-piece D. & J. type hanger. It should be noted that the frame will not permit the use of tires greater than 1¼ inches in diameter. Finish is carmine. The price is $50.



Model 51, the Emblem Racer, with Thor Racing Hubs and Lawson Bars. Two-Piece Hanger

Model 43 Is Fully Equipped

Model 43, the fully-equipped roadster, has a frame of 1-inch tubing. It is shod with Vitalic 1¾ or 1½-inch tires, and has motorcycle type guard with splasher. The Emblem patent one-piece hanger is fitted and the hubs have the firm's double-faced reversible cones, which increase the life of the hubs and bearings by 100 per cent. A stand is provided on this model. The saddle in the Troxel Eagle Easy, or a Mesinger type, as desired. Box bars are provided, with long grips. Finish is black, with an option of carmine. The head is nickel plated. Price is $40 without brake, or $45 with coaster brake. A full set of tools is included in the prices.

Model 45 is for ladies, being a light roadster, with 1-inch diameter double-curved front tubing. Like its running-mate, Model 43, it is fully equipped, the tires, stand, etc., of that model being the same on both machines. A high-class ladies' saddle and special bars are fitted. Finish is black only. The price is $40 without brake and $45 with coaster brake.

The Emblem roadster, Model 32, is somewhat more moderate in price than Model 43, but all fittings are of high quality. Brigadier tires, 1½ or 1⅜ inches, are fitted with an option of Goodyears, and motorcycle type mudguards with splasher are standard. The Emblem one-piece hanger and standard Emblem hubs are used, with either Tip-Top or Mesinger saddle. Box bars with leather grips are furnished. The list price is $30 minus brake, or $35 when coaster brake is fitted. Carmine or black finish as desired.

Men's Roadster, Model 32, an Emblem of Moderate Price, But with High Quality Fittings Throughout

Juvenile Line

Model 35 is the ladies' counterpart of Model 32, and is similarly equipped, except for ladies' saddle, etc. It lists at the same figures. It is finished in black only. The boys' juvenile, Model 72, is the successor of the popular Model 22 of the 1916 season and is similarly fitted. It is to be had in carmine finish and lists at $25 without brake. The girl's juvenile, Model 25, is identical with the model bearing the same number in previous seasons, and is priced at $25, or $30 with coaster brake equipment.

The 114 Motorbike and 144 Arch Truss roadster follow similar models of the 1916 season and are listed each at $40, without coaster brake. An extra charge of $5 is made for fitting the coaster. In addition to the lines mentioned, the Emblem folks have a jobbing line of wheels in extensive variety. Those models bearing the Erie, Capitol or "D" name plates will be fitted with Goodyear tires for 1917.

The regular Emblem line can, of course, be had in colors differing from the standards or options mentioned on special terms. All Emblem products are fully covered by an effective and thorough guarantee for one year against imperfections or defects in material.

DIRECTORATE RATIFIES SALES PROMOTION PLANS

Cycle Trade Body Paves Way for Putting Into Operation Biggest Cycle Exploitation Campaign Ever Attempted—Christmas Business Drive Well Under Way

NEW YORK, Oct. 18.—The full plans submitted by the Sales Promotion Committee for the stimulation and promotion of the bicycle business were ratified as recommended at a meeting of the United Cycle Trade Directorate at the Hotel Astor today.

The plans as submitted by Secretary Olin dealt first with an organized campaign to boost the Christmas bicycle business and the secretary reported that this campaign is already well under way and that bicycle dealers the country over will receive suggestions and sales helps along this line on or before the first of the coming month.

Electrotypes Furnished

One of the main features of the Christmas campaign embraces the furnishing of prepared electrotypes for use in newspaper advertising to the dealers, and it is made plain that the committee is assured the cooperation of newspapers the country over in obtaining editorial mention of the bicycle as a Christmas gift.

As a result of today's meeting, headquarters will be opened at an early date in New York City and a secretary will be employed to have entire charge of the details of the campaign.

Two men will also be employed who will spend their entire time visiting retail dealers, explaining to them every phase of the "Million Bicycles" campaign, organizing the dealers of the cities into dealers' associations, supervising road races, bicycle "weeks," instructing regarding window displays, advertising in moving picture theaters, and endeavoring to be of the utmost possible service in awakening new interest in the bicycle in every city which they visit.

These men will report on every dealer they visit daily to the central office so that the directorate may be in a position at all times to act promptly and effectively.

Dealers are to be assisted in making fine window displays. The directorate will loan to dealers life-size and expensive cut-out designs, handsomely printed in colors. Each one of these designs will give a happy atmosphere to cycling.

The cut-outs will be so arranged that the bicycle itself and not a picture of it will be a part of the display.

In connection with these displays material for trimming the window attractively will also be furnished.

Window Cards

The committee will also supply a series of attractive cards for use in the windows and elsewhere. Each one of these cards is full of color, life and snap.

A large line of electrotypes for illustrating newspaper advertising, circulars, folders, etc., will be furnished and these electrotypes will be even better than those furnished for Bicycle Day. Wherever dealers or dealers' associations use the newspapers, material will be furnished to such papers that will feature the bicycle.

Periodicals of every kind, including those devoted to boys and to women, will publish through the effort of the directorate valuable material, giving prominence to the bicycle in such a way as to stimulate a desire for it in all quarters.

The committee is to communicate with every dealer in the United States once a month, suggesting to them selling schemes, plans and work that have proved successful and otherwise, passing on the good things the directorate gets through its special representatives and correspondents.

Bicycle Racing

Bicycle racing is to be undertaken and promoted on a large scale and there will be another Bicycle Day or "week," probably at different dates in different sections so as to make it a big opening of the season everywhere. Special plans and co-operation will be given by the directorate in connection with these opening celebrations. Dealers will be furnished with very attractive slides than can be used to advantage in moving picture shows.

Plans will be adopted to making the bicycle prominent in fairs and local celebrations and brought to the attention of dealers in localities holding such entertainments. An effort is to be made to secure bicycle races on the program of all big athlectic events. The special work that has already begun in connection with the Boy Scouts and the Y. M. C. A. will be continued.

JAMES FLANAGAN LEADS THE H. C. W. RIDERS

BAYONNE, N. J., Oct. 23.—James Flanagan leads the other members of the Hudson County Wheelmen in the "cork" races run by that club this season. Flanagan has 85 points and the others stand as follows: R. H. Olsen, 75; Arthur Neminsky, 44; T. Flanagan, 35; H. Klotz, 31; L. Mahieu, 30; John Carey, 27; C. F. Hansen, 21; G. Kaetz, 13, and H. Kaetz, 11.

Charles Hansen won the "miss and out" race held yesterday by the club. James Flanagan finished second and T. La Rossax third. Dick Olsen won the 2½-mile handicap and George Kaetz won the Brassard race from John Fargo.

ERROR IN SMITH FLYER PRICE

In the last issue of **Motor Cycle Illustrated** a typographical error made the price of the Smith Flyer read $215. The price is $125 f. o. b. Milwaukee.

MONTREAL BIKE CLUB REORGANIZES

MONTREAL, Que.—Montreal has caught the spirit of bicycle club revival at last. The Montreal Bicycle Club has been reorganized with a membership of forty-one cyclists and a club room has been secured. The first run of the new organization was held recently to Chambly and St. John's, Quebec, and return, a total distance of sixty-five miles. Twenty-one riders participated in this tour. One of those actively interested in the new club is A. E. Bregent, distributor of the Smith Motor Wheel and Pope bicycles.

CHICAGO CYCLISTS ON TRIP

MICHIGAN CITY, Ind., Oct. 222.—Sixteen sturdy riders toured from Chicago to this city on their bicycles last Sunday. The start was made from Fred Nelson's bicycle store on Michigan avenue, Chicago, and the ride finished at Art Wolff's sporting goods and bicycle store here. All of the riders rode Excelsior wheels and Jim Bain, of the Excelsior Cycle Co., acted as host to the party, treating them to a swell spread and all the trimmings.

E. C. W. HOLD TWO RACES

BROOKLYN, N. Y., Oct. 23.—Dennis O'Shea annexed first honors in the ten-mile race run by the Empire City Wheelmen here yesterday. O'Shea had a handicap of one minute, and he beat out Peter Pesch, 1½ minutes; B. Crawford, 1½ minutes, and Joseph Phister, one minute, in the order named. In a one-mile race Lawrence Gaffney, scratch, beat O'Shea, 60 yards; Anthony Attardi, scratch, and George Laux in that order.

SCHOOL BOYS USE SMITH MOTOR WHEELS

HELENA, Mont., Oct. 20.—Spending five or six hours a day in school is hardship enough for the average boy, but when he has to trudge three miles to get there and three long, weary ones back, with the lifts from neighboring farmers few and far between, he thinks it is "tuff luk." But give the same boy a Smith Motor Wheel and going to school isn't a hardship—it's fun. So thinks Clark Whitcomb, who lives three miles out of this city, at the Blue Cloud Dairy, who rides one.

IVER LAWSON BOUND EAST

SALT LAKE CITY, Utah, Oct. 20.—Iver Lawson, the famous Swede cyclist, left here Tuesday, Oct. 17, for the East. Lawson is entered in the Boston and New York six-day races, being paired with Eddie Root in the former race. Lawson will go as far as Chicago by train and then ride his bicycle to Boston from the Windy City.

THE C. A. C. C. CHAMPIONSHIPS

SAN FRANCISCO, Cal., Oct. 23.—Four titular events will be run at the Golden Gate Park Stadium, Sunday, Oct. 29, by the California Associated Cycling Clubs at their annual championship meet. The races include the half-mile, one mile, three and five-mile events.

TEN TEAMS IN BOSTON SIX-DAY RACE

Classy Field Secured for the Annual Race in St. Botolph's Town—Sprint Races to Usher in the Carnival at the Arena

BOSTON, Mass., Oct. 26.—Local lovers of cycle racing will soon be in their glory. The annual six-day bicycle race will get under way at the Arena on St. Botolph street, on the afternoon of Monday, Nov. 6, while a sprint meet will usher the cyclists before the public on Saturday night, Nov. 4.

Nat Butler, the old rider and at the present time manager of the Revere Beach track, will be associated in the venture with Alex McLean and John M. Chapman, manager of the Newark Velodrome. A strong aggregation of six-day timber has been secured for the coming race and the entrants include the best of the sprint cyclers now in this country.

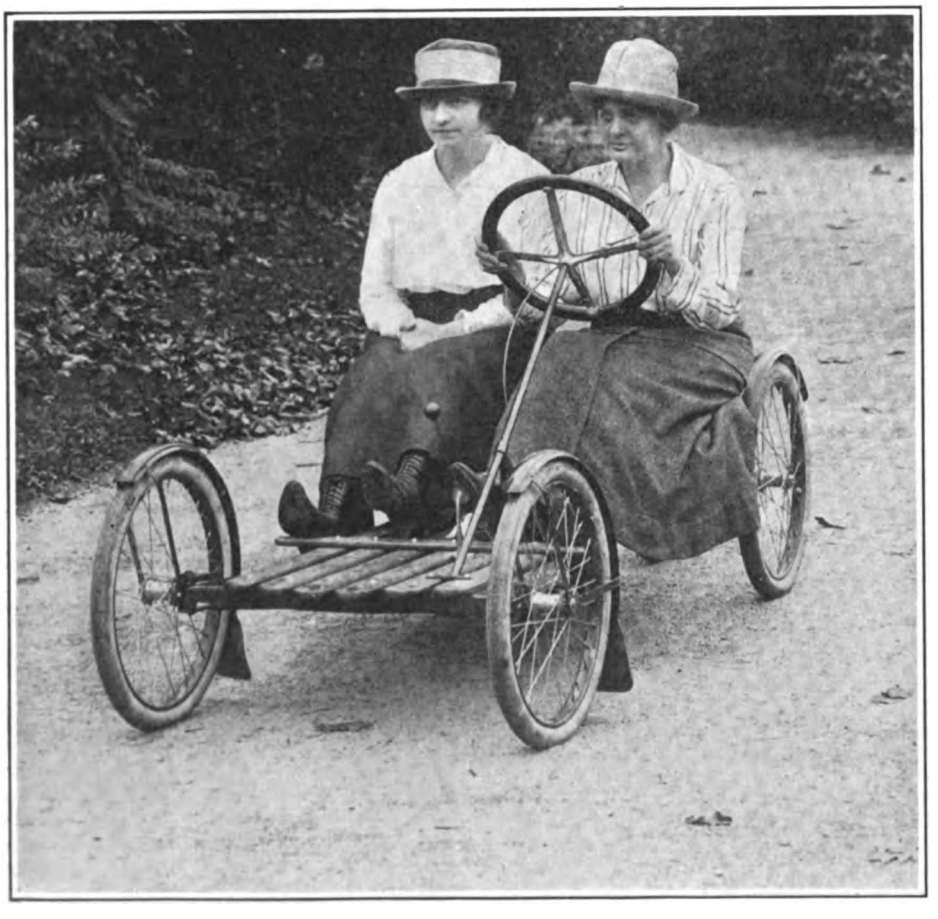
The Boston race as in past years will be of ten-hours per day, the race to start at 4 p. m. and finish the following morning at 2 o'clock. The curtain-raising card of events for Saturday, Nov. 4, is an attractive one and will furnish almost every kind of racing. The features for the opening meet are a 15-mile motor-paced race, which will be run in three five-mile heats, and the starters will be Clarence Carman, 1916 paced champion; George Wiley, the Syracuse rider, and Vincent Madonna, the Providence Italian; a four-cornered match sprint race between Reggie McNamara, Iver Lawson, Alfred Goullet and either Bob Spears or Arthur Spencer, a half-mile handicap for the professionals and a ten-mile open for the same class.

The Boston race will mark the entry of Tom Bello, the Brooklyn Italian amateur, into the strenuous six-day game, and his strong and aggressive riding should aid him in weathering the aches and pains that go with this end of the game. Iver Lawson, who recently retired, is doing a "come back" and will pair with Eddie Root, the old six-day champion.

THE FIELD IN THE BOSTON SIX-DAY RACE

Reggie McNamara and Bob Spears, Australia.
Clarence Carman, Jamaica, L. I., and George Wiley, Syracuse.
Alfred Goullet, Newark, and Alfred Grenda, Australia.
Eddie Root, Boston, and Iver Lawson, Salt Lake City.
Willie Hanley, San Francisco, and Eddie Madden, Newark.
Jake Magin, Newark, and Frank Corry, Australia.
Tom Bello, Brooklyn, and Vincent Madonna, Providence.
Tim Sullivan, New Haven, and Ray Eaton, Newark.
Lloyd Thomas and Percy Lawrence, San Francisco.
Marcel Dupuy, France, and Harry Kaiser, New York City.

ONE REASON WHY "SMITH" IS A POPULAR NAME



Just Because It Is Attached to This Flyer, Which Is Attracting Attention the Country Over

THE NEW SMITH FLYER HAS MADE BIG HIT

Reports From the Trade Give Ample Evidence of Its Popularity—Every Mail Brings in Praise for Vehicle

MILWAUKEE, Wis., Oct. 23.—The Smith Flyer has been on the market only a few weeks and already fine reports of how the public is taking to it are coming to the big Smith plant in every mail. Everywhere there is praise for the appearance and performance of the Flyer.

One Ohio dealer says, "I got the Flyer O. K., and it is a beauty. Everybody, young and old, is taken up with it." A New York dealer hasn't had time to write all about it, for "there are so many coming in asking questions that I'm kept on the jump. It sure brings them into the store," he says.

From Michigan a dealer reports, "The people crowd around wherever I let it stand for a minute." In Chicago, a big dealer who has just had his first Flyer writes:

"To say that we are pleased and enthusiastic is putting it mildly. All the police on the west side know her by now and many of them 'guy' me for riding a toy, but secretly they greatly admire it and are most friendly. To-day one of them asked me to take him from his post to headquarters; I told him the two of us would break down. He said if we did he would buy it. When we arrived, a large force were there reporting and when the enthusiasm displayed by that cop spread among the bunch and was taken up by a large crowd who heard the praise bestowed by the officer, they could not consider the thing a joke."

FORTY RIDERS ON B. V. W. CENTURY RUN

NEWARK, N. J., Oct. 23.—Forty members of the Bay View Wheelmen started on their fall century to Central Valley, N. Y., and return yesterday morning. Two divisions started—the fast and the slow—and in the former could be found Amateur Champion John L. Staehle, William Eager, Robert Henderson and other speedy Velodrome riders.

The slow division left the club house on Sixth street at 7:15 a. m., and the fast bunch at 8:35 a. m. The first named division arrived at Central Valley at noon while the fast contingent arrived at 1:1 p. m.

READING SCHOOL ON RUN

READING, Pa., Oct. 17.—A trip of 7 miles, which took the cyclists through Black Bear, Jacksonwald, Stonersville, Amityville and Yellow House, marked the third weekly run of the Reading High School Bicycle Club, held Saturday afternoon.

KISSMAN WINS N. E. W. RACE

NEW YORK, N. Y., Oct. 23.—Robert Kissman won the weekly point race of the New England Wheelmen, held yesterday over the Pelham Parkway course. C. Spaun finished second and A. Levine third.

Varied Activities of the Dealers

GIVES SERVICE CARD

Burnett Allows Each Machine Buyer Six Hours' Free Time

PROVIDENCE, R. I., Oct. 24.—William N. Burnett, local Harley-Davidson agent, employs a novel means of keeping his customers satisfied. With each sale he gives to the motorcyclist a free service card, good for six hours' work. This is presented after the sale is closed and is not used as an incentive to create business.

Burnett finds that those who receive the cards take pride in keeping them free of punches, and that it is only on rare occasions that the rider takes advantage of the opportunity to have free repair work done on his machine.

The card is divided into 24 sections, each representing a quarter of an hour's time. If the work covered by the free card was charged for at the regular rate of 75 cents an hour, it will be seen that it would cost the machine owner the sum of $4.50.

The card is good for work only on the machine with which it is issued and to guard against misunderstandings the number of the motor is printed on the card.

WALKER STAGES SHOW

Boston Dealer Has Big Exhibit at His Own Headquarters

BOSTON, Mass.—W. J. Walker, Harley-Davidson retail man in this city, had one of the largest exhibits of motorcycles, sidecars, sidevans and rearcars ever staged by an eastern dealer. The exhibit covered the whole floor of Walker's large store at 174 Columbus avenue.

Twelve new Harley-Davidson machines were on view, four of them 1916 models and eight of them 1917's. There were also three sidecars and one sidevan of the 1917 vintage, and six rearcars, two of the latter being finished in olive drab to match the Harley-Davidson machines, and fitted with tops and handbrakes.

Cutaway parts were also shown, such as the three-speed, the transmission, clutch and mechanical oiler.

Walker gave away souvenirs, and he and his staff had their hands full to handle the crowd of visitors.

Designed by Agent Rube Ullrich. This Exhibit Swelled 1917 Orders Largely

Harley-Davidson Sidecar Combination on Float Which Was Driven Through Streets of Pennsylvania Town on Recent Boosting Campaign—Dealer Ullrich Is on Float

BROWN'S R-S SLOGAN

ST. LOUIS, Mo.—The E. S. Brown Cycle Company, at 1000 North Grand avenue, handles the Reading Standard, and is featuring the fact that the letters R. S. also stand for Real Service. In addition to the motorcycle lines, they carry the New England bicycles. An up-to-date repair department, in the hands of skilled mechanics, is conducted.

SYKES CO. IN FULL SWING

COLUMBUS, O.—The Sykes Motor Co., 37 East Long street, Central Ohio distributor for the Indian, is now thoroughly settled in the new store, and is doing a nice business for this time of the year. A large shipment of Indian bicycles has been received and quite a few have been sold. A shipment of 1917 motorcycles is expected within a few days.

DIXON SOLD TWENTY TWINS

RACINE, Wis.—Guy H. Dixon, Harley-Davidson agent in Racine, reports the sale of 20 twins during the 1916 season. Among the deliveries was a twin machine to the Racine Police Department, and another for the sheriff's office.

"ZIM" BUSY AGAIN

Is Lining Up Dealers for a Big Week at Chicago Show

LINDSBORG, Kan.—P. E. Zimmerman, who always has an unusual stunt or two up his sleeve, is shooting the pep into his dealer friends throughout this territory, and exhorting them in a widely distributed circular letter to attend the Chicago Show and help to whoop things up.

Zimmerman is now boosting what he calls the "Wychmore Club," the members of which are signed up with the following "oath": "I Wychmore territory than I can possibly get; I Wychmore discount than the factory can possibly allow; I Wychmore business for 1917 than I ever Wyched before; I Wychmore enthusiasm so my business will prosper; I Wychmore hours in the day between Nov. 13 and Nov. 18."

"Having subscribed to this 'oath' and kissed the sacred white porcupine," Zimmerman's letter continues, "the dealer member is entitled to go as far as he likes."

The Lindsborg booster has sent out 200 of these letters to dealers throughout his territory, and it is expected that they will help to ginger things up considerably—provided some one finds out what the letters are all about before Show Week.

"Zim" is traveling representative for the Excelsior in Kansas, Nebraska, North and South Dakota and northern Missouri.

USED MACHINE SALE FOR MEAD

DENVER, Colo., Oct. 23.—At this time the Mead Autocycle Company, of this city, has a large stock of used motorcycles that have been taken in exchange for new Excelsiors. Of late the Mead people have been advertising their second hand stock quite extensively. E. A. Mead, head of the company, says business in all departments of his store is fine and he expects it to continue so during the winter months.

ROOS HITS A HOT PACE

OMAHA, Neb.—Victor Roos, one of the real live wires among the local motorcycle dealers, and Omaha agent for Harley-Davidson motorcycles, has acquired Potowatomie County, Iowa, as new territory and has sold his first 1917 Harley-Davidson to the Van Brunt Auto Co., which sells Overland cars in Council Bluffs, the auto company planning to use the motorcycle for service work.

Recently two 1917 Harley-Davidsons were sold before they even entered Roos' salesroom. Al and John Peterson, motorcycle enthusiasts, sat down on the curb in front of his place waiting for them to arrive, and when they did Al and John hopped on them and split the breeze.

BIG DEMAND FOR USED MOUNTS

KENOSHA, Wis.—Langanbach Brothers, located at Park and Exchange streets, have announced that they will not handle any new motorcycles in future, and will confine their operations to the sale of second-hand machines. They will also maintain a first-class repair shop, and will continue to sell the Chicago Cycle Company's lines of bicycles.

NO DELAY, SAYS EVA

Excelsior Traveler Assures damour of Prompt Deliver

The Non-Acid, Steel Encased

EDISON MOTORCYCLE SPECIAL

ALKALINE STORAGE BATTERY

Built Like a Watch, but as Rugged as a Battleship

Positive and negative grids are stamped out of sheet steel and heavily nickel plated; the positive active material, nickel hydrate, is held in tubes; the negative active material, iron oxide, is held in pockets—each made of perforated, cold-rolled carbon-steel ribbon, nickel plated. The container is made of nickel plated sheet steel, with side seam, bottom and cover all welded by the oxy-acetylene process, making it practically one piece of steel.

Nothing can bend, buckle, crack or jar loose, no matter how rough the going, and no amount of vibration or concussion can cause the active material to "shed" and form sediment.

The solution is non-acid—does not dissolve the active materials, is not corrosive, cannot cause sulphation, deterioration or attack the parts of the cell in any way.

The top of the cell is specially constructed to prevent spilling.

The safe, efficient, long-lived, economical, always reliable storage battery is the Edison Nickel-Iron-Alkaline.

WRITE FOR BULLETIN 883.

The Wise Riders Stick to the Thor

Why shouldn't they? Each year the Thor jumps farther forward. It had a head start; it was the first made brand in the world. Off with a good lead in construction, the Thor has quietly maintained this advantage.

The Thor makes a practice of being quiet. Examples of 1917 improvements to further the quiet running of the Thor are an auxiliary silencer on the muffler and the enclosed transmission. The 1917 Thor runs so silently that one would almost think the motor had little power. Such a possible thought is dispelled when, with the muffler opened, the Giant Thor thunders ahead with a deafening roar of 12 horse power!

Dealers: We have a new sales policy that is bound to interest you, regardless of the agency you now hold. Ask about it. At least—

MERRY'S CYCLEMOTOR CAMPAIGN UNDER WAY

EDWIN F. MERRY has been in Los Angeles working on final details of closing down the branch here and arranging to give Southern California dealers strong service direct from one sales headquarters and warehouse in San Francisco. Merry is going to make a strong campaign this year on the new type Cyclemotor, manufactured in Rochester, N. Y., 1917 model of which has just been announced.

Merry says it embodies certain refinements which will undoubtedly make the motor appeal very strongly to the trade. He is distributor for California, Arizona, Nevada and Hawaiian Islands. He is building up a good dealer representation and the dealers find that the motor sells. One man bought six of the 1916 model and already has a deposit up on 25 of the new type, which he expects to sell very quickly in his town as a result of the satisfaction given by the first six.

MOTORCYCLE NIMRODS BUSY

LOS ANGELES.—The list of successful hunters on the opening day for shooting duck, quail and rabbits included a big proportion of well-known motorcycle riders and dealers. "Bob" Sayre, of the Appeal, went out with Geo. Snyder, Bakersfield Harley-Davidson agent, and what they did to the quail was aplenty. C. L. Smith, Great Western bike distributor, is getting to be as keen after the shooting as he is for trout. Roy Breiter and two more brought in 26 ducks from a little lake it takes a motorcyclist to find. This year a man has to ramble a good many miles from the city to get into country that has not been shot over, and the fellow who does not own a motorcycle might as well give away his gun.

STICK CLOSE TO SHOP AND SUCCEED, SAYS LONG

LOUISVILLE, Ky.—Coleman B. Long, one of the pioneer bicycle dealers and repairers, and local agent for the Merkel, in a recent interview with the correspondent of **Motor Cycle Illustrated,** stated that one of the real secrets of his success in business had been the observance of the fact that the small dealer, operating with a small capital, contained practically his entire capital inside of himself, and that when he was away from his business, business was suspended.

The consequence has been that Long has always stuck closely to his shop, and has been grabbing the elusive dollar, while many dealers have come and gone, who endeavored to spent most of their time elsewhere and allow their shops to run themselves with the aid of a few repair men.

HILL-CLIMB TO BE BIG EVENT

LOS ANGELES.—Lester Miles, A. F. Van Order, L. E. Reed and Geo. Rubsch, the committee handling the forthcoming hill-climb of the L. A. M. C., have picked a long steep one out on the North Broadway highway to Pasadena. The hill is accessible by motorcycle and electric car, and a big crowd is sure to be on hand to see the 1917 models tackle the grade.

MOTORCYCLE RACER BACK FROM WAR WITH MEDAL

HAILEYBURY, Ont.—J. P. Morgan of this village, formerly one of the best known motorcycle racers of the dominion, has returned from the war with a scar across his forehead and the D. C. M.—Distinguished Conduct Medal.

Morgan enlisted in Montreal, went overseas with the Borden machine gun company and was attached to the Sixth Brigade. He showed conspicuous bravery in the defense of a machine gun during the bombardment of the British lines at Eloi last April, and was struck in the forehead by a piece of shell. For a long time there was doubt of his recovery. He was recommended for the medal immediately at the close of the action, and received it on May 1st.

CLIMBS HILL ON OLD MACHINE

LOS ANGELES.—Lester Miles rode one of the machines from the stock of second-hands, dealt in by Martin & Miles, out to the hill under consideration for the big November hill-climb. While the committee was debating whether any machine could get over so steep a grade Miles rushed it and made a creditable climb. The committee had to admit that Martin & Miles have good second hands.

THE HENDERSON IN HAMILTON

HAMILTON, O.—C. A. Clark & Son, Main and B streets, have just closed a contract to handle Henderson motorcycles in this territory.

Positive Grip

due to the generous design and construction—we think it is the best and strongest rat-trap pedal you ever put your foot on.

The No. 4 Standard

is a big, substantial, motorcycle-type pedal. It stands for the utmost mechanical value.

Sidecarist Ascends Mt. Washington

Boston Motorcycle Salesman Heads Party That Completes Eight-Mile Climb in White Mountains; Reached Summit in About Forty Minutes

BOSTON, Mass.—Ralph E. Watson, salesman for W. J. Walker, Boston, is curious to know whether he has the sidecar record for climbing Mt. Washington. With his brother, George Watson, in the sidecar and with Havelock Hennigar, John Lane and George Lane on solo machines he made a trip that is claimed to be one of the most scenically attractive in the United States.

Leaving Danvers, Massachusetts, at daybreak the party arrived at the foot of Mt. Washington, in the heart of the White Mountains, at 11 a. m. They stayed there for dinner and after dinner mounted their Harley-Davidsons for the climb. The mountain is a mile and a quarter high and the road is eight miles long, pretty rocky and so crooked that in no place can a rider see farther ahead than 100 feet at any one time.

"But this is made up for by the fact that you can look down for a thousand feet or more, and straight down, at that," says Mr. Watson, who has constituted himself a volunteer press agent for the White Mountains and overlooks no opportunity to boost them when he meets up with motorcyclists from other parts of the country. "Of course, the solo machines left me as soon as we started the main climb, but we made the summit in a little over forty minutes, which I believe is record time for this climb with a sidecar.

"When you get to the top you can see for many miles and on a clear day it is possible to see the Portland harbor, ninety miles away. After spending the afternoon on the top of the mountain we came down, and this is where one appreciates the value of a good brake. We rode westward through the famous Bretton woods and the Crawford Notch, putting up at the Crawford House for the night.

"The next morning we continued our ride directly across the range of mountains and then down to Boston, arriving there about eight o'clock in the evening, having covered 560 miles without having to fix so much as a puncture. The total expense for the entire trip was so small that it is not worth mentioning. We certainly had a beautiful trip, saw some of the finest scenery in New England, and I don't know but what it might well be called the finest in the United States."

TETLEY BACK ON JOB

RED BANK, N. J., Oct. 19.—The many friends of Lou Tetley, local Indian man, will be glad to know that he is now able to get around again, following the injuries he received a short time ago. "Lou" has had a good season, having sold 37 solo Indians and 10 sidecar outfits. To date he has taken orders for 12 of the 1917 Powerplus.

CLARK SIGNS AGAIN

Badger State Motorcycle Co. Continues to Handle Indian

MILWAUKEE, Wis., Oct. 24.—R. L. Clark, proprietor of the Badger State Motorcycle Company, 2220 Meinecke avenue, is back on the job and loud in his admiration and praise for Jesse Edwards and his methods of conducting the annual dealer sales convention of Wisconsin, Iowa and Illinois Indian representatives.

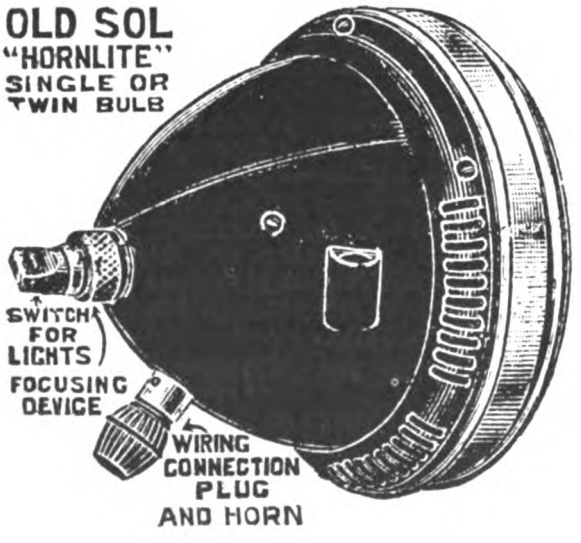
The Badger company has signed up for his second year to handle the Springfield product, and predicts that 1917 will be the biggest year he has had since in business. Intensive selling in the Milwaukee county farm districts is one of the features of Clark's policies that made the Reading-Standard a popular machine amongst the farm boys when he handled that make two years ago and previously. Adolph Waech, former partner in the Badger State company, now is handling the Reading-Standard.

Milwaukee motorcycle enthusiasts are all wrought up over the rumor that seems to be going around that Clark has something up his sleeve for this season in the way of a radical change in the organization. However, the boss refuses to divulge even the slightest inkling of what's coming off, in spite of questioning.

William Jensen, formerly head of the repair department in the Wisconsin Motorcycle Company, the old Indian agency, has been placed in charge of the Badger State repair shop. William C. Knuth is salesman.

Indian HENDERSON Dayton

These three "big-timers" will use the most advanced, the best looking, and the most effective warning and lighting system on the market—



Old Sol "Hornlite"

They do this because they have found that the HORNLITE gives the utmost in lighting power, with its two-bulb headlight, its specially built, highly silvered reflector, its focusing device, its 21 candlepower special Nitrogen Bulb, and, finally, its deep, far-reaching, harsh-toned horn, concealed in the lamp, the body of which forms the "bell" or sound-box for the warning signal. Consider the compact, efficient trim appearance of this combination outfit —then write us for prices.

Remember—three of the world's greatest motorcycle manufacturers are using HORNLITE *exclusively* in 1917.

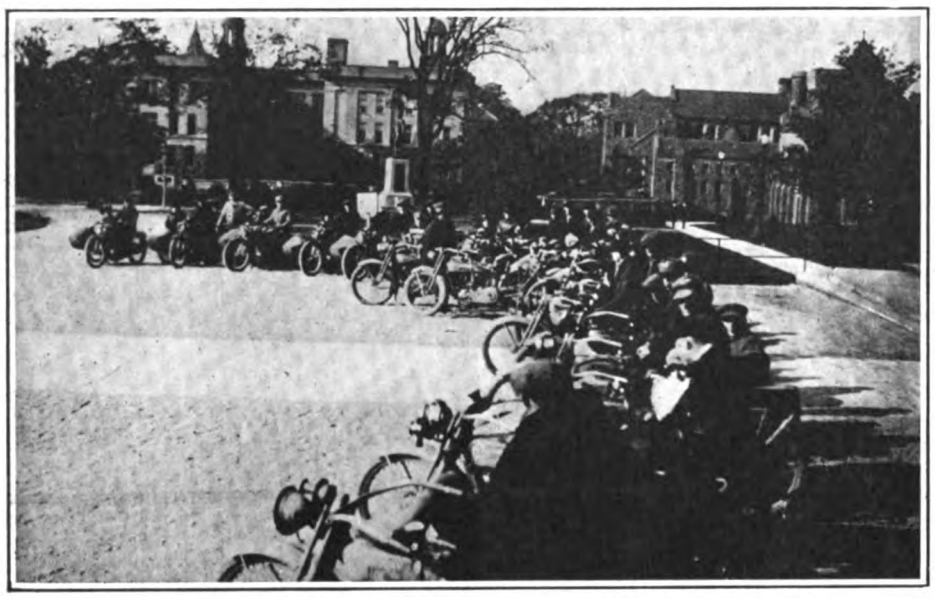
SIXTY JOIN ANDREWS IN LAKE SHORE TOUR

Three Score Harley-Davidson Enthusiasts Participate in 80-Mile Run Given by Toronto Agent—Tentative Plans for Club Discussed and Well Received



Lineup of Riders in Queens Park, Toronto, at Start of Andrews' Run

TORONTO, Ont.—Without exception, the very best motorcycle outing of the season for Toronto motorcyclists was the Lake Shore tour organized by Walter Andrews for Harley-Davidson riders on Sunday, Oct. 15. The pleasure-seekers made the 40-mile spin to Hamilton easily before dinner over the new Intercity highway and then returned home late in the afternoon after a chummy drive. Pleasant people made up the attendance of sixty participants, fifty of whom occupied the seats of Harley-Davidson sidecar outfits, the presence of so many sidecars arousing eighty miles of comment along the road. Although no guest had been requested to make a neat appearance for the occasion, every machine bristled with its best shine and the majority of the enthusiasts also bore attractive riding clothes.

With the get-away from the Harley-Davidson store here, the many sidecarists and soloists paraded orderly to Queen's Park where the riders grouped themselves among ancient guns and statues for the official photographs. After the photographic registrations, the front wheels were steered toward the open country and the machines fluttered, Harley-Davidson-like, over the concrete without a miss—excepting those in the sidecar tonneaux.

The tourists kept well together as the order had been issued by "Captain" Andrews for the boys to ride in "close column of route"—military style. At Hamilton the party dined at the New Commercial Hotel as the guests of Andrews. As smoke filled the air from after-dinner cigars, thoughts arose regarding a plan to organize a Harley-Davidson club in Toronto. The matter will be considered in a definite way at a future date.

ELLIS PROPOSES A NEW YEAR'S NIGHT RUN

New York F. A. M. Commissioner Suggests New York-Albany Ride Beginning Midnight and Invites Comment

NEW YORK, Oct. 23.—F. A. M. Commissioner George A. Ellis is proposing to hold a midnight run of motorcyclists from New York to Albany. The date is New Year's night. Start is to be made at Columbus Circle at 12 P. M. Dec. 31, 1916, and finish at Capitol Square, Albany. The winner will be the man to arrive first.

The run is to be held regardless of weather conditions. Commissioner Ellis proposes to get permission from the authorities to demonstrate that the motorcycle can be operated in winter to good effect as well as in fine weather. A series of prizes is being gotten up for the event.

Mr. Ellis invites comment upon this proposed run and will be glad to hear from dealers and riders about it. Address G. A. Ellis, c/o New York Sporting Goods Co., 10 Warren street, New York.

RAIN DOES NOT STOP MOTOR WHEEL SALES

MILWAUKEE, Wis., Oct. 23.—In far away Manila, the Smith Motor Wheel is daily demonstrating its efficiency, and F. H. Thompson & Co. write that the number of sales they have made right through the rainy season has surprised even themselves, as they didn't look for much business during the four rainy months which constitute our summer.

Gasoline there sells around one dollar a gallon—and we think the 16 to 20 cents we pay is exorbitant! One appreciates high mileage, therefore, in the Philippines, and one reason for so many Motor Wheels are being sold there is that the rider can get from 100 to 125 miles to a gallon of gas. One recent purchaser, Hignio Sepulveda, a merchant who uses his Motor Wheel for soliciting, says: "As a business getter the Motor Wheel can't be beat."

ROUTE TO GALT, ONT.

PLEASE give the best route from Auburn, N. Y., to Galt, Ont., also distance between the two cities. I wish to visit in the Canadian city.

Auburn, N. Y. W. H. HUGHES.

The route is Auburn, Seneca Falls, Waterloo, Geneva, Canandaigua, Mendon, Pittsford and Rochester, 71½ miles; about ten miles of poor roads. Rochester, North Chili, Churchville, Bergen, Byron, Batavia, East Pembroke, Pembroke, Clarence, Williamsville, Buffalo, 73.7 from Rochester. Buffalo, Tonawanda, North Tonawanda, Niagara Falls, 21½ miles from Buffalo. Canadian customs on bridge over Niagara river; New York license will carry you through all right.

Niagara Falls, Ont., St. Davids, St. Catharines, Jordan, Beamsville, Grimsby and Hamilton, 50½ miles, good roads. Hamilton, Dundas, Galt, 25.2 miles, fine roads. Total distance, from Auburn, 242½ miles.

A CASE OF OVERHEATING

MY 1915 twin is not acting right as regards climbing hills. It gets hot and will frequently not give power even on low gear. I recently had it overhauled so the ignition and valve timing must be all right.

R. M. M.

Reading, Pa.

Granting that the overhaul was made properly, the motor is overheating and this may be due to any of the following causes: Too rich a mixture, due to wrong carbureter adjustment; choked exhaust, due to soot in pipe or muffler; wrong lift on exhaust valves, due to too great a clearance between the tappets and the end of the stems; poor fuel; tight bearings. With the information you give us, we cannot give you the exact cause of the trouble. It may be also that your pistons are too loose in the cylinders, due to excessive wear of the latter.

SMITH MOTOR WHEEL SALES IN ALBERTA

MILWAUKEE, Wis., Oct. 23.—Remarkable activity in fall sales of Smith Motor Wheels has been shown by the Alberta Motor Wheel Co., Calgary, Canada. No less than seven sales have been reported in the last two weeks, and considering the cold weather already being experienced in Alberta, this looks like business will keep right up until the big snows come.

One purchaser, manager of a large lumber yard in Calgary, writes: "The Motor Wheel is perfect."

USE QUALITY OIL

The life of a motorcycle depends largely on how it is lubricated.

A Point Worthy of Consideration

with reference to speedometers in general and in particular the

CORBIN-BROWN SPEEDOMETER

The point is: that mechanical simplicity means life and strength. This simplicity the Corbin-Brown possesses in the highest degree.

We do not claim it to be the only speedometer on the market that will do its work efficiently, but we do claim that there are many other speedometers constructed on a different principle whose mechanisms are so overcrowded with devices aiming to neutralize certain extraneous influences that the percentage of wear, friction and deterioration is appreciably increased.

This is not so with the Corbin-Brown. Its principle is fundamentally correct and as a consequence its mechanism is sturdy and beyond question the strongest made.

Consider this point carefully. Catalog on request.

BOOSTS FOR BAKER

Admirer Tells Why He Considers Him a Good Sportsman

EDITOR **Motor Cycle Illustrated**: I hope you will print in your magazine this little tribute to Erwin G. Baker, the old "Warhorse" whom I greatly admire.

Although I ride a different make of machine from Baker's I can't help boosting for him. He is my ideal motorcyclist. He is always on the job, no matter what the conditions are, and when he goes into a contest he always gives the best that is in him. Most of the time he makes good against great obstacles, but at any rate he is a good sportsman.

His records for the past three years should be regarded by all motorcyclists with pride, regardless of the makes of motorcycles they ride. When I get into an argument with some automobile man about endurance riding I just dig down and bring up Baker's records. I point to the fact that he enabled the motor car to beat his own motorcycle record across the country, and remind the automobile man that his industry is glad to have a man like Baker pilot a car.

We can't give Baker too much credit, and it is too bad that the motorcycle sport hasn't more riders like him. We have a lot of mighty capable boys in the game, of course, but in my opinion "Cannon-Ball," or "Warhorse," or whatever you please to call him, is in the front rank as an all-round exponent of the motorcycle in this country. AN ADMIRER.

RAILROADERS FIND MOTOR WHEELS EFFICIENT

MILWAUKEE, Wis., Oct. 23.—That the Smith Motor Wheel is proving just as efficient for railway use when attached to a speeder as when used with a bicycle is evidenced by the following letter from Lee Vernnum, Rantoul, Ill., an employee of the Illinois Central Railway:

"I have used my motor wheel from three to four thousand miles this year. I get about 80 to 85 miles to a gallon of gas and the oil consumption is very small, about four gallons. The repairs have cost me about 80 cents to date. I cannot see that the tire has had any wear at all, and my opinion is that the tire will rot out with old age before it will wear out. The wheel gave me splendid service last winter, and while the weather was cool, I carried two men a great deal, and some times three, without any trouble."

OMAHA A GOOD CYCLE TOWN

OMAHA, Neb.—Always a good motorcycle town, Omaha is fast becoming one of the best in the country. The Omaha Club now has a membership of about 100, and is planning a series of week-end runs which will induce many more to join. One of the most popular runs is between Sioux City and Omaha, the last one being made in about six hours, each way, with a stop-over. The distance is approximately a hundred miles. A. G. Sorensen, the hustling secretary of the club, also says that the second annual ball, given October 10, proved a welcome rendezvous for many visiting motorcyclists who had been showing their speed over the Lincoln Highway, which runs through Omaha.

WHERE TO REACH JOE MERKEL

NEW YORK, Oct. 17.—Jos. F. Merkel, who designed both the Flying Merkel motorcycle and the Autoped and who even now, as was exclusively told in a recent issue of **Motor Cycle Illustrated**, is engaged in putting the finishing touches on a power wheel for bicycles, writes that since the appearance of that article he is getting much mail matter from trade acquaintances wrongly addressed to Flatbush. Merkel's address is 284 Washington Place, Flushing, L. I., N. Y.

SUPERINTENDENT BUYS ONE

PROVIDENCE, R. I., Oct. 23.—B. A. Swenson has sold a Powerplus machine with sidecar to Charles Brown, superintendent of the Rhode Island Malleable Iron Company. Mr. Brown will use it in going to and from his office. This was the fourth Indian sold by Swenson in the first three days of last week.

JAMAICA CLUB RUN, OCT. 28

JAMAICA, N. Y., Oct. 23.—The Jamaica M. C. will hold a club run to Eastport, L. I. on October 28. The start will be made about 8:30 a. m. and it is expected that 25 members, the usual number, will participate. Lunch will be eaten at Eastport and the return made in the afternoon.

What Does This Mean to You?

The fact that the Thor is the pioneer of them all, means that the Thor has had just that many more years in which to attain perfection. A younger motorcycle cannot begin at the degree of perfection present in the older motorcycle. It must begin at the bottom of the heap and, by yearly changes, slowly evolve.

Since the Thor had a head start in life, it has had years of time to get its component parts together into smooth working order. That is why the Thor is the years-in-advance motorcycle.

Dealers: Why not investigate the Thor? We are in a receptive mood to consider live-wire agents. If you are in this class, we will be pleased to correspond with you.

Nameplate Talks

No. 3

Generations of bicycle riders stand behind this nameplate. It is unique in the bicycle field. No other nameplate has its reputation, its prestige, its friends.

No other bicycle enjoys such steady, consistent, assured sales as does the bicycle upon which it is found.

For thirty-nine years it has been making profits and friends for dealers the country over.

You are going to hear more about it.

What the Harley-Davidson Contract Means This Year

For the 1917 season we believe the Harley-Davidson contract offers more than ever before, and quote the following as a few of the reasons for this:

1—We have given our dealers a popular and complete line to sell.

2—We have taken advantage of every factory efficiency plan to keep our production as close to our dealers' requirements as possible.

3—We have given our dealers what we believe to be the best sidecar made.

4—We have given our dealers the best line of commercial delivery vans.

5—We are placing on the market what we have reason to believe is the finest line of bicycles for the coming season.

6—We have given Harley-Davidson dealers the greatest service organization in the business.

7—We are offering all the practical co-operation possible to Harley-Davidson dealers, with the hopes that it will help them to materially increase their 1917 business.

That our dealers have appreciated our past efforts is evidenced by the unmatched loyalty to the Harley-Davidson Motor Company and the Harley-Davidson cause. What we have done for our dealers heretofore is but an indication of what we hope to do for them during this season.

We always hope to have room in the Harley-Davidson organization for any serious minded progressive dealer, whether he is at present handling motorcycles or not. If your locality is ably handled by a Harley-Davidson dealer, we may be able to tell you of some other locality where we believe you can make a success of the Harley-Davidson line. We have helped many riders to establish a pleasant and profitable business by locating a place for them to open up as accredited Harley-Davidson dealers.

The 1917 *Indian* and the DEALER

This is the Internationally famed Cradle Spring Frame.

Expensive as it is to make, it adds nothing to the cost of the Indian to the rider.

Broadly patented, it can be used on no other motorcycle. This is its fifth year as an exclusive Indian achievement.

As a riding-comfort device, it is unapproached. It levels rough roads, prevents fatigue. It absorbs at high speed jolts and jars that makeshift appliances have to creep over gingerly.

Practically every big cross-country motorcycle record has been made on the Cradle Spring Frame. It keeps shocks from jolting the motor mechanism —prolongs the life of the machine—greatly increases tire mileage—gives the touring buoyancy of a high-grade motor car.

It's a whale of a feature—a powerful sales clincher —over 100,000 Indian riders swear by it.

The dealer who can talk Cradle Spring Frame, Powerplus Motor, Triple Stem Forks, and a dozen other big things, is the Indian dealer. He has facts, not fancies, to close sales on. And he sells a machine that is supreme in the motorcycle world at practically the price asked for ordinary single-trackers.

Our 1917 Selling Plan gives the hustling dealer a chance to cash in heavily on Indian prestige. There won't be a better time than today to arrange for your territory.

BLUE STREAKS

These Tires Save You Time And Your Time Is Money

EVERY retail dealer, whether he sells clothing or jewelry or motorcycle accessories, has in stock certain *standard* goods that he sells without effort.

The Blue Streak Motorcycle Tire is a standard of this kind.

For Blue Streaks are well and favorably known by the tire buying public.

More and more, every day, the boys on the race track and on the road — yes, and the merchants too, who must figure out their delivery costs to the penny and who want to get the most mileage out of their tires at the least expense — all of them are coming to consider Blue Streaks as necessary a part of their equipment as the very gasoline that shoots them along the road.

And so Blue Streak sales are made without persuasion—quickly, satisfactorily.

The dealer saves his time when he sells Blue Streaks—time that he can use to advantage in other directions.

Your time is valuable.

Your reputation as a square dealer is valuable.

Satisfied customers are valuable.

Blue Streaks save your time, add to your reputation and multiply your satisfied customers.

Blue Streaks are valuable tires for you to sell.

And back of every Blue Streak is the name of Goodyear.

ARTLEY BANGS UP LOS ANGELES-BAKERSFIELD RECORD

Well-Known California Speedster Covers 128 Miles with Indian and Sidecar in 4 Hours and 18 Minutes; Climbs Ridge Route Grades with Motor Sealed in High Speed

LOS ANGELES, Cal., Oct. 30.—Roy Artley has done a great deal during the last year to keep this section of the country in the motorcycle limelight, particularly with reference to speed work on the road, but he has never shown to better advantake than in a new dash between Los Angeles and Bakersfield, on Oct. 28, when he hung up a record for the trip by covering the 128 miles in 4 hours and 18 minutes with a 1917 Indian Powerplus and sidecar. Artley had as his passenger J. J. O'Connor.

The feat takes on additional significance from the fact that Artley had his motor sealed in high speed for the entire distance, although he traveled by the famous Ridge Route on which he encountered innumerable grades and many difficult turns.

As is well known, the Ridge Route is likely to cause trouble for even experienced roadsters, owing to the fact that there are points where the rider makes sharp turns with a sheer cliff on one side and a hair-raising precipice on the other. During his trip over this course Artley reached an altitude of 4,360 feet, and at several points he would have welcomed the use of his three-speed. He went through on high, however, and arrived in Bakersfield with his outfit in good order.

Artley recently joined the Indian camp in southern California, and the Los Angeles-Bakersfield record is his first contribution to the speed annals of the Wigwam. There are persistent rumors that Artley is planning a series of dashes between California cities with a view of setting up a few more new marks.

NEW BRANCH BUILDING FOR BOSCH IN CHICAGO

Site Has Been Purchased at Strategic Location and Structure Affording 15,000 Square Feet of Floor Space Will Be Ready for Occupancy About December 1

CHICAGO, Ill., Oct. 31.—Closely following the announcement that the Bosch Magneto Company had started a second addition on its Springfield, Mass., Works, comes the news of their purchase of a large plot of ground in Chicago upon which they will build a new branch building.

The erection of a new building has been rendered necessary largely by the big increase in general business of the Middle Western section. The present location, which is at Michigan avenue and 24th street, having an area of 6,000 square feet, will be vacated about the 1st of December for the new branch building located on the corner of Michigan avenue and 37th place, a location somewhat farther south on Michigan avenue than the old branch.

The new branch building is being erected in keeping with the treatment adopted for the Springfield works. It will be a structure of gray brick and stone and is expected to add considerably to the pretentious appearance of Chicago's new automobile district. Nearly 15,000 square feet of floor space will be provided, which is about two and a half times as much space as is now available. A new installation department will be opened, since the demand for the installing of lighting, starting and ignition systems is growing considerably, and requires special accommodations. In this respect, the branch will be able to accommodate five times as many cars as heretofore.

The spare parts, sales and repair departments will be on the main floor, as well as the stockroom, the disassembling, washing and testing departments, packing department and installation department. The second floor will house the reception room, manager's office and general offices.

MOTORCYCLES BEAR DESPATCH TO PRESIDENT

Louis Crist and Jacob Bishop Carry Invitations from Pittsburgh to Shadow Lawn in 11 Hours —Eyes of the Military Officials Pinned on Performance of Training Camp Riders

SHADOW LAWN, N. J., Oct. 29.—Covered with dust, and just bubbling over with the sort of enthusiasm that comes of success achieved, Louis G. Crist and Jacob G. Bishop, both members of the H-D Motorcycle Corps of the Pittsburgh Military Training Camp released their clutches and ground on their brakes almost exactly at 6:30 this evening, and were ushered into the presence of President Wilson.

Without a great deal of formality, the dispatch bearers handed the President two messages from Pittsburgh—one from Mayor Joseph G. Armstrong and the other from William H. Stevens of the arrangement committee, both inviting the President to grace the Smoky City with his presence during the City Charter Centennial week, Oct. 29-Nov. 6.

The riders, both of them astride 1917 Harley-Davidson machines, left Pittsburgh at 7:30 o'clock this morning and following the route of the Lincoln Highway through Ligonier, Bedford, Chambersburg, York and Lancaster reached Philadelphia at 3:31 o'clock this afternoon having covered the 300-mile distance in 8 hours to the minute.

Their pace over the triple century was faster by nearly an hour than the train service. They were met on the outskirts of the Quaker City by Alexander Klein

PLANNING STATE TOUR FOR GEORGIA RIDERS

Savannah Officials and Club Workers Lay Out 1,000-Mile Route to Be Covered in a Week; Big Prize List Promised—Riders All Along the Course Invited to Participate

SAVANNAH, Ga., Oct. 31.—Georgia motorcyclists, headed by the boosters of Savannah, are laying definite plans to set the pace for the South along the lines of State tours, and F. A. M. State Commissioner John Balmer and Local Commissioner O. A. Meyer are hard at work on the preliminaries. Those in charge of the plans are chiefly concerned just now with the route for the proposed trip, and the course has so far been only roughly laid out.

It is the intention to keep the riders on the road for a week and cover about 1,000 miles. Starting from Savannah, the party will go to Augusta, to Columbus, to Atlanta, to Macon, to Brunswick and back to Savannah. From Savannah to Columbus the new Dixie Highway will be used, while part of the National Highway between Macon and Brunswick will also be included in the route.

It is stated that the roads so far included in the tour are in first-class condition, and it is believed that reasonably good weather can be counted upon almost any time except in January and February.

Commissioners Balmer and Meyer announce that the event will be sanctioned by the F. A. M. and that riders in all the cities on or near the route will be invited to participate, joining the main party as it passes through. There will be general prizes for the most consistent riders, and the neatest ones, and also special prizes for each city which is represented.

It has been impossible to set a date for the big program as yet, but there are strong indications that the tour will be held late in March or early in April. In the meantime the F. A. M. commissioners and their lieutenants will be busy working up enthusiasm all along the route and laying plans to accommodate the delegations from the various cities.

The State tour idea is one that promises to bring about big doings all over the country during 1917, and the energetic manner in which the Savannah crowd of enthusiasts has started the ball rolling for the South is indicative of far-reaching results.

THIRTY-TWO SHOW PERFECT IN ELLIS' RUN

Yonkers to Poughkeepsie Sociability Pulls 52 Starters, Many Mounted on 1917 Machines—Nissen Draws the First Prize—Waughop Distinguishes Himself

YONKERS, N. Y., Oct. 29.—Some 52 riders turned out for the "sociability" run from Yonkers to Poughkeepsie and back which was promoted by State F. A. M. Commissioner Ellis today; and of the number 32 showed back in Yonkers this afternoon with perfect scores and a chance to draw for the valuable prizes which Ellis hung up for the affair.

The run was noteworthy from many standpoints, chief among which was the appearance of a good many of the 1917 models. The latest Indian Powerplus creation was straddled by Calvin Webber of the New York Sporting Goods Company, and E. Sterns; Ben Ruderman of Brooklyn and H. Horowitz came through on 1917 Thors; Leslie Cobban, Jr., of the Bronx sported the new model Henderson; E. Brennan, the Brooklyn Flxible sidecar representative entered on a 1917 Excelsior with Flxible sidecar, while C. W. Waughop, H. Raoul and M. Goldman made up the lightweight brigade, each mounting the latest Cleveland creation.

The run was given a bit of a military flavor when Lieut. Lou Guterman of the 71st Regiment motorcycle corps and three other national guardsmen just back from the border joined the band; all four straddled the Reading-Standard machines they used on the border.

With the exception of the military division, which was 20 minutes late in starting and which joined the others on the road, the run pulled away from in front of Hollywood Inn precisely at 9 o'clock, thanks to the arrangements made by Ellis and the able aid afforded him by his new secretary, Mrs. Ellis.

Most of the riders reached Poughkeepsie long before the noon hour and left in a body for the return journey, after having taken luncheon, of course, just at 1 o'clock.

Not to be outdone by Wallace Stewart who showed the riders the way into Poughkeepsie, E. W. Stewart of the Cygnet Rear-car uncorked a burst of speed with his 1916 Indian that brought him back to Yonkers at the head of the party.

The pace the big fellows set proved too much for the lightweight riders with the exception of the veteran Waughop who rode off the course making an extra ten miles and even at that covered the return distance within the allotted time of three hours. Waughop's performance was viewed with amazement by most of the contenders who found it none too easy to maintain the

MOSSBERG EXPANSION

Attleboro Tool Maker Adding Wing to Present Plant

ATTLEBORO, Mass., Oct. 31.—In order to take care of the constantly increasing call for Mossberg products the Frank Mossberg Company, of this city, is pushing work on the erection of a new wing to its plant, which will add some 16,000 square feet of floor space.

The new building, which will be of the modern saw-tooth roof type, will be used as a storeroom in part and will house also the blanking out presses, the reel department and the workmen's locker room. The contract calls for its completion before Jan. 17, 1917.

CYGNETS IN POLITICS

NEW YORK.—Stern Brothers, of 1519 Second avenue, handling Cygnet Rear Cars and Indian motorcycles, have brought the Cygnets into public notice in a novel way. Rear Cars are furnished to political speakers for the coming election, and the speakers are transported in these outfits to the various corners on which they hold forth by day and night. Indian machines draw the Cygnets. The backs of the outfits carry political banners.

CYGNET FOR IMP

Limousine Body on Excelsior for Carbon Chaser Co.

NEW YORK, Oct. 31.—E. W. McDonald, of the Cygnet Rear Car, and Calvin R. Webber, of the New York Sporting Goods Co., the Metropolitan Cygnet distributors, are jointly congratulating themselves on the sale of a Cygnet with "limousine" body to the Imp Carbon Chaser Co.

The body of the machine is handsomely finished in red and white, and carries an advertising punch that is relied upon to put the Imp Chaser on the map.

The car is attached to a 1917 Excelsior three-speed.

Depending upon the success of this machine in the service of the Imp Co. is the sale of 12 other similar outfits.

BIG EXPORT ORDER

Cycle Motor Contracts for 7,500 Attachments for Denmark

NEW YORK, Oct. 31.—O. A. Adams, sales manager for the Cyclemotor Corp, of Rochester, has closed a deal with an export house, involving the shipment of 7,500 of the power attachments for bicycles, which will go to Denmark and Holland.

The contract, which was consummated this week, covers a five-year period, the number of machines shipped to be increased each year.

GOODRICH DIVIDEND

AKRON, O.—Directors of the B. F. Goodrich Company declared the usual 1¾ per cent. quarterly dividend on preferred and one per cent. on common stock on October 25. Preferred dividends will be paid January 2 to stockholders of record December 21, and common on February 15 to stockholders of record February 2.

ROYAL BECOMES THE RAYBESTOS COMPANY

Brake and Lining Firm Changes Title and Capitalizes for $1,500,000—No Change in Policy

BRIDGEPORT, Conn., Oct. 25.—The Raybestos Company has been incorporated under the laws of the State of Connecticut and has taken over the business and plant of the Royal Equipment Company, maker of brake linings and brakes under the Raybestos trademark. The new corporation is capitalized at $1,500,000.

The Raybestos Company states that there will be no changes in the policy of the Royal firm or in the character of its products. The dealer and jobber arrangements will also be unchanged. A 15-acre factory site has been purchased in this city and six new buildings are to be erected, which will double the capacity of the present plant.

Two of the new buildings measure 100 x 600 and will be devoted to weaving brake lining; one of 100 x 200 feet for the manufacture of brakes and a fourth for treating the Raybestos. Compressed steel will be made in the fifth building, measuring 60 x 300 feet, while a building of like dimensions will be used for a storehouse and shipping department.

GREATER EFFICIENCY

Sought Through New Goodrich Committee of Dept. Heads

AKRON, O.—At a meeting of the directors of the B. F. Goodrich Co., held Thursday, October 26, it was decided to appoint a committee of ten men from various departments of the factory to co-operate toward greater efficiency. This committee will be known as the "under operating committee" and will work under the advice of the "upper operating committee," the latter body being composed of the directors themselves.

The new committee is made up as follows: H. E. Joy, cost department; W. O. Rutherford, sales; H. K. Raymond, production; A. B. Jones, plant administration; Dr. W. C. Geer, development of goods and processes; George Oenslager, chemical laboratories; W. A. Means, treasurer; A. P. Lohmann, engineer; H. C. Miller, tire sales, and W. H. Yule, manager general rubber goods.

HILL-CLIMB RULES

For Big L. A. M. C. Program at Hippodrome Hill on Nov. 12

LOS ANGELES.—Hippodrome Hill, at Mission Road and Pacific Electric Crossing, is the site selected for the big hill-climb of the L. A. M. C. on Nov. 12. A fine view of the course is obtainable, and the hill will give every rider and machine a chance to show the stuff that is in them.

Machines will be inspected by three expert mechanics, Geo. Carpenter, of the Harley-Davidson agency, Earl Benton, Indian, and Harold Frank, Excelsior. The timers will be Dick Bissett, Abe Longley, and Pop Martin; starters, Ed Peterson and Ray Little; judges, Charles Fuller Gates, Mathews, of the United States Tire Co., and E. A. Trabant, Valvoline Oil Co.; referee, J. J. O'Connor.

Wheels may have only Weed chains or rope and machines must be two or three speeds, with gear not lower than 11 to 1 and weight of 300 lbs. or over. Tires must be 28 by 2¾ or 28 by 3 in.

ALEXANDER, WITH TWO UP, SCALES GREYLOCK

Pittsfield Indian Rider Accomplishes Ascent That Is Considered Difficult for One-Passenger Machines

PITTSFIELD, Mass., Oct. 31.—Howard Alexander, if he did not establish a new record at least did something noteworthy this week when he succeeded in climbing Greylock mountain on a 1916 Powerplus Indian and carrying two tandem passengers.

Greylock is the highest peak in the Berkshires. Greylock was never looked on with favor by the transient visitors who have attempted to reach its peak. Horses and wagons have slipped off its trail to be spread over a considerable area of the surrounding country and, in general, the old mountain has so demeaned itself as to achieve anything other than the popularity of its neighbors Mt. Washington and Mt. Tom.

The trail up Greylock is too narrow for a sidecar and almost too steep for anything except a Colorado canary. Furthermore, the trail has an uncomfortable habit of slipping out from under foot and leaving visitors nothing more solid than a Berkshire breeze to stand on. Speaking generally, a man who has climbed Greylock in any fashion whatever generally feels that he has accomplished a feat.

Previous to this time Greylock has been scaled by solo machines which carried the rider and one passenger, although those feats have been scarce. Never before has the feat been accomplished with a rider and two passengers on the machine.

THANKSGIVING MEET

Plans Progressing for Club of Philadelphia Affair

PHILADELPHIA, Pa., Oct. 31.—Details for the fourth annual Thanksgiving Day racemeet of the Motorcycle Club of Philadelphia, on the Belmont track, are being worked up by John Empfield, the Indian dealer, at 20 North 52d street. The tentative plans call for a 75 mile professional event as the feature on the card to be supplemented by a 25 mile amateur and a 5 and a 10 mile sidecar race. Several local amateurs have signified their intention of competing in the 25 mile and then turning "pro" so as to get in on the feature purse offered.

Entry blanks will be out within the next few days; full details can be had by addessing Empfield.

VITALIC CLUB HOLDS ITS SECOND SOCIAL

Employees of Continental Rubber Works Stage Hallow'een Party at Erie Company's Offices

ERIE, Pa.—Following out its schedule, which calls for a series of social functions to be staged throughout the cold months, the Vitalic Club, comprising the members of the office force of the Continental Rubber Works, staged a Hallow'een party at the company's offices on Saturday night last.

In keeping with the custom, corn, pumpkins, witches, goblins, and black cats made up the decorations and were so arranged in conjunction with pumpkin-devils and hidden lights as to present a pleasing yet weird and grotesque effect.

The amusements consisted of many of those games appropriate to the Hallow'een season. The fortune telling booth made its usual appeal and the black cat which wielded the destiny of the guests was kept busy throughout the evening. The later hours of the evening were given over to dancing. The party numbered about 75 people, including many of the officers and directors and their wives.

Plans are already under way for a Thanksgiving party and the one at Christmas will be the big event of the winter season.

BIG FIELD IN INDIA

Bombay Goodyear Man Says Opportunities There are Great

AKRON, OHIO.—C. C. Devore, resident representative for the Goodyear Tire & Rubber Company, in Bombay, India, declares that the opportunities for American business throughout Hindustan than ever before. He made this statement while visiting the home office for a short time recently.

"Motorcycles are very numerous in India," says Mr. Devore, "and American made machines predominate. They are used almost exclusively for pleasure. Sidecar outfits are used extensively; in fact you see more sidecar outfits than solo machines on the roads.

"Bicycling is very popular," continued the Goodyear man. "About 100,000 bicycles are ridden, mostly for pleasure. Most of these are European wheels with wired-on tires. The single tube bicycle tire is not used."

BIG CHAIN DEAL

American Chain Co. Takes Over Standard Company

BRIDGEPORT, Conn.—The big feature of a dinner given to the distributors of Weed tire chains by the American Chain Company, of Bridgeport, was the announcement that the company had purchased the Standard Chain Company, of Pittsburgh.

Plans for combining the sales staff and part of the office force of the two companies are now being worked out, and it is expected that the new arrangements will be fully in effect about January 1.

LOW SADDLE POSITION ON 1917 DAYTONS

New Frame Gives Height of 27½ Inches From Ground on Three-Speed Motorcycles—Tank in New Form—Eight Models in Line—Broader Base Stand, Decompressor, Needle Valve Lock and New Saddle on Motor Bicycle

DAYTON, Ohio, Nov. 1.—Such changes as have been made in the Dayton motorcycle and motor bicycle lines for the 1917 season are in the nature of refinements, for the most part, as the preceding seasons' designs have been most satisfactory from every standpoint. In fact, on the Dayton motorcycle, the most noticeable changes which have been made by the engineers of the Davis Sewing Machine Company, are in the form of the frame and the outlines of the fuel tank, the new frame giving the extremely low saddle height of 27½ inches while the tank is pointed at the front and tapers toward the rear in true-streamline form.

On the Dayton motor bicycle, changes for 1917 are minor, yet all tend to increase the efficiency of the motor and the ease of its operation. The intake valve has been refined to give greater power to the motor, the breather tube has been enlarged and there has been a decompressing device fitted on the intake dome to ensure easy starting. The stand has a broader base than in 1916. There is a lock on the carbureter needle-valve to prevent shifting of the adjustment from road shocks, etc. A larger and more comfortable saddle is fitted and a tool bag with full set of tools is now provided.

Eight Models Offered

For the new season, the Dayton motorcycle is offered in eight models, all being fitted with twin motors. The models are: E1, Dayton, 8 h. p. motor, single speed, $250; E2, Dayton motor, two speed, $260; E3, Dayton motor, three speed, $275; Dayton motor, three speed, electrically equipped, $315; E5, De Luxe 9 h. p. motor, single speed, $250; E6, De Luxe motor, two speed, $260; E7, De Luxe Motor, three speed, $275; E8, De Luxe motor, three speed, electrically equipped, $315. The Dayton motor bicycle is made in men's or ladies' models at $100, an advance of $5 over the price in 1916.

The frame on the Dayton three speed motorcycles gives the remarkably low saddle position of 27½ inches, a height which has heretofore been unknown in American motorcycle construction and certainly never before attempted on machines fitted with powerful twin motors. The top tube has been sloped considerably toward the rear to get this position, but at the same time there has been no decrease in the strength or resisting power of the tubing in so doing. This low saddle position will enable any rider—no matter how built—to firmly plant his feet on the ground while in the saddle.

New Tank Form

The fuel tank has been changed in form but not in capacity. It holds 2½ gallons as in the 1916 model, but is now pointed at the front and tapers from the forward swell in graceful lines toward the rear. The same form of gasolene cock which enables the rider to maintain a reserve of fuel is fitted as in the preceding models, and the unit oil tank, carried in a recess in the gasolene tank is likewise fitted for 1917.

DAYTON MODELS AND EQUIPMENT FOR 1917

E1, Dayton motor, single speed	$250
E2, Dayton motor, two speed	260
E3, Dayton motor, three speed	275
E4, Dayton motor, three speed electrically equipped	315
E5, De Luxe motor, single speed	250
E6, De Luxe motor, two speed	260
E7, De Luxe motor, three speed	275
E8, De Luxe motor, three speed, electrically equipped	315
Dayton Motor Bicycle, men's or ladies' model	100

EQUIPMENT

MAGNETO—On E1, E2 and E3, Dixie, Splitdorf Electrical Company, Newark, N. J. On E5, E6 and E7, Bosch, Bosch Magneto Company, New York.

GENERATOR—On Models E4 and E8, Splitdorf Mag—Generator, Splitdorf Electrical Company, Newark, N. J.

CARBURETER—Schebler, Wheeler-Schebler Carbureter Co., Indianapolis, Ind.

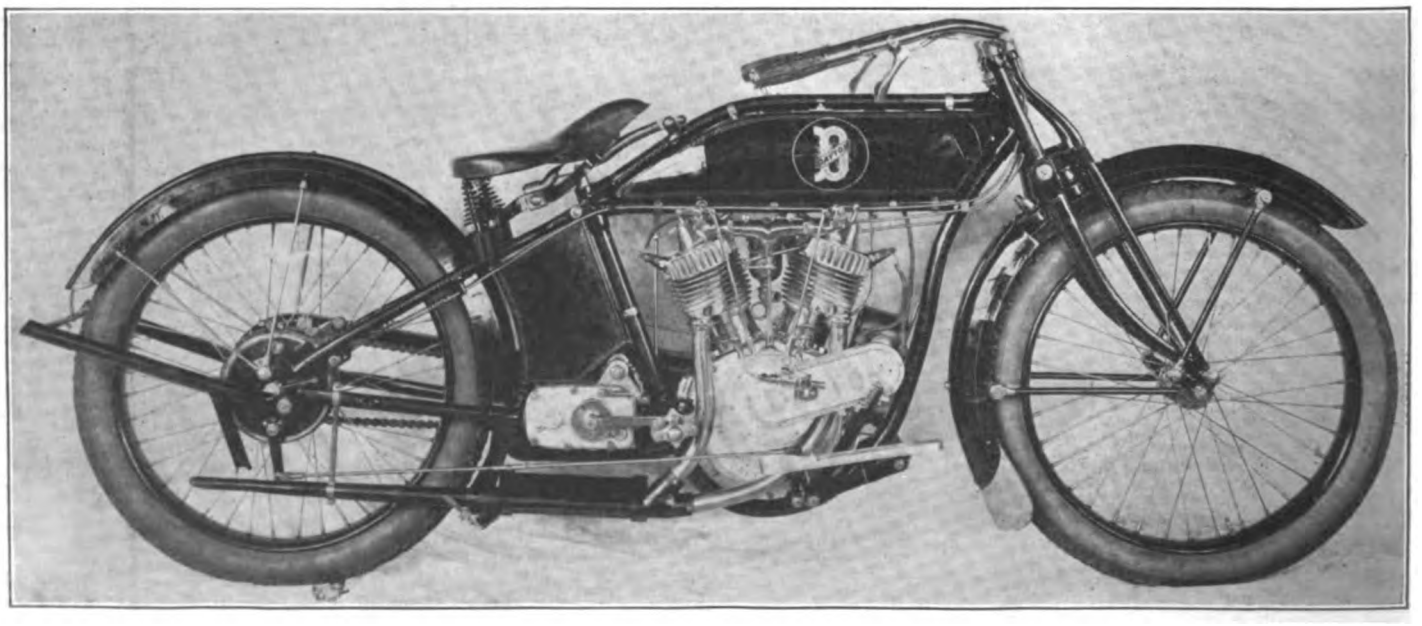
CHAIN—Duckworth, Duckworth Chain & Manufacturing Company, Springfield, Mass.

TIRES—United States, United States Tire Company, New York, or Goodyear, Goodyear Tire & Rubber Company, Akron, O.

SADDLE—Troxel Jumbo, Troxel Manufacturing Company, Elyria, O.

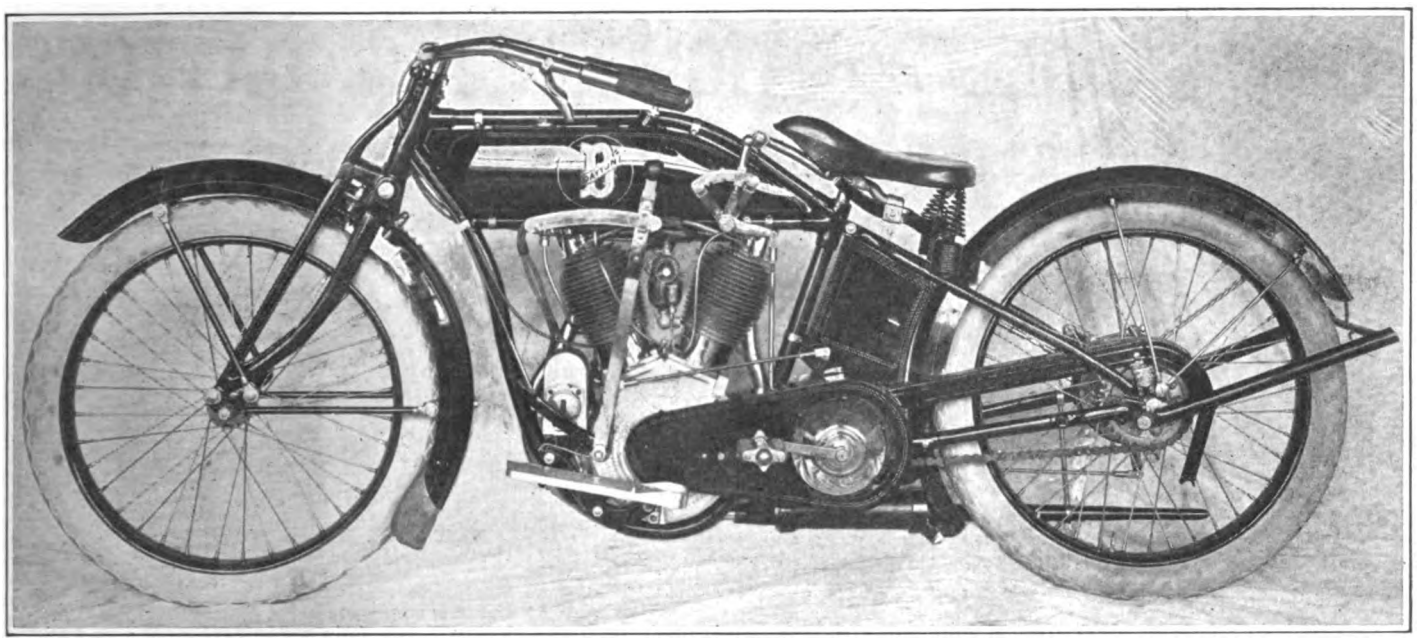
CLUTCH—On E1 and E5, Eclipse, Eclipse Machine Company, Elmira, N. Y. On other models, Dayton Dry Disc type.

DAYTON MOTOR BICYCLE—National magneto, National Coil Company, Lansing, Mich.; Goodyear tires, Goodyear Tire & Rubber Company, Akron, O.; Troxel "Pillow Pad" saddle, Troxel Manufacturing Company, Elyria, O.



Right Side of Three Speed Model E3 with Dayton Motor and New Low Saddle Position—Mechanical Oiler on Magneto Drive Casing

Digitized by Google



Left Side of De Luxe Motored Model E7, Showing Characteristic Front Fork, Dual Clutch Control and Shift Lever

On Dayton models E1 to E4 inclusive, the Dayton twin motor is fitted as powerplant. This motor has the inlet valves arranged over the exhaust in a common chamber, all valves being mechanically operated. The bore is 3 5/16 inches and the stroke 3½ inches, giving a piston displacement of 60.32 cubic inches. While rated at 8 horsepower, it develops 12 easily. On Models E5 to E8 inclusive, the De Luxe motor is used, this having a bore of 3½ inches and a stroke of 3.67 inches, giving a piston displacement of 70.62 cubic inches. Rated at 9 horsepower, this motor delivers 14 on the brake.

Carburetion and Ignition

The carbureter used on all Dayton motorcycles is the Schebler automatic, specially adapted to the Dayton and De Luxe motors respectively. On Models E1, E2 and E3, with Dayton motors, the Dixie high tension magneto is fitted, while the electrically equipped Model E4 is fitted with a Splitdorf Mag-Generator. The Bosch high tension magneto is used on the De Luxe powered Daytons, E5, E6 and E7, while the E8 is fitted with the Splitdorf Mag-Generator. Lubrication on all models is by Dayton mechanical oiler, giving a positive feed to the gears and other working parts, and in addition there is a hand pump housed in the detachable oil tank, for emergency purposes.

Auto-Type Gearset

On the three speed models, the Dayton Auto-Type gearset is fitted. The pinions in this set are on a spline shaft, with each gear separate from the others. Shifting from high to low or vice versa can be done without stopping at intermediate. All gears are cut from chrome nickel steel and have a big factor of safety. The gear case is of aluminum. The two speed gears are of the spring dog type, having springs behind the driving dogs which permit gears to be shifted while the machine is at rest. The springs produce an instantaneous meshing of the gears at all times.

On both two and three speed models a double locking device is fitted to prevent shifting while the clutch is engaged. This device is so compact that the lock may be released and the gears shifted with one motion. The clutch used or these models is the Dayton dry disc type, operated by either hand lever or pedal as desired.

On the single speed models, E1 and E5, the Eclipse multiple disc clutch is fitted, this being operated by a hand lever at the side of the frame. This clutch is countershaft-mounted, while the clutches on the variable geared Daytons are carried on the extension of the main gearshaft, in countershaft position, of course.
